“博雅双语名家名作”出版说明

1840年鸦片战争以降，在深重的民族危机面前，中华民族精英“放眼世界”，向世界寻求古老中国走向现代、走向世界的灵丹妙药，涌现出一大批中国主题的经典著述。我们今天阅读这些中文著述的时候，仍然深为字里行间所蕴藏的缜密的考据、深刻的学理、世界的视野和济世的情怀所感动，但往往会忽略：这些著述最初是用英文写就，我们耳熟能详的中文文本是原初英文文本的译本，这些英文作品在海外学术界和文化界同样享有崇高的声誉。

比如，林语堂的*My Country and My People*（《吾国与吾民》）以幽默风趣的笔调和睿智流畅的语言，将中国人的道德精神、生活情趣和中国社会文化的方方面面娓娓道来，在美国引起巨大反响——林语堂也以其中国主题系列作品赢得世界文坛的尊重，并获得诺贝尔文学奖的提名。再比如，梁思成在抗战的烽火中写就的英文版《图像中国建筑史》文稿（*A Pictorial History of Chinese Architecture*），经其挚友费慰梅女士（Wilma C. Fairbank）等人多年的奔走和努力，于1984年由麻省理工学院出版社（MIT Press）出版，并获得美国出版联合会颁发的“专业暨学术书籍金奖”。又比如，1939年，费孝通在伦敦政治经济学院的博士论文以*Peasant Life in China—A Field Study of Country Life in the Yangtze Valley*为名在英国劳特利奇书局（Routledge）出版，后以《江村经济》作为中译本书名——《江村经济》使得靠桑蚕为生的“开弦弓村”获得了世界性的声誉，成为国际社会学界研究中国农村的首选之地。

此外，一些中国主题的经典人文社科作品经海外汉学家和中国学者的如椽译笔，在英语世界也深受读者喜爱。比如，艾恺（Guy S. Alitto）将他1980年用中文访问梁漱溟的《这个世界会好吗——梁漱溟晚年口述》一书译成英文（*Has Man a Future? —Dialogues with the Last Confucian*），备受海内外读者关注；此类作品还有徐中约英译的梁启超著作《清代学术概论》（*Intellectual Trends in the Ch'ing Period*）、狄百瑞（W. T. de Bary）英译的黄宗羲著作《明夷待访录》（*Waiting for the Dawn: A Plan for the Prince*），等等。

有鉴于此，外研社人文社科出版分社推出“博雅双语名家名作”系列。

博雅，乃是该系列的出版立意。博雅教育（Liberal Education）早在古希腊时代就得以提倡，旨在培养具有广博知识和优雅气质的人，提高人文素质，培养健康人格，中国儒家六艺“礼、乐、射、御、书、数”亦有此功用。

双语，乃是该系列的出版形式。英汉双语对照的形式，既同时满足了英语学习者和汉语学习者通过阅读中国主题博雅读物提高英语和汉语

能力的需求，又以中英双语思维、构架和写作的形式予后世学人以启迪——维特根斯坦有云：“语言的边界，乃是世界的边界”，诚哉斯言。

名家，乃是该系列的作者群体。涵盖文学、史学、哲学、政治学、经济学、考古学、人类学、建筑学等领域，皆海内外名家一时之选。

名作，乃是该系列的入选标准。系列中的各部作品都是经过时间的积淀、市场的检验和读者的鉴别而呈现的经典，正如卡尔维诺对“经典”的定义：经典并非你正在读的书，而是你正在重读的书。

胡适在《新思潮的意义》（1919年12月1日，《新青年》第7卷第1号）一文中提出了“研究问题、输入学理、整理国故、再造文明”的范式。秉着“记载人类文明、沟通世界文化”的出版理念，我们推出“博雅双语名家名作”系列，既希望能够在中国人创作的和以中国为主题的博雅英文文献领域“整理国故”，亦希望在和平发展、改革开放的新时代为“再造文明”、为“向世界说明中国”略尽绵薄之力。

编者说明

费孝通的英文著作*China's Gentry* 1953年由美国芝加哥大学出版社出版。该书由芝加哥大学教授罗伯特·雷德菲尔德（Robert Redfield）撰写导论，其夫人玛格丽特·帕克·雷德菲尔德（Margaret Park Redfield）对费先生的英文口述内容作了整理、修改和编辑。2009年12月，北京三联书店出版了由赵旭东、秦志杰翻译的中文版《中国士绅》。

费孝通以中国士绅为主题，恢宏广阔地勾画了农民、士绅、国家之间的结构型态，深入浅出地展现了中国传统乡村社会的权力结构和秩序维持的实践图景，现在看来仍具有重要的借鉴意义。更重要的是，费先生是希望通过这些英文文章，向西方读者表达一个中国人对中国的看法。这也是英汉对照双语版首次在国内推出的重要价值所在。

本版以英文原本与三联译本为基础——原英文版附录的六篇生活史（Life-Histories）并非费先生所作，为初版编者所加，故本书未收录；文中附图系郭光远（James K. Y. Kuo）为英文初版绘制；经译者惠允，本版对译文作了进一步修订，以期在呈现作品英文原貌的同时，便于读者对照阅读，更好地理解这一经典著作个中要义。

INTRODUCTION

导论

● I

To Western readers Hsiao-tung Fei is known as the author of a short, illuminating book on life in a Chinese village,^[1] of another and more mature work on agriculture and industry in southwestern China,^[2] and of a stimulating article^[3] on one of the principal themes of the present book: the gentry in Chinese society. In China he is known also as a brilliant teacher, a leader and pioneer in sociological field research, and a man who has written widely, talked much, and acted fearlessly toward the solution of the immense social problems of China. After his return from London, where he took his doctorate under Bronislaw Malinowski, and during the war with Japan he joined those Chinese students and scholars who assembled to continue Chinese scientific and intellectual life in Yunnan Province. It was there that he carried on the studies that resulted in his second book. After the defeat of Japan he went back to teach in his old university, Tsinghua, in Peiping; and there (where I had come in the autumn of 1948 as a visiting professor to the same university) my wife and I

resumed an old association with him.

This book is made from articles contributed by Fei to Chinese newspapers in 1947 and 1948. During that autumn of 1948 he dictated to my wife a rough translation of these articles, stopping as he did so to talk over with her the substance of the dictation and in part rewriting and enlarging the text in the course of these discussions. The work was done hastily, with enthusiasm, and in the tense anticipations of the coming of Communist control. For, while the dictation and the rewriting went on, Peiping was ringed by Communist forces, and the fall of the universities and of the city itself was expected within a very short time. In December, 1948, most of the students and many of the faculty of the university looked forward to the coming of the Communists as a relief from hardship and oppression and as new opportunity to apply intelligence to the improvement of social and political conditions in China. There was apprehension too; but, with the abundant knowledge of corruption and tyranny under the Nationalist government, the hope outweighed the apprehension. Fei, always sanguine and courageous, was then of the opinion that he could work effectively with the Communists, even though he would continue to criticize when he thought criticism was due. Like others in his university, he did not conceive the incoming government of Chinese Communists in the image of Stalinist Russia; he thought of them as Chinese like himself, as his old friends and students, whose voices he heard over the Communist radio promising all good things to the people of Peiping. So Fei spoke to us of his hope of becoming, for the Communist government, a part of "the loyal opposition." He had already fallen into the disfavor of both parties. While in Yunnan he had been threatened with arrest by the Nationalist government and was fired upon in a public meeting where he had spoken unfavorably of Chiang's regime; on the other hand, Communist voices in the North had attacked him bitterly for certain articles he had published. On the whole, however, Fei felt that his views as to developing Chinese industry and agriculture would be congenial to the interests of the new regime and that after the transition he would be able to continue to work and to speak for China. In this hope, almost a confidence, the articles here assembled were dictated.

• —

许多西方读者都知道，费孝通写过一本关于一个中国乡村生活的书[4]，这本书篇幅虽短，但具有启蒙意义；还有一本有关中国西南部工农业方面的更为成熟的著作[5]；再有就是涉及本书主题——中国士绅的那篇

引人注目的文章^[6]。在中国人看来，费先生还是一位睿智的师者、社会学实地研究领域的先驱和带头人，是著述广泛、善于言辞并为解决中国诸多社会问题而勇敢行动的人。他在伦敦获得博士学位，师从马林诺夫斯基。在抗日战争期间，一些中国学生和学者聚集云南，继续从事科学和学术活动，费先生回国后也加入了他们的队伍，他的第二部著作就完成于此地。日本战败后，他回到母校（即位于北平的清华大学）执教，我曾于1948年秋做过清华大学的访问学者，在那里我和夫人与他恢复了旧日的联系。

本书取材于费先生1947年至1948年间发表在中国报纸上的文章。1948年秋，费先生向我夫人翻译并口述了这些文章的大致内容，他不时停下来与我的夫人讨论口述内容的要点，并在讨论中作了某些修改和扩展。在他口述和修改这些文章的时候，共产党军队已经包围了北平。费先生怀着对共产党即将当政的强烈憧憬和满腔热情，仓促完成了这项工作。人们料想共产党将很快占领各所大学和整座城市。1948年12月，清华大学的大部分学生和许多老师都期待着共产党的到来，以求从压抑和痛苦中解脱出来，并认为这是运用聪明才智去改善中国社会和政治条件的新的机会。虽然他们也怀有恐惧，但由于已充分了解国民党政府的腐败和暴虐统治，希望还是战胜了恐惧。一向乐观而勇敢的费先生当时所持的观点是： he 可以和共产党人一起有效地工作，不过，当他认为需要进行批评的时候，他会继续批评。但是，像清华大学的其他人一样，他并没有把即将到来的中国共产党的政府想象成斯大林主义俄国式的统治。在他心里，共产党人和自己一样是中国人，是他的老朋友或学生那样的人。他在收音机里听到了共产党向北平市民所作的美好承诺。所以，他告诉我们，他希望成为与共产党政府“忠诚对立”的一部分。他早已不被两党中的任一方所宠爱。在云南的时候，他曾被国民党政府以逮捕相威胁，并在一次公众集会上，因斥责蒋介石的统治而受到攻击。另一方面，北方的共产党也因他出版的某些文章而对他进行猛烈抨击。然而，总的来说，费先生认为他关于发展中国工农业的观点是符合新政权的利益的，在政权更替后，他仍能继续为中国而工作、为中国说话。这里汇集的几篇文章就是他满怀着这一近乎信心的希望口述的。

My wife and I left Peiping in December, 1948, and for more than three years now we have had no word from Fei. From others we have learned of some bare events. At about the time when Peiping fell to the Communists, Mao Tse-tung asked Fei to take charge of a research program with regard to problems of urban reconstruction, and he accepted and began the work. Fei published articles praising the "New Democracy" of China. He accepted membership on governmental boards or committees. Later he went on an expedition to study some of the remote communities of southwestern China—where he had worked during the Japanese war. Later word tells us that he has returned to Tsinghua University.

This book is published without any participation from him in its production since the days when he dictated its substance to my wife.

It is evident that he prefers it so. Communication with Westerners would embarrass or endanger him; he does not write to us, and we have ceased to write to him. My wife edited the text she had transcribed, assuming considerable responsibility in changing the order of the parts, in adding references, and even in inserting phrases or whole sentences when she was sure that Fei's meaning would be served by such additions. It is to be emphasized that the book therefore is an expression of Fei's views and judgments as he was about to step over the threshold between revolutionary China and Communist China. It was written when his students (many of whom I knew) moved in an excitement of fresh opportunity to remake their country—and moved without dogma.

我和夫人1948年12月离开北平，至今三年多来我们一直没有费先生的音信。从其他人那里我们仅得到了很有限的消息。听说共产党占领北平后，毛泽东请费先生负责一个有关城市重建问题的研究项目，费先生应允并开始了工作。他发表文章赞扬中国的“新民主”，还加入了政府性质的委员会，成为其中的一员。后来，他奔赴中国西南部——那是他曾在抗日战争期间工作过的地方，在那里从事对某些偏远社区的研究。后来又有消息说，他已重返清华大学了。

自从他向我夫人口述这些文章的主旨后，这本书的形成和出版再也未经他的任何介入。很明显，他是乐于保持这样的状况的。由于与西方人接触会给他带来尴尬和危险，因而我们不再通信。我的夫人对她自己的记录进行了编辑，并且还怀着强烈的责任感对某些部分作了顺序调整，添加了注释，甚至添加了一些短语和句子——因为她相信，这样会使费先生所要表达的意思更明确。需要强调的是，本书表达了费先生将从革命中国跨进共产主义中国时所持有的观点和看法。当他写这些文章时，他的许多学生（其中很多我都认识）已开始激动不已地并且毫无束缚地投入到重建自己国家的

Few of them had read a line of Marx. Most of them saw the Nationalist government as their oppressor, the Communists as their liberators.

● II

At the time he dictated a translation, Fei wanted the essays to be read by English-speaking people. Like other intelligent people of good will, he wanted China to be understood by Westerners, and he believed that he had something to say about China that was not said in other books. But, when Fei wrote the articles in the first place, he was talking to the Chinese; the present English version does not change that fact. Fei had developed a large audience for his newspaper articles; all sorts of people, mostly people neither peasants

nor intellectuals, read and admired what he had to say about the problems of China. These essays, as newspaper articles, had contributed to the extension of a sense of responsibility in the Chinese people themselves to take charge of their own affairs, and to deal with them, for their own good. Thus the book provides for Westerners an unusual and valuable light on China: a Western-educated Chinese, devoted to working to solve problems of China, analyzes some aspects of these problems so as to make them clearer to his countrymen. The essays give a Chinese point of view on China. They are not written to put a good face on things, or a dark face. They are written to help the Chinese to reach understanding of their troubles. Fei is saying to his countrymen: "Look, this is what has happened to us in recent years. This is the real revolution. This is the place where our shoe pinches. Understand; then act." To Americans, accustomed to thinking of China simply as an object of our foreign policy under the assumption that what will happen in China depends on what we do rather than on what the Chinese do, this book gives fresh insight. Problems of China are here looked at by a Chinese as problems for Chinese to solve, and to solve not by taking political sides, not by joining Russia or joining America, but by reform, by Chinese, of Chinese institutions.

Of course only some of the problems of China are considered in this book. Fei examines certain aspects of the traditional social structure and certain changes that have occurred in that structure that make difficulties for China. The changes have taken place chiefly as a result of the influence of the West. The book therefore bears on that social revolution in China which underlies the overthrow of the empire, the revolutionary republican movement led by Sun Yat-sen, and the winning of political control of China by Chinese Communists. The book does help us to understand how Chinese communism won China.

新契机中去了。他们中很少人读过马克思的著作，大多数人把国民党政府看作是压迫者，而把共产党人看作是解放者。

• 二

当费先生口述这些文章的英文译文时，他是希望英语读者去阅读它。像其他具有良好愿望的知识分子一样，他希望中国能被西方读者所理解，并且相信他要讲的是一些其他书中不曾讲到的关于中国的问题。但是，当费先生最初写这些文章时，他是在与中国人对话。这一事实在此英文版本中并没有改变。费先生在报纸上发表的文章有很大的读者群，包括各种各样的人，大多数既非农民也非知识分子。他们都读过费先生讲到的中国社会问题，而且都很欣赏。这些发表在报纸上的文章唤起了中国人的责任感，使他们意识到自己的事情要由自己来解决，从而

维护自己的利益。因此，对于西方读者来讲，本书包含有一种关乎中国问题的不同寻常而又价值无比的见解，这是一位受过西方教育的中国人献身于解决中国问题的事业当中，对这些问题的某些方面进行分析，以使他的同胞能够得到更清楚的认识。这些文章表达了一个中国人对中国的看法。这样做并非是在给事物贴上好坏的标签，而是帮助中国人理解他们当下所面临的困境。费先生是在对他的同胞讲：“看，这是近几年来发生在我们身上的事。这是真正的革命。这就是令我们裹足不前的所在，认识它，了解它，然后就可以有所作为。”长期以来，美国人一直认为中国只不过是美国外交政策的一个对象，中国的发展取决于美国人而非中国人怎么做。对于他们来说，这本书无疑体现了一种全新的观点。在本书中，中国人把中国的问题看作是他们自己要解决的问题，而解决这些问题并不能依靠政治上的一边倒——倒向俄罗斯或倒向美国，而要靠改革，要由中国人来改革自己的制度。

当然，本书只涉及了中国的某些问题。费先生研究了传统社会结构的某些方面以及发生在这一结构中的给中国造成困难的某些变化。这些变化的发生主要是西方影响的结果。因此，本书与中国的社会革命有关，它是以君主专制的灭亡、孙中山所领导的民主共和革命运动以及中国共产党夺取政权等历史事件为基础。本书确实可以帮助我们理解中国共产主义运动是如何赢得中国的。

● III

As the essays were written as separate articles, the threads of common idea which hold them together are not so apparent as they might be. There are two interrelated themes: the functions of the scholar and the gentry in the traditional Chinese society and the relations of the country and the city. The first theme is uppermost in the first four essays. The gentry and the scholars must be discussed together, for the scholars were chiefly (but not entirely) derived from the gentry, and the gentry carried on their functions and enjoyed their social position by virtue of the fact that some of them were scholars. The scholars were an elite; the gentry, a social and economic class. The first essay shows how the scholars, by becoming administrative servants of the imperial power, obtained security for themselves and kinsmen. In the second essay we find an account of the history of the development of this adjustment and of how the scholars reflected upon the relationship they had come to have with the centralized authority and how they explained and justified it in their philosophies. The third essay turns on the question why China experienced no important technical development. The scholars, or intellectuals, are now examined from the point of view of the exclusive concern they had with ethical knowledge: the intellectuals had no technical knowledge; they were supported by the labor of others and were

unconcerned with productive work. So the governing class lacked the kind of knowledge which would have improved the material condition of the people. In the fourth essay, as in the first two, the point of attention is the function of the scholar-official in mediating the imperial power. But now the attention is directed to that educated member of the gentry who, remaining in the local community, negotiated, in a personal and extralegal way, with the formally recognized functionary who occupied the lowest position in the official bureaucracy. This critical function, exercised by the scholar-gentry, made the imperial power workable, while yet maintaining the traditional social organization of the village. This essay develops into a discussion of the *pao-chia* system (at that time recently reintroduced by the Kuomintang and later abolished by the Communists) by which it was sought to make the central authority directly influential upon the local community and shows why it was doomed to failure.

• 三

由于这些文章独立成篇，其共同主题并非显而易见。文中有两条相互交错的线索：其一是传统社会中文人和士绅的作用，其二是乡村和城市之间的关系。前四篇文章主要讲第一个主题。文人和士绅要相提并论，因为文人大部分（并非全部）来自士绅，而士绅也靠他们中的某些人是文人而发挥作用和享受社会地位。文人是精英，而士绅属于社会经济阶层。第一篇文章讲述文人如何通过做官来为他们自己以及亲属赢得安全。第二篇文章描述了从文人到官员的这种调整的发展历史和文人如何看待他们与集权统治的关系以及如何以他们自己的哲学来对此加以解释和论证。第三篇文章转向了为什么中国没有经历重要的技术发展这一问题。在这里是从他们对于规范知识的独特关注的视角上而对文人或者说是知识分子作了考察。知识分子毫无技术知识，他们依靠别人的劳动，对生产活动毫不关心。所以统治阶级缺乏那种能够增进人民的物质条件的知识。与第一、第二篇文章一样，第四篇文章的关注点是士大夫在帝国的权力中作为中介的功能。但是现在的注意力指向了士绅中受过教育的人，他们仍住在地方社区当中，以私人的以及法律以外的方式，同那些正式承认的、在官府中担任最低职位的官吏打交道。文人士绅发挥的这种关键作用，使得皇权统治得以施行，并且维护了村庄的传统社会组织。这篇文章继而进一步讨论了保甲制度（该制度当时刚被国民党重新提出，后来又被共产党所废除），以此探求中央权威如何对地方社区施加直接影响，并要表明这样的做法为什么注定要失败。

In the fifth essay there is apparently a new beginning; Fei here takes up not the administrative relations but the economic relations between country and city. The scholar-gentry are not so apparent; but they are here just the same. For, while Fei is telling us that the economic relationship between city and country works to the

disadvantage of the country, because the city lives off the country by taking rent and interest from the countryman without sending to the country the products it needs and could consume, we must remember that it is these same gentry who are pocketing the rent and interest and increasingly using the money to buy Western-made products instead of Chinese-made goods. Fei distinguishes several types of towns and cities and shows how each type served the interests of the gentry (and also those of the imperial power) and did not bring advantage to the peasants. Garrison town, market town, and treaty port—all provided opportunities for the economic exploitation of the country. Thus the peasant came to pay a large part of the products of this labor to maintain the gentry class, while the gentry, coming to prefer Western goods, no longer bought the products of rural handicraft and so ruined the small manufacturing which provided the peasant with a little margin over the barest subsistence.

The sixth essay develops this theme of the unsatisfactory character of the exchange between city and country and the worsening of the situation since the introduction of products manufactured in the West. And the seventh essay continues the consideration of the dislocations of the old social and economic system brought about by the influence of the West, while it returns to the theme of the scholar and his functions in Chinese society. In these last pages we see that the modern intellectual, the man educated in Western learning, does not take the place of the old intelligentsia. He does not go back to the country where he has no social position and no career. He stays in the city; so from the country is eroded away some of its best human resources. And some of the rural people, becoming poorer than ever, are also detached from the rural community and become predatory rovers or—as ever in China—rebels against the government. So only a few years before the Communists began to purge by shooting, and before the fighting in Korea, this series of essays ends, a diagnosis of immense problems, a declaration of hope that the Communists would provide leadership toward solving them.

第五篇文章显然是一个新的起点。费先生在这里不再继续探讨城乡之间的行政关系，而是论述了城乡之间的经济关系。这里没有明确提及文人士绅关系，但实际上都是存在的。费先生告诉我们说，城乡之间的经济关系给乡村带来不利影响，因为城市靠从乡村收取地租和利息而生存，但却不把乡民们所需要的以及所能够消费得起的产品提供给他们。此时我们必须记住，正是这些士绅把地租和利息装进自己的口袋，并且不断地去购买由西方而不是中国制造出来的商品。费先生把城镇分成几类，指出每一类是如何仅仅满足士绅（和皇权势力）的利益而不给乡村带来任何好处的。衙门围墙式的城、集镇以及通商口岸，都为从经济上

剥削乡村提供了机会。因此，乡民们的劳动产品中很大一部分是用来供养士绅阶层，但士绅们不再购买农村的手工业产品，却转而青睐洋货，这样便毁灭了能给乡民勉强糊口的生活带来些许改善的小手工业。

第六篇文章进一步论述了城乡交换的不尽如人意以及引进洋货后这一情形的进一步恶化。第七篇文章继续论及西方影响给中国陈旧的社会经济制度造成的混乱，最后又回到文人及其在中国社会中的作用这一问题上。在最后的这些篇幅里我们注意到，受过西方教育的现代知识分子并没有取代旧知识分子。他们没有回到既无社会地位又无事业可谈的乡村中去，而是留在城市里，因此乡村流失了一些最优秀的人力资源。一些乡民变得越来越贫困，他们脱离了乡村群体而成为流浪的强盗，或者是像中国过去一再出现过的那样，成为叛乱分子。这一系列文章收笔于共产党准备开始镇压反革命以及朝鲜战争爆发的前几年。这是一份对中国众多问题的诊断书，是希望共产党能带领人们解决这些问题的一份宣言书。

● IV

To the Westerner the book sheds light on the recent political behavior of China and suggests that the failure of the West to prevent the party and power of Mao Tse-tung from taking control arose out of a worsening situation among the Chinese people which the party of Chiang Kai-shek did not remedy and which many Americans did not understand. Furthermore, it offers a different construction from that which is often put forward as to the benefit so far received by China from the importation of Western technology and capital.

First is borne in upon the reader the unwisdom, in the light of this analysis, of assuming that to the Chinese the central government has traditionally the meaning to Chinese which government has had to Americans and western Europeans. We have dealt with Chinese governments as though the Chinese thought they represented the Chinese people. It might have been nearer the truth if we had begun by assuming that centralized government is, traditionally, a potentially dangerous predator upon the people—"the tiger." With the revolution of Sun Yat-sen appeared governments that promised to act on behalf of the people, limiting their own power constitutionally. However, the credit of this promise, to Chinese, passed in the last decade from the Kuomintang to the Communist party. And the "people's assemblies," the innumerable committees and discussions, stimulated and guided by the Communists, gave Chinese, when the Communists took over, a sense of direct participation in government which they never experienced, and rarely thought was theirs to claim, during the long imperial period.

Second, we understand from what is brought forth in these pages how little prepared have been the Chinese people to assume leadership and carry on constructive and efficient national government. When many of us joined General Marshall in bidding the educated liberals of China to take the lead in constituting a government neither Communist nor corrupt, we did not understand the tradition of which those liberals are the heir. Since the time of Confucius at least, the educated man in China has been concerned with ethical advice (or "normative knowledge," as Fei calls it), not with political action. Indeed, as Fei makes quite plain, especially in the first and fourth essays, sound political policy in China has been to neutralize the political power of the emperor, not to control it. Do-nothingism, he says, has been the equivalent of a constitutional check on government. So the scholar, while being an administrator, had nothing to do with shaping national policy; and administrative effectiveness consisted not in technical efficiency, as in the West, but in skill in such personal negotiations as kept local affairs running not too much disturbed by demands of centralized power. An educated elite with this tradition, without any political power or experience in the formation of policy, separated from the peasantry by mode of life and class position, could hardly be expected to rescue China from the torments of civil war. For the Chinese who has a modern Western education is only the heir of the scholar-official of the long imperial period.

• 四

本书给西方读者阐明了中国近期的政治行为，并指出，西方企图阻止共产党和毛泽东政权上台的失败，是由于蒋介石的国民党没能挽救中国人民于每况愈下的处境，而对于许多美国人来说也未能理解这一危急形势。同时，对于通常认为中国受益于引进西方技术和资本的观点，本书也作出了相反的回答。

依照这一分析，读者首先认识到，如果假设对于中国人来说，传统上中央政府对中国人的意义与政府对美国人和西欧人的意义一样，这是很不智的。我们在与中国政府打交道时，总是假定中国人认为这些政府是代表中国人民的。如果我们一开始就假定，即从传统的意义上说，中央政府对人民而言，通常是潜在的危险的捕食者，是“老虎”，这也许会更接近于真实。随着孙中山的革命运动，出现了代表民众、用宪法限制自身权力的政府。不过，在中国人看来，代表民众的美名在过去的十年中由国民党转移到了共产党身上。由共产党所发动和领导的人民代表大会、不计其数的委员会和讨论，使中国人感受到，自己在共产党掌权后直接参与了政府，这是他们在漫长的帝国时代里从未经历也几乎没敢要求过的。

其次，从这些文章中我们了解到，中国人对于掌握政权、施行建设性和有效的国家统治是何等地准备不足！我们许多人加入马歇尔将军的队伍，呼吁中国受过教育的自由派领导中国，建立起一个既非共产主义的、也非腐化堕落的政府。但是我们并不了解，这些自由派实质是这些传统东西的继承人。至少是从孔子时代开始，中国受过教育的人已经和伦理教条（或者如费先生所称谓的“规范知识”）而非政治行为联系在一起。实际上，正如费先生特别在第一篇与第四篇文章中明确阐述的那样，在中国，良好的政治策略是使皇帝的政治权力自然化，而不是要去控制它。他说，“无为”成为政府体制约束的同义词。因此，作为官员的文人，在制定国家政策上无所事事；行政的效率并非像西方那样体现在技术的效率上，而是体现在为保持地方不过多地受到中央政权的干扰而进行的个人游说的技能上。一个具有这种传统的受过教育的精英，没有任何政治权力或制定政策的经验，从生活方式和阶级地位上脱离了农民身份，我们很难想象这样的人能把中国从内战的混乱中解救出来，因为受过现代西方教育的中国人也只不过是帝国时代的文官的传统。

The ancient system was not based on economic justice, but it worked. It worked to the degree that, except for natural catastrophes and wars, it gave the peasant a certain amount of security. His village handicrafts provided an income supplementary to that provided by his agriculture and used the labor that was not needed in slack seasons of the farmer's year. He had to support the gentry, but the scholar-official of the class he supported was useful to him in negotiating with the representatives of the imperial power to prevent the infliction of extreme hardship; and, if the peasant was both industrious and fortunate, he might live to see his son or grandson become a scholar and an official and so experience elevation in his own status. The teachings of the ancient sages reached the peasants through these scholars and redefined again and again the sense of moral purpose which peasant and gentry had in common. The Confucian non-acquisitive ideal both harmonized the peasant's ethics with his lot in life and acted as a restraint upon an imperial power otherwise without check.

If we call this regime, from a view of its politics, democratic or authoritarian, we are likely in either case to misrepresent the facts. The participation of a good many villagers in decisions as to local matters was hardly an equal participation, and the influence of the gentry on the local life was, through their economic power alone, very great. The authoritarianism of the central government was in cases and at times truly autocratic, yet that regime was in theory based on moral authority rather than force; the teachings of the Confucians made the point again and again; the fact that an ideal other than absolutism existed influenced the facts, just as the ideal of social

equality between all men influences the facts in the United States.

Thus the opposition between gentry and peasantry in traditional China was held within bounds by the real economic interdependence of the two classes, by the degree of mobility between them, by the co-operation between the two in dealing with the imperial power, and by common ethical principles. What happened to this system that made in China a genuine social revolution? Fei's book is no systematic study of this question—or of any other—but it does suggest some part of the answer. The changes that occurred in China through contact with the West disrupted this system, made it unworkable, and increased the real or apparent harshness of the inequality of life-changes between gentry and peasantry. Fei assumes but does not discuss the general effects in China of that great awakening of the ill-fed, overworked two-thirds of the human race, who live chiefly in Asia, which is such an immense event of our times: the new and growing discontent of the underdog everywhere. The special effects which he puts to the fore are the importation of goods (rather than of capital) and the new learning. Fei is plainly convinced that the benefits of Western capitalistic development in China did the common people harm rather than good. As the gentry developed tastes for Western goods, while some of them found new sources for wealth in trading with the West, they came to spend their profits realized in rent or interest on Western products. The peasant lost his market for his handicrafts and often found it difficult to move to market any agricultural produce that he might be lucky enough to have left over from his domestic wants. Whether Fei's account can stand without some qualifications or not, the visitor to China in recent years cannot fail to catch some of the bitterness with which many Chinese look upon Shanghai and the other treaty ports, where live the privileged, Chinese or Western, "sucking out the wealth of the Chinese people for their own luxuries." So the war between Nationalists and Communists is seen, against this background, not as a conquest of China by a foreign power or a foreign ideology but as a civil conflict between the traditionally privileged rentier class and the rural population.

古代的体系并非基于经济的公平，但却可行，可行到如果没有自然灾害和战争，农民就可以有一定程度安全感的地步。在农闲季节，多余的劳动力从事手工业可以带来额外收入。他们必须供养士绅，但是在与帝国权力的代表人物交涉以避免厄运时，他们所供养的这一阶层中的文官对他们又是有用的。并且，如果一个农民既勤劳又幸运，他也许能在有生之年看到自己的儿子或孙子成为文人和官吏，那么，他自己的地位也会因此而提高。古代圣人的教导便是通过这些文人来传递给农民的，并且一次又一次重新界定农民和士绅都共同认可的道德目的的意义。孔子“无欲”的理想既调和了农民对于命运的伦理思想，又限制了皇权，否

则皇权将毫无节制。

从政治的角度看，如果我们把这种统治叫做民主或独裁，那就可能歪曲了事实。在决定本村的事务时，众多村民的参加几乎并非平等的参与。士绅单单凭借他们在经济上的实力而对当地生活造成的影响就是相当巨大的。中央政府的威权主义有时存在，而且的确十分专制，但这种统治理论上是根基于道德权威而非武力，儒家学说曾多次指出过这一点。正是一种理想而非专制主义的存在这一事实影响到了这些现实，这与在美国人人平等的理想影响到了美国的那些现实是一样的。

因此在传统的中国，士绅和农民的对立局限在一定的范围之内：他们经济上互相依赖；在某种程度上，他们之间可以流动；在同皇权打交道时互相合作；享有共同的伦理概念。那么，这一体制发生了什么而导致了中国一场真正的社会革命？费先生并没有在书中对这一问题或任何其他问题作系统研究，但却的确暗示了部分的答案。中国在与西方接触的过程中发生的变化破坏了这种体制，使其丧失效力，并使士绅和农民之间不平等的生活差异变得更为严重。费先生没有讨论占世界人口三分之二、主要居住在亚洲、食不果腹、过度劳累的人民的伟大觉醒所带来的影响，但对此作了假设。这一觉醒是当今时代的一件大事：无处不在的被压迫者对现实新生的不满与日俱增。费先生将物品（而不是资本）的进口和新学的出现这样的特殊影响看作是首当其冲的。费先生确信，西方资本主义在中国的发展对老百姓有害无利。随着士绅们逐渐培养起对洋货的品味，当他们中的某些人在与西方贸易的过程中发现新的发财之路时，他们便会开始用收取地租和利息得来的钱去购买洋货。农民的手工业品失去了市场，并且通常很难将除自用之外有幸剩下的农产品拿到集市上去出售。无论费先生的描述是否能站得住脚，近几年到过中国的人都不难感受到某些凄凉之处，许多中国人正是带着这种凄凉来看待上海以及其他通商口岸的：在那里居住着享有特权的中国人或洋人，他们“为享受荣华富贵而榨取中国人民的财富”。因此，在这种背景下，国民党和共产党的斗争就不是被看作中国被国外的势力或意识形态所征服，而是来自传统的靠收取地租和利息生存的特权阶层和农民的内部冲突。

And more and more did the sympathies of the Chinese with modern education turn to the rural population and against the *rentier* class. They came to take hope that the reforms promised by Mao Tse-tung would remove some of the worst of the economic injustices of China. They saw a chance that they could use the special scientific knowledge many of them had acquired in solving the problem of how the city and country might be made mutually beneficial. They attacked the question of how industrialization of China might be wisely carried on, so that the common people might benefit. They began to see how great was their own personal and professional problem: to learn to act politically, to help make public policy in rural communities, and to work with a peasant from whom tradition had separated them.

接受现代教育的中国人，越来越同情农民而反对收取地租的阶层。他们开始寄希望于毛泽东，希望他的改革能祛除某些严重经济不平等现象。他们看到了可以用自己掌握的专门的科学知识去解决城乡互惠互利问题的那种机会。他们着力解决如何巧妙地在中国实施工业化，从而使得普通民众可以受益这一问题。他们开始发现自己个人的和职业上所面对的问题是何等地重要，那就是要学会政治上的行为方式，要帮助制定乡村社区的公共政策，还要与在传统上跟他们分离开来的农民并肩工作。

Hsiao-tung Fei, himself a member of the gentry class, at the time these essays were written was probably the leading voice among those striving to solve the problem of China with the aid of science and toward the common welfare. Through his studies and periods of residence in the West he had come to assume a position, unfamiliar to the traditional intellectual of China, that "something must be done to help." For this he and some few others in China like him were criticized by other intellectuals. Interested in American democracy and in English socialism, convinced that the people of China must assume responsibility for economic and social reform, he turned to the writing of the papers that now appear in this book partly because the suspicious Nationalist Chinese government would not allow him to carry on field research. The essays are in part an indirect criticism of the failures of the Nationalist government. Whether today Fei has the freedom he needs to speak and act in accordance with his convictions is not known to the writer of these lines. But those who know him are sure that he will continue as long as he is able to devote his energies, and to risk his life, to help the Chinese people.

● V

The correctness of Fei's interpretations of the origins of economic and political problems in China may be open to criticism. There are other minds and other books to do this. Another aspect of the book is also open to criticism: the use and interpretation of references to classical Chinese literature. Such references occur especially in the first two essays. To me the correctness of Fei's philological and philosophical understandings is, in the general context of this work, less important than the fact that he used the Chinese classics at all. The old literati had ceased to perpetuate themselves; they are gone forever; Fei's face was turned hopefully to the Communists, whose doctrines he knew to be anti-Confucian and Marxist. Yet Fei, talking to his own people, "the plain people," elaborates and demonstrates his views with etymologies and quotations from the traditional poets and philosophers. Also he quotes Lilienthal, R. H. Tawney, and Sorokin!

There is something in these pages that tells us about the forms of thought appropriate to the persuasion of literate Chinese at the turn of the revolutionary tide.

费孝通本人出身于士绅阶层，他所写的这些文章可能是那些想着民众的福利、主张依靠科学解决中国问题的人们的先声。他在西方学习和逗留期间逐渐认识到：“该做点帮忙的事情了。”这一立场对传统中国知识分子来说有些生疏，他同国内另外几个人因此遭到其他知识分子的批判。由于他对美国的民主和英国的社会主义感兴趣，认定中国人要负起经济与社会改革的责任，所以才会写下本书中所收录的文章，这里有一部分原因就是考虑到持怀疑态度的国民党政府可能不允许他去进行实地的田野研究。这些文章实际上委婉地批判了国民党政府的失败。费先生今天是否有依其信念的言行自由，本文作者不得而知，但认识费先生的人都确信，他会尽其可能继续不畏艰险、鞠躬尽瘁地帮助中国人民。

• 五

费先生对中国经济和社会问题的解释的正确性可能会引起批评意见。这是其他人和其他书要做的事了。本书的另外一个方面也许同样会遭到批评，那就是对本书所参考的中国古典文献的运用和解释方面。这些文献尤其在前两篇文章中居多。在我看来，费先生在文献学和哲学方面理解的正确性，从本书的一般脉络上来看，并不及他运用了中国经典这一事实来得重要。古代的文人学士已离我们而去，无法再永垂不朽。费先生转而憧憬共产主义，他深知共产党人的主张与儒家思想相左，他们是坚持马克思主义的。然而他引用古代诗人和哲人的语句来向他的“纯朴的人民”阐明自己的观点。他竟然还引用到了李林塞尔、理查德·亨利·托尼和索罗金！本书的字里行间向我们讲述了在革命浪潮转折时期，合乎中国文人信念的思维方式。

● VI

Fei's seven essays are followed in this volume by six life-histories of Chinese gentry collected by Mr. Yung-teh Chow in Yunnan between 1943 and 1946. Mr. Chow has translated these into English and kindly allowed their inclusion in this book. The accounts seem to us to exhibit, in terms of the life-careers of particular individuals, some of the principal generalizations Fei offers as to the role, partly beneficial, partly predatory, of the traditional Chinese gentry. Further comment on these life-histories appears on pages 145-148.

A Chinese sociologist in this country said to my wife and me: "When a Chinese sociologist writes for Chinese, he writes very differently from the way he writes for Americans." The remark suggests something of the incompleteness with which Western social

science and traditional Chinese forms of thought have become fused. It helps to explain, also, why my wife left in the text the many references to Chinese classics which Fei put there and introduced in the footnotes some explanations of some of these references. These references are entirely superfluous to the Sinologist; they are inserted to help readers who are not Sinologists to recognize the sources of some of Fei's allusions.

In the cases of Chinese who have written in English and have recorded their names with the surname in last position, we have followed this practice; in other cases we have written the names as the Chinese do: with the surname first.

My wife and I are indebted to Mr. William L. Holland and the Institute of Pacific Relations (which had previously given aid to Fei for his researches on the Chinese gentry) for guidance and encouragement in the course of the preparation of the manuscript; to Professor John K. Fairbank, Dr. Marion J. Levy, Jr., Dr. Derk Bodde, W. Lloyd Warner, and Dr. Sol Tax for their kindness in reading the work and making helpful suggestions; and to Dr. Shu-ching Lee for advice on points of Chinese language or history and in connection with the editing of the life-histories. None of the above, however, has any responsibility for the content or form of the book.

本书除了费先生的七篇短论外，接下来是六篇中国士绅的生活史，由周荣德先生于1943年至1946年间在云南搜集整理。周先生已将其译成英文并惠允我加进本书中来。从这些个人生活经历的角度来说，这些描述似乎向我们展示了费先生所概括的传统士绅阶层作用的一些主要性质，其作用大可说是利弊参半。在本书的145页至148页有对这些生活史的进一步评论。〔该附录部分非费孝通所作，故未收入本书——编者注〕

一位中国社会学家对我和夫人说：“当一位中国社会学家为中国人写作时，他的写作风格与为美国人写作时截然不同。”这一见解暗示了西方的社会科学和中国人的传统思维方式相融合时某种程度的不完全。这也有助于解释为什么我夫人在正文中保留了费先生引用的众多中国古典文献，并在脚注中对其中一部分加以解释说明。这些引用对汉学家来讲完全多余，它们是为了帮助非汉学家的读者去认识费先生某些引述典故的出处。

对于那些曾用英文写作并以英文形式（姓氏在后）注名的中国人的姓名，我们姑且沿用这种形式。其余的名字我们仍按中国人的习惯，即姓氏在前。

在准备本书原稿的过程中，威廉·霍兰德先生和太平洋国际学会（该学会曾为费先生研究中国士绅阶层问题提供帮助）给予了我们指导和鼓励，我和夫人在此深表感激。费正清教授、小马利恩·利维博士、德克·卜德博士、劳埃德·沃纳和索尔·塔克斯博士都阅读了本书，并提出了宝贵建议；李树清博士在汉语语言和中国历史以及生活史编辑工作方面多有建议——我们在此都一并表示感谢。以上诸位对本书的内容和形式不负任何责任。

Chapter One The Gentry and the Imperial Power

第壹章 士绅与皇权

The term "gentry," *shen-shih*, refers to a class of persons with a definite position and definite functions in the traditional society of China. Here, by "traditional society," is meant the period after the breakdown of feudalism and the unification of the empire under a centralized monarchical power not long before 200 B.C. The development of the gentry class has a history; only through this history can we understand its characteristics.

The class that is here called gentry is also sometimes referred to as *shih ta fu*, "scholar-official." Actually the gentry class, although closely linked with the group of scholar-officials, should be distinguished from it. To be born into a gentry family did not necessarily insure that one became a scholar or an official in traditional China. Under feudalism the situation was different. At that time the gap between the nobles and the commoners was great. *Shih*^[1] and *ta fu*^[2], although they were the bottom of the hierarchy of the ruling class, were still a part of that class and as such possessed real political power. But after the breakdown of feudalism political power

was no longer portioned out but became concentrated in the person of one man, the monarch. In order to carry out his administrative functions, the monarch required assistance. This was given him by the officials. The officials then were no longer relatives or members of the ruler's own family but rather employees—the servants, or tools, of the monarch.

After the breakdown of feudalism there was another important change. The throne became the object of capture by the strong, by the hunters after power. Under feudalism, in which political power was distributed to relatives and kin, anyone not born into a noble family was a common man who had no chance of reaching the throne, of touching or even of seeing the divine paraphernalia of monarchy. No more than a woman can change into a man could a common man become royal. But, when feudalism went, anyone could become emperor. Thus political power became an object of struggle. This is illustrated by the story told by the historian Ch'ien Ssu-ma of Xiang Yu, who during the Ch'in dynasty (221–206 B.C.), in watching an imperial procession, said to his friend, "This I can seize." Since that time the struggle for political power has never ceased. Political power in the eyes of the people has become something precious to be sought after, an enterprise for large-scale entrepreneurs.

“士绅”这个词，指的是在中国传统社会中占有一定地位、发挥一定功能的一个阶层。这里所谓的“传统社会”是指临近公元前3世纪时封建制度解体之后，由中央集权一统天下的帝国时期。士绅阶层有其自身的发展历史，只有通过这一历史，我们才能了解其特征。

本书所讲的士绅阶层有时也被称为“士大夫”。实际上，虽然士绅阶层与士大夫群体紧密相连，但仍应把他们区分开来。出身于士绅家庭，并不能确保此人将来一定会成为中国传统社会中的文人或官员。在封建时代，情形便不大一样。封建时代的贵族和平民之间存在有不可逾越的鸿沟。“士”^[3]和“大夫”^[4]虽然处于统治阶级等级体系的最底层，但他们仍属于统治阶级的一部分，并拥有真正的政治权力。但封建制度解体后，政权不再分散，而是集中在最高统治者一人手里。为了实施管理，最高统治者需要辅佐。这种辅佐是由官吏来提供的。因此，这里的官吏不再是统治者的家族成员或亲戚，而是他的雇佣，即仆人或者统治工具。

封建制度解体后发生了另一重要的变化，皇权成为强者、权力追逐者竞相争夺的目标。在封建制度下，政权分配给统治者的亲戚和家属，出生在贵族家庭之外的人是平民，他们永远没有机会登上王位，没有机会触摸君王的神圣用具，甚至连看的机会也没有。平民要想成为皇室的成员就像女人要变成男人一样不大可能。但是，封建制度解体后，任何人都有可能成为皇帝。这样，政治权力就成为大家争夺的目标。历史学家司马迁描述过这样一个故事：秦朝（公元前221年—公元前206年）时

的项羽在观看皇家列队时对他的朋友说：“彼可取而代之。”从那以后，争夺政治权力的斗争从来就没有停止过。政治权力在人们的眼里已成为竞相猎取的宝贝，要做大买卖的就干这个。

Unfortunately, since the breakdown of the feudal structure in China, political power has no longer been transmitted permanently in certain families, and up to the present no peaceful means of attaining it has ever been found. We continue to be convinced that the way to gain political power is through "taking up the stick" and fighting civil wars. Those few who emerge victorious in this struggle become emperors; the defeated become bandits. So we have had a succession of tyrants. A few people rule the mass. The nature of this despotic monarchy is not changed by the handing-on or relaying of power. In England, when a monarch was killed, monarchical power itself received a blow. Changes of monarchy led in time to a growth in the power of the people and to a government monarchic in name only. But, in China, blood flows from the people's veins, while those who attain the throne are but a few fortunate adventurers, like Liu Pang, the first emperor of the Han, who was born a lowly peasant, or Chu Yuan-chang, the founder of the Ming dynasty. When we study official versions of Chinese history, we find presented to us a continuous line of dynastic descent; but we should not forget that the authority of these rulers was continuously challenged by civil wars and unscrupulous adventurers.

To struggle for political power by violence is dangerous. If a man succeeds, he may become emperor; but, if he loses, he will be killed, and not only he himself but his whole family and clan. When he is challenging the established emperor, he is called a bandit and rebel, and the might of the army is directed against him. Moreover, the empire gained by violence may be lost by violence also. Twice in history, according to tradition, emperors tried to give up their power to other men who they thought would make better rulers. But those to whom the power was offered did not want it. They preferred to run away rather than to take on the responsibility. We do not know how far these two emperors were sincere in their desire to give up their power and to what extent this action was no more than a gesture or a piece of complicated political intrigue. There is no question of the fact, however, that in all of Chinese recorded history there is not a single case of voluntary abdication from the throne. Those abdications which did take place were forced. "The empire that was won on horseback will be lost only on horseback," as the popular saying goes.

[5]

To seek to become a monarch is to risk one's life. The heir to the throne must uphold his succession. The emperor, who should be

merciful, may pardon all other crimes but not the crime of attempted usurpation. That is the most terrible thing that can be attempted under heaven. To anyone who reads the records of the beginnings of the Ming dynasty, the account of tortures applied to those who menaced the throne sounds like an account of progress through hell. I was told that the models of the "eighteen hells" found in district Buddhist temples are reminiscent of what was really done in the Ming dynasty. The threat of torture was the emperor's protection. I remember once as a boy calling out in play, "I am the emperor." My grandmother stopped me at once, saying, "You must never say that." This was not superstition or overcaution on her part but a recognition of a real danger in rash speaking. According to tradition at least, emperors used to have those children killed whom fortune-tellers foretold would one day become monarchs.

不幸的是，中国封建制度里解放出来的政权，固不再专属一姓、万世一系了，但是到现在还没有找出一个夺取政权的和平方式。我们一说起夺取政权，就忘不了“揭竿而起”的内战手段。武力争夺的方式下，政权变成了“成则为王、败则为寇”的夺宝对象。夺来夺去，以暴易暴，总是极少数人统治着其他的人民，专制的皇权并没有在政权的传承和接替中发生任何性质上的改变。我们不像英国——杀了一个皇帝，皇权减少了一些，民权抬了一些头；赶走一个皇帝，皇权又减少了一些，民权再抬一些头；最后竟成了个挂名皇帝，取消了皇权——但是，在传统中国只有“取而代之”的故事，流的是人民的血，得到宝座的却是少数幸运的“流氓”，像下层农民出身的汉朝开国皇帝刘邦、明朝开国皇帝朱元璋等一派人物就是。在官方修撰的史籍上，固然有着一脉相承的正统；可事实上，大小规模的内战和肆无忌惮的冒险者恐怕是经常的现象，史不绝书，不断挑战着统治者的权威。

以武力争夺政权是危险的事。成固然可以称王，败则只有一死；非但一死，而且还会灭族。当他向当政的皇帝提出挑战时，他就成为寇匪或反贼，军队会冲他而来。况且，通过暴力得来的政权可能也会因暴力而丧失。历史上曾有过两次，依照传统，皇帝试图把政权让给他认为是更好的统治者的人。但是那些人并不想得到政权，他们宁可远离而不愿肩负责任。我们无从得知这两位皇帝让出政权的诚心有多大，也不清楚在何种程度上，这不过是一种姿态或是复杂的政治阴谋。但是有一个事实无法否认：中国有记载的历史中，没有一个皇帝主动退位让出皇权；曾经有过让位的例子，但那是出于被迫。常言道：马背上得天下，亦只于马背上失天下。^[6]

想当君王实际上是拿生命去冒险。王位继承人肯定要保住其继承权。作为皇帝应该仁慈，他可以赦免其他所有罪行，而唯独不能对谋反篡权罪手软。谋反是天底下最可怕的事。任何读过明朝初期历史的人都知道，书中描写的对谋反分子施加的酷刑仿佛是在地狱中发生的一样。我们在城隍庙里所见到的“十八层地狱”的形象，据说是写实的，是明史的标本。酷刑的威胁便是皇帝的保护伞。记得小时候，有一次我在玩耍

中大喊了一句：“我是皇帝！”祖母急忙阻止我说：“这是不能说的！”她并不是迷信，也非过于小心，而是意识到信口一句话会带来的实际的危险。至少依照传统来看，皇帝常会把那些据算命先生讲长大后会做皇帝的孩子杀死。

But this threat of violence has never really given effective protection to monarchical power. As Lao-tzu says, "When one does not fear death, how is it possible to threaten a man with death?" When it is possible to gain political power through violence, the throne is tempting. Though the brutality of those in authority may silence the majority, repression will never be entirely successful. The magnitude of the stakes, an imperial power which could be used to realize any whim, could not but make the effort attractive in spite of dangers. On the one hand, there were those who were willing to gamble with their lives; on the other, there were those who submitted quietly. One may ask, then, what it was that decided on which side a man should be.

Under monarchical rule the people had only duties without rights; the emperor's word was law. If he wanted to build a great palace, an imposing tomb, or a grand canal, he ordered it done without regard for the people. If he wanted to expand the boundaries of his kingdom, he commanded his army to mobilize regardless of whether the people liked it or not. The paying of taxes, the conscription of soldiers—these were burdens for the people to accept without compensation. Those who have lived under despotic monarchical power will understand Confucius' saying, "A brutal monarch is even worse than a tiger."^[7] This policy of despotism more fearful than a tiger has had a long history in China. So we say, when the tiger comes out from his cage, the frightened people escape to the Liang hills.^[8]

Upon all who are unarmed, we may say, the threat of political tyranny falls with equal weight. Yet in this, too, there have always existed differences. The richer folk could afford to pay for security. In the Chinese traditional pattern conscription, for example, could be bought off. The breaking-up of a family such as is described in "Old Poem" could never have happened in a rich family.^[9] Thus it was that people from this class became political adventurers.

但是，武力的威胁并没有真正有效地保护皇权。正如老子所言：“民不畏死，奈何以死惧之？”当通过暴力夺取政权成为可能时，王权就变得异常诱人。虽然统治者的暴行可以使多数人保持沉默，但压迫永远也不会完全奏效。在予取予夺的专制皇权下，政权可以用来谋取私人的幸福，社会也可以从顺逆的界限上分出敢于冒大不韪的人和不敢冒大不韪的人。那么，有人就会问了，敢与不敢这样的事情是怎样决定的呢？

在专制政权之下，人民只有义务而没有权利，皇帝的话就是法律。皇帝如果想要建造一座宏大的宫殿、巨大的陵墓，或是挖一条大运河，

他不会顾及百姓，只是下令让手下人去做。如果他想开疆拓土，就会命令军队去动员，不管人民愿不愿意。赋税和兵役都是百姓难以接受的负担，并且没有任何的补偿。生活在暴虐的专制统治下的人们很容易理解孔子的“苛政猛于虎也”这句话。^[10]这种比老虎更可怕的暴政在中国有很长的历史。所以我们说，这政治老虎出了栏，就会吓得人逼上梁山了。^[11]

专政统治的威胁对所有手无寸铁的人来讲，其威力都是一样的，但常常也有不同。富人可以用银子来买安全。比如，古代中国的征兵制度中有用银子来代替服兵役的做法。古诗中描写的支离破碎的家庭绝不会是富人家。^[12]因此恰恰是出自贫民阶层的人变成了政治上的冒险者。

The possession of riches or the lack of them was what was important for making some acquiesce and others rebel. "Man fears to be distinguished as a pig fears to be fat." When the political tiger attacks, the man who is rich will have a greater difficulty in escaping than the man without property. In such a case property becomes a burden. Propertied families developed great alertness in watching the behavior of the tiger. The poor man who has become desperate may rebel, become a bandit in the mountains, and even, in time, challenge the royal authority itself. But a man of property and family cannot easily do this. He must find some way to avoid the attack of the tiger. Unfortunately, as the old saying goes, "From the water's edge, all land is the emperor's; under the heavens all are the emperor's men." At that time travel was not easy; one could not run away to Washington or Brazil, nor was there any International Settlement in a treaty port, nor even any Hong Kong. Physically there was no escape. Perhaps this is not quite true, after all, because we know that from early times certain individuals were able to escape to Korea or Japan. But the ordinary man had to find some means of protection within the structure of society itself.

There was a weak point, however, in this centralized monarchical system. He who held power, the emperor, as I have said, could not administer the country by himself. Even though he might not wish to share his authority, he still required help in ruling and must therefore employ officials. These officials, with whom the ruling house had no ties of kinship, functioned merely as servants with administrative power but no power of policy-making. It was within the inefficiencies of this system that the ordinary man found his opportunity to carry on his private concerns.

It is true that previous to the unification of Ch'in (221 B.C.) there were attempts to establish an efficient administrative system. This was done under the influence of the *Fa Chia*, or Legalist, school of thought. Theoretically, the system proposed by this school of thought was a good one.^[13] In order to have an efficient administration of the

country, a legal basis must be established, with everyone controlled by the same law. Shang Yang, as prime minister of Ch'in, attempted to put this theory into practice. But the theory unfortunately neglected one small point. One man, the emperor, was left outside the law. And this omission destroyed the whole system of the *Fa Chia*.^[14]

财富的占有和匮乏是导致沉默和反抗的重要原因。“人怕出名猪怕壮。”当政治猛虎出击的时候，富有者比穷人更难以逃脱灾难，这时候财富变成了负担。富贵人家善于对“老虎”察言观色，而绝望的穷人也许会揭竿而起，或是落草为寇，甚至迟早直接向皇权发起挑战。一个有家室、有财产的人不会轻易这么做，他必须设法摆脱“老虎”的攻击。不幸的是，正如古人所言：“普天之下，莫非王土；率土之滨，莫非王臣。”那时出门可不容易，不能跑到华盛顿或巴西，也不可能在任何一個通商口岸寻求国际避难，甚至也没有香港这类地方。在地理空间上是无处可逃的。但也许并不完全如此，毕竟我们知道有些人在早年就逃到了朝鲜或日本。但是，一般人只能在现有的社会体制下寻找自我保护的途径。

不过，这种集权的专制统治有一个弱点，正如我说的那样，掌握政权的皇帝，不能独自管理国家。即使他不愿意让别人分享权力，他仍需要任命官吏做助手和代理，协助其实施统治。这些官吏与皇室没有亲戚关系，如同皇帝的雇佣，他们没有立法权，只有行政管理权。在这种效率低下的制度下，普通百姓才有机会产生私欲。

在秦朝统一国家（公元前221年）以前，确实曾有些人想要建立一个富有效率的行政机构。这是受到了法家学派的思想的影响。从理论上讲，这一学派提出的体系是好的。^[15]有效率的行政机构必须是一个法制的机构，所有人都要受到同样的法律的控制。作为秦国宰相的商鞅试图要将这一理论付诸实践。可不幸的是，这一理论有一点小小的疏忽——有一个人没有被纳入法律之内，那就是天子。这留在法律之外的一个人却把法家的整个体系废黜了。^[16]

Shang Yang himself lost his life on this account, for, though under the law he was able to punish the prince when he was only the heir to the throne,^[17] as soon as the prince became emperor, he ordered Shang Yang killed. And the efficient system which Shang Yang himself had established prevented him from escaping.

If the highest authority were bound by law, then administrative authority would be able to cage the tiger. But in Chinese history this has never happened. As a result, the ruled, including the officials themselves, have never sought for efficiency in administration. Rather the opposite has been true. Inefficiency and parasitism, on the one hand, remoteness of imperial control and a do-nothing policy by the emperor, on the other—this has always been the ideal. Yet this ideal of government, of a "good emperor" as one who presided but did not rule, has rarely been attained. As far as the officials were concerned,

the next best thing, then, could only be to protect themselves, to keep a back door open for their relatives, and to be able to use their position as a shield against the emperor's whims. To protect not only themselves but their relatives and their whole clan from the unchecked power of the monarch, and to do this not by constitutional or by legal means but by personal influence—this is what they sought. Not by challenging the emperor's authority but by coming close to him, by serving him and from this service gaining an advantage in being enabled to shift the burden of the emperor's demands onto the backs of those lower down, did the propertied class attempt to neutralize the emperor's power over them and to avoid the attack of the tiger. Groups of officials, with their relatives, formed, thus, in Chinese society a special class not affected by the laws, exempt from taxation and conscription. Nevertheless, they had no real political power.

To escape domination while approaching the source of power takes a highly developed skill. The position of the officials was not easy. As the old sayings go, "When the emperor orders your death, you must die" and "All the blame is mine; the emperor can do no wrong." If the official relaxed his efforts on behalf of the emperor, he might lose his life. When the emperor required money or labor, he must be active in meeting these demands—a task he accomplished by shifting the burden onto the backs of the people. Yet, if the burdens became too heavy for the people to bear, they might rebel, and it was then the officials who would be attacked first and who would serve as the scapegoats of the monarch.^[18] The officials must be two-faced: severe toward the people and compliant toward the emperor. They must know the art of going just so far and no further in order that they might not be caught either by the fury of the emperor or by the wrath of the people. Chinese officials' life has been described as the art of maneuvering on a stormy sea. Experience through the ages was the teacher. It may be noted that in Chinese the expression, "Do not speak to me officially," does not mean the same thing as in English but rather, "Speak to me sincerely."

商鞅因此自己把命丢了，尽管在法律之下，他能够对还只是王位继承人的太子加以惩罚^[19]，但是太子一当上皇帝就下令将商鞅杀掉，由商鞅自己所建立起来的高效率的体系也使他自己在劫难逃。

如果最高的权威受到了法律的约束，那么行政的权威就能够将这只老虎囚住。但是在中国的历史上，这样的事情从来没有发生过。结果，被统治者——包括官吏自己在内——从来就不追求行政上的效率。实际的情况正是与之相对立。一方面是无效率和寄生，另一方面是天高皇帝远以及皇帝的无为政策——这一直是一种理想的状态。然而这种政府的理想，即是说一位“好皇帝”应当统而不治，这样的皇帝很少有人能够做

到。就官吏而言，退而求其次的办法就只能保护他们自己，为他们的亲戚开后门，并且还能够利用他们的位置作为一种挡箭牌来抵御皇帝的变化无常。要保护的不仅是他们自己，还有他们的亲戚以及整个宗族免遭不受限制的君主权力的侵扰，而且这样做所依靠的并非是宪法或者法律的手段，而是依靠个人的影响力——这就是他们所追求的。有产阶级想要消磨掉皇帝加诸他们身上的权力，并以此来避开这只老虎的攻击，并非是靠对皇帝的权威加以挑战，而是靠亲近皇帝、为皇帝服务，从中获得的一种好处便是能够将皇帝各种要求的负担转移给比自己阶层更低者。官僚及其庇护下的亲友集团由此构成了中国社会所特有的一个不受法律影响的阶层，他们有免役免税的特权。虽然如此，但他们并没有真正的政治权力。

逃避自己想要接近的权力之源的支配，需要高超的技能。官僚的位置并不轻松。正如古语所言：“君要臣死，臣不得不死”，还有“臣罪当诛，天王圣明”。他不能怠工而有损皇帝的利益，否则可能性命不保。当皇帝需要钱或劳力的时候，他必须特别卖力来满足这些需要，即通过把整个的政治负担转嫁到平民身上来完成这项差事。但是，一旦这种负担过重，人民无法承受之时，他们便可能起来造反，到时就是这些官僚们首当其冲地受到攻击，由此而成了国君的替罪羊。^[20]官僚们必须有两套面目：对人民严酷而对皇帝顺从。他们必须要知道进退有节，适可而止，以免走了极端而惹恼了皇帝，或者是引起人民的激愤。中国官僚们的生活曾被描述为是在风云变幻的海上运筹帷幄的艺术。代代相传的经验即为人师。应该注意的是，在汉语中所说的“不要打官腔”，并非与英语字面的意思一样，而实际是在说：“跟我说实话。”

In normal times to be an official was no direct economic advantage. From the monarch's point of view, for an official to use his position to enrich himself meant corruption of the system and a diminution of his own treasure. Thus, unless a monarch were very weak, he would not tolerate such officials. An official in ordinary times would not improperly profit from the office but would leave it with "two sleeves full of wind."^[21]

Why, then, should people want to be officials? The poem of T'ao Yuan-ming expresses the feelings of one such man:

Why should I be an official?

I bend my back

For only three piculs of rice

Why should I not go back to till the land?^[22]

T'ao Yuan-ming was a typical unworldly poet. Yet, in spite of his talent and his interest in the things of the mind, even he had to "bend his back" and occupy an official position and withal receive only a small financial reward. Why did such a one accept this position instead of staying home where he was happy? The fact is that, if he

had shown his scorn of officialdom by leaving office, he would probably by now be "a man without an arm."^[23] The choice lay between "bending the back" or being disabled. The necessity for becoming an official was a little like the need for being inoculated. Just as one runs the risk of having a bad reaction to an inoculation, so in becoming an official one may risk having one's property confiscated or even one's head cut off. But, once the inoculation is over, one has gained protection. This analogy is not too apt, since from an inoculation one person becomes immune, whereas if one has been an official one can protect a whole group of people. As a result, it happened that sometimes a group would join to aid in the education of one man so as to enable him to reach officialdom. "One man rises to officialdom, then all his dogs and chickens will be promoted," is the saying.

在平常的日子里，做官并没有什么直接的经济上的好处。在皇帝看来，官员利用自己的职位来致富，不仅意味着腐化皇权所依赖的制度，而且是皇家财富的减缩。因此，除非某位皇帝软弱无能，否则，他是不会容许有这种官员存在的。处在太平盛世的官员不会不合法地从官位上捞到好处，而只会在离任时留下“两袖清风”。^[24]

那么，为什么人们还想要做官呢？陶渊明的诗表达了这种感慨：

我为什么要去做官呢？

只为五斗米折腰。

我为什么不归耕田园？^[25]

陶渊明是一位典型的出世诗人。尽管他富有才气，也很有风雅，但他还是“折了腰”，身居一个官位，仅仅是为了得到那么一点俸禄。为什么这样的一个人要去接受这样的位置，而不是呆在他所喜欢的家里呢？事实恰恰是，如果他真的表现出自己看不上官职，弃官而去，他就可能成为一位“折臂翁”了。^[26]这就是说必须在“折腰”和“折臂”之间作出选择。做官的必要性有点像打防疫针。正像打防疫针要冒打了过后有不良反应的风险一样，做官就可能要冒抄家和掉脑袋的危险。但是，一旦打了针后，人就可以有免疫力了。这样的比喻略有点不贴切，因为打了防疫针，只能够使一个人自己得到免疫，而做官所能庇护的是一整群的人。结果有时就出现了一大群人资助一个人去读书，以便使他能够获得个一官半职；一人升官，鸡犬安宁。

In Chinese traditional society the clan or big family naturally constituted a group which could take action of this sort, supporting one of their members until the time when he should become a scholar and be eligible for the official examinations. Once this individual attained official honors, the whole clan could rely upon him. Without any strong person at court, it was difficult to protect one's property. Ku T'ing-lin was an official during the Ming dynasty, but, when the

rule passed to the Manchus, he refused to continue in an official position, gave up traveling abroad, and shut himself up at home with his books. Yet for his own protection he was obliged to send his two nephews to the Ch'ing court to serve his enemies. This was made possible by the fact that, as we have said, Chinese officials did not share in the political power of the emperor but served their monarch by neutralizing and softening down his power rather than by supporting it. With his nephews in court, the uncle was protected even in secret rebellious activities. According to Chinese tradition, officials did not work seriously for the government, nor did they like to continue as officials for a long period. Their purpose in entering the government was to gain both immunity and wealth in this order. The Chinese officials when in office protected their relatives, but, when this duty to the family had been performed, they retired. Retirement and even a hermit's life were the ideal. In retirement there was no longer any authority to be served with watchful care, while the relatives who had gained protection from their kinsman official owed him a debt of gratitude. Now he need only enjoy his social prestige and grow fat and happy. As we say in China, "To come back to one's native soil, beautifully robed and loaded with honors, is the best thing in life."^[27] Such a man will not attempt to seize power; his children will not play at being emperor. Nor will he have any idea of reforming the social system, for that system will do him no harm. Once out of the way of imperial influences, he may enjoy the economic power of a landowner.

This is the sort of man I mean by gentry. The gentry may be returned officials or the relatives of officials or simply educated landowners. In any case, they have no real political power in shaping policies and may have no direct connection with politics whatsoever, yet they do tend to have influence at court and to be immune from political exploitation. And the more fearful the ruler and the more tiger-like, the more valuable is the gentry's protective covering. In such circumstances it is difficult to survive except by attaching one's self to some big family.

在中国传统社会中，宗族和大家庭自然就构成了这样的一个团体，这个团体所做的一件事情就是供其中一员去上学，一直到他考上了功名，得了一官半职，一族人就有靠山了。若在朝廷里没有靠山，在乡间想保持财产是困难的。顾亭林是明朝的一位官员，当改朝换代成了清朝，他拒绝再任官员，深居简出，闭门读书。但是为了安全和保障，他还是不得不派两名外甥到朝廷里去侍奉他的敌人。正如我们已经说过的，这之所以可能做到，是因为中国官员不是与皇帝分享政治权力，是通过淡化和弱化而非支持其权力来服务于君主。外甥做官，保障了舅舅的安全，甚至使舅舅能安心地去下革命的种子。中国传统的官吏并不认

真做官，更不想终身做官：打防疫针的人绝不以打针为乐，目的在免疫和免了疫的健康。中国的官吏在做官时庇护其亲友，做了一阵，他任务完成，就要告老还乡了，即所谓“归去来兮”那一套。退隐山林是中国人的理想。这时，上边不必再小心伺候随时可以杀他的主子，周围是感激他的亲戚街坊。此时他只需要享受他的社会声望，生活富足，心宽体胖。正如中国人所说的，“衣锦还乡是人生活中最美好的事情”。^[28]他不冒险去觊觎政权，他的孩子都不准玩“做皇帝”的游戏。他更不想改革社会制度，因为这种社会制度对他并没有害处。一旦他脱离开皇权的限制，他就可以享受地主的经济权利。

这种人就是所谓的“士绅”。士绅可以是退任的官僚，或是官僚的亲属，甚至可以是受过教育的地主。在任何情况下，他们都没有左右政策的实际的政治权力，可能与政治也没有任何直接的联系，可是他们常常有势力，势力就是政治免疫性。统治者越可怕，越像猛虎一样，士绅的保护性的庇护作用就越大。在此情况下，托庇于豪门才有命。

[1] Shih: "This word is often translated 'scholar,' but this is only a derived, metaphorical sense and the whole force of many passages in the Analects is lost if we do not understand that the term is a military one and means 'knight.' A shih was a person entitled to go to battle in a war-chariot, in contrast with the common soldiers who followed on foot. Confucius, by a metaphor similar to those embodied in the phraseology of the Salvation Army, calls the stout-hearted defenders of his Way 'Knights'; and hence in later Chinese the term came to be applied to upholders of Confucianism and finally to scholars and literary people in general. The burden of most of the references to shih in the Analects is that the Knight of the Way needs just the same qualities of endurance and resolution as the Soldier Knight" (Arthur Waley, *The Analects of Confucius* [London: George Allen & Unwin, 1938], pp. 33-34).

[2] Ta fu: lower-ranking official under feudalism.

[3] “士”这个字“英文经常译成‘scholar（学者）’，这只是一个引申出的比喻义，实际上此词与军事有关，是‘骑士’的意思，如果我们不这样理解，《论语》中很多篇幅就会完全丧失意义。‘士’是可以乘战车奔赴战场的，而普通士兵只能徒步其后。孔子打了一个比方，这个比方所指的人与有着‘救世军’称号的人是相似的，孔子把英勇护卫其道的人称作‘骑士’。因此，在后来的汉语中，这个词用来指拥护孔子思想的人，最后统指文人。《论语》中大多数关乎‘士’这个字的重点都是指需要像战士中的骑士一样具有那种忍耐力和不屈不挠禀性的卫道士”。引自《论语》英文版，阿瑟·韦利译，伦敦：乔治·艾伦与昂温出版公司，1938年，第33—34页。

[4] “大夫”：封建制度下地位较低的官吏。

[5] This phrase seems to refer back to the story told of Kao-tsu, the first emperor of Han, and the Confucian scholar Lu Chia. "After his [Lu Chia's] return in 196 or 195 B.C., he is said to have quoted the Book of Odes and the Book of History to Kao-tsu, whereat the latter scolded him and said, 'I got the empire on horseback; why should I bother with the Book of Odes or the Book of History?' Lu Chia replied, 'You got it on horseback, but can you rule it from horseback?' Then he proceeded to quote cases, from ancient history, of kings who had lost their thrones through their wickedness, concluding with the Ch'in dynasty, which Kao-tsu had himself overthrown" (Pan Ku, *The History of the Former Han Dynasty*, trans. Homer H. Dubs [Baltimore: Waverly Press, 1938], I, 21).

[6] 此句源于汉代开国皇帝高祖与儒生陆贾的故事。“公元前196年或前195年，陆贾出使回来后，据说他对高祖引述了《诗经》和《书经》的话。高祖责备他说：我从马上得到天下，何必计较《诗经》和《书经》呢？！（乃公居马上而得之，安事《诗》、

《书》！）陆费则回答道：您可以在马上得天下，但是您能在马上治理天下吗？（马上得之，宁可以马上治之乎？）然后，他引经据典，历数古代帝王由于暴虐丢掉王位的史实，直到高祖推翻的秦朝。”引自班固《汉书》英文版，德效骞译，1938年，巴尔的摩：韦弗利出版社，第1卷，第21页。

[7] "As they [Confucius and his disciples] passed by the T'ai mountain, the attention of the travellers was arrested by a woman weeping and wailing at a grave. The sage stopped, and sent one of his followers to ask the reason of her grief. 'My husband's father,' said she, 'was killed here by a tiger, and my husband also, and now my son has met the same fate.' Being asked why she did not leave so fatal a spot, she replied that there was there no oppressive Government. 'Remember this,' said Confucius to his disciples, 'remember this, my children, oppressive government is fiercer and more feared than a tiger' " (James Legge, *Life of Confucius*, in Vol. I of *The Chinese Classics* [2d ed.; Oxford: Clarendon Press, 1895], quoted from Li Chi, pp. 67–68).

[8] The Liang hills are here a reference to the Chinese novel, *Ju Hu* (All Men Are Brothers), in which it is told how men of many sorts, fleeing from harsh punishments of the authorities, came to band themselves together and lived by defying the government and preying upon the rich and powerful. Stories of this sort had a very real basis in fact. In Pan Ku's *History of the Former Han Dynasty* we read, for example: "Ch'ên Shê was an ambitious farm boy who became one of the chiefs of a levy of men made in the present southern Honan.... In the later-summer of 209 B.C., a bad rain prevented this levy from reaching its destination on time. According to Ch'in laws, the officers and men of the levy would have been condemned to death; they accordingly conspired to rebel. As a slogan they falsely called themselves partisans of Fu-su, the displaced heir of the First Emperor, and fabricated miracles to legitimize themselves. The rebellion was not thus at first openly directed against the dynasty, but was merely the act of men driven to desperation by over-harsh laws" (I, 4).

[9] "Old Poem," translated by Arthur Waley from *The Book of Songs*, reads: "At fifteen I went with the army, At fourscore I came home. On the way I met a man from the village, I asked him who there was at home. 'That over there is your house, All covered with trees and bushes.' Rabbits had run in at the dog-hole, Pheasants flew down from the beams of the roof. In the courtyard was growing some wild grain; And by the well, some wild mallows. I'll boil the grain and make porridge, I'll pluck the mallows and make soup. Soup and porridge are both cooked, But there is no one to eat them with. I went out and looked towards the east, While tears fell and wetted my clothes." (Arthur Waley, *Chinese Poems* [London: George Allen & Unwin, 1946], p. 51.)

[10] “当他们（孔子和他的学生）路过泰山时，发现一个妇人在坟前哭。孔子停下脚步，让学生前去打探原因。妇人说：‘我的公公和丈夫都在这里被老虎吃掉了，如今我的儿子也没能逃脱这个厄运。’当问她为什么不离开这个不幸的地方时，妇人说这里没有官府的压迫。孔子对学生说：‘记住啊，学生们，残暴的统治比老虎更可怕。’”（孔子过泰山侧，有妇人哭于墓者而哀。夫子式而听之，使子路问之，曰：“子之哭也，壹似重有忧者。”而曰：“然。昔者吾舅死于虎，吾夫又死焉，吾子又死焉。”夫子问：“何不去也？”曰：“无苛政。”夫子曰：“小子识之，苛政猛于虎也。”）出自《礼记》，引自《中国典籍》第1卷之“孔子生平”，理雅各编译，伦敦：克拉伦登出版社，1895年，第2版，第67—68页。

[11] 梁山典故出自中国古典小说《水浒》，该书讲述了各色人等为逃避官府压迫而聚集在一起，杀富济贫，公然反对官府的故事。事实上，这类故事有深厚的现实基础。例如，班固在《汉书》中写道，陈胜（字涉）是一名有鸿鹄之志的农民，后来成为今属河南南部征募上来的兵卒的屯长……公元前209年夏末，一场大雨使得他们无法及时到达目的地。根据秦朝的法律，他们都将处死。于是他们共谋起义大计。他们谎冒被废的皇太子扶苏的拥护者，通过编造鬼神启示来使他们的行为具有正当性。因此这一起义最初并非直接要反抗朝廷，而仅仅是一帮被严刑峻法逼上绝路的人的负隅之

举。

[12] 这首古诗名为《十五从军征》，全诗如下：“十五从军征，八十始得归。道逢乡里人：‘家中有阿谁？’遥看是君家，松柏冢累累。兔从狗窦入，雉从梁上飞；中庭生旅谷，井上生旅葵。春谷持作饭，采葵持作羹；羹饭一时熟，不知贻阿谁。出门东向看，泪落沾我衣。”引自《中国诗歌》，阿瑟·韦利译，伦敦：乔治·艾伦与昂温出版公司，1946年，第51页。（参考林庚和冯沅君主编《中国历代诗歌选》[上编]，第1册，人民文学出版社，1983年，第128页。——译者注）

[13] Waley discusses the social situation in which the Legalist school rose to power under the title "The Realists," in *The Way and Its Power* (London: George Allen & Unwin, 1934), pp. 68–86. The Fa Chia system, in spite of its recognition of the importance of a "rule of law," and its effort toward greater efficiency in government, does not appeal to the Western liberal mind. The Book of Lord Shang, trans. J. J. Duyvendak (London: A. Probsthain, 1928), supposedly the writing of Shang Yang, otherwise known as Wei Yang or Lord Shang, expresses the extreme position of the Legalists. Duyvendak comments: "Law, having been applied theoretically only in order to enforce the observance of the standards set by natural moral law, now became the instrument for enforcing the standard set up by the state. Here came a clash between the law and moral traditions. Never had this idea of law anything to do with the codification of the conceptions of justice living in the hearts of the people; it was merely penal laws and institutions, deemed expedient for the government's centralising and imperialistic purposes; it was the expression of the state's own growing self-consciousness. It is very remarkable that, when we find the necessity for publishing the laws urged, it is not, as elsewhere, an expression of the popular wish to safeguard the people's rights and privileges for the future; on the contrary, it is government itself that desires their publication as a safeguard of its own power, as it expects that the laws will be better observed if people know exactly what punishments and non-observances will entail. Consequently, to have a deterrent effect, the laws have to be severe" (p. 81).

[14] But, according to Fung Yu-lan, the highest ideal of the Legalist school actually was that "ruler and minister, superior and inferior, noble and humble, all obey the law." Fung quotes from Han Fei-tzu, a leading Legalist: "Therefore, the intelligent ruler carries out his regulations as would Heaven and employs men as if he were a spirit. Being like Heaven, he commits no wrong, and being like a spirit, he falls into no difficulties. His shih (power) enforces his strict teachings, and nothing that he encounters resists him." Fung interprets this passage as follows: "By comparing the ruler with Heaven, Han Fei-tzu means that he acts only according to the law, fairly and impartially. That he employs men 'as if he were a spirit' means that he makes use of them according to this 'method' or shu, secretly and unfathomably." The gulf between this conception of law and the conception held in the West may be one reason why the ideal of "Great Good Government" has, as Fung says, "never yet actually been attained in China" (Fang Yu-lan, *A History of Chinese Philosophy*, trans. Derk Bodde [Peiping: H. Vetch, 1937], I, 320–322).

[15] 韦利在《道及其力量》一书中以“实在论者”为题讨论了法家学派执掌权力的社会背景（伦敦：乔治·艾伦与昂温出版公司，1934年，第68—86页）。尽管法家的制度认识到了“法治”的重要性，并且努力使政府的运作更具效率，但这对西方倡导自由主义者来说并不具吸引力。戴闻达翻译的《商君书》英文版（伦敦：阿瑟·普罗赛因出版公司，1928年）一书，据说是由商鞅（又称卫鞅、商君）所写，它表达了法家的极端的观点。戴闻达评论道：“仅仅是为了强制人们遵守由自然道德律所建立的标准，并要在理论上贯彻的那种法律，现在则成了实施由国家所建立的标准工具。这里就出现了法律与道德传统之间的撞击。这种法律观念与人们心中正义观念的法典化从来毫无关系，它仅仅是一种刑法和制度，并被看作是政府的中央集权和帝国统治的权宜之计而已。这是国家自己日益成长的自我意识的表达。显而易见的是，当我们发现有要颁布法律的愿望的时候，与别处不同的是，这并非是一种未来要保护人民权利和利益的民

间愿望的表达；正相反，这恰恰是政府自己想要保护它自己的权力而想着要颁布法律，因为政府期望如果人民对违反法律所必须承担的惩罚有准确的了解，就会更好地遵守法律；因此，为了达到其威慑性，法律必须极为严苛。”（第81页）

[16] 照冯友兰的看法，法家的最高理想实际上是“君臣上下贵贱皆从法”。冯友兰引述著名的法家人物韩非子的话说：“故明主之行制也天，其用人也鬼。天则不非，鬼则不困，势行教严，逆而不违。”冯友兰对这一段文字有如下的解释：“‘明主之行制也天’，言其依法而行，公而无私也。‘其用人也鬼’，言其御人有术，密而不可测也。”这种法律观念与西方法律观念之间的沟壑可能就是为什么像冯友兰所说的“大治”“在中国历史中盖未尝实现”的一个原因。引自《中国哲学史》英文版，冯友兰著，德克·卜德译，北平：亨利·维奇出版公司，1937年，第1卷，第320—322页。[中文版参见冯友兰《中国哲学史》（上册），中华书局，1961年，第391—392页。——译者注]

[17] Even in this case the punishment was only indirect. "Then, the Crown Prince infringed the law. Wei Yang said: 'It is owing to the infringements by the highly-placed, that the law is not carried out. We shall apply the law to the Crown Prince; as, however, he is Your Highness's Heir, we cannot subject him to capital punishment. Let his tutor, Prince Ch'ien, be punished and his teacher, Kung-sun Chia, be branded'" (Introduction to The Book of Lord Shang, p. 16).

[18] "We have an ancient saying that if the dragon left its water and the tiger left the mountains, even they would be insulted. Take those officers in the imperial court, they take in all sorts of humiliations and never dare protest; but when they reach their homes, they scold and beat their children and wife to give vent to their angers. Yet the officers dare not resign, just like the tigers dare not leave the mountains and the dragons the waters" (Liu Ê, A Tramp Doctor's Travelogue: A Story Laid in the Manchu Regime, trans. Lin Yi-chin and Ko Te-chun [Shanghai: Commercial Press, 1939], p. 114).

[19] 即使在这种情况下，惩罚也仅仅是间接的。“于是太子犯法。卫鞅曰：‘法之不行，自上犯之。’将法太子。太子，君嗣也，不可施刑，刑其傅公子虔，黥其师公孙贾。”引自《商君书》英文版“导论”，第16页。

[20] “所以古人说：龙若离水，虎若离山，便要受人狎侮的。即如朝廷里做官的人，无论为了甚么难，受了甚么气，只是回家来对着老婆孩子发发标，在外边决不敢发半句硬话，也是不敢离了那个官。同那虎不敢去山，龙不敢失水的道理，是一样的。”引自《老残游记》英文版，刘鹗著，林疑今、葛德顺译，上海：商务印书馆，1939年，第114页。

[21] "A poetic expression dating back to the Ming dynasty when Yu Ch'ien as a provincial official refused to follow the custom of handing out gifts exacted without payment from the populace to the dignitaries of the imperial court but instead presented himself empty-handed. The term has come to refer to officials who hold office and retire without having enriched themselves. In spite of pressures and practices to the contrary, this type of official has always been an ideal of Confucian teaching.... The China of the nineteenth century still kept green the memory of past officials who had been incorruptible. Their names were household words; stories about them had been treasured for centuries. Thus, the Ancestral Hall of the Yang family was still called the Hall of the Four Knows because of what had happened there seven centuries earlier. In A.D. 112, when a friend remonstrated with Yang Chen for leaving nothing to his sons, he replied: 'If posterity speaks of me as an incorruptible official, will that be nothing?' And when a man offered him a bribe and said: 'It is after dark and no one will know,' Yang Chen was recorded as saying: 'Not know? Why, Heaven will know, Earth will know, you will know, I will know.' There was a later Yang, Yang Ch'eng, who lived a thousand years before the time of Tao Kuang. Ordered to collect taxes during the famine, he refused, and threw himself into prison where he slept on a plank. Many other old stories of official rectitude were current" (Maurice Collis, Foreign Mud [New York: Alfred A. Knopf, 1947], p. 95).

[22] "T'ao, who lived in the fourth and fifth centuries A.D., was our poet of nature par excellence. Once he served as a district magistrate. When he could not longer stand the ordeal of formality he burst out upon the occasion of the arrival of the provincial inspector, his superior, 'I cannot bow to a mean fellow from the street just for five pecks of rice.' So saying, he left his official hat hanging on the wall and went right home" (C. W. Luh, *On Chinese Poetry* [Peiping, 1935], p. 16).

"What folly to spend one's life like a dropped leaf

Snared under the dust of streets,

But for thirty years it was so I lived.

...

There is no dust or clatter

In the courtyard before my house.

My private rooms are quiet,

And calm with the leisure of moonlight through an open door.

For a long time I lived in a cage;

Now I have returned.

For one must return

To fulfill one's nature."

("Once More Fields and Gardens," by T'ao Yuan-ming, in *Fir-Flower Tablets*, translated from the Chinese by Florence Ayscough, English versions by Amy Lowell [Boston: Houghton Mifflin Co., 1930], p. 133.)

[23] In "The Old Man with the Broken Arm (A Satire on Militarism)," ca. A.D. 809, by Po Chü-i, we read:

"Everyone says that in expeditions against the Man tribes

Of a million men who are sent out, not one returns.

I, that am old, was then twenty-four;

My name and fore-name were written down in the rolls of the Board of War.

In the depth of the night not daring to let anyone know,

I secretly took a huge stone and dashed it against my arm.

For drawing the bow and waving the banner now wholly unfit,

I knew henceforward I should not be sent to fight in Yun-nan.

Bones broken and sinews wounded could not fail to hurt;

My plan was to be rejected and sent back to my home.

My arm—broken ever since; it was sixty years ago.

One limb, although destroyed—whole body safe!

But even now on winter nights when the wind and rains blow

From evening on till day's dawn I cannot sleep for pain.

Not sleeping for pain

Is a small thing to bear,

Compared with the joy of being alive when all the rest are dead.

For otherwise, years ago, at the ford of Lu River

My body would have died and my soul hovered by the bones that no one gathered.

A ghost, I'd have wandered in Yun-nan, always looking for home.

Over the graves of ten thousand soldiers, mournfully hovering."

(From *Chinese Poems*, trans. Arthur Waley, pp. 129–131.)

[24] “这一诗意的表达要回溯到明朝的时候，作为省级官员的于谦拒绝同流合污，搜刮老百姓来给朝廷中的达官显贵送礼，而是两手空空前去。这一成语指的是官僚们身居官位及至退休的时候并没有使自己发财致富。尽管有来自反面的压力和做法，这种类型的官员一直是儒家教育推崇的理想典范。……19世纪的中国还牢牢记着过去的一身廉洁的官员们。他们的名字家喻户晓，有关他们的故事被世代铭记珍视。因此，杨姓堂号仍旧被称作‘四知堂’，源于七个世纪以前发生的一桩逸事。在公元112年，当一位朋友指责杨震没有给他的儿子们留下任何东西时，他就回答说：‘如果子孙后代把我说成是一位清官的话，那不应该说是什么都没留下吧？’有人向他行贿时说：‘现在天色已

晚，不会有人知道。”据记载杨震当时说：“为什么没有人知道？天知、地知、你知、我知。”后来还出了个阳城，他的生活年代要早于道光朝一千多年〔实际为唐代，不到一千年；见《新唐书·列传第一百一十九》——编者注〕。皇帝命令他在饥荒的年代去收税，他拒绝了，并自囚于狱中，睡在狱中的一块木板上面。其他许多正直官员仗义执言的古老故事都流传至今。”引自《外来的泥土》，莫里斯·科利斯著，纽约：艾尔弗雷德·克诺夫出版公司，1947年，第95页。

[25] “陶渊明生活在公元4世纪—5世纪，他是一位优秀的崇尚自然的诗人。他曾经做过县令，但无法忍受繁文缛节的束缚。当他的上级郡监察官来巡察的时候，他的情绪一下子爆发出来，他说：‘吾不能为五斗米折腰，拳拳事乡里小人邪！’说完这样的话之后，他便挂冠归隐。”引自陆志韦著，《中国诗五讲》英文版（英文书名应为Five Lectures on Chinese Poetry——编者注），1935年，第16页。

“误落尘网中，一去三十年。……户庭无尘杂，虚室有余闲。久在樊笼里，复得返自然。”引自陶渊明诗《归园田居》，载于埃米·洛厄尔·弗洛伦斯·艾斯库合译诗集《松花笺》，波士顿：霍顿·米夫林出版集团，1930年，第133页。（可参见林庚和冯沅君主编《中国历代诗歌选》〔上编〕，人民文学出版社，1983年，第128页。——译者注）

[26] 白居易于公元809年在《新丰折臂翁》这首诗中写道：“皆云前后征蛮者，千万人行无一回。是时翁年二十四，兵部牒中有名字。夜深不敢使人知，偷将大石槌折臂。张弓簸旗俱不堪，从兹始免征云南。骨碎筋伤非不苦，且图拣退归乡土。此臂折来六十年，一肢虽废一身全。至今风雨阴寒夜，直到天明痛不眠。痛不眠，终不悔，且喜老身今独在。不然当时泸水头，身死魂孤骨不收。应作云南望乡鬼，万人冢上哭啾啾。”引自《中国诗歌》，韦利译，第129—131页。（中文参见《白居易诗译析》，霍松林著，黑龙江人民出版社，1981年，第152—153页。——译者注）

[27] Po Chü-i thus congratulates himself on the comforts of his life after his retirement from office:

"Lined coat, warm cap and easy felt slippers,

In the little tower, at the low window, sitting over the sunken brazier.

Body at rest, heart at peace; no need to rise early.

I wonder if the courtiers at the Western Capital know of these things or not?"

(From A Hundred and Seventy Chinese Poems, trans. Arthur Waley [New York: Alfred A. Knopf, 1919], p. 239.)

[28] 白居易曾作诗来形容他辞官还乡后的舒适生活，诗中写道：“重裘暖帽宽毡履，小阁低窗深地炉。身稳心安眠未起，西京朝士得知无。”引自《中国诗歌170首》，韦利译，纽约：艾尔弗雷德·克诺夫出版公司，1919年，第239页。

Chapter Two The Scholar Becomes the Official

第貳章 文人当官

In my first chapter I tried to analyze the position of the gentry in the political structure. My view is that, since the establishment of a central unified political power in the third century B.C., the gentry as a class have never attempted to control political power. That is, although occupying official positions, they have not exercised any decisive powers as to policy. Under the feudal system sovereignty belonged to the aristocracy; under the monarchy, to the king-emperor. The question which arises, then, is this: Why in Chinese history has there been no period in which the power of the aristocracy revived or in which a bourgeois middle class took over political power? The answer to this question leads us to a study of the political consciousness of the gentry and their attitude toward their own position. Why did they not struggle with the monarch to gain control? Why was there no movement similar to Magna Carta in England? The class who were landowners in the economic structure were gentry in the social structure. Why did they become so neutral, so negative in politics? In this chapter I shall be especially attentive to one question:

What was the attitude of the gentry class toward their political position? It is true that their attitude was not cause but rather effect of the political system upon them. Nevertheless, it may be said that the attitudes of acquiescence which developed within the political system tended to reinforce the system.

Every social structure has a system of attitudes which define proper behavior and support the structure. What I am going to discuss in this chapter is the attitude of the gentry toward the monarchical power after they had come to be controlled by that power.

In the political philosophy of the traditional gentry class there was an important idea called *tao-t'ung*.^[1] This idea took shape before the firm establishment of monarchical power and was probably necessary for its development. In my analysis I am concerned particularly with the period before the firm establishment of monarchical power when feudalism was in process of breaking down.

I am not inclined to think that this social philosophy originated in the minds of a few scholars. On the contrary, I believe that the scholars' elaboration of the system was accepted by society because it reflected a point of view which was generally shared. The function of the scholar was to formulate, to clarify, and to crystallize this point of view into a doctrine. In the period of transition between feudalism and imperialism the school of thought which reflected the philosophic trend of the times best was that of Confucius and his followers. But the Confucian school was only one of many in this period of the "hundred schools." It was only later, after the stabilization of the imperial power, that Confucianism came to be so popular and dominating. This shows, I think, that the ideology of the Confucian school represented the point of view best adapted to the Chinese imperial system.

我在第一章里试图分析士大夫在政治结构中的地位。我的观点是，自从大一统的集权政治在公元前3世纪确立之后，士大夫阶层从未试图掌握政治权力，即使做了官，也从未行使过政策决定权。在封建时代，主权属于贵族；在皇权时代，主权属于皇帝。这样就产生了一个问题，即为什么中国历史中不曾有过贵族权力复兴或中层阶级执政的政治结构？要回答这个问题，我们必须研究士大夫这个阶层的政治意识以及他们对于自己的政治地位的看法。为什么他们不去和皇帝争夺政权？为什么中国没有发生像英国宪章运动那样的政治事件？这个阶层在经济上是地主，在社会上是士绅，他们为什么对政治如此中立和消极？在本章里我想特别关注一个问题，即他们如何看待自己的政治地位。的确，他们的观点不是这种政治制度的原因，而是其结果。但是，可以说，在这种政治结构中形成的默许态度本身是一种支持这种结构的力量。

任何一种社会结构都有一套意识形态来界定正当的行为，以维持这

个结构。我在本章所要讨论的是被皇权所控制的士大夫对于皇权的态度。

传统士大夫阶层的政治意识中有一个特别重要的观念是“道统”。^[2]这个观念在皇权牢固确立之前已经产生，并且可能对于皇权结构的发展是必要的。在我的分析中，我特别要追溯到皇权牢固确立之前，即封建制度行将崩溃、封建和皇权交替的过渡时期。

我不愿意把这一社会意识的形成归结为出自几个思想家。相反，我认为思想家的言行能被社会所接受是因为他们反映了社会上一般的观点，他们的作用是将这一观点明白清晰地表达出来。在由封建过渡到皇权时，最能反映出这一时期趋势的是儒家。但是儒家只是当时“百家”中的一家，直到后来皇权稳固之后，儒学才开始广为传播并起主导作用。我认为这表明了儒家最能代表适合中国皇权制度的意识形态。

The conception of *tao-t'ung* developed from a set of social facts, of which one important element was that a class of socially important people had lost their political power. Confucian ideas, as formulated and organized into the Confucian system, following the concentration of monarchical power and the disintegration of the feudal system, underwent, it is true, an understandable process of change. And the writings we now have about Confucian ideas have been much modified by later scholars. I should like, however, to start here with the basic Confucian ideas and to try to trace their development to a later period. But, in discussing the influence of Confucius on the social history of China, we are not concerned with the question of whether the idea of *tao-t'ung* was that of Confucius himself but rather with the fact that this concept was selected and elaborated in his name by later scholars.

It appears to me that the development of the idea of *tao-t'ung* took place in Chinese traditional society because there had appeared a new type of person, the scholar-intellectual, one excluded from political authority but still possessing social prestige. Since he did not have political power, such a man could not decide political issues. Yet he might, through making known his opinions and formulating his principles, exercise a real influence. Such men did not try to control political power in their own interest but endeavored rather to put forward a set of ethical principles which should restrict the force of political power. The system of *tao-t'ung* which they developed came to be accepted by the gentry as the norm for their activity in politics. Eventually it came to serve the gentry not only as an ethical system but also as a protection for economic interests.

As the gentry attempted to restrict political power by ethical means, they put forward the teachings of Confucius, calling the latter the creator of *tao*, and a "king without a throne." And his spiritual

descendants are those whom we now call master-scholars.

Legends which grew up concerning Confucius and his origins symbolize the separation of the ethical from the political line. In the early period of mythical history going back to such culture heroes as Sui Jen, the inventor of fire, and Shen Nung, who started agriculture, through the reigns of all *San Huang* and *Wu Ti* (the Three August Ones and the Five Sovereigns) through the recorded history of the feudal kings of Chou, Wen Wang, and Wu Wang,^[3] one finds the tradition of ethics and politics united. The Confucian school upheld these ancient rulers as ideals. Here were men who both knew and followed the principles of right rulership. Following the rulers of Chou mentioned above, came Chou Kung, or the Duke of Chou, who, as uncle of the heir to the throne, ruled as regent. Much importance was attached to this individual by Confucius' school, because even under the feudal system he was able to attain high authority, being actually a sovereign. The regency itself was meaningful in that it symbolized the idea that, when the sovereign is unable to rule, the one who knows should take his place. Here was the beginning of the separation of the political and ethical lines. Confucius himself identified himself closely with Chou Kung. He said: "How utterly have things gone to the bad with me! It is long now indeed since I dreamed that I saw the Duke of Chou."^[4] In the legend of Chou Kung there is, to be sure, not a very marked separation between the political and ethical lines, since, as uncle of the king, Chou Kung was entitled to rule as regent. But the later followers of Confucius put him next to Chou Kung in a line of descent of noted and wise leaders. Thus Chou Kung is the starting point of the political line deviating from the ethical.

“道统”这个观念有它所根据的社会事实，其中一个重要事实是一个社会重要阶层失去了政治权力。归纳和组织成为儒家体系的儒家思想，伴随着中央集权的形成和封建体制的解体，的确经历了一个可理解的变迁过程。我们现在看到的儒家思想的记录已经由后来的学者修改了许多。然而，我愿意在此从儒家的基本观点开始，试图来追溯它的发展。在讨论儒家思想对中国社会历史的影响时，我们关注的不是“道统”的观念是否出自孔子本人，而是后代的学者以他的名义选用并深化了这一概念。

在我看来，中国传统社会中“道统”观念的发展，是由于社会上产生了一类新的人物，即文人知识分子，他们被排斥于政治权力的圈子之外，但仍享有社会威望。由于没有政治权力，他们不能决定政治事务，但他们可以通过表达意见、归纳原则来产生实际的影响。他们不从占有政治权力来保障自己的利益，而是尽力提出一套伦理规范来限制政治权力的威力。“道统”的思想被士大夫接受为他们政治活动的标准。最终，它不仅仅是作为一种伦理道德体系服务于士大夫，还可以维护他们的经济利益。

当士大夫阶层要用“道统”来限制政治权力时，他们推出了孔子的学说，把他作为“道”的创始者，称他为“素王”。我们现在把那些“道统”的精神传承者叫做“师儒”。

关于孔子身世的传说象征着政统和道统的分离。从早期神话历史中的文化英雄，如火的发明者燧人氏、农业的鼻祖神农氏，传到“三皇”、“五帝”，再到有文字记载历史的封建君王周文王和周武王^[5]，我们可以发现政道合一的传统。儒家把这些古老的君王奉为圭臬。这些人了解并且遵守了正确的统治原则。在上面所提到的周文王、周武王之后有一个周公，他作为王位继承人的叔叔，摄政主持国家大权。周公受到儒家推崇，因为即使在封建体制下他仍能得到最高权力，实际上是最高统治者。这种摄政统治本身意义深远，象征着这样一个观念，即在位的人如果没有能力治理天下，可以由有能力的人去代替，这是政道分离的开始。孔子把自己和周公紧紧联系在一起，他说：“甚矣吾衰也！久矣吾不复梦见周公。”^[6]在关于周公的传说里，政统和道统确实没有明显的分离，因为作为王叔，周公在宗法上是有地位的。但是儒家后来的追随者在著名的英明统治者系列中把孔子列在周公之后，这样周公便成了政道分离的起点。

The separation of ethical and political lines was, according to the stories of the Confucian school, more clearly established by saying that this "king without a throne" was the descendant of an aristocratic family. Actually, his connection was rather remote. He was not at all comparable in this way to a Chou Kung. Confucius had no qualifications for attaining power through his kinship status. But myths which tried to find a source of authority for him in the feudal system persisted. According to the *Shih-chi*,^[7] Confucius' origins were quite doubtful. He was said to be the child of an illegitimate union. His mother would not tell him where his father's tomb was, and only when his mother died did he learn from someone else where his father was buried so that he could bury his mother also in that spot. Here also is recorded the incident of a man called Chih, Baron of Lu, giving a feast to the shih, to which Confucius went also. But he met with a rebuff when a man called Yang Huo, a corrupt official, said, "The Baron invited shih (knights), not you." From this we may infer that his status as a shih was doubtful, although the shih were in the lowest rank in the feudal system. Yet such accounts are told not to demean Confucius but to raise him still higher, as when an account later on in the same book adds that Confucius was born after his mother had prayed on a hill—the implication being that Confucius was of divine, not merely mortal, origin.

根据儒家的传说，孔子这位“素王”乃贵族之后，由此道统和政统的分离才较为明确地建立起来。实际上，孔子与贵族的联系很远，在这一点上他完全无法与周公相比，他没有资格从血统的身份上得到任何权力。但是，试图为他找到在封建体制下的权威根源的传说经久不绝。

《史记》[8]对孔子的出身非常怀疑，据说他是“野合”的产物。他的母亲不把父亲的墓地所在告诉他，直到母亲死后，他才从别人那里得知，使父母得以合葬。这里还记载了鲁国贵族季氏招待士的一件事：“季氏飧士，孔子与往。阳虎绌曰：‘季氏飧士，非敢飧子也。’”这表明当时人们对孔子“士”的身份也很怀疑，尽管“士”只位列封建制度的底层。但这些描写不是贬低而是提高了孔子。《史记》又有“祷于尼丘得孔子”，暗示孔子由神所授，不是凡人出身。

The importance of all these myths was not so much to establish the origins of Confucius as to set up divine authority for the ethical line which he represented. Thus, if Confucius derived his power not through his kinship with a feudal lord but from divine sources, his spiritual throne must be as high as the actual kingly throne. So from Confucius there derived a line of important and authoritative figures of those who followed the *tao-t'ung*. These people might lack political power, but in the society about them they were as important as the actual monarchs in that they ruled the people by ethical and social influence.

The separation of political power from ethical power is one of the fundamental ideas in Confucian philosophy and is also an important factor in the Chinese power structure. It may be compared to the separation of church and state in the West but is not exactly the same. Theoretically, when Jesus said, "Render unto Caesar those things which are Caesar's," he recognized a duality of power. When the priests asked Jesus what authority he had in doing the things he did, he countered with, "The baptism of John, whence was it? From heaven or of men?" And the priests were in doubt what to reply and at last answered Jesus, "We cannot tell." And he said to them, "Neither tell I you by what authority I do these things." [9]

We see clearly that to Christ there were two possible sources of power, worldly and divine. But these two powers were not on the same level. Rather, one was subordinate to the other. So in European medieval history worldly power submitted to divine power, monarchical power submitted to religious power. When, in a later period, these two powers became separate as the powers of church and state, the civil rights of the people came to be recognized. In Western political thinking it came to be accepted that the power which does not come from heaven could come only from the people, the common man. So long as the monarch derived his authority from his divine origin, he might slight the popular will. But once the throne was separated from the church, and it was recognized that the king's power was secular, it was quite natural that the people should be allowed to have their say and to share in government. It seems to me that in the Western political system power was never entirely

independent and self-justified but was always based on an authority derived from either divine or popular sources. The situation in China was somewhat different.

In China, Confucius also recognized a duality of power, but for him the two systems were not in the same order. One was not necessarily subordinate to the other; rather they were seen to be parallel. In China political power was like Caesar's, but the other type of power, in contrast to the West, was not viewed as having a divine origin. Some people think that Confucianism is a system of religion, yet it recognizes no supernatural force. This is not the only way, however, in which it may be distinguished from Western religions. Another aspect of Confucianism in which it differs from the West is its relation to action. Jesus Christ was using his power in the same domain to control human affairs. As a result of this conflict, one power became subordinate to the other. But the Confucian *tao-t'ung* stands not for action but for the upholding of a standard or norm which defines the Way of a good emperor (and a good citizen). It is one thing whether the monarch acts according to the Way or not. It is another whether we have made clear the Way to be a good ruler. Christ made clear the good and wanted action toward that good. But Confucianism is divided into two parts: (1) the knowing what is good and (2) the doing what is good. Thus the man who knows what is good does not necessarily have an obligation to carry it out. In fact, he may not be able to do so, since what he is able to do depends upon his social position. So we have the differentiation into separate categories of the scholar who knows and the monarch who does. The following quotation explains the psychology of Confucius. Confucius said to his student: "Hui, the poem says that tigers and wild beasts are running wild in the fields. Is my Way wrong? Why should I become so poor?"

这些神话的作用不单是确立孔子的身世，更多的是为他代表的道统建立神话权威。这样，既然孔子不是从贵族血统中而是从神那里获得权力，那么他的地位就会和实际的王位一样高。因此，从孔子后出现了一系列重要和权威的人物追通道统，他们可能缺乏政治权力，但在他们所处的社会中，他们和实际的君王一样重要，因为他们用道德和社会的影响来统治人民。

政统和道统的分离是儒家理论的基础理念之一，也是中国权力结构中的一个重要事实，这和西方的政治和宗教的分离相似但又不完全相同。在理论上，当耶稣说“恺撒的归恺撒”时，他也是认识到了权力的双重系统。当牧师责问耶稣他仗着什么权柄做这些事时，耶稣反问他们：“约翰的洗礼是从天上来的，是从人间来的？”牧师很疑惑，不知如何回答，最后他们说：“我们不能告诉你。”耶稣对他们说：“我也不告诉你们我仗着什么权柄做这些事。”^[10]

我们可以清楚地看到，在耶稣眼里有两个可能的权力来源：一个来自人间，一个来自上天。这两种权力并不在同一层次上，前者从属于后者。在欧洲中世纪的历史中，来自人间的权力降服在天上的权力之下，皇权降服在宗教权力之下。后来政教分离时，人民的权力开始抬头。西方政治思想中公认的是，权力不从天上来就得从人间来，人间即是民间。只要君王的权力来自上天，他就可能忽视民间的意愿。但是一旦政教分离，君王的权力被认定为世俗的，人们自然应该享有发言权和政治权利。在我看来，西方的政治体制权力从未完全独立和自我证成，而总是以来自上天或民间的权威为基础。这与中国的情况有所不同。

在中国，孔子也认识到了权力的双重系统，但是在他看来这两个系统并不在一个层次上，一个不必从属于另一个，而是互相平行。在中国，政治权力如同恺撒的权力，但另一种权力与西方不同，不被视为来自上天。有些人认为儒家思想是宗教体系，只是它没有认可超自然的力量，然而这不是与西方宗教区分的唯一途径。儒家思想与西方不同的另一方面是与人类行为的关系。耶稣用他在同一领域（即人间）的权力来控制人间的事。这种冲突的结果是一种权力降服另一种。但是儒家的道统不代表行为，而是提出一个好的君王（和好的平民）应当怎样做的规范。君王按不按“理”做是一回事，有没有弄清一个好的统治者的“理”是另一回事。耶稣明确了好的规范，希望人的行为朝着好的规范去做。但是儒家思想分成了两部分：（1）知道什么是善的以及（2）履行这种善。因此，一个知道如何是好的规范的人，并没有义务一定要遵照去做，实际上他也许不能去做，因为他的行为由他的社会地位来决定。所以我们要在概念范畴上作出区分：文人学者在知，而君主则是在行。下面的引述解释了儒家的心理学。孔子对他的学生说：“回，诗云‘匪兕匪虎，率彼旷野’。吾道非邪，吾何为于此？”

Then the student Yen Hui answered: "The Way of my master is very great—the world cannot accept it. But, my master, try to carry out your Way. If others don't accept you, it shows that you are a gentleman. If we don't work out the Way for doing things, that is our shame. If those who have the power don't follow the right Way, that is their shame."

Then Confucius smiled and said: "You are right. If you were rich, I should become your secretary."^[11]

This quotation explains how even in a world in which brute beasts are running wild it is still possible for scholars to work out the Way. For the *tao*, or Way, is detached from worldly events. The Way can be perfected irrespective of actual happenings in the world. To make this Way effective, to practice it, is not the duty of a man who is not in a position to do so; in other words, of the man without political power. The man who has control of political power may administer his affairs according to the Way or may utterly disregard it. Those who are not in his position of authority may themselves maintain the

Way, and they may "push it and try to make it work," so that the Way will be followed by the man who controls the country. But they must not try to usurp the position of the man in power. What Confucius means when he speaks of "push it and make it work" is simply the use of persuasion. Confucius never assumes the authority assumed by Christ. As a result, in the Chinese scheme, the political line is active, the ethical line passive. Those who follow the ethical line will behave according to the popular saying:

颜回回答说：“夫子之道至大，故天下莫能容。虽然，夫子推而行之，不容何病，不容然后见君子！夫道之不修也，是吾丑也。夫道既已大修而不用，是有国者之丑也。不容何病，不容然后见君子！”

孔子欣然而笑曰：“有是哉颜氏之子！使尔多财，吾为尔宰。”^[12]

这一段引文说明，即使在“匪兕匪虎，率彼旷野”的乱世，道还是可以“既已大修”的，因为道与事是分开的，道是可以离事而修的。用道于事，并不是“不在其位”的人的责任，换言之，并不是没有政治权力的人的责任。有国者可以用道来管理事务，也可以彻底无视道。“不在其位”的人可能自行维持道，“推而行之”，以使有国者来遵守道。但是他们不能有篡夺有国者地位的企图。孔子所讲的“推而行之”只不过是游说。孔子从来也没有取得过基督耶稣所取得的权柄。结果，在中国的制度中，政统是积极主动的，而道统是消极被动的。那些追随道统的人则将：

When wanted, then go; When set aside; then hide.^[13]

To employ and to discharge belongs to the man who has power; to work or to hide is the role of the man who has the Way. According to this system, there will be no conflict. From the point of view of the person who upholds the norms, practical politics may sometimes coincide with the norm and sometimes not. One may distinguish those nations which have *tao* and those which have not. Yao and Shun are examples of those who ruled the nation according to the *tao*.^[14] Yü and T'ang are other examples. So also monarchical power may lose its Way, and, when this occurs, the man who knows it, and through this knowledge possesses it, should guard it and keep it safe from harm. Such a man must work hard to cultivate himself so that the norms will not disappear entirely. But he will have no idea of trying to correct the conduct of the monarch. This, then, is the Confucian view: the one who knows should be ready to present his views when asked but when not asked should keep them hidden. These scholar-masters do not desert the Way in time of difficulty, but only when the monarch in his behavior approaches the Way will they come forth and act as officials.

The Master said, "Be of unwavering good faith, love learning, if attacked be ready to die for the good Way. Do not enter a State that

pursues dangerous courses, nor stay in one where the people have rebelled. When the Way prevails under Heaven, then show yourself; when it does not prevail, then hide. When the Way prevails in your own land, count it a disgrace to be needy and obscure; when the Way does not prevail in your land, then count it a disgrace to be rich and honoured."

"A gentleman indeed is Ch'u Po Yü. When the Way prevailed in his land, he served the State; but when the Way ceased to prevail, he knew how to 'wrap it up and hide it in the folds of his dress.'" [15]

The real problem, then, is the link between the political and the ethical lines. The ideal of the Confucian school was that of the kingly Way—*wang-tao*—in which both political and ethical lines coincided. But how could that ideal be realized? Here we find the conflict in Confucius' ideas. Since he had been brought up under a feudal system, he valued a social order of this sort, one in which a stable society was ruled according to well-established traditions. The feudal tradition prevented him from breaking the connection between the political line and kinship; the static ideal made him abhor social changes. This is the first point to be noted with regard to Confucius' attitude. He took for granted the political system and did not wish it to be changed. At the same time, he was living when the system was actually disintegrating; men in a certain position no longer behaved according to the norm set up for them. To meet this difficulty, Confucius detached the norms from actual practice and set them up as an ideal type of behavior which was not to be deviated from. In this he was very stubborn and persistent. The student Tzu-kung said to him: "The Master's teachings are too great for the people, and that is why the world cannot accept them. Why don't you come down a little from your heights?"

用之则行，

舍之则藏。 [16]

用舍是有权者决定的，行藏是有道者采取的。依照这种体系，就不会有矛盾。在持执规范的人看来，实际的政治有时合于规范，有时则不合，于是可以分出“邦有道”和“邦无道”。尧舜是有道的例子 [17]，禹汤亦同。皇权可以失道，此时明道、有道者可以维护道，使之不受侵害。这样的人必须勤于修身，以使道不会完全消失，但他们并不会修正皇权的想法。因此，根据孔子的看法，明白规范的人可以在被用的时候把道摆出来，不被用的时候把道藏好。当皇权和道分离时，这些师儒退而守；皇权和道接近时，师儒出而仕。

孔子说：“笃信好学，守死善道。危邦不入，乱邦不居。天下有道则见，无道则隐。邦有道，贫且贱焉，耻也；邦无道，富且贵，耻也。”

“君子哉蘧伯玉！邦有道，则仕；邦无道，则可卷而怀之。”[18]

因此，真正的问题是政统和道统的连接。师儒的理想是“王道”，王道是政统加道统。怎样实现这种理想呢？这里我们看到了孔子思想的矛盾。他在封建制度下长大，关注这种社会秩序，这是一个按照建立完好的传统来统治的静态社会。封建传统阻止他打破政统和血统的联系，静态的理想使他厌恶社会结构的改变。这是在考虑孔子的态度时首先要注意到的。他把政统看成是既成的，不希望有所改变。同时，他生活在道统正在分解的时代，人们不再遵循既成的规范来做事。为解决这一困难，孔子将规范和实际行为划分开来，把规范立为不可背离的理想的行为方式。在这一点上，孔子很固执并锲而不舍。他的学生子贡对他说：“夫子之道至大也，故天下莫能容夫子。夫子盖少贬焉？”

Confucius replied: "Ah Ssu, a good farmer plants the field but cannot guarantee the harvest, and a good artisan can do a skillful job, but he cannot guarantee to please his customers. Now you are not interested in cultivating yourselves, but are only interested in being accepted by the people. I am afraid you are not setting the highest standard for yourself." [19]

We may wonder how, in such a case, the norms are ever to be brought into close contact with reality. It seems that this must depend largely on chance, since, on the one hand, one is bound to wait with patience and, on the other, to retire and let others seek one out. But Confucius did express himself on this matter of chance. The student Tzu-kung said: "Suppose one has a lovely jewel, should one wrap it up, put it in a box and keep it, or try to get the best price one can for it?"

The Master said: "Sell it! Most certainly sell it! I myself am one who is waiting for an offer." [20]

Confucius actually did go about and offer his services to more than seventy lords. The following quotation makes this point even more clear. When Confucius was fifty years old, Kung-San Po-niu started a rebellion against Baron Huan in the city of Pi. Baron Huan sent for Confucius, and Confucius was eager to go. He said: "The kings Wen and Wu rose to power from the small cities of Feng and K'ao and finally established the empire of Chou. Pi, I know, is a small place, but perhaps I may try." But Confucius' student, Tzu-lu, was displeased and tried to dissuade him from going. Confucius said, "Since the Baron asks to see me, he must have a plan in his mind, and if he would put me in power, we might achieve something resembling the work of Emperor P'ing." [21] But after all he did not go. Confucius felt the urge to be employed, and, when he was, he endeavored to carry out good projects. At the age of fifty-six he was pleased when in a certain principality he was made chief minister. His disciples said to him, "I hear that a gentleman is not afraid at the sight of disaster and not

delighted at success."

孔子曰：“赐，良农能稼而不能为穡；良工能巧而不能为顺；君子能修其道，纲而纪之，统而理之，而不能为容。今尔不修尔道而求为容。赐，而志不远矣！”^[22]

在这种情况下，我们也许会问，规范如何与现实紧密连接呢？似乎很大程度上是要靠机会，一方面是耐心等待，另一方面是退出，让别人来寻求。不过，孔子在等待机会这一点上表达得很清楚——子贡曰：“有美玉于斯，韞椟而藏诸？求善贾而沽诸？”

子曰：“沽之哉，沽之哉，我待贾者也。”^[23]

实际上，孔子的确周游列国，曾“干七十余君”，下面的引述表达得更清楚：“.....孔子年五十。公山不狃以费畔季氏，使人召孔子。孔子循道弥久，温温无所试，莫能己用，曰：‘盖周文武起丰镐而王，今费虽小，偁庶几乎！’欲往。子路不说，止孔子。孔子曰：‘夫召我者岂徒哉？如用我，其为东周乎！’”^[24]但最终他还是没有成行。孔子是很想做事的，而且当有人用他时，他努力施行善举：“孔子年五十六，由大司寇行摄相事，有喜色。门人曰：‘闻君子祸至不惧，福至不喜。’

"Is that so?" remarked Confucius. "Is it not said that one is happy because he rises to a position above the common people?" But he stayed in office only about three months, during which time he had executed a minister who opposed him. But it was said that during the time of his office there was no cheating in the markets, men and women did not walk together, people did not take things which belonged to others, and there was no litigation.

But, although Confucius waited patiently, he had little real chance to enter politics. Even when he did get his chance, there was no assurance that his way of merging ethics with politics would be continued. So at last Confucius left Lu and said, "How free I am. I can now spend my life in a leisurely way." Yet he still felt disheartened at times, saying, "The Way makes no progress. I shall get upon a raft and float out to sea."^[25] Actually, as far as a practical career was concerned, he had accomplished nothing. But we may imagine that if he had had a chance to remain in office for three years, as he wished, he might have accomplished some of the great results he had hoped for. Yet, in such a case, Confucius' death might have been like those of Tu Ming-tu and Shun Hua, two officials who attained high office but were later killed by their lords. When this news came to Confucius, he sighed. He was standing at the time near a stream and said: "How beautiful is the water! Eternally it flows! Fate has decreed that I should not cross this river."

"What do you mean?" asked Tzu-kung, coming forward.

And Confucius replied, "Tu Ming-tu and Shun Hua were good

ministers of Chin. Before Baron Chien Chao got into power, he said that he would insist on taking these two men, should he get into power, and now that he is in power, he has killed them. I have heard that when people disembowel embryos or kill the young, the unicorn refuses to appear in the countryside, and that when people dry up a pond in order to catch fish, the dragon refuses to bring the *yin* and *yang* principles into harmony (resulting in famine and flood),^[26] and that when people snatch birds' nests and break birds' eggs, the phoenix refuses to come. Why? Because a gentleman avoids those who kill their own kind. If even the birds and beasts avoid the unrighteous, how much more should I do the same?"^[27]

These remarks show Confucius' recognition of the difficulty of applying his Way in practical politics. Let me quote another passage from the *Shih-chi*. The lords of Lu had a hunting party and caught a strange animal which Confucius declared was a unicorn. Then Confucius said: "This is the end of it all. There is no one in this world who understands me."

“孔子曰：‘有是言也。不曰“乐其以贵下人乎”？’于是诛鲁大夫乱政者少正卯。与闻国政三月，粥羔豚者弗饰贾；男女行者别于涂；涂不拾遗；四方之客至乎邑者不求有司……”

但是尽管孔子耐心等待，他真正与闻政事的机会并不多，即使有机会，也不能确保他的政道结合能继续下去。最后他还是离开了鲁国，感慨“优哉游哉，维以卒岁”，然而他仍时感沮丧，说“道不行，乘桴浮于海”。^[28]实际上，从现实业绩来讲，他什么也没有达成。但是我们设想，如果他真的像他希望的那样“三年有成”，他也许会如愿取得一些不错的成就。不过，如果这样，他的结局就如同窦鸣犊和舜华了——他们两人做到很高的官位，但最终还是被统治者所杀。孔子得知后怅然叹息：“美哉水，洋洋乎？丘之不济此，命也夫？”

“子贡趋而进曰：‘敢问何谓也!’

“孔子曰：‘窦鸣犊，舜华，晋国之贤大夫也。赵简子未得志之时，须此两人而后从政；及其已得志，杀之乃从政。丘闻之也，刳胎杀夭则麒麟不至郊，竭泽渔涸则蛟龙不合阴阳^[29]，覆巢毁卵则凤凰不翔。何则？君子讳伤其类也。夫鸟兽之于不义也尚知辟之，而况乎丘哉！’”^[30]

这番话表明孔子认识到将他的“理”用于实际政治的困难。我再引用《史记》中的一段：“及西狩见麟，曰：‘吾道穷矣。’喟然叹曰：‘莫知我夫!’

His disciple Tzu-kung said, "Why do you say that there is no one who understands you?"

And Confucius said, "I don't blame Heaven, and I don't blame mankind. All I try to do is my best to acquire knowledge and to aim for a higher ideal. Perhaps Heaven is the only one who understands

me! Po-yi and Shu-ch'i were two sages who loved their ideals and their self-respect! (These persons and the following were famous scholars living as recluses.) Liu-hsia Hui and Shao-lien lowered their ideals and lost their self-respect. Yu-chung and Yi-yi remained active and outspoken, but their conduct was clean and they had good judgment. But I am different from all of them. I will insist on nothing." Then he added: "A gentleman will suffer pain to die without having lived up to his name. My Way will not be carried out. What can I do to explain myself to those who come after?"^[31] He chose to compile the book of *Spring and Autumn Annals* from historical sources.

The *Spring and Autumn Annals* is a Chinese grammar of politics. It reveals the norms of good government but does not necessarily give any practical advice for realizing them. From this work one may learn the *tao*, or Way, which runs side by side but does not merge with practical politics. The title given to Confucius of a "king without a throne," that is, a king without any political position, makes clear this peculiarly Chinese concept.

If the ethical line cannot control the political line, though scholars may repeatedly criticize the government as not acting according to the *tao*, in actual everyday politics the emperor, or the man who possesses political power, will not feel shame and will disregard them. In a state which is misgoverned, in which the scholar folds up his norm and hides it in his bosom, what happens to the people? Scholars may say, as Confucius once did, "If Heaven will not destroy this work what harm can my enemy do to me?" But Confucius also said, "Heaven may destroy this work, and those who come later will never again have a chance to learn the Way." Scholars may die, for they are men of this world, not of another. How can they hide when the imperial power rules the entire land? The imperial power may burn the books and bury the scholars alive.^[32] It may kill students because of some writing which injures the emperor. It may block the ethical line entirely for a time. Confucius was not able to solve this difficulty, namely, that, living together in the same world, the two lines, ethical and political, cannot let each other alone. Although the ethical line of the scholars may be willing not to struggle against the political line, the political line can, and often does, suppress the ethical.

“子贡曰：‘何为莫知子？’

“子曰：‘不怨天，不尤人，下学而上达，知我者其天乎！’“不降其志，不辱其身，伯夷、叔齐乎！’谓‘柳下惠、少连降志辱身矣’。谓‘虞仲、夷逸隐居放言，行中清，废中权’。‘我则异于是，无可无不可。’子曰：‘弗乎，弗乎！君子病没世而名不称焉。吾道不行矣，吾何以自见于后世哉？’^[33]，乃因史记作春秋……”

《春秋》是一部中国政治的典范。它揭示了好统治的规范，但没有对其实施提出实际的建议。我们可从中学到“道”或“理”，与政平行，二者没有统一。孔子的尊号是“素王”，就是没有政治地位的王，这是中国政治概念中的特色。

如果道统不能控制政统，尽管推崇道统的人不停地斥责有国者失道，但在日常政治活动中，帝王或是掌握政治权力的人并不觉得可耻且置之不理。邦无道时，师儒们固然不妨把道卷而怀之，可是那些百姓怎么样呢？正像孔子曾经说过的那样，师儒们可以说：“天之未丧斯文也，匡人其如予何？”但是孔子还说：“天之将丧斯文也，后死者不得与于斯文也。”师儒们终将死去，因为他们是地球上的生命，不是其他星球上的。当皇权控制整个国土的时候，他们怎么能隐藏起来呢？皇权可以“焚书坑儒”^[34]，可以兴文字狱，可以在一个时期内完全阻碍道统。孔子无法解决这一矛盾，即只要在同一世界上，道统和政统实际上是无法各行其是的。尽管道统不与政统相争，但实际上，政统可以而且的确常常压迫道统。

When this happens, what can scholars do? The positive way to meet this dilemma is, as was done in the West, to conquer the imperial power and subordinate practical politics to the socially accepted norms. But positive measures of this sort are not in accordance with the feudal tradition, and we find very little in Chinese history of this sort of positive resistance. Another line was taken.

When Confucius appealed to Heaven, that Heaven was an indifferent abstraction which would not interfere with worldly events.^[35] But when the ethical line of the scholars was suppressed by the emperors to such a degree that there was no possibility of their gaining any power in politics, they tried to convert Heaven into a really active force. Confucian *tao* has no inherent power. It cannot *do* things, for doing things is the emperor's task. In the Han dynasty, however, the conception of a realistic God who would interfere in human affairs gradually took shape. Tung Chung-shu (179?-104? B.C.), a scholar of the Han dynasty, interpreted the *Spring and Autumn Annals* in such a way as to threaten the royal power with heavenly anger. In a statement addressed to the emperor Wu he said: "Your servant, in reading the *Spring and Autumn Annals*, has come to see that, in this work done by previous generations, there is presented a relation between Heaven and Man. I realize the awfulness of this relation. When a nation loses its *tao*, Heaven will first warn the people by famines and disasters. If the emperor does not look back upon himself to criticize himself, then Heaven will warn him by portents. If he still does not change his way, then he will court real disaster. This shows the benevolence of Heaven, which wishes to stop disturbances in the world."

In Tung's formula Heaven comes first, the emperor second, the scholars third, and, at the bottom, the people. Following this formula, the emperor should no longer be repressive but should be awed and restrained by the behavior of Heaven. But the question is: Since Heaven expresses approval or disapproval through natural phenomena, who knows the meaning of the heavenly signs? Who is able to interpret these signs but the scholar? Thus Tung really emphasizes the importance of the scholar, in that he alone could interpret Heaven. The first part of this conception was different from the usual Confucian point of view and especially that developed by Mencius, according to which the will of Heaven is to be expressed in the will of the people. According to this new idea, scholars should interpret the will of Heaven as expressed in natural phenomena. It was not an attempt to control political power democratically but rather, indirectly, through religion. The role of the scholar was simply to help the monarch to meet Heaven's demands; and the punishment of the emperor, if it came, would be through natural disasters and not by the people. Theoretically, monarchical power was thus subordinated to religious power, and the scholar given a position of some independence. In other words, the scholar's ethical line was no longer to be held down by the political line of the emperor.

那么这时师儒们该怎么办呢？积极的出路是依照西方的做法，制约皇权，把政统压迫在社会公认的道统之下，但这与封建传统不合，在中国历史中很少有这种积极的反抗，他们采取的是另一种方式。

孔子呼天，这个天是空洞的，即使有知也不干涉人事。^[36]可是当道统被帝王压迫得无法翻身、完全丧失政治权力的时候，他们试图请天来干涉人事，以发挥其实际的积极作用。孔子的道统没有权柄，不能做事，因为做事是帝王的任务。但在汉代，一个可以干涉人事的现实的“天”逐渐成型。汉代的师儒董仲舒（约公元前179—公元前104年）在对《春秋》的解释中用上天的愤怒来吓唬皇权。他对汉武帝说：“臣谨案春秋之中，视前世已行之事，以观天人相与之际，甚可畏也。国家将有失道之败，而天乃先出灾害以谴告之，不知自省，又出怪异以警惧之，尚不知变，而伤败乃至。以此见天心之仁爱人君而欲止其乱也。”

在董仲舒的公式里，上是天，中是皇，次是儒，末是民。根据他的公式，皇权不再处于压迫别人的地位而应敬畏上天，受上天的限制。但问题是，既然上天通过自然现象来表达赞赏或责备，那谁能明白这些天相符兆的意义呢？除了师儒，还有谁能解读这些符兆呢？董仲舒就这样实际强调了师儒的重要性，即只有师儒能解释天意。这个概念的前一部分与儒家通常的观点有所不同，特别是与孟子所发展的“天意表达于民意”的观点不同。根据这种新观点，师儒应该通过自然现象来解释天意，这不是试图通过民主的方式来限制政权，而是间接通过宗教。师儒不过是帮着皇权去应天。天要降刑罚于君主时，不经由民众而是通过自然灾害。理论上，皇权就这样屈服于宗教的力量，师儒被赋予了一定独立的

地位。换句话说，师儒的道统不再为皇帝的政统所压制。

If Tung Chung-shu had advanced a step further, perhaps he might have gone so far as eventually to transform the scholar from an interpreter of Heaven into a priest. Then the scholar-priests might have formed an organized church, which, with divine sanction, might have been strong enough to check the unlimited monarchical power. If this had taken place, we might have had in China something similar to the relations between church and state in the West. But when this theory came to challenge the supremacy of the monarchical power, it was suppressed at once. Tung Chung-shu developed a theory of omens and could even predict natural disasters from the *yin* and the *yang*. "When you want rain," he said, "stop the *yang* and open the *yin*. If you want the rain to stop, reverse the process. Practice this throughout the nation, and it will not fail." Once in Liao-tung, a hall in the tomb of the emperor caught fire. Tung interpreted this to mean that the emperor had done something wrong. A friend of his called Yen Chu-fu, who knew of this and who was jealous of Tung, stole the writings which made clear this interpretation and showed them to the emperor. The emperor called together all the scholars and showed the writings to them. A student of Tung's called Lu, who did not know the writings were his master's, said it was all "nonsense." Then the emperor was relieved. He put Tung into prison and condemned him to death. Later Tung was pardoned but never again dared to interpret in this way.

The theory of heavenly anger expressed through portents did not succeed in controlling monarchical power. But it encouraged the people in that it destroyed the theory of imperial absolutism. If Heaven dislikes the ruler, then the ruler must be changed. During the Han dynasty, and afterward, whenever there were social disturbances, this theory was used to justify the rebellion of the people. But, although as a popularly accepted theory it might be a justification for revolt, it did not change the nature of the imperial power.

At the same period as Tung, under the Han emperor Wu, there was another scholar who had also studied the *Spring and Autumn Annals*, namely, Hung Kung-sun. This man, who took part in the persecution and exile of Tung, presents another form of adjustment to the imperial power. That is, to become an official and serve the emperor. Orthodox Confucianism scorned Hung Kung-sun because he sold out the spirit of Confucianism, the keeping of the *tao*. An old scholar, ninety years of age, Yuan Ku-sun, who had retired because he would not modify his opinions to please the emperor, looked askance at Kung-sun, and said: "You, Kung-sun, should say what you have learned. You should not bend your teaching to please the world." This

meant that it was the duty of the scholar to hold to the ethical line and not to be an opportunist. Kung-sun had come of humble origins; he had been a jailer and at one time had even herded pigs. Yet he came to be prime minister, the first who had reached this position without being related to the emperor. He thus, very well, saw the advantage of selling out the ethical line to the emperor and of subordinating the Confucian norms to the monarchical power. Actually, unless one retired from the world entirely, there were, practically speaking, only two alternatives: either to subordinate ethical power to political power or to become unpopular. Yuan Kusun, the old scholar, and Tung Chung-shu did not submit and were exiled. But Hung Kung-sun submitted and became prime minister.

如果董仲舒再进一步，也许会最终把解释天意的师儒发展成宗教的牧师。然后这些牧师型的师儒可以组织成教会，获得上帝的认可，也许会发展到可以控制无限制的皇权。如果这样，中国就会有像西方那样的政教关系。但是当这种理论开始向皇权的至高无上发出挑战时，就立刻被镇压下去了。董仲舒发展了灾异论，甚至能通过阴阳来预言自然灾害。他说：“求雨，闭诸阳，纵诸阴，其止雨反是；行之一国，未尝不得所欲。”“先是辽东高庙、长陵高园殿灾，仲舒居家推说其意，草稿未上，主父偃候仲舒，私见，嫉之，窃其书而奏焉。上召视诸儒，仲舒弟子吕步舒不知其师书，以为大愚。于是下仲舒吏，当死，诏赦之。仲舒遂不敢复言灾异。”

通过自然征兆来表达上天之怒的灾异论，虽没有获得控制皇权的成功，但它鼓励了民间百姓，因为它打破了皇权的绝对性——如果上天厌恶皇帝，皇权就要改统。于是在汉代期间以及之后，每一次社会暴动，都用这种理论来正名。虽然这种被民间广泛接受的理论成了造反改统的根据，但它没有改变皇权的性质。

在汉武帝时代，与董仲舒同一时期的还有一个研究《春秋》的儒家公孙弘，他是参与迫害和流放董仲舒的阴谋家，提出了另一种适应皇权的方式，那就是做官侍奉皇帝。正统的儒林谴责公孙弘出卖了孔子卫道的传统。不肯修改自己的想法以迁就皇权的九旬老人辕固生，罢归的时候，公孙弘侧目而视固。固曰：“公孙子务正学以言，无曲学以阿世！”这表明师儒有着维持道统的责任，不能投机。公孙弘出身卑微，做过狱吏，甚至牧过猪，但却被封为宰相，成为第一个与皇帝没有关系而达到此地位的人。因此他非常清楚地看到出卖道统、牺牲儒家规范而屈服于皇权的好处。其实除非一个人完全脱离尘世，否则实际地说，只有两个选择：一是政统征服道统，一是失宠于上。老儒生辕固生、董仲舒不肯屈服，被放逐了；公孙弘屈服了，做到宰相。

As prime minister, Kung-sun advocated the principle that monarchy should rule the people through the scholars of his ilk. He said: "The leopard, the wild horse, the untamed ox, all wild beasts and birds are difficult to control. But, when they are domesticated, they

may be used for human purposes. To bend wood takes less than a day. Gold and other metals can be melted in less than a month. A man who has a mind of his own and can judge the good from the bad, advantage from disadvantage, must be more difficult to handle than animals, birds, wood, or metal. But in a year's time he too may be molded." Kung-sun developed the technique of how to serve the emperor as a good official as follows: Each morning, when there is a conference, he will present the choices of action to the emperor and let him make his selection. He will not argue or insist upon anything. Then the emperor will see that he is discreet and understanding and that he knows administrative work and is an expert scholar. The emperor will be glad to have him near him. When the emperor grants him an audience, and he finds that they are not in agreement, he will not argue but will go back and find someone else to mediate. This man will present the case first to the emperor, Kung-sun following him. For this tactful approach the emperor will be very pleased with him. Moreover, even when a conference of ministers has decided a matter, the man who is wise will not speak according to the agreement but will fit in with the emperor's mood.

For following the latter precept, Kung-sun was attacked by other officials. They said: "This man is most treacherous and unfeeling. He turns his face against his friends. He suggests the idea himself first and then abandons it; he isn't loyal." The emperor asked Kung-sun if this were true. He replied: "Those who understand me will think that I am loyal. Those who do not understand me will think that I am not."

作为宰相，公孙弘主张由皇权利用他这类的师儒来统治人民。他说：“夫虎豹马牛，禽兽之不可制者也，及其教驯服习之，至可牵持驾服，唯人之从。臣闻揉曲木者不累日，销金石者不累月，夫人之于利害好恶，岂比禽兽木石之类哉？期年而变……”公孙弘总结了一套“做官”“事上”的技巧：“每朝会议，开陈其端，使人主自择，不肯面折庭争。于是上察其行慎厚，辩论有余，习文法吏事，缘饰以儒术，上说之……弘奏事有所不可，不肯庭辩。常与主爵都尉汲黯请间，黯先发之，弘推其后，上常说，所言皆听，以此日益亲贵。尝与公卿约议，至上前，皆背其约以顺上指。

“汲黯庭诘弘曰：‘齐人多诈而无情，始为与臣等建此议，今皆背之，不忠。’上问弘，弘谢曰：‘夫知臣者以臣为忠，不知臣者以臣为不忠。’……

Another critic of Kung-sun said: "Hung Kung-sun has a high position among the top men. His salary is very high, but still he affects cotton gowns. That is not honest. He gives the impression of being modest and frugal when he really is not. Kung-sun started from a lowly position but in only a few years has climbed so far that he has

become a minister and a lord. Outwardly his personality seems that of a temperate and hospitable man. He has built a guest house and filled it with guests whom he invites to participate in his work. While he himself takes only one piece of meat, they are entertained lavishly, and even his family neglected on their account. But, in spite of all this outward good will, inwardly he is jealous of everyone. He makes up to those officials who are not on good terms with him and then finds some way to hurt them. He killed Yen Chu-fu and exiled Tung Chung-shu. These are his plots."

From these old quotations we can see that here was a man without principles, one who merely tried to follow the emperor's whims, did not keep his word, sold out his friends, and formed his own party to help maintain his high position in the government.^[37] This is a type of official which has often been seen in China.

Following the example of Hung Kung-sun, the ethical line which had been maintained by Confucius and his followers no longer was the norm. Scholars took to supporting monarchical power. This transformation was completed in the person of one Han Yü who, though considering himself directly descended from the ethical line, converted his position not into that of a critic but into a way of showing the emperor's tolerance. Han Yü was a man without academic honors, a hermit, but the emperor liked his conduct so well that he took him out of obscurity and created for him the office of imperial censor, an official who should tell the emperor what was wrong throughout his domain. His role was to convince the world at large that in the court people were allowed to speak freely and honestly, to make it evident that the emperor did not confer rewards unjustly, and to show that the emperor had the great virtue of being willing to follow suggestions disagreeable to him.^[38] This, it was thought, would make the "people in the caves," the common people, "put on their finery and come to court to tell their wants." And this would make the emperor approach in virtue Yao and Shun, and his name would go down in history for ever and aye.

Han Yü no longer asked whether the imperial power followed the *tao* or not. To him this was no longer a problem, for he believed that the political line must be the same as the ethical. The emperor could do no wrong. Moreover, the emperor had the obligation to use the scholars, and the scholars, in turn, had the obligation to present themselves in court. His reasoning went thus: "In ancient times scholars were sorry for one another if one or another of them went as long as three months without being in office. Such a one, leaving his own country, would go to bear gifts to the court of another lord. He would feel so anxious to find an opportunity to serve in government

that, if he could not find a job in Lu, he would go to Ch'i, if not in Ch'i, he would go to Sung and Chien [Cheng?]. But now we have a centralized government. Within the four seas there is but one rule. If a man is to leave, he must go live with savage tribes, leaving behind the country of his father and mother. The scholar who wishes to practice his *tao* must do so at court or else go off to the wilds. In the mountains and forests he can do nothing but cultivate himself; this is a way out only for those who care very little for the world, not for those who care for people."

“汲黯曰：‘弘位在三公，奉禄甚多，然为布被，此诈也。’……弘自见为举首，起徒步，数年至宰相封侯，于是起客馆，开东阁以延贤人，与参谋议。弘身食一肉，脱粟饭，故人宾客仰衣食，奉禄皆以给之，家无所余。然其性意忌，外宽内深。诸常与弘有隙，无近远，虽阳与善，后竟报其过。杀主父偃，徙董仲舒胶西，皆弘力也。”

从以上引述中我们可以看出，这是一个没有原则、揣摩上意、不守信用、出卖朋友、沽名钓誉、阴结私党以维持高位的人。^[39]这是中国常见的官僚类型。

从公孙弘所开创的官僚路线上，孔子及其追随者所维持的道统已不再是规范，而是支持皇权的工具。这个转变由韩愈最终完成。他虽自认是直承道统的人物，但他把谏诤的意义解释成为皇帝获取美誉的手段。他说：“夫阳子本以布衣隐于蓬蒿之下。主上嘉其行谊，擢在此位。官以谏为名，诚宜有以奉其职。使四方后世知朝廷有直言骨鲠之臣，天子有不僭赏从谏如流之美。^[40]庶岩穴之士闻而慕之。束带结发，愿进于阙下而伸其辞说，致吾君于尧舜，熙鸿号于无穷也。”

韩愈不再问皇权是否合于道。对他来讲这已不再是问题，因为他相信政统即是道统，皇帝不会做错事。而且，皇帝有责任起用士人，士人也有责任自荐于朝廷。他的理由是这样的：“古之士，三月不仕则相吊。故出疆必载贐，然所以重于自进者，以其于周不可，则去之鲁。于鲁不可，则去之齐。于齐不可，则去之宋，之郑，之秦，之楚也。今天下一君，四海一国，舍乎此则彝狄矣。去父母之邦矣。故士之行道者，不得于朝，则山林而已矣。山林者，士之所独善自养，而不忧天下者之所能安也。如有忧天下之心，则不能矣。”

From Han Yü on, Chinese scholars ceased to bother themselves about whether the emperor was good or not. Their function as scholars they now saw was to uphold the emperor. As people who simply read the orders of the emperor, they became caricatures of the real scholar.

Thus the relation between the scholar and political power changed in the course of history. In the beginning they were separated from practical politics; they were regarded as maintainers of the ethical way but not as positively effective in government. In the

process of concentration of monarchical power this same class was unable to protect its own interest; its members turned to religious sanctions in the hope that divine authority, in controlling the monarch, would at the same time offer them protection. But the divine sanctions were not effective, and thus the only alternatives came to be either to rebel or to surrender. Since the scholar class were never in any sense revolutionary, they chose the latter course, becoming officials. And they even degraded themselves by becoming utterly subservient to the emperor. This is the historical process which determined the later position of the gentry in the social structure. They did not themselves attempt to take over political power but found security by subordinating themselves to the mercy of the imperial court. In the power structure of traditional China the gentry were a distinctly noncombative element.

自韩愈起，中国之士不再议论皇帝的是非。在他们眼中，作为士，他们的作用是侍奉皇帝，他们成了只不过是诵读圣谕的所谓的师儒。

于是，师儒和政权的关系在历史过程中有所演变。最初他们从政统里分离出来，被看作是不能主动影响政事的卫道者。在皇权不断集中的过程中，这个阶层不能维护自己的利益，他们转向依靠宗教的约束力，希望神的力量可以制约皇权，并同时保护他们。但这并没有奏效，于是除了反抗只有屈服。士大夫阶层从来都不是一个革命的阶层，他们选择了后者，即成为官僚，他们甚至降为彻底臣服于皇帝之流。这段历史过程决定了士绅在政治结构中的地位。他们本身并不想夺取政权，只是屈服于政权来谋得安全。在传统中国的权力结构中，士绅显然是没有斗志的那部分。

[1] Tao-t'ung, literally "tao-series," "tao-succession," "tao-transmission," in usage something like "the orthodox transmission of the tao or Way." The Chung Yung, or Doctrine of the Mean, defines the Confucian tao as follows: " "The Universal Way for all under Heaven is five-fold, and the (virtues) by means of which it is practiced, are three. There are the relations of ruler and subject, father and son, husband and wife, elder and younger brother, and of friend and friend: these five constitute the universal Way for all. Wisdom (chih), human-heartedness (jen) and fortitude (yung): these three are universal virtues for all. That whereby they are practiced is one. Some are born and know it; some study and so know it; some through painful difficulties come to know it. But the result of their knowing is one" (quoted by Fung Yu-lan, *A History of Chinese Philosophy*, trans. Derk Bodde [Peiping: H. Vetch, 1937], I, 373).

Han Yu of the T'ang dynasty (768-824), in his essay *On the Nature of the Tao*, wrote: "What I will call the Tao is not what has hitherto been called the tao by the Taoists and the Buddhists. Yao transmitted the tao to Shun. Shun transmitted it to Yü. Yü transmitted it to Wen, Wu, and the Duke of Chou. Wen, Wu, and the Duke of Chou transmitted it to Confucius, and Confucius transmitted it to Mencius. After Mencius, it was no longer transmitted."

[2] “道统”这个词的字面意思是指“道的系列”、“道的接续”、“道的传递”，在用法上类似于“道的正统传递”。《中庸》把儒道界定如下：“天下之达道五，所以行之者三，曰，君臣也，父子也，夫妇也，昆弟也，朋友之交也。五者，天下之达道也。知仁勇

三者，天下之达德也；所以行之者一也。或生而知之，或学而知之，或困而知之，及其知之。或安而行之，或勉而行之，或利而行之，及其成功一也。子曰：‘好学近乎知，力行近乎仁，知耻近乎勇。’知斯三者，则知所以修身。知所以修身，则知所以治人。知所以治人，则知所以治天下国家矣。”引自《中国哲学史》英文版，冯友兰著，德克·卜德译，北平：亨利·维奇出版公司，1937年，第1卷，第373页。（中文版参见冯友兰《中国哲学史》，北京：中华书局，1961年，第450—451页。——译者注）

唐朝的韩愈（768—824）在《原道》中这样写道：“尧以是传之舜，舜以是传之禹，禹以是传之汤，汤以是传之文、武、周公，文、武、周公传之孔子，孔子传之孟轲。轲之死，不得其传焉。”

[3] The three rulers, Yao, Shun, and Yü, the great models of virtue in Confucian tradition, are the first to be mentioned by the Shu Ching, or Book of History, most ancient of Chinese documents. There is some difference of opinion as to whether Yao and Shun, among these at least semi-historical figures, are to be included with the "Five Sovereigns," or whether they ruled later as Sheng or Divine Sages. Granet says: "The three first of the Five Sovereigns, Huang-ti, Chuan-hsü, and Kao-hsin, figure in the works connected with the Confucian traditions, but have a philosophic rather than an historical character. The Book of History, attributed to Confucius, only mentioned the two last, Yao and Shun.... In making the history of the Sovereigns and of the Three August Ones precede that of the royal dynasties, the learned men of China set out to paint a picture of an halcyon age when, with human characteristics, perfect virtue rules. The heroic figures of the early age in China preserve, however, a number of mythical features. In Yao and Shun... the effacement of these features is nearly completed" (Marcel Granet, Chinese Civilization [New York: Barnes & Noble, 1951], p. 9).

[5] 尧、舜、禹这三位统治者是儒家传统伟大的道德典范，最初是在中国最古老的文献典籍《书经》中提到的。像尧和舜这样半虚构的历史人物是否包括在五帝之内，还有他们后来是否算圣人治世——这些问题都存在着观点上的分歧。葛兰言说：“五帝的前三位——黄帝、颛顼和高辛——都是出现在与儒家传统相关的著作中的人物，但是他们都有着一种哲学的而非历史的特征。据说为孔子所著的《书经》中只提到后面两个，即尧和舜.....通过将“三皇五帝”的历史置于皇家王朝之前，中国的文人学者着手绘制出一幅太平年代的图景，其时富有人性特征的完美品德居统治地位。然而，中国早期的英雄人物都保留有许多神话的特征。在尧和舜身上.....这些特征近乎完全地消失了。”引自《中华文明》，葛兰言著，纽约：巴恩斯与诺布尔公司，1951年，第9页。

[9] Matt. 21: 23–27.

[10] 《马太福音》21章23—27节。

[11] "Tzu-kung came out and Yen Hui went in, and Confucius said, 'Ah, Hui, it is said in the Book of Songs, "Neither buffaloes, nor tigers, they wander in the desert." Are my teachings wrong? How is it that I find myself now in this situation?' And Yen Hui replied, 'The Master's teachings are so great. That is why the world cannot accept them. However, you should just do your best to spread the ideas. What do

you care if they are not accepted? The fact that your teachings are not accepted shows that you are a true gentleman. If the truth is not cultivated, the shame is ours; but if we have already strenuously cultivated the teachings of a moral order, and they are not accepted by the people, it is the shame of those in power. What do you care if you are not accepted? The very fact that you are not accepted shows that you are a true gentleman.' And Confucius was pleased and said smilingly, 'Is that so? Oh, son of Yen, if you were a rich man, I would be your butler!' " (Lin Yutang, op. cit., pp. 74-75). (This episode is apocryphal.)

[12] “子贡出去而颜回进来，孔子说：‘颜回，据《诗经》上说，不是犀牛也不是老虎，却疲于奔命在空旷的原野。这是我的教学有了什么错误之处吗？我为什么沦落到这个地步？’颜回接着回答说：‘老师的教育如此地伟大，这正是为什么这个世界不能接受这些的原因。然而，您应该继续尽全力来传播自己的观念。如果这些观念不被接受，您又何必管它呢？您的教育不被接受这样的事实不正表明您是一位真正的君子吗？如果真理没有得到培育，那么这就是我们的羞愧了。但是如果我们已经含辛茹苦地培育了一种道德秩序的教化，而它们并不为人民所接受，这便是那些掌握权力的人的羞辱了。假使人们不接受您，您又何必在乎呢？人们不接受您这一事实本身就表明了您是一位真正的君子。’孔夫子心里非常高兴，面带笑容地说：‘是这样的吗？颜家的孩子，如果你是一位富人，我愿是你的一位管家。’”参见《孔子的智慧》英文版，林语堂著，第74—75页。这一情节广为流传，但其真实性存疑。

[25] Waley, *Analects*, Book V, No. 6, p. 108.

[26] "Yang, the positive principle, is associated with all that is bright, beneficent, active, masculine: symbolized by Heaven and the Sun. Yin, the negative principle, with darkness, passivity, the feminine in nature: symbolized by the Earth and Water. "The Yang is said to transform, the Yin to unite. By these processes they brought into being the five essences, water, fire, wood, metal, and earth....

"In no sphere of Chinese life and thought can the Yang and Yin be lost sight of. Their nearest Western parallel is what we call 'the mysterious causes underlying the operations of Providence' " (G. Willoughby-Meade, *Chinese Ghouls and Goblins* [New York: Frederick A. Stokes, n.d.], p. 4).

"In Zoroastrianism, Darkness is essentially evil; the principle of Light, essentially good. The fundamental conception of yin and yang is quite different. They are two interdependent and complementary facets of existence and the aim of yin-yang philosophers was not the triumph of light, but the attainment in human life of perfect balance between the two principles" (Arthur Waley, *The Way and Its Power* [London: George Allen & Unwin, 1934], p. 112).

[27] Lin Yutang, op. cit., p. 68. (This is another apocryphal incident.)

[28] 《论语》英文版，韦利译，第5篇，第6章，第108页。

[29] “阳，指正向的特性，它是与所有明亮、仁慈、积极、阳性的东西相联系，并以天和太阳作为象征。阴，指负向的特性，具有黑暗、被动和阴性的本质，以土地和水作为象征。

“阴阳转换而成一体。通过这样的过程而产生出水、火、木、金和土这五行来……

“在中国人的生活和思想中，阴阳无处不在。与西方最为接近的看法是我们所谓的‘天道运行背后的神秘原因’（《中国的食尸鬼和小鬼》，杰拉德·威洛比-米德著，纽约：弗雷德里克·斯托克斯公司，无出版年月，第4页）。

“在拜火教中，黑暗实质上就是恶，对光明的信念实质上就是善。在阴和阳的基本概念上存在有相当的差异。它们是指存在的两个相互独立和互补的方面，而且阴阳哲学家的目标并非是获取光明，而是要在人的生活中达到这两种特性的完美平衡（《道及其力量》，阿瑟·韦利著，伦敦：乔治·艾伦与昂温出版公司，1934年，第112页）。

[30] 林语堂，《孔子的智慧》，第68页。（这是另一个广为流传但真实性存疑的情节。）

[31] Fei's translation. See Lin Yutang, op. cit., pp. 86–87. The significance of catching the unicorn was that, although this creature in itself symbolized the coming-to-power of a sage and of general peace and prosperity, the fact that in this case the unicorn had been hunted down was rather the sign of something unusually disastrous, in this case of the death of the great scholar Confucius. Fei's repetition of the tradition that Confucius composed the Spring and Autumn Annals would be repudiated by most scholars.

[32] These events took place under the harsh Ch'in empire, in 213–212 B.C., as a means of enforcing intellectual conformity. All books throughout the empire, with certain important exceptions, were collected by the government and burned, and over 460 scholars were allegedly buried alive.

[33] 费孝通的翻译。见林语堂《孔子的智慧》，第86—87页。捕获麒麟的意义在于，尽管这一动物本身象征了一位圣人即将拥有权力以及普遍的安定和繁荣，但在这个例子中这只麒麟被捕获的事实，更可能是某种极为不幸的象征，暗指大学问家孔子的逝世。费孝通这里所重复的孔子编《春秋》的传统，可能是为大多数学者所拒斥的。

[34] 这些事件发生在严酷的秦朝，公元前213年—公元前212年之间，作为一种强行统一思想的手段。除了特定重要的著作之外，整个国家的所有书籍都被政府收缴上来烧毁，据说有460多位儒生被活埋。

[35] The substance of this and the following paragraphs as set out here by Fei would be disputed by many scholars in certain respects. That Heaven to Confucius was an indifferent abstraction is not the view of others (cf. Fung Yu-lan, op. cit., I, 58: "For Confucius, Heaven was a purposeful supreme being"). Second, it is more widely thought that the theory of the Will of Heaven here attributed to Tung Chang-shu antedates him by almost a thousand years (see the chapter on this subject in Herrlee G. Creel, *The Birth of China* [New York: Reynall & Hitchcock, 1937]).

[36] 费孝通在这里和下面几段中陈述的要义，在某些方面而言，许多学者会有异议。有的学者并不认为对孔子来说，天是漠不关心的抽象概念（参见冯友兰《中国哲学史》英文版，第1卷，58页：“孔子之所谓天，乃一有意志之上帝”）。再者，更为广泛的看法是认为这里说成是董仲舒的有关天的意志的理论早于他的时代近千年（参见顾立雅《中国的诞生》一书中相关章节，纽约：雷纳尔与希契科克公司，1937年）。

[37] But Dubs says: "Kung-sun Hung proved to be admirable in personal conduct, able in disputation, capable in legal matters, and an ornament to scholarship" (Introduction to Pan Ku's *The History of the Former Han Dynasty*, trans. Homer H. Dubs [Baltimore: Waverly Press, 1938], II, 23). For discussion of the reign of the emperor Wu and his attitude toward Confucianists see also Herrlee G. Creel, *Confucius, the Man and the Myth* (New York: John Day Co., 1949), pp. 233–243.

[38] "Since the fourteenth century, there has existed a definite organization known as the Censorate, the members of which, who are called the 'ears' and 'eyes' of the sovereign, make it their business to report adversely upon any course adopted by the Government in the name of the Emperor, or by any individual statesman, which seems to call for disapproval. The reproving Censor is nominally entitled to complete immunity from punishment; but in practice, he knows that he cannot count too much upon either justice or mercy. If he concludes that his words will be

unforgivable, he hands in his memorial, and draws public attention forthwith by committing suicide on the spot" (H. A. Giles, *The Civilization of China* [New York: Henry Holt & Co., 1911], pp. 158–159).

[39] 但是，德效骞说：“公孙弘在个人行为上是令人敬佩的，他善于辩论，长于法律事务，学问笃实”（引自班固《汉书》英文版“导论”，德效骞译，巴尔的摩：韦弗利出版社，1938年，第2卷，第23页）。关于汉武帝统治及其对儒家的态度的讨论亦可参见《孔子其人及其神话》，顾立雅著，纽约：约翰·戴出版公司，1949年，第233—243页。

[40] “自14世纪以来就存在有一个所谓监督审查的固定机构，这一机构的成员被称为是统治者的‘耳’‘目’。这些人的工作就是挑刺，不论是对本着皇帝之名的政府行为，还是对似乎会招致异议的个人政客之举。挑刺的巡查官名义上享有完全的豁免权；但实际上，他知道他不能够对公正和宽恕有太多的期望。如果他断定自己的言辞是不可宽恕的话，他会递上自己的请愿书，并立刻在众目睽睽之下当场自杀。”引自《中国的文明》，翟理思著，纽约：亨利·霍尔特公司，1911年，第158—159页。

Chapter Three The Gentry and Technical Knowledge

第叁章 士绅与技术知识

The Chinese term for "intelligentsia," *chih-shih fen-tzu*, "they who know," indicates that in Chinese society there was a differentiation based on wisdom. The questions arise: What kind of wisdom was it upon which this social differentiation was based? What was the mechanism by means of which it was monopolized by one class in society? We should like to ask further: How did this class maintain its position in the traditional scheme, and what changes are taking place in it through contact with the West?

The characteristic of the members of this class has always been not only that they knew something but that they had a special kind of knowledge. What this special knowledge or wisdom was is made clear in Confucius' work. The word *chih* has a restricted meaning. For example, the student Fan Ch'ih asked Confucius about the meaning of the word *chih*. Confucius said, "He who devotes himself to securing for his subjects what it is right they should have, who, by respect for the

Spirits, keeps them at a distance, may be termed wise."^[1] Confucius also said: "There may well be those who can do without knowledge; but I for my part, am certainly not one of them. To hear much, to pick out what is good and follow it, to see much, and take due note of it, is the lower of the two kinds of knowledge."^[2]

From these quotations it is clear that Confucius did not use the word "knowledge" to mean merely cognition but implied knowledge of the right thing. Again, when Fan Ch'ih asked what it meant to be wise, the Master said, "Know men." Fan Ch'ih did not quite understand. The Master said, "By raising the straight and putting them on top of the crooked, one can make the crooked straight."^[3] Confucius described the process of knowledge as, first, perception—the gathering of information—but, following upon this, the drawing of distinctions and the making of a choice. Knowledge is more than mere gathering of information, since it involves choice, and this choice is based on the ability to distinguish the good from the bad. Knowledge in this restricted sense, and based on a standard or norm, is designated by the word "straight." When you know what is straight, you must act upon it. And by so doing you will make the crooked straight. Thus Confucius explains the word *chih* as wisdom or knowledge of right behavior. Those who work for the people and those who respect the spirits are the people who know what they ought to do, and they are therefore "those who know." To know in this sense is not only to be intelligent but also to be virtuous. Knowledge of this sort goes with *jên*^[4] and courage. The wise man not only is an intellectual but also knows the Way, the norm, the things he ought to do.

汉语里的“知识分子”一词暗示，中国社会在“知识”上发生了分化。问题是，什么样的知识能成为社会分化的基础呢？社会中的某一阶级是利用何种机制来独占知识的呢？我们还能进一步问，这一阶级怎样在传统社会结构中维持他们的地位，在与西方的接触中发生了怎样的变化？

这个阶级成员的特点是他们不仅“知”，而且有一定的专门知识。这种专门知识在孔子的著作中讲述得很清楚。“知”字有严格的意义。例如孔子的学生樊迟“问知”，“子曰：‘务民之义，敬鬼神而远之，可谓知矣。’”^[5]孔子还说：“盖有不知而作之者，我无是也。多闻，择其善者而从之；多见而识之；知之次也。”^[6]

这里我们看到，孔子所谓的“知”，显然不单是“知道了”，而是指“懂得正确的道理”。樊迟再次“问知”，“子曰：‘知人。’樊迟未达。子曰：‘举直错诸枉，能使枉者直。’”^[7]孔子说明了知识的过程：首先是闻、见，即搜集信息，接下来是择、识。由于“知”不仅仅是信息的搜集，而且包括选择，这就要以分辨是非的能力为基础。这一狭义的知基于一定的行为标准，而这标准即为“直”。知了之后，还要遵循去做，对人还要“使直”。孔子把标准行为的规范解释为知，那些对民能“务本”、

对神能“敬之”的人就可以算是知了。知在这里不仅指聪明智慧，还指高尚道德，可以和“仁”^[8]、“勇”并称。知者不仅是聪明人，还是明道理的人，道理就是规范。

We can differentiate knowledge into two categories: first, understanding of the nature of the physical world and, second, understanding of what constitutes right conduct. In the Confucian classics *chih* refers to the second type of knowledge. Confucius even believed that the man who knew the moral norms did not necessarily need to know about nature. In fact, he was himself represented as that sort of man whose "four limbs are unaccustomed to toil" who "cannot distinguish the five kinds of grains."^[9] Fan Ch'ih asked the Master to teach him about farming. The Master said, "You had much better consult some old farmer." He asked to be taught about gardening. The Master said, "You had much better go to some old vegetable gardener." When Fan Ch'ih had gone out, the Master said: "Fan is no gentleman! If those above them love ritual, then among the common people none will care to be disrespectful. If those above them love right, then among the common people none will dare to be disobedient. If those above them love good faith, then among the common people none will dare to depart from the facts. If a gentleman is like that, the common people will flock to him from all sides with their babies strapped to their backs. What need has he to practice farming?"^[10] This quotation explains that, to Confucius, a knowledge of nature was not so important and also shows his conception of his own social position. Men such as he are at the top; the ordinary people are at the bottom. The people must work on the land, but those at the top need only acquire and keep the respect of the people through upholding the *li*^[11]—justice and faith. The man who knows about the norms of conduct need not work for his living.

In Mencius this social structure becomes still clearer. A man called Ch'en Hsiang spoke to Mencius about Hsü Hsing's idea that a worthy prince would till the land with the people. But Mencius did not agree with him and put forward arguments to show that a division of labor was both natural and right.

When Ch'en Hsiang saw Hsü Hsing, he was greatly pleased with him, and, abandoning entirely whatever he had learned, became his disciple. Having an interview with Mencius, he related to him with approbation the words of Hsü Hsing to the following effect: "The prince of T'ung is indeed a worthy prince. He has not yet heard, however, the real doctrines of antiquity. Now, wise and able princes should cultivate the ground equally and along with their people, and eat the fruit of their labour. They should prepare their own meals, morning and evening, while at the same time they carry on their

government. But now, the prince of T'ung has his granaries, treasuries, and arsenals, which is an oppressing of the people to nourish himself. How can he be deemed a real worthy prince?"

我们可以把“知”分成两类：一是知道物质世界的特征，即自然知识；二是知道正确的行为如何构成，即规范知识。儒家作品中的“知”指的是第二类，孔子甚至认为懂得规范知识的人不必有自然知识，实际上他自己就代表了那种“四体不勤，五谷不分”^[12]的人。“樊迟请学稼。子曰：‘吾不如老农。’请学为圃，曰：‘吾不如老圃。’樊迟出。子曰：‘小人哉，樊须也！上好礼，则民莫敢不敬；上好义，则民莫敢不服；上好信，则民莫敢不用情。夫如是，则四方之民襁负其子而至矣，焉用稼？’”^[13]这段话说明，自然知识对于孔子是不太重要的，还表明了他对于自己社会地位的概念。像他这样的人是在上的，“民”在最下层。民必须种田，而在上的人只需高举“礼”^[14]——即义、信——来获得和维持民的敬服。懂得行为规范的人不必亲自劳作。

孟子把这种社会结构说得更清楚。有一个叫陈相的人在孟子面前宣传许行的“贤者与民并耕而食”的主张，但孟子不同意，认为劳动分工既是自然的又是正确的。

“陈相见许行而大悦，尽弃其学而学焉。陈相见孟子，道许行之言曰：‘滕君则诚贤君也；虽然，未闻道也。贤者与民并耕而食，饔飧而治。今也滕有仓廩府库，则是厉民而以自养也，恶得贤？’

Mencius said, "I suppose that Hsü Hsing sows grain and eats the produce. Is it not so?" "It is so," was the answer. "I suppose also, he weaves cloth, and wears his own manufacture. Is it not so?" "No. Hsü wears clothes of haircloth." "Does he wear a cap?" "He wears a cap." "What kind of a cap?" "A plain cap." "Is it woven by himself?" "No. He gets it in exchange for grain!" "Why does Hsü cook his food in boilers and earthenware pans, and does he plough with an iron share?" "Yes." "Does he make those articles himself?" "No. He gets them in exchange for grain."

Mencius then said, "The getting of those various articles in exchange for grain is not oppressive to the potter and the founder, and the potter and the founder in their turn, in exchanging their various articles for grain, are not oppressive to the husbandman. How should such a thing be supposed? And moreover, why does not Hsü act the potter and founder, supplying himself with the articles which he uses solely from his own establishment? Why does he go confusedly dealing and exchanging with the handicraftsmen? Why does he not spare himself so much trouble?" Ch'en Hsiang replied, "The business of the handicraftsman can by no means be carried along with the business of husbandry."

Mencius resumed, "Then, is it the government of the kingdom

which alone can be carried on along with the practice of husbandry? Great men have their proper business, and little men have their proper business.... Hence, there is the saying, 'Some labour with their minds, and some labour with their strength. Those who labour with their minds govern others; those who labour with their strength are governed by others. Those who are governed by others support them; those who govern others are supported by them.' This is a principle universally recognized."^[15]

We may see here how a recognition of the obvious need for an economic division of labor was used to support class distinctions and to justify the privileges of the ruling class. But I quote the two passages given above in this context to show the difference in attitude under the traditional system toward knowledge of the natural world and ethical knowledge. Knowledge of the natural world was knowledge for production and belonged to farmers, craftsmen, and others who depended upon it for earning their living. Ethical knowledge, on the other hand, was an instrument in the possession of those who used their minds to rule the people. To rule others means that one is superior and should be able to be maintained by others, if not exploit them. Because such men do not deal with the material world, they form the habit of "not using their four limbs" and "not distinguishing the five grains." It is this which Confucius suggests by his question as to why he should till the land.

“孟子曰：‘许子必种粟而后食乎？’曰：‘然。’“许子必织布而后衣乎？’曰：‘否；许子衣褐。’“许子冠乎？’曰：‘冠。’曰：‘奚冠？’曰：‘冠素。’曰：‘自织之与？’曰：‘否；以粟易之。’曰：‘许子奚为不自织？’曰：‘害于耕。’曰：‘许子以釜鬲爨，以铁耕乎？’曰：‘然。’“自为之与？’曰：‘否；以粟易之。’

““以粟易械器者，不为厉陶冶；陶冶亦以其械器易粟者，岂为厉农夫哉？且许子何不为陶冶，舍皆取诸其宫而用之？何为纷纷然与百工交易？何许子之不惮烦？’曰：‘百工之事固不可耕且为也。’

“然则治天下独可耕且为与？有大人之事，有小人之事。……故曰，或劳心，或劳力；劳心者治人，劳力者治于人；治于人者食人，治人者食于人，天下之通义也。”^[16]

这里我们可以看到，对劳动的经济划分的必要性的认识是如何被用来支持阶级划分和为统治阶级的特权辩解的。但我引用以上两段话是要表明传统制度下对自然知识和规范知识的不同态度。自然知识是生产知识，属于农民、手工业者和其他以生产为生的人；而规范知识是劳心者统治人民的工具。统治别人意味着高于别人，可以“食于人”，如果不是剥削人的话。他们自己不参与生产，养成了“四体不勤，五谷不分”的习惯，孔子“焉用稼”的问题正式表达了这层意思。

Although Mencius laid down the distinction discussed above as a universal principle, he did not explain why those who work with the mind, those who possess ethical knowledge, should stand above the people and rule them and be entitled to be supported by them.^[17]

This leads us to the question: How did the intelligentsia acquire their social position? Much of their authority was derived from the nature of the knowledge they possessed, a knowledge not, as we have seen, of practical affairs but of something other, of recognized social value.

In order to satisfy the basic needs of existence, such as food, clothing, and shelter, we must use material goods and have some real acquaintance with the world about us. We must know how to deal with material objects in the right way. For instance, the knowledge that friction will produce fire was an early-discovered principle and an important addition to civilized knowledge. But one cannot make fire simply by rubbing something together. The knowledge of how to make fire must include a knowledge of what materials to use and of how long friction of these materials must be maintained. Only under certain conditions is the principle of making fire through friction realized. A technique prescribes a definite procedure by which one reaches certain desired consequences, and a knowledge and proper use of it determine whether one achieves the desired result or not. But in human life we do not use techniques for their own sake but rather as a means toward an end. We make a fire in order to cook, to warm a house, or to worship the gods. Thus making a fire brings not only the problem of *how* but also of *when*, *where*, and *by whom* to make *what kind* of fire. Making a fire is not an isolated activity but part of a social institution. And social institutions always involve not only efficiency but also values. The problem is whether we ought or ought not to make the fire. This is part of what Confucius called the *li*. Thus the same action may be right in certain contexts and not right in others. When someone asked Confucius if Kuan Chung knew about the *li*, he said: "Only the ruler of a State may build a screen to mask his gate; but Kuan had such a screen. Only the ruler of a State, when meeting another ruler, may use cupmounds; but Kuan used one. If even Kuan is to be cited as a expert in ritual, who is not an expert in ritual?"^[18] That which decides what we ought to do is not the technique but a norm of conduct.

In dealing with nature, it is a question of doing what is practically right. If we work according to principles inherent in nature itself, we will reach our desired end. If we do not do so, we will not succeed in making the fire burn. Thus no extra authority is needed to reinforce knowledge of the natural world. If one does not act according to social

norms, the consequences may be bad for society as a whole, if not for the individual himself. To protect the common good, we need sanctions which will make the nonconformist respect the norms. In this way, we turn *ought to be* into *dare not do so*. Social sanctions require authority from society at large. But this authority cannot be given to everyone; society must delegate someone to be its agent. In China such persons have been those whom we referred to above as "the men who know."

虽然孟子把以上的社会分化说成是“天下之通义”，但他没有解释为什么那些“劳心者”、那些掌握规范知识的人可以在上、可以治人、可以食于人。[19]

这使我们不禁要问：知识分子是怎样获得他们的社会地位的？他们的地位大部分是从他们所拥有的知识的性质引出的。正如我们所看到的，这种知识不是指实际事务的知识，而是另外一种对社会价值的认识。

为满足衣食住行基本生活的需要，我们必须利用自然的物资，与所处的自然世界发生真正的联系。我们必须懂得如何用正确的方式来与物资打交道。例如，摩擦生火是人类很早懂得的原理，也是对文明知识很重要的补充，但不是随意把东西摩擦一下就可以生火的。生火知识的内容包括用什么东西、怎样摩擦、摩擦多久等，只有在一定的条件下才能实现摩擦生火的原则。技术规定了在一定程序下会得到一定的效果，而知识及其正确运用可以决定是否能达到预期的结果。但在人类生活中，我们不是为用技术而用技术，而通常是为达到某个目的。生火是为了煮饭、取暖、敬神，因此生火不仅仅是如何生火的问题，还包括生火的时间、地点、由谁来生火和生何种火。生火不是孤立的行为，而是社会制度中的一部分，而社会制度经常不仅涉及有效性，而且涉及价值观念。问题是我们是否应该生火。这是孔子所谓的“礼”的一部分。因此，同一个活动在某些情况下就可能是应当的，而在另外的情况下就可能是不应当的。有人问孔子，管仲是否懂得礼呢？他说：“邦君树塞门，管氏亦树塞门。邦君为两君之好，有反坫，管氏亦有反坫。管氏而知礼，孰不知礼？”[20]决定我们应该做什么的不是技术而是行为规范。

与自然打交道时，问题在于区分正确与否。如果我们遵循自然规则，就能达到目的；如果不遵循，就不能达到目的，就生不出火。我们不需要另外的力量来使人们遵循自然知识。一个人不遵守社会规范，即使不会危害他自己，却可能会给整个社会带来危害。为了保护大家的利益，我们必须对不守规范的人加以制裁，这样就把“应该做”转变为“不敢做”。制裁需要来自社会共同意志的权威的支持，但是权威不能给大家，只能授予若干人来做大家的代理。在中国，这种人就是前面我们提到的“知者”。

In a static society those norms of conduct which are developed through and accumulated by practical experience are usually effective directives for a successful life. Their effectiveness is their *raison d'être*

and their justification for their support by social authority. In such a society the other side of the coin is the fact of willing conformity by the majority, because conformity to these norms of conduct gives satisfaction in daily life. Norms of conduct in a stable society are traditions handed down over the years, crystallized experience in dealing with the world. Confucius achieved his social authority not so much from his own wisdom or learning as from his profound knowledge of the traditional way. In a stable, traditionally organized society a man does not need to question, to rationalize, or to justify. What he needs to do is to find out what the custom is. When Confucius speaks of "finding out," he is not seeking to explore something new but to rediscover the past.^[21] In a society in which historic traditions have the only real validity influence lies not with the innovators but with those who can guide along established paths. As apprentices learn their techniques from their masters, so the common people depend upon the students of traditional values to teach them the way in which they must go. And these teachers are those who possess social authority and prestige.

Social authority is, however, different from political power. I emphasized the fact that the Chinese gentry did not possess real political power. In fact, in China, political power has always been quite different from social authority. Political power is attained by violence and imposes the relationship of conqueror to conquered, while social authority is a rule of society over the individual which is based on consent and common understanding, Confucius' school hoped that political power and social authority might be made to coincide. When a ruler rules his country by political power alone, he will be called a despot, or *pa*. When political power and social authority coincide, he will be called a king, or *wang*. In actual fact, in the history of China, the combination has never been achieved. Confucius was revered as a "king without a throne," *su wang*, a man with social authority but without political power. The result of having two parallel sources of authority meant that, in Chinese society, order was established on two different levels. The daily life of the masses was regulated by social authority, while political authority was usually confined to the activity of the yamen.^[22] The court, except in the case of a few tyrants, did not interfere in the going concern of society. In general, a good monarch collected a definite amount of taxes and left the people alone.

在一个静态的社会中，从实际经验里发展、积累得来的规范通常是社会共同生活有效的指导。规范对于社会生活的功效是它存在的理由，也是受到社会权威支持的理由。这种社会的另一面是大多数人民的悦服，因为服从于这些行为规范可以带来日常生活的满足。行为规范在稳

定的社会中成了多年的传统和处世的经验。孔子获得其社会权威更多是因为他对传统的深刻理解而不是他自己的聪明或学识。在稳定的传统社会里，人们不必去推究“为什么”的问题，他只需找出传统的做法就可以了。孔子谈“发现”时，他不是指去探索新的东西，而是去重新发现过去。^[23]在一个只有历史传统才具有真正有效性的社会中，影响不在于改革者，而在于那些沿着已有的道路指引人们的人。正像学徒向师傅学手艺一样，人们依靠知道传统价值的人来教授他们必须要走的路。这些知道传统的人具有社会的威望。

然而，社会权威和政权是不同的。我曾强调过中国的士大夫并不真正掌握政权这一事实。实际上，在中国，政权和社会权威经常是迥异的。政权通过武力获得，是征服者与被征服者的关系；社会权威则是社会对个人的控制力，基于认可和共同的理解。儒家希望政权和社会权威相合，当统治者只用政权来统治国家时，被称为霸道，二者相合时称为王道。事实上，在中国的历史中，二者从没有相合过。孔子被尊称为“素王”，一个有社会权威而没有政治权力的人。两种权力并行于天下的结果意味着，在中国历史中，秩序建立在两个不同的层次上：民众的日常生活由社会权威来规定，衙门^[24]里则是政权的统治。除了少数的暴君，皇权是不干涉民众生活的。一般说来，一个好的帝王在额定的赋役之外不去干预民众。

In a simple society the norms of conduct are known to most of the people and are not specialized knowledge. Anyone may follow the norms and receive recognition. A student of Confucius, Tzu-hsia, once said: "A man who treats his betters as betters wears an air of respect, who in serving father and mother knows how to put his whole strength, who in the service of his prince will lay down his life, who in intercourse with friends is true to his word—others may say of him that he still lacks education, but I for my part should certainly call him an educated man."^[25] The reason for the lack of special qualifications for the person who knows the norms is that for most of the people ethical or normative knowledge is accessible. In a simple society this kind of knowledge is handed down orally and learned by repetition. Confucius used the word "exercise" in writing of acting upon knowledge gained by hearing rather than by the study of books. Literacy had not yet become so all-important. It is said of Confucius that, "when the Master entered the Grand Temple, he asked questions about everything there. Someone said, 'Do not tell me that this son of a villager from Tsou is expert in matters of ritual. When he went to the Grand Temple, he had asked about everything.' The Master, hearing of this said, 'Just so! Such is the ritual.'"^[26] And when the disciple Tzu-kung asked, "Why was K'ung Wên-tzu called Wên ('The Cultured')?" the Master said, "Because he was diligent and so fond of learning that he was not ashamed to pick up knowledge even from his inferiors."^[27]

But, when life becomes more complicated, the transmission of norms of conduct can no longer depend entirely on oral transmission. There come to be different versions, and the decision which is right requires verification through the study of documents. Confucius said, "How can we talk about the ritual of the Hsia? The State of Ch'i supplies no adequate evidence. How can we talk about the ritual of Yin? The State of Sung supplies no adequate evidence. For there is a lack both of documents and of learned men."^[28] When ethical values are no longer transmitted by word of mouth but mainly through written documents, they no longer are accessible to everyone, and literacy becomes very important. Then there develops a special group of people who know how to read books—the *chih-shih fen-tzu*, or intelligentsia.^[29]

在简单的社会里，行为规范被大多数人所认识，它并不是特殊的知识，任何人都可以遵循它和享受传统的权威。孔子的弟子子夏曰：“贤贤易色；事父母，能竭其力；事君，能致其身；与朋友交，言而有信。虽曰未学，吾必谓之学矣。”^[30]懂得规范的人没有特殊资格是因为大多数人都有和这种知识接触的机会。在简单的社会里，这种知识是在世代间口口相传、人人相习的。孔子用“习”字来说明通过“闻”而不是通过书本知识来行事。那时文字并不很重要。据说孔子“入太庙，每事问”。有人就说：“孰谓鄫人之子知礼乎？入太庙，每事问。”孔子听说后就说：“是礼也。”^[31]而当弟子子贡问“孔文子何以谓之‘文’也”，孔子回答说：“敏而好学，不耻下问，是以谓之‘文’也。”^[32]

但是，当生活变得更复杂时，行为规范就不能再完全依靠口口相传了，规范发生了派别的出入，正确的决定要通过对文献的研究而得到证实。子曰：“夏礼，吾能言之，杞不足征也；殷礼，吾能言之，宋不足征也。文献不足故也。足，则吾能征之矣。”^[33]当社会价值不再以口口相传而是通过文献时，就不是每个人都可以得到的，文字也就变得很重要，这样就有了能够识字读书的特殊人物，称之为“知识分子”。^[34]

At the folk level in traditional China there has always been an oral literature.^[35] Classical literature, the only literature officially recognized, which developed from the writing-down of sacred rituals and songs, systems of divination, dynastic histories and genealogies, remained always something apart from the common man. Official historical records of the teachings of the sages may serve to instruct but are of little practical value to the struggling farmer. Not only is the content of what was written difficult to grasp, but the (classical) written language itself is quite distinct from common speech. And since the very structure of the written language differs from spoken, even a literate man who can speak well will not necessarily be a good writer. Literary composition cannot be picked up but requires great application. The pictorial characters are hard to learn, and, if one does not use them constantly, one forgets them. In an economy of scarcity

very few can enjoy sufficient leisure to learn.^[36] Agriculture is the main occupation of China. Farmers engaged in the work of the fields expend their energies in long hours of grinding labor and enjoy small incomes. Such men cannot hope for long periods of leisure. As I described the situation in *Earthbound China*, production and leisure are mutually exclusive; unless one can be supported by others who produce, one cannot leave manual labor. Thus those who have leisure must be big landholders, so big that they can live entirely on their rents. In this way the class of people who are trained in an understanding of values is limited to an economic group who do not represent the interests of the common people.

Mencius said that those who use their minds should be supported by those who use their labor. It appears to me true that only those who are supported by someone else can enjoy literary work. But this does not mean that all those who are supported by others and do not work with their hands necessarily are capable or willing to work with their minds. Those who are privileged to be supported by others have no need to learn technical knowledge, but they also need not learn norms of conduct; they may merely live parasitically. However, in this case, their privileged position may not be secure. Privilege must be supported by some force, either by political power maintained by physical force or by social authority. The class of people who enter officialdom not only can afford to become educated but must do so in order to acquire prestige.

传统中国的乡土社会常常是有语无文的。^[37]从神礼、神歌、占卜、朝代史和家谱等的记载发展起来的经典文学是唯一得到官方认可的文献，常常远离普通人民。官家史书记载的圣人之言也许可以引导人们怎样做人，但通常对于贫苦的农民没有实际意义。不仅是所写的内容难以理解，典籍所用文字也与普通口语的说法明显不同。由于文言文的句法与白话不同，即使一个口才很好的文人也不一定会作好文。写文章不是能轻易学会的，需要格外努力。象形字很难学会，如果不经常用，又会忘掉。在匮乏经济时期，很少人有足够的闲暇来学习。^[38]中国以农业为主，农民在田地里长时间劳作，只能获得很少的收入，这些人不可能有长期的闲暇时间。正如我在《被土地束缚的中国》中描写的：生产和闲暇互相排斥；除非一个人能得到生产者的供养，否则他不能脱离劳作。因此，那些有闲暇的人一定是大地主，大到能靠收租为生。因此受教育的人局限在一个经济群体中，他们不代表普通人民的利益。

孟子说“劳心者食于人”，只有靠别人来供养的人才能读书写文。但这并不是说不劳力者一定能够或愿意劳心，那些靠着特权享受别人供养的人不但不必去学习技术知识，也不必学习社会规范，他们可以只过着寄生的生活。然而，在这种情况下，他们的特权也许不安全，特权必须依靠力量——暴力政权或社会权威——来支持。官僚阶层不仅有条件读书，而且为获得特权也有读书的需要。

The prestige of literacy combined with the power of political authority to support a privileged class distinguished from the laboring class by their higher economic position, their greater opportunity for education, and resultant greater social authority, and, last but not least, their separation from all practical technical knowledge.

As I have shown above, technical knowledge should be related to ethical values. But, once the knowledge of values became so closely linked with literacy that it became the monopoly of one class, it became separated from technology. And, once this link was broken, technological development was arrested. I have said that knowledge of the natural world must be incorporated into a social institution to become "useful," that is, a technique which improves the life of the people. If, however, the governing class, who are responsible for the life of the people, completely lack technical knowledge, they will not be able to order human affairs by technical means. For example, if those who "do not move their four limbs and who cannot distinguish the five grains" have the power of deciding techniques of land cultivation, they will not be willing or able to improve production by introducing improved techniques which may disturb existing traditional ways. Progress in modern techniques comes only when the producers themselves have the power to decide. Once this power is separated from the real producer, technical improvements will cease.

In Chinese traditional society the intelligentsia have been a class without technical knowledge. They monopolized authority based on the wisdom of the past, spent time on literature, and tried to express themselves through art. Chinese literary language is very inapt to express scientific or technical knowledge. This indicates that, in the traditional scheme, the vested interests had no wish to improve production but thought only of consolidating privilege. Their main task was the perpetuating of established norms in order to set up a guide for conventional behavior. A man who sees the world only through human relations is inclined to be conservative, because in human relations the end is always mutual adjustment. And an adjusted equilibrium can only be founded on a stable and unchanging relation between man and nature. On the other hand, from the purely technical point of view, there are hardly any limits to man's control of nature. In emphasizing technical progress, one plunges into a struggle in which man's control over nature becomes ever changing, ever more efficient. Yet these technical changes may lead to conflict between man and man. The Chinese intelligentsia viewed the world humanistically. Lacking technical knowledge, they could not appreciate technical progress. And they saw no reason to wish to change man's relations to man.

靠知识的特权和政治权力共同支持的特权阶层，以他们较高的经济地位、更多的教育机会和由此而得到的更大的社会权威以及与一切实用技术知识的分离而区别于劳动阶层。

如我在上面所说的，技术知识应该和规范知识相关联。但是当规范知识和文字一旦结合而成了某一阶层的独占品时，它就和技术知识分离了，这样一分离，技术也就停顿了。我已说过自然知识一定要通过社会才能被应用而成为有用的技术，改善人民的生活。如果对人民生活负责的统治阶级完全缺乏技术知识，他们就不能通过技术手段来管理人民。比如说，那些“四体不勤、五谷不分”的人如果有着决定怎样应用耕种技术的权力的话，他们将不愿或不能通过引进更好的技术以改善生产，因为这可能扰乱既有的传统方法。现代技术的进步是生产者取得了决定社会规范的权力之后的事。一旦这权力脱离了真正的生产者，技术的进步也立刻停顿。

在中国传统社会，知识阶级是一个没有技术知识的阶级，他们独占以历史的智慧为基础的权威，在文字上下工夫，在艺技上求表现。中国文字非常不适合表达科学或技术知识。这表明在传统社会结构中，既得利益的阶级的兴趣不在提高生产，而在于巩固既得的特权。他们主要的任务是为建立传统行为的指导而维持已有的规范。一个眼里只有人与人关系的人不免是保守的，因为人与人的关系的最终结果常常是互相协调。调整的均衡只能建立在人与自然稳定不变的关系基础上。另一方面，单从技术的角度出发，人类对自然的控制几乎没有限制。在强调技术进步的同时，人对自然的控制也随之不断改变，变得更为有效。然而技术的变化也许会导致人与人之间的冲突。中国的知识分子从人和人的关系看待世界，由于缺乏技术知识，他们就不会赞赏技术进步，看不出任何意图改变人与人关系的理由来。

[2] *Ibid.*, Book VII, No. 27, pp. 128-129.

[3] *Ibid.*, Book XII, No. 22, p. 169.

[4] Referring to *jên*, "man," and continuing to show its relation to *jên*, "goodness," Waley says: "This word, in the earliest Chinese, means freemen, men of the tribe, as opposed to *min*, 'subjects,' 'the common people.' The same word, written with a slight modification, means 'good' in the most general sense of the word, that is to say, 'possessing the qualities of one's tribe.'... Finally, when the old distinction between *jên* and *min*, freemen and subjects, was forgotten, the *jên* became a word for human beings, the adjective *jên* came to be understood in the sense 'human' as opposed to 'animal,' and to be applied to conduct worthy of a man, as distinct from the behaviour of mere beasts.

"Of this last sense (human, not brutal) there is not a trace in the *Analects*. ... *Jên*, in the *Analects*, means 'good' in an extremely wide and general sense.... It is a sublime moral attitude, a transcendental perfection attained to by legendary heroes such as Po I, but not by any living or historic person. It appears indeed that *jên* is a mystic entity not merely analogous to but in certain sayings practically identical with the Tao of the Quietists. Like Tao, it is contrasted with 'knowledge.' Knowledge is active and frets itself away. Goodness is passive and therefore eternal as the hills. Confucius can point the Way to Goodness, can tell 'the workman how to sharpen his

tools,' can speak of things 'that are near to Goodness.' But it is only once, in a chapter showing every sign of lateness, that anything approaching a definition of Goodness is given" (ibid., Introduction, pp. 27-29).

[6] 同上书，第7篇，第27章，第128—129页。

[7] 同上书，第12篇，第22章，第169页。

[8] 指“人”，韦利继续说明其与“仁”的关系：“这个字在中国古文字中意思是指自由人、部落里的人，与‘民’、‘平民’相对。在写法上略有些改变的同样一个字（仁），意思是最广义的‘善’，即是说‘具有其所属部落的属性特征’……当‘人’与‘民’之间这种古老的区分最终被遗忘之后，‘人’这个字就用来指人类，形容词意义上的‘人’这个字是从与动物相对立的‘人类’这个意义上理解的，并被用以指涉符合人的德性的行为，与单纯的兽类行为区分开来。

“对于后面的这个含义（即人性而非兽性），在《论语》中无法找到任何出处。……在《论语》一书中，‘仁’意味着极为广义上的和普遍意义上的‘善’。……这是一种崇高的道德态度，这是由像伯夷这样的传奇式英雄而不是由活着的或历史上的人物所达到的一种超越的完美。‘仁’似乎确实是一种神秘的存在，它不仅类似于，而且在某些表述中几乎等同于寂静主义者所持守的‘道’。与‘道’一样，它是与‘知识’相对立的。知识是积极的，因而逐渐消磨。善则是被动的，有如高山一样恒久。孔子能够指出达到善的道路，能够告诉‘工’如何‘利其器’，能够告诫弟子‘亲仁’。但是《论语》中仅有一次在明显比较后期的一章中近乎给出了‘善’的定义。”同上书，导论部分，第27—29页。

[9] Analects of Confucius, free translation by Fei. "The five grains are paddy, millet, panicked millet, wheat, and pulse" (James Legge, The Works of Mencius in The Chinese Classics [2d ed.; Oxford: Clarendon Press, 1895], II, 251 n.).

[10] Waley, Analects, Book XIII, No. 4, p. 172. See Legge's version of the Confucian analects for a somewhat different translation. Although somewhat less literal than Legge, Waley's text of the Analects has been employed as being closer to Fei's usage. For example, Fei uses the term "gentleman," as does Waley, rather than "superior man," "man of the higher type," "wise man," as do Legge and Soothill.

[11] Li: "Ceremonials, customary morality, mores, rites, rules of good manners, proper conduct, propriety" (Fung Yu-lan, A History of Chinese Philosophy, trans. Derk Bodde [Peiping: H. Vetch, 1937], I, 439).

[12] 见《论语》，费孝通自译。“五谷是指稻、黍、稷、麦、菽也。”引自《中国典籍》第2卷《孟子选集》，理雅各编译，第2版，牛津：克拉伦登出版社，1895年，第251页注释。

[13] 引自《论语》英文版，韦利译，第13篇，第4章，第172页。另可参见理雅各对儒家语录的翻译，译法稍有不同。尽管不如理雅各在字面上忠于原文，但是韦利的《论语》译本更近于费孝通所使用的含义。比如，对“君子”的译法，费孝通和韦利一样译为gentleman，而不是像理雅各和苏慧廉那样译成superior man、man of the higher type和wise man。

[14] “礼”是指“庆典、习俗道德、风气、仪式、良好的行为举止和礼仪”。引自《中国哲学史》英文版，冯友兰著，德克·卜德译，北平：亨利·维奇出版公司，1937年，第1卷，第439页。

[16] 引自《中国典籍》第2卷《孟子选集》，理雅各编译，第3篇上，第4章，第247—250页。（中文可参考《孟子译注》，杨伯峻译注，中华书局，1962年，第123—124页。——译者注）

[17] Mencius did say: "The Minister of Agriculture taught the people to sow and reap, cultivating the five kinds of grain. When the five kinds of grain were brought to maturity, the people all obtained a subsistence. But men possess a moral nature; and if they were well-fed, warmly clad, and comfortably lodged, without being at the same time taught, they become almost like the beasts. This was a subject of anxious solicitude to the sage Shun, and he appointed Hsieh to be the Minister of

Instruction, to teach the relations of humanity:—how, between father and son, there should be affection; between sovereign and minister, righteousness; between husband and wife, attention to their separate functions; between old and young, a proper order; and between friends, fidelity. The highly meritorious sovereign said to him, 'Encourage them; lead them on; rectify them; straighten them; help them; give them wings:—thus causing them to become possessors of themselves. Then follow this up by stimulating them, and conferring benefits on them.' When the sages were exercising their solicitude for the people in this way, had they leisure to cultivate the ground?" (ibid., Book III, Part I, chap. iv, pp. 251–252).

[29] Giles wrote of the China of 1911: "The Chinese, recognizing the extraordinary results which have been brought about, silently and invisibly, by the operation of written symbols, have gradually come to invest these symbols with a spirituality arousing a feeling somewhat akin to worship. A piece of paper on which a single word has once been written or printed, becomes something other than paper with a black mark on it. It may not be lightly tossed about, still less trampled under foot; it should be reverently destroyed by fire, here again used as a medium of transmission to the great Beyond; and thus its spiritual essence will return to those from whom it originally came. In the streets of a Chinese city, and occasionally along a frequented highway, may be seen small ornamental structures into which odd bits of paper may be thrown and burnt, thus preventing a desecration so painful to the Chinese mind; and it has often been urged against foreigners that because they are so careless as to what becomes of their written and printed paper, the matter contained in foreign documents and books must obviously be of no great value" (H. A. Giles, *The Civilization of China* [New York: Henry Holt & Co., 1911], pp. 231–232).

[34] 翟理斯在谈到1911年的中国时写道：“中国人认识到了由书写符号的运用而无形引起的超乎寻常的后果，并逐渐赋予这些象征符号以某种灵性，由此而激发出一

种近乎崇拜的情感来。在一张纸上上面一旦写上或者是印上一个单字的话，那这张纸就不再是写有黑字的纸了。不能随便摇晃它，更不能踩在脚下；应该满怀敬意地焚毁，这样做还是将其当作向苍天传递消息的媒介——如此则其灵性的本质还会返回其最初由来之处。在中国城市的街道上，以及偶尔在人来人往的道路旁，会看到小小的略加装饰的建筑物，人们会将各样的小纸片投进去烧掉，以免亵渎神灵——这对于中国人来说是十分令人痛苦的事。并且这一点也常被用来反对外国人，因为他们对写下的和印刷的字纸毫不在意，记载在外国人的档案和书籍中的内容显而易见就没有什么太大价值了。”引自《中国的文明》，翟理斯著，纽约：亨利·霍尔特公司，1911年，第231—232页。

[35] "So long as men seek illusion, the story-teller will remain a feature of Chinese life, invited to wealthy homes to amuse those of the 'inner chamber,' welcome in the village tea-shops on the summer evenings where he is the peasants' living book of history, drawing his audience at fairs and wringing hard-earned coppers from the pockets of the crowds by the same device our up-to-date magazines use for serial stories, demanding a new outlay for a new installment. The story-tellers belong to an organization. Novices sometimes start their careers under an experienced teller of tales, but, usually, in the old days, they were unsuccessful students" (Juliet Bredon and Igor Mitrophanow, *The Moon Year* [Shanghai: Kelly & Walsh, 1927], pp. 152–153). Even fairly recently, during the war with Japan, the management of a factory in Free China hired an old-fashioned story-teller to tell stories of "The Chinese Robin Hood." This was entertaining for the less sophisticated local workers, but the nonlocal workers did not care for it (Kuo-heng Shih, *China Enters the Machine Age*, ed. and trans. Hsiao-tung Fei and Francis L. K. Hsu [Cambridge: Harvard University Press, 1944], p. 110).

[36] "The 'bridge of learning' is a long one. From the primary school to the upper grades of the middle school takes nine years. And during these nine years parents must pay not only for the food but also for the other expenses of their children.... Moreover, while the children are in school, they cannot help on the family farm. This means that only the rich can afford to send their children to school. The young men of the poorer houses can have no chance to pass over this bridge; so they must find another way out. None of those from the middle, poor, and landless classes, who left the village, had had a middle-school education. Among the ten persons who went out from the rich houses of the village, seven of them had received a middle-school education" (Hsiao-tung Fei and Chih-i Chang, *Earthbound China* [Chicago: University of Chicago Press, 1945], p. 274).

[37] “只要人们还追求幻想，说书人就仍是中国人生活的一个侧面，他们会被富人家请去娱乐那些所谓的‘内眷’，他们会在夏季夜晚乡间的茶馆里受到人们的欢迎，在那里他们成了农民生活的历史书。说书人在集市上吸引观众的方法与今天时兴的杂志所使用的连载故事的方法一样——人们花钱来听讲一回新故事，以此来挣观众口袋里的几个辛苦钱。说书的人都属于某个组织。有时初学者会在一位有经验的说书人的带领下学艺，但在过去，这类学生大多不会成功”（引自《中国风俗节日记》，裴丽珠、伊戈尔·米特罗法诺著，上海：别发印书局，1927年，第152—153页）。甚至到了最近的抗日战争期间，在自由中国管理工厂还会雇老式说书人来讲‘中国罗宾汉’（指《水浒》中的梁山好汉——译者注）的故事。这些故事是用来娱乐较为单纯的当地工人的，而外地工人对此并不大感兴趣（引自《中国进入机器时代》，史国衡著，费孝通和许烺光编译，剑桥：哈佛大学出版社，1944年，第110页）。

[38] “‘学习之桥’历时漫长。从小学到中学的高年级要九年的时间。在这九年当中，家长必须负担的不仅仅是他们孩子的伙食费用，还要负担其他方面的费用.....更进一步说，当孩子在学校里的时候，他们不能在自家农田里帮忙。这便意味着只有富人能够负担得起送孩子上学。贫困户的男孩子就没有机会跨越这座桥梁了；因此他们要寻求其他的道路出来。出村的人中，来自中农、贫农和雇农家庭的没有一个人受过中学教育，而十位富家子弟中就有七个人受过中学的教育。”引自《被土地束缚的中国》，费孝通、张之毅著，芝加哥：芝加哥大学出版社，1945年，第274页。

Chapter Four Basic Power Structure in Rural China

第肆章 中国乡村的基本权力结构

● THE DO-NOTHING POLICY OF THE IMPERIAL POWER

A centralized political system has had a long history in China. Since the time (221 B.C.) when the First Emperor abolished feudalism and created the provinces and districts, local officials theoretically have always been appointed by the central government, the custom being that local men should not be named as local officials. It would appear from this that the Chinese political system was one controlled completely from the top, one in which the people were entirely passive and in which local interests had no voice. If this had been really true, the Chinese political system would have been the most authoritarian known to man. Yet it is obvious that, unless the people were completely enslaved, a centralized control of this sort would be very difficult to maintain, particularly in a huge country in which the system of communications was not comparable to that of the Roman Empire, for example, and which was without many strong garrisons.

Any political regime which wishes to maintain itself for long, if it cannot win the active support of the people, must at least gain their tolerance. In other words, the political system cannot be developed on a single track from the top downward. Under any kind of political rule the people's opinion cannot entirely be ignored. This means that there must be, in some way, a parallel track from the bottom up. A sound system which will endure must thus be "double track." This is clearly seen in modern democratic institutions, but in fact it may also be traced in the so-called absolutistic governments. When under this sort of rule the track from the bottom up is broken, we have a tyrant, and the result is disaster. The fact that in China, even under the absolutistic system, despotic tyrants have not always ruled indicates that there has been some informal type of track by means of which the people's opinion has penetrated to the top levels.

In the Chinese traditional political system there have been two lines of defense which prevented an absolute monarchy from becoming intolerably tyrannical. The first defense was Chinese political philosophy, the theory of do-nothingness. Years of experience shaped this. In Chinese history there has been little theory or practice to encourage political power to interfere with the social life of the people. It is true that the realistic and materialistic Legalistic Han Fei-tzu (*ca.* 280–233 B.C.) did advocate reforms in the government to strengthen it and to make the nation rich. He and his followers worked out the Legalist theory of rule by law. But in the eyes of traditional scholars throughout Chinese history, Han Fei-tzu has been poorly regarded, and his tragic end^[1] has been pointed out as a warning to those who would have liked to follow the same path. Two other well-known reformers, Wang Mang in the Han dynasty (who usurped the throne A.D. 9–23), and Wang An-shih (1021–1086) in the Sung dynasty, wished the government to carry out social reforms and were against the do-nothing policy. But both failed. It may be said by those who sympathized with them that they were prevented by reactionaries from attaining their goals. And yet none of these reformers went so far as to attempt to restrict the monarchical power by law. Nor did any of them make any effort to learn whether their reforms would be acceptable to the people either in whole or in part. In fact, there was no evidence that the policy they urged upon the government, coincided in any way with the people's desires.^[2] The policy of maintaining the monarchical power unrestricted and enforcing the government's will upon the people naturally resulted in conflict with the latter. In the political history of the West the tendency has been increasingly to give up the responsibility for, and control of, political power to the people. In China political policy throughout the ages has been rather to neutralize political power in

such a way that the people did not become restless (while the few would-be reformers of this system have tended toward more authoritarianism than those whom they opposed). Do-nothingism is a way of dealing with political problems which is different from the positive check of a constitutional government but which serves as the "first defense" against political absolutism.^[3]

• 皇权的无为政策

中央集权制度在中国有着漫长的历史。自公元前221年秦始皇废封建、置郡县以来，原则上地方官吏都由中央政府来任命，当地人通常不能在当地为官。以此看来，似乎中国的政治体制是完全受上面控制的，人民是完全被动的，地方利益无法保障。如果确是这样，那中国的政治体制也成了最专制的方式。但显而易见的是，如果人民不被完全奴役，这种集权统治就很难维持，尤其在这样一个交通系统无法与比如罗马帝国相比且缺乏足够牢固要塞的大国。任何想长久维持的政权，如果不能赢得人民积极的支持，至少也要得到他们的容忍。换句话说，政治体制不能简单地沿着自上而下的轨道运行，在任何政治统治下，人民的意见都不能完全被忽视。这就意味着，在某种方式上，必须要有自下而上的一个平行轨道。因此，一个可以长时间维持的良好的体制将是“双重轨道”，这在现代民主制度下显而易见，在专制政治的实际运行中也是如此。在这种统治下，当自下而上的轨道被破坏时，就有了暴君，于是悲剧就发生了。事实是，在中国，即使在专制统治下，也并不完全是暴君统治，这一事实表明人民的意见通过某种非正式的轨道向上传达。

在中国传统政治体制下，有两道防线使专制的皇帝不致过于暴虐。第一道防线是中国政治哲学——无为主义，这是从长年的经验里累积而成。在中国历史上，很少有理论或实践鼓励政权去干扰人民的社会生活。主张现实主义和唯物主义的法家代表人物韩非子（约公元前280年—公元前233年）确实曾倡议改革来加强政府统治、富裕国家。他和他的追随者提出了法治的法家学说。但是在中国历史上传统学者的眼里，韩非子并未受到尊重，他悲惨的结局^[4]被认为是给想要重蹈其覆辙者敲响了警钟。另外两位知名的改革者是汉代的王莽（他在公元9年—23年篡夺了皇位）和宋代的王安石（1021—1086），他们希望政府实行社会改革，反对无为政策。但两人都失败了。那些同情他们的人可以说，是反动分子的阻挠使他们未能如愿。但是，没有一位改革者胆敢以法来限制皇权，也没有改革者花费精力来研究，他们的改革是否完全或部分地被人民所接受。其实，没有证据显示，他们推行的政策是否符合人们的意愿。^[5]维护皇权的无限制性和加强政府对人民的控制就自然导致了与后者的冲突。西洋的政治史是加强对权力的控制，使它逐渐向民意负责。而在中国长时间以来的政治政策是软禁权力，以使人民不会感到不安（那些在此种体制下的少数未来改革者们比他们与之对着干的那些人更倾向于威权主义）。无为主义是一种解决政治问题的方法。这一方法与宪法政府的积极制约不同，但却是针对政治专制主义的“第一道防

线”。[6]

We recognize now that such a system is not effective in modern life, since we depend upon central governmental power to take action with regard to those things which concern the people as a whole. But in economically self-sufficient communities it is not necessary to employ authority beyond that found in the local community. Constitutional government is a modern achievement. Before it developed in the West, political power was there as elsewhere restricted by traditional morality, in this case reinforced by the supernatural authority of the church.[7] And we may note that the American constitution, which was drafted before industrial development had taken place, had the point of view that the best government is the one which governs least. In China, men had recourse not to legal but to ideological restrictions upon the absolute power of the monarch. It was probably due to the influence of Confucian ideology that the abuse of political power was to some extent lessened.

现在，我们意识到这种制度在现代生活中不起什么作用，因为在面临与全体人民密切相关的事务时，我们依靠中央政府采取措施。但是在经济自给自足的社会中，没有必要再动用除地方权力机构之外的其他权力。宪法政府是现代的成就。它在西方发展之前，那里的政治权力如同其他任何地方一样，受到传统道德的约束，在西方即得到教会超自然权威的强化。[8]而且我们会注意到，在工业发展之前起草的美国宪法认为，“最少管事的政府是最好的政府”。在中国，人们不求助于法律，而是寄望于对绝对皇权的意识形态上的制约。可能正是受儒家意识形态的影响，在某种程度上政府权力的滥用才有所减轻。

● THE POLITICAL TRACK FROM THE BOTTOM UP

In this section I do not wish to emphasize the first line of defense, however, but rather the second. In our traditional politics, on the one hand, we restricted political power by ideology and, on the other, restricted the sphere of the administrative system. We somehow managed to "hang up" the centralized power so that it did not reach to the ground, since the officials sent by the central government stopped at the district *yamen*. Ordinarily, students of Chinese administration have paid little attention to the connection between the *hsien* (district) government and the gate of each house. But, in fact, this connection was both extremely interesting and important in that it was the meeting point of the powerful central authorities and the local self-governing community. Only by understanding this meeting point can we know how the Chinese traditional system actually worked.

Let us start with the district *yamen*. I have said that the officials sent by the central government stopped at the district because, formerly, we did not recognize any political unit below the *hsien*. The head of the *hsien*, who represented the emperor, was called the "parent-official," or *fu-mu kuan*. He was supposed to maintain an intimate relationship with the people, but, in fact, the office of this *lao-yeh* was as high as the sky—so high, indeed, that no ordinary person could reach up to it. Nor was the *yamen* a place in which any common person could enter freely. But between the parent-officials and the children-common people existed intermediaries. Those who made the actual contact between the *yamen* and the people, the ruler and the ruled, were the servants of the officials. These official servants (*ya-i*) occupied one of the lowest positions in the Chinese social scale; they were deprived of most of their civil rights, and their sons were not allowed to take the examinations. It is a significant point in the Chinese power structure that these men who were in the position of most easily abused power should have been held so low. If society had not suppressed them by despising them and depriving them of a decent social position, they might have become as fearful as wolves. But with no hope of ascending in the social scale, even if they abused their power, they still would not be too formidable.^[9]

Under a political system that upholds the do-nothing policy, the local officials will have very little work. So history shows us many officials spending much of their time in leisurely expeditions or in developing their literary talents. Their job was merely to collect taxes and to act as judges.

• 由下而上的政治轨道

不过，这一节将强调第二道防线上的权力制约，而不是第一道防线。在我们传统的政治生活中，一方面我们用思想约束政治权力，另一方面又去限制行政体系的范围。这是把集权的中央悬空起来，不使它进入与人民日常生活相关的地方公益范围之中。中央派遣的官员到县级为止，不再下去了。一般研究传统中国行政机构的人很少注意到从县衙门到每家大门之间的一段情形，其实这一段是最有趣的，同时也是最重要的，因为这是强大的中央政权与自治的社区之间的结合点。只有对这个结合点有很好的了解，我们才能理解中国的传统体制实际是如何运作的。

我们先从衙门说起。我谈到由中央派遣的官员只存在于县级以上，因为以前在县级以下我们不认可政府部门的存在。知县代表着皇帝，被称为“父母官”，他应与群众保持亲密关系，但这位老爷的衙门像天一样高得让普通老百姓难以接近。衙门也不是一般人都能随便进入的。但是，在父母官和其子民之间有着一些往来接头的人。那些保持衙门与民

众之间、治人者与治于人者之间联系的人是官僚的奴仆们。这些衙役在中国的社会中居于最低的阶层之中，他们被剥夺了大多数的公权，他们的儿子不得参加科举考试。最容易滥用权力的人被置于如此低的地位，这也是中国权力体系中十分重要的一点。如果社会没有通过轻视他们、剥夺他们优越的社会地位的方式压制他们的话，他们可能就会像犬狼一样可怕。在没有提高社会地位可能的情况下，即使他们滥用权力，他们仍然不至于令人惧怕。^[10]

在倡导无为政策的政治体制中，地方官没有什么工作可做。所以，从历史上我们可以了解到许多在这种职务任内花大把时间游山玩水或培育自身文学才能的例子。他们的工作只是收税和断案。

So far as the latter occupation went, there was not much to do, because the ideal was to have no litigation. The duty of governmental servants was to keep order among the people, to collect money, and to conscript labor when needed. If the district ordinances had applied to each and every household, it would have meant that the *hsien* was actually a basic unit of administration. But in fact this was not true. District orders did not come to the various households but to the local self-governing unit (called, in Yunnan, the "public family," or *kung-chia*). I speak of this type of organization as a "self-governing unit" because it was organized by local people to look out for the public affairs of the community. Public affairs included problems of irrigation, self-defense, mediation in personal disputes, mutual aid, recreation, and religious activities. In China such things are local community affairs, and, according to the tradition still preserved, they are not an affair of government but are managed by the local community under the leadership of the better-educated and wealthier family heads. Practical affairs such as might come up in dealing with irrigation, for example, might be dealt with by nonscholarly responsible individuals; but the more scholarly would generally have greater prestige in the making of decisions.^[11]

But besides deciding local public affairs, another important function of the *kung-chia* was to represent the people in their dealings with the government. With good reason I have separated these two functions—the self-governing and the dealing with the central government. The responsible leaders of the *kung-chia* organization kept clear of any official dealings with the *yamen*. Instead, there were special individuals who represented the community in their dealings with the government. These people were called *shang-yao* (the term used locally in Yunnan). As I said before, in the *de jure* political system, there was no recognized track from the bottom up, the emperor being absolute. To reject an order of the emperor thus was a crime. Nevertheless, the fact that the emperor had ordered it was not in real life a guaranty that the people would accept it. Therefore, in

actual practice, there had to be a means for communicating with the people and discovering their sentiments. The servant of the government brought the orders not to the *kung-chia* but to the *shang-yao*. The *shang-yao*, whose office was filled in turn by members of the community, was in a particularly awkward spot because he had no real power or influence in the community but merely served as the terminus of the track from the top down. After he had received an order from the government, he in turn reported to the head of the *kung-chia*. The latter then talked the matter over with other leaders of the gentry in the teashop, and if he, along with the others, decided that the order was unacceptable, he rejected it and turned it back to the *shang-yao*. This unfortunate in turn must again communicate with the *yamen* and receive the brunt of official annoyance due to his lack of success. But in this way the "face" of the emperor would have been saved, since the refusal to comply was not direct but merely indicated in a roundabout fashion. Meanwhile, informal negotiations would be carried on. The leaders of the local community, whose status as gentry placed them on a footing of equality with officialdom, would make a friendly call upon the district official in the course of which they discussed the governmental order. If no agreement resulted from these negotiations of local gentry and local government officials, the local gentry would be inclined to get their friends and relatives in town to take the matter up with the higher levels of the bureaucracy, in time, perhaps, working up to the very top. Eventually, an agreement of some sort would be reached, the central government would change its order, and things would settle down again.

就是第二项工作也没有多少事，他们的准则是最好没有诉讼。政府工作人员的任务是维持人们的正常秩序、收钱以及在需要时征集劳力。如果县政府的命令下达到每个家庭，那才真正意味着县是一个基本的行政单位。但事实并非如此。县的命令并不直接到达各家各户，而是发到地方的自治团体（在云南被称为是“公家”的那一类组织）。我称这一组织为“自治团体”，因为它是由当地人民组织以管理社区公共事务，如水利、自卫、调解、互助、娱乐、宗教等。在中国，这些是地方的公务，在依旧活着的传统里，它们并非政府的事务，而是以受到过良好教育、较为富裕家庭的家长为首，由地方社区来管理的。像灌溉这样的实务，可能由没有学问的人来负责，但有学问的人通常在作决定方面有更高的声望。[12]

但是，除处理地方上的公共事务之外，公家另外一个重要的作用就是与政府打交道时代表人民。我有足够的理由将此二种功能——自治与代表政府——分离开来。公家负责人不沾手与衙门发生的官方关系，而是有特定人物代表社区与政府打交道，这些人被称为“乡约”（此为云南土语）。如我所言，在法定的政治体系中，并不承认自下而上的轨道，皇帝是绝对的，因此违背皇帝的旨意就是犯罪。但是在实际生活

中，谁也不敢保证自上而下的命令一定是人民乐于接受的。因此，在实际的运作中，必须有与人们交流以及了解他们的意愿的途径。官府衙役并不是把命令传达到公家，而是传达到乡约那里。乡约由社区成员轮流担任，其身份尤其尴尬，因为他在社区没有实权或影响，只不过是权力从上至下轨道的终点。他在接到政府命令后，相应地向公家的管事汇报，后者在茶馆里与士绅中的其他头面人物商讨，如果他与其他管事觉得命令难以接受，他可以拒绝并退回给乡约。这倒霉的乡约必须再次通报衙门，并且由于办事不力，还会成为官家的“出气筒”。不过，这样皇帝的“脸面”就保住了，因为这种违抗并非是直接的，而仅仅是以一种迂回的方式来表明。另一方面，非正式的协商也开始了。地方的管事以其与官位相当的士绅地位去拜会地方官，就政府指令一事进行协商。如果达不成协议，地方的管事就会委托镇上的亲戚朋友，再往上层活动，到地方官上司那里去交涉，有时可能会上至最高当局。最后某种协议达成了，中央政府就会自行修改命令，事情再次得到解决。

According to this system, the local leader did not come into contact with the despised governmental petty servants. If the self-governing unit had been an actual part of the *de jure* administration, however, the track from the bottom up would have been blocked. The official in charge of the *yamen* could not have a free discussion with subordinates in office but only with those outside the bureaucracy and his social equals. In the Ch'ing dynasty (1644–1911) a man who had passed the district examination could call on the local official, using his own card. Besides this privilege of a scholar, he was also protected from corporal punishment, unless his degree were first taken away. And this latter act was in the power not of the district official but only of the local education official. Such people who were able to deal with the governmental officials are those who were called gentry.

I hope I have made certain points clear in this somewhat simplified account. (1) In the traditional Chinese power structure there were two different layers: on the top, the central government; at the bottom, the local governing unit whose leaders were the gentry class. (2) There was a *de facto* limit to the authority of the central government. Local affairs, managed in the community by the gentry, were hardly interfered with by the central authorities. (3) Legally there was only one track—from the top down—along which passed imperial orders. But in actual practice, by the use of intermediaries such as the government servants and a locally chosen *shang-yao* or functionary of the same type, unreasonable orders might be turned back. This influence from the bottom up is not usually recognized in discussions of the formal governmental institutions of China, but it was effective nevertheless. (4) The mechanism of bringing influences to bear from the bottom upward was worked through the informal pressure of the gentry upon their relatives in office and out or upon

friends who had taken the same examinations. By this means influence could be brought to bear sometimes even upon the emperor himself. (5) The self-governing organization so called arose from the practical needs of the community. The power of this group was not derived from the central imperial power but came from the local people themselves. When the central authority collected only a limited amount of taxes and of conscripts, the people would be likely to feel that "Heaven is high, the emperor is far away." But the necessity for maintaining some contact between centralized and local authorities meant that the local gentry always tended to have strategic and leading positions in the local organization."^[13]

依照这种体制，地方管事不与被鄙视、不起眼的政府差人接头，因为如果自治团体成了法定行政机构里的一级，从下到上的轨道就被阻塞了。负责衙门的官员不能与属下胥吏自由交谈，只可与官僚体制之外的人或与他社会地位相仿的人讨论。在清代（1644—1911），中举的人可以用自己的帖子拜会地方官员。除了这种文人的特权外，除非他的头衔被取消，他还可以免受皮肉之刑。举人的功名县官无权取消，而只有地方教育官员才有此权力。那些可以与政府官员打交道的人被称作士绅。

我希望我已经在上述有些简短的叙述中阐明了几点：（1）在中国传统的权力体系中存在两个层次——上层有中央政府，下层有以士绅阶层作为管事的自治团体。（2）中央政府的权威事实上是受限的。由士绅管理的地方事务一般不受中央权威的干扰。（3）从法律上来讲，只有一条自上而下的传达皇帝命令的途径。但是在实际运作中，不合理的命令可以通过官府衙役、地方选择的乡约或其他此类的媒介人物而被打回。在讨论中国正式的政府制度时，通常没有认识到这种自下而上的影响，但无论如何它是有效力的。（4）自下而上传递影响的机制是由士绅的从政或不从政的亲属或参加同批考试的朋友的非正式压力来实现的。通过这种方式，影响甚至可以直达皇帝本人那里。（5）所谓的自治团体是由当地人民实际需要中产生的，而且享受着地方人民所授予的权力，不受中央干涉。当中央政权只征收一部分有限的赋税和劳役时，当地百姓可能会有“天高皇帝远”的感觉。但是保持中央和地方政府之间联系的重要性意味着，士绅通常会在当地组织中拥有决策和管事的地位。^[14]

● THE BREAKDOWN OF THE LOCAL SELF-GOVERNING GROUP

In describing the power structure above, the term "inefficiency" was not derogatory. Actually the need for efficiency did not arise, in that the affairs which directly concerned the people were carried on outside the formal government. The work of local self-governing

groups followed local needs and conformed to local attitudes. Occasionally, the local organization attempted to regulate life in minute detail. For example, in a certain village in Yunnan, if a married couple did not produce children, they would be symbolically beaten and even fined a small amount. Traditional and religious actions were maintained by the local organization. Thus, a do-nothing emperor might enjoy high peace and order under the heavens during his reign because the local organizations throughout the country kept things going. Since the imperial power demanded only two things—taxes and conscripts from the people—the existence of inefficient, poetry-writing officials was, in a sense, a blessing. But such a system could work only in an economy which was to a high degree self-sufficient. When intervillage affairs developed, such as *large-scale* irrigation or other public works projects, or warfare was initiated, an inefficient centralized government was a bad thing. This point is easy to see. The development of Chinese economy increased the work of the central government. Theoretically, no changes were needed in the government itself, since we already had a highly developed centralized political system; we required only more efficiency in its working. It is true that since, legally, the power of the central government was unlimited, increasing its efficiency might break down the first line of defense against a tyrannical authority. But since the do-nothing policy was, after all, a very negative means of restricting power, a means indeed which could hardly be maintained in a modern society, its decline could hardly be regretted. The damage which occurred to the second line of defense, the highly developed local self-government system, when the supposedly more efficient *pao-chia* system was introduced (or, rather reintroduced) was another matter, however.

• 地方自治团体的崩溃

在上文对权力结构的描述中，“无能”不是个恶名。实际上，并没有出现对“效率”的要求，因为与人民利益直接相关的事务在正式的政府之外得到执行。地方自治团体迎合当地需要，满足地方上的要求。偶尔，地方政府也试图管理琐碎小事。比如，在云南有一个村庄，如果已婚夫妇没有生育，他们会受到象征性的责打，甚至还要被少量罚款。地方自治组织还管理传统的宗教性活动。因此，皇帝无为而能天下治的原因是有着无数这类地方团体到处在勤修民政。既然皇权只向人民索要赋税和劳力这两样东西，效率低下、舞文弄墨的官员的存在从一定意义上说也是人民的一种福气。但这种机制只有在一个高度自给自足的经济中才行得通。当有村际事务，像大型灌溉或其他公共项目或公益事务启动以及出现战事时，无能的中央政府就成了一件坏事。这一点容易看出来。中国经济的发展使中央政府的工作增加。理论上讲，政府本身没有改变的

必要，因为我们已经有一个高度发展的中央集权的政治体制。我们只需要有更高的工作效率。从法律上来讲，中央政府的权力可以大到无限，因此提高政府效率确实可能破坏防止权力被滥用的第一道防线。不过，对于无为主义的防线的溃决，我们不必加以惋惜，毕竟，这本是十分消极的限制权力的办法，几乎不适用于现代社会。但当效率更高的保甲制度引入进来（或者说重新引入）之后，对第二条防线的破坏，即对高度发展的地方自治机制的破坏，就是另一回事了。

The *pao-chia* system^[15] has brought the political track from the top down to the gate of every household and, in fact, as a state of policing, has even entered every house door. The introduction of the *pao-chia* system was for reason. In the old traditional system governmental administration was handicapped by its lack of thoroughness, the fact that it only went halfway in carrying out orders. It seemed it would be much more efficient for the government to deal directly with the people instead of having to have everything pass through the local organization. Moreover, when the *pao-chia* system came into force in the 1930's, it was intended that it should, in time, take up the function of self-government, so that, as the recognized track from the bottom up, there might be built up a system of really democratic representation. But the latter result has never been realized. The *pao-chia* system has certain defects which make it unsuited to a democratic system of representation. According to *pao-chia*, the people were to be organized, with slight variations, in uniform numerical groups. But such units did not necessarily coincide with actual social groups. The size of a community is determined by historical and social forces; we cannot add members to a family or to a local community and have them fit in. By instituting the principle of uniformity in the *pao-chia* system—this was actually worked out only for convenience in administration and especially for dealing with conscription—the principle of local self-government has been weakened. Often a community will be divided into several *chia*, while several unrelated units may be combined in one *pao*, the result being much confusion. In fact, there now came into existence two overlapping systems: one, the *pao-chia*, imposed from the top; the other, the natural local organization, which had now become illegal, and these two systems tended to come into conflict.

保甲制度^[16]是把自上而下的政治轨道筑到每家的门前，实际上是把国家的警察制度这条轨道延长到了各家门内。保甲制度有它推行的原因。在旧的传统制度中，政府管理缺乏彻底性，政令执行半途而废，自上而下的轨道因而受阻。似乎政府直接与人民打交道比事事经当地组织效率要高得多。另外，当保甲制度在20世纪30年代得到实行的时候，人们期望它迟早能够起到自治政府的作用，以便在这一公认的基层上行轨道上可以建立真正的民主代表体制。然而，后一结果从未得以实现。保

甲制度有一些缺点使其不适于一种代表制的民主制度。在保甲制度下，人们被组织成略有差别的按数目统一排列的群体单位。但是，这些单位并不与实际存在的社会群体等同。社区的规模是由历史和社会力量决定的；我们不能人为地向一个家庭或社区增加成员并使其成为其中的一员。通过推行保甲制度的统一性——这只是为了管理上的方便，特别是管理征募事务——地方自治的原则被弱化。通常一个社区被分成许多“甲”，几个互不联系的单位又被合并为一个“保”，其结果是一片混乱。实际上是存在着两个重叠的体制：一是上面强制实行的保甲制度，另一个是现属非法的自然形成的地方组织；这两者之间很容易发生冲突。

● TEARING UP THE DOUBLE TRACK

The first serious problem over which conflict developed was the selecting of the head of the *pao-chia*, the *pao-tsun*. The *pao-chia* was an administrative system which executed orders from above, but at the same time it was the legally recognized organization for directing local public affairs. Under the traditional system the carrying-out of this double function was shared by three different groups: the servants of the government; the *shang-yao*, or local representative and intermediary; and the leaders among the local gentry. Now that these three were all combined in one man, the *pao-tsun*, it was assumed that the orders of the central government would be accepted by the people, as always, and carried out by them. But practical difficulties arose at once as the result of the new system. First of all, those people of the community who possessed prestige have usually been unwilling to accept the job of *pao-tsun*. As local gentry, if they wished to preserve their equal status with officialdom, they could not accept a place in the system which would make them lower in status and unable to negotiate but only to accept orders from those above. As a mediator, in fact, the function of the *pao-tsun* was only equivalent to that of a *shang-yao*. Yet the *pao-tsun* and the *shang-yao* are actually not at all the same. The *shang-yao* has no power, while the *pao-tsun* is legally upon the same level as the local leaders, with the right to keep the public funds and to manage local affairs. The difficulty is that the functions of mediator and of administrator have become confused. An energetic *pao-tsun* is likely to come into conflict with the local gentry, and in this conflict there will be no longer any bridge between governmental and local interests. A local leader of the gentry who accepts the post of *pao-tsun* as being in his own interest and a position of authority will find that actually his situation has changed for the worse, in that he can no longer reject any order from above. Thus the local community has become a dead end in the political system. The people now have no way to express themselves against the central authority, and, when

the situation becomes intolerable, the only way out is to rebel.

The *pao-chia* system, thus, not only has disrupted the traditional community organization but has also hampered the developing life of the people. It has destroyed the safety valve of the traditional political system. Nor has the new structure of the *pao-chia* effectively taken over the work of the traditional self-governing organization. The net result has simply been to outlaw the old system so that it can no longer work openly. Deadlock, inefficiency, and even the disruption of the basic administrative machinery have been the results.

• 双轨的拆除

导致冲突的第一个严重问题发生在保甲头领即保长的人选上。保甲是一个执行上级命令的行政机构，同时它也是法律认可的指导地方公共事务的组织。在传统体制下，这两种职能由三种人物分担，他们是衙门里的差人、地方上充当代表和媒介人物的乡约以及地方士绅的领袖管事。当三者集中于保长一人之身时，人们以为中央政府的命令会像以往一样被人们接受并得到执行，但随之新制度即刻出现了实际的问题。首先，社区中有声望的人通常不愿接受保长之职。作为当地乡绅，他们更愿意保留与官僚同等的地位，而不愿接受社会地位降低，使其不得与官僚平等磋商而只能接受上级命令的结局。其实，保长作为媒介人物的地位相当于乡约。不过保长和乡约又不完全相同。乡约没有权力，保长与地方官员有同等的权力并可以保留公产及管理当地的事务。问题在于，接头人物和管理人物的职能被人们混淆。工作积极的保长易与当地士绅发生矛盾冲突，而在冲突中政府利益和地方利益之间的桥梁也不复存在。为了自己利益接受保长之职而处于管事地位的乡绅会发现，自己实际上处在一种更不利的境地——他们再难抗拒来自上面的政令。这样，地方社区成为了政治体制的一个死角。人们没有其他途径表示他们对中央政府的不同意见，当情况变得难以忍受时，他们只有起来造反。

因此，保甲制度不仅扰乱了传统的社区组织，而且还阻碍了人们生活的发展。它还破坏了传统政治制度的安全阀。保甲制度这种新的体制也没有有效地替代传统的自治组织。最终的结果是将旧的制度置于法律的保护范围之外，使其不能公开活动。僵持、低效甚至对基本管理机制的破坏就是由此而带来的后果。

The extension of the track from the top down was intended to facilitate the execution of governmental orders. Though it is true that through the *pao-chia* system a more centralized administration has been realized, greater efficiency has resulted in form only, since, when there is a deadlock at the bottom, orders tend not to be carried out actually. In the more efficient collection of taxes and of conscripts, the new system has achieved something, it is true. But in all projects of local reconstruction or increase of production, all that is accomplished

is the placing of the orders in the files of the *pao-chia*. In fact, it has become generally accepted that this storing of documents is one of the main functions of the *pao-chia*. Under such conditions even a good man in the office of the *pao-tsun* has little chance of bringing about any practical measures of social reform.

下行轨道的延伸是为了协助政府命令的实施。虽然通过保甲体制达到了一个更集权化管理的目的，但是由此产生的只有低效，因为在下层存在着僵持的状态，政令很难得到真正的执行。在征税和征募劳役的过程中，这种体制确实取得了更高效的结果。但在所有的地方重建项目或增产活动中，保甲制度做到的只是把有关政令收在保公所文件里。其实，现在大家都认为保存档案成了保甲的一项主要功能。在这种条件下，即使是个能人，身居保正之位也没有什么机会实现任何社会变革的实际举措。

[1] Han Fei-tzu, slandered and unable to plead his case, ended his life by taking the poison sent him by his slanderers, according to Ssu-ma Ch'ien's Historical Records (see The Complete Works of Han Fei Tzu, trans. W. K. Liao [London: A. Probsthain, 1939], I, xxii-xxix).

[2] See chap. i, n. 6.

[3] " 'But it is a pity that a talented person like yon is unwilling to serve the government. Those who are not talented wish to become officials but those who are, only wish to escape it. This is indeed a most regretful matter.'

" 'You are not right,' argued Lao-ts'an. 'It is a matter of no importance whether the common clay wish to become officials or not. The regretful thing lies in the fact that the talented wish to get such posts. As you can see, Mr. Yu is a talented person, but he is too hasty—hasty for promotion, for becoming a big shot. Therefore, he has not hesitated to do many harmful and unreasonable things in order that he may get results. It is unfortunate that his so-called good administration is known far and wide. Don't you think that in a few years he will be promoted, and be still more harmful to society? If he presides over a prefecture, the prefecture would be injured. If he governs a province, the province would suffer, and if he rule the country, the country would be ruined. Therefore, I put to you this question, whether it would be better for the talented to become government officials, or the non-talented?' " (Liu Ê, A Tramp Doctor's Travelogue, trans. Lin Yi-chin and Ko Te-shun [Shanghai: Commercial Press, 1939], p. 78).

[4] 据司马迁的《史记》记载，韩非子受到诽谤，无以辩驳，因服诽谤他的人送来的毒药而死。见《韩非子全集》英文版，廖文魁翻译，伦敦：阿瑟·普罗赛因公司，1939年，第一卷，xxii—xxix页。

[5] 见第一章注释6（本书注释9，第178页）。

[6] “阁下如此宏材大略，不出来做点事情，实在可惜。无才者抵死要做官，有才者抵死不做官，此正是天地间第一憾事！

老残道：‘不然。我说无才的要做官很不要紧，正坏在有才的要做官。你想，这个玉大尊不是个有才的吗？只为过于要做官，且急于做大官，所以伤天害理的做到这样。而且政声又如此其好，怕不数年之间就要方面兼圻的吗。官愈大，害愈甚：守一府则一府伤，抚一省则一省残，宰天下则天下死！由此看来，请教还是有才的做官害大，还是无才的做官害大呢？’引自《老残游记》英文版，刘鹗著，林疑今、葛德顺译，上海：商务印书馆，1939年，第78页。

[7] The author seems to be referring to the situation in medieval Europe, neglecting the fact that the bases for the concept of law and of constitutional government in the West are to be found in the formularization of laws, which approached a written

constitution in fifth-century Greece and which was later expanded and developed by the Romans. In traditional China the limitations on the power of the monarch, or of his representative, seem never to have been derived from a concept of justice defined by law, written or unwritten.

[8] 作者似指中世纪欧洲的情况，不过忽视了西方法律和宪法政府的概念发源于法律的形成时期，即公元前5世纪希腊成文宪法的制定以及后来罗马人对此的发展。在中国古代，对皇权或其代表的权力的限制的做法，似乎从来都不是衍生自成文或不成文的法律所界定的正义概念。

[9] The typical ya-i would be a man with a little education but not enough to enable him to get ahead. Being literate, he would not want to sink to manual labor.

[10] 一般的衙役通常是受过一点点教育但算不上出类拔萃的人。因为受过教育，他不会情愿沦于从事普通劳动之列。

[11] Lu Hsien, in a short story entitled "Divorce," satirized the role of the gentry in deciding village disputes. A girl wishes to leave her husband and refuses to accept the advice of her relatives. So a member of the local gentry, Squire Seventh, is brought in. The girl thinks, "Those who know the classics and are men of justice must always defend the oppressed." Squire Seventh's authority is urged upon her with the words, "Squire Seventh is a man of wisdom and learning, very different from us villagers, with a knowledge of what is right.... Here is a fact which will not escape Squire Seventh's notice, for those who know the classics and wisdom know everything...." In the end the girl is forced to accept Squire Seventh's obviously biased decision.

[12] 鲁迅在一篇名为《离婚》的短篇小说中，讽刺了士绅在处理乡村纠纷中的角色。一位女子想离开她的丈夫，又不愿听亲戚们的劝导。于是当地的一位乡绅七大人出来劝解。这位女子想：“读经书的一定是有正义感的人，他会帮受害者讲公道话。”七大人的权威促使她说出这样的话：“七大人是知书识理，顶明白的。不像我们乡下人。……这也逃不出七大人的明鉴，知书识理的人什么都知道……”最后那个女子不得不屈从于七大人带有明显偏袒的裁决。

[13] Fei wrote of the village of Kai-hsien-kung, south of Lake Tai, in 1939: "The basis of the headmanship lies in public recognition and support in the leadership in community affairs, and in being the representative of the community against the outside world. Chen started his career as a school-master and Chou as an assistant in the silk factory. Their service and ability have given them authority and prestige. In the village there are few who are literate and still less who are at the same time willing to take up the responsibility without economic reward. Young men of ambition are not satisfied with the position: it is considered by the two middle-school graduates I met in the village as sterile and hopeless. Thus the range for the selection of village heads is not very large.

"Although they have no direct economic reward, they enjoy prestige and presents from the persons who have received services from them. For example, they are respected by the people, and can call the generation senior to them, except their own near kin, by their personal names without adding any relationship term. This cannot be done by an ordinary person.

"Village heads are always accessible, because they are known to every villager, and a stranger will be received by them immediately. The visitor will be impressed by their heavy burden of work. They help the people to read and to write letters and other documents, to make the calculations required in the local credit system, to manage marriage ceremonies, to arbitrate in social disputes, and to look after public property. They are responsible for the system of self-defence, for the management of public funds, and for the transmission and execution of administrative orders from the higher government. They take an active part in introducing beneficial measures such as industrial reform into the village" (Peasant Life in China [New York: E. P. Dutton & Co., 1939], pp. 108-109 and 106).

[14] 费孝通在1939年记述了太湖南岸一个叫开弦弓的村子：“当村头领的基础在于，不论他们代表社区面向外界时，或是他们在领导社区的事务中，都能得到公众的承认和支持。。陈先生从做学校校长起家，周先生则是做一个丝绸厂的助手。他们的服务和才干使得他们获得了权威和声望。在村里没几个有文化的人，能不计经济报酬而自愿承担责任的人更少。有抱负的年轻人对此职位又看不上——我在村里遇到的两个中学毕业生认为，这是一个枯燥无味且无发展前途的位置。故而，村正人选的选择余地并不大。

“虽然他们没有直接经济收入，但是他们享有很高的声望，接受曾得到他们帮助者的馈赠。比如，他们会受到人们的尊敬，对比他们年长辈分高的一代，除其近亲属外，可以直呼其名而不加表明关系的称谓。这也是一般人所不能做的。

“村正是易于接近的，因为村民都认识他们，外来的生人能很快地得到村正的接待。来访者会对他们庞大的工作量感到吃惊。他们帮助人们读写信件和其他文书，按照当地借贷规则算账，主持结婚典礼，仲裁社会纠纷，管理公共财产。他们要负责地方保安，管理公共基金，传达和执行上级政府的行政命令。他们积极地采取各种有利于本村的措施，村里的蚕丝工业改革就是一例。”引自《江村经济——中国农民的生活》，纽约：杜冬出版公司，1939年，第108—109页和第106页。

[15] The pao-chia, under which ten households, the members of which were held to be mutually responsible for one another's behavior, were grouped in a chia, ten chia forming a pao, was more or less in force in China from 1932 until recently, when the Communists, on taking over the government, abolished it. It had been first instituted in 1069 or 1070 by the famous statesman Wang An-Shih. According to Fei's *Peasant Life in China*, the pao-chia system was introduced for military purposes, in order to register and organize the people more effectively against the Communists. Yang says: "Since the revival (a supposed revival of an older system of social control) of the pao-chia system, each family must post on the top of the front door, a card bearing the name, age, sex, kinship status, and occupation of the family members.... The government has recently initiated the pao-chia system but the villagers do not, except very rarely, comply with it. They would not report that a son of their neighbour was involved in anything wrong. This reluctance is largely due to the traditional relations between neighbours, which make it very hard for one villager to report another's bad behaviour to a government authority or an outsider. It is also due to the fact that the system was primarily adopted for eliminating politically undesirable persons, especially those who have been accused of being communists, and often a person in disfavour with the political authorities may be on good terms with his fellow villagers" (Martin Yang, *A Chinese Village*, Taitov, Shangtung Province [New York: Columbia University Press, 1945], pp. 9 and 150).

[16] 保甲制度是指由十户组成一“甲”，一甲的成员对相互的行为负责；十甲组成一“保”。这种保甲制度在中国或多或少地起作用是从1932年开始。当共产党推翻了原政府之后，就将此制度废除了。这一制度最初是在1069年或1070年由著名的政治家王安石建立起来的。照费孝通所著《江村经济——中国农民的生活》一书来看，引入这一保甲制度是基于军事的考虑，为的是对人民进行登记和组织，以此来更有效地阻止当时共产党的发展。杨懋春说：“保甲制度恢复（据称为一种社会控制的旧制度的恢复）之后，每一户家庭都要在自家的大门的门楣上贴上一张卡片，上面写着家庭成员的姓名、年龄、性别、亲属状况和职业……政府最近开始实行保甲制度，但是除了极少数的人，村民并不照此遵守。他们不会举报某个邻居家的儿子犯了什么过错这样的事情。这种不情愿主要是源于传统上的邻里关系，这种关系的存在使得一个村民很难做到向某个政府或是一个外人报告村里另外一个人所做的坏事情；另外还源于这样的事实，那就是之所以采纳这一制度，主要是由于政府要消灭政治上的异己分子，特别是那些被指控为‘赤化分子’的人，而通常对政治当局不满的人可能与其村民同乡关系很好。”引自《一个中国村庄——山东台头》英文版，杨懋春著，纽约：哥伦比亚大学出版社，1945年，第9页和第150页。

Chapter Five Village, Town, and City

第伍章 村、镇与城市

Having discussed the place of the gentry in the political structure of China, I now turn to their place in the economic order. But, in order to understand this, we must first make clear the difference in form between rural and urban communities and the nature of the economic and other relationships which hold them together. Five types of concentration of population may be recognized: the village, the walled or garrison town, the temporary market, the market town, and the treaty port.

● POPULATION AND URBAN COMMUNITIES

What do we mean by "urban" as applied to a community? This question is difficult to answer. In the United States the Bureau of the Census calls a community of 2,500 people or more a city; and a community in which the incorporated area has a population of 50,000 and the outlying suburbs a population density of 150 per square mile is termed a metropolitan area. But not all sociologists agree to this standard. In fact, there exists no absolute generally accepted standard. Mark Jefferson, for example, calls a city an area with a population of 10,000 per square mile, while, for Walter F. Willcox, 1,000 individuals

per square mile is enough to enable him to designate the area as a city.^[1] Although these men disagree as to the numbers to be used, both use population density as the criterion for differentiating rural and urban areas. This is possible because in the United States a dense population is always organized into a city. But in China the situation is different. For instance, in my native province of Kiangsu the average population density is over 500 per square mile; in Shantung it is 615; in Chekiang, 657; and in some parts of these provinces it is more, even, than 6,000 persons per square mile.^[2] If we applied Willcox's criterion, this whole area should be called a city. But to do so would be simply to abandon common sense. If we accept the notion that different standards must be adopted for the situation in China, which is so different from that in the United States, the question arises: What sort of standard, then, shall we use? It is clear that the density of population alone is insufficient for differentiating rural from urban communities.

In studying urban and rural communities from the point of view of population, the emphasis should be laid not upon quantity or density but rather upon distribution. We see that, as economic life develops among human beings, the population begins to concentrate at certain points which seem like nuclei of cells. The nuclear concentration in an area may be called urban; the area surrounding it, rural. Inevitably, there will be a difference in population density related to the process of concentration in the nucleus and in the area surrounding it. But we cannot pick this or that number of persons per square mile as a basis for distinguishing communities at different stages of economic development. Assuming a high density of population, our main problem is to analyze why the population concentrates in a few spots.

在讨论了士绅在中国政治结构中的地位之后，下面我们来看一下他们在经济秩序中的地位。但是，要理解这一点，我们先要认清城乡社区形式的差别以及把城乡结合在一起的经济和其他关系的本质。我们可以看到人口聚集的五种类型：村、衙门围墙式的城、临时集市、镇和通商口岸。

• 人口与城市社区

怎样的社区才能算是一个“城”呢？这个问题很难回答。美国人口局规定2500人以上聚居的地方称作“城”；市区人口超过5万，近郊区域的人口密度为每平方英里150人以上的社区，称作“都会”。但是，并不是所有社会学者都同意这个标准。实际上，没有绝对的被广泛认可的标准。例如，马克·杰斐逊就认为，人口密度在每平方英里1万人以上才能称作城市，而沃尔特·弗朗西斯·威尔科克斯则认为每平方英里有1000人

已足以称为一个城市。^[3]虽然他们在数量问题上意见不一，但都把人口密度作为划分城乡的标准，这种做法是可行的，因为在美国人口密集的地方往往就会建成一个城市。中国的情况则有所不同，例如在我的家乡江苏省，平均人口密度为每平方英里超过500人，山东为615人，浙江为657人，在这些省的某些地方，人口密度甚至超过每平方英里6000人。^[4]如果采用威尔科克斯的标准，这些都可以叫做城市社区了，这显然与常识不符。如果我们认同说情况与美国截然不同的中国要有一套不同的标准的话，那么问题是：我们应该用哪一种标准呢？很明显，仅人口密度不足以区分城市和乡村社区。

从人口角度来研究城乡社区时，重点应放在人口的分布上而不是数量或密度上。我们认识到，随着人类经济生活的发展，一个区域里会产生若干人口密集的中心地点，像是细胞中产生了核心。一个区域的核心就是“城”，核心的外围人口密度较低的地方是“乡”。在人口聚集过程中，核心和外围区域在人口密度上不可避免地会产生差别，但是我们不能以每平方英里的这个或那个人数作为区分不同经济发展阶段的社区的基础。假设一个地区人口密度高，我们的主要问题是分析为什么人口会聚集在少数几个地点上。

In self-sufficient economies, whether nomadic or agricultural, each unit may live by itself, and its population may be dispersed over an area. There is no economic necessity for a nucleus, and, even if individuals come together, there is no economic differentiation. In cultivating the land, for practical reasons, if for no other, we should expect to find farmers settled on their own land so as to be near their work and to have their produce close at hand. This is what we call the dispersed type of agriculture, which is the usual thing in America.^[5] But in China, except for a few places, such as the hilly areas of Szechwan, the situation is quite different. Chinese farmers live not in isolation but close together in villages. Two factors, the kinship organization and the need for mutual protection, are important in particular in bringing this about. Where, as in China, brothers inherit their father's land equally, all tend to remain together upon the land. If there is any free land near by, the family may spread out, and in the course of several generations a clan village may be developed. The fact of kinship keeps people living together in the same locality. Moreover, it is true that, although the lengthening of the distance between farms and living quarters is disadvantageous from an economic standpoint, living together in one place has great advantages from the point of view of security. Farming communities are easily invaded, and the best way to be safe is for the farmers to concentrate their families and produce in one place which is easier to protect and which may be inclosed with some sort of wall. A concentration of farm families of this sort we call a village.

The emphasis on defense appears from the very construction of

the farmhouses themselves. In the mountains and hilly areas villages are smaller, and there may appear scattered homesteads with their own walled inclosures like primitive fortresses. Or, if structures of this sort are lacking, we will see that in the outer walls there are no windows, so that the house looks entirely inward. In larger villages we often find a central walled-in place to which the people can retire when necessary and where they can store their produce in case of an attack from outside. Even in more peaceful and orderly spots like Kiangsu, which we call Paradise, where river transport is more important than roads, the river will be blocked with a wooden gate every evening or in case of emergency. But here the form of the houses is modified, and windows are open to the street.

在自给自足的经济中，无论是游牧还是农业，每个生活单位都可以独立生存，人口可能在一个区域上散布开来。没有什么经济需求促使人口聚集，即使个体聚集在一起，也不会存在经济上的差等。以耕种土地而言，如果不考虑其他而只考虑实际的原因，农民最好是住在他所经营的土地上，便于耕种和收获。这就是所谓的散居式的农业，在美国极常见。^[6]但在中国，除了几个地方，如四川的山区，其他地方就很少有了。中国的农民不是各自独居的，而是聚居在村落里。这种模式的形成有两个特别重要的原因，就是亲属的联系和互相保护的需要。在中国，兄弟平均继承父亲的土地，他们都希望共同生活在这片土地上。如果周围还有闲散的土地，家庭就会开垦扩展土地，几代之后就可以发展成一个小的同姓村落。亲属的联系也使他们住在同一个地方。另外，土地和居住地点间距离上的增大在经济上的确是不利的，但是这种聚居在安全上却是大为有利的。农业社区很容易遭到侵略，农民获得安全的最佳方式是将他们的家庭集中起来，在一个地方从事生产工作，这样更容易保护，周围可以围上墙。这种农户的聚居点我们称作“村”。

从农舍的建筑本身就可以看出对防卫的重视。山区的村落较小，分散的农家建筑带有围墙，像是原始的堡垒。或者，如果建筑不是这种结构，我们会看到外墙上是没有窗户的，整座房子完全是向内的。大一些的村落里有的在中心区域还筑造了围墙，必要时居民可以撤退到围墙之内去，每家的农产品也可以储存在这里以备受外来侵略时用。即使在较为安定、秩序较好、水运比陆运更为重要的地区，比如被称作天堂的江苏，每晚或在紧急情况时，河道都要以木门隔断。但是这里的建筑样式有所改变，窗户朝向街道。

Whatever the variation in form and whatever the size, as an assemblage of self-sufficient units, without a differentiation of function or division of labor among its members, we may recognize it as a village or rural community rather than as a town or urban center. The village, then, may be seen as one type of organization. The towns of China, on the other hand, are not all of one type but vary according to their function.

● THE WALLED OR GARRISON TOWN: A POLITICAL CENTER

An important type of urban center is the walled town or *ch'eng*. The original meaning of this word is "wall," "inclosure," or "defense work." Constructions for defense may vary in size and quality. Sometimes they are built for a single family; sometimes for a village. But, when the word *ch'eng* is used, it designates a wall or defensive construction on a larger scale, one built to protect a political center. To make a wall of this sort is a big enterprise which cannot be accomplished by private means alone; it must be a public work shared in by the people over a large area. Both political power and political purpose are needed to construct this kind of large wall.

A *ch'eng*, then, is an instrument of the ruling classes in a political system where power resides in force. The *ch'eng* is the symbol of power and also a necessary tool for the maintenance of power. As a result, the location of a *ch'eng* is usually chosen with its political and military uses in mind. In the places where the representative of the monarch was used to stay there had to be a wall to protect him. Every *hsien* had to have a *ch'eng* where the representative of the emperor resided. Sometimes, however, when a *hsien* could not afford to build a *ch'eng*, the representatives of several *hsien* would concentrate in one *ch'eng*. In other words, the *ch'eng* existed in order to protect the *yamen* (the bureaucracy). And the existence of the *ch'eng* clearly illustrates the theory expounded in previous chapters that, in China, monarchical power needed always to be vigilant and on the defensive.

作为一种自给自足的生活单位的聚居，无论其在形式和大小上如何变化，只要成员之间没有功能上的区位分化和劳动分工，我们就把它认作是村或乡村社区，而不是镇或城的中心。村落可以看作是一种组织。另一方面，中国的镇不止有一种，而是根据功能的不同而在类型上也有所不同。

● 衙门围墙式的城：一个政治中心

一种重要的城市中心类型就是有围墙的城镇或者说“城”，这个字最初的含义是指“城墙”、“包围”或“防御工事”。防御工事可以在大小或质量上有所不同，有时一家，有时一村。但是称作“城”时，则指较大规模的城墙或防御工事，它所保卫的是一个政治中心。建造这样一个大的城墙工事不是私家所能单独完成的。这必是一个公共的工事，由较大区域的人民共同负担。这种大的城墙工事是要凭借政治权力和政治目的才能修建的。

因此，在一个依靠武力来统治的政治体系中，城墙是统治阶级的保

护工具。城是权力的象征，是维护权力的必要工具。所以，城的地点经常是依照政治和军事的需要而定的。在皇权代表的驻扎地点必然要有一个保卫设施的城。每一个县在皇帝的代表知县住的地方要有一个城。如果有的县不能单独建造城的话，几个县的政府有时合住在一个城里。换句话说，城是为了保护“衙门”（官署）的。城的存在清楚地表明了前面讲过的理论，即在中国，皇权常常需要保持警惕和自我保护。

In Yunnan we see that, in building a walled city, the custom is ordinarily to build the wall partly on a hilltop and partly on the plain because this type of construction is easier to defend. If built on flat ground, a moat, called a *ch'ih* ("pond") or *huang* ("ditch") was dug about it. (By extension, the guard who rules the district in the spirit world, who is a counterpart of the magistrate who rules this world, was called a *ch'eng huang*.) It is clear that the wall and the moat have symbolized a seat of authority far back in Chinese history. Within the walled inclosure, even in cities such as Peking and Nanking, there was usually a large amount of cultivable land which in case of siege even in these days has often been useful for providing perishable foodstuffs. The ideal city, from the traditional point of view, was a self-sufficient castle. And even now the government may, in emergencies, order the gates of a city to be closed. Recently, even before martial law was established in Peking, the city gates were closed every evening at seven o'clock.

Although the *ch'eng* symbolized security, the population within the walls might not necessarily be greater than in communities outside. In fact, in Yunnan it is common to find the walled towns smaller in size than the adjacent villages. Yet the well-protected area of the town had its attractions for certain people. To be a rich man, or even one just a little well-to-do, has never been safe in China, as we said before. Owing to the low cost of labor, landowners need not be very wealthy in order to be freed from the necessity for working their own lands, and in such a case they might feel moved to rent out their land and move to the walled town. Riches obtained from exploitation need to be protected by political power, and governmental authority might be used, when necessary, to collect rent for absentee owners. In Yunnan a troop of soldiers was, at one time, sent to collect rents.^[7] As previously described, the landowners tend to maintain a close personal relationship with the bureaucracy. And it was this combination of officialdom and landed gentry which gave the walled or garrison town its special character.

For the use of the dwellers in the walled town there developed handicraft industries. The greater the concentration of landowners as well as of wealth, the greater the development of craftsmen and the more skilled and varied the types of things produced. The silver of Chengtu, the embroidery of Soochow, the silk of Hangchow, and the

cloisonné of Peking are all examples of art handicrafts which attained a high degree of development. In centers of this sort a more far-reaching trade in the local specialty as well as in local country products, such as fur or herbs, might grow up. But the walled town was not typically a trading center, nor did it serve to supply the needs of the peasant population. Luxury goods of the sort mentioned above were not within the reach of the country people living on an economy of bare subsistence. The craftsmen who lived in the walled towns, such as the tailor (who occupied a place at the front gate of a big house and served as gateman as well), the carpenters, the dispensers of drugs and tonics, the silversmiths, and all the others did not serve the villagers but rather the landlords, somewhat as the artists and craftsmen in the Middle Ages served their lords. Economic activity in these fortified centers of administration, then, was based not on an exchange of goods between producers but on the purchasing power of consumers who gained their wealth largely from exploitative relationships with the country.^[8]

在云南，我们看到，建造县城的通常做法是一半在山丘上，一半在平地里，以易于防守。如果建在平地里，沿城要掘一道环城的水道，叫“池”（有水的城池）或“隍”（无水的城池）。（由此延伸，在神灵世界中控制这一地区的守卫者，就是与现实世界中的县令平起平坐者，叫“城隍”。）很明显，城和池是久远的中国历史上的权力之位的象征。在城墙内，即使是在北京和南京这样的大城市内，也通常有一些可以耕种的土地，万一城市被围困，这些田地可以供给居民不易储藏的食品，即使到今天也是如此。依照传统的观点，理想的“城”是一个能自给自足的堡垒。即使在今天，遇有危急情况，官府也要下令关上城门。最近，即使在北京的军事管制实行以前，城门每晚都是七点钟关闭的。

虽然城象征着安全，但城区的人口并不一定要比外面社区的人口多。实际上，云南有许多县城比邻近的村子要小，但是，有着良好防御工事的城区有它吸引人口的力量。像我们前面讲过的那样，在中国，一个富有的人或稍有些财富的人从来都是不安全的。由于劳动成本很低，地主不必非常富有就可摆脱耕种土地之累，在这种情况下，他可能更愿意把土地租出去，然后搬到城里去住。剥削而来的财富需要得到政权的保护，必要时用政治权威来为不在当地的地主收租。在云南，一队士兵曾被派去收租。^[9]像前面所描述的那样，地主希望与官僚保持密切的私人关系，正是官僚与地主阶级的这种联合使得围墙式的城镇有其特色。

为了城里居民的需要，手工业发展起来。地主集中的数量越多，积累的财富越多，手工艺从业者也就越多，这类手工业品的种类也越多，手艺也越精细。成都的银器、苏州的刺绣、杭州的丝绸和北京的景泰蓝都是手工业高度发展的例子。在这类中心地区，各地的土特产如毛皮或药草等影响更加深远的贸易也可能发展起来。但是城并不是一个典型的贸易中心，也不为农民提供生活用品。上面所列的那些奢侈的消费品不是生活在拮据经济状况下的农民所能购买的。生活在城里的手工业者，

如裁缝（在大户人家的前门占一块地，也同时充当门房）、木匠、卖药的、银匠以及其他，他们并不为农民服务，而是为地主服务，有点儿像中世纪时为他们的主人服务的艺匠。这些行政防御中心地区的经济活动，并不以生产者之间的商品交换为基础，而是以主要通过剥削农民而获得财富的消费者的购买力为基础。[10]

Besides their money from rents, landowners derived income from investing their capital in pawnshops, in the loaning-out of money at high rates, and in rice shops. Once I asked a resident of a walled town about how much moneylending went on there and was told by him that *everyone* in town engaged in this activity. He probably merely meant that most of the townsfolk did so. And the poor country people who come to borrow money will usually be forced to sell their land eventually in order to pay their debts.[11]

The investment of the rice-shop owner may be increased through speculation as well as through merely buying and selling rice. He will then buy rice when the price is low and keep it to sell when the price is higher. In a number of places the rice shop had still another function—that of husking the rice, either, as in former times, by means of machinery run by water power or, as at present, by crude-oil or electric power. (But in the villages of the interior, in particular, we may still see the villagers husking their rice by pounding it.)

In general, this type of town was not conducive to the development of either industry or commerce, and that which did exist, for the most part, served the wealthy classes who had taken up their residence there for political or security reasons.

● MARKETS AND TOWNS DEVELOPED FROM TRADE

Self-sufficiency was highly developed in the rural economy of China, but it was not complete. Some of the necessities of life of the villagers came from exchange with other villagers and some from the outside. So we do find trading activities in the rural areas, and this is another factor in the concentration of population. We may distinguish, as centers of trade, temporary markets from market towns.

地主除了从地租获得收入之外，还利用他的资本从事典当、高利贷、米行等经济活动，以此来增加收入。我在一个县城里调查放高利贷的情况时，一位朋友就告诉我：“城里这些人全是放债的。”这句话并非完全是事实，他可能只是说放债的人很多罢了。那些贫穷的乡下人來此借债最终不得不把地卖掉來还债。[12]

而米行老板的投资可以通过投机和单纯的米的买卖来获得丰厚回报。他在米价低时买进，等到米价高时再卖出。在许多地方，米行还有

另外一个功能，就是碾米，以前是利用水力，现在则用柴油机或电机。（但特别是在内地的乡村，我们仍可见到人们是用舂米的方式。）

总的说来，这种城对于工业和商业的发展都无益，即使是实际存在的工商业，很大程度上也是为那些由于政治和安全的考虑而居住于此的富有阶层服务的。

• 由贸易发展而来的集市和镇

在中国，乡村经济自给程度很高但不完全，有些农民所需的必需品是从别村或外界交换而来。所以我们在乡村也能见到贸易活动，这是人口集中的另一个因素。作为贸易中心，我们可以把临时性的“集市”与“镇”区分开来。

In interior China temporary markets are still common. These have names which vary with the locality and which indicate that they are a local development rather than something imposed from the top and alike throughout the country as the *ch'eng*. The terms for temporary market refer to places where producers exchange goods among themselves.^[13] Since the producers cannot engage in trade every day, this kind of market usually takes place only every few days (in Yunnan the common practice is to hold a market every six days). On market day the villagers bring to the market the things they wish to sell and bring back, at the end of the day, what they have bought in exchange. The size of the market varies according to the area which it covers, large markets having sometimes more than ten thousand people. On the Dragon Day, Sheep Day, or Dog Day markets in Yunnan, when one stands on the top of a hill and looks down, there appears to be a sea of human beings moving back and forth like waves. People are so crowded together that their shoulders touch, and it is hard to move. But the crowd does not last long. At sunset they will be leaving, and by evening the place will be empty.

Markets of this temporary nature do not represent a community. The term "market" refers merely to a location which has been selected for its convenience in communication. Usually it must be a large open space, often the open area near a temple, where people are apt to gather. Where trading is more developed, markets of this sort become more frequent. Gradually around the big open space will spring up small storehouses for the merchants who buy up local products and transport them to other places as well as teahouses for those who wish to sit and rest. As the demand grows for more supplies from outside, what is brought in by the peddlers will not be enough. In time a store may be established close to the market center, and eventually there will develop a permanent community which we call a market town, or

In the Lake Tai area, where communication by water is much quicker than by land, this type of town has had more chance to develop. As described in *Peasant Life in China*, a so-called "agent boat" buys things for the villagers, each boat roughly serving about a hundred households. By using the morning to go to town and the afternoon to come back, a boat of this sort can cover quite an area. In town there are usually hundreds of these agent boats, supplying tens of thousands of rural families. The stores in town have special arrangements with one or more boats for their supplies, and thus, by having access to such a large number of consumers, a large commercial center may be maintained. But in the interior of China, where communication is difficult, towns of this sort are very few.

在中国内地，临时性的集市仍旧非常普遍。各地方的名称不同，意味着它们是在地方上发展起来的，而不是像“城”一样由上面推行、遍及全国。临时集市是指生产者之间相互交换的场合^[14]，由于生产者不能每天都从事贸易活动，因此这样的集市每隔几天才有一次（云南通常是六天一次）。赶市的那一天，各村的乡民提着他们要卖的东西上街，赶集日结束时再带回交换所得的东西。各地集市大小各不相同，大的集市有时会有上万人。在云南的龙街、羊街和狗街，站在山坡上往下看，人山人海，来来往往的人群就像起伏的波浪。人群太过拥挤，接踵摩肩，连前行都很困难。但拥挤的人群并不会持续很长时间，太阳落山时，他们先后离去，到了晚上就没有人了。

临时的集市不代表社区，它不过是一个交通方便的地点。一般来说，它必须是一片开阔的空地，附近有庙，易于人们聚集。随着贸易的发展，这种集市变得越来越频繁。渐渐地，在空地周围出现了贩运商品的小型栈房和供人休息的茶舍。随着对外界商品需求的增长，贩运商人运来的商品已不够用。一段时间后可能就会在靠近集市中心的地方出现囤积商品的仓库，最后发展成为永久的社区，我们不妨将此叫做“镇”，或者“市”。

在水运比陆运快捷的太湖流域，镇尤其易于发展。像我在《江村经济——中国农民的生活》一书中所描述的那样，有一种为村民买东西的“代理航船”，每只航船代理一百多户农家。它们每天一早从村子驶出，下午回来，能为很大一片区域提供服务。在镇上，常常有几百只船为几万农家办货。镇里的商店和个别的船只维持着专门的供应关系，有了这样大的消费区域，大的商业中心可能得以维持下去。但是在交通不便的内地，这种镇是很少的。

Market and garrison towns can be differentiated not only theoretically but also by mere inspection. In Yunnan their aspects are very different. Around Kunming, which is a big walled city, there are six or seven temporary markets. It is true that Kunming has recently also become a commercial center, but it has not developed through

rural consumption. On the main street of Kunming there are department stores selling foreign goods and merchants selling gold. Those who buy here are mostly city dwellers or traders from various other towns. Very few villagers come to buy things directly from these shops. They buy the things they need from the markets which surround the city walls.

We may take another example of a small garrison town of Yunnan in which there is only one main street inside the town walls. On this street are several teashops, a barbershop, and a shop with miscellaneous drygoods and sweets. Outside the walls, a fifteen-minute walk away, is the Dragon Day market. Though within easy reach of the town, it is quite distinct from it. The town represents a political center in which, the chief interest being security, the location chosen was a hillside, which is easier to defend. The latter, developing through trade, selected a position at a crossroads, which makes it easily accessible to the villagers round about. In the Lake Tai area in my own native district, Wukiang, the garrison town is much smaller and less prosperous than the nearby market towns, such as Chen-tse. In the Ch'ing dynasty this garrison town contained two district governments, but, besides the governmental *yamens*, it had mainly private residences and only one main street. Here one sees clearly the difference in function between garrison and market town.

It is true that these two types of town do have certain similarities, since the market town is also the place where landowners gather. When they live in an economic center, they have more opportunity to make commercial use of the capital which they have accumulated from the land. But, according to traditional standards, the landlord who engaged in trade occupied a lower position than did the landlord who was an official in the *ch'eng*. However, as this tradition has been gradually breaking down, a high position in the market town is often a step toward a high position in a garrison town. In the market town, where the shops are the center of the community, there are also small industries and handicrafts developed to serve the community itself and for export to rural areas. In this way the two types of town also resemble each other.

市镇和城不但在概念上可以区分，事实上也是常常分开的。在云南这种情形可以看得很清楚。昆明这个大城的附近就围绕着六七个临时集市。当然昆明最近已发展成一个商业中心，但它不是通过乡村的消费而发展起来的。昆明的主要街道上有卖洋货的百货公司和金店，从这里买东西的人多数是城里的居民和从别的镇来的商人，只有很少的村民直接从这些店铺里买东西。他们是从环绕着城墙的集市上买自己所需要的东西。

我们可以举云南的另一个衙门围墙式的小城为例，其城墙内只有一条主要街道。这条街上有几家茶舍、一家理发店和一家干货糖果店。在城外，步行十五分钟就是龙街，虽然与城相隔不远，但却截然不同。城代表了政治中心，以安全为主要目的，地点选在山坡上，易于防守；而集市由贸易发展而来，地点选在十字路口，便于附近的村民往来。以太湖流域的情形说，我的故乡吴江县的县城远不及附近的震泽等市镇大和发达。在清朝，两个县政府同在这个县城里，但是除了政府衙门之外，主要是私人住户，只有一条主要的街。由此我们可以清楚地看出城和市镇的不同功能来。

城和市镇确实有着一些相似之处，因为市镇也是地主们蚁集之所。当他们居住在经济中心时，就有更多的机会把从地里得来的钱财用作商业目的。但是，根据传统的标准，做生意的地主比在城里的官僚地主地位要低。然而，随着这个传统渐渐被打破，镇上的高位往往意味着离城里的高位更迈进了一步 [参照费孝通著《乡土中国与乡土重建》，原意为“镇的地位事实已有超过了县城的”（台北：风云时代出版公司，1993年，第136页）——编者注]。在镇上，店铺成为社区的中心，随之发展了一些小型的工业和手工业来为社区服务，并向乡村地区出售产品，在这方面很类似于城。

But even though these two types of towns do tend to overlap and are sometimes even combined into one community, it seems worth while to try to differentiate them conceptually, the garrison town as the seat of traditional bureaucratic authority and the wealthy gentry, the market town as a link between the peasants' local industry and more highly developed commerce and manufacturing.

● THE TREATY PORT

We come, then, to the last type of concentration of population—the treaty port. I should like to make clear here that the Chinese modern city which developed from the treaty port not only differs from the traditional town, either of the market-town or of the garrison-town type, but also differs notably from the modern metropolitan city in the West. Those who advocate urbanization in China usually take the position that a city such as Shanghai is similar to New York and London. Such a conclusion is most misleading, because there is a real and very essential difference between Chinese cities and Western metropolises. Metropolitan cities like New York and London may be viewed as nerve centers for a wide economic area. The development of the center indicates the development of the hinterland, since they are bound up together. Through this relationship the economic division of labor of the different areas is facilitated. But Shanghai is different. It is not the center of an economically independent area but rather is a treaty port which was

forced open by political agreement. It is a gateway to an economically underdeveloped continent, opened toward the Occident, rather than a city which, like New York or London, grew up through the economic development of its own hinterland. Shanghai and other treaty ports are the result of the impact of economies at different levels. Thus Shanghai originally was only a small fishing village occupying an insignificant position in the traditional economy. Since it has become a gate to the interior, it has entirely changed and has prospered mightily.

But its prosperity does not mean the prosperity of the hinterland, because it represents not a mutual development but rather the establishment of a superior economic force working its way toward a dominance of a less-well-developed area. The fact that treaty ports like Shanghai had for a long period a special political position as foreign settlements where Chinese power could not reach was no accident, since economically they were also separate from Chinese economy. On the one hand, they were a gate by means of which foreign goods could come in; on the other, they served as ratholes for dribbling away Chinese wealth. When I call the treaty ports "economic ratholes," I mean that they were fundamentally similar to the garrison towns, a community of consumers and not of producers. I may be challenged on this point by those who point out that commerce is mutual benefit and that the importation of foreign goods must be balanced by the export of other goods or that otherwise trade will stop. This may apply to New York, but it does not apply to Shanghai. To be sure, there are exports from Shanghai, not only Chinese raw materials but also silver and gold, when other goods are not enough to make a balance of trade. But these goods are not produced in Shanghai or in the industrial areas near by. They are raw materials from the countryside. If Shanghai played the role of connecting foreign consumers with their own producers, it might claim a status similar to that of New York or London. But the fact is that the producers of goods for export do not get back an equal value in imports. The Shanghai people collect the raw materials and sell them to foreign countries and then themselves consume the foreign goods which come in as imports. This relationship is quite similar to the traditional system in the garrison town, which I described above.

即使城和镇互相交错，甚至有时会联合成一个社区，但是把它们从概念上区分开来似乎仍很必要：城是传统官僚地主和富有士绅的基座，镇是联系乡村工业和更为发达的商业与制造业的纽带。

• 通商口岸

现在我们讨论最后一种人口聚居的形式——通商口岸。应该认清的是，从通商口岸发展而来的中国现代城市不仅与传统的镇或县城有所不同，也与现代西方大都市有着明显的区别。那些提倡在中国实行都市化的人常常认为上海与纽约、伦敦相似，这是一个很大的误导，因为中国的城市与西方的都市有着真正的和本质的区别。纽约和伦敦这样的大都市可以看作是一个大的经济区域的神经中枢。中心地区的发展预示了内地的发展，因为它们连成一体，通过这种联系促进了不同地区劳动的经济分工。但上海不同，它不是一个经济自立区域的中心，而是由于政治协议而被迫开放的口岸。它是通向经济不发达的内陆地区的大门，向着西方开放，而不是像纽约和伦敦那样通过自身内地的发展而发达起来的。上海和其他通商口岸是不同层次的经济影响的结果。上海起初只是一个小渔村，在传统经济中的地位无足轻重，但自从成了内地对外开放的大门之后，它发生了巨变并极度繁荣起来。

但是上海的繁荣并不意味着内地的繁荣，因为它并不代表共同发展，而是一种高级经济力量的确立，以逐步支配欠发达的地区。像上海这样的通商口岸，很长时间以来都占据着特殊的政治地位，它们是外国人的居住地，不受中国的控制，这一事实并非偶然，因为从经济上来讲，它们也是与中国的经济相脱离的。一方面，它们是外国商品得以进入中国的大门；另一方面，它们也是中国财富外流的老鼠洞。我把通商口岸称作“经济鼠洞”，是指它们根本上是与县城相似的，是消费者的社区，而不是生产者的社区。那些认为商业是互利行为，进口与出口要达到平衡，否则贸易就会停止的人也许会对这一点提出疑问，对于纽约也许是这样，而上海则不同。可以确定，上海有出口商品，包括国产的原材料、金和银等，而其他商品不足以达到贸易上的平衡。但是这些商品都不是在上海或附近的工业区生产的，它们是来自农村的原材料。如果上海可以使外国人来消费中国产品，那么它或许可以与纽约或伦敦获得相似的地位。但事实却是，出口商品的生产者不能从进口商品中获得同等的价值。上海人收集原材料出口到国外，而自己消费进口商品，这种关系与我上面所提到的县城里的传统体制非常相似。

But there is a difference between the treaty port and the traditional garrison town. In the latter, goods are consumed which are produced in the local area or at least near by, while, in the treaty port, the goods consumed are largely those imported from foreign countries. The treaty port itself, as a great center of foreign influence, is very effective in bringing about the substitution of foreign goods for those produced at home. So we find a new class of wealth and influence in China—the comprador.^[15] Part of the foreign goods pass into the towns of the interior, but the main market remains the treaty port or the international settlements. Because of the relative political freedom in these places, they collect all those people who feel they cannot stay in the interior, and, in fact, they become "Grand Hotels" for refugees of all sorts. In calling them "Grand Hotels," I am referring to the fact that most of those who enter the settlements bring with

them money to spend. The source of this money is not the treaty port itself but is in the rural areas round about. Straws of various sizes thrust into the rural areas suck out the wealth of China into these ports. It is quite obvious that such an industrially undeveloped metropolis as Shanghai, with a huge population next in size to New York and London, cannot have a self-sufficient economy but depends for its income upon the countryside.^[16] As such, it is a garrison town and a community of dependent consumers and parasites rather than a highly developed city of the modern type.

但通商口岸与传统的县城有一点不同，后者的商品在其生产地或至少是附近地区消费，而在通商口岸，消费品大多是来自国外的进口商品。通商口岸本身作为受外国影响的一个巨大中心，在买进本国产品的国外替代品时是非常有效的。所以我们在中国又发现了一个有财富、有影响的阶层，即买办阶层。^[17]一部分外国商品进入到内陆城镇，但主要市场仍是在通商口岸或外国人的居住地。由于这些地区的政治相对自由，这里聚集了所有自认为不能呆在内地的人，实际上成了各种难民的“大旅馆”，这样称呼是因为大部分人都带着钱来到这里消费，这些钱并不来自通商口岸，而是来自附近的乡村。乡村的财富如同被粗细不一的吸管不断吸出，涌入这些通商口岸。显而易见，上海这样一个工业不发达的都市，拥有仅次于纽约和伦敦的人口，不能自给自足，而要靠来自乡村的收入。^[18]这样看来，它只是一个县城，一个依靠别人的消费者和寄生虫聚集的社区，而不是一个现代的高度发展的都市。

Modern metropolises are the products of industrialization. A country which has not been industrialized cannot have urban centers like New York or London. The treaty port brought about the invasion of an industrialized economy into an economically inferior area, where a simple economy still prevailed. This created a peculiar community which should not be classed with modern urban centers. In order to understand the nature of such a community, we need more research than has so far been done.

现代都市是工业化的结果。一个非工业化国家不会有纽约或伦敦这样的城市中心。通商口岸带来了工业化经济对简单经济仍占主导地位的不发达地区的入侵，这就产生了一种不应该归入现代城市中心的特殊社区。为了理解这一社区的特征，我们现在所作的研究还远远不够。

[1] Walter F. Willcox, *Studies in American Demography* (Ithaca, N.Y.: Cornell University Press, 1940), chap. vi, "Density of Population: Urban and Rural," p. 117. The Mark Jefferson reference has not been found.

[2] China has never had a real census. Rather, population has been computed for purposes of taxation and compulsory labor on the basis of not very accurate estimates. However, from 1932 to 1937, seven experimental censuses, confined to one hsien (district) each, in the case of six, and part of a hsien for the seventh, were taken. These hsien were scattered through five provinces, three in Kiangsu, and one each in Hopeh, Shantung, Chekiang, and Fukien (Tâ Chen, *Population in Modern China* [Chicago: University of Chicago Press, 1946]).

[4] 中国从未有过真正的人口统计。为了赋税和徭役的目的，才在非常不精确的估计的基础上计算人口数量。但是，1932年至1937年期间，做了7次实验性的人口统计，其中6次是限于一个县内，第7次是一个县的局部地区。这些县分散在5个省，3个在江苏省，其余分别在湖北、山东、浙江和福建。参见《现代中国人口》，陈达著，芝加哥：芝加哥大学出版社，1946年。

[5] The dispersed farms of America are the exception, of course. Throughout the world old farming populations tend to cluster their houses into villages and go out to their fields.

[6] 美国分散的农场当然是例外。全世界传统的农业人口都往往是聚居在村子里而到村外面去耕作。

[7] "Landlords of big estates establish their own rent-collecting bureaus, and petty landlords pool their claims with them.... At the end of October, the bureau will inform each tenant of the amount of rent that should be paid that year. The information is forwarded by special agents. These agents are employed by the bureau, and have been entrusted with police power by the district government" (Hsiao-tung Fei, *Peasant Life in China* [New York: E. P. Dutton & Co., 1939], p. 188).

[8] Compare with Pirenne's description of medieval towns of Europe during the period of closed domestic economy: "As can be easily seen, the burghs were, above all, military establishments.... In case of war, its inhabitants found there a refuge; in time of peace, there they repaired to take part in the assemblies of justice, or to pay off the prestations to which they were subject. Nevertheless, the burgh did not show the slightest urban character.... Neither commerce nor industry was possible or even conceivable in such an environment. It produced nothing of itself, lived by revenues from the surrounding country, and had no other economic role than that of a simple consumer" (Henri Pirenne, *Medieval Cities* [Princeton: Princeton University Press, 1925], pp. 75 and 76).

[9] “大地主建立了自己的收租机构，小地主与他们合伙.....到10月底，收租机构会来通知每个佃户当年应该交纳的地租数目。这件事会由专门的代理人来传达。这些代理人由机构雇佣，并由当地政府授予他们以警察一般的权力。”引自《江村经济——中国农民的生活》，费孝通著，纽约：杜冬出版公司，1939年，第188页。

[10] 与皮朗所描述的封闭经济时期欧洲中世纪的城镇相比：“显而易见，城镇首先是军事设施.....战争爆发时，居民把它当作一个避难所，和平时期在此参加公众正义集会，或还清他们在这里所借的贷款。但是，城镇没有显示出丝毫的城市特征.....在这种环境下，任何商业或工业都是不可能的，甚至是不可想象的。它不生产任何东西，依靠从周围的农村获得的税收来维持，除了作为一个单纯的消费者之外，没有任何经济上的作用。”引自《中世纪的城市》，亨利·皮朗著，普林斯顿：普林斯顿大学出版社，1925年，第75、76页。

[11] D. K. Lieu, in his recent *China's Economic Stabilisation and Reconstruction* [New Brunswick, N. J.: Rutgers University Press, 1948], does not quite agree with Fei's picture of the typical landlord. "While there are landlords who exploit tenants, the worst kind of exploiters, both of tenants and small farmers, are the professional money lenders.... In some sample studies made before the war, the rate of interest charged by these rural Shylocks was from 50 to 100 per cent per annum, or many times the rate on bank loans in the cities, which was from 10 to 15 per cent before the war.... While miserly landlords often lend money to their tenants on the same terms as the money lenders, they are comparatively few. It is to their interest to keep the tenants from being unduly burdened with debt, which would affect the latter's work on the farm, and thus also affect the rent to be collected, especially if it is on a share-cropping basis. Besides, the landlords, particularly the larger ones,

have their social standing, and would not like to be regarded as belonging to the same class as the money lender.... In some cases, however, landlords may lend to independent farmers, with the object of obtaining possession of their land, since these farmers, when they are heavily burdened with debt, are usually compelled to sell their land for debt settlement; but such scheming landlords are not very common" (pp. 42-43).

[12] 刘大钧在他最近出版的《中国的经济稳定与重建》(新泽西新布朗斯维克: 鲁特格斯大学出版社, 1948年)一书中, 不太赞同费先生对典型地主的描述: “虽然地主剥削佃户, 但是剥削佃户和小农户最厉害的是那些职业的放贷者.....在战前做的一些案例分析中, 这些农村的‘夏洛克’们收取的年利息一般是50%—100%, 比城里银行10%—15%的战前利息高出很多倍.....虽然吝啬的地主经常以与放高利贷者相同的条件借钱给佃户, 这样的人相对很少。避免让佃户背上过重的债务也符合地主的利益, 因为那样会影响佃户种地, 因而影响收租, 特别是在共同耕种的情形下更是如此。而且, 地主——尤其是较大的地主——有一定的社会地位, 不愿意与放高利贷的人混为一谈.....在有些情况下, 地主可能把钱借给自耕农, 目的是想占有他们的土地。因为当这些农民债务累累时, 他们经常被迫卖地来偿还债务。但是这种狡诈的地主并不多见”(第42—43页)。

[13] "The intimate relation between the periodic market and local production, which is overwhelmingly agricultural, is shown in the monthly sales record for livestock for the year 1932 in central market Sun-chia-chen. Sales fluctuations correspond entirely to the local agricultural calendar.... During the sowing season, fertiliser, hoes, plows, and other market implements connected with the work of the season are sold widely on markets. In harvest seasons, the markets are abundantly supplied with sickles, ropes for bundling stalks, screens and mats for threshing grains. Immediately after harvest, when farm work is in a temporary lag, markets are alive with cardboards for making shoes, cotton yarns and shuttles and other weaving supplies, silk threads and other sewing articles....

"Among the total traders of eleven markets, in one market day, 69.8 per cent of them came to sell their own service and products, both agricultural and handicraft....

"Inquiry into thirty-seven farm families shows that thirty-three rely entirely upon the periodic markets for disposing of their agricultural products; and only four, whose farms are larger than the rest, sell about 25 per cent of their grains directly to merchants.... Products of home industry such as hand loomed cloth, home-made shoes and sewing materials, depend on the market as the sole outlet" (Ching-kun Yang, A North China Local Market Economy: A Summary of a Study of Periodic Markets in Chowping Hsien, Shantung [New York: Institute of Pacific Relations, 1945], pp. 10-11).

[14] “中心集市孙家镇1932年每月牲畜买卖的记录表明了定期集市与当地产品(主要是农产品)的密切关系。买卖的波动与当地的农业节气完全吻合。.....在播种季节, 肥料、锄头、犁以及其他与播种有关的用具在集市上广泛出售。在收获季节, 集市上则大量供应镰刀、捆庄稼的绳子、筛子和打谷用的席子。收获季节刚过, 到了农闲季节, 集市上又出现了做鞋用的纸板、棉纱、梭子和其他纺织用品、丝线和其他缝纫物品.....

“在11个集市的所有商人中, 一天内有 69.8%的人出售自己的劳动或产品, 包括农产品和手工业品.....

“对37户农家的调查表明, 有33户完全依靠定期集市来处置他们的农产品; 只有4户拥有较多农田的人把25%的粮食直接卖给商人。.....家庭工业产品例如手织布、自制的鞋和手工缝制的物件只能依靠集市出售。”引自《华北的地方集市经济: 山东邹平县定期集市研究》, 杨庆堃著, 纽约: 太平洋国际学会, 1945年, 第10—11页。

[15] "I possess no sufficient data on the family background of those who form the first line of contact with Western traders, but I strongly suspect that those 'secondhand foreigners,' were, at least for the early period, recruited from the

outcasts of the traditional structure, who had lost their positions and sought their fortune by illegal means. Treaty ports are open to them. If they find regular employment in the community, such as servants or interpreters in a foreign concern, they gradually become compradors, or first-boys; if they fail, they form gangs. They live in, and take advantage of, the margin of cultural contact. They are half-caste in culture, bilingual in speech, and morally unstable. They are unscrupulous, pecuniary, individualistic, and agnostic, not only in religion, but in cultural values" (Hsiao-tung Fei, "Peasantry and Gentry," *American Journal of Sociology*, LII [July, 1946], 14).

[16] Compare this with the imperialism of ancient Rome. "All this brilliant expansion of urban civilisation had in it the seeds of its own decline. It was an external and superficial development, like that of Modern European civilisation in the East, or in the eighteenth century Russia. It was imposed from above, and was never completely assimilated by the subject populations. It was essentially the civilisation of a leisured class, the urban bourgeoisie and their dependents, and though the process of urbanisation promoted the advance of civilisation, it also involved a vast increase of unproductive expenditure and a growing strain on the resources of the empire. As Professor Rostovtzeff has said, every new city meant the creation of a new hive of drones" (Christopher Dawson, *The Making of Europe* [London: Sheed & Ward, 1932], p. 12).

[17] “对于那些与西方商人直接接触的人，我没有关于他们家庭背景的足够材料，但我可以充分地料想，那些‘二手洋人’，至少在初期，主要是来自被传统社会排斥的人群，他们在社会中已经丧失了地位，试图通过非法手段捞取利益。通商口岸对他们开放。如果他们在社区里找到正常的工作，例如给洋人当差或当翻译，他们就逐渐变成了买办；如果找不到工作，他们就组成帮会。他们生活在文化接触的边缘，同时也在利用这个边缘。他们在文化上处于中间地带，操两种语言，道德上处于不稳定状态。不仅在宗教上，而且在文化价值上，他们都肆无忌惮，推崇金钱、个人主义和不可知论。”引自费孝通，《农民与士绅》，载于《美国社会学学刊》第52卷，1946年7月，第14页。

[18] 以此与古代罗马的帝国主义相比较。“所有这些明智的城市文明的扩张都埋有自取毁灭的种子。这是一种外部和表面的发展，像东方或18世纪俄罗斯的现代欧洲文明。这是由上层强压下来的，从未被下级百姓完全吸收。它本质上有闲阶级、城市资产阶级及其仆从的文明，虽然都市化进程促进了文明的进步，但是它也导致了非生产性花费的大量提高以及帝国资源吃紧的不断升级。正如罗斯托夫教授所说，每一个新的城市都意味着创造出一个新的蜂巢。”引自《欧洲的诞生》，克里斯托弗·唐森著，伦敦：席德与沃德出版社，1932年，第12页。

Chapter Six Rural Livelihood: Agriculture and Handicraft

第陆章 乡村生计：农业与手工业

With regard to the relationship in China between rural and urban areas, there are two distinct points of view, the first holding that rural and urban areas complement each other and are mutually beneficial, the second maintaining quite the reverse—that they are antagonistic.

Theoretically, of course, rural and urban communities are necessarily related integral parts of the whole country. Villages are the places where the agricultural products necessary for the subsistence of the country are produced, while those who stay in the city are not engaged in agriculture and depend upon a food supply from the country. Thus the urban communities are markets for the village produce, and the more developed the market, the higher will be the value of the food consumed and the more profit will result for the villages. Urban centers are also industrial centers for which raw materials such as soybeans, tung oil, cotton, and tobacco may be produced in the rural areas. These raw materials for industry sometimes have an even higher value than the foodstuffs produced and are then a cash crop. When modern industry develops in the city,

its hinterland has the opportunity to develop crops of this sort according to the nature of the soil and other conditions. On the other hand, industrial products, manufactured goods over and above those needed for supplying the urban dwellers, will for the most part go to the countryside. Thus, there will be a constant exchange of raw materials and food for manufactured goods, a type of rural-urban trade which raises the standard of living for both sides.

The theory of the complementary nature of countryside and city is one generally accepted. Thus, if the Chinese standard of living is to be raised, the strengthening of urban-rural economic relations is of paramount importance. Most Chinese are still living in rural areas and are engaged in agriculture. To increase the income of these people, it is important to expand their exports to the cities and also to develop Chinese industry in the cities so as to enlarge the market for rural products.

But, judging from recent Chinese history, the development of the Chinese city seems not to have promoted rural prosperity. On the contrary, the rise of modern Chinese cities has been paralleled by the decline in Chinese rural economy. In the first few years of the last war with the Japanese, when most of the modern coastal cities were occupied and economic relations between rural and urban areas were cut off by blockade, a period of recovery, if not of prosperity, appeared in the Chinese villages. This seems to prove that the relation between urban and rural areas in China is to the disadvantage of the latter. If this view is correct, then, for the sake of the Chinese rural population, the lighter the connection between country and city, the better for the country.

关于中国乡村和都市的关系，有两种明显的观点：一种认为乡村和都市互补互利；另一种则恰恰相反，认为二者相敌对。

当然，在理论上，一个国家的乡村和都市本是相关的一体。乡村是国家生存所需的农产品的生产基地，生活在都市的人不从事农业，依靠来自乡下的食物供给。这样城市社区就成了农产品的市场，市场越发达，粮食的价值就越高，乡村也就获利越多。都市还是工业中心，工业原材料如大豆、桐油、棉花和烟草等在乡村产出。这些工业原料有时比乡村产的食物价值更高，于是被称为经济作物。随着城市现代工业的发展，其内陆地区可以根据土壤性质和其他条件等因地制宜发展这类作物。另一方面，都市里的工业制造品除了供给市民外，剩余的大部分都流入了乡村，这样便有了工业制造品和乡村的粮食及原材料的持续交换，这是一种使双方生活水平都能得到提高的城乡间的贸易。

城乡互补的理论基本能被接受。因此，如果要提高中国人民的生活水平，那么加强城乡经济联系是首要的。大多数中国人仍生活在乡村，以农业为生，要增加他们的收入，就要增大对都市的农产品输出，并发

展都市工业以扩大农产品市场。

但是从最近的中国历史来看，中国都市的发展似乎并没有促进乡村的繁荣。相反，都市兴起和乡村经济衰落并行。在抗日战争最初几年，大多数现代沿海都市被占领，城乡经济联系被封锁、中断，而中国乡村有一度的喘息（如果不说是繁荣）。这像是证明了在中国城乡之间的联系对乡村是不利的。如果这种观点正确，那么对乡村人口来说，城乡联系越少，对乡村越有利。

To me there is truth in both these points of view. The first theory applies to economic relationships in a normal situation; the latter, to the present situation in China. Let us analyze the rural economy on the basis of which the relationship which should have provided prosperity for both sides has failed and has even caused disaster in the villages.

● DISTRIBUTION OF LAND AND THE WELFARE OF THE PEOPLE

When one comes to examine the economic decline of the country, what strikes one most forcefully is the system by which tenant farming is carried on. When a man has no land of his own and rents land from others, he generally has to give at least one-half of his main crop to the landlord as rent. Is such a rent high? Let us see what this amounts to in relation to total income. I shall take one village as an example. In Kiang-ts'un, a village near Lake Tai midway between Nanking and Shanghai, the average area cultivated by each peasant family is 8.5 *mow*, which is equivalent to 1.29 English acres. The average production of rice is forty bushels per acre, each bushel weighing 67 pounds, a rich harvest in China. Thus every peasant family in good times will produce on the average about 51.6 bushels of rice. The average size of a farm family is 4.1, which, referring to the consumption of food, is equivalent to 2.9 adult males (according to the Atwater scale, which has been adjusted by us). On the average, every male adult eats 7 bushels of rice, or 470 pounds, while an average family will consume 20.3 bushels of rice. Subtracting the quantity consumed from the total amount produced gives us 31.3 bushels. Now in case the land is rented rather than owned, the normal rent will amount to one-half the total, or 25.8 bushels. After paying the rent and reserving the amount needed to feed the family, there will be no more than 5.5 bushels of rice left. We may presume the value of supplementary products, including handicrafts, to be equivalent to about 10 bushels of rice. Thus, after the rice is eaten and the rent paid, what the family can spend amounts to about the value

of 15.5 bushels of rice. Is this enough to live on, assuming that the items of general expenditure for a Chinese farmer are proportionately as follows: 42.5 per cent for rice, 42.5 per cent for other expenses, and 15 per cent for agricultural reinvestment? According to this, a family probably needs the amount of money equivalent to the value of 20.5 bushels of rice for other expenditures besides that employed for basic subsistence. If a family has no other income besides that from the farm, it will probably lack the value of 12.9 bushels of rice.^[1] In order for such a family to survive, it must either find other sources of income or go into debt.

对于我来讲，上述两种观点都有其正确性。第一种理论适用于正常情况下的经济关系；第二种适用于中国目前的情形。本应为双方都带来繁荣的城乡关系失败了，甚至在乡村引起了灾难。让我们以此为基础来研究一下这种乡村经济。

• 分田与人民的福利

研究乡村经济的衰退时，最能引人注意的一点是租种土地的制度。当一个人自己没有土地而是从别人那里租地时，他一般要拿出收成的一半来交租。这样的租金高吗？我们来看一下它与全部收入的关系。以一个村子为例。在江苏南京和上海之间太湖流域的一个村子里，每个农户耕种的土地平均为8.5亩，相当于1.29英亩。平均每英亩可产大米40蒲式耳，1蒲式耳相当于67磅，这在中国算是收成很好了。所以，年景好的时候，平均每个农户的大米产量是51.6蒲式耳。每户平均人口为4.1人，平均消耗粮食相当于2.9个成年男子的消耗量（依阿特沃特能量价值体系标准修正后折合）。每个成年男子平均消费7蒲式耳或470磅米，每户平均消费20.3蒲式耳米。从全部收成中减去消费的数量之后，还剩31.3蒲式耳米。现在假设土地是租来的而非自有的，地租一般是收成的一半，即25.8蒲式耳米。除去地租和一家口的粮食之外，至多仅剩5.5蒲式耳米。我们可以假定一下其他作物产量的价值，包括手工艺品，大致相当于10蒲式耳米。这样，除去地租和消费的粮食以外，每个家庭可以花费的大约相当于15.5蒲式耳米的价值。假定一个中国农民的各项花费比例是42.5%用于吃饭，42.5%用于其他消费，15%用于农业投资，那么这个数目够用吗？这样看来，除了基本生存费用外，一个农户还需要相当于20.5蒲式耳米的钱用作其他消费〔参照费孝通著《乡土中国与乡土重建》，此数据应为28.4蒲式耳（1993年，第187页）——编者注〕。如果一户人家除了从地里获得的收入以外再无其他收入，那么他们大约缺少价值相当于12.9蒲式耳米的家用。^[2]这样一个家庭如果要生存下去，只能是要么寻找其他收入来源，要么负债。

It is true that, if the farm is somewhat larger, the surplus after the farmer has paid his rent will be somewhat increased. But not only is the amount of land available for cultivation restricted but under present farming techniques the area of the farms is limited to that

amount of land which the farm families themselves can cultivate. In an analysis made by us in some villages in Yunnan of the problem of farm labor in the busy seasons of the year, it was found that husband and wife by themselves could cultivate only 3 *mow* of land. In other words, if they wished to run a larger farm, they must either hire help or exchange their labor for extra help in the busy season. The amount of land cultivated thus depends not only on availability but also on the labor force. Generally speaking, the area which a family can cultivate by themselves cannot exceed by very much the amount cultivated by the average farmer of Kiang-ts'un.^[3] Landlords who own comparatively large areas of land are not able to cultivate the land by themselves but usually split the land up into small pieces which they rent out to tenants. Thus, from the point of view of management, the problem is not so much one of redistribution of land as of improved techniques of cultivation and of organization.

Actually, even an equable distribution of land among all the inhabitants of a village would not in most cases increase the area of the average farm by very much. Compared to areas farmed in the West, even the amounts of land held by so-called "wealthy landlords" tend to be insignificant.^[4] A redistribution of land would not relieve the pressure of population upon the resources provided by agriculture. The need to decrease the population of the rural areas would remain in force.^[5] Yet it would be a mistake to think that, because the redistribution of lands would not increase the area of the farms by very much, owning their own land would contribute nothing to the welfare of the people. According to my statement above, if the farmers of Kiang-ts'un did not need to pay rent, they probably could live fairly well on what they themselves produced. The value of the harvest and of handicrafts together being equivalent to 61.6 bushels of rice, this would allow 20.3 bushels of rice for food, 20.3 bushels for consumer's goods, and 8.4 bushels for agricultural reinvestment. And this would allow them the minimum standard of well-being described by the phrase, "not hungry, nor freezing."

如果农田面积大一些，那么交租后剩余的粮食的确就会多一些。但是不仅可耕种土地的面积有限，而且在目前的农业技术下，农村家庭自身耕种土地的能力也有限。我们在对云南乡村在农忙季节的劳动力问题的分析中发现，夫妇两人只能耕种三亩地。换句话说，如果他们想种更多的地，在农忙季节，他们只能或雇佣别人，或交换劳动来获得帮手。因此耕种土地的数量不仅取决于可耕地数量，还取决于劳动力的组织。一般来讲，一个农户自己所能耕种的土地面积，不会大大超过江苏农民的平均水平。^[6]具有相对而言大面积耕地的地主自己不能耕种，经常把地分成小块租给别人种。这样从管理的角度讲，就不仅仅有土地再分配的问题，更有提高耕种和组织技术的问题。

实际上，即使在村民之间平均分配土地，通常农户平均耕种的土地面积也不会增加太多。比起西方国家的耕地，即使是所谓的“大地主”所拥有的土地面积也是微不足道的。^[7]土地的重新分配不会减轻农业资源的人口压力。减少农村人口的需求依然有效。^[8]但是认为由于土地再分配不能使农户耕种面积增加多少，所以拥有自己的土地对于农民的生活质量并没有益处的观点是错误的。根据我前面讲到的，如果江苏农民不必交地租，那么地里的收成也许就可以让他们生活得很好。收获的粮食和手工艺品的价值加起来相当于61.6蒲式耳米，其中20.3蒲式耳米用于食物，20.3蒲式耳米用于消费品，8.4蒲式耳米用于农业投资，这样农民的生活就能达到小康的最低水准，即“不饥不寒”。

● RURAL LIVELIHOOD—HANDICRAFTS AND AGRICULTURE

If the foregoing analysis is correct, tenant farmers cannot rely upon the products of their land alone for maintaining even a minimum standard of living. But tenant farming has existed in China for a long time. Why did not the problems connected with it become really serious until about twenty or thirty years ago? I believe that difficulties in rural economy did exist from very early times but that, in the traditional rural livelihood, there was a factor which prevented serious conflict between landlord and tenant. This factor was the rural industry or handicrafts, mentioned before as a supplement to farm incomes. China has never been a purely agricultural nation. As far back as the time of Mencius, the peasants were being urged to plant mulberry bushes at their homesteads for the production of silk.^[9] China's early lack of interest in commercial relations with the West rested partly upon her self-sufficiency in producing both raw materials and finished products for the necessities of life. These necessities were not produced in large-scale manufactories, to be sure, but were scattered throughout numerous villages. Besides the specialized products of certain regions, such as the raw silk known to the English as *tsatlee*, which came from a small district near Lake Tai, the tea of Lung Ching, and the china of Ching-te-chen, widespread rural industries,^[10] such as cotton-spinning, were carried on by many farm families very largely within the home. In my youth I helped my grandmother spin cloth, and among my mother's marriage gifts there was a spinning wheel. The fact that these manufactures were scattered among the various families was probably an obstacle in the way of improving them but an important fact in the traditional livelihood of China. The additional income from such family industries gave the farmers who had insufficient land to support them enough to live on.

Let us return to the problem of the small size of the average

Chinese farm. We may say that the direct cause of this is that the rural population is too large. Why is this so? Some people may regard this as a foolish question in that they think that the growth of population is a biological rather than a social phenomenon. Or, again, they may see the basic cause of overpopulation in the value placed by traditional Confucianism on a large family. But from the point of view of labor requirements there is, as I indicated above, still another answer to this question. Rural activities are quite seasonal. The farmer's busy time, when more labor is needed to get the work done, alternates with the farmer's slack time. The difference between the amount of labor needed for the busy time and the slack time is great. Actually, the number of people in the village is just enough, with present techniques of cultivation, to enable the people to cultivate their farms at the periods of special activity. Thus, from the point of view of agricultural production, the population of the Chinese rural districts is not too large. In fact, during the latter part of the Sino-Japanese War there was a shortage of labor in a number of villages. Not only were many men conscripted but some fled their homes to avoid conscription. Unless there is an improvement in agricultural techniques, the population of the rural districts is not likely to increase. And yet there are certainly too many people to permit all to enjoy a good standard of living. Even though agriculture demands a large labor force for short periods, there remains about two-thirds of the year when there is no work for the extra laborers. As a result, there is periodic unemployment. We are "spreading out over a year all the labor which is needed for just the busy time."

• 乡村生计——手工业和农业

如果前面的分析是正确的，那么佃户就不能仅仅依靠地里的收成来维持哪怕最低的生活水平。但是，佃户在中国有着漫长的历史，为什么有关佃户的问题直到二三十年前才变得特别严重起来呢？我认为乡村经济的艰难的确在早期就已存在，但是在传统的乡村生活中，有一种因素防止了地主和佃农之间矛盾的恶化，这个因素就是乡土工业——乡村的工业和手工业，就是前面讲到的农业的附加收入。中国从来都不是一个纯粹的农业国。早在孟子时代，农民被要求在他们的宅地附近种上桑树以养蚕织丝。^[11]中国早期对发展与西方的商业联系缺乏兴趣，部分原因是在原材料和生活必需的制成品方面实现了自给自足。可以肯定的是，这些必需品不是产自大型的制造厂，而是分散于无以计数的村子里。除了某些地区的特产外，如太湖附近某一小地方的生丝（英语中称为tsatlee“辑里丝”）、龙井茶、景德镇的瓷器，广泛分布的乡村工业^[12]——如纺纱业——大部分是由很多农户在家里完成的。我年轻的时候曾帮祖母纺过纱，而我母亲的嫁妆中就有个织布机。制造工业分散在家庭里可能阻碍了生产技术的提高，但这却是中国传统生计中的一个重要事

实。从家庭工业中得到的额外收入使得土地不足的农家足以生存下来。

让我们回到农民的平均耕地面积小这一问题上。我们可能会说直接原因是乡村人口太多。为什么会这样呢？有些人会认为这是个愚蠢的问题，因为他们觉得这是一个生物学的而非社会的现象。或者他们又会认为，人口过多的基本原因是受了传统儒家大家庭观念的影响。但是从劳动力需求的角度来讲，正像我前面提到的，这个问题还有另一个答案。农作活动很具有季节性，农忙农闲互相交替，忙时需要更多的劳动力来完成工作。两个时期需要的劳动力差别很大。实际上，根据目前的耕作技术，乡村的人数刚刚够应付特定时期的耕种活动。这样，从农业生产来讲，中国乡村地区的人口数量并不太大。实际上，在抗战后期，有些村子还缺乏劳动力。很多男人参加了军队，还有人为逃避参军而离开了家。除非有农业技术上的改进，农村人口不易增多 [参照费孝通著《乡土中国与乡土重建》，应为“否则农村人口不易减少”（1993年，第190页）——编者注]。不过，要使每个人都能过上好生活，目前的人口当然就太多了。虽然农业在短期内需要大量的劳动力，多余劳动力一年中仍有三分之二的时间无事可做。于是就有了阶段性的失业。这就是“养工一年，用在农忙”。

In the past this extra labor occupied itself with handicrafts. Rural industry, co-operating with agriculture and sharing with agriculture its source of labor, was able to maintain the local economy in a healthy state. In this case, even though the landlord took his half of the produce of the land, there would still be no unrest among the people. Those who are critical of the part played by the landlord may regard the existence of the rural handicrafts as affording simply an opportunity for the landlord to squeeze more from his tenants. But, from the point of view of economics, there was a genuinely organic adjustment of agricultural techniques, the demand for labor, the size of the population, the area of the farms, the rural handicrafts, the amount of rent, and the rights of the landlords. So long as such an adjustment gave the people a standard of living which was "not starving, nor freezing," traditional Chinese society could be maintained. Any economic system which did not maintain such a minimum standard could not have endured.

● THE TRADITIONAL MECHANISM OUT OF GEAR

During the last one hundred years the traditional mechanism or organic adjustment mentioned above has begun to break down. How did the breakup begin? I should say that the one important gear broken was that of the rural handicrafts. Other parts, such as agricultural technique, size of population, farm area, amount of rent collected, and the rights of the landlord, have remained relatively unchanged. Following the decline in rural industry, the traditional

adjustment which had maintained a minimum standard of decent living for the peasants no longer functioned.

过去，剩余劳动力从事乡土工业。与农业配合并与其分享劳动力资源的乡土工业，能够保持地方经济的健康状态。在这种情况下，即使地主拿走一半收成，农民并不感到不安。那些对地主的作用持批判态度的人也许会认为，乡土工业的存在只是给地主提供了进一步榨取佃户的机会。但是从经济的角度来看，农业技术、劳动力需求、人口数量、耕地面积、乡土工业、地租多少和地主权利等因素是一个真正有机的配合。只要这种配合能使人们过上“不饥不寒”的生活，传统的中国社会就能维持。任何一种无法维持这种最低限度民生的经济制度都不能长久。

• 传统机制的脱栓

在过去的上百年中，传统机制或前面提到的有机配合开始破坏。这种破坏是如何开始的呢？应该说，一个重要的脱栓齿轮就是乡土工业。其他的部分，如农业技术、人口数量、耕地面积、地租多少以及地主的权利，相对都没有什么变化。随着乡土工业的衰退，曾经维持农民最低生活水平的传统的有机配合已不再起作用。

It is easy to see that the decline in rural industries was the result of competition with Western, highly mechanized industries, since with their large-scale production they were able to decrease costs and improve the quality of their products. "Local products" became the synonym for inferior. How could the homemade goods compete with the handsome, cheap, and often even more durable foreign goods? The fact that the market for handicrafts was taken over by foreign goods gave to those who could afford to buy them a higher standard of living while at the same time it created unemployment in numerous villages. The ruin and poverty which followed the decline in rural industries resulted from a purely impersonal force against which there was no way to rebel or to defend one's self. If a countrywoman who has spun some cloth cannot find anyone to buy from her, whom can she blame? She will simply sigh and cease to spin. She will have to put all her hopes on the harvest from the land. But when the earth must bear the expense for the whole family, the difficulties which result from the traditional system of landholding and rental come sharply to the fore. The landlord has not lost the right of collecting rents, and, moreover, the rents have not even been reduced. In the traditional society landlords are not producers; they are "fed by others." In a changed situation they do not lower their demands. On the contrary, stimulated by the influx of imported goods, they have raised their standard of living and consume more than ever before. They will not easily give up the income they derive from rents. But when they go to the country to collect these rents, they find that their

tenants are no longer so docile. How can they be? If they pay their rent, they will be faced by famine. If they are to maintain their very lives, there must be conflict between them and the landlords. The landlords, on the other hand, do not understand why the attitude of their tenants has changed. The unwillingness of the tenants to pay the established rental seems to them quite unreasonable. But in the eyes of the tenants the landlord who comes to collect their last grain of rice becomes a sort of devil who bears folk away to death. The fact is that noiselessly and invisibly the invading foreign industries have dislocated the traditional mechanism by doing away with the rural handicrafts, which, unbeknown to the landlords, all this time enabled them to enjoy their special privilege.

The force dislodging the rural industries is both powerful and deeply penetrating. Behind it are big battleships and guns, the "imperialism" of well-organized industrialized countries. The traditional handicraft worker who is also a farmer lives in scattered villages, belongs to no organization, and has no power of modern science to help him. It is an ironic fact that the power and the influence of the landlords are very weak compared to those of foreign industrialism. But the landlord is near at hand, and, in order to live, the peasant must resist him. Thus the land problem of China becomes more difficult day by day.

显而易见，乡土工业的衰退是与西方高度机械化工业竞争的结果，因为机械化大生产可以降低成本和提高产品质量。“地方货”成了次等品的代名词。家庭制品怎么能与漂亮、便宜而通常又更耐用的洋货相比呢？手工业品的市场被洋货市场代替，这提高了那些买得起洋货的人的生活水平，同时也产生了大量的失业农民。乡土工业衰落后的没落和贫困，纯粹是由非个人的力量所造成的，农民无法与之对抗或者是自我保护。如果一个织土布的农妇找不到买布的人，那么她能怪谁呢？她只能叹息，停止织布，完全指望田地的收成。但是，当田地要负担整个家庭的花销时，那些在占有土地和收取地租的传统体制中出现的问题就会变得非常尖锐。地主没有丧失收取地租的权利，而且地租甚至也没有降低。在传统社会中，地主不是生产者，他们“食于人”，在变化了的形势下，他们没有降低要求。相反，在大量涌入的进口货的刺激下，他们的生活水平有所提高，消费也随之前所未有地提高了。他们不会轻易放弃从出租的田地中获得的收益。但是，当他们到乡村去收租的时候，发现佃户不像以前那么温顺了。他们又怎么能温顺呢？如果交出地租，就面临着饥荒；要维持自身的生计，就肯定会与地主发生矛盾。另一方面，地主并不明白为什么佃户的态度改变了，佃户不愿交早已定好的租金对他们来讲毫无道理。但是，在佃户的眼里，来收他们最后一粒米的地主，就像是置人于死地的魔鬼。事实是，外国工业的入侵，通过抑制乡土工业，在无形之中毫无声息地扰乱了传统的运作机制。地主自己并不知道，一直以来是乡土工业使他们得以享受特权。

驱逐乡村工业的力量既有力又深入，它的背后是战舰和枪炮，是组织良好的工业国家的“帝国主义”。传统的手工业者是居住在分散的村子里的农民，不属于任何组织，也得不到现代科学的帮助。比起外国产业制度的威力，地主的力量和影响是太微弱了，这是一个具有讽刺意味的事实。但是，地主近在咫尺，为了生存，农民只能起来反抗他。这样中国的土地问题就变得一天比一天严重。

● THE REASONABLE WAY OUT FOR THE LANDLORD CLASS

"Not starving, nor freezing" is, we must confess, a minimum standard of living for the people. Since the right of man to live is recognized, the right to struggle for such a living standard ought to be recognized as just and reasonable. This is the fundamental basis of the doctrine of "people's livelihood." But China is being constantly drained of her wealth. Her original industrial productivity, far from making the country people well-to-do, has made them "rather poor," and from rather poor the descent has been to "very poor," and from very poor to the lowest depths of poverty. Since the prosperity of the country has been eroded away in this way, it is not strange that the peasants are demanding their right to have back as high a standard of living as that which they had formerly.

Under such conditions, if we cannot revive our declining industries, those of the landlord class who have been depending upon income from rents must sooner or later be attacked and then eliminated. Landlords who cannot themselves cultivate the land can only rent their land out to others. Yet this piece of land will not feed both the landlord and his tenant at one and the same time. The landlord cannot find a way to eliminate the tenant and get income directly from the land, but the tenant can cultivate the land without the assistance of the landlord. Therefore, in a struggle between landlord and tenant, the tenant will probably win. Since the tenant system in China is not built up on the basis of a surplus of produce from the land but rather is supported by the surplus income derived from rural industries, rural industries really determine the basic rents for land and, in fact, the future of the landlord class. It is true that the use of oppressive measures may for a short time bring about "forced agreements." But to employ force means additional expense at the moment and, moreover, leads to bitter and unlimited resistance in the future. Rent seizures do not offer a permanent solution.

● 地主阶级的合理出路

我们必须承认，“不饥不寒”是人民最低的生活标准。由于人拥有生存权，那么于情于理同样应该有争取这种最低生活标准的权利，这是“民生”主义的根本所在。但是中国一直消耗着财富，最初的工业生产力远不能使乡村的人民过上小康生活，反而使得人民“比较贫困”，后来就变成了“非常贫困”，最后降至最低点。由于乡村的繁荣就此受到侵蚀，所以农民要求过上以前那样的生活是不足为怪的。

在这种条件下，如果我们不使正在衰退的工业得到复苏，那么以收取地租为生的地主阶级最终要受到打击甚至毁灭。那些自己不能耕种土地的地主只能把地租给别人去种，然而一块地不能同时养活地主和佃户。没有佃户，地主就没有办法直接从地里获得收益，而佃户则可以不靠地主的帮助来耕种土地。因此，在佃户与地主的斗争中，佃户可能获胜。由于中国的租地体制不是建立在农业收入过剩的基础上，而是建立在来自乡土工业的额外收入的基础上，乡土工业实际决定了基本地租，事实上也决定了地主阶级的未来。利用强迫措施确实可以在短期内达到“被迫的同意”的结果，但是利用武力意味着当时将产生额外的费用，而且会引起将来强烈和无限的反抗。夺取地租不是永久的解决方法。

From the landlords' point of view the reasonable way out should not be to take action which will only hasten their own ruin but to try to adjust themselves to the changed circumstances and find some means of livelihood other than merely living on rents. If they had wished to continue in the old way, it would have been well to have struggled against the invasion of foreign industries in the very beginning. For their own protection, the landlord class, who are in such a critical situation, should give up the right of collecting rents from the peasants. Only in this way can the country as a whole gain the support of the peasants and their co-operation in overcoming the present economic crisis. The farsighted policy of Sun Yat-sen that "every cultivator should have his own piece of land" is the reasonable solution.

But the goal of Chinese rehabilitation should also be the reconstruction of her industries. And, in order to build up national industries, we must rebuild rural industries, so that our peasants, who make up 80 per cent of the population, can have a share in an improved standard of living. It is true that the destruction which is the result of civil war has made more difficult an increase in productivity. Yet the effort to rebuild industry must be made. The Chinese have endured and can continue to endure suffering, but simple endurance seems hardly to be a reasonable ideal.

We see now how the development of modern cities with their flow of imported foreign goods, on the one hand, and large-scale manufacture of articles of daily necessity, on the other, has deprived the countryside of an important source of income. It is true that, if the

growth of these modern cities had stimulated prosperity for agriculture by creating a greater demand for rural products and thus raising their price, it might have compensated rural industries for the injuries done to them. But unfortunately things have not worked out this way. It is true that the increase in population in the large cities has increased the demand for foodstuffs, but the farmer does not get more for his produce, since, owing to the very poor system of communications, it has been found cheaper to import food from foreign countries than to buy it locally.^[13] Modern transportation in China seems mainly to connect consuming centers. Railroads connecting large cities parallel ancient lines of communication along the rivers rather than supplementing them, while rather primitive means of transport for the most part tend to connect rural and urban areas. Moreover, there is no direct connection between the modern city and the village, since the traditional town serves as a middleman.

对地主阶级来讲，理想的出路并不是要采取武力——那只会加速他们的灭亡，而是试着调整自己适应变化的环境，寻求收取地租以外的谋生手段。如果他们曾经希望依照旧方式继续下去，那么也许从一开始就应该抵制外国工业的入侵。为了保护自己，处于这种关键形势下的地主阶级，应该放弃向农民收取地租的权利。只有这样，整个乡土才能得到农民的支持以及通过互相合作来克服目前的经济困难。“耕者有其田”，孙中山这一富有远见的主张是合理的解决方法。

但是，中国复兴的目标还应该包括工业的复兴。为了建立民族工业，我们必须重建乡土工业，让占总人口80%的农民也能够分享生活水平的提高。虽然内战的破坏的确使得生产力难以提高，但仍要努力重建工业。中国人民一直在忍耐并能继续忍耐，但是仅仅耐苦似乎远不是合理的理想。

我们现在可以看出，随着外国商品的涌入以及日常用品的大规模生产而发展起来的现代都市是如何剥夺了乡村的一项重要收入来源。的确，如果这些现代都市的发展，通过促进农产品需求的增长并进而提高产品价格，而刺激了农业的繁荣，也许会对乡土工业所受损害有所补偿，但不幸的是，事实并非如此。大城市人口的增加扩大了对食品的需求，但是农民并没有从农产品中得到更多利益，因为由于交通不便，人们发现从国外进口商品比从当地买更为便宜。^[14]中国的现代交通似乎主要是把消费中心连接起来，连接大城市的铁路与古代沿河的交通路线平行，而不是对其进行补充，而城乡之间大多还是靠相当原始的交通工具相联系。而且，现代都市和乡村之间并不直接相连，因为传统的镇充当了它们之间的中介。

Here live in idleness the unproductive landowners who formerly bought manufactured goods from the countryside but now prefer Western-made goods. Garnering in the rural products as payment for rent or interest on loans, they send them to the city in exchange for

foreign goods of which the country people catch never a glimpse or, if they do see them, are unable to purchase. Instead of having an expanding economy, life for the countryside is deteriorating, and the common folk are forced to cut down on the bare necessities of life. Under the present system any profits to be made from farm products will accrue to the middleman or speculator rather than to the producer, and the countryside continues to support those who consume modern manufactured goods, the *rentier* class, without gaining any benefit from modern industrialism for itself. It is true that the villagers have little use for such things as toothbrushes and tooth paste, foreign coffee or preserves, or ready-made foreign-style clothing, but they could make use, for example, of better tools of all sorts, seeds, fertilizers, blankets, warm knitted underwear, and leather shoes.

From this analysis we can see that, to some extent always, but even more at present, urban centers and rural areas are antagonistic to each other. And, if there is no great change in the future, this antagonism will continue; that is, the rural areas will continue to be at an economic disadvantage. Under these circumstances the severing of rural and urban relations is good for the villages but very bad for the cities. Knowing this, we can understand why during the recent war with the Japanese the villages in the interior of China had a period of prosperity and why Chinese rural co-operatives developed so quickly. This also explains why the Communist-controlled areas have not worried about the severing of rural-urban relations and the dislocation of Chinese town economy during the civil war. Taking the last one hundred years, Chinese cities and large towns have not achieved a sound productive base. They have been largely distributing centers for foreign goods. Although foreign goods have not reached rural areas in any large quantity, this has drained the wealth of the country, since the foreign goods gained by exchange are consumed in the towns in place of local handicrafts. But when the relations between the townsfolk and villagers are cut off so that the townsfolk's sources of income are stopped, the importation of foreign goods must stop unless funds are obtained through relief or loans of various sorts. This cannot continue indefinitely.

镇上居住着闲散而不事生产的地主，他们先前从农村购得手工商品，现在则转向西方的商品。他们把当地租或高利贷利息收来的农产品储存起来，拿到城市交换外国商品，这些洋货农民见都没见过一眼，即使见了也根本买不起。因此，经济没有扩展，农民的生活正在恶化，他们不得不降低最低生活消费。在目前的体制下，从农产品中获得的任何利益，都会进入中间人或投机者的腰包，农民无从获利，乡村仍支撑着消费现代工业品的食利阶层，但自身却不能从现代工业中得到任何益

处。牙刷、牙膏、咖啡、加工食品和做好的洋式服装确实对农民没有多大用处，但是他们可以使用各类更好的工具、种子、肥料、毯子、保暖内衣和皮鞋。

从以上的分析我们可以看出，在某种程度上，城市和乡村常常互相敌对，目前尤甚。如果将来没有巨大变化，这种敌对将会持续下去，也就是说，乡村仍旧会处在经济上的不利地位。在这种情况下，切断城乡联系对乡村有利而对城市有害。这样我们就能理解，为什么在最近的抗日战争时期，中国内地的一些乡村有过繁荣阶段，以及为什么乡村合作社会飞速发展。这也说明了为什么共产党占领的地区不担忧城乡联系的割断及内战时城镇经济的混乱。最近一百年来，中国的城市和大镇没有建立一个坚实的生产基础，只是外国商品的分发地。虽然洋货没有大量到达乡村，但已经攫取了乡村的财富，因为交换而来的洋货在城镇的消费代替了对当地手工业品的消费。当城镇居民和农民的联系被割断以至于城镇居民的收入来源停止时，如果没有各种救济或贷款资金，就要停止外国商品进口。这不会无限地持续下去。

● THE GROWING GAP BETWEEN RURAL AND URBAN AREAS

Ever since the building of railways connecting the northern and southern parts of China, the separation of the three river basins as natural areas has gradually lessened. It is hard to believe that China will ever again be divided into north and south. But the separation between urban and rural areas which has developed during the last one hundred years has become a new source of cleavage. During the war with Japan, Chinese troops practiced guerrilla warfare, occupying the interior and leaving rail lines and key points in the enemy's hands. Guerrilla tactics of this sort have an economic basis, as we have shown above. But, as a result of these wartime tactics, economic relations between town and country have become more and more disrupted. From a short-term view of the situation, the countryside is not suffering, since once the rural people are cut off from the towns much of their produce will be kept from moving out, and, as a result, they will have enough food to live on. This does not seem a very good way out, however. Once the rural areas are detached from the urban centers, they must rely entirely upon themselves. Self-sufficiency leads to security of a sort, but the price paid is the lowering of the standard of living and a return to a more primitive way of life. This does not seem to be the right solution for Chinese economic problems. Although the decision of the villages to rely wholly upon themselves will not actually decrease very much their already extremely low standard of living, it creates for the towns and cities which have lost their hinterland a very critical situation indeed. We must recognize

that Chinese villagers tend to prefer the alternative of lowering their standard of living by self-sufficiency to that of keeping up relations with the town in that this latter means that they will be exploited by the townspeople and still have little chance to raise their standard of living.

The industry and the commerce of the modern cities are not supported by the consuming power of the rural producers. The markets for modern manufactured goods are among city and town dwellers, and the purchasing power of these people depends largely on income derived from the countryside in the form of rent and interest. The separation of the country from the town directly threatens those city dwellers who live on their income from the country and affects the traditional organization of town economy. In order to continue to maintain the traditional relations of town and country, it becomes necessary, then, for the *rentier* class to break the blockade, even if by force. And this, I understand, is one of the real causes for the present civil war, a war in which the traditional privileged class is fighting against the people who refuse to carry on their traditional obligations. As the conflict goes on, the antagonism which has accumulated for centuries becomes fiercer, and it seems that, unless there is a real change in Chinese economic structure, the proper relation between town and city cannot be established.

• 城乡差别的不断扩大

自从连接中国南北的铁路建成后，作为自然区域的三大河流流域的划分逐渐削弱，很难相信中国还会分成南北两方。但是近百年来城乡的分离，已经成为一种新的分裂。抗战时期，中国军队打游击战占领内陆地区，把铁路线和主要地点留给敌人。这种游击战术有一个经济的基础，正如我们前面讲到的。但是，这种战术的结果是导致城乡关系变得越来越混乱。短期来看，乡村并没有受苦，因为一旦乡村与城镇中断关系，很多农产品就不再运走，农民也就有了足够的食物来生存下去。但是，这看起来并不是一个好的解决办法。一旦城乡分离，他们必须要完全依靠自己。自给自足可以达到一种安全，但代价却是生活水平的降低和回到更为原始的生活中去，这似乎不是解决中国经济问题的正确方法。虽然乡村完全依赖自给的决定不会骤然降低他们业已很低的生活水平，却使已经失去腹地的市镇及城市的处境很危急。我们必须认识到，中国乡村侧重于自给自足，即使乡村居民降低生活水平也不愿意与城镇保持联系，因为这样就意味着他们要受城镇居民的剥削，同样没有提高生活水平的机会。

现代城市的工商业不是依赖农业生产者的消费能力。现代商品的消费市场是城镇居民，而这些居民的消费能力很大程度上要依靠以地租或利息形式从乡村所获得的收入。城乡分离直接威胁着这些从乡村获得收

入并赖以为生的人，也影响了城镇经济的传统结构。为了继续保持城乡的传统关系，食利阶层有必要甚至利用武力来打通障碍。我认为这是目前内战的真正原因之一，这场内战是传统的特权阶层与拒绝执行传统义务的人们之间的斗争。随着矛盾的继续，积聚了几个世纪的敌对形势变得越来越激烈，好像中国经济结构不发生真正的变化，城乡的正常关系就不能建立起来。

Chinese economy cannot afford to stay in a situation which means bankruptcy of the town, the reduction of the village to more primitive conditions, and, taken as a whole, the decline of Chinese economy. The question is: How can urban-rural relations be restored? The direction which this restoration should take is quite clear: an effort should be made to realize the principle mentioned earlier—that rural and urban areas should mutually supplement each other in production and consumption. But to achieve this end is more difficult than to conceive it. Essentially the problem is how to change towns and cities into productive centers which can maintain themselves without continually exploiting the villages. From the point of view of the rural areas, the problem is how to increase their incomes either by developing rural industry or by developing specialized agricultural cash crops. City and village are equally important; they should work together. But the initiative in making changes must come from the city. It is most essential that the character of the traditional town be changed from a group of parasitic consumers into a productive community in which the people can find some other source of income than that derived from the high rents for land and exorbitant interest on loans. In other words, the main issue is land reform.

中国经济不能处于城镇破产、乡村生活倒退、总之是经济衰退的状态中。问题是：怎样恢复城乡关系呢？复原的方向很明确，即努力实现前面讲过的原则——城乡在生产和消费上的互补，但是达到这一目的比构思这一目的要难得多。根本问题是如何将市镇和城市转变成可以维持自己的生产中心而不用去剥削乡村。对于乡村来讲，问题是如何通过发展乡土工业或专门的经济作物来增加收入。乡村和城市同等重要，应该携手合作，但是变革的动力必须来自城市。最为根本的是，传统城镇的特点应从一群寄生的消费者转变为一个生产社区，人们从中可以找到除了收取高地租和高利息以外的其他收入来源。换句话说，主要的问题还是在于土地改革。

[1] See the comparative material on family budgets in three villages of Yunnan and the village of Kiang-ts'un in Hsiao-tung Fei and Chih-i Chang, *Earthbound China* (Chicago: University of Chicago Press, 1945), pp. 84–108 and 297–302. The explanation of the apparent discrepancy appearing in the figure “12.9” may lie in an assumption that part of the supplementary products are consumed by the family.

[2] 参阅前引费孝通、张之毅所著《被土地束缚的中国》（芝加哥：芝加哥大学出版社，1945年）一书中关于云南三村和江苏开弦弓村的家庭费用的相关资料，第84—108页和第297—302页。12.9这个数字存在明显出入，原因可能是假设一部分副产品

由农家自己消费了。

[3] Ibid., chap. xiii, "Farm Labor," pp. 141–149.

[4] Li Tso-chow, in a paper on "The Big Landlords of Wei-Hsien, Shantung," republished in *Institute of Pacific Relations, Agrarian China* [Chicago: University of Chicago Press, 1938], reports one family as owning 8,000 mow of land (or about 4,000 acres) by local standards of measurement; 24,000 by the official standard mow of China (pp. 15–17). In this same volume, Wu Sho-peng, in "Land Concentration in Northern Kiansu," reports landowners holding 10,000–20,000 mow (pp. 11–14). Yet the "lord" or rich man of the Yunnan village described by Fei in *Earthbound China* (pp. 278 and 296) became a rich enough man to build a large temple and large house by having acquired 300 mow of land. Merchants who are reported to have acquired "huge amounts of land" have bought up 300–500 mow.

[5] "The fundamental fact, it is urged, is of a terrible simplicity. It is that the population of China is too large to be supported by existing resources" (R. H. Tawney, *Land and Labour in China* [London: George Allen & Unwin, 1932], p. 103).

[6] 同上书，第8章“农业劳动”，第141—149页。

[7] 李索州在一篇关于《山东潍县的大地主》的论文中讲到，根据当地的测算标准，一户农家拥有8000亩地（或4000英亩），而根据官方的测算，每户拥有2.4万亩（载于《农业中国》，太平洋国际学会再版，芝加哥：芝加哥大学出版社，1938年，第15—17页）。在这本文集中，吴少朋在《苏北的土地集中》一文中讲到，地主拥有1万—2万亩的土地（第11—14页）。但是费孝通在《被土地束缚的中国》中描写道，云南乡村的地主或富豪拥有300亩地就足以建造一座大的寺庙和房子（第278和296页）。据说获得了“大量土地”的富商是指买了300—500亩地的人。

[8] “要强调的这一基本事实极为简单，即中国的人口太多，而现有资源又无法支撑他们。”引自《中国的土地和劳工》，理查德·亨利·托尼著，伦敦：乔治·艾伦与昂温出版公司，1932年，第103页。

[9] "Let mulberry trees be planted about the homesteads with their five mau, and persons of fifty years may be clothed with silk" (James Legge, *The Works of Mencius in The Chinese Classics* [2d ed.; Oxford: Clarendon Press, 1895], Vol. II, Part I, chap. iii, p. 13).

[10] *Peasant Life in China* discusses the importance of the silk industry in Kaihsienkung; *Earthbound China* gives an analysis of the economic role of the cottage industries of basketmaking and weaving and the larger-scale papermaking manufacture in villages of Yunnan.

[11] “五亩之宅，树之以桑，五十者可以衣帛矣。”引自《中国典籍》第2卷《孟子选集》，理雅各编译，牛津：克拉伦登出版社，1895年，第2版，[第1卷]上，第3章，第13页。

[12] 在《江村经济——中国农民的生活》一书中论及了开弦弓村的丝绸业的重要性；而《被土地束缚的中国》一书分析了云南乡村棉纺织业和大规模造纸业的经济作用。

[13] In 1928 an American commercial attaché wrote: "China grows enough wheat to keep all the flour mills in the country running at full capacity throughout the year, but only a fraction of this wheat can be gotten to the flour mills sufficiently cheaply to make it profitable for the mills to buy it....

"Even were the Shensi farmer to present his wheat to any of these Chinese flour mills, they could not afford to take it, so long as they would be obliged to pay the transportation costs in getting the wheat to their mills. They could, in all cases, better afford to go to the Dakota farmer and buy his wheat at the prevailing American market price and transport it a thousand miles across the Pacific, and several hundred miles up an interior waterway in China than to take the Shensi farmer's wheat as a gift" (Julean Arnold, *Some Bigger Issues in China's Problems* [Shanghai: Commercial Press, 1928], p. 1). This situation has hardly been improved in recent times, especially with the damage done to rolling stock by wartime destruction.

[14] 1928年一名美国使馆商务专员写道：“中国产出的小麦足以让全国的磨面机全年满负荷运转，但是只有一部分价格便宜、磨面厂买进后有利可图的小麦进入到面粉加工厂里来……”

“即使陕西农民打算把小麦送到磨面厂，只要运输费用由厂主来出，磨面厂也收不起。无论如何，他们宁愿以美国的市场价去买达科他州农民种的小麦，然后跨过数千英里的太平洋，再沿几百英里国内水路运回来，也不愿接受白白赠送的陕西农民种的小麦”（《中国问题的几大方面》，安立德著，上海：商务印书馆，1928年，第1页）。这种情况近些年来并未得到很大改观，尤其是战争对交通运输损害很大。

Chapter Seven Social Erosion in the Rural Communities

第七章 乡土社区的社会侵蚀

● EROSION: OF LAND AND OF MAN

Lilienthal, in his book on the TVA in America (*Democracy on the March*), uses the term "mining" to describe the methods of growing cotton on the played-out farmlands of the South, methods by which for the sake of a single crop the wealth of the soil was taken out and its riches exhausted. Even the addition of chemical fertilizers could not combat the evil effects of soil erosion accelerated by floods—floods at least in part directly due to the decrease in cover crops, deforestation, and the resulting lack of organic matter in the soil to make it hold water. It was through this sort of erosion that the soil of the Tennessee Valley, originally quite fertile, became barren and unproductive. Lilienthal's project for the TVA was to restore the organic equilibrium of nature, so that man should no longer attempt to defy nature but to understand and co-operate with her, and should bring it about that the river, whose floods had been a yearly threat, should now be harnessed for the service of man.

If I mention the TVA here, it is not so much in order to make

clear Lilienthal's ideas as to draw an analogy between physical erosion of land as described by Lilienthal and the social process which is going on in China today. In China today we are interested in promoting the principles of soil conservation. But we shall also do well to extend this concept to rural life in general, that is, to the conservation and encouragement of talents and human resources. In considering the TVA experiment, it has become clearer to me that Chinese agriculture is not only a matter of techniques but also a system of customs, institutions, morality, and leadership which, in the past at least, worked together to maintain the life of China. But in the last one hundred years it seems to me there has been at work a process of social erosion suggesting that which went on in the Tennessee Valley. As a result have come poverty, illness, oppression, and suffering. In the traditional organization of society it appears we had a system under which most of the people could manage to live. It is true that standards of living were very low and that life was not without its hazards and disturbances. Yet there was achieved a stable organization of society in which most people did not starve and did not suffer excessively. This traditional way of life was built upon an economy which carefully served the land and preserved the fertility of mother-earth so that people could continue to live upon the land without destroying its richness. The Chinese attitude was not one of the exploitation of resources but rather of companionship with and adaptation to nature. From what I understand of Lilienthal's work, he seems to have been working toward a goal very close to the Chinese conception.

• 对土地和人的侵蚀

李林塞尔在他有关美国TVA计划（田纳西河流域管理局——译者注）的著作（《行进中的民主》）中，用“采矿”一词来描述业已贫瘠的南方农场的种棉方法：为使棉花生长良好，耗尽了土地的养料。即使增施化学肥料，也敌不过洪水加速侵蚀土地的恶劣后果。造成洪水的直接原因至少部分是由于地表植物减少，森林砍伐，导致土壤中有有机成分缺乏，使得水土无法保持。正是由于这种侵蚀，田纳西河流域曾经肥沃的土地变得贫瘠，少有产出。李林塞尔的TVA计划意在恢复自然生态平衡，于是人们不应再试图违抗自然，而应理解和与自然合作，并且应该治理好每年洪灾泛滥的河流，造福人民。

我在此谈TVA计划，并不是为了把李林塞尔的观点弄清楚，而是为了在他所描述的土地的物理侵蚀和中国今天正在经历的社会进程之间找到可类比之处。今天的中国对于改善土壤保持倍感兴趣，但我们还应该把这一概念推广到整个农村生活中去，即要对才智和人力资源给予维护和鼓励。在研究TVA计划时，我更清楚地认识到，中国的农业不仅是技

术问题，还是传统、社会结构、道德及统治的问题，这些因素至少在过去共同维持了中国的生活。我认为近百年来，似乎存在与田纳西河流域类似的社会侵蚀，其后果是贫穷、疾病、压迫和苦难。在传统社会结构中，好像存在着一个大多数人都可以生存的体制。虽然生活水平很低，人们仍有可能遭受危险和骚乱，但却有一个稳定的社会结构，多数人不受饥饿和其他方面的过分煎熬。这种传统生活方式建立在人民悉心保护土地，保持养分，以便可以继续以土地为生且不破坏其肥力的经济之上。中国人的观念不是剥夺资源，而是追随和顺从自然。以我对李林塞尔的工作的理解，他所为之努力的目标与中国人的观念似是很接近的。

Any visitor who has had an opportunity to observe the life of a Chinese countryman cannot but perceive his close bonds with the soil. He carefully uses those things which grow from the land and then as carefully turns them back to the land. In this way human life is not a process of exploiting the earth but only a link in the organic circulation. And the fact that, when life has left a body, the corpse goes into the soil is a source of comfort. It seems there is a close bond between man and the land. This is doubtless one reason why it is so important for a man, when he comes to die, to go back to his own native spot, the place from whence he came. The stream of life of which everyone is a part flows parallel with the life of the earth, which has its own life.

In the folk society man and the land are linked by strong bonds of sentiment—an attachment called, in Chinese, the *sang* ("mulberry") and the *tzu* ("catalpa"), a name derived from the two varieties of trees (*sang* and *tzu*) traditionally in ancient China planted near the house.^[1] Men, it is suggested, are like plants that take their nourishment from the land. But when the springtime of their growth is past and they come to the fall of life, they must return to the land, just as leaves of a plant fall and come in time to nourish its roots. Such a conception, in recognizing genuine ties between man and nature, emphasizes the fundamental unity of life. But when carried to extremes an attachment of this sort may appear unreasonable and even absurd, as, for example, when overseas Chinese laborers work day and night to send back money, penny by penny, and leave as their dying command that their coffins be transported from afar back to their native spot. This kind of yearning to return even after death can hardly be appreciated by the West. But in Chinese traditional culture such a feeling is of supreme importance. Among my own forefathers there was one man who passed a high examination and was sent by the government to Yunnan to supervise the salt-mining industry. At that time Yunnan was a far frontier and, moreover, dangerous on account of the prevalence of malaria. In fact, my ancestor contracted malaria and died soon after his arrival. He had a younger brother who, when he

heard the news, made up his mind to go to Yunnan and bring back the coffin of his brother. After working for several years to save up enough money for the trip, he set out, struggled through all kinds of difficulties in wild mountain country, and at last succeeded in having the coffin carried home. To accomplish this task, which to modern minds would appear quite unnecessary, he not only sacrificed his career, since he gave up his chance to take the government examinations, but even risked his life. In our family chronicle this exploit is written up as though it were the one really big thing which had been done in the family.

任何一个有机会观察乡村生活的人都不会不发觉，农民与土地有着紧密的关系。他们小心利用土地上长出的东西，又很仔细地将其返回土地。如此看来，人类生活并不是一个掠夺地力的过程，而是这有机循环中的一环。当生命离开身躯，尸体还要入土为安。人与土地之间似存在着一种紧密联系。这无疑解释了为什么人们快死时对回归故里一事这么看重，在什么地方出生，就要回到什么地方去。每个人都是生命长河的一部分，与土地自己的生命之流平行。

人和土地在乡土社会中有着强烈的情感联系，即一种桑梓情谊，“桑”和“梓”是古代人们种在家门口的两种树。^[2]这使人想到，人同植物一样从地里吸取养料。当生命的春季过去、秋季到来时，他们必然要回归大地，正如落叶归根，滋养土地。这样的观念承认人与自然的真正纽带，强调了生命的根本统一。但是如果走向极端，这种情感可能变得无理甚至荒谬，比如，海外的华侨终日劳作，把钱一分一分攒起来寄回家里，死了也要大老远地把棺材运回家乡安葬，这种甚至连死后也要万本归原的愿望是西方人难以理解的，而在我们传统文化中却看得比什么都重要。我自己就有一个老祖，中了举，派到云南去监管采盐业。那时，云南是远疆，又有瘴气弥漫，相当危险。我那位老祖就受了瘴气的感染，到那里没多久就去世了。他的弟弟听到他的死讯后，决定去云南将哥哥的灵柩运回来。在辛苦数年攒足了路费后，弟弟出发了，穿过荒山老林，历尽艰辛，终于成功把棺材运回家乡。为了完成这项在现代人看来多此一举的使命，他不仅放弃了参加科举考试的机会，牺牲了自己的前途，还冒了生命危险。在我们的家谱上，此举被大书特书，仿佛是历代事业中最伟大的一项。

It seems to me that one does not understand what the underlying feeling here is if one does not see that this strong sense of the importance of kinship ties is extended to a symbolic kinship between man and the earth. Better not to leave one's own place, but, if one goes, one must come back. Coming back from Europe in the steerage during the war, I met Chinese peddlers who had been living for years in France selling a certain type of jade. They could speak nothing but Chinese and had taken no part in the life of this foreign land. Instead they had struggled to save every penny they could in order to send it home where their relatives put it into the building of fine houses.

When the Nazis dosed the borders, they risked their very lives to see that the money got out, and now, old and worn out, they were going home, not to enjoy life but merely to die.

From the peasant's first act of the morning in collecting manure from the streets to the putting of a coffin in the ground, all is part of the same big cycle of nature and of man's attachment to the soil. And it is the strength of this relationship which to my mind has maintained Chinese culture throughout the years. I hope, however, the reader will not misunderstand me as advocating this type of attitude. I wish merely to emphasize the existence of this spirit in Chinese life and particularly in relation to the changes now taking place—changes which I call the process of "social erosion."

Among country children in my native area one of the most common names is Ah-kên ("The Root"). Man has roots. Individuals are like the branches of a tree which has grown up from its roots and which depends for its well-being on the strength of these same roots. For man the roots are the society from which he gets his material well-being and his education; they are the family, the village, the region, and the nation. These roots are something like what Lilienthal refers to in American life as "grass roots." From the point of view of society, whether human or plant, that which is taken away must eventually be returned. If basic elements are taken away by a "mining" process, then after a certain length of time the community will become bankrupt. The cycle of giving and taking away may become very complicated. The TVA represents the more complicated, the Chinese farm the simpler, form of the process.

在我看来，如果人们看不到对这种血统重要性的强烈感情已延伸到了人与土地的象征性亲缘关系，就不能理解其潜在的感受。人最好不要离开自己的乡土，如果要离开，就必须回来。战时我乘坐最差舱位从欧洲回来时，遇到了一些曾在法国居住多年、以贩卖某种玉石为生的中国小贩。他们只会讲汉语，从未融入异乡的生活；相反，他们拼命攒下每一分钱，为的是寄回家里让亲属盖好房子。纳粹党封锁边境之后，他们冒着生命危险以保证钱安全寄出。现在，他们老了，精力耗尽了，踏上了归途，不是去享受生活，只是等待死亡的降临。

从农民清早上街拾粪，到送棺材入土，都是自然界同一个大循环中的一部分，也是人与土地的关系的一部分。在我看来，正是这种人地关系的力量支撑着这历久未衰的中国文化。不过，我希望读者不会误以为我在提倡这种拾粪运枢的人生态度，我只是想强调这种精神在国人生命中的存在，尤其是有关现在正在发生的变革，我把这种变革叫做“社会侵蚀”。

在我的老家，农村孩子最常见的名字是“阿根”。人也有根，个人不过是根上长出的枝叶，生命之树的茂盛有赖于根。对于人来讲，根是他

从中获得生长资料和教育文化的社会：小之一家一村，大之一乡一国。这些根类似于李林塞尔所指的美国生活中的“草根”。从社会的角度来看，无论是人还是植物，取之于地的必须回之于地。如果基本要素被“采矿般”地挖掘走了，那么一段时间之后，这个地方必会荒芜。供给和消耗的循环可能变得非常复杂。TVA计划代表这一过程较为复杂的形式，而中国农田是较为简单的。

The greater and more highly developed the cycle, the higher the standards of living; but, simple or complex, it must still remain a cycle of reciprocal action. The mining process is suicidal, for, though it may give returns for a while, eventually it exhausts all available resources, and the mining town becomes a ghost town. Thus it is clear a healthy community can survive only when it can draw adequate nourishment from its environment.

● THE DESERTERS—RURAL BOYS WHO DO NOT COME BACK HOME

In our traditional culture the men of talent were spread throughout the local communities. Recently I analyzed with Professor Quentin Pan the source of origin of nine hundred and fifteen scholars who passed the high-ranking imperial examinations (those above provincial rank). The distribution was as follows: 52.5 per cent came from the Chinese traditional town, 41.16 from rural areas, and 6.34 from intermediate small towns. If we divide the series according to provinces, the percentage from rural areas surpasses that from urban areas for four provinces in North China: Shantung, Anhwei, Shansi, and Honan. These statistics show that even in this field of activity, which requires long literary training, half of the students were at this time from rural areas. Still more significant is the question whether their fathers had literary degrees or not. This turns out to be about the same for rural as for urban areas, the ratio in the city being 68 to 33 and in the country 64 to 36 (the larger number applies to those whose fathers did have degrees).

This shows that, in China, men of ability and learning were not concentrated to a very large extent in the city as they are in the countries of the West. According to Sorokin's theory, in the West, unless a man becomes a city dweller, he will have no chance to rise.^[3] But, in China, the tradition of "the leaves going back to the roots" seems to have helped to maintain the high quality of the rural population. People who attained high social honors still did not forget their place of origin and, when they were old at least, would come back and would do their best to make use of the prestige and

advantages gained outside for the benefit of their home community. Thus, having one distinguished man in an area might lead to there being more, since this man would help others to get a start. Able men formerly did not leave their grass roots permanently. As a result not only did intellectual men share in the life of the countryside but they also helped to encourage others in the same region.

循环越大，程度越高，人民的生活水平就越高。但是，无论复杂与否，必须保持一种互惠行为的循环。采矿式的消耗是自杀性的，虽然一时会带来回报，但最终会耗尽所有可利用的资源，一个有着丰富矿藏的镇会变成死镇。因此，很明显，一个健康的社区只有从环境中获得适当的养料，才能生存下去。

• 逃亡者——不回家的乡村子弟

在我们的传统文化中，人才是分散在地方上的。最近潘光旦先生和我一同分析了915个通过了（乡试以上）科举考试的读书人（清朝贡生、举人和进士）的出身。他们的地域分布如下：52.5%出自城市，41.16%出自乡村，另有 6.34%出自介于城乡之间的市镇。如果再按省份来分，乡村百分比超过城市百分比的有山东、安徽、山西、河南四个北方省份。这些数字表明，即使需要很长时间文字训练才能考中的人才，竟有一半是从乡村出来的。更值得注意的是，我们所分析的人物中父亲已有功名和父亲没有功名的比例，城乡之间几乎相等，城市的比率是68：33，乡村是64：36（大数代表父亲已考取功名的人）。

以上事实表明，中国有才能和学问的人不像西方国家那样主要集中在城市。根据索罗金的理论，在西方，除非一个人变成城里人，否则不会有出人头地的机会。^[4]但在中国，落叶归根的传统似乎为乡土社会保持着人才。即使飞黄腾达的人也不会忘记故土，至少是年老的时候，他们就会回来，利用自己在外获得的声望和有利条件为家乡谋福利。这样，一地有了一个成名的人物，接下来就会人才辈出，因为这个人会帮助其他人成才，所谓“开了风气”。在以前，有能力的人不会永远脱离他们的“草根”。结果不仅是知识分子参与乡村的生活，而且还会鼓励当地的其他人参与。

Now the situation is quite changed. At the present time those whom the community supported in their youth no longer return in order to become useful to it. Recently we said goodbye to a number of college graduates who were threatened with unemployment. One of their teachers was urging them to go back to their own birthplace. All agreed that in principle this would be a good thing to do but said that, speaking realistically, they could not go back. And actually I do not know of one case where a graduate has returned to his own community. Instead they either managed finally to squeeze into positions in the city or remained unemployed, living with the help of

friends. They were unable to go back to their homes not only because they felt unwilling to do so but because it would have been impractical for them to try to live there. At the time that they had left their homes there seems to have been some force from outside which pushed them out. Their parents, brothers, and other relatives had done their best to help them realize their dream of going to the city. In order that they might do so, some families even sold land or borrowed money. Yet, when the young people came to graduate from college, they were apt to find that these several years of absence had severed their links with the home community. In the country there are no jobs for college graduates. It is not so much that in the modern college the student may have learned Western science or technology as that he has become accustomed to a new way of life and to a system of ideas quite different from that found in the country. The change is enough to make him conscious of the fact that he is different. So the college graduate of today feels that in the country there is no one to talk with, no one who understands him, and he often even feels alienated from his own kin. If he does go back, he will not find a suitable job where he can apply the knowledge he gained in college, since Chinese colleges are not preparing men to work in rural areas. What he will have learned in the university is usually knowledge imported from the West. It is true that knowledge should have no national boundaries and that the need in present-day China to modernize quickly must be met by the introduction of Western knowledge. Modern knowledge must provide the plan for the reform of the traditional system in the rural areas. But the point is that the students who have been trained in the universities have usually failed to find a bridge by means of which they might bring over and apply their knowledge to their own communities. Without such a bridge, modern knowledge is ineffectually hanging in the air. And as a result the countryside, which is constantly sending forth its children, is losing both money and men.

现在情况则有所不同。目前，那些在青年时期曾受到过乡土社区培育的人已不再回去为其所用。最近有很多大学毕业生找不到工作，有一位老师劝他们回家乡去，他们原则上都能接受，但又非常现实地说他们回不去了。事实上我也没听说有一个人回去的。他们宁可待在城市里，费劲心思谋个职位，或无处供职，靠朋友资助为生。他们回不了家，这不仅是因为他们不愿，也是因为回家生活已经很现实。在没有离乡之前，好像有一种外在的力量在推他们出来，他们的父母、兄弟和其他亲人也为他们想尽办法实现离乡的梦，有的甚至变卖田地或背负债务。当他们大学毕业时，他们发现几年的离乡生活已把他们同乡土的关系割断了。乡村没有大学毕业生的工作。这不仅仅是因为他们在学校学到了西方现代科技知识，更因为他们已经适应了那种与乡村生活截然不同的新的生活方式和观念，这一变化已足以使他觉得自己已有异于乡村人了。

所以，今天的大学生毕业回到乡村后无人交流，没有人理解他，他自己竟然经常觉得被家人疏远了。即使他回到家乡，也找不到合适的工作，学校里学来的知识没有用武之地，因为中国的大学并不培养去乡村工作的人才。从大学里学到的东西常常是来自西方的知识。知识不应分国籍，我们也应该快速现代化，要现代化就要引入西方知识。现代知识必须提供乡村传统制度改良的方案。但问题是大学生无法找到一座桥梁能把他学到的东西介绍和运用到自己的家乡农村中去。没有这样的桥梁，现代知识只能徒劳地悬在空中。结果是不断输出子弟的乡村同时丧失了金钱和人才。

This holds true not only for most Chinese university students but also for the middle-school students. In Yunnan I studied a village near a walled town. A short distance from the village was an agricultural school. This village depended for its livelihood upon market gardening. The village gardeners used to point to the school farm and laugh, saying, "The teachers and students in that school plant their cabbages like flowers. That doesn't pay." On the other hand, the teachers, who had been trained in modern methods of agriculture, told us that the cabbages grown by the villagers could be improved, and they even demonstrated to us improved varieties. There was truth on both sides. Unfortunately the students when they left school would not be able to continue using modern techniques or experimental methods, since their families neither could afford nor did they wish to do so. There seems to be an unbridged gap between the school and the farmer. The farmer is not prepared to learn from the school. As a result the graduates of this agricultural school either became teachers in the primary grades or entered the military academy to become officers, or some of them did nothing at all and simply spent their time loafing around the district town. Parents who send their children to school believe, according to the traditional idea, that education will give promotion to a higher social level. But they are not rich enough to enable their children to complete the education which is necessary to permit a young man to take a job in the big cities. On the other hand, for young men who have passed a number of years in being educated, to go back to working in the fields would be a disgrace in which the family would share. So they are caught and are unable to go forward or back. It seems that during the last few decades the army and party (Kuomintang) organizations have attracted people of this sort; this explains to a certain extent, I believe, modern Chinese Fascistic tendencies. It reminds one of the situation in Japan before the war, where young men from rural areas frustrated in other careers became part of the political and military machine and developed extremist ideas which sometimes even led to irresponsible attempts to seize power. Formerly, the traditional educational system took care of such people by enabling them to come up for examinations, the

passing of which gave some official status and enabled them to achieve satisfactory social positions in the community as petty gentry. Moreover, they might keep on working and hope to pass a higher examination. But changes in the present educational system and the gap between the modernized city and education in the interior now all combine to frustrate their ambitions.

不仅大学生，中学生也是如此。我曾对云南一个县城附近的村子作过研究。村子不远有个农业学校。这个村子依靠市场园艺业营生。村里的菜农常指着学校的农场笑着说：“学校的老师和学生种菜像是种花，那可挣不到钱。”另一方面，受过现代农业种植技术培训的老师则告诉我们，乡下人种的菜大可以改进，甚至向我们展示改良的品种。实际上他们各有道理。不幸的是，学生离开校园后无法再运用现代技术和实验方法，因为家里没有本钱也不愿意让他们这么做。学校和农场之间好像有一条无法逾越的鸿沟。乡下人不想向学校学习，结果，这个学校的毕业生有的当了小学教员，有些转入军校当军官，有些就什么都不干，只是在县城附近闲逛鬼混。送孩子上学的父母依照传统观念认为，上了学就能提高社会地位，但是他们的经济条件又不允许让孩子完成能在大都市工作的必要学业。另一方面，这些年轻人认为，受过多年教育之后又回到家乡种地，对自己、对家庭都不体面，所以他们进退两难。似乎最近几十年来，参军和加入国民党吸引着这些年轻人，我认为这在某种程度上为现代中国的法西斯倾向提供了注解。这使人联想起战前日本的情形：一些在其他职业中遭到失败的乡村年轻人变成政治和军事机器的一部分，产生了极端主义观念，甚至导致不负责任地攫取权力。在过去，传统的教育制度给这些人提供关照，让他们通过考试来做官、成为小士绅，从而在社区里获得更高的社会地位。他们也许还会继续努力来通过更高级的考试。但是目前教育制度的变化和现代都市与内地教育之间的鸿沟共同破灭了他们的理想。

College graduates have more chance for employment in the city than do the graduates of the middle schools, to be sure, but even for them the problem is essentially similar. In the first place, there is little opportunity for them to reform the traditional ways of doing things by using the modern methods in which they have been trained, and, second, since there is no way for them to earn a living through productive activities, they must do so by striving for power and influence in the political field. Thus in a poor community there is always the burden of maintaining a huge number of political appointees in administrative offices. This explains some of the inefficiency of our administration. Thus I am afraid that the present educational system has not successfully carried out its function of modernizing China but on the contrary has drained off the sons of the well-to-do farming class from the country and brought them to town without providing them with useful employment there. This I call the "process of social erosion."

● THE PARASITIC LAYER

Some may think that modernization always implies urbanization. Modern civilization is the product of the city, and the city population must of necessity come from the country, since the city cannot replace itself. In the country the able man does not have a chance to develop his abilities, but, once he comes to the city, he finds opportunities for developing them. In this sense the city is the place where human capabilities may be realized. Potential talents of the countryside, we may say, can be developed only through the process of urbanization. But this principle does not hold entirely for China. I mentioned above Lilienthal's work. From what he says I suspect that this principle is not always true for America either. Especially in the south of the United States there seems to have been going on a somewhat similar process of social erosion. As in China, the process of organic circulation has been disrupted, and men and wealth have been constantly drained away. The TVA, as I understand it, aims, by introducing modern knowledge, to restore this circulation and, by creating the bridge I spoke of above, to restore prosperity. To create a bridge, there is needed not only knowledge of modern techniques but a utilization of the human element in such a way that those who have received a modern education will be able to go back and serve their own communities. Without such a bridge, the development of the city will cause a dislocation of the social mechanism.

在城市里，大学生当然比中学生有更多的就业机会，但即使对大学生来讲，问题基本上仍是相似的。首先，他们几乎没有机会利用学过的现代方法改革传统的行为方式。其次，他们不能通过生产活动来谋生，只能通过政治领域获得权力和影响。因此贫穷的社区常常要背上养活大批政客的负担，这也部分解释了为什么我们的管理低效。所以，现在的教育制度恐怕没有发挥使中国实现现代化的作用，反而使小康农家的子弟流入城市，但城市又不能为他们提供有价值的就业。我称此为“社会侵蚀过程”。

● 寄生阶层

也许有人认为现代化总是意味着都市化。现代文明是都市的产物，都市人口必然来自乡村，因为都市人口无法自我补充。人才在乡村没有发展的机会，但是到了城市后，他就有机会自我发展。从这个意义上讲，城市是发挥才能的地方。可以说，乡村潜在的人才只有在都市化进程中才能得到发展，但是中国又不完全如此。我在前面提到过李林塞尔的计划。从他的话中，我猜想这一原则在美国也不是永远正确，特别是在美国南方，发生着与中国相似的社会侵蚀。在中国，有机循环受到破坏，人力和财富被不断地掠夺。我理解，TVA计划的目标是通过引进现

代知识来恢复这一循环，通过搭一座我前面讲到的桥来恢复繁荣。建一座桥，不仅需要现代技术，还需要人力因素，即那些接受现代教育的人回归本土为社区服务。没有这样的桥，城市的发展将引起社会机制的混乱。

At present the growth of great urban centers is like a tumor from which China is suffering. The economic aspects of the unfavorable relations between city and country I explained in the foregoing chapter. Here I merely wish to add a cultural perspective to the picture. It is not correct to my mind to take the modern city as representing Western civilization and the rural areas as representing the traditional Chinese civilization. In my opinion the modern Chinese city is the product of the contact between East and West. Those individuals who, through contact with Western culture, have changed their way of life and their way of thinking will not find themselves able any longer to live in the country. Some portion of them will be taken in by newly developing urban enterprises. But, since such enterprises are limited in number, there will be sure to be some who are left out to roam about without being attached to anything. Thus there develops a new type of person, one who avoids productive work in either city or country but rather goes in for seizing political power. This new type of person is both directly and indirectly recruited from the country. Before the contact with the West, the examination system would have taken care of these people, and they would have continued to live in the country or small towns as gentry. Being versed in the classical Confucian philosophy, they performed the function of the "man who knows." It is true indeed that such men were parasitic in so far as they derived their support from the working people, living mainly as they did on their rent from land. But, since they continued to live in the country, there was at least no large outgo of wealth from the countryside.

If in Chinese modern cities industrial enterprises might be quickly developed, the elements that have been taken in from the countryside might find their proper place. Although the countryside would then still suffer from a certain measure of "erosion," this would be compensated for by the prosperity of the city. And, like TVA in America, China might be enabled to turn back benefits from the city to the country. If this were so, the situation in China would be very different. Unfortunately China is still in the status of a semicolony. Large-scale industrial development is not feasible. The essence of Western civilization, industrialism, has not been really introduced as yet. What has been brought in is the superstructure of the more superficial elements of this civilization, including the desire for material comforts and satisfactions. But there has not been

constructed as yet the material foundation on the basis of which these things would make sense. This lack of foundation creates a special class of people who live superficially in Western culture but without a traditional base from either the West or the East. These are both the victims and the directors of China's tragedy.

目前大都市化正成为中国的疾患。我在前一章节从经济角度讲过不尽如人意的城乡关系，现在只想加上文化角度。如果说现代都市代表着西方文明，乡村社区代表着传统中国文明，我认为这一观点是不正确的。我认为，中国的现代都市是东西方接触的结果。那些通过接触西方文化改变了生活和思维方式的人发现，他们自己再也不能生活在乡村了。他们中的一部分被新发展的都市企业吸收。但是由于这样的企业数量有限，必然有一部分人游离于任何组织之外。这样就产生了一类新人，他们既不在城市也不在乡村从事生产活动，而是追求政治权力。这类新人直接或间接来自乡村。在与西方接触之前，科举制度吸住了这些人，使得他们可以作为士绅在乡村或县城生存下去。他们精通传统儒家哲学的教育，执行身为“知者”的社会任务。这类人确实是一种寄生的人，因为他们是从劳动人民那里得到给养，靠收取地租来生活。但是，由于他们继续生活在乡村，所以至少财富没有大规模外流。

如果中国都市里的生产事业发展得快，从乡村吸收来的人可能会找到合适的位置。虽然乡村仍在某种程度上遭受着“侵蚀”，但会被城市的繁荣所补偿。像美国的TVA计划那样，中国也许能够把利益从城市返回到乡村。果真如此，中国的情况就大不一样了。不幸的是，中国仍处在半殖民地的地位，大规模的产业发展不大可行。西方文明的本质——工业主义还没有被真正地引进，引进的是其表面或上层的因素，包括对物质享受和满足的渴望，但是还没有建立起能使这些变得有意义的物质基础。这种基础的缺乏制造了一个表面上生活在西方文化中，但又没有东西方传统基础的特殊阶层。他们是中国悲剧中的主角和导演。

● BENEATH THE FLOOD

Erosion of land takes place when the land is bare of grass and tree cover and thus not able to hold water. Then floods follow and bring disaster to the people. Social erosion has a similar effect, causing an exodus of the population. In the process of social erosion, at first only the top layers are carried away, those economically well-to-do and better educated who no longer choose to remain. But, as both wealthy and able men are washed away in this fashion, the pressure of city industry continues with this fact to press the country people still further down into poverty. Well-to-do people who remain become poorer. And the really poor can no longer remain but must desert the land. Movement away thus comes from both upper and lower levels, leaving behind only the middle class of peasants.

As for the elements mentioned above who are left outside of productive work, they tend to form a new class of organized parasites. Since villagers are both naive and not very well organized, they may easily become the prey of such people. When I was in a village one time a roving individual came and tried to blackmail my landlord, because, he said, my landlord's son, who had left military school, was a deserter. Actually the boy had done nothing wrong, and the man was simply trying to work a racket. I said to this man, "You come from the country yourself. How would you like it if someone like you came to your village and tried to bully and blackmail the people there?" He could not find an answer. I felt that the man himself was rather pathetic, a dislocated drifting individual. But it is people such as this who have aroused the hatred of the peasants. The lot of the conscript is a hard one also. The government takes all the able-bodied men from the country and enlists them. But, when these men are discharged, no one pays any attention to them. Country people say that those who have gone as soldiers will never return to farming. Once enlisted, they become disorganized and are no longer accustomed to obedience but rather to looting and other wild behavior. Thus conscription accelerates the processes of social erosion. The banks are broken and a flood results: in this case, peasant revolt. The disorganization of life, economic, political, and moral, has confronted China with needs for new leadership and reform.

• 在洪流的冲洗下

当土地缺乏植被不能保持水分时，就会发生土地的侵蚀，接着就会有洪水的到来，给人们带来灾难。社会侵蚀具有相似的后果，造成人口大量流亡。在社会侵蚀的过程中，起初只有最顶层的人离开，他们在经济上比较富裕，受过较好的教育，不愿意继续留在乡村。但是由于富有和有能力的人都离开乡村，加上都市工业势力的压迫，使得乡村开始变得贫困。小康之家降为穷户，而穷户再也支撑不住，开始离乡。这样的转变发生在贫富两极，中间阶层则足以维持。

我们在前面曾经讲到不从事生产活动的人，他们试图组成一个新的有组织的寄生阶层。由于村民单纯幼稚，又缺乏良好的组织，他们轻易就会成为这一阶层的牺牲品。有一次我在一个村子时，一个游手好闲的人想敲诈我的房东，他说房东离开军校的儿子是个逃兵。实际上房东的儿子并没做什么坏事，那个人只不过想找碴捣乱。我对他说：“你不也是来自乡村吗？如果有人像你这样到你的乡村去敲诈，你觉得怎样？”他无言以对。我觉得他自己很可怜，是一个被命运抛弃的人。但是正是这样的人引起了农民的仇恨。参军入伍也是一个艰难的问题。政府把所有身强力壮的人都征去当兵，退伍时却没有一个人来关心他们。乡下人说那些去当兵的人永远也不会再回来种地。入伍之后，他们变得涣散不羁，

不再循规蹈矩，而沉沦于抢劫掠夺等野蛮行径。征兵因而加速了社会侵蚀的进程。农民如决堤的洪流般起来反抗。中国面临着生活、经济、政治、道德的混乱，她需要新的领导和改革。

[1] According to the Book of Poetry one should revere the sang and the tzu because they symbolized parental and even ancestral ties. Since then the phrase has come to stand for a man's attachment to his own region and particularly to his own homestead.

[2] 据《诗经》记载，人们应该尊敬桑和梓，因为它们象征着与父辈甚至是祖辈的联系。从那时起，“桑梓”开始指代一个人对他的家乡——尤其是他的家园的眷恋之情。

EDITOR'S NOTE

To most thoughtful and dispassionate Chinese it seemed, especially in the postwar years 1946–1949, that the new leadership and reform for which they had been looking for so many years could not come from the repressive and discredited right but (because there was no effective "vital center") from the left. Yet, though it is obvious that Fei was looking forward to Communist "liberation," the leadership and the doctrine were to be Chinese in origin rather than either Russian or Western. The following sentences from a lecture delivered by Fei in 1947 at the London School of Economics present the point of view of the Chinese patriot who hoped for co-operation rather than domination by any outsiders in the solving of China's problems.

"If, in advancing to the present stage of technological development, the West had achieved a new order—that is, an integrated social system—the problem in the East would be simpler. All we would need to do is to learn to transplant the new form across the ocean. There would be difficulties, but if the new order offered greater material advancement as well as social satisfaction and happiness, reluctance would be only a matter of unfamiliarity, which could be overcome by better instruction.... The defect of Confucianism in denying the importance of man and nature relationship is apparent in our inability to cope with modern Western civilization. But the one-sided emphasis [of the West] on material advancement without due consideration of a corresponding development in social relations is equally dangerous. It is therefore clear that the process of social change in China should not be a mere transplantation of Western culture but should imply a reorganization of social structure in conformity with the inherited spirit of harmony and integration. The question of how these two developments can be made to keep pace with one another is essential for the solution of the present chaotic state of affairs in China, which is manifested in grave economic and political disturbances. These disturbances are primarily symptoms of a process of change without a definite aim. Unless China is to perish, we have to find our own solution from our inheritance of experience over thousands of years...."

编后记

对于多数有思想、没有偏见的中国人来说，尤其是在战后的1946年—1949年，他们多年来一直寻求的新的领导体制和改革不可能是来自因采取镇压手段而丧失信誉的右派，而是来自“左派”（因为不存在一个实际的“生命中枢”）。然而，虽然费先生明显地是在盼望着共产主义的“解放”，但是这种领导的体制和主张从根源上是中国式的，而不是俄国或西方式的。以下一段话引自费先生1947年在伦敦经济学院的演讲，这代表了这位爱国者希望通过合作而不是由外人主宰来解决中国问题的观点：

“如果在技术发展到当今阶段之时，西方就已经达到一种新秩序，即实现了一种统一的社会体系，那么东方的问题就会简单一些——我们只需把新的方式跨大洋移植过来。当然困难也会存在，但是如果这种新秩序提供了更大的物质进步以及社会满足和幸福的话，那么不情愿也只是由于不熟悉罢了，这可以通过进一步引导来解决……儒家否认人与自然关系的重要性，这一缺陷在我们与西方现代文明交锋时的无力中明显地表现出来。但是单方面强调（西方的）物质发达，而对社会关系的相应发展缺乏应有的考虑同样是危险的。因此，中国社会变迁的进程不该是西方文化的简单移植，而应该隐含着对一种与和谐统一的内在精神相适应的社会结构的重组。这两种发展如何才能达到步调一致，对于解决目前中国的混乱状态——表现为严重的经济和政治混乱——是最为基本的。这些混乱主要是没有明确目标的社会变迁过程的征兆。要使中国不灭亡，我们必须要从几千年历史传承的经验中寻找我们自己的出路……”

译后记：逝者如斯的结构秩序

赵旭东

在65年以前，也就是1946年，美国极有影响的《美国社会学学刊》（*American Journal of Sociology*）登载了当时在云南大学任社会学教授的费孝通先生题为“农民与土绅：中国社会结构及其变迁的一种解释”的长达17页的论文。^[1]这应该算是晚出的英文版《中国土绅》（*China's Gentry*）的节缩本，而后者又可以说是费先生基于长期田野工作凝缩而成的对于中国社会整体结构与功能运作机制的总结性论断。尽管此文通篇没有一个注释和文献征引，但读过之后，你不会觉得这是在云里雾里地调侃，而是实实在在地思考，思考那时中国社会所面临的危机以及转型时期可能的道路选择。

确实，这篇用英文写作并且主要是写给西方人阅读的文字，其核心内容在中文世界里并不陌生，其中许多论点和语汇，在他后来出版的《乡土重建》、《乡土中国》中，还有他与历史学家吴晗合编的《皇权与绅权》中，一样都能够读到。^[2]到了1953年，由美国著名人类学家雷德菲尔德（Robert Redfield）作序^[3]，由其夫人玛格丽特编辑的《中国土绅》在英语世界出版。^[4]这本书在出版之后，便一直是英语世界中国乡村社会结构及其变迁这一领域中必定要被引用的参考文献。

有关社会精英人物的研究，向来是诸多学科的研究焦点，包括社会学、人类学、政治学以及历史学等。费孝通先生的《中国土绅》一书是从社会人类学的研究视角，以他在江苏和云南几个村落的田野调查为基础而写成的。关于这几个村子的情况，费先生之前曾有《江村经济——中国农民的生活》（*Peasant Life in China*）和《被土地束缚的中国》（*Earthbound China*）这两本田野报告先后在1939年和1945年以英文出版，并且后来都有了中文版。^[5]唯独由美国著名社会学家、芝加哥学派的奠基人罗伯特·帕克（Robert Park）的女儿玛格丽特依据费孝通英文口述修订和编辑的这本《中国土绅》尚未见汉语版的发行。几年前三联书店的编辑舒伟先生、后来是薛松奎先生同我商量翻译此书的事宜，我犹豫了一下，最终还是接受下来了，并邀秦志杰女士与我一同翻译。

之所以接受这一任务，是因为当年三联书店欲以这本书来为费先生祝贺九十华诞，而我作为费先生的学生义不容辞应该担当这一翻译工作。之所以犹豫了一下，是因为以前读书的时候曾经读到过这本书的英文版，并做了些笔记，但一直不曾动过翻译的念头。而这样做完全是由于自己深知这本书虽然短小，但要真正翻译成汉语却并非易事。

后来真的翻译起来情况也确实如此。这本书是玛格丽特女士20世纪40年代末来中国，在费先生当时所在的清华大学听了先生的英文口述之后，回美国重新编辑整理完成的，其中还加入了几十条注释。费先生的那几篇文章大略可以在中文版《皇权与绅权》和《乡土重建》这两本书中读到，但费先生当时并非是完全照着他最初写的汉语原文来逐字逐句口述翻译的。正像她的丈夫也就是著名人类学家雷德菲尔德所说，玛格丽特进行了仔细的编辑，又添加了一些内容，从而使文意前后更加连贯，成为一个整体，并希望借此能够使费先生的意思更清楚地传达给英语世界的人们。

这些本来是一个编辑应该做的事情，不需要太多的说明。奈何我们又要将此英文的翻译和编辑后的文字回译成中文，这里就出现了以哪个版本为依据翻译的问题了。最初是想将费先生原来的文字原封不动地拿来用，但发现和英文版的文字虽然意思上接近，细节上还是有些出入的。比如英文版第80页在谈地方官的工作时写道："Their job was merely to collect taxes and to act as judges."^[6]费先生在《乡土重建》一书中对此则写道："他们的任务不过于收税和收粮，处理民间诉讼。"^[7]还有英文版是说："On the Dragon Day, Sheep Day, or Dog Day markets in Yunnan..."^[8]，而费先生的原文则是："昆明附近的龙街、狗街、羊街等都是这种大街子....."^[9]前一个例子中，英文少了“收粮”这一信息；而在后一个例子中，云南地方性的集市名称“街”这个字在英文版里就见不到了。这种中英文的不对应一直是困扰我们翻译的一个难题。后来我自己给自己找到了一条理由，以为应该忠实于英文的翻译，把一个美国人对一位中国学者的文字的理解再重新翻回到中文中来，由此可以看出文化翻译的可能与困难所在。

有了这样的思路之后，译稿很快就完成了，这里的原则就是基本上以英文为基础重新将其翻译成中文，有些带有本土意味的词汇还是要参阅费先生的中文原文。另外，对费先生忠实翻译自己原话的部分，则尽量用费先生自己的语式和词汇，因而在译文中会见到有些文字是引自费先生上面两本书中的原话，只是作了一些文字上的改动，以便使前后文字顺畅自然。

二

首先需要指出的是，这些文字虽然都是费先生六十多年前写下的，但现在读来依旧耐人寻味。费先生在六十多年前对西方现代化带给中国乡村生活的“损蚀”（可参阅《乡土重建》中“损蚀冲洗下的乡土”一文），在今天变得越来越明显了。一位朋友近日从文学家沈从文先生的老家凤凰城回来说，那里的唐朝古镇已经在被现代化的高楼大厦所侵蚀，时时都有被吞噬的危险，正如去那里写生的一些画家对他所说的，真是“来一次少一次了”。这种悲哀在费先生的文字中似乎到处都可以捕捉到。

在上个世纪之初，中国人选择了现代化的道路，并以一种乌托邦式

的想象，希望现代化能够给贫困的中国带来生机。但是我们为这种现代化付出的代价应该说也是极为惨重的，至少对乡村生活是这样的，并且还在一直地为此付出代价。偏执于现代化道路的人或许会讥笑说，这样的伤感太有些怀旧主义的味道。但我要真正辩解的是，一个文化有权利保留它自己存在的样态，虽然这种保留因为文化霸权的逻辑而最终是不可能的，但是“乡愁”之类的宣泄途径依旧是不可少的，否则真不知有多少人会因为此种郁闷而遁入歧途。

谈到有关中国士绅的问题，费先生的观察应该是极为敏锐的，他看到了中国士绅阶层对所谓绅权的滥用以及作为乡土社会精英的士绅与皇权之间的微妙关系。但是，这个社会离开下层士绅的“绅权”又是难以进行上下顺畅沟通的。传统时代的士绅阶层在城乡之间、皇帝与民间社会之间起着不可多得的纽带作用。正是士绅这种角色的不可替代性，使得他们变得更为危险。

近日读早期中国社会学家陶孟和在上世纪20年代写下的文字，看到他对上述类似观点的提醒也是颇为值得注意的。虽然他是在谈论中国的“士”这个阶层的问题，但“士绅”也不过是“士”的转化形式而已。恰如其所说：

士向来是中国最高的阶级，因为他是帮着帝王从事政治活动的。士是中国的贵族，但是因为他是无产的贵族，所以是极危险的阶级。但是一方面因为他们所住的地方是物质文明极不发达的中国，所有的人大概都是一般的困穷，用不着物质的奢侈的炫耀，又一方面我们古代的圣贤所垂示的告诫，所奖励的美德又都是节俭廉洁一类的行为，所以以先无产阶级的士还是政治组织上的中坚，他们在政治上的功劳也不为小的。他们虽然赶不上柏拉图理想的“哲学家的治者”那样的舍己奉公，他们在中国社会总算是一种高尚的阶级。一旦物质文明侵入中国，古圣先贤的经典逐渐失了束缚人心的势力，这个士的阶级就变成最危险的分子。世上有许多人谈起共产主义与无政府主义就色变的，但是他们不知道如果将政权交给这士的阶级或者让他参与，那个危险要比共产主义与无政府主义还要厉害的多。因为无论是共产主义还是无政府主义到底还是有组织的，还是一律施行的。至于士的阶级当权的时候，他们劫夺人民的产业，——但是专肥了他们自己，他们自己实在是无政府，——但是强迫人民承认他们是有政府。士的阶级不能独立生活，是要靠着人吃饭的。他们不能像农人那样耐劳的工作，他们只靠着他们的文笔，口舌与诡诈的手段为寄生的生活。他们现在既然肯做“猪仔”肯做军阀的奴隶，将来也就肯去做外国的奴隶。因为这样做奴隶是他们唯一的生存——并且有时是致富——的方法。但是我们学校里还不断的造士的阶级呢！

[10]

我想即使在今天，也许重复费先生的那句话还是有必要的，那就是：“传统的中国并未消逝。”在这里，也许我更想强调的是，传统并非单单是浮现在表面上的东西，因而就不单单是衣着饮食之类，而是潜在于日常生活中的社会结构，这种结构并非一朝一夕就能够养成，因而要瓦解它，也并非像画画写字那样一蹴而就。

大凡谈论中国社会，大概不能不提及中国的农民；而谈论农民，当然也就离不开谈论把这些农民组织起来的乡村精英。过去称这些精英人物为“缙绅”、“老爷”、“东家”之类。中国曾经有一个时期，国家试图构建起一种追求人人平等的理想国，但终究因为没有实际的效率而宣告失败。随之而来的就是鼓励精英分子发挥作用的社会发展政策，着实使得生产力发生了巨变，精英与平民开始分出高低上下，既有的农民—士绅—国家的结构模型再一次得到凸显。农民在分配到自己名下的土地上耕作，通过村干部向国家交纳税款。这些村干部一方面不属于是国家的正式干部，另一方面也很少有被转变成为国家正式干部的机会。这些人应该是扮演着传统中国社会中士绅的角色，一方面以自己积累的财富以及一部分从农民的劳作中获取的租金来供养自己相对悠闲的生活，另一方面因为土生土长的缘故，又由于亲属关系的纽带，而使得他们有意对农民自身的利益给予地方性的保护。在这个意义上，国家的政策在任何时候都不会原封不动地被接受，甚至有时政策到了下面只能变成是一纸空文。^[11]村干部作为乡土精英的这种过滤屏障作用是不能够不去考虑的。

农业社会不同于部落社会的一个最大特点就是，前者是一家一户依附于一块有限面积的土地上进行精耕细作，而后者则是分散于大片土地上依靠相互合作的狩猎和采集来维持生活。依附于土地以及散布于山林，这显然构成了两种不同的生活方式。大略说来，前者是个体主义的，而后者则是团体主义的。对于前者，大概不需要太大范围的合作，单单依靠自己的劳作便能够实现衣食无忧。孟子描述过的那种“老死不相往来”的农民社会大概都应该属于这个范围。因而从本性上讲，这是一个不需要组织的自由散漫的社会。古代文字中，常常将这些人说成是“野人”，这个词并不带有后来附加上去的含有种族主义的那种负面含义，而是在真实地描述这个社会里一般性的特征，这种特征是相对于城市以及皇族的“文”而界定的。所谓的文野之别，很大一部分含义说的是不大劳作的统治者与天天在泥土里刨食的农民之间的区分。这种区分或者说结构关系在中国社会也许是最为基本的，也就是费先生在那篇文字中所说的农民与士绅的关系。

但是要维系这样一种文和野的区分，一种意识形态的建构显然是不可或缺的，这就是借用一种家族主义的意识形态来压制个体主义的天性。不过这种建构显然获得了相当大的成功，从汉代独尊儒术以后，这种意识形态便牢固地建立起来并能够持久地存在。在这种意识形态之下，儒家文化的再生产变成士绅阶层过着悠闲生活的合法性基础。他们一般通过有一段时间充任国家的官僚所获得的俸禄来购置田地，等到退职还乡，便依靠地租来维持一种不劳而获的悠闲生活。明清史料中，许多官宦多以在任置办田地、终老衣锦还乡为荣。他们在日常杂务之外，最乐于做的事情就是吟诗、作赋、写文章，这些活动都是农民自己不做来的，不过他们会鼓励自己的子女用心于此，如有一天，他们中的某位子弟登科高就，自然也就成为那个悠闲阶层中的一员，不用再去土里刨

食地劳作了。因而传统农家的读书子弟，多不用下地种田，并被认为这是理所当然，甚至一丁点的力气活也不用自己劳神，由旁人代为料理，唯恐笨重的体力会玷污了圣洁的脑力。在这种文化中，劳动被看成是等而下之人才干的事情。我的祖母就曾经对我回忆说，她自己是浙江乡下的童养媳，而我的六祖父是一位读书人，每次从乡下进城读书，书和必要的用具多由我祖母用担子挑着送进城里。当然这种情况已经有了改变，不过显然不是结构上的改变，而是形式的改变。农民有了一些钱总会希望把子女送出去学习，进入好的学校，受到良好的教育，最终还是希望以此换得一个悠闲阶层一员的身份。最近听朋友们讲，北京、上海这样的大都市都有许许多多陪孩子读书的母亲，她们要么是单身一人，要么是下岗失业，她们全部的希望都寄托在城市里读大学的孩子身上，母以子荣，希望一旦孩子毕业找到一份理想的工作脱离农村或小城市，自己的人生价值也就能因此得到体现。

在这种社会结构中，人员显然是保持流动的。不论哪个时代，都有一些农民改头换面，成为不用自己下地劳动、专营儒家正统或者今天的现代科技的士绅或社会精英。^[12]这种结构显然又是极为稳定的，因为它为所有个体主义的不满提供了一个社会宣泄的孔道，借助这一孔道，作为个体的农民将不满转化成为一种渴望，并将这种渴望在他们子女一辈的身上传递式地得到实现。以前有一个误解，认为“不孝有三，无后为大”，因而没有生育子嗣，或许就是一个有家庭的人最大的不幸了，但实际的情况恰恰可能是有许多人并无子嗣，但这些人一样可以在村子里有威信，遗憾虽有，但并没有觉得对不起祖先。他们应付这种教化的办法显然有许多，比如收养、过继之类。^[13]对他们而言，最为沉重的心理负担莫过于子女读书不成，不仅白花了银子，而且更重要的是，他们自己希望后代能够离开土地的渴望也因此而破灭了。在这个意义上，所有的社会组织都会被调动起来以服务于这样一种被广泛接受的意识形态。

另一方面，悠闲的士绅阶层如果想维护其依靠地租不劳而获的悠闲生活，必须要依靠一种联合，没有这种联合，他的生活便没有了保障。以前学术界总以为，中国农民是家族主义的，每个人生来就融入到一个家族组织中。现在看来，这种家族主义，显然是一种由社会精英来操纵的意识形态建构，它不是建立在生物血缘的基础上，而是建立在文化意识形态基础上。最近有些学者开始反省中国的亲属制度，认为这是一种费孝通先生所说的社会组织，而不单单是一种血亲和姻亲的联系，因而，许多宗族中姓氏根本不同也就容易被人理解了。^[14]它被发明出来并得到日积月累的实践，所要达到的目的仅仅在于维持这个中间层次人员的生存。

而且“族”、“家族”以及“宗族”之类的社会组织，其根本的功能不是单一地把同姓或者把同一地区的人口组织起来，而是仅仅在于维持一个族自身的优越地位。而维持这种优越地位的根本在于有历史学家何炳棣所说的“杰出的新血”，也就是族中要有新的杰出人物成为新的士大夫，而整个家族的意识形态也会积极地鼓励这方面杰出人物的涌现，即何氏家族中的前辈所用心总结出来的法则：

越是自己本房或本支经济或文化条件较好，越是本人读书上进，越易受到族内的重视与资助。族的目的在制造“成功者”，在这点上传统与现代家族政策上并无二致。^[15]

或许我们今天觉得，这个中间阶层实在可恶，因为他们不劳而获或者一劳永逸，希望铲除这些人——结果会是一怎么样呢？费先生写文章的年代恰好给他思考这种状况提供了一个绝好的机会。当时，也就是上世纪40年代，中西方的接触不仅仅是差异性文化之间的碰撞，而且还是现代性的工业化与传统社会生产方式之间的碰撞，碰撞的结果是，中国的乡村社会受到了侵蚀，洋货取代土货，曾经存在的乡绅与农民之间的结构性平衡关系一夜之间被打破，许多士绅的后代进城以后也大多不愿再返回到自己的乡村中去，乡村与国家之间成为面对面的交往而没有原来的以乡绅阶层为主体的缓冲地带。费先生曾经用水土流失来作类似的比喻，因为大洪水或者人为的原因，土壤中的营养成分被冲刷到河流里，顺水漂流融入大海里，结果造成陆地上水土流失，土壤贫瘠。在费先生看来，乡村社会在面对现代文明时，情况也是一样的。当一些悠闲的文化精英渐渐离开一个养育他的社会环境时，一方面他自己失去了自我发育的土壤，另一方面，原来的社会也因此失去了既有的平衡，一种和谐的文化生态也就被打破了。

四

中国自古相沿的政治结构从来都是皇权与绅权共存，同时又相互抑制，此消彼涨。占据皇权的人为数极少，说得狭义一点，为皇帝一个人所独占，说得广义一点，是为皇族所共享。他们大多是因为把自己神圣化为“真龙天子”而获得理所当然的合法性，并支配着皇族血统以外的其他人。他们很大程度上是一种象征意义的存在，他们不是依靠辛勤的工作来获得其他人的认可，而是依靠经营象征性的符号来实现，比如古代帝王的封禅以及祭祀祖庙的活动。单单一个封号、一处题诗甚至一次求雨仪式，就可以让一方的百姓得到安抚，这就是位居皇位的人每天最需要做的事情。

皇帝以下的臣民就不同了。整日在旷野里劳作的是那些拿不到功名的普通百姓，他们依赖土地并从土地里收获粮食，并拿出一部分的收入作为税赋上缴国家，用以养活皇帝和他的大臣们。他们的名称曾经被称作“野”、“氓”和“庶”，现在则被称为“农民”。在只具有象征意义的皇帝和作为实际生产者的农民之间就是为皇帝办事情的各类各级的官员们，这是一个很特殊的阶层，在位的时候是国家的官员，不在位的时候就衣锦还乡，成为地方上的乡绅。^[16]这些在位与不在位的官员构成了一个特殊的利益集团，他们因为是国家的实际办事人员，办事的效率全由他们自己来操纵，甚至皇权也约束不了他们，反过来他们可以通过对天命的不断强调而限制皇权的蔓延。在这个君臣共治的结构中，表面上做大臣的官员要绝对服从于皇帝的命令，但实际上这些官员不仅仅是行政体系中的一员，而且还是正统意识形态的界说者、教化者。他们常常会以不合正统的礼法和道德为由对皇帝的发号施令置之不理，并以此来约束

皇权的过度膨胀。对此政治结构，历史学家许倬云有清晰的概括：

中国的政治权力，因其注重德行而导致中国官僚组织发展为具有独特势力的政治因子，足可与君权相抗衡。政治权力遂常在强制型与名分型二端之间动荡。君权每欲逞威肆志，儒家化的臣僚则每以德行约束，以名分之故自制不过分压倒君权。表演于实际政治斗争上，则为君主挟其恩悻、外戚与宦寺构成轩轻的一端，内外臣工则依仗行政权力构成轩轻的另一端。^[17]

中国的政治多与这两个集团的相互制衡有关联。皇帝马上得天下，真正的治理还要依靠那些饱读儒家经典的士大夫。因此之故，皇帝往往被架空，仅仅成为一个国家一体的象征，皇帝再有能力，再有抱负，离开这些掌管着实际权力的士大夫，或者得不到他们的承认，最终也只能落个一事无成的下场。聪明的皇帝多会采取无为而治的省事做法，任由士大夫去玩弄权力。权力玩弄久了，派系的关系网因资源争夺而出现混乱的秩序，没有办法摆平的时候，皇帝会借助天子这一所有派系都认可的唯一权威，找出几个士大夫，拉出去斩首，以儆效尤。结果，乱子大多会得到摆平，皇帝还可以因此不费吹灰之力就得到一大笔的没收资产充入国库。难怪清代嘉庆年间民间有“和绅一倒，嘉庆吃饱”的谚语，擅权营私、富可敌国的官员，在一定意义上可以说是皇帝私存的银行，需要的时候把这座银行的锁头砸碎了，财富也就流进了皇帝的腰包。

在此意义上，中国的政治又是一种治乱的模式，一乱一治恰恰是这个社会得以稳固存在并有一定发展的根基。皇帝和士大夫之间是这样一种共同治理的关系，作为统治者，他们和在野的非正式的民间社会亦有此制约关系存在，不会任由民间社会自由发展，干涉是经常性的。这种干涉可以采取多种形式，但不外武力和教化这两端。民间总试图秉持乡野散漫的作风，不肯与这种干涉主义相合作，任其宰割，结果抵制也就随处可见。抵制的方式当然也因应着压制而有多种形式，但亦不外揭竿而起的直接反抗到隐秘的地下活动这两端。

皇权得到认可依靠的是士大夫阶层以道德正统来加以衡量的论证，但是具有合法性基础的皇权往往又可以任由其意愿地对士大夫阶层进行宰割，所谓“伴君如伴虎”，说不定什么时候虎就要吃人，做官员的也就缺少了一份安全感。皇帝和士大夫的生存空间常常被他们自己界定为文化并与城市生活联系在一起，而城市以外的乡村就是蛮野的地方，大部分没有读过书或者没有通过国家科举考试的人都住在这样的没有清晰轮廓、漫无边际的旷野之中。但是，这两个领域又是紧密地联系在一起，连接的纽带就是通过了国家某一级科举考试但是因为种种原因不能够入朝为官的乡绅，他们是文明与教化的代言人。如果说西方的社区共同体是依靠牧师的布道而统一在一起，那么在中国的乡村，这些乡绅就承担起教化子民的布道牧师的角色了。

五

中国的士绅阶层看起来是一体的，但实际却分化得很厉害。作为官

僚的政治精英是一种人，而作为在乡的地主则是另外一种人，这中间还有等级上的差异，尽管他们中间也有不同形式的联系。官员们退休也会回到地方上去，成为跟在乡地主一样的地方精英。^[18]差不多是在19世纪，英国的外交官和传教士们开始用“中国士绅”（the Chinese gentry）来描述这些从衙门退下来到地方上以及通过科举考试留在地方上的有着潜在政治影响力的精英，把他们看作是一个社会群体。^[19]

在这些英国人的眼中，那些地方精英跟英国的没有世袭的爵位但又并非平民的在乡地主阶级有着可以类比之处。尽管他们这样来作类比，但是欧洲人实际上“发现”，中国这些所谓士绅常常是顽固不化、极为保守，对于外在的世界更是充耳不闻，并且刚愎自用。这些认识都建立在这些士绅阶层对于所有门户开放政策一味的反对上面。^[20]费孝通先生对此一群体也有过这样的概括：

在中国传统社会，知识阶级是一个没有技术知识的阶级，他们独占以历史的智慧为基础的权威，在文字上下工夫，在艺技上求表现。中国文字非常不适合表达科学或技术知识。这表明在传统社会结构中，既得利益的阶级的兴趣不在提高生产，而在于巩固既得的特权。他们主要的任务是为建立传统行为的指导而维持已有的规范。一个眼里只有人与人关系的人不免是保守的，因为人与人的关系的最终结果常常是互相协调。调整的均衡只能建立在人与自然稳定不变的关系基础上。另一方面，单从技术的角度出发，人类对自然的控制几乎没有限制。在强调技术进步的同时，人对自然的控制也随之不断改变，变得更为有效。然而技术的变化也许会导致人与人之间的冲突。中国的知识分子从人和人的关系看待世界，由于缺乏技术知识，他们就不会赞赏技术进步，看不出任何意图改变人与人关系的理由来。^[21]

包括文人在内的整个知识分子阶层都可以归纳到这士绅的概念下面，并笼统地把他们归纳为没有等差的一群人。这种印象自19世纪中叶即已经开始形成，并一直在影响着后来的人对于这一阶层的人的认知。过去的秀才、举人和士大夫，现在的大学生、博士和国家干部都应该属于这样的范畴之列了。这样推算上去，可以一直推算到汉代建立之初的公元前206年。这样，中国作为一个士绅的社会，至少也存在有2200多年了。^[22]作为一个群体，士绅阶层是脱离手工劳动和技术知识的，对于专业化的训练嗤之以鼻，顽固地坚持着儒家伦理的价值观念，并以此来稳固地保护着他们在社会中的优越地位，这也使得他们成为技术现代化以及经济发展的最大的阻碍力量。^[23]

但是不能不意识到，这士绅阶层既是顽固的儒家伦理的维护者，同时也是鼓动民众、恢复社会正统秩序的发动者。^[24]在西方人的眼中，他们顽固不化，但是换一个角度，他们又是那样地坚不可摧，任何强烈的外来力量都无法使他们退缩下来成为其他意识形态的俘虏。

六

今天这种状况是否得到改善了呢？我想一个不用争辩的事实就是，

改革已经让所有的人受益，农民也不例外。他们开始自由自在地在自己承包的土地上从事劳作，随着工业化在乡村的开展，农民的副业收入也大幅度地增加了，新的富裕户逐渐在乡村社区中承担起组织农民的责任，并能够在必要的时候为本乡本土的乡亲谋求公共利益上的保护。但不可否认，这些保护者已经不再是在野的士绅，或者说在野的士绅不再退回到乡村里，不再承担地方组织的领导者的重任。乡村社会的政治牢牢地把持在各种各样的财富精英以及善于权术的政治精英手中，他们不再像既有的以礼治进行教化的士绅那样只要衣食无忧，便不思进取，终日沉浸于琴棋书画之类的传统文化活动。

这些新的精英大多有类似西方工业化资本家的发家史，从一穷二白到腰缠万贯，都是用他们自己夜以继日的辛苦以及瞄准时机的大干而逐渐累积起来的。他们大多会因此而参与村落选举，把村民不喜欢的领导选下去而由他们来继任，结果他们上任后，多半又会重蹈覆辙，玩弄财富和政治于鼓掌之间，老百姓照样得不到实惠，久了一样会遭到乡里乡亲们的反对。我自己曾经在白洋淀附近调查过一个水区村落中精英人物的成长历史。在那个我称之为兆村的水中央的村子中，活跃着一些靠塑料袋加工而发家致富的村落精英。他们有了大笔的金钱之后，最乐于从事的就是乡村的公共事业，比如修路以及捐助贫困户，由此而聚拢人心，并逐渐通过选举的正常途径掌控村庄事务。当他们一旦掌握住这村落的领导权之后，往往都会以此来换取更大的经济利益，比如用极为低廉的价格承包到大片的芦苇田，一定就是30年以上的承包期限，再之后是把自己的厂房从狭小的村中移到自己的承包地上，盖上永久性的厂房。这样的精英人物已经不再是费先生所界定的上通下达的地方士绅，而是转变成为了以国家身份为庇护的专门攫取村民集体利益的地方一霸，而这样的精英即使是在今天也是很难立足脚跟的。最近，我听一起在那里调查的一位朋友说，由这些新的精英所组成的村落领导集体已经被全部撤消职务，这样的后果显然也是在预料之中的。

如果说过去的士绅的存在有其文化的合法性，今天乡村精英存在的合法性就不是文化的而是经济的。去农村访问，农民会对你说，某某人当上了村长，就是因为他有钱。我想，农民在讲这些话时，更多的意思并非是反对有钱人的存在，有哪一个农民不想自己有一天也能够腰缠万贯呢？他们暗下所要表达的实际是，这些有钱的掌权人并不能够真正地为农民争取利益，而是想着如何将政治权力转化成为商业资本，进而再把商业资本兑换成为更大的政治权力，如我在白洋淀所遇到的那些精英们一样。他们从来也不悠闲，从来也不会以孔孟之道训导乡邻，他们更多的心思都是用在如何让自己的财富越滚越大。传统士绅的悠闲生活，对他们而言已经变得毫无吸引力，反倒是终日埋头赚钱的资本家多是他们效仿和学习的榜样。

如果说上世纪40年代或者更早，中国乡村的士绅阶层已经开始受到侵蚀而瓦解的话，那么经过这60多年的发展，士绅阶层已经消失殆尽，这不是社会精英的缺失，而是一种士绅文化的衰落，因为生长这种文化的土壤已经干枯而不复存在了。随之，由这种文化孕育出来的一种农民与士绅以及国家之间的稳定而平和的结构秩序也在渐渐地逝去。一方

面，农民并不能够安心地在自己的土地上劳作，因为当他们发现，辛苦一年，卖出的粮食或者收获的果实不仅不能够抵消自己全部的投入，甚至于连吃饭都成问题的时候，他们劳动的热情自然就会大为降低；另一方面，当他们发现，自己并没有足够的钱来供养孩子读书，进而使他们离开乡村、摆脱土地的束缚的时候，他们就只能以绝望来面对自己的生活世界了。

一句话，结构可以带来一种秩序，这种秩序依靠一种意识形态而得到稳固，并经过长久时间的运作实施而使其极为稳固。这种稳固也很容易因为抽掉一些最为核心的要素而变得异常不稳定。这种不稳定是秩序的不稳定，也必然是社会的不稳定。

这种警钟是值得敲响的，在今天的社会里，我们应该对作为“士”的知识分子的社会责任有些深刻的思考。如果说以前知识分子的齐家、治国、平天下的使命感转化成了今天的仅仅是用知识去生产金钱的作为，那也许就真的是我们文化的悲哀了！不过，这或许只是我的误读或误解，当然也可以说是我的胡思乱想。

七

本书由于许多原因未能在费先生九十华诞的时候出版，一拖就想着会在先生九十大寿的时候奉献给他老人家。但是在我即将校对完成的那天早晨，也就是2005年4月25日传来噩耗，说费先生已经于前一天晚上10点38分离开了这个他热爱并且作出杰出贡献的社会，悲痛之余我写下这样一个帖子转发给我的朋友们：

尊敬的费孝通教授于零五年四月二十四日晚不幸病逝，享年九十五岁。作为中国社会学的先驱者以及新时代社会学的开拓者和引路人，我们不仅为其对于中国社会的敏锐的思考所折服，而且也为其宽容博大的胸怀所感染。哀痛之极，泣不成声，回首往事，历历在目。愿天下受其学养恩惠者，目送先生魂归故里。

费先生生前曾经把自己怀念故人的文集起名为《逝者如斯》，人去如流水，能够留下来的仅仅是先生的音容笑貌以及那顺畅并透漏着刚毅的文字。就人而言，逝者如斯，就事而言，如斯逝者。先生过去了，先生笔下的中国社会也在发生着深层次的改变，这改变的结果，很少有人能够知晓，因而探索也仅仅刚刚开始。但是先生分析中国社会的方法依然有效，不会随之而消逝，薪火相传，延续这样的方法，传承并光大先生治学的理路，这也许是学生辈对老师辈最为深切怀念的最为有意义的表达。

最后，应该感谢我的挚友和同乡蔡国先先生在初稿翻译中所做的一些协助性翻译和查找注释的工作。另外就注释的一些问题我曾经求教于刘援朝、麻国庆、孙珉、赵丙祥等诸位先生，在此一并表示感谢。

本书中文版2009年在北京三联书店首次出版后，2010年恰逢费先生百年诞辰，经由费孝通先生的家人推荐，又荣幸地被外研社选为用以

纪念费孝通百年诞辰的英汉对照版的中文译本，在此向费宗惠女士和张荣华先生表示由衷的感谢。在对原有版本进行再次审校的过程中，责任编辑易璐女士做了大量细致的工作，我的研究生齐钊同学在中间承担了大量的联络工作，并对出版社提出的各种疑问和我一起逐章作了再一次的校订和查漏补缺的工作，在这里对他们的帮助表示由衷的感谢。是为记。

[1] 参阅：Hsiao-Tung Fei, 1946, "Peasantry and Gentry: An Interpretation of Chinese Social Structure and Its Changes," *American Journal of Sociology*, LII, No. 1 (July), 1-17.

[2] 参阅：费孝通，《乡土重建》，上海：观察社，1948年；费孝通，《乡土中国》，上海：观察社，1948年；吴晗、费孝通，《皇权与绅权》，天津：天津人民出版社，1988年。

[3] 汉语文献中很少有雷德菲尔德跟费孝通关系的描述，最近读到一位美国人类学家弗雷德·艾甘（Fred Eggan）在总结上世纪战后到70年代以前的国际人类学发展时，对于中国只顺带提到两句话，一句是有关马林诺夫斯基和拉德克里夫—布朗对于中国社会与文化人类学的早期影响，另一句就是有关雷德菲尔德与费孝通之间学术联系的描述。他说战后雷氏与费孝通有学术上的合作，他们试图要从人类学的视角来研究中国文明，研究的经费是由福特基金会提供，但是后来由于众所周知的原因而中断了（参阅：Fred Eggan, 1979, "Developments in Social and Cultural Anthropology: A Western Perspective." In Stein Rokkan, ed., 1979, *A Quarter Century of International Social Science: Papers and Reports on Developments 1952-1977*, New Delhi: Concept Publishing Company, 29-47, 34.）。这样看来，雷氏为费先生的这本小册子序就是顺理成章的了，这本小册子应该是他们合作研究的一部分成果。但是对于艾甘本人，笔者所知无几，属于孤证，有待进一步的研究。

[4] 费孝通先生自己的记述是这样的：“……其中一部分文章，曾于1949年在北平口授雷德菲尔德夫人，她回国后编成*China's Gentry*一书，1952年在美国芝加哥大学出版社出版。”（参阅：费孝通，“学术简述”，载于《费孝通选集》，1—8，天津：天津人民出版社，1988年，第5页。）实际出版的时间是1953年，雷德菲尔德的导言写于1952年5月。

[5] 前一本是直接来自英文翻译而来：费孝通，《江村经济——中国农民的生活》（戴可景译），南京：江苏人民出版社，1986年。后一本不是直接来自英文翻译过来，但是却是英文写作的基础，也就是两本出版的（《禄村农田》、《易村手工业》）和一本没有出版的（《玉村农业和商业》）调查报告在半个世纪以后的合刊：费孝通，《云南三村》，天津：天津人民出版社，1990年。

[6] Fei Hsiao-tung, 1953, *China's Gentry: Essays in Rural-Urban Relations*, rev., ed., Margaret Park Redfield ed., Chicago: Chicago University Press, p. 80.

[7] 费孝通，《乡土重建》，上海：观察社，1948年，第47页。

[19] “绅士”、“士绅”、“乡绅”都曾经用来指中国社会结构中皇权以下的统治阶层，但是不同的学者在使用上的意义有所不同。关于这方面的文献回顾可以参阅：徐茂明，《江南士绅与江南社会（1368—1911年）》，北京：商务印书馆，2004年，第13—23页。

[20] Joseph W. Esherick & Mary Backus Rankin, 1990, ed., *Chinese Local Elites Patterns of Dominance*, The University of California Press, p. 2.

[21] Fei Hsiao-tung, 1953, *China's Gentry: Essays in Rural-Urban Relations*, Margaret Park Redfield ed., Chicago: The University of Chicago Press, p. 74.

[22] Joseph W. Esherick & Mary Backus Rankin, 1990, ed., *Chinese Local Elites Patterns of Dominance*, p. 3.

[23] 同上。

[24] 史景迁最近的研究从另外一个侧面说明了中华帝国时代的文人是如何受到有所作为的皇权的严密的监视的。那些文人在雍正这样的统治者眼中就是大逆不道的反叛者和皇权的觊觎者。参阅：史景迁，《皇帝与秀才——皇权游戏中的文人悲剧》，邱辛晔译，上海：上海远东出版社，2005年。

费孝通用富含志情的笔调，在《江村经济》的结尾写道：“我们只有齐心协力，以泪目和，展望未来，才不辜负我们所承受的这一切牺牲和苦难。”

“博雅双语名家名作”出版说明

1840年鸦片战争以降，在深重的民族危机面前，中华民族精英“放眼世界”，向世界寻求古老中国走向现代、走向世界的灵丹妙药，涌现出一大批中国主题的经典著述。我们今天阅读这些中文著述的时候，仍然深为字里行间所蕴藏的缜密的考据、深刻的学理、世界的视野和济世的情怀所感动，但往往会忽略：这些著述最初是用英文写就，我们耳熟能详的中文文本是英文文本的译本，这些著述原初的英文文本在海外学术界和文化界也享有着崇高的声誉。

比如，林语堂的《吾国与吾民》（*My Country and My People*）以幽默风趣的笔调和睿智流畅的语言，将中国人的道德精神、生活情趣和中国社会文化的方方面面娓娓道来，在美国引起巨大反响——林语堂也以其中国主题系列作品赢得世界文坛的尊重，并获得诺贝尔文学奖的提名；再比如，梁思成在抗战的烽火中以英文写就《图像中国建筑史》文稿，经其挚友费慰梅女士（Wilma C. Fairbank）等人的奔走和努力，英文版《图像中国建筑史》（*A Pictorial History of Chinese Architecture*）于1984年由麻省理工学院出版社出版，该出版社也因此获得美国出版联合会颁发的“专业暨学术书籍金奖”；又比如，1939年，费孝通在伦敦政治经济学院的博士论文以*Peasant Life in China—A Field Study of Country Life in the Yangtze Valley*为名在英国劳特利奇书局（Routledge）出版，后以《江村经济》作为中译本书名——《江村经济》使得靠桑蚕为生的“开弦弓村”获得了世界性的声誉，成为国际社会学界研究中国农村的首选之地。

此外，一些中国主题的经典人文社科作品经海外汉学家和中国学者的如椽译笔，在英语世界也深受读者喜爱。比如，艾恺（Guy S. Alitto）将他1980年用中文访问梁漱溟的《这个世界会好吗——梁漱溟晚年口述》一书译成英文（*Has Man a Future? —Dialogues with the Last Confucian*），备受海内外读者关注；此类作品还有徐中约英译的梁启超著作《清代学术概论》、狄百瑞（W. T. de Bary）英译的黄宗羲著作《明夷待访录》，等等。

有鉴于此，外研社人文社科出版分社推出“博雅双语名家名作”系列。

博雅，乃是该系列的出版立意。博雅教育（Liberal Education）早在古希腊时代就得以提倡，旨在培养具有广博知识和优雅气质的人，提高人文素质，培养健康人格，中国儒家六艺“礼、乐、射、御、书、数”亦有此功用。

双语，乃是该系列的出版形式。英汉双语对照的形式，既同时满足了英语学习者和汉语学习者通过阅读中国主题博雅读物提高英语和汉语

能力的需求，又以中英双语思维、构架和写作的形式予后世学人以启迪——维特根斯坦有云：“语言的边界，乃是世界的边界”，诚哉斯言。

名家，乃是该系列的作者群体。涵盖文学、史学、哲学、政治学、经济学、考古学、人类学、建筑学等领域，皆海内外名家一时之选。

名作，乃是该系列的入选标准。系列中的各部作品都是经过时间的积淀、市场的检验和读者的鉴别而呈现的经典，正如卡尔维诺对“经典”的定义：经典并非你正在读的书，而是你正在重读的书。

胡适在《新思潮的意义》（1919年12月1日，《新青年》第7卷第1号）一文中提出了“研究问题、输入学理、整理国故、再造文明”的范式。秉着“记载人类文明、沟通世界文化”的出版理念，我们推出“博雅双语名家名作”系列，既希望能够在中国人创作的和以中国为主题的博雅英文文献领域“整理国故”，亦希望在和平发展、改革开放的新时代为“再造文明”、为“向世界说明中国”聊尽绵薄之力。

人文社科出版分社

著者前言

本书是1939年英国Routledge书局出版我所写*Peasant Life in China*一书的中译本，原书扉页有《江村经济》中文书名，今译本即沿用此名。这书的翻译工作原应由我自己动笔，但在该书有条件翻译时，我一直忙于其它事务，无暇及此。今由戴可景同志译出，无任感激。应译者要求，我在书前说一说这书写作和翻译的经过。

这本书的写成可说是并非出于著者有意栽培的结果，而是由于一连串的客观的偶然因素促成的。话要从1935年我从清华大学研究院毕业时说起。我毕业后由该校社会学及人类学系推荐，取得该校公费留学资格。按惯例应于该年暑假出国，但出于指导我研究工作的导师史禄国教授的主张，在出国前应到少数民族地区实地调查一年，因偕前妻王同惠赴广西大瑶山。该年冬，在瑶山里迷路失事，妻亡我伤。经医治后，我于翌年暑期返乡休息，准备出国。在此期间，我接受家姊费达生的建议，去吴江县庙港乡开弦弓村参观访问，她在该村帮助农民建立生丝精制运销合作社。我被这个合作社所吸引，在该村进行了一个多月的调查，在出国前夕才离开该村。这次调查并不是有计划的，是出于受到了当时社会新事物的启迪而产生的自发行动。

我去英国，乘坐一艘意大利的邮轮“白公爵”，从上海到威尼斯航程要两个多星期。我在船上无事，趁我记忆犹新，把开弦弓调查的资料整理成篇，并为该村提了个学名叫“江村”。到了英国，进入伦敦经济学院人类学系。最初见到该系Reader^[1] 弗思(Raymond Firth)博士，他负责指导我选择论文题目。我原来打算以“花蓝瑶社会组织”作底子编写论文。随后我谈到曾在江村进行过调查，他看了我已经整理出来的材料，主张编写“江村经济”这篇论文。不久该系教授马林诺夫斯基(B. Malinowski)从美国讲学返英，我向他汇报了江村调查经过和内容，他决定直接指导我编写这篇论文的工作。该论文中主要的几章都在他主持的有名的“今天的人类学”讨论班上宣读、讨论、修改、重写过的。1938年春季，我申请论文答辩，通过后，由伦敦大学授予我博士学位。博士证明书上所标明的论文题目是：“开弦弓，一个中国农村的经济生活”。

论文通过的那天晚上，由导师马林诺夫斯基把这篇论文介绍给Routledge书局出版。书局编辑阅后建议书名改为《中国农民的生活》。我看过该书清样后，离英返国，已是1938年的初秋。我记得，由于在轮船上得到广州沦陷的信息，所以临时决定在西贡登陆，直奔云南昆明。到了云南，不久就开始我的内地农村调查。

该书是1939年出版的，其时欧洲已发生战事。全球战乱连年，我已把这书置之脑后。我仿佛记得直到战后我回到清华园，才接到书店寄给我的这本书。当时届解放前夕，时局紧张，我哪里有闲情来想到翻译此

书。解放后，我参加民族调查工作，此书的译事提不到日程上来。1956年英伦老同学格迪斯(W. R. Geddes)博士，澳大利亚悉尼大学教授，参加该国文化代表团访华，得到周恩来总理的同意，访问了江村。他引起了我重访江村的兴趣。翌年成行，在调查工作进行过程中，有事返京，适逢“反右”斗争。在《新观察》发表的《重访江村》连载报告尚未结束，我已遭殃及，被错划右派。在被批判中，即使这本书并未译成中文发行，它还是作为一项“流毒深远”的“罪证”。

“文革”后期，我国对外开放，不断有西方学者来华访问，从他们的口上，我才知道，该书已重印了三次。在许多大学的人类学课程中把它列为必读参考书。还有不少现已成名的人类学者告诉我，这本书启发了他们研究人类学和研究中国社会的兴趣。我当时不免担心，深恐其“流毒”太广，增加我的“罪行”。这种历史条件排除了翻译该书的可能性。

这一页历史终于翻过去了。1981年我得到老师弗思的来信，他告诉我：英国皇家人类学会将在1981年授我赫胥黎奖章。这是这门学科中最高的荣誉。他并说《中国农民的生活》又重印发行，建议我在接受奖章时要宣读的论文，最好是叙述江村在四十多年中的变化。我因此又到江村进行了短期的访问，写了《三访江村》这篇文章。

从伦敦回国，我又回江村继续我的农村调查。1982年就从江村作为起点“更上一层楼”开始研究作为农村政治、经济、文化中心的小城镇。从吴江县各镇入手，逐步扩大研究范围，包括苏州、无锡、常州、南通四个市。1984年又扩大到苏北及南京、镇江两市。小城镇的研究，从我个人来说是江村研究的继续。在这段工作中，我已感到有需要把《江村经济》翻译出来给一起调查的同仁们作参考之用，而且江苏人民出版社已约定出版这个译本。但是我自己这几年恢复了学术活动，任务较重，实在抽不出时间和精力来做这项翻译工作，所以只能委托戴可景同志代劳。她在1984年就已经完成译稿，又请潘乃穆同志校阅过一遍。她把译稿交给了我，搁在我书架上，一搁几乎有一年。我应该对译者表示歉意。

屈指一算，离我最初在江村调查时，明年是整整半个世纪了。我自幸在今生能看到这项偶然形成的研究成果取得了国际上的承认，又在国内恢复了名誉。另一方面，经过这将近五十年的阅历，自己对这本早年的著作，总觉得有许多不能惬意之处。作为我个人在人生道路上的一个脚印，自当珍惜；作为国家社会历史的一些历史记录，固然也有它存在的价值；但是我既然还活着，而且尚能工作，自觉有责任再把江村在这半个世纪里的变化写下来，作这本书的续编，并当尽力把这段时期自身的长进来补足早年的不足。因而，我决定和上海大学社会学系合作进行为期两年的江村再调查，编写一本《江村五十年》。在准备这项研究计划时，我才挤出时间，把译稿重读了一遍，做了些必要的修正后，交付出版。至于它的续编在两年之后是否能出世，目前还是难于预知之事，但是我自己是有决心去完成这个自己给自己规定的任务。

以上是本书中译本诞生的经过，就以此作为前言，写在译本的前面。

1985年4月15日

[1] Reader是英国大学教职体中独有职位，低于教授，高于副教授。

译者说明

为了满足社会学研究工作者和广大读者的需要，我利用业余时间完成了本书的翻译工作。初稿供当时去吴江县调查的研究人员参考。后来，译稿由北京大学社会学系潘乃穆同志帮助校阅，又承蒙费孝通先生亲自过目修改，谨在此向他们表示衷心的感谢。

有关译文中的一些技术问题，说明如下：

一、对度量衡单位未作换算，如mile直接译作英里（1英里 = 1.609公里），bushel译为蒲式耳（1蒲式耳〔英〕 = 36.368升）。

二、修正了原文中的一些数字。农业用田改按该村土地总面积的90%计算，户数改按274户农业户计算，每户按平均四口人计算；这样，对第三章第三节、第七章第五节、第十章第四节以及第十二章第二节中的其他有关数字也作了相应的修改。^[1]

三、附录中关于中国亲属称谓仍用原音符表示，仅译出其解释部分。

此外，我根据费老的意见又将澳大利亚悉尼大学人类学系主任W. R. 格迪斯著的《共产党领导下的中国农民生活》一文附录于后，以供读者参照阅读。^[2]

限于译者水平，译文有不妥之处，望读者指正。

1985年4月

[1] 译者还对第二章第二节、第五章第四节中的数字作了修改。另，编者对译文中太平天国运动（第三章第八节）和宋朝（第六章第五节）的起止年代以及两处关于节气时刻的换算（第九章第二节）作了修改，特此说明。

[2] 因篇幅有限，本书未收入此文。

作者和农村姑娘 The Author and Village Girls

〔1〕 A Bridge 木桥

〔2〕 Houses along the Stream (1) 沿河的房屋 (1)

〔3〕 Houses along the Stream (2) 沿河的房屋 (2)

ACKNOWLEDGEMENTS

I have to thank all those who have encouraged and helped me in my field investigation and in my preparation of this book. Above all, I must acknowledge my indebtedness to the following teachers and friends:

To Professors Wu Wen-tsao and S. M. Shirokogoroff I owe my early training in sociology and ethnology, and encouragement in introducing the intensive field investigation in studying Chinese culture. My sister, whose devotion to the rehabilitation of the livelihood of the villagers has actually inspired me to take up this investigation, had introduced me to the village and financed my work. Later, I was awarded a scholarship by Tsing Hua University, which enabled me to pursue my study in England and, so to speak, "to enter under the door" of Professor B. Malinowski. His intellectual inspiration and paternal affection during the past two years has imposed on me a life-long filial duty—a duty, as I understand, to share his heavy burden in building up a science of man, and in realizing a genuine co-operation among all civilizations.

I must thank Mr. G. F. A. Wint, Dr. and Mrs. Raymond Firth, Dr. M. H. Read, Mr. C. Wrong and Miss M. Wrong for their kindness in reading my manuscript and in correcting my English. I was also assisted in various ways by members of the Seminar in the London School of Economics, especially Mr. P. L. Haksar and L. K. Hsü.

Finally, let me remember my wife, who died for Anthropology in our expedition to the Yao Mountains in 1935. Her solemn sacrifice leaves me no alternative but to follow her always. To her this book is dedicated.

致 谢

我由衷地感谢所有鼓励我并帮助我进行实地调查和撰写此书的人。首先，我必须对以下的老师和朋友表示谢意：

吴文藻教授和史禄国教授是我早年攻读社会学和人类学的老师，他们鼓励我用深入实地调查的方法来研究中国文化。我的姐姐把我介绍给这个村庄并资助我工作；她那为改善农民生计的热忱，确实激励了我从事这项调查研究工作。后来，清华大学授予我一笔奖学金，使我有可能到英国去求学，也就是说，进入了布·马林诺夫斯基教授的“门下”。过去两年来，他对我知识上的启示和亲长般的情谊使我感到对他一生具有承上启下的责任——以我所理解的说，我必须在建立一门研究人的科学以及在使一切文明之间真正合作上分担他那沉重的负担。

我一定要感谢G. F. A. 温特先生、雷蒙德·弗思博士和夫人；感谢M. H. 里德博士、C. 朗先生和M. 朗小姐，感谢他们阅读了我的手稿并润色了我的英文。伦敦经济学院讨论班成员，特别是P. N. 哈克塞先生和许烺光先生也为我提供了各方面的帮助。

最后，请允许我以此书来纪念我的妻子。1935年，我们考察瑶山时，她为人类学献出了生命。她的庄严牺牲使我别无选择地永远跟随着她。谨以此书献给我的妻子。

目录

- PREFACE
- 序
- CHAPTER I INTRODUCTION
- 壹 前言
- CHAPTER II THE FIELD
- 貳 调查区域
 - [1] Delimitation of Field
 - 一、调查区域的界定
 - [2] Geographical Foundation
 - 二、地理状况
 - [3] Economic Background
 - 三、经济背景
 - [4] The Village Site
 - 四、村庄
 - [5] The People
 - 五、村里的人
 - [6] Reasons for Selecting the Field
 - 六、选择这个调查区域的理由
- CHAPTER III THE CHIA
- 叁 家
 - [1] Chia as an Expanded Family
 - 一、家，扩大的家庭
 - [2] Continuity of "Incense and Fire"
 - 二、“香火”绵延
 - [3] Population Control
 - 三、人口控制
 - [4] Parents and Children
 - 四、父母和子女
 - [5] Education
 - 五、教育

PREFACE

I venture to foretell that *Peasant Life in China* by Dr. Hsiao-Tung Fei will be counted as a landmark in the development of anthropological field-work and theory. The book has a number of outstanding merits, each of them marking a new departure. Our attention is here directed not to a small, insignificant tribe, but to the greatest nation in the world. The book is not written by an outsider looking out for exotic impressions in a strange land; it contains observations carried on by a citizen upon his own people. It is the result of work done by a native among natives. If it be true that self-knowledge is the most difficult to gain, then undoubtedly an anthropology of one's own people is the most arduous, but also the most valuable achievement of a field-worker.

The book, moreover, though it takes in the traditional background of Chinese life, does not remain satisfied with the mere reconstruction of the static past. It grapples fully and deliberately with that most elusive and difficult phase of modern life: the transformation of traditional culture under Western impact. The writer is courageous enough to cast away all academic pretence at scientific detachment. Dr. Fei fully realizes that knowledge is indispensable to the right solution of practical difficulties. He sees that science, in rendering real service to mankind, is not degraded. It indeed receives the acid test of its validity. Truth will work, because truth is nothing else but man's adaptation to real facts and forces. Science becomes only prostituted when the scholar is forced, as in some countries of Europe, to adapt his facts and his convictions to the demands of a dictated doctrine.

Dr. Fei as a young Chinese patriot is fully alive, not only to the present tragedy of China, but to the much bigger issues involved in the dilemma of his great Mother-country to Westernize or to perish. And since as an anthropologist he knows how difficult a process is that of readaptation; how this process must be built on the old foundations, and built slowly, gradually, and wisely, he is deeply concerned that all change should be planned, and that the planning be based on the solid foundation of fact and knowledge.

序

我敢于预言费孝通博士的《中国农民的生活》（又名《江村经济》——译注）一书将被认为是人类学实地调查和理论工作发展中的一个里程碑。此书有一些杰出的优点，每一点都标志着一个新的发展。本书让我们注意的并不是一个小小的微不足道的部落，而是世界上一个最伟大的国家。作者并不是一个外来人，在异国的土地上猎奇而写作的；本书的内容包含着一个公民对自己的人民进行观察的结果。这是一个土生土长的人在本乡人民中间进行工作的成果。如果说人贵有自知之明的话，那么，一个民族研究自己民族的人类学当然是最艰巨的，同样，这也是一个实地调查工作者的最珍贵的成就。

此外，此书虽以中国人传统的生活为背景，然而它并不满足于复述静止的过去。它有意识地紧紧抓住现代生活最难以理解的一面，即传统文化在西方影响下的变迁。作者在科学研究中勇于抛弃一切学院式的装腔作势。他充分认识到，要正确地解决实际困难，知识是必不可少的。费博士看到了科学的价值在于真正为人类服务。对此，科学确实经受着严峻的考验。真理能够解决问题，因为真理不是别的而是人对真正的事实和力量的实事求是。当学者被迫以事实和信念去迎合一个权威的教义的需要时，科学便被出卖了。在欧洲某些国家里就有这种情况。

费博士是中国的一个年轻爱国者，他不仅充分感觉到中国目前的悲剧，而且还注意到更大的问题：他的伟大祖国，进退维谷，是西方化还是灭亡？既然是一个人类学者，他毕竟懂得，再适应的过程是何等的困难。他懂得，这一过程必须逐步地、缓慢地、机智地建立在旧的基础之上。他深切地关注到，这一切改变应是有计划的，而计划又须是以坚实的事实和知识为基础的。

Some passages of this book can indeed be taken as a charter of practical sociology and anthropology. "The need of such knowledge has become more and more urgent in China because the country cannot afford to waste any more of her wealth and energy in making mistakes." Dr. Fei sees clearly that with the best intentions and the most desirable end clearly in view, planning must remain faulty if the initial situation of change be misconceived. "An inaccurate definition of a situation, either due to deliberate aberration or to ignorance, is dangerous for a group," because it presupposes forces which do not exist, and ignores obstacles which obstruct the way of progress.

I feel I have to quote one more paragraph from the Introduction. "An adequate definition of the situation, if it is to organize successful actions and attain the desired end, must be reached through a careful analysis of the functions of the social institutions, in relation to the

need that they purport to satisfy and in relation to other institutions on which their working depends. This is the work of a social scientist. Social science therefore should play an important rôle in directing cultural change." This expresses well the greatest need, not only of the Chinese but of our own civilization, the need, that is, to recognize that even as in mechanical engineering only a fool or a madman would plan, design, and calculate without reference to scientific physics and mathematics, so also in political action, reason and experience must be given the fullest play.

Our modern civilization is perhaps now facing its final destruction. We are careful to use only the most qualified specialists in all mechanical engineering. Yet as regards the control of political, social, and moral forces, we Europeans are yielding more and more to madmen, fanatics, and gangsters. A tremendous arraignment of force, controlled by individuals without a sense of responsibility or any moral obligation to keep faith is accumulating on the one side of the dividing line. On the other side, where wealth, power, and effectiveness could still be made overwhelmingly strong, we have had during the last few years a consistent and progressive display of weakness, lack of unity, and a gradual whittling down of the sense of honour and of the sanctity of obligations undertaken.

I have read Dr. Fei's clear and convincing arguments as well as his vivid and well-documented accounts with genuine admiration, at times not untinged with envy. His book embodies many of the precepts and principles which I have been preaching for some time past, without, alas, having the opportunity of practising them myself. Most of us forward-looking anthropologists have felt impatient with our own work for its remoteness, exoticism, and irrelevancy—though perhaps these may be more apparent than real. But there is no doubt that my own confession that "Anthropology, to me at least, was a romantic escape from our over-standardized culture," was essentially true.

此书的某些段落确实可以被看作是应用社会学和人类学的宪章。“中国越来越迫切地需要这种知识，因为这个国家再也承担不起因失误而损耗任何财富和能量。”费博士清晰地看到，纵然有最好的意图和理想的目的，如果一开始对变化的环境有错误的理解和看法，那么，计划也必定是错误的。“对形势或情况的不准确的阐述或分析，不论是由于故意的过错或出于无知，对这个群体都是有害的”，因为这会造成这样的错误：预先假设了不存在的力量或是忽视了前进道路上的障碍。

我感到，还必须引述前言中的一段话，“如果要组织有效果的行动并达到预期的目的，必须对社会制度的功能进行细致的分析，而且要同它们意欲满足的需要结合起来分析，也要同它们的运转所依赖的其他制度

联系起来分析，以达到对情况的适当的阐述。这就是社会科学学者的工作。所以社会科学应该在指导文化变迁中起重要的作用。”这充分表达了中国文化和我们自己的文化的最大需要，也就是说，我们必须认识到，即使在机械工程中，只有傻子或疯子才会不顾科学的物理和数学而作出规划、设计或计算，故在政治行动中同样需要充分发挥理智和经验的作用。

我们的现代文明目前可能正面临着最终的毁灭。我们只注意在机械工程中使用最合格的专家。但在政治、社会和道德力量控制方面，我们欧洲人越来越依从于疯子、狂人和歹徒。在界线的一边正越来越多地责备着那种个人随心所欲、毫无责任感或毫无恪守信义的道德义务的倾向，而在另一边我们尽管仍然可以在财富、权力和实力上具有压倒的优势，近数年来却始终不断地暴露出软弱、涣散以及对荣誉、对所负的神圣义务的忽视。

我怀着十分钦佩的心情阅读了费博士那明确的令人信服的论点和生动翔实的描写，时感令人嫉妒。他书中所表露的很多箴言和原则，也是我过去在相当一段时间里所主张和宣扬的，但可惜我自己却没有机会去实践它。我们中间绝大多数向前看的人类学者，对我们自己的工作感到不耐烦，我们厌烦它的好古、猎奇和不切实际，虽然这也许是表面上的，实际并不如此。但我的自白无疑是真实的，我说过：“人类学，至少对我来说是对我们过分标准化的文化的一种罗曼蒂克式的逃避。”

The remedy, however, is at hand. If I may be allowed to quote some of my other reflections, "the progress of anthropology towards a really effective analytic science of human society, of human conduct, and of human nature, cannot be staved off." To achieve this, however, the science of man has first and foremost to move from so-called savagery into the study of more advanced cultures of the numerically, economically, and politically important peoples of the world. The present book and the wider work in China and elsewhere, of which it is a part, justifies my forecast: "The anthropology of the future will be...as interested in the Hindu as in the Tasmanian, in the Chinese peasants as in the Australian aborigines, in the West Indian negro as in the Melanesian Trobriander, in the detribalized African of Haarlem as in the Pygmy of Perak." In this quotation is implied another important postulate of modern field-work and theory: the study of culture change, of the phenomena of contact, and of present-day diffusion.

It was therefore a great pleasure when some two years ago I received the visit of a distinguished Chinese sociologist, Professor Wu Wen-Tsao of Yenching University, and learnt from him that independently and spontaneously there had been organized in China a sociological attack on the real problems of culture change and applied anthropology, an attack which embodies all my dreams and

desiderata.

Professor Wu and the young scholars whom he was able to train and inspire had realized first of all that to understand the civilization of their great country and to make it comprehensible to others, it was necessary to read in the open book of Chinese life, and learn how the live Chinese mind works in reality. Just because that country has had the longest unbroken tradition, the understanding of Chinese history must proceed from the appreciation of what China is to-day. Such an anthropological approach is indispensable as a supplement to important historical work carried out by modern Chinese scholars, and by a body of sinologists in Europe, on the basis of written records. History can be read back, taking the present as its living version, quite as much as it can be read forward, starting with the archaeological remains of the dimmest past and the earliest written records. The two approaches are complementary and they must be used concurrently.

然而补救办法近在咫尺，如果允许我再引述我的一些其他看法的话，我认为“那面向人类社会、人类行为和人类本性的真正有效的科学分析的人类学，它的进程是不可阻挡的”。为达到这一目的，研究人的科学必须首先离开对所谓未开化状态的研究，而应该进入对世界上为数众多的、在经济和政治上占重要地位的民族的较先进文化的研究。本书以及在中国和其他地方开展的广泛的工作，证实了我的预言：“未来的人类学不仅对塔斯马尼亚人、澳洲土著居民、美拉尼西亚的特罗布里恩德群岛人和霹雳的俾格米人有兴趣，而且对印度人、中国农民、西印度群岛黑人、脱离部落的哈勒姆非洲人同样关注。”这一段引语中还包含着对现代实地调查和理论工作提出的重要的基本要求：研究文化变迁、文化接触的现象、现代文化的传播。

因此，约两年前，当我接待了燕京大学杰出的中国社会学家吴文藻教授来访，感到极大的欣慰，从他那里得知，中国社会学界已独立自发地组织起一场对文化变迁和应用人类学的真正问题进行学术上的攻关。这一学术进攻表达了我梦寐以求的愿望。

吴教授和他所培育的年轻学者首先认识到，为了解他们的伟大祖国的文明并使其他的人理解它，他们需要去阅读中国人生活这本公开的书本，并理解中国人在现实中怎样思考的。正因为那个国家有着最悠久的没有断过的传统，要理解中国历史还必须从认识中国的今天开始。这种人类学的研究方法对于现代中国学者和欧洲的一些汉学家所进行的以文字记载为依据的重要历史工作，是一种不可缺少的补充。研究历史可以把遥远过去的考古遗迹和最早的记载作为起点，推向后世；同样，亦可把现状作为活的历史，来追溯过去。两种方法互为补充，且须同时使用。

The principles and the substance of Dr. Fei's book reveal to us how sound are the methodological foundations of the modern Chinese School of Sociology. Take the main subject-matter of the book. It is a

field-study of country life on one of those riverine plains which for thousands of years have nourished the Chinese people both materially and spiritually. It is axiomatic that the foundation of an essentially agrarian culture will be found in village life, in rural economy, and in the needs and interests of a peasant population. By becoming acquainted with the life of a small village, we study, under a microscope as it were, the epitome of China at large.

Two main motives dominate the story of this book: the exploitation of the soil, and the reproductive processes within the household and the family. In this book, Dr. Fei limits himself to the fundamental aspects of peasant life in China. He proposes, I know, in his subsequent studies, to give a fuller account of ancestor-worship; of the more complicated systems of belief and knowledge which flourish in village and township alike. He also hopes sooner or later to make a wider synthesis of his own works and that of his colleagues, giving us a comprehensive picture of the cultural, religious, and political systems of China. For such a synthesis, monographic accounts such as the present one are the first step. Dr. Fei's book and the contributions of his fellow-workers will become valuable pieces for the mosaic which it will be possible to construct from them.^[1]

It is not the task of a preface writer to retell a story so admirably told as the one of this book. The reader will find himself introduced into the setting: the charming riverine village of Kaihsienkung. He will be able to visualize its lay-out with its streams and bridges, its temples, ricefields, and mulberry trees. In this the excellent photographs will prove an additional help. He will appreciate the good balance of concrete, at times numerical data, and the clear descriptions. The account of agricultural life, of the means of livelihood, and the typical occupations of the villagers; the excellent seasonal calendar, and the precise definition of land tenure, give a type of intimate and at the same time tangible information not to be found anywhere else in the literature on China.

费博士著作中的原理和内容向我们揭示了现代中国社会学派的方法论基础是多么结实可靠。本书的主要题材是对湖泽地带的平原乡村生活的一次实地考察。那水道纵横的平原是数千年来在物质上和精神上抚育中国人民的地方。不言而喻，在乡村生活、农村经济、农业人口的利益和需要中找到的主要是农业文化基础。通过熟悉一个小村落的生活，我们犹如在显微镜下看到了整个中国的缩影。

贯穿此书的两个主题是：土地的利用和农户家庭中再生产的过程。在本书中，费博士集中力量描述中国农民生活的基本方面。我知道，他打算在他以后的研究中说明关于崇祀祖先的详细情况以及在村庄和城镇中广为流传的关于信仰和知识等更复杂的体系。他还希望终有一日将自

己的和同行的著作综合起来，为我们展示一幅描绘中国文化、宗教和政治体系的丰富多彩的画面。对这样一部综合性著作，像本书这样的专著当是第一步。费博士的书和他同行的贡献将成为他们可能完成的精雕细琢的镶嵌品中的一件件珍品。[2]

序言作者的任务并不是再来复述一番本书已经动人地描述过的内容。随着本书的描述，读者本身将自然地被带入故事发生的地点：那可爱的河流，纵横的开弦弓村。他将看到村庄的河流、桥梁、庙宇、稻田和桑树的分布图，此外，清晰的照片更有助于了解这个村庄。他将欣赏到具体资料、数据和明晰的描述三者之间很协调的关系。对农村生活、农民生活资料、村民的典型职业的描述以及完美的节气农历和土地占有的准确定义等都为读者提供了一种深入的确实的资料，这在任何有关的中国文献中都是十分罕见的。

I am allowed to quote from a statement by Sir E. Denison Ross, who read the book in manuscript, and thus defined its position in scientific literature: "I regard this treatise as quite exceptional. I know of no other work which describes at first hand and with intimate understanding the full story of life in a Chinese village community. We have had works dealing with statistics, economic studies, and novels full of local colour—but in no book have I found the answer to every kind of inquiry which the curious stranger might make." The "curious stranger," when he appears in the person of Sir Denison Ross, is a man of science, a historian, and one of the world's experts in Oriental Studies.

To me personally, the chapter on the silk industry is perhaps the most significant achievement of the book. It is an account of a planned change from domestic industry into a readaptation to co-operative work compatible with modern conditions. It vindicates some of the claims of sociology to be a practical and relevant study for social engineering. It raises a number of collateral questions, and will become, I think, the starting point of other inquiries both in China and elsewhere.

In the argument of this chapter and in many other passages we can discover a moral quality of the book which I may be allowed to underline. There is no trace of special pleading or self-justification, although the book is written by a Chinese to be placed before Western readers. It is rather a criticism or self-criticism. Thus in the chapter on "Agrarian Problems in China" we read "The national government with all its promises and policies on paper was not able to carry out any practical measures owing to the fact that most of the revenue was spent in its anti-communist campaign, while, as I have pointed out, the real nature of the communist movement was a peasant revolt due to their dissatisfaction with the land system. Despite all kinds of

justification on either side, one thing is clear: that the conditions of the peasants are getting worse and worse. So far no permanent land reform has been accomplished in any part of China since the recovery of the Red Area by the government." That a type of sociological work which openly criticizes the inadequacy of government action is yet carried on with the encouragement of the government speaks for itself. It proves on the one hand the integrity of the young sociologists in China and on the other the goodwill and wisdom of their official patrons.

我已得到允许，引述E.丹尼森·罗斯爵士在读了该书手稿以后的一段话，他阐明了该书在科学文献中的地位：“我认为这篇论文是相当特殊的。据我所知，没有其他作品能够如此深入地理解并以第一手材料描述了中国乡村社区的全部生活。我们曾经有过统计报告、经济研究和地方色彩浓厚的小说——但我未曾发现有一本书能够回答好奇的陌生人可能提出的各种问题。”这里所说的“好奇的陌生人”就是丹尼森·罗斯爵士，他恰是一个科学家、历史学家和世界知名的东方学专家。

我个人认为或许有关蚕丝业的这一章是本书最成功的一章。它向我们介绍了家庭企业如何有计划地变革成为合作工厂，以适应现代形势的需要。它证明，社会学需要研究社会工程的有关实际问题。它提出了一些附带的问题，我想这些问题将成为中国和其他地方的另一些研究的起点。

在这一章和其他很多章节的论据中，我们能够发现著书的道德品质，请允许我强调提出这一点。虽然这本书是一个中国人写给西方读者看的，文字中没有特殊的辩护或自宥的流露。相反倒是一种批评和自我批评。在“中国的土地问题”这一章中我们可以读到：“国民党政府在纸上写下了种种诺言和政策。但事实上，它把绝大部分收入都耗费于反共运动，所以它不可能采取任何实际行动和措施来进行改革，而共产主义运动的实质，正如我所指出的，是由于农民对土地制度不满而引起的一种反抗。尽管各方提出各种理由，但有一件事是清楚的，农民的境况是越来越糟糕了。自从政府重占红色区域以来到目前为止，中国没有任何一个地区完成了永久性的土地改革。”这样一种公开批评政府不当行为的社会学工作，现在仍然进行着，想必得到政府的鼓励，这一方面证明了中国青年社会学家的正直和团结，另一方面也说明了官方的善意和明智。

A dispassioned, detached, and dignified attitude characterises all the Author's observations. That a Chinese must to-day have bitter feelings against Western civilization and the political rule of Western nations, is understandable. Yet no trace of this will be found in the present book. In fact, throughout my personal acquaintance with Dr. Fei and some of his colleagues, I had to admire the absence of national prejudice and national hatred—a moral attitude from which we Europeans could learn a great deal. The Chinese seem to be able to distinguish between nationhood and the political system. There is no

hatred even of the Japanese as a people. On the first page of this book the Author refers to the invading country only in terms of dispassionate appreciation of its rôle in consolidating the Chinese nation and forcing it to build up a united front, and to readjust some of its fundamental problems, economic and social. The very village which we have learnt to know, to appreciate, to which we have almost become attached, has probably now been destroyed. We can only echo the writer's prophetic desire that in the ruin of that village and many others, "the internal conflicts and follies should find their last resting-place" and that "from the ruin a new China shall emerge."

B. MALINOWSKI

University of London,

15th October, 1938

作者的一切观察所具有的特征是，态度有尊严、超脱、没有偏见。当今一个中国人对西方文明和西方国家的政治有反感，这是可以理解的。但本书中未发现这种迹象。事实上，通过我个人同费博士和他的同事的交往，我不得不羡慕他们不持民族偏见和民族仇恨——我们欧洲人能够从这样一种道德态度上学到大量的东西。看来中国人是能够区别民族和政治制度的。日本作为一个民族来说，他们对它甚至不怀仇恨。在本书第一页上，作者提到这个侵略国，冷静地评价它的作用在于迫使中国建立起一条统一战线并调整它的某些基本的经济和社会问题，从而巩固了中国。我们所了解、评价甚至逐渐依恋的那个村庄，现在可能已被破坏。我们只能回想着作者预言式的愿望：在这个村庄和其他许多村庄的废墟中，“内部冲突和耗费巨大的斗争最后必将终止”，“一个崭新的中国将出现在这个废墟之上”。

[1] The work already completed, mostly in Chinese, includes such subjects as: *The Marketing System in Shantung*, by C. K. Yang; *Litigation in a Village Community of Hopei*, by Y. S. Hsu; *Peasant Custom in Hopei*, by S. Huang; *A Clan-Village in Fukien*, by Y. H. Lin; *Chinese Rural Education (in Shantung) in Change*, by T. C. Liao; *The Social Organization of Hua Lan Yao (in Kwangsi)*, by Dr. and Mrs. Fei. Further studies are now being made of Land Tenure in Shansi, by Y. I. Li; and problems of emigrant relations between Fukien and overseas outpost, by A. L. Cheng.

[2] 这些已经完成的作品大多用中文写成，有下列诸题：《山东的集市系统》，杨庆方著；《河北农村社区的诉讼》，徐雍舜著；《河北农民的风俗》，黄石著；《福建的一个氏族村》，林耀华著；《变动中的中国农村教育》，廖泰初著；《花蓝瑶社会组织》，费博士及夫人著。正在进行研究的有李有义的“山西的土地制度”，及郑安仑的“福建和海外地区移民的关系问题”。

CHAPTER I INTRODUCTION

This is a descriptive account of the system of consumption, production, distribution and exchange of wealth among Chinese peasants as observed in a village, Kaihsienkung, south of Lake Tai, in Eastern China. It aims at showing the relation of this economic system to a specific geographical setting and to the social structure of the community. The village under investigation, like most Chinese villages, is undergoing a tremendous process of change. This account, therefore, will show the forces and problems in a changing village economy.

An intensive investigation of a small field of this kind is a necessary supplement of the broad surveys made of present-day economic problems in China. It will exemplify the importance of regional factors in analysing these problems and will provide empirical illustrations.

This type of study will enable us to realize the importance of the background of the traditional economy, and the effect of the new forces on the everyday life of the people.

To stress the equal importance of the traditional and the new forces is necessary because the real process of change of Chinese economic life is neither a direct transference of social institutions from the West nor a mere disturbance of a traditional equilibrium. The problems arising from the present situation are results of the interaction of these two forces. In the village under our examination, for instance, the financial issues can only be understood by taking into consideration the decline of the price of silk due to the world industrial development on the one hand, and on the other, the importance of domestic industry in the family budget based on the traditional system of land tenure. Underestimation of either aspect will distort the real situation. Moreover, the product of the interaction of these two forces, as we shall see in the later description, cannot be a reproduction of the West or a restoration of the past. The result will depend on how the people solve their own problems. A correct understanding of the existing situation based on empirical facts will assist in directing the change towards a desired end. Herein lies the function of social science.

Culture is a set of material equipment and a body of knowledge. It is man who uses the equipment and the knowledge in order to live. Culture is changed by men for definite purposes. When a man throws away a tool to acquire a new one, he does so because he believes that the new tool suits his purpose better. Therefore in any process of change, there is an integration of his past experience, his understanding of the present situation and his expectation of the future consequences. Past experiences are not always a real picture of past events because they have been transformed through the selective process of memory. The present situation is not always accurately comprehended because it attracts attention only in so far as interest directs. The future consequences do not always come up to expectations because they are the products of many other forces besides wishes and efforts. So the new tool may at last prove not to be suitable to man's purpose.

壹 前言

这是一本描述中国农民的消费、生产、分配和交易等体系的书籍，是根据对中国东部太湖东南岸开弦弓村的实地考察写成的。它旨在说明这一经济体系与特定地理环境的关系，以及与这个社区的社会结构的关系。同大多数中国农村一样，这个村庄正经历着一个巨大的变迁过程。因此，本书将说明这个正在变化着的乡村经济的动力和问题。

这种小范围的深入实地的调查，对当前中国经济问题宏观的研究是一种必要的补充。在分析这些问题时，它将说明地区因素的重要性并提供实例。

这种研究也将促使我们进一步了解传统经济背景的重要性及新的动力对人民日常生活的作用。

强调传统力量与新的动力具有同等重要性是必要的，因为中国经济生活变迁的真正过程，既不是从西方社会制度直接转渡的过程，也不仅是传统的平衡受到了干扰而已。目前形势中所发生的问题是这两种力量相互作用的结果。例如对我们观察的这个村庄的经济问题，只有在考虑到两方面的情况时才能有所理解：一方面是由于世界工业的发展，生丝价格下跌，另一方面是以传统土地占有制为基础的家庭副业在家庭经济预算中的重要性。对任何一方面的低估都将曲解真实的情况。此外，正如我们将在以后的描述中所看到的，这两种力量相互作用的产物不会是西方世界的复制品或者传统的复旧，其结果如何，将取决于人民如何去解决他们自己的问题。正确地了解当前存在的以事实为依据的情况，将有助于引导这种变迁趋向于我们所期望的结果。社会科学的功能就在于此。

文化是物质设备和各种知识的结合体。人使用设备和知识以便生存。为了一定的目的人要改变文化。一个人如果扔掉某一件工具，又去获取一件新的，他这样做，是因为他相信新的工具对他更加适用。所以，任何变迁过程必定是一种综合体，那就是：他过去的经验、他对目前形势的了解以及他对未来结果的期望。过去的经验并不总是过去事实的真实写照，因为过去的实事经过记忆的选择已经起了变化。目前的形势也并不总是能得到准确的理解，因为它吸引注意力的程度常受到利害关系的影响。未来的结果不会总是像人们所期望的那样，因为它是希望和努力以外的其他许多力量的产物。所以，新工具最后也可能被证明是不适合于人们的目的。

It is more difficult to achieve successful changes in social institutions. Even when an institution has failed to meet the need of the people, there may be no substitute. The difficulty lies in the fact

that since a social institution consists of human relations, it can be changed only through concerted actions which cannot readily be organized. Moreover, the social situation is usually complicated and expectation varies among the individuals involved. Therefore in the process of social change, it is always necessary in order to organize collective actions to have a more or less accepted definition of the situation and a formulated programme. Such preparatory activities generally take a linguistic form. It can be seen in its simplest form in the command of a captain to his crew when directing the course of a ship. It can also be observed in the well staged debates in parliament or congress. Different definitions of the situation and varying expectations about the results form the centre of the debates. Nevertheless, such preparatory activities are always present in an innovation in socially organized activities.

An inaccurate definition of situation, either due to deliberate aberrations or to ignorance, is dangerous for the group because it may lead to an undesired future. There are many instances in the present account to illustrate the importance of an empirical definition of the situation. In anticipation of the following pages, I shall mention a few of them. In kinship organization, the present practice of inheritance is defined by the legislature as an instance of inequality between sexes. Since the situation is so defined, once the idea of sex equality has been accepted, the resultant actions would involve a revision of the unilateral kinship principle. As I shall show, the transmission of property is a part of the reciprocal relation between generations; the obligation of supporting the old, in a society where that responsibility falls upon the children, cannot be equally shared by sons and daughters under the present system of patrilocal marriage. Therefore the bilateral inheritance combined with unilateral affiliation creates inequality between the sexes. Seen in this light, the consequences of the legislation are obviously contrary to expectation (IV-6).

对社会制度要完成一个成功的变革是更加困难了。当一种制度不能满足人民的需要时，甚至可能还没有替代它的其他制度。困难在于社会制度是由人际关系构成的，只有通过一致行动才能改变它，而一致行动不是一下子就组织得起来的。另外，社会情况通常是复杂的，参与改革的一个个人，他们的期望也可以各不相同。所以在社会变革的过程中，为组织集体行动，对社会情况需要有一个多少为大家所接受的分析和定义以及一个系统的计划。这种准备活动一般都需要一种语言形式。最简单的形式如一个船长在指挥一条船航行时，对他的船员们发出命令；又如在议会或国会里进行一场有准备的辩论。对形势或情况的不同解释和关于结果的各种期望形成辩论的中心。无论如何，这样的准备活动总是在有组织的革新活动中出现的。

对形势或情况的不准确的阐述或分析，不论是由于故意的过错或出

于无知，对这个群体都是有害的，它可能导致令人失望的后果。本书有许多例子说明了对情况或形势的实事求是的阐述或分析的重要性。下面我想先举几个例子：在亲属组织中，目前法律对财产继承问题的规定似已成为两性不平等的实例。一旦男女平等的思想被接受，这样的规定将产生一种修改单方亲属原则的行动。正如我要说明的，财产的继承是两代人之间相互关系的一部分。供养老人的义务，落在子女身上的社会里，在目前父居家庭的婚姻制度下，女儿和儿子不能分担同等的义务。因此，双系继承与单方立嗣相结合将形成两性的不平等。从这一点来看，立法的后果显然与期望是背道而驰的（第四章第六节）。

A definition of situation sometimes may be accurate but not complete. In the silk industry, for instance, the reformers have defined the situation mainly in technical terms. The omission of the factor of international trade in the decline of the price of silk had resulted in their failure for many years to fulfil their promise to the villagers of big incomes from the industry (XII-8).

An adequate definition of situation, if it is to organize successful actions and attain the desired end, must be reached through a careful analysis of the functions of the social institutions, in relation to the need that they purport to satisfy and in relation to other institutions on which their working depends. This is the work of a social scientist. Social science therefore should play an important rôle in directing cultural change.

The need of such knowledge has become more and more urgent in China because the country cannot afford to waste any more of her wealth and energy in making mistakes. The fundamental end is evident; it is the satisfaction of the basic requirements common to every Chinese. This should be recognized by all. A village which stands on the verge of starvation profits nobody, not even the usurers. In this sense there should be no political differences among the Chinese upon these fundamental measures. Where differences exist, they are due to misrepresentation of facts. A systematic presentation of the actual conditions of the people will convince the nation of the urgent policies necessary for rehabilitating the lives of the masses. It is not a matter for philosophical speculation, much less should it be a matter for dispute between schools of thought. What is really needed is a common-sense judgment based on reliable information.

The present study is only one of the initial attempts of a group of young Chinese students who have realized the importance of this task. Similar studies have been carried out in Fukien, Shantung, Shansi, Hopei, and Kwangsi and will be pursued in the future by more extensive and better organized efforts. I am reluctant to present this premature account, premature because I have been deprived of

chances of further field investigation in the immediate future on account of the Japanese occupation and destruction of the village here described. But I am presenting this study in the hopes that it may give a realistic picture to Western readers of the huge task that has been imposed on my people and the agony of the present struggle. Without being pessimistic, let me assure my readers that the struggle is evidently to be a long and grave one. We are ready for the worst and it may be a thousand times worse than the Japanese bombs and poisonous gas. I am, however, confident that, despite the past errors and present misfortunes, China will emerge once more a great nation, through the unswerving effort of her people. The present account is not a record of a vanished history but a prelude to a new chapter of the world history that will be written not in ink but in the blood of millions.

有时，对情况或形势的阐明或分析可能是正确的，但不完整。例如，在缫丝工业中，改革者主要从技术方面来分析情况，忽略了在丝价下降中国际贸易的因素，这就导致多年来，对村民许下的从工业中增加收入的诺言，未能实现（第十二章第八节）。

如果要组织有效果的行动并达到预期的目的，必须对情况有细致的阐述，而这种阐述需要对社会制度的功能进行细致的分析，而且要同它们意欲满足的需要结合起来分析，也要同它们的运转所依赖的其他制度联系起来分析。这就是社会科学者的工作。所以社会科学应该在指导文化变迁中起重要的作用。

中国越来越迫切地需要这种知识，因为这个国家再也承担不起因失误而损耗任何财富和能量。我们的根本目的是明确的，这就是满足每个中国人共同的基本需要。大家都应该承认这一点。一个站在饥饿边缘上的村庄对谁都没有好处，即使对放贷者也是如此。从这个意义上说，对这些基本措施，在中国人中间应该没有政治上的分歧。分歧之处是由于对事实的误述或歪曲。对人民实际情况的系统反映将有助于使这个国家相信，为了恢复广大群众的正常生活，现在迫切地需要一些政策。这不是一个哲学思考的问题，更不应该是各学派思想争论的问题。真正需要的是一种以可靠的情况为依据的常识性的判断。

目前的研究，仅仅是一群懂得了这一任务的重要性的中国青年学生的初步尝试。在福建、山东、山西、河北和广西都开展了同样的研究。将来还会有更广泛的、组织得更好的力量，继续进行研究。我不太愿意把这本不成熟的书拿出来，它之所以不成熟，是因为日本人占领并破坏了我所描述的村庄，我被剥夺了在近期作进一步的实地

调查的机会。但我还是要把本书贡献出来，希望它能为西方读者提供一幅现实的画面，这就是：我的人民肩负重任，正在为当前的斗争付出沉痛的代价。我并不悲观，但肯定地说这是一场长期而严酷的斗争。我们已作了最坏的准备，准备承受比日本的炸弹和毒气还会更坏的情况。然而我确信，就算有过去的错误和当前的不幸，通过人民坚持不懈

的努力，中国将再一次以一个伟大的国家屹立在世界上。本书并不是一本消逝了的历史的记录，而是将以百万人民的鲜血写成的世界历史新篇章的序言。

CHAPTER II THE FIELD

[1] Delimitation of Field

To carry out intensive study of the life of the people, it is necessary to confine oneself to the investigation of a small social unit. This is due to practical considerations. The people under investigation must be within easy reach of the investigator in order that the latter can observe personally and intimately. The unit of study, on the other hand, should not be too small. It should provide a fair cross-section of the social life of the people.

This general problem has been discussed by Professor A. Radcliffe-Brown, Dr. Wu Wen-tsao, and Dr. Raymond Firth.^[1] It is agreed that in the first stage of such a study, a village would be the most appropriate unit. "To start with a single village as a centre," says Dr. Firth, "investigate the relationships of the persons composing it, in terms of kinship, the distribution of authority, economic organization, religious affiliations, and other social ties, and try to see how these relationships affect one another and determine the co-operative life of the small community. From this centre the investigation will radiate out following the personal relationships into other units in adjacent villages, economic linkage and social co-operation."^[2]

A village is a community characterized by its being an aggregate of households on a compact residential area, separated from other similar units by a considerable distance (this may not hold good in some parts of China where households are scattered), organized in various social activities as a group, and possessing a special name of its own. It is a *de facto* social unit recognized by the people themselves.

A village as such does not enter formally into the new administrative system in China—Pao Chea^[3]—which is artificially created for certain specific purposes (VI-5). Since this system was introduced to Kaihsienkung only in 1935, it is very difficult to say when these *de jure* units, through increasing administrative function, will cause a shift in the existing *de facto* groupings. But at present, in actual practice, the Pao Chea system is still largely a formality. Thus

the unit of our study, the aim of which is to understand the life of the people, must follow the real existing functioning unit—the village.

贰 调查区域

一、调查区域的界定

为了对人们的生活进行深入细致的研究，研究人员有必要把自己的调查限定在一个小的社会单位内来进行。这是出于实际的考虑。调查者必须容易接近被调查者，以便能够亲自进行密切地观察。另一方面，被研究的社会单位也不宜太小，它应能提供人们社会生活的较完整的切片。

A.拉德克利夫-布朗教授、吴文藻博士和雷蒙德·弗思博士^[4] 曾经讨论过这个基本问题。他们一致认为，在这种研究的最初阶段，把一个村子作为单位最为合适。弗思博士说：“应当以一个村子作研究中心来考察村民们相互间的关系，就亲属关系而言，考察权力的分配、经济的组织、宗教的皈依以及其他种种社会联系，并进而观察这种种社会关系如何相互影响，如何综合以决定这社区的合作生活。从这研究中心循着亲属系统、经济往来、社会合作等路线，推广我们的研究范围到邻近村落以及市镇。”^[5]

村庄是一个社区，其特征是：农户聚集在一个紧凑的居住区内，与其他相似的单位隔开相当一段距离（在中国有些地区，农户散居，情况并非如此），作为一个群体组织各种社会活动，具有其特定的名称，而且是一个为人们所公认的事实上的社会单位。

这样一个村庄并没有正式进入保甲制。保甲制是中国的一种新的行政体制，是为了某种特殊目的而人为地设置的（第六章第五节）。开弦弓村在1935年才有这种制度，因此很难说得清，这种法律上的保甲单位，究竟到什么时候才能以其不断增长的行政职能取代现存的事实上的群体。但目前，在实施过程中，保甲制仍然大多流于形式。因此，我们所研究的单位必须是实际存在的职能单位——村庄。我们研究的目的在于了解人民的生活。

To take the village as the unit of study at the present stage of investigation, does not mean that it is a self-contained unit. The interdependence of territorial groups, especially in economic life, is very close in China. It can even be said that the Chinese people have during the last half century entered into the world community. Western goods as well as ideas have reached very remote villages. The economic and political pressure of the Western powers is the prime factor in the present change of Chinese culture. In this connection, one

can ask what understanding of these changes and of the external forces causing them can be gained by a field investigation in a small area, such as a village.

It is obvious that the investigator in the village cannot analyse the outside forces in their wide perspective. For instance, the decline of the price of native silk in the world market as a result of the world economic depression and of the technical improvement of the silk industry in general, has produced such effects in the village as deficiency in the family budget, shortage of food, postponement of marriage and the partial break-down of the domestic industry. The field investigator in this case must record as fully as possible the forces that affect village life but he will of course leave the further analysis of these forces themselves to other sciences. He will take these facts for granted and limit himself to tracing the effects which can be directly observed in the life of the village.

Generalizations made from such an intensive study of a small social unit may not be applicable to other units. But they can be used as hypotheses and as comparative material for further investigation in other fields. This is the soundest way to obtain really scientific generalizations.

[2] Geographical Foundation

The village chosen for my investigation is called Kaihsienkung, locally pronounced *kejiug'on*. It is situated on the south-east bank of Lake Tai, in the lower course of the Yangtze River and about eighty miles west of Shanghai. It is in the geographical region of the Yangtze Plain. The geographical foundation of this region has been described by G. B. Cressey: "The Yangtze Plain is a land of rivers and canals. Probably nowhere else in the world is there an area with so many navigable waterways. The Yangtze Kiang, the Hwai Ho, and their tributaries provide a splendid highway through the length of the region. In addition to the many rivers there are a series of great lakes, chief among which are Tungting, Poyang, Tai, and Hungtse Hu. It is the canals, however, which give the most characteristic note to the landscape. These canals are the very arteries of life. In the region of Yangtze Delta they form an intricate network and serve as an artificial drainage system which takes the place of rivers. Their length in the south delta alone is estimated by F. H. King, at twenty-five thousand miles.

在目前阶段的调查中，把村庄作为一个研究单位，这并不是说村庄就是一个自给自足的单位。在中国，地方群体之间的相互依存，是非常密切的，在经济生活中尤为如此。甚至可以说，在上半个世纪中，中国人民已经进入了世界的共同体中。西方的货物和思想已经到达了非常边远的村庄。西方列强的政治、经济压力是目前中国文化变迁的重要因素。在这一点上有人可能会问，既然如此，那么在这样一个小的地区，在一个村庄里搞实地调查，对于这种外来力量及其所引起的变迁会取得什么进一步的了解呢？

显然，身处村庄的调查者不可能用宏观的眼光来观察和分析外来势力的各种影响。例如，由于世界经济萧条及丝绸工业中广泛的技术改革引起了国际市场上土产生丝价格的下跌，进而引起农村家庭收入不足、口粮短缺、婚期推迟以及家庭工业的部分破产。在这种情况下，实地调查者必须尽可能全面地记录外来势力对村庄生活的影响，但他当然应该把对这些势力本身的进一步分析留给其他学科去完成。调查者应承认这些事实，并只专注于跟踪那些可以从村庄生活中直接观察到的影响。

对这样一个小的社会单位进行深入研究而得出的结论并不一定适用于其他单位。但是，这样的结论却可以用作假设，也可以作为在其他地方进行调查时的比较材料。这就是获得真正科学结论的最可靠方法。

二、地理状况

我所选择的调查地点叫开弦弓村，坐落在太湖东南岸，位于长江下游，在上海以西约80英里的地方，其地理区域属于长江三角洲。G. B. 克雷西曾经这样描述该区域的地理概况：“在长江平原的土地上，布满了河流与运河。世界上大概再也没有其他地区会有那么多可通航的水路。长江、淮河及其支流形成了一条贯穿这个区域的通道，颇为壮观。这里不但河流多，而且还有许多大小湖泊，其中主要有洞庭湖、鄱阳湖、太湖、洪泽湖。然而赋予这个地貌以最显著的特征的是人工河渠。这些河渠正是生活的命脉。在长江三角洲地区，河渠形成了错综复杂的网络，起着人工水系的作用，取代了河流。据F. H. 金的估计，仅三角洲南部的河渠长度就有25,000英里左右。

"This region is compound alluvial plain, the accumulation of sediment laid down by the rivers during long ages. There are a few isolated hills, but for the most part the land is level. The country is flat, but innumerable grave mounds and the trees about the villages break the view. Both rural and urban settlement is more congested than in the region of the North, but factors of climate and location combine to make this the most prosperous part of China. [6]

"The Yangtze Plain is...distinctly influenced by summer-monsoon conditions... Here, too, are felt the greatest effects of continental cyclonic storms.

"Owing to the southernly latitude, the summers are subtropical with temperatures which frequently rise to 38°C. (100°F.)... The average (rainfall) for the entire region is about 1,200 mm. (45 in.).... Most of the rain falls during the spring and summer, with June the rainiest month. The period from October to February is comparatively dry with clear skies and stimulating temperatures, making this the most pleasant season of the year.

"Winter temperatures seldom remain below freezing for more than a few days at a time. Ice forms only in thin sheets on the colder nights and there is little snow.... The average of summer maximum temperature for Shanghai is 37°C. (91°F.), and the average of winter minimum is -7°C. (19°F.).

"The Yangtze Plain has climate conditions which are favourable for agriculture during most of the year so that the growing season lasts for about 300 days." [7]

The commanding position of this region in Chinese economy is

due partly to its superior natural environment and partly to its favourable position in the system of communications. It is located at the crossing point of the two main water routes: namely, the Yangtze River and the Grand Canal. They connect this region with the immense territory of western and northern China. Being a coastal region, it has become more and more important since the development of international trade by ocean transport. Shanghai, the seaport of this region, has developed into the biggest metropolis in the Far East. The railway system in this region is also well developed. From Shanghai, two important lines have been built, one to Nanking, passing Soochow, and one to Hongchow, passing Chianhsing. Recently in 1936 a new line between Soochow and Chianhsing was added to form a circuit between the above-mentioned two main lines. Motor roads have been built for the intra-regional communication; and besides there is an extensive use of the canals and canalized streams.

“这个地区是复合冲积平原，由长期以来河流带来的泥沙淤积而成，只有少数孤立的丘，大部地区是平川。乡下土地平坦，但是无数的坟墩和村子周围的树林遮住了视线。这里，无论是乡村或城市的居住区都比北方地区人口密集。但由于气候、地理位置等因素的共同作用，这里成为了中国最繁荣的地方。[8]

“长江平原……显然受夏季季风的影响……也经受大陆性旋风的巨大威力。

“由于纬度偏南，夏季呈亚热带气候，气温经常升至 38°C (100°F)。……整个地区平均降雨量约为1,200毫米 (45英寸)……春、夏季多雨，6月份的雨量最多。自10月至来年2月，气候较为干燥，天空晴朗，气温宜人，这时候是一年中最为爽快的季节。

“冬天的气温，难得一连数日都在零下，在较冷的夜间才结薄冰，很少下雪。……在上海，夏季平均最高气温 37°C (91°F)，冬季平均最低气温为 -7°C (19°F)。

“长江平原一年四季，大部分时间的气候条件都有利于农业，生长季节持续300天。”[9]

这个地区之所以在中国经济上取得主导地位，一方面是由于其优越的自然环境，另一方面是由于它在交通上的有利位置。该地区位于长江和大运河这两条水路干线的交叉点上。这两条水路把这个地区与中国西部和北部的广大疆土联结起来。作为沿海地区，自从通过远洋运输发展国际贸易以来，它的重要性与日俱增。该地区的港口上海现已发展成为远东的最大城市。这里的铁路系统也很发达，已经修建了两条重要线路，一条从上海经苏州至南京；另一条由上海经嘉兴至杭州。最近，也就是在1936年，苏州与嘉兴之间又增加了一条新线路，与上述两条干线形成环行铁路。为了便利地区内的交通，还修建了汽车路；除此之外，还广泛利用了运河及改成运河的河道进行交通运输。

This region has supported a very dense population, most of which is resident in villages. A bird's-eye view shows a cluster of villages. Each village is separated from its neighbour by only a walking distance of, on an average, twenty minutes. Kaihsienkung is but one of these thousands of villages crowding on this land.

In the centre of several tens of villages there is a town. The town is the collecting centre of the basic produce from the surrounding villages and the distributing point for manufactured goods brought from the outside cities. The town on which Kaihsienkung depends is called Chên Tsê, about four miles south of the village. It takes about two and a half hours for a single trip by boat. Chên Tsê lies about six miles south-east of Lake Tai and eight miles west of the Grand Canal and the Soochow-Chianhsing line. At present it is connected with the nearest station, Ping Wang, both by motor boat and bus services. By the existing railway lines, one can reach Shanghai from the town within eight hours. The geographical position of Kaihsienkung in relation to the above-mentioned towns and cities is shown in the accompanying maps (Map I and II).

[3] Economic Background

Here the human geographer will be right in inferring the occupation of the people from the natural conditions of the land they occupy. A traveller in a train, passing through that region, would not lose sight of the rice fields for more than intervals of a few minutes. In Kaihsienkung, according to estimates, more than ninety per cent. of the land is used for rice cultivation. This single village produces, on the average, eighteen thousand bushels of rice every year (X-2). Only a little more than half of the produce is consumed by the people themselves (VII-5). Very few households in the village are entirely free from agricultural work. About seventy-six per cent. of the total number of households are engaged in agriculture as their main occupation (VIII-1). The time spent in cultivating rice amounts to six months in the year (IX-3). From this crop the people earn more than half of their income (XII-2). Thus from any angle, rice is of primary importance.

该地区人口密集，大多数人口居住在农村。如从空中俯视，可以看见到处是一簇簇的村庄。每个村子仅与邻村平均相隔走20分钟路的距离。开弦弓只不过是群集在这块土地上成千上万个村庄之一。

在数十个村庄的中心地带就有一个市镇。市镇是收集周围村子土产品的中心，又是分配外地城市工业品下乡的中心。开弦弓所依傍的市镇叫震泽，在开弦弓以南约四英里，坐手摇船单程约需两个半小时。震泽地处太湖东南约六英里，大运河及苏嘉线以西约八英里。目前，可乘轮船或公共汽车到达苏嘉线的平望站。通过现有的铁路线，可在八小时以内从震泽到达上海。开弦弓与上述各城市及集镇间的位置关系，详见所附地图（见地图I、II）。

三、经济背景

在这里，人文地理学者会正确地从人们所占据的土地的自然条件推论人们的职业。一个旅客，如果乘火车路经这个地区时，将接连不断地看到一片片的稻田。据估计，开弦弓90%以上的土地都用于种植水稻。该村每年平均产米18,000蒲式耳（第十章第二节）。仅一半多一点的粮食为人们自己所消费（第七章第五节）。村里极少有完全不干农活的人家。占总户数约76%的人家以农业为主要职业（第八章第一节）。一年中，用于种稻的时间约占六个月（第九章第三节）。人们靠种稻挣得一半以上的收入（第十二章第二节）。因而，从任何一个角度看，种植水稻的重要性是居于首位的。

地图II 开弦弓周围的环境

But rice is not the only produce of the land. Wheat, rapeseeds and various vegetables are grown too, although they are insignificant as compared with the chief crop. Moreover, the water provides fish, shrimps, crabs, and different kinds of water plants which are all used locally as food.

The mulberry tree plays an important part in the economic life of the villagers. It enables them to develop their silk industry. Wright wrote early in 1908, "Raw white silk, the *tsatlee* silk of European

markets, is produced by the hand reeling of the Chinese silkworm farms... The best white silk comes from the district surrounding Shanghai, which contributes by far the greatest proportion of the value exported."^[10]

Silk industry is common to the whole region but it is specially well developed in the villages around Lake Tai. This specialization is due, according to the local people, to the good quality of the water. It is said that the so-called *tsatlee* silk is produced only in the area about four miles in diameter around Kaihsienkung. How far this statement is true is another question, but the importance of the village in rural industry is beyond doubt. During its prosperous period, this area not only contributed a large part of China's silk export but also supplied the demand for raw material for the domestic weaving industry of the neighbouring town Sheng Tsê (Map II). The weaving industry of that town before its decline had been known to be able to produce "ten thousand pieces a day."

The rural silk industry began to decline when the modern factory for silk manufacturing with its improved technique of production was introduced both into Japan and China. This industrial revolution changed the fortunes of the domestic rural industry.

"Previous to 1909... the quantity of Chinese silk exported had been larger than that of Japanese silk. In 1907, for instance, the two were almost the same. It was only in 1909, however, that Japanese silk export began to exceed that of China, and this advantage the former has been able to keep up ever since. In fact, in recent years, the Japanese export was nearly three times that of this country. From the point of view of our foreign trade, silk also decreased in significance since 1909. Before that date it used to constitute from 20 to 30 per cent. of our total exports, but the average for the years 1909—1916 fell to 17 per cent." ^[11]

此地不仅产米，人们还种麦子、油菜籽及各种蔬菜，尽管它们与主要作物相比是无足轻重的。此外，江河里尚有鱼、虾、蟹及各种水生植物等，这些都是当地的食物。

桑树在农民的经济生活中起着重要的作用。人们靠它发展蚕丝业。赖特早在1908年写道：“白色生丝，即欧洲市场中的‘辑里丝’，是中国养蚕农家用手抽制的。……最佳生丝产自上海附近地区，该地区出口的丝占出口额的绝大部分。”^[12]

蚕丝业在整个地区非常普遍，在太湖周围的村庄里尤为发达。据当地人说，它之所以成为该地特产是由于水质好。据说，所谓的“辑里丝”仅产于开弦弓周围方圆四英里的地带。这一说法的真实性暂且不论，但这个村庄在当地乡村工业中的重要地位确是毫无疑问的。在繁荣时

期，这个地带的丝不仅在中国蚕丝出口额中占主要比重，而且还为邻近的盛泽镇（见地图II）丝织工业的需要提供原料。在丝织业衰退之前，盛泽的丝织业号称“日产万匹”。

现代制丝业的先进生产技术引进日本、中国之后，乡村丝业开始衰退。这一工业革命改变了国内乡村手工业的命运。

“1909年以前.....中国蚕丝出口量比日本大。例如1907年，两国出口量几乎相同。但到1909年，日本蚕丝出口便超过了中国，而且从此以后，日本一直保持优势。事实上近年来，日本的出口量几近中国的3倍。从我国外贸角度来看，自从1909年以来，蚕丝的重要性也降低了。以前，蚕丝通常占我国出口总额的20%至30%，而从1909年至1916年的平均数下降至17%。”^[13]

The amount of produce, however, had been increasing although irregularly up to 1923. But owing to the fall in price, the increasing amount of export did not mean necessarily an increase of return. The amount of export has declined steadily ever since that time. During 1928 to 1930, the percentage of decrease was about twenty.^[14] The rate of decrease was more rapid in the period between 1930 to 1934. "As Japanese silk was dumped on the American market in the latter part of the year (1934), China's silk export dropped to the lowest point accordingly. The volume of silk exported amounted to only one-fifth of that in 1930, a fact which is indicative of the depression of the Chinese silk trade.

"The price of raw silk dropped to a new low level in 1934.... The 1934 price level for the same quality of silk was only one-third of the 1930 price level."^[15]

The internal market for silk has shrunk at the same time due to the same forces of industrial revolution affecting the weaving industry. The consequence of the shrinkage of the market is the breakdown of the traditional domestic silk industry in the rural district. The traditional specialization in the silk industry and its recent decline form the background of the economic life of the village in the present analysis.

[4] The Village Site

Let us examine the village itself. The land occupied by the people in this village consists of eleven *yu*. *Yu* is the local term for the unit of land surrounded by water. Each *yu* has its own name. Its size is determined by the distribution of streams and thus varies. The total area of land of this village is 3,065 *mow* or 461 acres. The names and sizes of these eleven *yu* are given in the following table, according to the official survey of 1932. Two of the *yu* belong in part to other villages, and, since there are no clear boundaries, I can only make a rough estimate of the portion belonging to Kaihsienkung.

936.062	Angiow
546.194	Kioh Hsi Tou <i>yu</i>
458.101	Si <i>yu</i>
275.113	Kioh <i>yu</i>
251.820	Hoh <i>yu</i>
174.116	Yu
173.263	ang Pa
70.546	ü <i>yu</i>
56.456	ü <i>yu</i>
96.186	eng Kioh
85.45	Tien <i>yu</i>
3,065.804	
461.12	acres

尽管如此，一直到1923年，蚕丝的产量一直是在增加的，虽然增长的幅度并不固定。由于蚕丝价格下跌，出口量的增长并不一定意味着收入的增加。从1923年以后，出口量便就此一蹶不振。1928年至1930年间，出口量下降率约为20%。^[16] 1930年至1934年间，下降得更为迅速。“1934年下半年，由于日本向美国市场倾销蚕丝，中国蚕丝出口量随之降到最低水平。出口蚕丝量共计仅为1930年的五分之一。这一事实，说明了中国蚕丝贸易的不景气。

“1934年生丝价格跌到前所未有的更低的水平。……同样质量的丝，1934年的价格水平仅为1930年的三分之一。”^[17]

工业革命影响丝织业的力量同样使国内蚕丝市场缩小。市场缩小的结果带来了农村地区传统家庭蚕丝手工业的破产。传统的专业化蚕丝业及其近年来的衰落就形成了我们目前所分析的开弦弓村的经济生活背景。

四、村庄

现在让我们来观察一下村庄本身。村里的人占有土地共11圩。圩是土地单位，当地人称一块环绕着水的土地为一“圩”。每个圩有一个名字。圩的大小取决于水流的分布，因此各不相等。该村土地的总面积为3,065亩（或461英亩）。据1932年官方勘测，各圩的名称及面积如下表所示，其中有两圩部分属于其他村子，由于无明显的界限，我只能粗略地估计属于开弦弓那部分土地的面积：

西长圩	986.402亩
城角西多圩	546.141亩
龟字圩	458.010亩
城角圩	275.110亩
凉角圩	261.320亩
西多圩	174.146亩
潘乡背	173.263亩
多字圩	70.540亩
吴字圩	56.469亩
北城角	55.858亩
新添圩	8.545亩
总计	3,065.804亩
或461.12英亩	

The land can be roughly divided into two parts: namely, that used for cultivation and that used for dwellings. The residential area occupies rather a small portion. It is found at the junction of three streams and the houses are distributed on the margin of four yu. Names of these yu and number of houses on each are given in the following table:

133	h'eng Kioh yu
115	Liang Kioh yu
115	Hsi Chang yu
117	T'an Chia Têng (Wu Tsŭ yu)

3601 .

The plan of the residential area must be studied in relation to the communication system of the village. In this region, boats are extensively used for heavy and long-distance traffic. The land routes connecting different villages and towns are mainly used for pulling the boats against unfavourable currents and winds. People usually come to the village by boats, except a few pedlars. Nearly every household possesses at least one boat. The importance of the boat in communication means that the houses must be near the water and consequently determines the plan of the village. Villages grow up

along the streams; at the junction of several streams, bigger villages are found. As we can see from the accompanying map, the backbone of Kaihsienkung village is formed by three streams, designated here as A, B, and C. Stream A, the main one, runs like an arc, and from this the village gets its name. Kaihsienkung literally means open-string-bow.

Boats are not convenient for short distances or very light traffic inside the residential area. Roads are built for communication between the houses. In this case, the streams represent obstacles to communication and the separated *yu* must be connected by bridges.

土地可略分为两部分：庄稼用地及居住用地。住宅区仅占相当小的部分，就在三条小河的汇集处，房屋分散在四个圩的边缘。这四个圩的名称及每个圩边的房屋数目如下：

I.城角圩.....	133
II.凉角圩.....	95
III.西长圩.....	75
IV.谈家墩（吴字圩）.....	57
总计.....	360

研究住宅区的规划必须同村子的交通系统联系起来。在这个地区，人们广泛使用船只载运重物进行长途运输。连接不同村庄和城镇的陆路，主要是在逆流、逆风时拉纤用的，即所谓塘岸。除了一些担挑的小商人之外，人们通常乘船来往。几乎家家户户都至少有一条船。由于船只在交通运输上的重要位置，为便利起见，房屋必须建筑在河道附近，这就决定了村子的规划。河道沿岸，大小村庄应运而生；大一些的村子都建在几条河的岔口。正如我们可以从附图上看到，开弦弓的“脊梁骨”系由三条河组成，暂且定名为A、B和C。河A是主流，像一张弓一样流过村子，开弦弓便由此而得名。字面上的意思就是：“拉开弦的弓”。

在住宅区内，用船装载轻便的东西，或作短距离运输，不甚方便。因此在住房之间修起了道路以利往来。在这种情况下，河流就成了交通的障碍。各圩被河流所分割，必须用桥来连接。

The road system of this village does not form a complete circle. In the northern part of *yu* III, a large part of the land is used for farming. In that part, there are only small paths among the farms, and they are not convenient for walking, especially during wet weather. Owing to this fact the bridge at the west end of Stream A is the central point in the system. Small shops are concentrated largely around the bridges, especially the bridge at the west end (XIV-8).

Nevertheless, in the village plan, there is no special place where the public life of the people is concentrated. Except for the informal gatherings in the summer evenings around the bridges, there has been no organized public gathering for more than ten years, since the annual opera performance was suspended.

The headquarters of the village headmen is at the east end in the co-operative silk factory. The position of the factory was selected for technical reasons. The current of Stream A runs from west to east. To avoid adding the dirt of the factory to the stream which provides the daily water supply of the people along the stream, the factory was built at the lower course.

Map III The Village Plan
地图III 村庄详图

Two temples are found on the outskirts of the residential area: one at the west end and the other at the north end. But the position of the temples does not mean that the religious life of the people is concentrated on the outskirts. In fact, their religious life is largely carried on in their own houses. It would be more correct to regard the temples as the residences of priests and gods, who are not only segregated some distance apart from the ordinary people but are also separated from everyday community life except on special ceremonial occasions.

The public school is at the south end. The building was originally used as the office of the silk reform bureau. It was given to the school when the factory was established.

The residential area is surrounded by farming land, which is low owing to the irrigation system (X-1). The area suitable for buildings has been covered by houses and for a long time has not expanded.

这个村的陆路系统不能形成完全的环行路。在圩III的北部，大部分土地用来耕种，田间仅有小路，不便于行走，雨天尤其如此，因此，河A西端的桥便成了交通中心。小店铺大多集中在各桥附近。特别是集中在村子西边的桥旁（第十四章第八节）。

虽然如此，村庄的规划中却没有一个人们集中起来进行公共活动的专用场所。自从一年一度的唱戏停止演出后，除了夏天夜晚人们随意地聚集在桥边乘凉以外，十多年来，从未有过组织起来的公众集会。

村长的总部设在村子东端合作丝厂里面。厂址的选择是出于技术上的原因。河A的水自西向东流。由于河A供给沿岸居民的日常用水，所以把厂子建在下游，以免污染河水。

在住宅区外围有两座庙，一个在村西，一个在村北。这并不意味着人们的宗教活动都集中在村外边进行。实际上，他们的宗教活动多数都在自己家里开展。比较确切地说，庙是和尚及菩萨的住所。和尚、菩萨不仅同普通的人隔开一段距离，而且也与社区的日常生活隔开，但进行特殊仪式时除外。

公办小学在村的南端。校舍原先用作蚕丝改进社的办公室。合作丝厂建立以后便把房子给了学校。

住宅区周围都是农田，由于灌溉系统的缘故，农田地势较低（第十章第一节）。适宜于建筑的地区都已盖满了房屋，而且长期没有扩大。

The newly introduced public institutions such as the school and the silk factory could only find their location at the outskirts of the old residential area. Their location is an expression of the process of change in the community life.

[5] The People

A census of the village was taken in 1935. Because no continuous registration of births and deaths has been properly carried out, I can take this census only as the basis for my analysis. In the census, all the residents in this village, including those temporarily absent, are recorded. The figures are summarized in the following table:

Male
79 +
00-70
00-65
00-60
00-55
00-50
00-45
00440
00935
00630
01525
00220
01315
0020
008
3—
00458

Those temporarily residing in the village but living in definite households are recorded in the census in a special class called "Persons living together"; these are not included in the above table. The total number in this class is 25.

The density of population (excluding surface of water in computation) is about 1,980 per square mile. This cannot be compared with the average density of the province. The latter is calculated from the general area of the province which includes the surface of water and uncultivated land; it is a gross density. My figure represents the actual ratio between men and land used. The gross density of the province (Kiangsu), as quoted by Professor Tawney, is 896 per square mile.^[18]

新的公共机构，例如学校和合作丝厂，只有在老的住宅区外围找到地盘。它们的位置说明了社区生活的变化过程。

五、村里的人

1935年该村的人口有过一次普查。因为出生、死亡情况一直没有连续的登记，所以我只能把这次普查结果作为分析的基础。这次人口普查对村里的所有居民，包括暂时不在村里的人口，都做了记录。统计数字见下表：

年龄
79+
60—70
50—65
50—60
50—55
50—50
50—45
50—40
50—35
50—30
50—25
50—20
50—15
50—10
50—5
50—
50—8

对那些暂时寄居在村里农户家里的人口，普查记录专设了一栏。这些人口未包括在上表中。这一栏的总人数为25人。

人口密度（计算时不包括水面面积）约为每平方英里1,980人。这个数字不能与本省的平均人口密度相比，因为省人口密度是根据全省总面积（包括水面及非耕地）来计算的，那是一个总密度。我的数字代表着人和被使用的土地之间的比率。托尼教授所引述的江苏省的人口总密度是每平方英里896人。^[19]

Not all those who reside in the village are indiscriminately considered as villagers. If the inhabitants are asked which are the people who belong to the village, we shall discover that distinction is made locally between natives and outsiders. This is not a legal distinction; from the legal point of view those who reside in a district for more than three years become members of the local community.^[20] But this does not constitute, in the people's eyes, real membership of the village.

To analyse this distinction, it may be better to take concrete cases of those who are considered as outsiders in the village. There are ten such households, and their professions and birth-places are as follows:

Benkiang (Kiangsu)

Miliyang (Kiangsu)
 Gilengshan (A village in the same district)
 Spindriashen (A village in the same district)
 Prichên Tsê
 Pingpo (Chekiang) ping machine
 Sihsiahsing (Chekiang)
 Baichihou (Chekiang)
 Mui-chien (Chekiang)

Their common characters are (1) that they are immigrants and (2) that they are engaged in special professions. But I have no information about the necessary period of residence in order to attain the status of being a native villager. I have, however, known cases of children of the "outsiders" born in the village being treated like their parents. It appears that the distinction is not made solely on the consideration of period of residence.

On the other hand, the fact that none of the outsiders are farmers is significant. Although not all special professions are filled by them, they constitute one-third of the whole group (VIII-2). It prevents them from quick assimilation.

The villagers as a group possess certain cultural peculiarities. One of my informants mentioned three outstanding items to me: (1) that the villagers tend to palatalize the words such as *gon*, *jeu*, etc., in speech, (2) their women do not work on the farm, and (3) their women always wear skirts even in the hot summer. In these respects, they differ even from the people from the nearest town, Chên Tsê.

人们并不认为所有住在村里的人一律都是本村人。如果问本村居民，哪些人是本村的，我们就会发现当地对于本村人和外来人有着明显的区别。但这种区别并不是法律上的；从法律观点看，一个人只要在某地居住三年以上，他就成为当地社区的一名成员。^[21] 可是在人们的眼里，这样的人并不是真正的本村人。

为说明这种区别，不妨举一些具体的例子：那些被当作外来户的村里人。这样的外来户共有10家，其职业和本籍分述如下：

理发匠.....	2镇江（江苏）
磨工兼鞋匠.....	1丹阳（江苏）
杂货商.....	1横掘（同区—村庄）
纺织工.....	1吴家村（同区—村庄）
和尚.....	1震泽
水泵操作者.....	1宁波（浙江）
银匠.....	1绍兴（浙江）
篾匠.....	1金华（浙江）
药商.....	1邬镇（浙江）

他们的共同特点是：（1）都是移民，（2）从事某种特殊职业。我未听说一个外来人究竟需要在本村住多久才能算作本村人，但是我却听说过：外来人的孩子，虽生于本村，仍像其父母一样，被视作外来人。

由此看来，并非完全根据居住期的长短来确定这种区别的。

另一方面，值得研究的是这样一个事实：凡是外来户都不是农民。虽然并非所有特殊的职业都是外来人干的，但他们仍构成了这类人的三分之一（第八章第二节），从事特殊职业使他们不会很快被同化。

作为一个群体，本村人具有一定的文化特色。一个提供资料的本地人向我提到过三个显著特点：（1）本村人说话时，吐字趋于腭音化，例如“讲”、“究”等等；（2）妇女不下田干活；（3）妇女总是穿裙子，甚至在炎热的夏天也穿着。在这几方面，本村人甚至与最近的震泽镇人都不相同。

Those who are regarded as outsiders have not been culturally assimilated. I noticed their non-native accent in speech and non-native way of dressing; for instance, the women in the medicine shop did not wear skirts.

As long as the outsiders preserve their own linguistic and cultural difference, and those are noticed by the natives, they will live on more or less symbiotically in the community. The distinction of natives and out-siders is significant because it has been translated into social relations. The fact that outsiders are all engaged in special professions and possess no land is alone sufficient to indicate that the distinction has far-reaching economic consequences.

[6] Reasons for Selecting the Field

The village as described is of interest in the following respects.

(1) It has been one of the important centres of domestic silk industry in China. The village can therefore be taken as a representative case of the process of change in Chinese industry; the change has been chiefly concerned with the substitution of the factory for the domestic system and the social problems rising therefrom. This is a general process, still going on in China, and also has parallels in different parts of the world. The problem of industrial development in China has its practical significance, but has never been studied intensively with a full knowledge of the social organization of the village. Moreover, in this village an experiment at industrial reform has been made during the past ten years. The social reform activities are of great relevance to the social changes in China; they should be carefully analysed in an objective way. It is possible that through such an analysis certain important but hitherto unnoticed problems may be revealed.

(2) Kaihsienkung is located in an area where, owing to superb natural resources, agriculture has been developed to a very high degree. The institution of land tenure also has here peculiar elaborations. The village would provide a good field for the study of land problems in China.

那些被视为外来户的人，在生活上一直未被同化。我注意到他们的非本地口音及非本地穿着方式，例如，药店里的妇女不穿裙子。

只要外来户保留着他们自己的语言和文化差别，而且本村人注意到这些差别，那么，在这个社区内，外来户总是过着多少有所见外的生活。对本村人及外来户作出区别是颇有意义的，因为这种区别已经具有广泛的社会意义。外来户全部从事特殊职业，没有土地，仅这一事实就足以说明，区别是有其深远的经济后果的。

六、选择这个调查区域的理由

这个村庄有下列值得注意和研究之处：

(1) 开弦弓是中国国内蚕丝业的重要中心之一。因此，可以把这个村子作为在中国工业变迁过程中有代表性的例子；主要变化是工厂代替了家庭手工业系统，并从而产生的社会问题。工业化是一个普遍过程，目前仍在我国进行着，世界各地也有这样的变迁。在中国，工业的发展问题更有其实际意义，但至今没有任何人在全面了解农村社会组织的同时，对这个问题进行过深入的研究。此外，在过去十年中，开弦弓村曾经进行过蚕丝业改革的实验。社会改革活动对于中国的社会变迁是息息相关的；应该以客观的态度仔细分析各种社会变迁。通过这样的分析，有可能揭示或发现某些重要的但迄今未被注意到的问题。

(2) 开弦弓一带，由于自然资源极佳，农业发展到很高水平。有关土地占有制度在这里也有特殊的细节。开弦弓将为研究中国土地问题提供一个很好的实地调查的场地。

(3) The extensive use of water communication in that region, with its net-like distribution of water ways, has led to a special relation between town and village, which is different from that found in North China. We are thus able to study a typical case of a marketing system based on water transport.

Besides these considerations, I had special facilities in investigating this village. My investigation had to be limited to a period of two months. It would have been impossible in this short time to carry out any intensive study, if I had worked in an entirely unfamiliar field. Kaihsienkung is a village belonging to the district of Wukiang of which I am a native. I thus started with certain linguistic advantages. Differences in Chinese dialect is one of the practical difficulties in carrying out field investigation. The people in villages usually cannot understand any other dialect besides their own. Being a native of the district, it was not necessary for me to spend time in learning the local dialect. The community feeling of being a native of the same district also enabled me to penetrate into more intimate life without arousing suspicion.

Above all, in this village I could fully utilize the personal connections of my sister, who, being responsible for the silk reform, had gained the confidence of practically every person in the village. I could without any difficulty secure the best possible co-operation of the villagers in general and the village heads in particular. Having

understood my intention, they not only supplied me with all possible material, but made very intelligent and valuable suggestions and explanations to facilitate my investigation. Furthermore, I had visited the village several times before and had been kept continuously informed by my sister about the conditions there. Thus I could go directly into the problem without wasting my time in preliminary work.

My investigation covered the two months of July to August, 1936. Within this time limit, I was naturally not able to follow the complete annual cycle of social activities. However, these two months are significant in their economic life. They cover the last part of the silk industry and the first part of the agricultural work. Supplemented by oral information and my past experiences, the material so far gathered concerning their economic life and the related social institutions is enough for a preliminary analysis.

(3) 这个地区广泛使用水上交通，有着网状分布的水路，因而城乡之间有着特殊的关系，这与华北的情况截然不同。这样我们就能够通过典型来研究依靠水上运输的集镇系统。

除去这些考虑之外，我调查开弦弓村还具备特殊便利的条件。由于时间有限，我的调查必须在两个月之内完成。如果我在一个全然不熟悉的地方工作，要在这样短的时间内进行任何细致的研究是不可能的。开弦弓村属于吴江县，而我就是吴江人，我首先在语言上就有一定的有利条件。中国各地方言的差别是进行实地调查的实际困难之一。村里的人们除自己的方言外，一般不懂得任何其他方言。作为一个本地人，就不必再花费时间去学习当地方言。而且同乡的感情使我能够进一步深入到人们的生活中去，不致引起怀疑。

尤其是在这个村里，我可以充分利用我姐姐个人的联系。我姐姐负责蚕丝业的改革，村里的人确实都很信任她。我能够毫无困难地得到全村居民的通力合作，特别是村长们的帮助。他们理解我的意图，不仅尽一切可能提供材料，而且还提出一些可行的办法和有价值的建议，这使我的调查得以顺利进行。此外，我以前曾多次访问过该村，姐姐也继续不断地向我提供该村的情况。因此，我一开始就能直接进入调查本身，无须浪费时间去做那些初步的准备工作。

我的调查历时两个月，是在1936年的7月至8月进行的。在这有限的时间内，我自然不能对完整的一年为周期的社会活动进行调查。然而，这两个月在他们的经济生活中是有重要意义的，包括了一年中蚕丝业的最后阶段及农活的最初阶段。以我过去的经验及人们口头提供的资料作为补充，到目前为止，我所收集到的关于他们的经济生活及有关社会制度的材料，足以进行初步的分析。

[1] Professor A. Radcliffe-Brown gave a lecture in Yenching University, Peiping, in 1935 on the problem of intensive study of Chinese villages. Following this lecture, Dr. Wu Wen-tsao has published a series of articles on the problem in Social Research

- Weekly, Yih Shih Pao, Tientsin. Recently Dr. Raymond Firth has discussed the problem in his article, "Stability in North China Village Life," The Sociological World, Vol. X, in Chinese.

CHAPTER III THE CHIA

The basic social group in the village is the Chia, an expanded family. The members of this group possess a common property, keep a common budget and co-operate together to pursue a common living through division of labour. It is also in this group that children are born and brought up and material objects, knowledge, and social positions are inherited.

Larger social groups in the village are formed by combining a number of Chia for various purposes and along kinship or territorial principles. Associations based on individual membership are few and secondary. The following four chapters will provide a social background of the village for our study of its economic life.

[1] Chia as an Expanded Family

The term family, as commonly used by anthropologists, refers to the procreative unit consisting of parents and immature children. A Chia is essentially a family but it sometimes includes children even when they have grown and married. Sometimes it also includes some relatively remote patrilineal kinsmen. We can call it an expanded family, because it is an expansion of a family due to the reluctance of the sons to separate from their parents after marriage.

Chia emphasizes the inter-dependence of parents and children. It gives security to the old who are no longer able to work. It tends to ensure social continuity and co-operation among the members.

In a given economy, the indefinite expansion of the group may not be advantageous. In the process of expansion social friction among the members increases. As we shall see presently, the Chia will divide whenever the division proves to be advisable. The size of the group is, therefore, maintained by the balance of the opposing forces working for integration on the one hand and for disintegration on the other. We shall analyse these two forces in the following sections.

Some quantitative data about the size of the Chia in the village may be helpful for our further discussion. In spite of the fact that most studies of China have stressed the importance of the large-family system in China, curiously enough, in this village a large-family is rare. In less than ten per cent. of the total number of Chia do we find more than one married couple.

叁 家

农村中的基本社会群体就是家，一个扩大的家庭。这个群体的成员占有共同的财产，有共同的收支预算，他们通过劳动的分工过着共同的生活。儿童们也是在这个群体中出生、养育并继承了财物、知识及社会地位。

村中更大的社会群体是由若干家根据多种不同目的基于亲属、地域等关系组成的。由个人成员组成的社团很少而且占次要地位。以下四章将提供该村的社会背景以便我们研究其经济生活。

一、家，扩大的家庭

“家庭”这个名词，人类学家普遍使用时，是指一个包括父母及未成年子女的生育单位。中国人所说的“家”，基本上也是一个家庭，但它包括的子女有时甚至已成年或已婚。有时，它还包括一些远房的父系亲属。之所以称它是一个扩大的家庭，是因为儿子在结婚之后并不和他们的父母分居，因而把家庭扩大了。

家，强调了父母和子女之间的相互依存。它给那些丧失劳动能力的老年人以生活的保障。它也有利于保证社会的延续和家庭成员之间的合作。

在一定的经济条件下，这个群体本身无限的扩展很可能是不利的。在扩展进程中，其成员之间的磨擦增加了。我们即将看到，家是会分的，即所谓“分家”。而且，分家只要较为可取，它就分。因此，家的规模大小是由两股对立的力量的平衡决定的：一股要结合在一起的力量，另一股要分散的力量。在下面几节里，我将分析这两股力量。

关于这村里家的规模，有一些定量的数据可以帮助我们进一步开展讨论。尽管大部分对中国的研究强调中国大家庭制度的重要性，但很奇怪，在这个村里，大家庭很少。在家的总数中，我们发现有一对以上已婚夫妇的家不到十分之一。

The most common type is that which consists of a nucleus of a married couple and several dependent patrilineal relatives. In fact, more than half, or 58 per cent. of the total, are of this type. But there is not a married couple in every Chia. Sometimes, for instance, after the death of her husband, a woman lives with her children without joining another unit. It may also be the case that a father lives with his son without a woman in the house. These are cases resulting from social disorganization, mainly due to the death of working members of the group; they are consequently unstable. Either the widower will remarry or the child will marry in the earliest possible future so that a normal functioning of the group can be restored. This type of unstable Chia amounts to 27 per cent. of the total.^[1]

An average Chia in the village consists of four persons. This is by no means an exception, and indicates the smallness of the group. Evidences from other rural districts in China give a similar conclusion. The variation lies between six to four persons per family.^[2] The so-called large-family is chiefly found in towns and evidently has a different economic basis. For the present material, it can be said that in the village here described, the Chia is a small kinship group

consisting of a family as its nucleus and several dependent relatives.

[2] Continuity of "Incense and Fire"

The parent-child and the husband-wife relations are two fundamental axes in the family organization. But in the Chia the former seems more important. The essential character of the Chia is that married sons do not always leave their parents, especially when either father or mother is dead. Furthermore, to find a bride for a young man is regarded as part of the parental obligation. Mates are selected and ceremonies arranged by the parents. On the other hand, the legal act of marriage, although preceding the birth of the child, always anticipates the realization of parenthood. The main purpose of marriage, in the village, is to secure the continuity of descent. To ensure posterity is the chief consideration in the selection of a daughter-in-law and this is explicitly expressed in the consultations which are held with the fortune-tellers. The incapacity of a daughter-in-law to fulfil her obligations may be taken as a strong ground for her repudiation without compensation. Again, the full status of a woman is acquired after the birth of her child. Similarly, the affinal relation remains impotent unless a child is born. It is, therefore, justifiable to start our description of the organization of Chia from the parent-child relation.

最常见的类型是：以一对已婚配偶为核心，再包括几个依赖于此家的父系亲属。事实上，超过一半的家，准确地说，占总数58%的家都属于此类。但并不是每一个家都有一对已婚配偶。有时候，在一个妇女丧夫之后，她就和她的子女在一起生活，而不去加入另一个单位。也有这样的情况，一个父亲和他儿子居住在一起，家中没有女人。这些都是社会解组的结果，主要是由于这个群体中从事劳动的成员死亡所致，因而它们是不稳定的。鳏夫会再结婚，孩子也会在不久的将来，一有可能就结婚。任何一种情况都能使一个不正常的家庭得到恢复。这一类不稳定的家占总数的27%。^[3]

村中，一个家的成员平均为4人。这说明这种群体是很小的，而且这绝不是一种例外的情况，从中国其他农村地区的材料也可以得出同样的结论。中国农村家庭，平均的人数大约是在4至6人之间。^[4] 所谓大家庭，看来主要存在于城镇之中，很明显，它们具有不同的经济基础。就现有材料看，可以说，这个村里的家是一个小的亲属群体，以一个家庭为核心，并包含有几个依靠他们的亲属。

二、“香火”绵续

父母与子女、夫与妻这两种关系是家庭组织的基本轴心。但在中国所谓的“家”中，前者的关系似乎更为重要。家的基本特征是已婚的儿子中往往有一个不离开他们的父母，父母之中如有一人亡故，更是如此。此外，为儿子找一个媳妇被视为父母的责任。配偶由父母选就，婚礼由父母安排。另一方面，婚姻的法定行为尽管先于生孩子，但结婚总是为了有后代。生孩子的期望先于婚姻。在农村中，结成婚姻的主要目的是为了保证传宗接代。选聘媳妇的主要目的是为了延续后代，保证生育男儿是向算命先生明白提出的要求。如果当媳妇的没有能力来完成她的职责，夫家就有很充足的理由将她遗弃而无需任何赔偿。妇女在生育了孩子之后，她的社会地位才得到完全的确认。同样，姻亲关系只有在她生育孩子以后才开始有效。因此，先从父母与孩子的关系着手来描述和研究家的组织是有根据的。

The importance of the posterity is conceived in religious and ethical terms. The local term for the continuity of descent is "continuity of incense and fire"; this means a continuity of ancestor worship. Beliefs connected with the relation of living descendants to the spirits of their ancestors are not clearly and systematically formulated among the people. The general view is that the spirits live in a world very similar to ours, but that economically they are partially dependent on the contributions of their descendents which are made by periodically burning paper money, paper clothes, and paper articles. Therefore it is essential to have someone to look after one's well-being in the after-world.

Some explain the importance of having children on purely ethical grounds. They conceive it to be their duty because it is through their children that they can pay back their debt to their own parents. Thus the desire to have children is backed up by a two-fold motive: it ensures, in the first place, the continuity of the line of descent; and, in the second place, it is a concrete expression of filial piety by the future father towards his ancestors.

These beliefs, while undoubtedly connected with religious and ethical ideas, have also practical value. In later sections I shall show how the child helps the development of intimate relations between husband and wife, who are little acquainted with one another before marriage. The child stabilizes the relations in the domestic circle. The economic value of the child is also important. A child starts contributing very early to the family welfare, often before he is ten

years of age, in such tasks as collecting grass to feed sheep. A girl is specially useful in the daily house work and in the silk industry. Moreover, when a boy grows up and gets married, his parents are relieved by the young couple of the full burden of work on the land and in the house. When the parents are old and unable to work, they are supported by their sons. This is illustrated by the following fact: there are 145 widows in this village who are unable to live on their own resources, but this does not constitute a serious social problem because most of them are supported by their adult children. Children in this sense are insurance for old age.

Social continuity in kinship is complicated by the unilateral emphasis of affiliation. Membership and property of a person is not trans-mitted equally to the son and daughter. Emphasis is on the male side. During childhood both male and female children are cared for by their parents. Both assume their father's surname, but when they grow up, and get married, the son will continuously live in the parents' house before division while the daughter will leave her parents and live with her husband. She will add her husband's surname to her own. She has no claim on the property of her parents except what she gets as dowry. She also has no obligation to support them except by offering periodical gifts and occasional financial help as their affinal relations (XV-2). Property is inherited by the son whose obligation it is to support the old (IV-3). In the third generation, only the children of the son carry on the continuous line of affiliation. The children of the daughter are regarded as affinal relatives, and assume their father's surname. Therefore, in the village, the principle of descent is patrilineal.

传宗接代的重要性可以从宗教和伦理角度加以理解。传宗接代，用当地的话说就是“香火”绵续，意思是，不断有人继续祀奉祖先。关于活着的子孙和他们祖先鬼魂之间联系的信仰，在人们中间不太明确，也没有系统的说法。大致的观点是：这些祖宗的鬼魂生活在一个和我们非常相像的社会中，但在经济方面他们部分地依靠子孙所作的奉献，这就是定时地烧纸钱、纸衣服和其他纸扎的模拟品。因此，看来死者在阴间的福利还是要有人来照管的。

有人用纯伦理的观点来解释生育子女的重要性。他们认为这是一种做人的责任，因为只有通过他们的子女才能向自己的父母偿还他们对自己的抚育之恩。因此，要有子女的愿望是出于双重的动机：首先是传宗接代；第二是向祖宗表示孝敬。

这些信仰，无疑地和宗教及伦理观念联系在一起，同时也有实际的价值。在以后的章节里我将说明子女如何有助于建立夫妇间亲密的关系，因为丈夫和妻子在结婚前是互不相识的。子女还起着稳定家庭群体里各方关系的作用。子女的经济价值也是很重要的。孩子很早就开始给

家庭福利作出贡献，常常在十岁之前，就打草喂羊。女孩在日常家务劳动及缫丝工业方面是非常有用的。再者，孩子长大结婚后，年轻的夫妇代替父母担负起在田地上及家庭中的重担。当父母年老而不能劳动时，他们就由儿子们来赡养。这些可以由以下的事实来说明：这个村子中有145名寡妇，她们不能靠自己的经济来源维持生活，但这并没有形成一个严重的社会问题，因为她们之中的绝大多数都由成年子女赡养。从这个意义上来说，孩子是老年的保障，即所谓“养儿防老”。

亲属关系的社会延续问题，由于强调单系的亲属关系而变得复杂起来。一个人的身份和财产并不是平等地传递给子女的。总是把重点放在男性这一边。在幼年时期，男孩和女孩都由父母抚养。他们都用父亲的姓氏。但当他们长大成亲后，儿子在分家前还继续住在父母的房屋里，而女儿则离开父母去和自己的丈夫住在一起。她在自己的姓名前要加上丈夫的姓氏。她除了能得到自己的一份嫁妆外，对自己父母的财产不能提出什么要求。出嫁的女儿，除了定时给父母送礼品及有时给父母一些经济帮助外，她也没有赡养自己父母的责任（第十五章第二节）。财产由儿子继承，他的责任是赡养其父母（第四章第三节）。在第三代，只有儿子的儿子接续他的家系。女儿的孩子则被视为亲戚关系，他们使用自己父亲的姓氏。因此，在村子中，传代的原则是父系的。

This principle, however, can be modified in case of need. By agreement, a daughter's husband may add his wife's surname to his own and their children will carry their mother's line. Sometimes the husband and wife may carry both lines of their parents. These however are minor obliterations of the general principle and appear only in specific circumstances (IV-4). The present legal system has attempted to alter the traditional unilateral emphasis of kinship affiliation owing to the new conception of sex equality (IV-6). We will discuss these obliterations later.

[3] Population Control

In spite of the fact that the villagers recognize the importance of posterity, there is a limiting factor for population. It is true that children can contribute labour to the domestic economy, but there must be enough work on which it can be utilized. With land holdings of limited size, and with limits to the extent of silkworm raising, surplus members of a Chia will be merely a burden to the unit. This brings us to an examination of the average size of a land holding in the village.

The total area of cultivated land is 3,065 *mow* or 461 acres. If this area were equally allotted to 360 households, it would mean that each household could only occupy a piece of land about 9.5 *mow* or 1.2 acres in size. Each *mow* of land can produce in a normal year six bushels of rice. About twenty-seven bushels of rice is needed for the consumption of one man, one woman, and one child (VII-5). In other words, to obtain sufficient food, a family group needs a piece of land of about five *mow*. The present size of land holdings is hardly sufficient to provide an average household with a normal livelihood which requires sufficient food and other necessities. The pressure of population on the land is thus a strong limiting factor on the number of children. For example, a family, with a small holding of nine *mow*, will face a serious problem if a second boy is born. According to local custom, the children when grown up will divide the estate. This will mean poverty for both sons. The usual solution is infanticide or abortion. The people do not attempt to justify these practices and admit that they are bad. But there is no alternative except poverty and "crime." The result can be seen in the figures of the total number of children in the village: there are only 470 children under sixteen years of age, 1.3 per Chia.

然而，这个原则有时也可以根据需要加以修改。经过协议，女儿的丈夫也可以在自己的姓名前面加上他妻子的姓，他们的孩子则接续母亲的家系。也有时夫妇双方各自接续双方的家系。总之，这些是总的原则在特定条件下的次要变动（第四章第四节）。由于男女平等的新概念，现行的法律制度企图改变这种传统的偏重单系的亲属制度（第四章第六节）。关于这些变化，留到以后再加以讨论。

三、人口控制

尽管村中的人认识到后代的重要性，但现实中还存在着必须限制人口的因素。儿童的劳动能对家庭经济作出贡献，这是事实，但必须要有足够的劳动对象来利用这些劳动力，由于拥有土地的面积有限，能养多少蚕也有限度，家中多余的成员，成了沉重的负担。有鉴于此，让我们先来观察一下这个村平均的土地拥有量情况。

该村的总面积为3,065亩，农地占90%，如果将2,758.5亩农田平均分配给274家农户，则意味着每户只能有一块约10.06亩大的土地。正常年景，每亩地能生产6蒲式耳稻米。一男、一女和一个儿童一年需消费33蒲式耳稻米（第七章第五节）。换句话说，为了得到足够的食物，每个家庭约需有5.5亩地。目前，即使全部土地都用于粮食生产，一家也只有大约60蒲式耳的稻米。每户以4口人计算，拥有土地的面积在满足一般家庭所需的粮食之后仅能勉强支付大约相当于粮食所值价的其他生活必需品的供应。因此，我们可以看到，这个每家平均有4口人的村子，现有的土地已受到相当重的人口压力。这是限制儿童数量的重要因素。按照当地的习惯，孩子长大后就要分家产。有限的土地如果一分为二，就意味着两个儿子都要贫困。通常的办法是溺婴或流产。人们并不为这种行为辩护，他们承认这是不好的，但是有什么别的办法以免贫穷呢？从这个村子中儿童的总数可以看到这个结果：16岁以下儿童，总共只有470名，平均每家长1.3个。

The practice of infanticide is more often for the female children. The patrilineal descent and the patrilocal marriage have effected the social status of women. A girl is of less value in the eyes of the parents because she cannot continue the "incense and fire" and because as soon as she is mature, she will leave her parents. In consequences, the ratio of females in the age group 0-5 is unusually low. There are only 100 girls to 135 boys (II-5). Only in 131 Chia, or 37 per cent. of the total, are there girls (under sixteen) among their children (excluding *siaosiv*), and in only fourteen Chia is there more than one girl.

Since population control is considered as a precaution against poverty, families with comparatively large estates are free to have more children. They are proud of their numerous children, and these are taken as a sign of their wealth in the eyes of the people. The desire for posterity, the dislike of infanticide and abortion, and economic pressure—these factors work together to equalize land holdings (XI-6).

[4] Parents and Children

Before the birth of a child, the mother has already definite obligations toward it. During pregnancy, the mother must abstain from violent emotion, from looking at abhorrent things, and from eating certain types of food. There is an idea that the foetus needs education. Good behaviour by the mother is expected to affect the future personality of the child. No special obligations are, however, incurred by the father, except perhaps abstaining from sex relations with his wife, since this is considered unfavourable to the physiological development of the child and may lead to its early death.

杀害女婴就更为经常。父系传代及从父居婚姻影响了妇女的社会地位。在父母亲的眼中，女孩的价值是较低的，因为她不能承继“香火”，同时，她一旦长成，就要离开父母。结果0~5岁年龄组的性比例是：100个女孩比135个男孩（第二章第五节）。只在131家中，即占总数37%的家中，有16岁以下的女孩（不包括“小媳妇”），只在14家中，有一个以上的女孩。

正因为人口控制是为了预防贫穷，一些有着较大产业的家庭就不受限制地有更多的子女。他们对自己有为数众多的子女感到自豪，而在人们的眼中，又视之为富裕的象征。有后嗣的愿望、厌恶杀婴与流产及经济上的压力等等，这些因素同时发生作用使土地的拥有量趋向平均化（第十一章第六节）。

四、父母和子女

孩子出生之前，当母亲的已经有了明确的责任。在妊娠期间，当母亲的要避免感情冲动，避免观看令人憎恶的事物，禁忌吃某些食物等。人们已经有了胎教的观念。人们认为母亲的良好行为会影响到孩子将来的性格。对父亲则无特殊的要求，只是认为他应避免和妻子同房，因为这被认为对孩子的生理发育不利，甚至可能导致夭亡。

Expectation and fear cause a general tension in the house. The pregnant woman is recognized to be in a special position and is exempted from her various household duties. The exemption is associated with the sense of uncleanliness of sex matters. Her own parents share the tension. Shortly before the child is delivered, they will offer a kind of medical soup to their daughter. Her mother will stay in her room for several days to look after her. It is also the duty of her own mother to clean all the soiled clothes and wait on her daughter after delivery.

It is not customary for the mother to take a long period of rest after the child is born. She resumes her work in the household within a week. This practice was regarded by my informant as the cause of the high death rate of women after childbirth. The actual death rate is not known. But in the population statistics, there is an apparent fall in numbers in the age group of females of 26-30 and 41-45 (II-5); this indicates the fact.

Infantile mortality is also high. If we compare the number of individuals in the age group 0-5 with that in the age group 6-10, a big decrease is observed. The difference between the groups is 73 individuals, or 33 per cent. of the group. This phenomenon is also reflected in the belief in "spirit sadism." In the ceremony of *menyu*, literally "child-reaching-full-month," the child will be shaved and given a personal name by his maternal uncle. This is usually a name of abuse, such as dog, cat, or monk. The people believe that the lives of the children, particularly those who are specially regarded by their parents, are sought by devil spirits. A way of protecting the child is to show the spirits that there is no one interested in it; the theory is that spirits, being sadists, will then dis-continue their intervention. This is sometimes carried so far that children are nominally given for protection to somebody who is considered to have greater influence, or even to gods. This pseudo-adoption will be described later (V-3). The parents' outward expression of love of their children is thus

carefully concealed.

The attitude of the parents and elder relatives towards children must be understood in relation to these factors—the need for population control due to economic pressure, the small number of children, the high infant mortality, the belief in spirit sadism, the desire for posterity and the connected religious and ethical ideas. As a result of these factors, we can see that the children who survive are highly valued, even though there is an outward show of indifference.

对生育的期待与恐惧，使家庭充满了紧张的气氛。怀孕的妇女被认为处于特殊地位并免除了她各项家务劳动。这是因为人们对性有一种不洁净的意识。她自己的父母也分担了这种紧张。小孩快出生之前，娘家的父母给她喝药汤。母亲要在女儿房里陪住几天，以便照顾她。她的母亲也有责任去洗涤污脏的衣服，并在产后，守在她身边。

孩子出生后，按习惯，当母亲的不长期休息。她在一个星期之内便恢复家务劳动。当地向我提供情况的人认为，这种做法是造成妇女产后高死亡率的原因。真实的死亡率还不得而知，但在人口统计中，26~30岁及41~45岁两年龄组妇女人数的明显下降（第二章第五节）说明了这个问题。

婴儿的死亡率也是高的。如果把年龄组0~5岁与6~10岁相比较，会发现人数有很大的下降。两组数字相差为73人，占这个组总数的33%。这种现象也反映在当地人迷信“鬼怪恶煞”。孩子“满月”时要剃头，并由孩子的舅父起一个小名。这通常是一个带贬义的名字，如阿狗、阿猫、和尚等等。人们迷信孩子的生命会被鬼怪追索，受父母宠爱的孩子尤其如此。保护孩子的一种办法，就是向鬼怪表示，没有人对这孩子感兴趣；其理由是鬼怪性喜作恶，看父母溺爱孩子，就要进行打击；孩子既然受到冷淡，鬼怪就不再继续插手了。甚至有时采取这样一些方法，名义上把孩子舍给那些被认为大有影响、甚至在神道面前也是很有影响的人物，以求得保护。这种假的领养孩子的办法以后还会讲到（第五章第三节）。因此，父母原来在表面上表露出来的对孩子的珍爱，被小心地掩藏起来了。

关于父母以及长亲对孩子的态度问题，必须联系下述各种因素来加以理解。这些因素是：由于经济压力需要控制人口；儿童为数很少；婴儿死亡率高；迷信鬼怪恶煞；要子嗣的愿望及有关的宗教伦理观念。从这众多因素的结合中可以看到，活下来的孩子便受到高度的珍爱，虽然从表面上看，对待孩子的态度是淡漠的。

The children in the village cling to their mothers all the day long. The cradle is little used if there are arms available for nursing the babies. The period of suckling lasts three or more years. The time of feeding is not fixed. Whenever the child cries, the mother will at once put her nipple into the child's mouth to keep the child quiet. Moreover, women in the village do not go to the farm, but work

almost all the day in the house. Contact between mother and child is thus in ordinary circumstances almost uninterrupted.

The relation between the father and the child is slightly different. The husband has no special duties during his wife's pregnancy and child delivery. For more than half the year, men are at work outside the house. They go out in the early morning and come back in the evening, the chance of contact between them and the children is relatively less. During the child's infancy, so far as the child is concerned, its father is only an assistant of its mother and sometimes an occasional playmate. The husband will take over a part of his wife's work, even in the kitchen, to relieve his wife when she is nursing the child. I have seen young husbands holding their babies awkwardly in their arms in the evening when enjoying their leisure after hard work in the daytime.

As the child grows, the father's influence over the child increases. In the case of boys, the father is the source of discipline; less so in the case of girls. The mother is more or less indulgent; when a child is mischievous the mother often will not punish him directly but threaten to tell his father. The method adopted by the father is usually beating. Very often in the evening a big storm will burst out in a house and show that a child is being beaten by a bad-tempered father. As a rule this is ended by the mediation of the mother. Sometimes, the result is a dispute between husband and wife.

Children more than six years old are usually engaged in collecting grass to feed the sheep. This job is congenial to them because it permits a free run in the wild with their companions without any interference from the elders. Girls above twelve generally stay at home with their mothers and are engaged in household work and silk reeling, keeping apart from the children's group.

It is only through a gradual process that a dependent child becomes a full member of the community and it is also by a gradual process that the old retire to a dependent position. These two processes are actually two phases of a general process, that is, the transmission of social functions from one generation to the other—whereby social continuity is secured in spite of biological discontinuity. The social functions of the newcomers, owing to the limited material environment of the community, cannot be acquired without displacing the old. It is specially true in the village where material expansion is very slow. For instance, the total amount of labour required for the land, under the unchanged technique of production, is more or less constant. The introduction of a young man to the land means the displacement of an old man in the working

team.

村里的孩子整天依恋着他们的母亲。只要有可能，孩子总是被抱在手里，很少用摇篮。孩子吃奶要吃到3岁或更长的时间。喂奶无定时。每当孩子哭闹，母亲立刻就把奶头塞到孩子的嘴里，使他安静下来。村里的妇女不到田里劳动，整天在家中忙碌。因此在平常的环境里，母子的接触几乎是不间断的。

孩子与父亲的关系稍有不同。在妻子怀孕和生孩子时，丈夫并没有什么特殊的责任。在一年之中，男人有半年以上的时间在户外劳动。他们早出晚归，父子之间的接触相对地比较少。在孩子的幼年，就孩子来说，父亲只是母亲的一个助手，偶尔还是他的玩伴。在妻子养育孩子时，丈夫会接过她的一部分工作，甚至是厨房里的工作。我曾经看到，一些年轻的丈夫，经过一天忙碌的劳动，在傍晚余暇的时候，笨拙地把孩子抱在手里。

孩子大一些以后，父亲对孩子的影响就增加了。对男孩来说，父亲或为执行家法的主要人物，对女孩子，则管得较少些。母亲对孩子总有点溺爱。当孩子淘气时，母亲往往不惩罚他而只吓唬说要告诉他的父亲。而父亲经常用敲打的办法来惩罚他。傍晚时分，常常听到一所房子里突然爆发一阵风暴，原来是一个坏脾气的父亲在打孩子。通常这阵风波往往由母亲调解而告平息。有时，也在夫妻之间引起一场争辩。

孩子过了6岁就参加打草、喂羊的劳动。孩子们对这种劳动很感兴趣，因为可以和同伴们在田野里随便奔跑而不受大人的任何干涉。女孩子过了12岁，一般都耽在家中，和母亲共同操持家务和缫丝，不再和孩子们在一起了。

只有通过这样一个过程，一个依赖别人的孩子才逐渐成为社区的一个正式成员，同样，通过这种逐渐的变化，老年人退到了一个需要依靠别人的地位。这两个过程是总的过程的两个方面，这就是社会职能逐代的继替。虽然在生物学上一代代的个体是要死亡的，但社会的连续性却由此得到了保证。由于社区的物质条件有限，老的不代谢，新生力量的社会功能就得不到发挥。农村中物质基础的扩大尤其缓慢。例如，在生产技术不改变的情况下，土地所需要的劳力总量一般来说是不变的。一个年轻人的加入便意味着生产队伍里要淘汰一个老人。

This process is gradual but nevertheless the older generation is retreating step by step. In the process, knowledge and material objects are transmitted from the old to the young, and the latter gradually takes over at the same time his obligation towards the community and the older generation. Here we find the problems of education, inheritance and filial obligation.

[5] Education

Children receive their education from their families. Boys of fourteen begin to learn the technique of agriculture from their fathers by practical instruction and participation in the farm work. They become full workers before they are twenty. Girls learn the technique of the silk industry, sewing and other household work from their mothers.

A few words may be added on the school education in the village. The public school is conducted according to general prescriptions of the Minister of Education. The total term for attendance is six years. Instruction is exclusively literary. If a child starts his school days at six, he will still have enough time to learn his main occupations, in agriculture and the silk industry, after twelve. But in the past ten years, sheep raising has become an important domestic industry. As I shall describe later, these sheep are kept in huts and their food must be collected for them (XIII). This has become the children's job. Thus the village economy comes into conflict with the school curriculum.

Furthermore, literary training has not been proved to be very useful in community life. Illiterate parents do not take school education very seriously. Without the help of the parents, primary school education is not very successful. The enrollment is more than a hundred but the actual attendance as some students told me, rarely exceeds twenty, except when the inspector visits the school. Vacations are long. My stay in the village covered a period longer than the official vacation, but I had had no opportunity to see the school at work. The literary knowledge of the students, so far as I could test, is surprisingly poor.

虽然这个过程是缓慢的，但老的一代在逐步隐退。在这一过程中知识和物质的东西从老的一代传递给青年一代，同时，后者便逐步承担起对社区和老一代的义务。因此，也就产生了教育、继承和子女义务等问题。

五、教育

孩子们从自己的家庭中受到教育。男孩大约从14岁开始，由父亲实际指导，学习农业技术，并参加农业劳动。到20岁时，他成为全劳力。女孩子从母亲处学习蚕丝技术、缝纫及家务劳动。

另外还要讲几句村里的学校教育。公立学校根据教育部的教学大纲进行教学。学生就学的时间为六年，是单纯的文化教育。如果孩子在六岁开始上学，在12岁以后还有足够的时间来学习他的主要职业技能——蚕丝业或农业劳动。但在最近的十年里，养羊开始成为一种重要的家庭副业。以后我们还要讲到这个问题。羊是饲养在羊圈里的，因此要为羊打饲草（第八章）。打草就成了孩子们的工作。因此，村子里的经济活动与学校的课程发生了矛盾。

再说，文化训练并不能显示对社区生活有所帮助。家长是文盲，不认真看待学校教育；而没有家长的帮助，小学校的教育是不易成功的。学校里注册的学生有100多人，但有些学生告诉我，实际上听课的人数很少，除了督学前来视察的时间外，平时上学的人很少超过20人。学校的假期很长。我这次在村中停留的时间比学校正式的放假时间长，但我仍没有机会看到村中的学校上课。学生的文化知识，就作文的测验看，是惊人的低下。

Chen, a village head, who had himself been a schoolmaster, complained to me that the new school system could not work in the village. His reasons are worth quoting here: Firstly, the school terms are not adjusted to the calendar of work in the village (IX-3). Students in the school are generally about twelve years old, and have reached the age when practical education must be started. The leisure periods in the calendar of work are two: from January to April and from July to September. But during these periods, the school is closed for the vacation. While the people are busy at the silk industry and agriculture, the school is open. Secondly, the system of education in the school is the so-called "collective" method, that is, the giving of lessons one after another without considering individual absence. Since absence is frequent, the student who has been absent cannot follow the class when he comes back. In consequence students cannot keep up their interest and this causes further absence. Thirdly, the present girl teacher does not command prestige in the village.

I cannot go into the problem in detail here but it is clear that there is a maladjustment of the present educational system to the general social condition in the village. A field study of the educational system in a district in Shantung by Mr. Liao Taichu^[5] shows that the

maladjustment is not limited to this village but is a general phenomenon in Chinese villages. This deserves further systematic investigation from which practical suggestions may be drawn.

[6] Marriage

The problems of inheritance and filial obligation do not arise in normal conditions until the children grow up and get married. Therefore, we can come to the problem of marriage first.

In the village, sons and daughters give their parents a free hand in arranging their marriage affairs and will obey accordingly. It is considered as improper and shameful to talk about one's own marriage. Therefore there is no such thing as courtship. The parties to this transaction are not acquainted with one another; and after the engagement is fixed, must avoid each other.

姓陈的村长，他曾经当过村中的小学校长，向我诉说，认为这种新的学校制度在村中不能起作用。在这里，他的理由值得引述一下：第一，学期没有按照村中农事活动的日历加以调整（第九章第三节）。村中上学的学生大多数是12岁的孩子，他们已到了需要开始实践教育的年龄。在农事活动的日历中有两段空闲的时间，即从1月至4月及7月至9月。但在这段时间里，学校却停学放假。到了人们忙于蚕丝业或从事农作的时候，学校却开学上课了。第二，学校的教育方式是“集体”授课，即一课接着一课讲授，很少考虑个人缺席的情况。由于经常有人缺席，那些缺课的孩子再回来上课时，就跟不上班。结果，学生对学习不感兴趣，并造成了进一步的缺课。第三，现在的女教员在村中没有威信。

在这里，我不能就此问题更深入一步进行讨论，但明显的是，村中现有的教育制度与总的社会情况不相适应。廖泰初先生^[6]在山东地区对教育制度进行了实地调查。从他的材料中可以看到，不适应的情况不限于这个村子，而是中国农村中的普遍现象。应当进一步进行系统的调查以便提出更为实际的建议。

六、婚姻

关于继承问题和子女的义务问题，在通常情况下并不会提出来，要到孩子长大成人并且要结婚的时候才会提出来。因此，我们首先要提到婚姻问题。

在这个村子里，儿女将婚姻大事完全交由父母安排并且服从父母的安排。谈论自己的婚姻，被认为是不适当的和羞耻的。因此，这里不存在求婚这个说法。婚配的双方互不相识；在订婚后，还要互相避免见面。

Arrangements for marriage are made early in the child's life, usually when it is six or seven years of age. This is necessary if there is to be a large range for selection, because children of good families are usually promised very early. My informants repeatedly observed that if a girl is engaged too late, she will not be able to make a good match. But it is improper for a girl's mother to initiate a proposal. Moreover, as mentioned, the relation between mother and daughter is very strong. Marriage means the separation of a girl from her parents, and the mother is therefore usually reluctant to contemplate it. Indeed the girl cannot be retained too long in her parents' house. Under the patrilineal system, a woman has no rights of inheritance to the property of her parents. Her future, even a proper livelihood, can only be received through marriage. A third party is thus needed for making arrangements for the marriage. The villagers state that match-making is a good job, because the service is well paid.

The first step by the match-maker is to ascertain the time of birth of the girl. This is written on a red paper with eight characters defining the year, month, date, and hour of the birth. The parents will not object to anyone to whom these papers are sent by the match-maker—at least so they pretend. The match-maker carries the paper to the family of an eligible boy and lays it before the kitchen god. She then explains her mission. A boy of an ordinary family usually receives more than one such red paper at a time. Thus his parents are able to make a choice.

The next step is for the boy's mother to bring the red papers to a professional fortune-teller, who will answer questions (according to a special system of calculation based on the eight characters) as to the compatibility of the girls in question and the members of the boy's Chia. He will suggest the relative merits of each girl, tactfully leaving his client to express her real attitude, and give a decision accordingly.

Even if the fortune-teller gives a judgment against his client's wishes, which are usually uncertain, the latter is not bound to take this as final. She can seek a further consultation with the same fortune-teller or with another.

A rational selection of a daughter-in-law is a very difficult matter. No girl is perfect, but everyone seeks the best. It is easy to be mistaken. If no other reason for error can be found, the selector will be blamed. The fortune-teller thus serves not only as a means of reaching a decision, but also for shifting responsibility for human error to the supernatural will. If the marriage turns out to be an unhappy one, it is fate. This attitude is a very practical aid in the adjustment of husband and wife. But it must be clearly understood that the real factor in the selection is the personal preference of the boy's parents, as specially seen in cross-cousin marriage (III-8), although this is disguised under the cover of a supernatural judgment.

婚姻大事，在孩子的幼年，经常在6~7岁时就已安排了。如果要在较大的范围内进行选择，这是必要的，因为好人家的孩子往往很早就定了婚。村中向我提供情况的人曾多次说到，如果女孩订婚过晚，她就不能找到好的婚配对象。但由女孩的母亲来提亲也是不合适的。而且前面讲过，母亲和女儿之间的关系是极为紧密的。结婚意味着女儿和她父母的分离，因而当母亲的总是很勉强地来办这件事。女儿留在父母的家中时间过长也是不可能的。在父系社会里，女人没有权利继承她父母的财产。她的前途，即使是一个安定的生活，也只有通过她的婚姻才能得到。因此，需要有第三者来为双方的婚姻作出安排。村里的人说作媒是一件好差使，因为媒人从中说合可以得到很好的报酬。

媒人的第一件事是弄清楚女方的生日。就是在红帖上写明女孩的八字，即诞生的年、月、日及时辰。当父母的对媒人送红帖子到哪一家男方去从来不表示反对，至少是假装不反对。媒人把红帖送到有合适男童的家庭时，把红帖供在灶神前面，然后媒人说明来意。一个普通家庭的男孩，同时会收到几张贴子，因而他的父母可以进行选择。

下一个步骤是男孩的母亲拿着红帖去找算命先生。他将根据生辰八字的一种特殊推算办法，来回答一些问题，即这个女孩的命与男孩家里人是否和谐。他要对每个女孩命中的优点加以介绍，并圆滑地让他的顾客来表示她的真实态度，并依此作出决定。即使算命先生的判断和顾客的意愿不一致，虽然顾客的愿望通常是犹豫不定的，她不一定要把算命先生的话当作最后决定。她可以找这位算命先生再商量，或者另找一位算命先生。

用理智选择儿媳妇是一件很难的事情。没有一个女孩子是完美无缺的，但每户人家都想找到最好的。因此很容易出错。如果找不到其他出错的原因，那就要归罪于挑选的人了。因此，算命先生不仅是充当作出决定的一种工具，同时，也被用作把错误的责任推卸给上天意志的一个办法。如果婚姻不美满，那是命运。这个态度实际上有助于维持夫妻关

系。但必须明白，真正起作用的挑选因素，首先是男孩父母的个人喜好，在表亲婚配时尤其如此（第三章第八节），但这都被假装说成为天意的决定。

The chief considerations in the selection are two: physical health that insures posterity, and skill in the silk industry. These represent the two main functions that are expected from a daughter-in-law: the continuity of the family, and the economic contribution to the household.

When in the manner described a candidate has been selected, the match-maker will go to persuade the girl's parents to accept the match. The custom is first to refuse the proposal. But a diplomatic match-maker will not find very much difficulty in obtaining consent if there is no competition. Lengthy negotiation is needed to determine the marriage settlement. The negotiation between the parties involved is carried out through the third party—the match-maker—and the villagers remarked that at this period the principals behave to each other like enemies. The girl's parents will make exorbitant demands for gifts; the boy's parents will bargain; and the match-maker goes between them. The marriage gift, including money, dress, and ornaments, will be sent on three ceremonial occasions. The total amount of a proper marriage gift varies from two to four hundred dollars.^[7]

It is far from correct to regard the bargaining as a kind of economic transaction. It is not a compensation to the girl's parents. All the gifts, except that offered to the girl's relatives, will be returned to the boy's Chia as the dowry, to which the girl's parents will add nearly as much as the marriage gift. How much the girl's parents will add it is difficult to estimate, but according to the rule generally accepted, they will be disgraced if they cannot match at least the marriage gift, and the girl's position in her new Chia will be an embarrassing one.

The keen bargaining, hotly carried on, has a twofold meaning. It is a psychological expression of the conflict between mother-love and patrilineal descent. As the people put it, "We cannot let them have our girls without making a fuss." On the sociological side, it is important because the marriage gifts and dowry are, in fact, the contribution of the parents on both sides to provide the material basis for the new family, and a periodic renewing of the material basis of the household for each generation.

挑选时主要考虑到两点：一是身体健康，能生育后代；二是养蚕缂丝的技术。这表明了对一个儿媳妇所要求的两个主要职能，即：能延续家世，及对家中的经济有所贡献。

当一个对象被选中之后，媒人就去说服女方的父母接受订婚。按照风俗习惯，女方应当首先拒绝提亲。但只要不出现其他竞争者，一个会办事的媒人，不难使对方答应。为了作好以后的婚事安排，要进行长时间的协商，双方的协议要经过第三者即媒人来达成。村里的人说，在协商的阶段双方家长相持如同对手一般。女孩的父母提出极高的聘礼要求，男孩的父母表示要求过高，难于接受，媒人则在中间说合。聘礼包括钱、衣服、首饰等，聘礼分三次送去。聘定所花的钱，总数约在200至400元之间。^[8]

如果把双方的争议看成一件经济交易是完全不正确的。财礼并不是给女孩父母的补偿。所有的聘礼，除了送给女方亲属的那部分外，这些聘礼都将作为女儿的嫁妆送还给男家，而其中还由女方父母增添了一份相当于聘礼的财物。究竟女方的父母增添多少嫁妆，是较难估计的，但按照一般能接受的规则来说，增添的财物如果抵不上聘礼，那就是丢脸的事，女儿在新的家中的地位也将是尴尬的。

尖锐而热烈的协商本身具有双重的意义。它是母爱与父系继嗣这两者之间斗争的心理反映。就像人们所说的，“我们可不能随随便便地把女孩子给人家”。从社会学方面看，它的重要性在于，这些聘礼与嫁妆事实上都是双方父母提供新家庭的物质基础，同时也是为每一家物质基础定期的更新。

The point must be made clear that from the economic point of view the marriage is disadvantageous to the girl's parents. The girl, as soon as she is mature and can assume her full share of work, is taken from her own parents, who have had all the expense of her upbringing. The marriage gifts do not belong to them, but are returned to the daughter in the form of a dowry with an addition which nominally is at least equal in amount. Since the bride will live and work at her husband's house, this means a net loss to her parents. Furthermore, when the girl is married, her parents and brothers assume a new series of obligations towards their relatives, specially to the children of their girls. In actual life, interest is taken in a child by relatives both on the father's and mother's side. But descent is unilateral, and the child has fewer obligations to its relatives on the mother's side (IV-5 and V-2). The immediate reaction on the side of the girl's parents towards their disadvantages in their girl's marriage is reflected in the whole process of arrangement and wedding ceremony and also in the high rate of female infanticide and its resulting unbalanced sexual ratio.

The wedding ceremony takes as a rule the following forms. The bridegroom goes in person to meet his bride, travelling by a special "meeting-boat" used for this purpose. He puts on a humble and self-deprecating air, and he must face a crowd of the bride's relatives whose attitude to him is usually by no means friendly. He must

behave strictly according to custom, and there are experts in this who direct him. A mistake will lead to the suspension of the proceedings. Sometimes the ceremony lasts for a whole night. The culminating scene is when the bride makes a final effort at resistance and buries herself in tears before leaving her father's house. This is ended by the ritual of "throwing the bride" by her father, or, if she has no father, by her nearest male relative on her father's side, into the sedan chair. As soon as the bride enters the chair, the bridegroom's party leaves very quickly and quietly, and no music is played until they are clear of the village. The symbolic expression of antagonism on the part of the girl's relatives often causes unpleasant feelings between the newly established affinal relatives, especially if they have not a sense of humour.

The next stages of the procedure are the transporting of the bride by "the meeting-boat," the act of union, the ritual recommendation of the bride to her husband's relatives, and the worshipping of her husband's ancestors; these I cannot describe here. A big feast is prepared by the bridegroom's parents for their relatives and friends. This is one of the occasions for the kinship group to assemble, and the ties of relationship between them are thus reinforced. Each relative or friend offers a gift in cash, the amount of which is determined by the proximity of kinship and friendship. The expenses of the ceremony amount to two to four hundred dollars.

应当明确，从经济观点来看，女儿的婚姻对女方父母是不利的。女孩一旦长成，能分担一部分劳动之后，却又被人从她的父母手中夺走，而父母为了把她抚育成人，是花了不少钱的。所收下的聘礼并不属于父母，这些聘礼要作为嫁妆陪嫁；此外，还要加上一份至少和聘礼相等的嫁妆在内。新娘婚后将要在她丈夫家里生活和劳动，这对她父母来说，是一种损失。再说女儿结婚后，她的父母和兄弟又对这门亲戚承担了一系列新的义务，特别是对女儿生的孩子将承担更多的义务。在现实生活中，不论父方还是母方的亲戚，都对孩子很上心，但由于是单系继嗣，因而孩子对他母亲方面的亲戚承担的义务较小（第四章第五节及第五章第二节）。在女方父母方面，对女儿出嫁受到的损失所作出的反应，首先表现在整个安排过程及举行婚礼方面；同时，也表现为大量溺死女婴，从而造成人口的男女性别比例失调的现象。

婚礼照例有如下的一些程序。由新郎去迎亲，乘坐一条特备的“接亲船”。他要做到很谦逊而不惹事，他要面对的是新娘家的一群亲戚，他们对他的态度通常都是装得不友好的。他的一举一动必须严格按照习惯行事，一些专门管礼仪的人在旁进行指导。发生的任何一个错误都会使整个进程停下来。有时，这种仪式要延续整整一夜。最后结束的场面是新娘作出表示拒绝的最后努力。她在离开她父母的房子之前痛哭流涕，于是由她父亲进行“抛新娘”的仪式，把新娘送进轿子。如果她没有父亲，则由父方的最近男亲来代替。一旦新娘上了船，男方的迎亲队伍马上安

静地离去，乐队默默无声，直到离开村庄。女方亲属的这种象征性的对抗，往往会引起男家亲戚们不愉快的感觉，如果他们缺乏幽默感的话。

下一步的程序是用“接亲船”接新娘、两人拜堂、新娘向丈夫的亲戚见礼以及向男方的祖先祭拜等等。这些，我在这里就不详加描写了。新郎的父母为亲友准备了盛宴，这是亲属会集的一个场合，他们之间的联系因而也得到了加强。每门亲朋都要以现钱作贺礼，至于送多少钱，由他们之间的关系亲疏而定。举行婚礼的开支，在200至400元之间。

[7] The Daughter-in-Law in the Chia

The girl has now entered her husband's house. She finds herself among strangers, but in the most intimate relations with them. Her position is dictated by custom. At night, she sleeps with her husband and she must respond submissively to him. With him alone she can have sexual relations. By day, she shares in the housework under the supervision of her mother-in-law, who has authority over her. She must treat her father-in-law with respect but not with intimacy. She must deal tactfully with her husband's sisters and brothers or they will intrigue against her. She will undertake the cooking and at meals will take the lowest place at table—or even not appear at the table at all.

It must be remembered that in her own family, she enjoyed a rather free life, and one can then imagine what a new world she has now entered. This is her time for discipline. Occasionally, she is allowed to go back to her mother and sob for comfort, as every newly married girl will do. But as the traditional verse runs, "Spilled water cannot be gathered up"; so no one can help her. She accepts her position. This is facilitated by religious beliefs. Human marriage is believed to be held together by the old man in the moon, *yulou*, with invisible red and green threads. This knitting together is symbolically performed in the wedding ceremony. The paper inscription of the god is in evidence in every marriage ceremony. Human helplessness breeds such religious beliefs and they help to relieve the situation. At least in this case they mitigate the tendency of the bride to rebel.

The process of adjusting herself in her husband's house does not in ordinary conditions last very long. She is useful in the house especially in the silk industry, which, as will be shown later, is of great importance in domestic economy (XII-2). In the first spring after marriage, a new daughter-in-law must pass a kind of test. Her mother sends her a sheet of specially selected good silkworm eggs. She will raise these worms entirely by herself. If as a result she proves her skill, she will, so to speak, win the favour of her mother-in-law. This is considered an important event in the life of a girl and on it depends her position in her husband's house.

七、家中的儿媳妇

女孩子终于到了她丈夫的家中。她发现自己处在陌生人的中间，但这些人又属于和她有着最亲密的关系的人。她的地位是由习俗来支配的。夜间，她和丈夫睡在一起，她必须对丈夫十分恭顺。她只能和丈夫发生两性关系。白天，她在婆婆的监督下从事家务劳动，受她婆婆的管教。她必须对她的公公很尊敬但又不能亲近。她必须灵活机敏地处理她和小姑子、小叔子的关系，否则他们将同她捣乱。她要负责烧饭，而在吃饭的时候，她只能坐在饭桌的最低下的位置，甚至不上桌吃饭。

必须记住，她在娘家的时候，生活是相当自由的，因此，可以想象她进入了一个什么样的新环境。这是她要严守规矩的时候了。她偶尔也被允许回家去看望她的母亲，并向她的母亲哭诉一番以解心头之闷，差不多所有的新娘都是这样做的。但正如俗话说：“泼水难收”，没有人再能帮助她。她只能接受她的地位和处境。宗教信仰在此也起着促进的作用。人们相信，人间的姻缘是由月下老人用肉眼看不见的红线绿线牵在一起的。在结婚仪式上也象征性地用红绿绸带来表示这种结合。每一个结婚典礼中都可看到刻印在纸上的“月老”神像。人类本身无能为力的感觉，引起了这种宗教信仰，并借此减轻现实的压力。至少在这种情况下，可以缓和新娘的反抗倾向。

一般说来，新娘适应她夫家的状况并不需要很长的时间。她在家中，特别对从事蚕丝生产是很有用的。后面还要讲到，蚕丝业在家庭经济中占有很重要的地位（第七章第二节）。在结婚之后的第一个春天，新的儿媳妇必须经过这样的一种考试。新娘的母亲送给她一张特殊挑选出来的好蚕种。她完全靠自己的能力来养这批蚕。如果她养得好，显示了她的技能，就能赢得她婆婆的好感。这被认为是女孩子一生中的重要时刻，据此可以确定她在丈夫家中的地位。

Similarly her position will be strengthened if she bears a child, especially a boy. Before the birth of the child, her husband, at least overtly, is indifferent to her. He will not mention her in conversation. Even in the house, in anyone's presence, if he shows any intimate feeling for his wife it will be considered improper and consequently will become a topic for gossiping. Husband and wife do not sit near each other and very seldom talk to each other in that situation. Rather they talk through a third party and they have no special terms for addressing one another. But when a child is born, the husband can refer to his wife as the mother of his child. Thereafter, they can converse freely and behave naturally towards each other. It is the same with other relatives. It is the child that actually admits a woman to her husband's household. The care of the child is an integrative

force in the domestic circle.

There are, however, difficulties in the adjustment of relations between a bride and her new relatives. She may not take a quick liking to her husband with whom she has had no previous acquaintance. The people are prejudiced against any intimate relations of a woman with men outside wedlock. To prevent such a possibility prenuptial chastity is strictly maintained by social disapproval of any intimate association between grown-up girls and boys. Any lapse of this code on the girls' side may lead to invalidating their marriage arrangement and difficulties in making other arrangements. Adultery of married women is still more grave. Husbands, in theory, can murder the adulterers with impunity. But in practice it is seldom done. The expense of marriage prevents people even from repudiating a misbehaved daughter-in-law. Sexual intrigues are talked about without seriousness in the evening gatherings. In one case, as my informant told me, the husband indulges his wife in holding a man for economic purposes. But unfaithfulness of a wife is undoubtedly a factor for domestic conflict.

Domestic conflicts are more frequently found between the daughter-in-law and her mother-in-law. It comes to be taken more or less for granted that the mother-in-law is a potential enemy of the daughter-in-law. Friction between them is taken as usual and harmony as worth special praise. Anyone who has listened to gossips among the elder women, will confirm this statement. They are never tired of cursing their daughters-in-law. The potential conflict between them can be understood considering the daily life of the household. The husband and father-in-law do not spend their whole time in the house, but work outside. But the mother-in-law is always there. The daughter-in-law starts with no affection for her. When she comes into the house, she finds herself being watched by her, criticized and constantly scolded. She must obey her, otherwise she may be beaten by her husband on behalf of her mother-in-law. The mother-in-law represents authority.

同样，她如果能生一个孩子，特别是一个男孩，她的地位也可以得到提高。在生孩子之前，丈夫对她的态度是冷淡的，至少在公开场合是如此。在讲话的时候，丈夫都不会提到她。甚至在家中，只要有别人在场，她的丈夫如果表示出对她有一些亲密的感情都会被认为是不妥当的，结果会成为人们背后议论的一个话题。在这种情况下，夫妻之间坐也不挨得很近，而且彼此极少交谈。他们宁愿通过第三者来交谈，而且彼此还没有一个专门名词来称呼对方。但一旦生了孩子，当丈夫的就能称他的妻子为孩子的妈。从此之后，他们能比较自由地交谈，彼此之间也能较自然地相处。对于其他亲属来说，情况也是相同的。真正使丈夫的家接受一个妇女的，是那个孩子。对孩子的关怀是家中的一种结合力

量。

然而，新娘和她的新的亲属之间的关系，要调整得好，总是有困难的。她对自己的丈夫，由于过去并不熟悉，也许不会很快就喜欢他。人们对一个妇女与婚姻之外的任一个男性比较亲密的关系都存在着偏见。为了防止这种可能性，社会上绝不允许成年的女孩和男孩有亲密的关系，以严格保持女孩婚前的贞洁。女方的任何失检将导致原定婚约无效，并亦为其他的婚事安排带来困难。对已婚妇女的通奸，看得更为严重。从理论上说，当丈夫的可以杀死奸夫而不受惩罚，然而在实际很少这样做。由于结婚花费很贵，人们甚至不会轻易遗弃有不轨行为的儿媳。晚上人们聚拢在一起时，也会很随便地谈到私通的事。我的情况提供者告诉我，有那么一个例子，有一个丈夫因经济上的原因纵容妻子另有一个男人。但毫无疑问的是，妻子的不忠实始终是家庭中发生争吵的一个因素。

但家庭纠纷更经常地发生在媳妇和婆婆之间。人们理所当然地认为婆婆是媳妇的潜在对手。她们之间发生摩擦是司空见惯的，因而关系和睦就会得到特殊的赞扬。有人如果听到老年妇女的私下议论，就会证实我的说法。那些老年的妇女总是喋喋不休地咒骂她们的儿媳。如果考虑到日常的家庭生活，婆媳之间存在的潜在冲突是可想而知的了。丈夫和公公白天不在家中，终日外出劳动，但婆婆总是在家。儿媳对婆婆本来毫无感情基础，来到这个家之后，感到自己被婆婆看管着，且经常受到批评和责骂。但她必须服从婆婆，否则，丈夫会替婆婆来打她。婆婆就代表着权力。

Similarly from the point of view of the old woman, the daughter-in-law is not always pleasant. I have pointed out in the above section that the tie between parent and child is strong. The relation between husband and wife is in a certain sense a disturbing factor in the parent-child relation. If there is any conflict between the daughter-in-law and the mother-in-law, the husband cannot keep entirely aloof. If he takes sides with his mother, as is usually the case at the beginning of married life, the quarrel becomes one between husband and wife. If he takes side with his wife, the conflict becomes one between mother and son. I witnessed a case where the son became so furious with his mother, owing to a conflict between her and his wife, that he beat his mother. With this triangular relation in the house it is often very difficult to maintain harmony.

If the conflict becomes intolerable, the daughter-in-law may be repudiated. Repudiation is usually on the initiation of the mother-in-law even against the will of her son. If she could find any recognized ground of such action, such as adultery or sterility of the daughter-in-law, no compensation would be asked; otherwise, sixty to seventy dollars must be given to the repudiated party. The daughter-in-law has no right of redress against such action, but she may be able to

persuade her husband to stand firm for her. In the latter case, a division of Chia will result.

The daughter-in-law has no right to request a divorce. The positive action open to her is desertion of the home. She may run away to the town, where she can find a job to maintain herself until a compromise becomes possible. If her husband supports his mother too firmly and there is no hope of reconciliation, she may take a more desperate course: committing suicide. According to popular belief she then becomes a spirit and is able to revenge herself; furthermore her own parents and brothers will seek redress, sometimes even destroying part of her husband's house. Therefore the mere threat of suicide is enough for practical purposes to effect a reunion. Moreover, since the mother-in-law has to face this possibility, she will usually not drive the daughter-in-law so far as to pro-voke the result she so much fears.

老年妇女都有类似的观点，认为儿媳妇总是不合意。我在前面已经指出过，父母和孩子之间的联系是紧密的。夫妻之间的关系，在一定的意义上说，是父母与儿女关系中的干扰因素。如果婆媳之间发生纠纷，当丈夫的不能完全置身事外。如果他站在母亲一边，这往往是结婚后不久发生的情况，夫妻之间将发生争吵。如果他站在妻子一边，就成为母子纠纷。我曾亲眼看到过这样一个例子，由于婆媳之间的纠纷，儿子对母亲大发雷霆以致打了母亲。家庭中的这种三角关系使家庭很难保持和睦相处。

如果纠纷闹得忍无可忍，儿媳妇就可能被休弃。休妻通常是由婆婆提出，甚至违背自己儿子的意愿。如果婆婆能为采取这种行动找到一些站得住脚的理由，如儿媳通奸、不育等，则儿媳不能要求赔偿，否则必须给离弃的女方60至70元。当儿媳的没有权利来改变这种行动，但她可能说服她的丈夫坚定地站在她一边。如果发生后一种情况，就要闹分家。

媳妇无权提出离婚。她唯一可以采取的有效行动是放弃家庭。她可以逃奔到城里去，在那里找些事干来维持生活，直到有可能和家庭慢慢达成和解。如果她丈夫坚决地支持他的母亲，以致夫妻和好无望时，她可能采取更加绝望的行动，即自杀。人们普遍都迷信她将变成鬼为自己报仇。此外，她自己的父母、兄弟将要求赔偿，有时甚至把丈夫的房子部分拆毁。因此，仅仅是自杀的威胁，实际上已足以使人们重新言归于好。另一方面，当婆婆的由于害怕面临这种可能性，因而她通常还不敢把媳妇逼到这种地步，以免激起她自己都十分害怕的后果。

Disharmony in the Chia should not be exaggerated. In the group, co-operation is essential. It is true that the mother-in-law has a privileged position, so long as she is supported by her husband and her son, but the educational value of her discipline should also be taken into consideration. The discipline which a boy receives from his

father, a girl gets from her mother-in-law. And, as the people themselves say, in the long run justice is done; for when the girl's own son takes a wife, the mother will enjoy the same privilege as her own mother-in-law. The economic value of a daughter-in-law, and the common interest in the child, make for a harmonious give and take.

[8] Cross-Cousin Marriage and Siao-siv

I have now briefly reviewed the parent-child relation and the husband-wife relation. I have brought out the fact that there is an apparent lack of economic reciprocity between the boy's and girl's families, and that owing to the marriages being arranged without regard for the inclinations of husband and wife, there is the possibility of domestic disharmony which may lead to the instability of the Chia. Admittedly in the long run, there is a reciprocity of economic advantage, and this is the fundamental stabilizing force in the kinship institutions; but the temporary grievances of the daughter-in-law are not favourable to the smooth working of the group. Cross-cousin marriage is one of the solutions.

In the village, two kinds of "cross-cousin" marriage can be distinguished. A girl married to the son of her father's sister is called *saonseodiu*, meaning a girl going up the hill. "Up the hill" signifies the prosperity of the family. A girl married to the son of mother's brother is called *wesienodiu*, meaning a girl going back to the native place. This is interpreted as a sign of ruin of the family. As these terms show, the people prefer the up-hill type and dislike the "reverting" type.

Let us see what is the real difference between these two types. If family A in the first generation gives a girl to family B to be the latter's daughter-in-law, and in the next generation the process is repeated, the process is an "up-hill" one. If the process is reversed in the next generation, the girl is the "reverting" type. In the first case the girl will be the daughter-in-law of her father's sister, who is from the father's Chia and still stands in an intimate relation to her father; while in the second case, the girl will be the daughter-in-law of her mother's brother's wife, who has suffered from her own mother-in-law who is the girl's mother's mother. An intimate relation of a mother towards her married daughter is usually jealously resented by her son's wife. When the girl comes under her control, she will take her as a target for revenge.

家中的不和睦也不应当加以夸张。在这群体中，基本的情况是合作的。当婆婆的特权，这是事实，只要她得到她的丈夫和儿子的支持。但也应当考虑到她维护家规所具有的教育作用。男孩从父亲那里受到的管教，媳妇从婆婆处得到。而且正像人们所说的那样，日久天长总有公道。因为当这个女孩自己有了一个儿子并娶了妻，她自己也能享受当婆婆的特权。一个媳妇的经济价值和小孩的共同兴趣，使家庭中得失相

抵，大致上得到了和谐。

八、表亲婚姻与“小媳妇”

我已扼要地叙述了父母与子女的关系及夫妻关系，并提出了这样的事实，在男方和女方亲家之间，很明显地缺少经济的互惠关系。而且婚姻的安排很少考虑到丈夫和妻子的爱好，因而存在着家庭不和睦的可能性，它会导致家的不稳定。从长远看来，经济互惠还是存在的，它是亲属制度基本稳定力量；但在短时期内，媳妇的处境不利于这个群体的和睦相处。因此，表亲联婚成了一种解决问题的办法。

在村中可以看到有两种不同的“表亲”婚姻。一个女孩子嫁给她父亲的姊妹的儿子，叫做“上山丫头”，“上山”意味着家庭的兴旺。一个女孩子嫁给她母亲的兄弟的儿子，叫做“回乡丫头”，就是一个女孩又回到她的本地。这被认为对这家不利的。可以从这字面上表达的意思看出，人们都喜欢“上山”的一类，而不喜欢“回乡”的一类。

让我们来看看这两种类型之间有哪些真正的不同。如甲家庭在第一代将一个女孩给乙家庭，成为乙家的儿媳；到了第二代，又重复了这个过程，这种婚姻就叫做“上山”型。如果这个过程在第二代向相反方向发展，这女孩子的婚姻就成了“回乡”型。在第一种情况下，这女孩子成为她父亲的姊妹的儿媳，她的婆婆是从她的父亲的家中来的，和儿媳的父亲还有着亲密的关系；而在第二种情况下，一个女孩成为她母亲的兄弟的妻子的儿媳。兄弟的妻子曾在婆婆手里受过苦的。兄弟的妻子的婆婆正是女孩的母亲。当母亲的总和出嫁的女儿之间存在着一种亲密的关系，而这种亲密的关系往往被她的儿媳所忌恨。当这个女孩子落到了她母亲的兄弟的妻子手上当儿媳，而她的婆婆正是她母亲的母亲的儿媳，她正好成了她婆婆报复的对象。

In this family situation, we can see that the psychological factor is stronger than the economic factor, because from the economic point of view the second type is much preferable for a balancing of obligations.

I could not ascertain the actual number of cases of each type of cross-cousin marriage. But my informant admitted that if there is an opportunity of a suitable match of the up-hill type, it will usually be made. In a neighbouring village, there is only one case of the "reverting" type, and that was cited as fresh evidence of its unhappy results. Furthermore, comparative materials from South China confirms the conclusion here suggested. The same type of patrilineal family system and the potential conflict between the mother-in-law and daughter-in-law is found, together with the same preference for the up-hill type of cross-cousin marriage.^[9]

The economic burden of girl children has led to a high rate of female infanticide. This I have already shown in the previous section. The sex ratio which results actually makes it difficult for poorer boys to get a mate. If we take 16 as the lower age limit for marriage, we find that there are 128 marriageable men, or 25 per cent. of the total, who are still single. On the other hand there are only 29 women above 16, or 8 per cent. of the total, who are unmarried. Not a single woman above 25 is a spinster. But there are still 43 bachelors above 25.

The unbalanced sex ratio also affects the age difference between husband and wife. The average difference is as seen in 294 cases 4.9 years while the husbands are older than wives by an average of 3.65 years. We must remember that very young wives are not looked upon with favour, because they are unable to perform their share of the labour of the household. There are many cases where the wife is older than the husband. Indeed in one case the wife was eleven years older than her husband.

在这种家庭情况下，可以看到心理上的因素往往超过了经济上的因素。因为从经济观点来看，第二种情况更利于两家在承担义务问题上取得平衡。

我不能证实每类表亲婚姻的准确数字。但向我提供情况的人认为，如果有合适的上山型婚配机会，往往就办成了。在邻村，只有一对“回乡”型的婚姻，恰好成为被引用来作为结局不愉快的最新证据。此外，从中国南部得到的对比材料也证明了这里所提出的结论。在那里，一样存在父系家庭制度以及婆媳之间潜在冲突，同样，也存在着偏爱上山型表亲婚姻中的情况。^[10]

女孩带来的经济负担导致了大量的溺女婴，这在前面的章节里已有所述。现存的两性比例的情况，使一些贫穷的男孩子难以找到对象。如果以16岁为结婚的最低年龄，我们发现128个婚龄男子（占总数的25%）仍是单身汉；另一方面，超过16岁的妇女只有29名（占总数的8%）没有结婚。25岁以上的妇女没有一个是未婚的，但村里却有43个25岁以上的单身汉。

两性比例的不平衡也影响到夫妻之间的年龄差别。在294例中，夫妻之间的平均年龄差别为4.9岁，其中，丈夫比妻子平均大3.65岁。应当知道，在农村里娶年龄太小的妻子并没有什么好处，因为她们还不能分担家务劳动。有许多例妻子的年龄大于丈夫，事实上，有一对夫妻，女的比男的大11岁。

I must add that the figures given above were confined to this village; but marriage is, in most cases, inter-village. Thus, I am assuming a similarity of conditions in other villages. Such an assumption is justified by the fact that the marriage area is identical with the industrial area, and that the silk industry in this area makes

identical demands upon girls. In the town conditions are different. The sex ratio in the town is unknown. But the villagers, instead of practising infanticide often send their girls to the town as foster maids in big families as well as to special philanthropic institutions. Moreover, in the town, I found that infanticide was less practised. In consequence it is to be expected that the sex ratio will be higher than in the village. The difference in the sex ratio between town and village has led to the practice of women being supplied from the town to the village. For instance, when a maid servant in the town comes of age, her master will arrange a marriage for her with villagers. In the village, I know eleven such cases (representing 2.5 per cent. of the married women).

Late marriage is also due to the high expense of the ceremony. Though I could not discover a definite figure for such expenses, a rough estimate is about five hundred dollars (VII-7). This amount is equivalent to the total yearly family expenditure. During the past few years of depression, marriage has been entirely suspended. The depression of rural industry has fundamentally challenged the existing marriage proceedings. But since marriage cannot be postponed indefinitely, another type of marriage is found. This is the so-called *siaosiv* system: *siaosiv* meaning small daughter-in-law or more precisely the foster daughter-in-law.

The parents of the boy will take a girl as foster-child at a very early age, the future mother-in-law even feeding her at her breast, and will take care of her up to marriage. All the elaborate proceedings such as match-making, marriage gifts, the sending of the meeting-boat and sedan chair, will not be needed, if the daughter-in-law has been brought up in her husband's house. Some of the *siaosiv* even do not know their own parents. Those who have still maintained contact with their own parents, owing to early separation, will not be of special interest to them. The wedding ceremony can be curtailed to cost less than one hundred dollars.

我必须进一步说明，这些数字仅限于这个村子，而大部分婚姻是本村与外村之间的。因此，我假定在别的村子中也存在着相同的情况。这种假设是由以下的事实来证明的，即进行婚配的地区与从事某种家庭工业的地区是相同的，而这地区的蚕丝业对女孩子的需求也是相同的。在城市中，情况可以不同，城市中的两性比例尚不清楚。但农村中的人，常把女孩送到城里去给大家庭作养女，或把她们送到慈善机构里去，以代替溺婴。此外，我发现在城中较少溺婴。因此，可以预期在城市中女性的比例比农村中为高。由于农村和城市两性比例的不同，导致了从城市中把妇女送到农村的现象。例如，在城里的年轻女佣，到了结婚的年龄，她的主人就为她安排一门农村的亲事。在这个村子中，我知道有11对（占已婚妇女的2.5%）就属于这种情况。

晚婚也是由于婚事费用过高而造成的。虽然我还没有找到这种开支的一个肯定的数字，粗略地估计，大约需500元（第七章第七节）。这个数字相当于一个家庭一年的开支。由于近几年来经济萧条，村里几乎中止办婚事。农村工业的不景气从根本上向现存的婚姻程序进行了挑战。但由于成婚是不可能无限期推迟的，所以出现了另一种结婚的方式，这就是所谓的“小媳妇”制度，“小媳妇”的意思是年幼的儿媳妇，即别的地方所说的“童养媳”。

在女孩很小的时候，男孩的父母领养了她。她未来的婆婆甚至还要给她喂奶，并一直要抚养她到结婚。如果这女孩是在她丈夫家中养大的，那么婚姻的一切复杂程序如做媒、行聘、接亲船、轿子等等都不再需要了。有些“小媳妇”甚至不知道她自己的父母。而那些与自己父母还保持联系的女孩，由于早期即与父母分离，父母对她们也就没有特别的兴趣。婚事的费用，可以缩减到少于100元。

The relations among the members of the Chia and between the affinal relatives are greatly modified by the new institution. The girl brought up from an early age by her future mother-in-law, becomes, as I have observed in many cases, very closely attached to the latter and feels towards her just like a daughter, especially in the frequent cases where there is no real daughter. Even those who are badly treated by the future mother-in-law become used to their position and do not thus experience a crisis after marriage. Thus the conflict between the mother-in-law and the daughter-in-law is often not so acute, even if not entirely avoided. Affinal relation is very loose, and in many cases is entirely eliminated.

The number of *siaosiv* has increased during the last decade. Among the married women, 74 out of 439, or 17 per cent. had been *siaosiv* before marriage. But among the unmarried girls, there are 95 *siaosiv* against 149 non-*siaosiv*. This amounts to 39 per cent. On the average there is one *siaosiv* for each 2.7 households. This figure is very instructive. But it is too early to predict the further development of the institution. Traditional marriage is still the predominant institution, both in frequency of occurrence and in the regard of the people. The *siaosiv* system is despised, since it develops at times of economic depression and is usually practised by poorer families. Moreover, its effect in loosening ties of affinal relationship, affects the normal working of kinship organization. It is also unfavourable to the status of women and to the possibility of the young couple forming an independent family, since they lack the contribution of their parents in marriage gifts and dowry. It is significant that, according to my informants, this type of marriage had in rather similar circumstances become very popular after the Taiping Rebellion (1848—1865), which was followed by a general economic depression. But it had given way to the traditional type as soon as normal conditions had been

recovered.

由于这种新的制度，家中的成员之关系和姻亲之间的关系起了很大的变化。我曾观察到，有许多从幼年起就被未来的婆婆带领大的女孩子，十分依附于她的婆婆，就像一个女儿对母亲一样。特别是，如果这家真的没有女儿，情况就更是如此。甚至那些受到未来婆婆虐待的人，逐渐习惯于自己的地位，在婚后也不至于经受不起。故婆媳之间的纠纷，即使不能完全避免却常常不是那么尖锐。姻亲关系是松散的，在许多情况下它已经消失了。

在最近的10年里，“小媳妇”的数字增加了。在已婚的439名妇女中，有74人（即17%）在婚前是“小媳妇”。但在未婚的妇女中，“小媳妇”有95人，而非小媳妇有149人，“小媳妇”占39%。平均起来，每2.7户人家就有一个“小媳妇”。这个数字是非常有意义的。但现在就来预测这种制度进一步发展的情况，为时尚早。从成婚率和人们关心的程度来看，传统的婚姻仍然是主要的制度。“小媳妇”制度是受到轻视的，因为它是在经济萧条的时候产生的，而且通常是贫困的人家才这么做。此外，它使姻亲联系松散，影响亲属结构的正常功能。它对妇女的地位、甚至对年轻夫妇建立一个独立的家庭都有不利的影响，因为他们缺少双方的父母供给的聘礼和嫁妆。有意思的是，据提供情况者说，此类型的婚姻，在太平天国运动（1851～1864年）之后，曾在很相似的情况下流行过。太平天国运动以后接着是普遍的经济萧条。但一旦情况恢复正常，传统婚姻就取代了这种类型的婚姻。

[1] The following table gives the number of each type of Chia :

I. Those which do not include a married couple . . . 99

(a) Without extended relatives 62

(b) With extended relatives 37

II. Those containing a single married couple . . . 223

(a) Corresponding exactly to "family" . . . 85

(b) With extended relatives 138

III. Those with more than one married couple . . . 37

(a) Parents with one married son and his wife . . 25

(b) One of the parents with two married sons and their wives . 9

(c) Parents with two married sons and their wives . . 3

Total (excluding the priest) 359

[2] R. H. Tawney, *Land and Labour in China*, p. 43, note 1.

[3] 下表列出了各类不同的家的数字：

I. 不包括一对已婚夫妇99

(a)没有远亲62

(b)有远亲37

II. 包括一对已婚夫妇223

(a)完全与家庭一致85

(b)有远亲138

III. 有一对以上的已婚夫妇37

(a)父母和一个已婚儿子及其妻子25

(b)父母之一，和两个已婚儿子及其妻子9

(c)父母及两个已婚儿子及其妻子3

总计（不包括和尚）.....359

CHAPTER IV PROPERTY AND INHERITANCE

[1] Ownership

Before we proceed to discuss the problems of property and inheritance, it is necessary to add a section on ownership in this chapter. I will reserve the problem of land ownership to a later chapter.

Ownership is a certain relation between an object and an individual or a group of individuals. The owner can use, enjoy the benefits of, and dispose of the object under the prescription of custom and law. There are three subjects to be studied, namely: the owner, the object, and the relation between them. From the villagers, we can get a classification of property based on the nature of the owner.

(1) "No man's property." Everyone without discrimination has free access to such property—air, road, water ways, etc. But free access is qualified by the essential fact that one individual should not deprive another of its use. Take the example of water routes: everyone can use the village streams, but they are not allowed to use the route to the detriment of the villagers. The streams are closed during the night. No one can then pass unless he gets permission from the night guards. Again, even in daytime, boats are not allowed to block the passage. When a boat stops, it must be close to the bank and must leave room for others to pass.

(2) Village property. The inhabitants of the village have equal rights to use and to be benefited by such property—the water products in the surrounding lakes and streams, the grass on the public roads and on the "tomb-land." But the right of disposing of such property is in some cases in the hands of the village heads. This kind of property will be described more fully in the chapter on land tenure (XI-1).

Objects belonging to other territory groups are few. Perhaps we may mention the idol of *luiwan* which is "owned" by the group *de* (VI-3).

(3) Property of extended kinship groups. The clan in the village does not own any common property. But among brothers, after the

process of division of Chia, they may still use the same front room of the house (VII-2). The ancestral tombs do not come under property in the real sense because they cannot be used for any benefit of the descendants, but the descendants are on the contrary obliged to keep them in repair. The obligation is shared among the sibling Chia.

肆 财产与继承

一、所有权

在开始讨论财产和继承问题以前，有必要在本章加述一节所有权的问题。关于土地所有权问题，我将在以后章节中论述。

所有权是一物与个人或一组人之间的一定关系。所有者根据惯例和法律规定，可以使用、享有和处理某物。关于这一问题有下列三方面需要研究：所有者、物、所有者与物之间的关系。我们从村里的人了解到他们对财产的一种分类办法。他们是根据所有者的性质来分类的。

(1) “无专属的财产”。每个人可以无例外地自由享用此类财产——如空气、道路、航道等。但自由享用必须是在不侵犯别人享用的条件下进行。以航道或水路为例：每个人均能享用村里的河流，但不允许其在使用时做出对当地居民有害的事。夜间停止使用河流，除得到守夜人许可外，任何人不得通过。又如，即使在白天，船只不得堵塞航道，船只停留时，必须靠岸以使他人通过。

(2) 村产。凡该村居民，均有同等权利享用此类财产，如：周围湖泊河流的水产品、公共道路和“坟地”上的草。但在某些情况下，此类财产的处理权在村长手中。这将在土地占有这一章（第十一章第一节）中作更详细的描述。

属于其他地域群体的物很少，也许我们可以提到刘皇的偶像，它属于“段”这个群体所有（第六章第三节）。

(3) 扩大的亲属群体的财产。村里的氏族没有任何共同的财产。但兄弟之间分家后，仍然可共用一间堂屋（第七章第二节）。祖坟不列入真正的财产，因为它对子孙后代没有任何用处，相反，后代有修缮祖坟的义务。同一祖宗的各家均有这种义务。

(4) Chia property. This category will be the main subject of the next section.

These four categories have exhausted those about which a villager will inform you, and with them all the objects in the village can be classified accordingly. It may be surprising to note the essential omission of individual ownership. The fact is that individual ownership is always included under the name of Chia ownership. For instance, when you ask a person whether his pipe belongs to him or to

his Chia, he will answer that it belongs to both. When he says the pipe belongs to his Chia he is trying to exclude members of other Chia from using it; and when he says it is his personal belonging, he is trying to indicate that his fellow members in the Chia do not use it. These two types of ownership do not seem to him mutually exclusive. Everything owned by an individual is recognized as a part of the property of his Chia. Members of a Chia are under an obligation to protect any article belonging to any particular member in the group. This does not mean that there is no discrimination in the rights over the object of the different members of the group. What it really indicates is only a title under which there is a wide range of intermediary gradations between property jointly owned by the group and individually owned by each member.

Objects may be classified again by types of use.

(1) Those used as a means of production, such as the land, the house so far as it is used for the silk industry, the hut used for raising sheep, the implement, the kitchen, etc.

(2) Those used for consumption.

(a) Those not destroyed or exhausted after being used, such as rooms, clothes, furniture, ornaments, etc.

(b) Those destroyed and exhausted after being used, such as food, etc.

(3) Those immaterial objects, such as purchasing power (as represented by money), credit, services, and, on the negative side, liabilities, and debts.

[2] Property of the Chia

Among the property-owning groups, the Chia is the fundamental one. It is the basic social unit of production and consumption and thus becomes the basis of the collective aspect of ownership. But, as mentioned, the collective aspect of ownership of the Chia does not entirely rule out the group. It is therefore necessary to analyse how different kinds of objects are owned by different members and how different types of ownership are diffused among them.

(4) 家产。此类财产是下一节要讨论的主要题目。

村里的人告诉你的都可包括在这四类财产之中。村里全部东西也可依据这四类来分类。可能有人会惊奇地注意到，没有列出个人的所有权。实际上，个人所有权总是包括在家的所有权名义之下。譬如，你问一个人，他的烟斗是属于他的还是属于他家的，他会回答是属于这两者的。说烟斗是他家的，意思是别家的人不能用这烟斗。说烟斗是他个人的东西，指的是他家里的其他成员不用这烟斗。这两种所有形式对他来说似乎并不互相排斥。个人拥有的任何东西都被承认是他家的财产的一部分。家的成员对属于这个群体内任一个成员的任何东西都有保护的义务。但这并不意味着这个群体中的不同成员对一件物的权利没有差别。家产的所有权，实际表示的是这个群体以各种不同等级共有的财产和每个成员个人所有的财产。

物还可以按其不同的用途来分类：

(1) 用作生产资料的物，如土地、养蚕缫丝用的房屋、羊栏、农具、厨房等。

(2) 消费品。

(a) 用后未破坏或消耗尽的，如房间、衣服、家具、装饰物等。

(b) 用后被破坏或消耗的，如食物等。

(3) 非物质的东西，如购买力（以钱币形式出现）、信贷、服务，以及相反方面的，如债务。

二、家产

拥有财产的群体中，家是一个基本群体。它是生产和消费的基本社会单位，因此它便成为群体所有权的基础。但如前所述，家的集体所有权的部分，对这个群体的各个成员并不完全保持同等权利，所以必须分析不同种类的物如何为不同的成员所拥有。同时也需要分析不同类型的所有权是如何在各成员之间分配的。

Land is cultivated by all or some of the male adult members of the household. Boys assist occasionally and women only in irrigation. The produce is partly stored for the consumption of the household and partly sold to pay taxes, rent, and wages and to buy other goods for consumption. The right of using the land as well as the right to a share of the produce is sometimes extended to the employees by definite contract. The right of the tax and rent collectors is limited to that of deriving benefits from the land. In the village, with exceptions, the right of using and right of disposing are generally reserved by the cultivator. He may be regarded as a full owner if he does not pay rent to anyone, but pays taxes to the government. If he has lost his legal title of his holding, he must pay rent to the title holder who will pay the taxes out of the rent. In any case the cultivators are protected by law and custom from alienation of the land and from interference by the title holders. In other words, the cultivator owns the land with an attached liability to share a part of the produce with the person who holds the title (XI-4).

The right of disposing of the land is in the hands of the head of the Chia. But in daily management—such as the determining of the crop to be sown, date of sowing, etc.—the head, especially if it is a woman, does not exercise the right but leaves the decision to persons competent in the technique. But in selling or leasing the land, no one except the head can make a decision. Indeed, in practice, his action may be compelled by other members or he may act on their advice, but the responsibility is his own. In the ownership of land, we can see how the right of use, the right of enjoying the benefit and the right of disposal have been diffused among the members of the group.

The house is used for the silk industry, for threshing rice, for cooking, and for other productive work. It is also used for shelter, for sleeping and for comfort. These different functions derive from quite different types of ownership. In case of silk raising, much space is needed specially during the last two weeks of the raising period. In

that period, all the rooms except the kitchen may be used for sheltering silkworms. All the members of the household will crowd in one bedroom. The individual allotment of bedrooms disappears temporarily. In threshing rice, the central hall is used in common and even sometimes shared with the newly divided siblings. The kitchen is chiefly used by women. But the food prepared is shared by all members of the household, except occasionally for special members.

土地是由农户全体成年男子或一些成年男子耕种的。男孩有时帮助耕种，女人只帮着灌溉。产品部分被贮存起来供一家人消费之用，部分出售，以纳税、交租和支付工资，并买回其他消费物品。土地使用权和产品享用权有时通过契约扩大到雇工。收税和收租人的权利只限于从土地取得的利益的范围。在村里，除了例外，耕种者一般保留使用和处理土地的权利。如果他不付给任何人地租而向政府纳税，他可被认为是一个完全的所有者。如果他失去了法定的土地所有权，他必须对持所有权者交地租，持所有权者用所收地租的一部分向政府纳税，在任何情况下，耕种者受法律和惯例的保护，使其不离开土地，不受持所有权者的干扰。换句话说，耕种者拥有土地但有一个附带的条件，即与持所有权者分享部分产品（第十一章第四节）。

处理土地的权利掌握在家长手中。但在日常管理中，例如决定播种的作物、播种日期等，家长，特别若是女人的话，不行使权利，而把决定留给一个技术熟练的人来作。但出售或出租土地的事，除家长外，没有别人能作决定。实际上他的行动可能受其他成员所驱使或者是根据其他成员的建议来作出决定，但责任由他自己来负。在土地所有权这一问题上，我们可以看到，土地的使用权、处理权和利益的享用权是如何在这一群体的各个成员中分布的。

房屋用于蚕丝工业、打谷、烹饪及其他生产性工作。房屋也是用作庇护、睡觉和休息的场所。这些不同的功能来自相当不同类型的所有权。养蚕时期，特别是最后两周需要很大的地方。在这一时期，除去厨房外，所有房间都可能用来养蚕。全家人都挤在一间卧室里，个人就暂时没有各自的房间。打谷时，中间的房屋公用，有时还需与新分家的兄弟合用。厨房主要是妇女用的场所，但做得的食品全体成员共同享用，偶尔有为特殊成员供食的情况。

Individual ownership, as meaning the exclusive use of certain objects by certain individuals, is found mostly in goods for consumption. It is clear that those goods which will be exhausted after use are necessarily owned by individuals. But those articles that can be repeatedly used may be shared by several persons successively. The clothes are shared among brothers or among sisters, and between parents and children in different periods, but during certain periods they are used more or less exclusively by one person. Valuable ornaments are exclusive to individual members. They belong mostly to women and are a part of the dowry. Dowry is considered as the

"private" property of the woman and shared with her husband and children. It is the family property within the Chia. But at a financial crisis, the family property may be mortgaged for common relief of the Chia. In this case, the willingness of the woman must be secured. Selling a wife's ornaments without her consent will cause domestic disputes.

The room allotted for individual use is more or less exclusive to the family group. The furniture is partly supplied by the wife's parents. The door can be locked by the daughter-in-law although this is not considered as very polite to the mother-in-law. The keys to the boxes and drawers in the room are kept by the daughter-in-law which marks the exclusiveness of family property in the Chia.

The private use of the bedroom by the family does not undermine the final right of disposal of the house to the head of the Chia. The junior members cannot sell or exchange their rooms with anyone. As in the case of land, the head of the Chia has the final decision in any transaction concerning immovable property. It is also true for the produce of the land and the industry. Raw silk may be sold by the woman. If she is not the head, she must hand the money to the head. In this sense, the head of the Chia possesses a superior right to the property over that of anyone in the group. The rights over immaterial goods, which includes money as purchasing power, are more complicated. The main source of income derived from rice, silk, and sheep, is controlled by the head. Thus money is largely in his hand. It is he who determines the buying of implements and fertilizer, or the acquisition of new land or a new house. Theoretically, according to the ideal system, other members, whenever they get money from other sources, must hand it to the head; and when they need things must ask the head to buy them. It is a very centralized economy. But in practice the earner usually reserves the whole or a part of his or her earnings. For instance, a girl who works in the factory usually gives her wage not to her father but to her mother to save for her own future use. A daughter-in-law will consider her wage as her own. If a daughter-in-law does not earn money directly, she will ask for more than the real cost of the daily commodities and save the surplus. In this way, she gets a little saving of her own which is called *sivon*, her "private room." It is kept in secret but always watched closely by her mother-in-law and consequently becomes a source of conflict.

个人所有权，意即某些人专用某些物的权利，绝大多数是消费物品。虽然，那些用后耗尽的物品必需归个人所有。但那些能够重复使用的物件，可由几个人先后连续共用。兄弟之间和姊妹之间、双亲和孩子之间在不同时期可共用衣物，但在一定时期内，或多或少是一个人专用的。贵重的首饰等归个别成员所有，多半属于妇女，而且是嫁妆的一部

分。嫁妆被认为是妇女的“私房”，但可与丈夫和儿女共享。它也是这个家的家产，遇到必要时，可以抵押出去来接济家里的困难。但在这种情况下，必须征得妇女本人的同意。未经妻子同意便出售她的首饰往往引起家庭纠纷。

分给个人住的房间，或多或少是小家庭专用的。部分家具系由妻子的父母提供。媳妇外出可以把房门锁上，虽然，一般认为这样做对婆婆是不很礼貌的。房内箱子和抽屉的钥匙由媳妇保管，这是家中的成员专有权的象征。

小家庭私用的卧室并不损害家长对房屋的最终处理权。幼辈成员不能出售或与任何人交换住房。和土地的情况一样，家长对不动产的处理有最后决定权。对土地和副业的产品也是如此。妇女可以出售生丝，如果她不是家长，她必须把钱交给家长。在这个意义上，家长对财产具有较大的权利，超过这个群体中的任何一员。对非物质的物品的权利，包括作为购买力的钱，更为复杂。种稻、养蚕、养羊是主要收入来源，由家长控制。钱主要在他手中。只有家长才能决定购买农具、肥料，添置新的土地或房屋。从理论上说，这个制度的理想做法是：每当其他成员从其他来源得到收入时，必须把钱交给家长，他们需要什么时，要求家长去买。这是一种非常集权的经济。但实际上，挣钱的人通常保留他或她的全部或部分收入。例如，在工厂做工的女孩通常不把她的工资交给父亲而是交给她母亲保存，以备她将来之用。儿媳妇认为工资是她自己的钱。如果一个媳妇不直接挣钱，她向家长要的钱往往超过实际的开支，把多余的节省下来。这样，她自己有少量储蓄，称为“私房”，即她“私人的钱包”。这是媳妇秘密保存的，但总是受到婆婆严密的监视，因而往往成为冲突的缘由。

The daily expenditure of the household is paid from the common source. But individual members may have a sum each month as their pocket money for free disposal. The main items such as taxes, wages, food, clothes, and other services are controlled by the head. Permission is necessary before any individual member can execute any transactions of these kinds. They are not allowed to secure loans. If a son, a bad one indeed in the eyes of the villagers, is in debt to somebody secretly, his father may refuse to repay as long as he is living. The son can only pay back the loan when he gets a share in inheritance. Therefore the interest is usually very high.

From his economic position, the head of the Chia derives the actual authority in the group. The right over objects enjoyed by a person who is not the head of a Chia is limited and incomplete.

[3] Transmission of Property

Inheritance in its wide sense is the entire process of transmission of property according to kinship affiliation. But it is limited in legal usage to referring the claim of an heir to the property of his deceased progenitor.^[1] As studied by anthropologists, the problem is usually that of the disposal of the property of a deceased person.^[2]

But to limit the study in this way is to leave out various facts, such as the transmission of property during the parents' lifetime and the economic obligation of the descendants towards their deceased ancestors. Ownership is a composite concept of various rights over an object. The process of transmission usually takes place bit by bit. It is not completed even when the progenitor is dead. The fear of displeasing the spirits of the ancestors or the ethical consideration of filial piety indicate the lingering influence of the dead on the free disposal of the inheritance by the heir. Therefore for the present analysis, I shall use the term inheritance in its wider sense.

家庭的日常费用由公共财源开支。但每个人每月有一些零用钱可以自由处理。主要的项目如税金、工资、食物、衣服和其他开销由家长控制。个人在办理这类事务之前应先得到家长允许。除家长外，个人不准借贷。如果一个儿子秘密欠了某人的债，在邻居们看来就是个坏人，他父亲只要活着就可以拒付这笔债款，儿子只有在得到一份遗产后才能还债。因此，这样的贷款利息通常是很高的。

从经济地位来说，家长在这个群体中确实是有权威的。不是家长的人对物的享有权既有限也不完整。

三、财产的传递

广义地说，继承是根据亲属关系传递财产的整个过程。但它在法律上的用法限于指取得对已故祖先的财产的权利。^[3] 在人类学中，通常是指一个已故者的财产处理问题。^[4]

但如果把研究限制在这样一个范围内，势必把其他各种事实遗漏，例如父母活着时的财产传递、后代接受已故祖先的经济义务等。所有权是对物的各种权利的一个混合概念。传递的过程通常是一点一点进行的，甚至在祖先死后，还未必完成。惧怕惹恼祖先鬼魂的心理，或是子孙孝顺的伦理思想，都表明了死者对继承人自由处理遗产的缠绵不息的影响。因此为分析当前的问题，我将从广义方面来使用“继承”这个术语。

A child is born into the world without possessing anything. Owing to his physical incapacity to acquire objects the infant is solely dependent upon others' provision. It is the function of the family to bring up a dependent infant to become a full member of the community. The parental obligation towards the child is the basis for the universal principle of transmission of property according to the kinship affiliation.

The relation between a child and the objects that satisfy his need is through his parents. At the beginning, he cannot use anything without the consent of his parents. For instance, the basic need of nutrition is dependent on the consent of his mother. Indeed, this consent is to a certain extent guaranteed by human sentiment and social rules, but even this is not always secured. In case the child is not welcomed to the house, he may be killed by the refusal of milk. As he grows up, the objects allotted for his use increase. But he has no free access to those things. The clothes he wears are put on him or taken off according to the will of his mother. Food is put before him. He cannot take things without the permission of his mother. The gifts given by his relatives are kept by his mother. The control of the elders over the child in his relation with objects is mainly for the welfare of the child and for preventing damage to the object by the child's unskilful use. Therefore when the child knows how to take care of itself and learns the proper use of objects the control diminishes. As technical knowledge increases and he participates in productive work, the child gradually acquires the right of use over objects that belong to the Chia. But there are very few objects exclusively and freely used by him. The type and amount of goods he consumes are also always

under the control of his elders.

An important step in the process of transmission of property takes place at marriage. In the marriage, the parents of both bride and bridegroom contribute to the new couple, in terms of marriage gifts and dowry, a set of objects, consisting of personal belongings, as a nucleus of family property. The new couple now have a room, more or less, for themselves. But from the point of view of the bride, she has at the same time lost at least a considerable amount of her right over the objects in her own parents' house. When she goes back after marriage, she is a guest, the more so if her parents are dead and the house is owned by her brother. She is admitted into her husband's house. But she cannot behave there freely as in her own parents' house. Her right to use objects is in practice very limited. She has no share in the personal objects of other members in the Chia except those of her husband. It is she who starts the disintegrative tendency in the collective economy of the Chia.

一个婴儿，一无所有、赤身裸体地来到这个世界。由于他的身体还不具备获得物体的能力，因此他全靠他人的供养。家庭的作用就是把一个没有独立生活能力的婴儿抚养成为社会中一名完全的成员。父母对孩子的义务是根据亲属关系确定财产传递的一般原则的基础。

孩子通过父母同各种东西发生接触，从而满足其需要。最初时，未征得父母的同意，他不能使用任何东西。例如，对营养的基本需要依靠母亲的供应。当然，这种供应在一定程度上是受到人类感情和社会规则的保证的，但即使这一点也不一定总有保障。假如这孩子不受家庭的欢迎，他可能因为不喂奶而饿死。他长大后，归他用的东西增加了，但他不能自由取用那些东西。他的衣服，穿上或脱掉都需随他母亲的意愿。放在他面前的食品，必须经他母亲许可才能吃。亲戚送给他的礼物由母亲保管。成人控制孩子同物之间的关系，主要是为了孩子的福利或为了防止孩子由于技术不熟练而用坏物品。所以当孩子懂得照顾自己并学会正确使用物品时，这种控制便减少了。孩子的技术知识增长并参加了生产劳动，就逐步获得了那些属于家的物品的使用权。但真正专门归他用的或可由他自由使用的物品极少，他所消费的物品类型和数量也总是在他长辈的监视之下。

财产传递过程中的一个重要步骤发生在结婚的时候。男女双方的父母都要以聘礼和嫁妆的名义供给新婚夫妇一套属于个人的礼物，作为家庭财产的核心。新婚夫妇现在有了一间多少是他们自己的房间。但从新娘的角度来看，她同时失去了使用自己娘家财物的一定权利。她出嫁后回娘家，便成了客人；如果父母去世，更是如此。家屋已归她兄弟所有。她住在丈夫的家中但却不能像在自己娘家那样自由自在。实际上，她对物的使用权非常有限。除去她丈夫的东西外，家中其他成员个人的东西，她无权共有。家的集体经济的分解倾向，往往是从她开始的。

The centralized system in the domestic economy, as described in

the above section, reduces the independence of the young couple. The parental control is necessary for the development of a child, but the persistence of such control over him after his marriage is a different matter. A full member of the community needs a certain amount of property under his own disposal and a normal functioning of a family requires a larger material basis; but these are precluded by the centralized system of the Chia economy. The demand for economic independence of the young then becomes one of the disorganizing forces, and finally leads to the division of the group.

The process of division is one of the most important steps in the transmission of property from the parents to the child. Through the process the young acquire a legal title over a part of the property formerly belonging to the father and enjoy a more exclusive right to it.

The division between the parents and the married son usually takes place after some accident of domestic friction. The maternal uncle acts as mediator and proposes the division on behalf of the young man. He will negotiate with the old to decide the share to be allotted to the son. But the division between married brothers is automatic when their parents are dead.

Let us take an example of a Chia, consisting of a father, a mother, two sons, and a daughter. When the first son gets married and demands a division, the land will be divided into four parts. The first part is that reserved for the parents. The second share is the extra share for the first son. The rest is equally divided between the two brothers.

The share reserved for the parents will be sufficient to provide for their daily life as well as the marriage expenses of the second son and the daughter; its size will therefore depend on the number of unmarried children and the living expenses of the parents.

The eldest son receives two shares, the extra share being a small one. The size of the extra share depends on the economic contribution that he has made to the collective unit. The first son, being older, will undoubtedly have made more contributions than his younger brother. Moreover, in the view of the villagers, he has also a greater ceremonial obligation towards the dead parents.

The share for the unmarried son is nominal. He will live with his parents and has no independent status. But he can demand the share when he is married. If one of the parents dies before his marriage, further division will be ruled out. The younger son who has not yet separated from his parents will support the remaining parent, who

will hand over most of his or her economic authority to the married son even without division. When both parents are dead, the reserved share will go to the younger son, in consideration of the support he has given them. Thus he will also in the end inherit two shares. But if the elder brother shares in the support of their parents, he will have a claim on the reserved share. The final division will not necessarily be equal.

上述集权的家庭经济体系削弱了年轻夫妇的独立性。在孩子的成长过程中，父母的控制是必要的，但婚后继续进行这种控制，就是另一回事了。社会的一个完全的成员，需要一定数量属于他自己支配的财物，同时一个家庭的正常功能需要较丰富的物质基础。但这些均受到家的集权经济体系的阻碍。年轻一代对经济独立的要求便成为家这一群体的瓦解力量，最终导致分家。

分家的过程也就是父母将财产传递给下一代的最重要的步骤之一。通过这一过程，年轻一代获得了对原属其父亲的部分财产的法定权利，对这部分财产开始享有了专有权。

父母和已婚儿子分家，通常是在某一次家庭摩擦之后发生的。那时，舅父便出来当调解人，并代表年轻一代提出分家的建议。他将同老一代协商决定分给儿子的那份财产。父母去世后，已婚的兄弟之间则自动分家。

让我们以有一父、一母、两个儿子、一个女儿的一个五口之“家”为例。长子成婚后，如果要求分家，便将土地分成不一定等量的四份。第一份留给父母，第二份是额外给长子的，剩下的一份由两个儿子平分。

父母的一份将足以供给他俩日常生活及女儿出嫁、小儿子成婚所需的费用。这一份土地的大小根据二老的生活费用及未婚子女的多少而定。

长子接受两份，额外归他的那份一般比较小，其大小将根据他对这个集体单位的经济贡献而定。长子年纪大些，肯定较其弟多作些贡献。从村里邻人的眼光看来，长子对已故双亲也具有较大的礼仪上的义务。

未婚儿子的那一份是名义上的。他与父母一起生活，没有独立地位。但成婚后，他可以要求分得这一份。如父母之一在他成婚前去世，就不再分家。尚未与父母分家的儿子供养在世的父亲或母亲。父亲或母亲甚至不通过分家的方式就将大部分经济权交给已婚的儿子。当父母都死去时，由于小儿子曾供养他们，留给父母的那份土地便留给小儿子。这样，最终他也继承两份土地。但如长子也赡养父母，他亦可对留给父母的那份土地提出要求。长子和幼子最后分得的土地数不一定相等。

The house is divided in several ways. If the parents are living, the eldest son will have a house outside. In the case of Chou, the junior village head, he, being the younger son, lives with his parents in the old house. His elder brother moved, after the division of Chia, to a new house not far from the old one. If the division of Chia occurs after

the death of the father, the elder son will occupy the old house and the younger son moves out with the mother. To build or to find a new house is difficult. Thus in most cases the old house is simply divided into two parts; the elder takes the east part and the younger the west. (The orientation of the house is always to the south.) The front room is occupied in common.

If there is one son only, he will demand separation from his parents only in case of serious conflict. In this case it means no more than a demand for economic independence. The amount of the son's share is not important because it is only a temporary allotment. In the end all the property will be handed over to him; when the parents are old and unable to work, they will be re-incorporated into their son's Chia. The process of re-incorporation does not undermine the rights acquired by the son, but, on the contrary, conveys to him the rights to the rest of the property.

Both the land and house are unilaterally inherited. The daughter has no share in them. When she is married her parents will give her a dowry, consisting of furniture, ornaments, clothes, and sometimes a sum of money; but never land or house. Even the poorest parents furnish the coverlet of the bed for their daughter.

The son, after the process of division, has a separate house or a part of the house. He has a separate kitchen in which his wife will cook food for the family. He has a separate piece of land. The produce of the land is at his own disposal. But, in fact, his right over these allotments is still not complete. His father, as long as he is living, can strongly influence his use of the land and house. The son cannot sell them against the will of his father. He will send food to his parents in case of need. When the parents are old or one of them is dead, he is obliged to support them. Therefore the process of division does not completely end the economic relation between the parents and the child.

房屋有几种分法。父母在世时，长子住在外面其他房屋里。例如，该村副村长周某，他是幼子，同父母一起住在老房屋内。其兄在分家后搬到离老房屋不远的新屋内。如父亲去世后才分家，长子便占住老房子，幼子同母亲一起迁往新居。由于修建或租用新房屋有困难，因此，多数情况下将老房屋分成两部分。长子住用东屋，幼子住西屋（房屋的方向总是朝南），堂屋为公用。

如仅有一子，只有在发生严重冲突的情况下他才会要求和父母分家。在此种情况下，分家仅意味着是一种经济独立的要求。儿子分得多少，无关重要，因为这只是一种暂时的分配。最终全部财产仍将传交给儿子。父母年老不能工作时，他们又将再合并到儿子的家中去。这种再合并的过程不损害儿子已获得的权利，反而是将其余的财产权传给儿

子。

不论是土地或房屋均为单系继承。女儿无继承权。女儿出嫁时，父母给她一份嫁妆，包括家具、首饰、衣服，有时有一笔现钱；但从不分土地或房屋，甚至最穷的父母也得为女儿备一份被褥。

分家以后，儿子获得单独的住房或分得一部分老房屋，其中单有一间厨房，其妻便在这厨房内为这个家煮饭。他有单独另一块土地，所得产品归他个人支配。但实际上，他对这些分配所得的权利仍是不完全的，只要他父亲在世，便可以对他使用土地和房屋施加影响。儿子不得违背父亲的意愿去出售土地。父母需要食物时，他必须送往。父母双方年老或有一方在世时，他必须负责赡养。所以分家并非就此完全结束了父母与子女之间的经济关系。

Moreover, the property divided in this way is limited to that used for production and a part of that used for consumption. Personal belongings of the parents will be reserved for them. The son usually gets a sum of money to start his new economic unit, but debts and liabilities, except his own secret loans, will be kept back until the death of the father.

The reserved part of the immovable property will be transmitted to the son when the parents are too old to work. The final transmission occurs at the death of the parents, specially of the father. A part of the personal belongings will be buried with the dead and a part will be burnt—to be used, as it is believed, by the spirits. The remainder will be divided not only between the sons but also between other relations who have served the deceased. The daughter will have a considerable share of her mother's leavings, including clothes and ornaments. This suggests, in some degree, the matrilineal inheritance; but since the daughter-in-law also has her share, the rule is not absolute. The division of these types of property is subject more or less to the personal will of the deceased or her husband (or his wife) who has the right to decide the disposal of what is left.

[4] Effects of Inheritance on Marriage and Descent

As far as the land and house are concerned, the line of inheritance goes along the line of descent. But if a man has no son, to whom will the property be transmitted? This problem appears in two circumstances: a man may be childless; or may have a daughter but no son. Let us study the first case of the man who is childless.

Childlessness due to physiological sterility is rare. If a woman is sterile, she may be repudiated and her husband will remarry. In most cases childlessness is due to the death of the child. When a man is old and without a living child, he can adopt a boy. He is free to choose his adopted son. In adopting his son, he must invite his clansmen and before them he will sign a contract with the parents or other responsible person of the child. The contract consists of two parts. On the one hand the adopting father will give a formal promise to guarantee the full status of the adopted son, especially the right of inheritance; and on the other side the person responsible for the adopted child will promise to sever his relation with the child and also guarantee in the child's name to support the adopting parents when they are old.

此时所分的仅限于生产用的和一部分消费用的财产。属于父母个人的财产仍然被保留着。儿子通常分得一笔钱以开始经营他那新的经济单位。至于债务，除去儿子秘密欠的债以外，仍将留到父亲去世时才解决。

父母年老，丧失劳动能力时，保留的不动产部分将传给儿子。最后的传递在父母去世时进行，特别是在父亲去世时。部分个人用品将与死者一起埋葬，另一部分火化，被认为是给死者的灵魂使用的。其余部分不仅为儿子而且将为服侍过死者的其他亲戚所分用。女儿可分得相当一部分母亲的遗物，包括衣物和首饰。在某种程度上，这意味着母系继承，但由于儿媳也往往分得一份，这个惯例便不是绝对的了。对此类财产的分配或多或少是按照死者或其丈夫（或妻子）的意愿，他们有权决定对遗物的处理。

四、继承对婚姻和继嗣的影响

就土地和房屋而言，继承是按继嗣系统进行的。但如果一个人没有儿子，财产传给谁呢？这个问题有两种情况：一个人可能没有孩子或有女儿而没有儿子。让我们先研究一下第一种情况。

因生理原因而无子女的情况极少。如果一个妇女不能生育，就会受到遗弃，丈夫将重新结婚。多数是因为孩子死亡而无子女的。一个男人上了年纪而没有活着的孩子时，可以领养一个男孩。他可以自由选择一个养子。在领养时，他必须邀请他同族的人，在他们面前与孩子的父母或孩子的其他负责人签订契约。契约分两个部分：一方面，养父正式允诺，保证养子具有正式的地位，特别是继承权；另一方面孩子的父母或负责人保证断绝他与孩子之间的关系，同时以孩子的名义担保在养父或养母年老时赡养他们。

The endorsement of the fellow-clansmen of the contract is essential, for this action is counter to their interest. If the person dies without issue, his nearest kin in the next kinship grade will automatically become his descendant and inherit his property according to custom. But in this case, the heir will not sever social relations with his own parents. The child will live with his own parents and has done no work for his benefactors. The heir has, in fact, mainly ceremonial obligations.

From the economic point of view, it is considered preferable to adopt a child who can work for the adopted parents during their lifetime than to appoint an heir among kindred. But adopting an outsider means the loss on the side of the nearest kin of a potential claim on the property. Therefore the parents of the potential heir will do their best to prevent the action. The usual result is a compromise. Either the nearest kin will support the adopting parents or the old will adopt an outsider but promise a share to the potential heir in the inheritance. The share will not be land or house but a sum of money.

If the son dies after his marriage and leaves no grandson, his parents will find a substitute for his son as the second husband of their daughter-in-law. The substitute is called *wanipon*.^[5] He will change his surname to that of his wife's former husband and live in the latter's house. His child will be regarded as a descendant of the deceased. The social status of such a substitute is low because no well-to-do person will accept this position. There are two *wanipon* in this village.

Levirate is practised in the similar condition if the deceased has a

brother who has not yet been engaged. There are two cases of this type in the village. Levirate is common in case of *siaosiv* when her would-be husband dies before marriage.

We must now turn to the second case: that of the man who has only a daughter but no son. If the daughter has been married before the death of her brother, she cannot contribute anything to the continuity of her father's line. But if she has not been married, her parents, knowing that there is not hope of another son, can ask the parents of their daughter's fiancé to allow their daughter to carry on their descent. In other words, they will have the right to take one of their daughter's male children as their own grandson. This type of marriage is called *lendiugoxofen*; meaning to attach two flowery flags on the ancestral shrines of both Chia. The flowery flag is a symbol of descent used in the wedding ceremony. In this village there is one case of this type.

同族人在契约上签字甚为重要，因为这一行动是违背他们的利益的。如果一个人死后无子女，他的近亲层中最近的亲属便自然地成了他的嗣子，并根据惯例继承他的财产。但在此种情况下，继承人不会同他自己的父母断绝社会关系。他将与自己的父母同住，不替被继承人做事。事实上，这种继承人主要只是承担礼仪上的义务。

从经济观点考虑，人们认为领养一个能为养父母干活的孩子，在他们生前侍候他们，比在亲属中指定一个继承人好得多。但领养一个外人意味着在最近的亲属方面失去了对财产的潜在的继承权。因此潜在的继承人的父母往往想尽一切办法来制止这一行动。通常的结果是妥协。或者最近的亲属答应赡养领养父母，或者年老的父母领养一个外人，但是允诺把一份财产传给潜在的继承人。这份财产并非土地或房屋，而是一笔金钱。

假如儿子成婚后死去，未留下孩子，其父母将为死去的儿子找一个替代人作为儿媳的后夫。此替代人被称为“黄泥膀”。^[6] 他将改姓其妻子前夫的姓并住在前夫的房屋内。他的孩子将被视作死者的嗣子。这个替代人的社会地位很低，富裕的人是不会接受这种位置的。村里有两个“黄泥膀”。

假如死者有一个未订婚的弟弟，叔嫂婚也就在同样的情况下产生。村里有两起这样的婚姻。当“小媳妇”的未婚夫在结婚前去世，在这种情况下，叔嫂婚比较普遍。

现在，我们必须转入第二种情况：即一个男人仅有女无子。如果女儿在弟弟死前出嫁，她对她父系的继嗣不能作出任何贡献。但如果她尚未出嫁，父母也明白不可能再有儿子，他们便可要求女儿的未婚夫的父母允许他们的女儿为他们传嗣。换句话说，他们有权利将其女儿的一个男孩作为他们自己的孙子。这类婚姻称作“两头挂花幡”，意思是在两个家的祖宗牌位上插两面花旗。在结婚仪式上，花幡是传嗣的象征。这个

村子有一起这样的婚姻。

If the daughter has not yet been engaged, her parents can adopt a son-in-law. The girl's parents will send marriage gifts to the boy's parents. The wedding ceremony will take place in the girl's house and the husband will live in his wife's house with the wife's parents. In addition to the general wedding ceremony, the girl's parents will sign a contract with the boy's parents, similar to that of adoption of a son and witnessed by their clansmen. The child of their daughter will take their surname and continue their descent. There are twelve such cases in this village. This number is significant if we take into consideration that there are relatively few cases of sonless parents and that the practice of late engagement is rare. When there is still hope for the parents to get a boy themselves, they will not arrange such a marriage. But if after the marriage, they got a boy, as seen in one case, the accomplished fact will continue to be valid. It is a generally accepted institution and has been legalized in the civil code.^[7]

In the above-mentioned cases, the patrilineal principle of descent is obliterated and the marriage institution is modified. It shows that the problem of inheritance and descent should be viewed as a part of the reciprocal relation between the two generations: the transmission of property on the one hand and the obligation of supporting the old on the other. The obligation of the young to support the old is maintained not by legal force alone but by human affection. Owing to the tie of affection and economic security of the old, they prefer an adopted son from outside to an appointed heir among the kindred, and modify the patrilineal principle to adopt a son-in-law. The obligation of the young does not end when the old are dead. The care of the tomb and offering sacrifice to ancestor spirits are a part of this reciprocal relation. Furthermore, the right of free disposal of inherited property is again strongly conditioned by the religious and ethical belief of ancestor worship. Thus we must study the obligation of the young towards their parents in connection with the problem of inheritance.

[5] Obligation of the Young

To begin with, in a childless family, the adults themselves will collect grass for the sheep. But when a child is born and able to work, they are relieved of this work. In rice growing, a boy will assist first in trans-planting young shoots and in irrigation. As the boy grows older, he works side by side with his father and eventually undertakes more work than his father, even before he gets married. A girl will assist her mother in the daily household work and in the silk industry. When their contribution to the family exceeds their own consumption, they begin to support their parents, although their share is not apparent owing to the collective economy.

假如女儿尚未订婚，他的父母可以领养一个女婿。女孩的父母向男孩的父母送一份结婚礼物。婚礼在女孩家中举行，丈夫将住在妻子家里与岳父母一起生活。除举行婚礼外，女孩的父母还将与男孩的父母签订一项契约，与领养一个儿子的契约类似，并有同族人联署。其女儿的孩子姓他们的姓，为他们继嗣。这类婚姻本村有12起。如果我们考虑到无子的父母相对来说比较少，且一般订婚比较早，12起的数目是相当可观的了。在父母还有希望获得亲生儿子时，他们是不会安排此类婚姻的。但如女儿成婚后，父母又得一子，已办成的事仍然有效。我们见到一例。这是普遍都接受的制度，而且在民法中已有法定条文。^[8]

在上述情况中，父系继嗣的原则已作修改，婚姻制度有所改变。这说明，继承和继嗣的问题应被视为两代人之间相互关系的一部分，一方面是财产的传递，另一方面是赡养老人的义务。年轻一代供养老人的义务不仅靠法律的力量来维持，而且是靠人的感情来保持的。由于感情上的联系及老人经济保证的缘故，他们宁愿从外面领养一个儿子，而不愿在亲属中指定一个继承人。他们领养女婿，改变了父系原则。老人去世后，下一代的义务并未结束。照看坟墓、祭祀祖宗便是这相互关系的一部分。此外，对继承下来的财产的自由处理权又受到崇敬祖先的宗教和伦理信念的约束。因此，我们研究年轻人赡养父母的义务必须联系继承问题。

五、赡养的义务

一开始，家庭里尚未添丁时，成人自己割羊草。家里有了孩子并能工作时，成人就摆脱了这项工作。在种稻这项工作中，男孩最初可帮着插秧，进行灌溉。男孩长大后便与父亲并肩劳动，终于，甚至在成婚前已比他父亲担任更多的工作。女孩帮助母亲料理日常家务及养蚕缂丝。当他们对家庭的贡献超出他们自己的消费时，便已开始赡养父母。虽则由于经济收入归家庭的缘故，他们供给家庭的份额并不明显。

The problem of equality between parents and children in economic contribution does not arise, but it does arise between siblings. I was acquainted with one case of a man who did not work at all on the land but was supported by his brother. He prevented his younger brother from marrying in order to continue his parasitic way of living. He was severely criticized by the community. Public opinion has forced him to arrange a marriage for his younger brother which would be followed by a division of Chia, but it had not taken place before I left the village. The accepted idea is this, that since one owes a debt to one's parents in childhood and receives property from them, it is one's duty to work for them, but not for one's brother.

However, a sense of equality between parents and children is not altogether ruled out. When a young couple undertakes the greater part of the work in the household but still is without an independent status owing to the economic power being centralized in the hands of the older generation, there will be much dissatisfaction. It will eventually force the parents to relinquish their power along with their withdrawal from work.

The obligation to support becomes apparent when the son has secured his independence. If the parents have in their old age still a share of the land, and are not able to work it themselves, the son will cultivate it for them. This means in fact that the son must set apart a share of his labour for his parents. Another form common when one of the parents is dead, is that the remaining one will re-incorporate into the son's Chia and live there. The amount of support is then not fixed. If there are two sons, they may support their parent alternately. In any case, the authority of the parents is reduced in proportion to the degree of their dependence. From the point of view of types of ownership the general line of retreat of the parents is from the right to use to the right of disposal of the produce and finally to the right of disposal of the objects itself. From the point of view of types of

objects, the retreat takes place from the means of production to goods for consumption and finally to immaterial privileges and liabilities. These steps of retreat correlated with the increase of obligation of the young from entire dependence to taking a co-operative rôle and finally to bearing responsibility for the whole livelihood of the parents. Even the death of the parents, as mentioned, does not completely eliminate the obligation of the young towards the old. The disposal of the corpse, the mourning and the periodical offering of sacrifices are a prolongation of filial obligations. Since the privileged party cannot exert direct control over these obligations, religious belief and public opinion enter more strongly into the sanctions.

在父母和孩子之间并不计较经济贡献上的平等问题，但在兄弟之间确有这个问题。我知道这样一个事例，有一个人根本不在地里劳动而靠他弟弟过活。为继续他的寄生生活，他甚至阻碍弟弟结婚。他受到了社会舆论的严厉批评。公众舆论迫使他为弟弟安排了婚事，并准备婚后接着分家，但在我离开村子以前，分家尚未举行。普遍接受的理念是：既然一个人在童年时代受了父母的抚育，又接受了父母的财产，为父母劳动就是他的责任，但为兄弟劳动却不是义务。

然而，父母和子女之间平等的意识并非完全被排除了。年轻夫妇如果挑起了家中的大部分劳动重担，而由于经济权力集中在老一代手里，青年仍然没有独立的地位时，他们也会产生不满。这将最终迫使父母在逐渐退出劳动的过程中，同时放弃他们的权力。

儿子有了独立地位时，赡养父母的义务就明显了。假如父母年老时仍然掌握一份土地，但已无力耕种，儿子将代他们耕种。这意味着实际上儿子必须为父母出一份劳力。另一个普遍的形式是：当父母一方去世时，活着的一方将与儿子的家进行合并，并一起居住。供养的金额并不固定。如果有两个儿子，他们可以轮流赡养。总之，随着父母年老依赖儿子的程度的增加，他们的权威便按比例地缩小。从各类型所有权的角度看，父母退却的一般规律是从使用产品的权利退到处理产品的权利，最后到处理用具的权利。从各类物体的角度看，从生产资料退却到消费物品，最后到非物质的权利和债务。这些退却的步骤与下一代义务的增加是相互关联的。下一代从完全依赖于父母到担当合作的角色，最后到挑起赡养父母的全部责任。正如前面已经提到的，甚至到父母死亡，尚未完全解除下一代对上一代的义务。对遗体的处理、服丧和定期祭祀，都是子女义务的延续。由于受赡养和祭祀的一方对这些义务不能施加直接的影响和控制，宗教信仰和公众舆论便成了强烈的约束力。

A person approaching death will be attended by the members of the Chia. All the juniors will kneel beside him with the son in the closest position. Daughters are not necessarily among the group but will come promptly after their parent's death. A package of clothes will be burnt with a paper chair before the front door. Neighbours will then gather to assist the funeral business because the members of the

Chia are under heavy mourning and not able to manage the business. The son, the daughter-in-law and the daughter will put on coarse hempen cloth and their heads will be tied with a long white belt down to the ground. Shorter belts and white clothes are worn by grandchildren.

On the second or third day, the corpse will be put into the coffin. The eldest son will hold the head of the deceased and the younger son the feet. On the next day, the coffin is closed and moved to the graveyard. According to the practice of the village, which is different from the town, the coffin is not buried underground, but above the ground among the mulberry trees and covered with a shelter built in bricks and tiles. If the family cannot afford a brick-and-tile shelter, a simple straw one will do. In this way, no land is made waste for the burial.^[9]

It is the duty of the descendants to repair the shelter of their ancestors' coffins up to five generations. Those decaying coffins, about which no one cares any more, will be removed by a special philanthropic institution and buried somewhere else.

The spirit of the dead, it is believed, has left the corpse and has been admitted to the world of spirits. It will come back to the house at the seventeenth or eighteenth day after death. On that day, the house will be prepared to welcome the spirit. The tablet with the name of the dead will then be put into a wooden pavilion presented by the husband of the daughter and set in the front room. Heavy mourning is observed for forty-nine days. Each meal will be prepared before the pavilion and a woman will wail beside it with dirges. This is the obligation of a wife towards her husband and a daughter-in-law towards her parents-in-law. Men never take part in such wailing.

当一个人垂死的时候，家的成员都要聚集在身旁，小辈们跪在床前，当儿子的位置最接近死者。女儿不一定在此之列，但一旦父母死亡，出嫁了的女儿便得迅速赶到。在死者大门前燃烧起一包衣服和一张纸钱。邻居们纷纷到来，协助料理丧事，因为家的成员此刻都服重孝，无心办事。儿子、儿媳和女儿都身穿麻布孝服，头缠白色长带，一直拖到地面。孙儿辈则穿白衣，头系短带。

到第二天或第三天便是遗体入殓。长子捧头，幼子扶足。再下一天，盖棺，把棺材运到坟地。村里同城镇的做法不同，棺材不埋在地下，而是放在地上桑树丛中，用砖和瓦片盖起一个遮蔽棺材的小坟屋。如果这家买不起砖和瓦，则用稻草搭成坟棚。这样，不会因为埋葬而荒废土地。^[10]

后代有责任修缮祖先的坟屋，一直继续负责到五代。那些腐烂的棺材没有人再管时，有专门的慈善机关将它们运走，埋葬在别处。

人们相信死者的灵魂离开尸体，进入阴间。死后第17或18天灵魂将回到家里。那天，家中应准备就绪，迎接死者的灵魂到来，女婿将奉献木龕一个，内立有死者名字的牌位，安放在堂屋里，举哀49天。每餐都准备好食品供在灵位前，并且有一妇女在旁边哀号恸哭，如诵悼歌。这是一个妻子对丈夫的义务，也是儿媳对公婆的义务。男人从不参与这种恸哭。

During the funeral ceremony, the priest who keeps the genealogy of the Chia will be invited to recite buddhist classics before the dead. His recitation is believed to have pecuniary value in the spirit world. The name of the dead is thus put into the genealogical record by the priest and will be included on the list for worshipping.

Daily sacrifices will be ended on the forty-ninth day. The tablet pavilion will be burnt at the end of two years and two months. It concludes the mourning period. The tablet is then put in the ancestral shrine.

At ordinary time, special sacrifices are offered on the birth and death days of each particular ancestor, and collective offering for all lineal ancestors five times a year as shown in the time-table of social activities (IX-3). The mode of sacrifice is that a feast is prepared for the spirits, at the conclusion of which paper money made in tin foils is burnt. This indicates directly the prolonged economic obligation of the young towards the old even after death.

The observance of these obligations by the descendants is in one sense the legal charter of descent and the claim on inheritance. The act of holding the head of the dead when the corpse is being placed into the coffin, for instance, is regarded as justifying the extra share of inheritance of the eldest son and is a determining fact in appointing an heir from the kindred. It is true that there are no two persons who stand in exactly the same kinship order with the deceased, but if the nearest kin failed to perform this act, the second one takes up his rôle and the claim of the nearest kin is forfeited. The one who observes the obligation will be the legal heir and will inherit the property.

Furthermore, at the death of an unmarried person who possesses no property of his own, the question of inheritance does not arise and therefore no descendant is appointed.

But the obligation of mourning is not unilateral. Mourning groupings are shown in the following table.

From the table, we can see that both the period and the act of mourning are not correlated with descent but to a certain extent with the actual social relations and their standardized ties of affection. Mourning is not thought to increase the welfare of the spirit but is

regarded as an expression of affection. It is different from ancestor worship, which is thought to be a definite contribution to the welfare of the spirit.

举行丧礼期间，邀请保管家谱的和尚在死者面前念佛经。人们相信诵经对阴间有财富的价值。从此，死者的名字便由和尚记载在家谱中，列入崇祀的名册。

49天后，每天的祭祀告终。两年零两个月后烧掉牌位龕，居丧便告结束。死者的牌位便放入祖祠内。

在平时，每一个祖宗的生日和终日都要祭供。对所有直系祖先，每年要集体祭祀5次，其时间见第九章第三节社会活动时间表所列。祭祀的方式是为祖先的鬼魂准备一次宴席。席后，焚烧一些锡箔做的纸钱。这直接说明了下代对上代的经济义务，甚至延长到老人去世以后。

后裔遵奉这些义务，在某种意义上表明了传嗣的合法权利，以及对继承权的要求。例如，遗体被放进棺材时，捧头的行动被认为是长子继承父母那份额外的土地的合法证明，也是在亲属中指定一名继承人的决定性依据。事实上，不会有两个人与死者的亲属关系是处在完全同等的位置，但如果最近的亲属未能履行这个行动，第二个人便接过这一角色，最近的亲属便丧失了继承权。奉行这个义务的，就是合法继承人，他将继承死者的遗产。

此外，如果死者是一个既未结婚也没有财产的人，就不发生继承的问题，因此不指定继承人。

但是，服丧的义务不是单系的，参加服丧的成员如下表所列。

从表中，我们可以看出，服丧的时间及戴孝的轻重并不与传嗣相关，而在某种程度上与实际的社会关系及他们与死者之间的标准化的感情关系相关。人们并不认为戴孝会增加鬼魂的福利，而认为是对死者的感情的表露。这同祭祀祖宗不同，人们认为祭祀是对鬼魂福利有一定的贡献，是对阴间祖先的赡养。

Relationship to the Dead

Wife and son-in-law: white shoes and white skirt and shoes; wearing no silk.

Daughter and son-in-law: white shoes.

Son-in-law

Son: white shoes, changing to white, if one parent is still living again changing to blue; white button; wearing no silk for one year.

Daughter and son-in-law (for one year): white shoes changing to blue; yellow cord.

Daughter and son-in-law (for 35 days, rest like the daughter).

Daughter and son-in-law (for 35 days, rest like the daughter).

Brother's child

Sister's child

Daughter's child

Elders of the deceased observe no obligatory mourning.

The immediate control over objects and persons ceases at the time of death. But the belief in the existence of spirits even after death prolongs the influence of the deceased over property. Misfortunes and

sickness are sometimes, not always, explained as the warning of ancestor spirits for some action that they do not approve, such as non-observance of the periodic sacrifice, damage to the coffin shelter, selling of land or house, etc. Pure ethical consideration is strong enough to prevent the person from selling his inheritance freely. The continuity of land holding is an expression of one's filial piety. Any act against it will be criticized by the community as bad. This is of considerable importance to the problem of land tenure.

服喪關係

妻麻衣服鞋，直到頭花結婚，然後改穿白裙和鞋；不穿絲綢

子主喪藍頂戴個月

女 婿

粗麻布鞋十然後改穿白鞋，如果父母一方未去世，又改穿藍鞋；白頂子，一年不穿絲綢

妻粗麻布鞋（或赤頭）白鞋，後改穿藍鞋；黃頭帶

妻粗麻布鞋主未五天，其餘如女兒

男用藍頂子

僮用藍頭帶

外 甥

外 孫

死者的長輩無服喪的義務

人斷氣時，對物和對人的直接控制便停止。但人們相信鬼魂的存在，這便延長了死者對財產的影響。家中的不幸、病痛有時被解釋為是祖宗的鬼魂對他們所不同意的某些行動的警告，例如，不遵奉定期祭祀、遮蔽棺材的小坟屋壞了、有人出售家中的土地或房屋等。純粹的倫理觀念考慮已足以阻止一個人隨意出售他所得的遺產。繼續保持土地擁有是子女孝心的表現。相反的行动就會遭到社區輿論的批評，認為是不道德的。這對土地占有問題至關重要。

[6] New Legislation on Inheritance

Having described the actual process of transmission of property in the village, now we can turn to the legal provisions. In preparation of the new civil code in China which came into force in 1929, the legislators followed the fundamental policy of the Kuomintang, the National Party in China, to promote sex equality by granting an equal right of inheritance to men and women. This has made an important departure both from the old civil code and from the traditional practice as described above.

The principle of the old and the new codes on the problem of inheritance can be summarized as follows:

"Formerly, a woman had, save a simple exception, no right to inheritance according to Chinese law. For instance, suppose a Chinese died fifteen years ago, leaving his widow, a son and a daughter, the whole of the property left by the deceased was by law to be inherited by the son only. Neither the widow nor the daughter was entitled to any share. In case the deceased had no issue except the only daughter, the daughter and the widow were still entitled to nothing if the brother of the deceased had a son. The son of the deceased's brother was the legal heir to the deceased and the whole of the property was to go to him. Again, even if the deceased had no brother, or his brother had no son, yet, so long as the deceased had a male relative descending from their common male ancestor and belonging to a younger generation than that of the deceased, surviving him, that male relative had a legal claim to inherit the whole estate left by the deceased. So the daughter could have the right of inheritance only when her deceased father had neither a son, nor a nephew, nor a male relative existing at the time of his death. The widow was in no case entitled to succession.

"But now the law has been changed very greatly. Women's right of inheritance is expressly recognized in the civil code.^[11] Suppose the above-mentioned man dies now, instead of fifteen years ago, his property will be equally divided between the widow, the son and the daughter. If he has no issue other than the daughter, the daughter and the widow will inherit jointly to the estate. The patrilineal nephew and the other male relatives have been deprived of the right of succession altogether."^[12]

The old legal principle prescribed strict unilateral inheritance

along the line of patrilineal descent. It followed the custom so long as a person had a son of his own. His daughter after marriage would live with her husband and join the economic unit of the latter. She had no obligation to support her own parents. In the mind of the people it was fair that a woman should be deprived of the right to inherit her own parents' property. But there were cases where a person had no son. According to the old law, he had no choice but to leave his property to his nearest kin. He might adopt a son or a son-in-law but the latter had no legal right of inheritance. Under these circumstances, the custom had provided compromises. It seemed to the people unreasonable to deprive one who had supported the deceased from inheriting what the latter left. But since they also recognized the potential claim of the nearest kin, as mentioned, compensation might be demanded.

六、新的继承法

在描述了村中财产的实际传递过程之后，现在我们可以看一看法律条款。在制定新的民法（于1929年生效）的时候，立法者是按照中国国民党的基本政策给男女以同等的继承权，以便促进男女平等的。这与旧民法和以上描述的传统做法有重要的区别。

在继承问题上，新旧民法的原则可以归纳如下：

“过去，根据中国法律，一个女人，除去个别例外，是没有继承权的。例如，假定一个中国人在15年以前去世，留下一个寡妇、一个儿子和一个女儿，根据法律，全部遗产只能由儿子继承，寡妇和女儿一概没有权利继承。如果死者没有子嗣，只有一个女儿，而他兄弟有一个儿子，在这种情况下，女儿和寡妇仍然没有任何继承权，死者兄弟的儿子是法定继承人，一切财产均归于他。再如，即便死者没有兄弟或他的兄弟没有儿子，但只要死者有一个男性亲属活着，他是与死者同一个男性祖先的后裔，而且是属于小辈，这个男性亲属便有继承死者全部财产的法定继承权。所以，女儿只有在她的先夫去世时既没有儿子、侄子也没有活着的男性亲属的情况下，才有继承权。寡妇在任何情况下不得继承。

“但是现在，法律有了很大的改变。在民法中明确地承认女子的继承权。^[13] 假定上述男人现在死去，而不是15年以前死去，他的财产便可平均分配给寡妇、儿子和女儿。如果他没有儿子只有女儿，母女可以共同继承遗产。父系侄子和其他男性亲属一概无权继承。”^[14]

旧的立法原则规定严格沿着父系传嗣单系继承。只要一个人自己有一个儿子，就沿着这种惯例进行。他的女儿，出嫁后与丈夫住在一起并参加后者的经济单位。她没有赡养娘家父母的义务。在人们的思想里，女人没有继承娘家父母财产的权利是公平的。但在一个人没有儿子的情况下，根据旧法律，他只能把财产留给他最近的亲属，无其他选择。他可以领养一个儿子或一个女婿，但后者没有法定的继承权。在这种情况下，习俗提供了折中的办法。在人们的眼里，剥夺一直赡养父母的人的继承权是不合理的。但正如以上所述，他们既然也承认最近亲属的潜在继承权，因此允许提出补偿的要求。

The new code has altered the unilateral principle of inheritance because it is conceived as against the principle of sex equality. But how far it has altered the principle of descent is not very clear. It recognizes the daughter, even after marriage, as being as much a descendant of her parents as were her brothers (Article 967). But as a wife, she will "prefix to her surname that of the husband" (Article 1,000), and take "the domicile of her husband as her domicile" (Article

1,002), except her parent adopt a son-in-law for her. Her children will "assume the surname of the father" (Article 1,059), except there is an agreement for another arrangement, and the domicile of her child is that of the father (Article 1,060). As a descendant, she has obligations to maintain her own parents (Article 1,115). Therefore each family has the obligation to maintain relatives of both husband and wife while husband and wife have to live together.

These legal provisions when translated into actual social practice will lead to an organization based on a bilateral principle of kinship. Professor B. Malinowski has pointed out that "unilateral descent is also intimately bound up with the nature of filiation, that is, with the handing over of status, power, office and possessions, from one generation to the other. Order and simplicity in the rule of filiation are of the greatest importance for social cohesion."^[15]

It would be interesting, therefore, to investigate the social consequences of this legal system. It provides an experiment for the anthropologists to study the process of change from unilateral kinship affiliation to a bilateral one. But so far as this village is concerned, I have yet found no indication of any actual change pointing in this direction, although the new law has existed for seven years.

新民法改变了单系继承的原则，因为这被认为是违反男女平等原则的。但对传嗣原则，究竟作了多少改变，不很清楚。它承认女儿甚至出嫁后，仍像她兄弟一样是她父母的后嗣（第967条）。但同时，“妻以其本姓冠以夫姓”（第1,000条），“妻以夫之住所为住所”（第1,002条），除非她父母为她招赘。她的子女将“从父姓”（第1,059条），除另有安排协议外，未成年之子女以其父之住所为住所（第1,060条）。作为后嗣，她有义务供养娘家的父母（第1,115条）。因此，每个家庭，夫妻必须住在一起，他们也同时有供养双方亲属的义务。

这些法律条款付诸实际社会实施时，将形成以双系亲属关系原则为基础的组织。布·马林诺夫斯基教授曾经指出：“单系继嗣是与亲子关系的性质密切联系在一起的，就是与地位、权力、官职和财产从一代传给另一代有密切的关系。亲嗣规则中的单系秩序，对社会结合来说是最重要的。”^[16]

所以研究这个法律制度的社会效果是有意義的。它为人类学家研究从单系亲属关系变为双系亲属关系的过程提供了一个实验的机会。但就这个村子而论，虽然新法律已颁布七年，我尚未发现有向这一方向发生任何实际变化的迹象。

[1] Chinese Civil Code, article 1, 147. The term succession to property is used in English translation of the code (C. L. Hsia, etc., Kelling and Walsh, Ltd., 1930). I follow the definition given by W. H. R. Rivers: inheritance for the transmission of property and succession for transmission of office (Social Organization, p. 87).

[2] R. H. Lowie, Primitive Society, pp. 243-255.

[3] 《中华民国民法》（以下简称《民法》）第1,147条。《民法》译本（C. L. 夏等，凯林及沃尔什有限公司，1930年）用succession to property这一术语。我沿用W. H. R.里弗斯的定义：用inheritance一词表述财产的继承，用succession一词来表述职位的继承（《社会组织》第87页）。

[4] R. H. 洛伊：《原始社会》，第243-255页。

[5] Villagers explained the meaning of this term as yellow (wan) muddy (ni) leg (pon). But they did not know why he should be so called. Afterwards I found that a similar expression "muddy leg" is used in the Northern Chinese dialect, for example, in the classical novel Red Chamber Dream, chapter 45, referring to those wandering vagabonds. But another literary explanation of this term was given to me by the literate people in the town as "to prevent the wildness or lack of the child." The word for prevent, Fang, is pronounced by the local people as ban which has been changed as wan in this term. The word for child, Er, is pronounced as ni in the local dialect. The word for wild or lack, Huang, is pronounced as whan, and is changed here to pon. The phonetic changes such as b to w and wh to p are observed in other instances. The literary explanation gives the function of the substitute while the local explanation gives the nature of the substitute. They are both useful in understanding the practice.

[6] 村里的人解释方言“黄泥膀”这个词的意思为黄泥腿。但他们并不知道为什么要这样称呼他。后来我发现中国北方方言也有同样的叫法——“泥腿光棍”，例如在古典小说《红楼梦》第45回中，指那些无业单身汉。但城镇里识字的人告诉我这个词的另一种书面的解释是“防儿荒”。“防”，当地人念ban，在此词中变音为wan。“儿”，当地方言念作ni。“荒”，读作whan在这里变成pon。语音变化如b变成w,wh变成p，在其他例子中也常见。书面的解释说出了替代人的功能，而当地人的解释说明了替代人的性质。两种解释对了解这种习俗都有用处。

[7] Code Nos. 1,000, 1,002, 1,059, and 1,060.

[8] 《民法》第1,000、1,002、1,059及1,060条。

[9] The average percentage for grave land in the farm is 2.6 in Eastern Central China (Buck, Chinese Farm Economy, p. 33). The absence of special grave land, except the tombs for the rich in the town who bury their dead in the village, indicates the particularly high population pressure on land.

[10] 在华东中部，坟地占农田面积的平均百分比为2.6%（巴克：《中国农村经济》，第33页）。除城镇里的富人把死者埋藏在农村以外，没有其他专门的坟地，这说明了人口对土地的压力极大。

[11] The Chinese Civil Code, Article 1,138: "Heirs to property other than the spouse come in the following order: (1) Lineal descendants by blood; (2) Parents; (3) Brothers and sisters; and (4) Grandparents." Lineal relatives are defined in Article 967 as "His relatives by blood from whom he is descended or those that are descended from him." They include both son and daughter and their lineal descendants.

[12] This summary is supplied by Mr. H. P. Li, Barrister-at-law at Shanghai.

[13] 《民法》第1,138条：“遗产继承人，除配偶外，依下列顺序定之。一、直系血亲卑亲属。二、父母。三、兄弟姊妹。四、祖父母。”直系亲属在第967条中的定义为：“称直系血亲者，谓己身所从出，或从己身所出之血亲。”他们包括儿子、女儿以及他们的直系后裔。

[14] 这一条综述由上海高等法院律师H. P. 李先生提供。

CHAPTER V KINSHIP EXTENSIONS

Kinship is the fundamental bond uniting the members of the Chia, but it does not confine itself within this group. It extends to a much wider circle and forms the principle of association of larger social groups which will be the subject-matter of this chapter.

[1] Paternal Extension

The Chia is an undivided expanded patrilineal family, because it excludes the relatives on the mother's side and also married daughters. The larger kinship group on the father's side is the group in which members have still preserved, to a certain degree, the social relations originated in the Chia after it is divided. As we have seen, when the family nucleus in the Chia increases in size, the group becomes unstable. This leads to division. But the divided units do not entirely separate from each other. Economically they become independent, in the sense that they have each a separate property and each has its own fire place. But they are still bound together by various social obligations. At the beginning, they usually live in adjacent houses and sometimes share the big front room in common. They stand very close to each other in matters of mutual help and in daily intercourse. In the second generation, children of both units share the intimacy of the relation between their parents. The intensity of daily intercourse and mutual help varies according to the kinship proximity and also to the territorial proximity of residence. If brothers after division reside in distant houses, the opportunity for mutual help is decreased, and this is still more so among siblings of the next generation.

According to accepted principle, all the patrilineal descendants and their wives that can be traced to a common ancestor within five kinship grades consider themselves as belonging to a kinship group called Tsu, and refer to each other as *tsezomenzon*, meaning "one who comes from the same door of my Tsu." But in practice this strict genealogical accounting is not important. Firstly, there is no written document of genealogy and memory of descent is not very exact. Family trees are kept by the priests, not for the purpose of recognizing living kindred but for keeping alive the memory of lineal ancestors to whom sacrifices should be offered. Siblings do not enter into the list of spirits. Spirits of ancestors farther back than five kinship grades are removed from the list to be worshipped. Secondly, if the principle were strictly observed, theoretically there would be a division of Tsu for each generation. But Tsu are seldom divided for this purpose.

伍 亲属关系的扩展

使得家的各个成员联系起来的基本纽带便是亲属关系。但亲属关系并不把它自己只限制在这个群体之内。它扩展到一个较广的范围，并成为较大社会群体的联系原则。

一、父系亲属关系的扩展

家是一个未分家的、扩大的父系亲属群体，它不包括母亲方面的亲戚和已出嫁的女儿。父系方面的较大的亲属群体是这样一群：即其成员在分家后，仍然在一定程度上，保持着家的原来的社会关系。我们已看到，家中的家庭核心增大时，这个群体就变得不稳定起来。这就导致分家。但已经分开的单位，相互间又不完全分离。经济上，他们变成独立了，这就是说他们各有一份财产，各有一个炉灶。但各种社会义务仍然把他们联系在一起。开始时，他们通常住在邻近的房子里，有时共用一间大的堂屋。他们互相帮助，在日常生活中关系比较密切。在第二代，由于他们双方父母之间的关系密切，儿辈之间也亲密相处。他们之间互相帮助和日常交往的密切程度，视亲属关系的远近和居住地区的远近而异。分家后弟兄们如果住得较远，互相帮助的机会就减少，下一代的兄弟姐妹更是如此。

根据已接受的原则，五代以内同一祖宗的所有父系后代及其妻，属于一个亲属关系集团称为“族”，互相间称“祖宗门中”，意思是“我同族门中的人”。但实际上，这个谱系的严格计算并不重要。第一，没有文字记载的家谱，对家系的记忆并不准确。和尚记家谱是为了记得需要定期祭祀的直系祖先，而不是为了承认活着的亲戚。兄弟并不被列入祖先鬼魂的名单。五代以前的祖先不再列入祭祀的名单。第二，如果严格遵照这一原则，从理论上说，在每一代，族都要淘汰一些远亲，但实际上族很少这样做。

The actual situation is as follows: The population in the village has been stationary for a long time. The Tsu will not be subdivided if there is no increase of members. Furthermore, if there is an increase, there must also, owing to the pressure on the land, be a migration to some other place. When people move away, they will no longer take an active part in the kinship group. After one or more generations, kinship ties cease to function. That is why I have not yet found any Tsu with members permanently in other villages.

The following note given to me by a villager may be quoted here. "The average size of a Tsu is about eight Chia. This is because when my son marries, all the Tsu will come and sit at the same table. (Each table has eight seats, for one representative from each Chia; men and women gather separately at different times.) When a table is not large enough, we do not invite our distant kindred to the celebration." Of course, this statement is not an actual rule, but indicates that the acknowledgement of membership of the unit allows individual discrimination. One can exclude those distant kin in ceremonial

gatherings and they will not insist on their claim to be invited. A rich Chia is able to provide two or more tables for its clansmen, and will do so with pleasure and be praised for it. In this sense, the Tsu can be taken as no more than a ceremonial group which assembles periodically at wedding and funeral occasions, taking a common feast, offering sacrifices to the common ancestors together, and contributing a small sum barely enough to cover the food. Real social obligations of mutual aid exist between smaller groups, such as brothers with newly divided households. The people do not use the term *tzezo-menzon* to describe their relation but the term *disho*, or brotherhood.

Another character of this unit is that its membership is the Chia. Therefore it is not a unilateral kinship as its individual members are concerned. A married woman entering her husband's Chia automatically becomes a member of her husband's Tsu. She takes the surname of her husband although she retains her father's surname in the second place. She kneels beside her husband in the joined offering of sacrifice to the ancestors during the ceremonial occasions of her husband's kin. When she is dead, she will receive sacrifices with her husband.

She loses her membership of her father's Tsu when she is married in the sense that she will not join the offerings of sacrifice to ancestors on the father's side and will not be offered sacrifices by them after her death.

实际情况是这样的：长期以来村的人口一直是变动不大。如族的成员人数不增加，就不分族。如果人数增加，对土地压力增加，就必定移民到其他地方去。人离开了，就不再积极参与这个亲属群体。一代或几代以后亲属联系就停止发生作用。这就是为什么我尚未发现任何族有成员永久居住在其他村里。

下面是一个村里人告诉我的一段话：“一个族的大小平均约有八家。因为我儿子结婚的时候，全族都要围着一张桌子团坐（每张桌子有八个座位，一个座位坐一个家的代表，女人和男人在不同时候分别集会）。桌子座位不够时，我们就不请远亲来参加庆祝。”当然，这段说明并不就是实际的规则，但它表明，一个单位在承认其成员的资格时允许有区别对待。在礼节性聚会时，可以排除那些远的亲戚，他们也不会坚持要求受邀请。一个富裕的家能请两桌或更多桌的族人，他们乐于这样做，也往往受到赞扬。在这个意义上说，族也可以说是一个礼仪的群体，有婚丧大事时，聚集在一起，宴会或祭祀共同的祖先，同时也送少量礼金勉强够食物的开支。互相帮助的真正的社会义务则在更小的群体内进行，例如刚分家的兄弟。此时，人们不用“祖宗门中”这个俗语，他们用“兄弟”或用“兄弟辈”这样的字眼来描写他们之间的关系。

族这个单位的另一个特征是：它的成员是家。因此，从它的个人成员来说，族并不是单系的亲属关系。一个已婚妇女到了丈夫的家，便自

动成了丈夫的族的一员。她姓丈夫的姓，把她父亲的姓放在第二位。她丈夫的亲戚遇有重大礼节性场合时，她跪在丈夫旁边，共同拜祭祖先。她死后将与丈夫一起接受祭祀。

妇女出嫁后不再是她父亲那个族的成员，她不再参加对父亲一方祖先的祭祀，死后也不受父方下辈的祭祀。

The most important function of the Tsu is in the regulation of marriage. The Tsu is an exogamous unit except in case of levirate. Persons with the same surname are not barred from marriage, provided they are not of the same Tsu. It is true that the classical rule, as well as the old legal code, prohibited marriage between two persons with the same surname, but this does not apply in the village; and so far as my informants remember, has never applied. The lack of clear distinction of Tsu does not hamper their exogamous function, because most of the marriages are inter-village and the organization of Tsu rarely goes beyond the village.

[2] Maternal Extension

In the above sections, we have already seen that the child keeps close contact with his relatives on his mother's side. His maternal grandmother comes to assist his mother in childbirth. The child will visit his maternal relatives many times a year. His maternal uncle has special obligations towards him. He is the guest of honour at the ceremony held when the child reaches one month, and is the one who selects a name for the child; he escorts him when presenting him for the first time to his schoolmaster. He will present a valuable gift, ornament, or cash, when his sister's son gets married. On the child's side his maternal uncle is a protector against harsh treatment by his father. He can run to his maternal uncle in case of need. His maternal uncle will act as mediator in conflict between father and son. When property is divided between father and son or among brothers, the maternal uncle is the formal judge. When the maternal uncle dies, his sister's children will mourn for him.

The mother's sisters, especially those married to fellow villagers of the father, also, owing to local proximity, stand in very intimate relationship.

But the kinship relation does not extend beyond the group of Chia of maternal uncle or maternal aunt. Their extended kindred is excluded from the functional grouping.

Relatives on the wife's side do not come into intimate contact before a child is born. They do not participate in the wedding ceremonial of their daughter, but pay visits in the first month after it. The bridegroom goes with the bride to visit his new parents-in-law on the third day after the wedding. After those ceremonial visitings are over, they do not visit each other except the wife herself who may go back occasionally. When a child is born the wife's mother will spend a few nights with her daughter. From that time on relatives on the wife's side become maternal relatives of the child.

族的最重要的功能在于控制婚姻规则。族是外婚制单位，叔嫂婚例外。同姓、非同族的人可以结婚。古时候的规定及旧的法律规定，禁止同姓的人结婚，但这个村并非如此，至少在向我提供情况的人所能记忆的时期内，这个村子从未这样实行过。族缺少明确的界线，这一点并不妨碍外婚制的功能，因为大多数婚姻都在各村之间进行，而族的组织很少超越村的范围。

二、母系亲属关系的扩展

从上面几节，我们已看到孩子与母亲方面的亲戚保持密切的联系。母亲生孩子时，他的外婆来帮助料理。孩子一年要看望母方亲戚数次。舅舅对孩子有特殊的义务。他是孩子满月时的贵客。给孩子取名字的是他，陪伴孩子第一次上学校去见老师的也是他。外甥结婚时，舅舅要送贵重礼物，如首饰或现金。对孩子来说，父亲若对孩子管得太严厉，舅舅是孩子的保护人，需要时，孩子也可以跑到舅舅那里去。父子有矛盾时，舅舅就出来作调解人。父子之间或兄弟之间分财产时，舅舅是正式的裁判。舅舅去世时，外甥须为他服丧。

母亲的姊妹，特别是那些嫁给父亲的同村人的，由于住得较近，关系也很亲密。但母系亲戚关系不超过舅家和姨家的群体范围。舅姨家的亲属是不属于这个功能群体之内的。

妻方的亲属，在妻子生孩子之前，并没有密切的联系。他们不参加女儿的婚礼，要到婚礼后的一个月才去探望她。婚后第三天，新郎和新娘要到岳父母家去“回门”。礼节性拜访结束后，彼此不再探望，只是妻子本人偶尔回娘家探视。生孩子时，妻子的母亲便来女儿处陪伴数夜。从这时候起，妻方的亲属便成为孩子的母系亲戚。

[3] Pseudo-Adoption

Pseudo-adoption is a system by which a person is partially included in another's kinship group without the connection of procreation or marriage. The local term for this system is *govan*, meaning "passing to another house" or *gochi*, meaning attaching. It is said to be originated from the belief in the malevolent spirits who will make trouble for those children who are specially regarded by their parents (III-4). By similar reasoning, anyone who has numerous children must possess stronger resisting power against the evil spirits. Thus by "attaching" a child to such a strong person, it will be protected. On the other hand, giving the child to others, though nominally, will be enough to show the spirits that the child is disregarded by its parents.

This belief, as shown, is related to the high infantile mortality, but the institution of pseudo-adoption means more than a spiritual protection of the child's welfare. It also provides a wider social connection for the child, if we remember that those who have numerous children, whether they really possess spiritual power or not, certainly possess wealth and social influence (III-3). By creating a pseudo-kinship relation with them, the child will acquire a better economic and social position in the community. On the other hand, the person who accepts pseudo-adopted children is pleased by the belief that this is an indication of his prestige and future prosperity.

The relation will be created by a ritual act, which consists of a sacrifice to a god called "new-official-horse" (the meaning of this term is not clear to me). The adopted child will offer a present of needles, peaches and wine, symbols of long life, to his "adopting" parents, who will in turn offer him a feast and give him a new personal name, and his "adopting" father's surname (which is in fact never used) and some ornaments and cash.

The child also acquires at the same time a new set of duties and privileges. He will address his "adopting" parents by relationship terms. In the new year, he must greet his "adopting" parents, offer regular gifts to them. He will participate in their ceremonial occasions, and mourn for them; and he will not marry their children. He in return receives "rice of new year's eve," shoes, hats, and gowns for three years (symbolizing in-corporation into the "adopting" parents' household), regular gifts and other regards.

三、名义上的收养

名义上的收养就是一个人不通过生育和婚姻，部分地被接受到另一个亲属关系群体中去的制度，当地称之为“过房”，意思是“过寄到另一家去”，过寄意思是依附。据说这来源于人们相信恶毒的鬼魂对父母娇养的孩子往往要找一些麻烦（第三章第四节）。按同样的推理，多子女的人对鬼魂的抵抗能力较强。因此，把孩子“过寄”这样一个强有力的人，孩子可以得到保护。另一方面，孩子虽然是名义上过寄别人，但也足以向鬼魂表示父母对孩子的淡漠。

这种信仰与婴儿的高死亡率有关，但这种名义上收养的制度不仅仅意味着对孩子的一种精神上的保护，这也为孩子提供了一种较新的社会联系。在前面已谈到过，那些多子女的父母，无论他们是否真正具有精神上的强大力量，他们比较富裕，社会影响大，这是肯定的（第三章第三节）。通过名义上的收养与他们建立关系，孩子将在这个社区内获得较好的经济和社会地位。另一方面，名义上收养孩子的人也感到高兴，因为他相信，这表示他的声誉和未来的兴旺。

这种收养关系将通过一次仪式来建立，那就是向一个被称为“新官马”（意思不明）的神进行祭祀。被收养的孩子向过寄的父母赠送针、桃、酒等象征长寿的礼物。收养孩子的过寄父母要给孩子办筵席，并给孩子取一个新名字，姓他过寄父的姓（实际上从不用此姓），送他一些饰物和现金。

从此，孩子便有了新的责任和权利。他须按照亲属关系来称呼他的寄父母。新年的时候，他必须向寄父母拜年，送礼物。有婚丧大事时他必须参加，为他们戴孝，他不应与他们的子女结婚。寄父母则须请寄养儿子吃年夜饭，供给他三年鞋、帽和长袍（象征孩子已被接纳到寄父母的家中来）以及定期送礼物和给予其他关怀。

This type of "adoption" is metaphorical; the child does not sever its relation with its real parents. It acquires neither the right of inheritance nor the obligation of support. It nominally changes its surname but this is, as the villagers put it, only to fool the spirits. The real meaning therefore is to create a new social relation similar to kinship by metaphorical use of relationship terms and by ritual acts.

The extension of social relations facilitates social activities but is also expensive. During the economic depression, even real kinship relations are a burden, and there is a clear sign of the shrinking of kinship organization. Pseudo-adoption becomes less popular. As my informant told me, to seek protection against the evil spirits, they "attach" their children to the god or to their father's sister's husband.

Thus no new relations will be created. Since girls are much less often pseudo-adopted, the special preference for a father's sister's husband to play the part may be linked up with the idea of unlucky marriage of the "reverting" type (III-8). It does not narrow down the marriage choice when girls of father's sisters are included in the exogamous unit.

[4] Kinship Basis of the Village

In pseudo-adoption, kinship terms are used in a metaphorical sense in order to establish new social relations which are similar and derived from kinship. This type of extension of the kinship relations to persons bound neither by procreation nor by marriage is very common in the village.

All the terms for relatives on the father's side, with the exceptions of those for father, mother, grandfather, and grandmother, are used for addressing fellow villagers according to their sex and age and the consanguinity and affinity to the village. The terms for mother-side relatives, with the exception of mother's parents are used for addressing the people in the village of mother's parents in similar manner. This type of usage of kinship terms serves the function of classifying local and age groups, and defines the different types of social relation towards each of them by that derived from the existing kinship relation.

There is a definite purpose in this extended use of relationship terms. To each term there has become attached certain psychological attitudes corresponding to the intimate relationships for which they were initially devised. These emotional attitudes may, by the extended use of the term, be taken up to persons not actually standing in such an intimate relationship. For instance, a person addressing his fellow senior villagers as father's brother will tend to show the same obedience and respect to them as to his father's brother. The attitude associated with the term used for the mother's brother, is different from that with the term for the father's brother. The nephew associates the idea of his maternal uncle with indulgence and friendliness. By addressing his mother's fellow villagers as mother's brother he behaves freely among that group of persons, and enjoys their treating him as a guest.

这种“收养”是象征性的；孩子并不离开生父、生母。他不要继承权，也没有赡养寄父母的义务。他名义上改了姓，但正像乡亲们说的，这是骗那些鬼魂的。所以真正的意义在于通过象征性的亲属关系称谓和礼仪形式来建立一种新的与亲属关系相似的社会关系。

社会关系的扩展促使社会活动增加，但也会增加开支。在经济萧条时期，甚至真正的亲属关系也成为一种负担，那时，亲属关系的组织明显缩小，名义收养也不流行了。向我提供情况的人告诉我说，为了免于受鬼魂的侵害，他们把孩子“寄”给神或“寄”给父亲的姊妹的丈夫。这样

并没有建立新的关系。由于女孩很少被“寄养”，特别喜欢让父亲的姊妹的丈夫来担当这个角色很可能与不吉利的“回乡”型婚姻观念有联系（第三章第八节）。当父亲的姊妹的女儿被包括进外婚制单位中时，并没有使婚姻的选择面变窄。

四、村庄的亲属关系基础

在名义收养制度中，人们象征性地使用亲属关系的称谓来建立新的社会关系，这种关系来源于亲属关系并与亲属关系相类似。亲属关系的这种扩大方式在这个村里很普遍，它既与生育无关，也不与婚姻相联系。

除了父亲、母亲、祖父、祖母的称呼外，人们根据不同的性别、年龄、血统关系和姻亲关系，用父方的所有亲属称谓来称呼同村人并用母方所有的亲戚称谓——除外祖父、外祖母以外——来称呼外祖父母村子里的人们。亲属称谓的这种延伸的用法，起到了区分不同的地方和年龄组的作用，并可由现存的亲属关系派生的这种关系来说明不同类型的社会关系。

亲属称谓的延伸使用是有一定目的的。每一个称谓，当它最初被用来称呼时就包含了与亲密的亲属相应的某种心理态度。由于称谓的延伸使用，这种感情上的态度也逐渐被用来对待实际上并不处于这样一种亲属关系的人。譬如，一个人称呼他村里的年长的人时，用父亲兄弟的称谓，这就是说，他将像对待他伯伯或叔叔那样来服从或尊敬他们。与母亲的兄弟的称谓相联系的态度，与伯伯或叔叔的称谓相关的态度不同。外甥把舅舅与友好和宠爱的观念相联系。同舅舅这个称谓来称呼他母亲村里的人便意味着，他可以在这些人之中自由自在地行动，并乐于被他们待为上客。

It should be noted that the extension of such emotional attitudes to persons not actually related as the terms would imply does not necessarily involve an extension of specific privileges and obligations. It does not imply a real extension of kinship relation, but it is useful in defining a person's status in the community where the old are respected and usually possess authority.

Recently the principle of distribution of authority according to age groups has been undergoing change. The old men in the village who are not able to keep up with the rapidly changing situation cannot fulfil the rôle of leaders in the community. Thus the present village head, Chou, is from the second age grade in the community. He addresses the senior grade who either work under him or are less influential in the community, by their personal names. Formerly this manner of address was possible only between a senior and his juniors. On the other hand a new term has been introduced, *sisan* (used in towns generally as the title of a teacher, or simply as a common title such as that of mister in English), by which he is addressed by the age grade senior to him. This case illustrates very clearly how sentiment is

associated with the term. When the situation has changed in such a way that a person from the senior grade has become the subordinate, the original sentiment of respect is incompatible in the context. The changed social situation thus caused a psychological difficulty, and finally a change in language.

It must be pointed out that the extended use of relationship terms should not be taken as evidence of an existence of "clan village," at present or in the past, in this part of China. A study of the distribution of the surnames in the village can demonstrate that, although kinship groups tend to concentrate in compact areas, genealogical relation does not form a basis of local groups.

应当注意的是延伸地用这种感情态度来对待实际上并不是属于这种亲属地位的人，并不意味着他们之间就延伸特定的权利和义务。用这种称呼，并不等于他们之间真的建立了这样的亲属关系，但这种称呼有助于说明这个社区内不同的人的地位。在这个社区内，老年人受到尊敬，而且通常是具有威信的。

近来，按年龄组分配权力的原则有所变化。村里的老年人不能适应迅速改变着的形势的需要，因而不能胜任这个社区的领导人的角色。现任村长周某，属于村里第二个年龄组。他用个人名字来称呼在他下面工作或在社区内不太有影响的老年人。过去只有年长者能用姓名称呼年轻的人。另一方面，现在已引进一个新的名称“先生”（在城镇普遍用作教师的头衔或仅如英文中的Mister这个普通头衔），比周年长的人也这样称呼他。这一例子很清楚地说明了感情与称谓的关系。当情况有了变化，年纪大的人变成在他下面的人，原先的尊敬的感情与整个环境不甚相符。因此，变化了的社会环境便引起心理上的别扭，最后引起语言的改口。

必须指出的是亲属称谓的延伸使用不应被当作过去或现在在中国这部分地区有“族村”存在的证据。对这个村子的姓的分布的调查可以说明，虽然亲属关系群体倾向于集中在某地区，但家族关系并没有形成地方群体的基础。

the clan organization. But one thing is clear, those who have different surnames cannot be of the same patrilineal kinship group. Thus multiplicity of surnames in the village can be taken as an indication of their multiplicity of patrilineal kinship groups.

There are twenty-nine surnames in the village. The table above shows the number of Chia of each surname in each *yu* (II-3).

From this table, it is possible to see the distribution of the Chia of the same surname. There appears a tendency of concentration of kinship related groups. For instance, Chou and Yao are concentrated in *Yu* I; Lü in *Yu* II; and T'an in *Yu* III and IV. Some of the surnames, such as Lü and Chiu can be found only in one *yu*. These facts indicate a close relation between residence and kinship relations. In other words, there is a tendency for the Chia bearing the same surname, probably bound by kinship ties, to live in an adjacent residential area. But it is also clear that the fact of numerous surnames and their dispersion indicate the multiple kinship groups and the low correlation of consanguinal and local ties.

Similar are the affinal relations. Strictly the village is neither an exogamous nor an endogamous unit. But, as mentioned, marriage is more frequently arranged among people of different villages. There is a tendency towards local exogamy although it is not formulated. Among the villages, no special preference is made of one as against another. Therefore, affinal relation does not preserve a strong tie among the people of the same village or among the villages.

在父系社会中，姓是由父亲传给儿子的。但这并不是说，同姓的人都可溯源到同一个祖宗。例如，周某告诉我，该村姓周的人属于两个完全不同的血统。此外，有同一个祖宗的那些人，社会上不一定承认他们是宗族关系。但有一件事是明确的，不同姓的人，不可能属于同一父系的亲属群体。所以可以认为，一个村子里的居民有许多不同的姓，说明了这个村里有许多不同的父系亲属群体。

这个村共有29个姓，上表说明了在每个圩里（第二章第三节）每一姓的家数。同姓的家的分布情况如上表所示。

从此表可以看出同姓的家的分布情况。亲属群体有集中的倾向。例如周姓和姚姓集中在圩I；吕姓在圩II；谈姓在圩III和IV；某些姓，如吕和邱，只分布在一个圩里。这些事实表明居住地亲属关系之间的密切联系。换句话说，有这样一种趋势，同姓的家，可能因亲属关系联系在一起并住在一个邻近的居住地区。但这个村子里的姓很多而且同姓住得也分散，这个事实也清楚地说明，村里有许多亲属群体，而亲族联系和地方联系的相互关系不大。

姻亲关系的情况也相同。严格地说，这个村既不是外婚制也不是内婚制的单位。但正如已经提到过的，不同村的人互相通婚更为经常。虽

然并没有明确提出，但是有地方性外婚的趋向。各村之间，在婚姻关系上并没有特殊的偏向，因而，姻亲关系并没有在同村人之中或在各个村庄之间保持密切的纽带关系。

CHAPTER VI THE HOUSEHOLD AND VILLAGE

Beside kinship bonds, another fundamental social tie is that of territorial bonds. Those who live near each other find it easy to co-operate in matters of common interest demanding concerted action. In this chapter, we shall review various territorial groups.

[1] Household

The Chia, held together by kinship ties, is not necessarily an efficient working unit in economic life. Members of a Chia may be temporarily absent or removed by death. The introduction of new working members, through kinship ties such as birth, marriage and adoption, is not always easy to effect and sometimes is not advisable owing to questions of inheritance. On the other hand, members of a Chia, which has broken up may wish to be temporarily in-corporated into another working unit without assuming new kinship relations. Therefore, those who live in the same house and participate in most of the economic pursuits may not be necessarily considered as members of Chia.^[1] Here we may use the term household to refer to this basic territorial group.

In the village I found that in twenty-eight cases individuals have been introduced into the economic unit, living, eating, and working as members of the household but clearly distinguished from the members of the Chia. They were not connected with the Chia by the necessary kinship ties and did not permanently pool their property without discrimination into the Chia but usually joined the unit upon definite terms. The relation of such members to the group varies from that of a long-term guest to having practically no distinction from the members of the Chia except over the legal rights of property.

There are three ways in which non-Chia members may be introduced into a household. The member may be a guest of a certain family and have made a definite annual or monthly payment over a rather long period of residence. For instance, a medical doctor practising in the village had lived in the house of the owner of the medicine store for many years. He had a separate room and shared the daily life with his hosts. Another case was that of a child whose own family lived in another village, but who was brought up and nursed in a house in the village. The parents of the child made contributions each month to the family nursing it. There were five cases of persons related to their hosts by affinity. After the breaking up of their own Chia, they join their relatives on the mother's side. They could not be in-corporated into the Chia but would remain as guests, although practically they lived in the house just as members of the Chia.

陆 户与村

除了亲属关系的联结，另外一个基本的社会纽带就是地域性的纽带。居住在邻近的人们感到他们有共同利益并需要协同行动，因而组成各种地域性的群体。在这一章里，将加以分析。

一、户

家是由亲属纽带结合在一起的，在经济生活中，它并不必定是一个有效的劳动单位。家中的成员有时会暂时离去，有时死亡。在家中要吸收新的劳动成员，通过亲属关系，如生养、结婚、收养等办法，有时不易做到，有时则因涉及继承等问题而不宜进行。在另一方面，有些人的家破裂了，可能希望暂时参加另一劳动单位，但并不希望承认新的亲属关系。因此，那些住在一起、参加部分共同经济活动的人，不一定被看作是家的成员。^[2] 我们在这里采用了“户”这个名词，来指这种基本的地域性群体。

在这个村子里，我发现28起个人被吸收到另外的经济单位中的情况。作为户的一员，一起居住、吃饭和劳动，但他们和家的成员有着明显的区别。他们和这家人并不存在一定的亲属纽带关系，并不把自己的财产永久地投入这一家中。通常情况是，他们在一定条件下参加这个单位。这种成员和这家的关系大有差别，有些是长期的客人，有些是除了没有财产的法定权利外，其他都和家里人是一样的。

非家庭成员进入一户，通常采取三种办法。其一，这个成员可能是这家庭的客人，他在一个较长时期内住在这里，按月或按年付一笔钱。例如，有一个医生在村中开业，他就在药店老板的家中住了多年。他单独有一间房，并和他的房东共同生活。另一例是一个小孩，他自己的家住在另一个村子里，但他是这个村的一家人抚养大的。这个孩子的父母每个月付给抚养孩子的家庭一笔钱。还有五例，他们都和房东有姻亲关系。他们自己的家破裂之后，跟随着母方的亲戚。虽然他们实际上和家的成员一样地生活在一起，但他们不能加入这个家，而保留着他们的客人身份。

The institution of apprenticeship also provides a way of introducing a working member from outside. There were four cases of this kind. An apprentice is provided with food and shelter by the master without tuition and in return is bound to work for his master for a certain period of years without wages, except in the last year when he can demand a small amount for "renewing his shoes and stockings."

The commonest way, however, is through employment. A person may be introduced into a household as an employee under a definite contract to work on the farm or at the silk industry. The employee receives accommodation in his employer's house. He participates in the household work, is entitled to use all the implements, and is provided with food and shelter. He has also a fixed amount of wage each year.

These are all the cases in the village in which members who do not belong to the Chia were introduced into the household.

The members of a Chia may not live in the house but pursue their work in distant places. Their temporary absence from the house does not affect their kinship affiliation. But during their absence, they cannot be considered as a member of the household, although they have definite economic relations with it.

In the village the total number of individuals not living in the house of their own family was fifty-four. Of these thirty-two are females and eighteen males; they were at work in the town except four boys who lived in their master's houses in the village bound as apprentices. These numbers indicate the relatively strong movement of the population towards the town, especially among females.

[2] Neighbourhood

A number of Chia combined together to form larger territorial groups. The formation of larger groups depends on the common interests of those who live in a wider territory. For instance, there are natural menaces such as flood and drought and also the threat of invasion by an alien people, which do not affect single individuals but all those living in a locality. They must take concerted actions to defend themselves—as by building dikes, relief measures, magical and religious activities. Moreover, the satisfactory exploitation of his land by an individual requires co-operation with others: similarly with the distribution of the produce and with trade and industry. The need of relaxation and amusement is another factor which will bring together individuals in games and other forms of group recreation. Thus the fact of living together and near to each other produces the need of political, economic, religious, and recreative organizations. The following sections will give a general description of territorial groupings found in the village, but those groups formed specially for economic activities will be discussed in later chapters in detail.

学徒制度也是一种从外面吸收工作成员的办法。这种情况有四例。师傅为学徒提供食宿，免收学费；而学徒则必须为他的师傅做一定年限的工，没有工资，只是在最后一年，可以要少量的“鞋袜钱”。

最普遍采用的办法是雇佣。一个人可按一定契约做一名佣工进入一户，他为那家种田或养蚕缫丝，佣工在雇主的家中得到住宿。他参加该户的劳动，有权使用所有的用具，并由该户供给食宿。他每年可得到一笔事先议定的工资。

以上是村中不属于家的成员而进入户的全部情况。

家中的成员也可能不住在家里而在远处工作。他们暂时不在家，并不影响他们的亲属关系。但他们不在的时候，他们不能算作户的成员，虽然他们和这一户有着明确的经济关系。

在这个村子里，那些不住在自己家里的人，总共有54人，其中女32人，男18人。除了其中4个男孩作为学徒住在本村的师傅家里外，其他人都在城里工作，这个数字表明了人口流入城市的强烈倾向，其中尤以女性人口更为突出。

二、邻里

若干“家”联合在一起形成了较大的地域群体。大群体的形成取决于居住在一个较广区域里的人的共同利益。比如，水、旱等自然灾害以及外敌入侵的威胁，不是影响单个的人，而是影响住在这个地方的所有的人。他们必须采取协同行动来保护自己——如筑堤、救济措施、巫术及宗教等活动。此外，个人要很好地利用他的土地，需要别人的合作；同样，运送产品、进行贸易、工业生产都需要合作。休息和娱乐的需要又是一个因素，把个人集聚在各种形式的游戏和群体娱乐活动中。因此，人们住在一起或相互为邻这个事实，产生了对政治、经济、宗教及娱乐等各种组织的需要。下面几节将对这个村子的各种地域性群体作概括的描述，但有关经济活动的各种群体，将在以后几章里详细讨论。

A neighbourhood is the group of households combined for daily intimate contact and mutual help. Conventionally people take the five households on each side of their residence as being their neighbours. For these they have a special term *shanlin*. They have towards one another special social obligations.

When a new-born baby is one month of age, his mother will carry him to visit the neighbours. They will be courteously received with tea and entertainments. When they leave, a gift, which consists of cakes, will be bestowed on the baby. This is the first visit of the baby to a house other than his own, even before he goes to his mother's father's house.

In the case of marriage, the bridegroom's family will distribute a kind of cake as an announcement and invitation to the wedding ceremony. Neighbours are included in the list. In return they will offer a present in cash on the wedding day and participate in the feast of celebration. In case of funerals, each house in the neighbourhood will send one person to assist without payment.

In daily life when one needs extra labour in household work, such as removing heavy articles, neighbours will come to help. In case of economic stress, money can be borrowed from them in small sums without interest. Such relations of mutual help are not rigidly confined to ten households, they depend more on personal intimacy than formal prescriptions.

[3] Religious and Recreative Groups

In the village, the god, besides the ancestor spirits, who receives sacrifices most frequently is the kitchen god—his wife being sometimes included.

The kitchen god, *zončen*, is the supernatural inspector of the household, sent by the emperor of heaven. His duty is to watch the daily life of the house and to report to his superior at the end of each year.

邻里，就是一组户的联合，他们日常有着很亲密的接触并且互相帮助。这个村里习惯上把他们住宅两边各五户作为邻居。对此，他们有一个特别的名词，叫做“乡邻”。他们互相承担着特别的社会义务。

当新生的孩子满月以后，他的母亲就带他去拜访四邻。他们受到殷勤的接待，用茶点款待。离开的时候，还送点心给孩子。这是孩子第一次到别人家中去，那时他甚至尚未到过外公家。

办婚事前，新郎的家庭要分送喜糕到各家去，作为婚事的通告和参加婚礼的邀请。邻居都包括在邀请的名单里。各家在举行婚礼那天送现金作为回礼，并参加婚宴。在丧葬时，每家邻居都派一人去帮忙，不取报酬。

在日常生活中，当某人家有搬运笨重东西等类似的家务劳动、需要额外的劳力时，邻居们齐来帮忙。如果经济拮据，也可向邻居借到少数贷款，不需利息。此种互相帮助的关系，并不严格地限制在十户人家之中，它更多地取决于个人之间的密切关系，而不是按照正式规定。

三、宗教和娱乐团体

在村里，除了祭祀祖先外，最经常得到祭祀的是灶王爷，有时也包括灶王奶奶。

灶神是上天在这户人家的监察者，是由玉皇大帝派来的。他的职责是视察这一家人的日常生活并在每年年底向上天作出报告。

The god is represented by a paper inscription, bought from the shop in the town and placed in the little palace on the stove. He receives sacrifices twice a month, regularly at the first day and the fifteenth day, and on other occasions as shown in the time-table of social activities (IX-3). The first dish of each seasonal food will also be shared with the god. The sacrifice is made by laying dishes on the platform before his little palace, lighting a pair of candles and burning a bundle of incense as an invocation.

At the end of the year, the twenty-fourth day of the twelfth month, a farewell sacrifice will be made. This sacrifice consists of a big feast and takes place in the front room. After the feast the paper inscription will be burnt with the pine sticks and a paper chair. Through the fire, as indicated by the flame, the god returns back to heaven. In this annual audience with the emperor, he will make a report about his findings on the particular house in his charge. Based on the report, the fortune of the household will be decided.

The criterion for pleasing and displeasing the god, a very important daily control of human behaviour, is the observance and non-observance of certain taboos. A full list of taboos does not exist in a precise form, but a vague feeling of fear of supernatural interference in daily life due to displeasing actions is definitely found in everyday occurrence. As far as I was able to note, those taboos fall into three categories. The first is based on reverence for rice. Rice should not be trampled underfoot or wasted. Even sour rice should not be thrown away carelessly. The proper manner is to eat all the rice cooked. If this cannot be done, it must be thrown into the river in order to feed the fish. The second category of taboo is connected with the sense of dirt in sex matters. All the things and activities connected with sex must be cleared up outside the kitchen. Women during menstruation should not touch anything on the platform of the kitchen god. The third category is connected with respect for learning. Any paper with written characters of any kind, even newspapers, should be collected carefully and waste papers should be burnt, never in the kitchen, but

on the open ground or in the special furnace in the temple.

The idea of a well organized supernatural kingdom complicates the connection between human actions and supernatural interference. The breaking of any taboo does not automatically provoke certain consequences directed by the supernatural powers. They must come through the supernatural administrative machinery. Therefore if anyone can prevent the inspector, the kitchen god, from seeing or reporting, the taboo can be broken with impunity. The supernatural agents or the spirits are not conceived as absolutely omnipotent and omnipresent. They are actually invisible human beings with very similar human sentiments and desires. Since they are very human, they also commit all human weaknesses and follies. Thus, all the human methods, which can be used towards any human policeman such as cheating, lying, bribing, and even physical bullying, can also be used in dealing with the supernatural inspector.

神像是刻印在纸上的，由城里店铺中买来，供在灶头上面小神龛中。灶神每月受两次供奉，通常是在初一和十五。也在其他时候受到供奉，具体时间可见社会活动的日期表（第九章第三节）。各式刚上市的时鲜食品，第一盘要供奉灶神。供奉是把一盘盘菜肴供在灶神座前，并点上一对蜡烛、一束香以示祀奉。

到了年底，农历腊月二十四祭送灶神上天。这次供奉的东西特别丰富，而且在堂屋中举行。这次供奉之后，纸的神像和松枝、纸椅一起焚化。灶王爷就由火焰的指引回到了天庭。他通过每年一次向玉帝的拜奏，对他所负责的这一家人的行为作出报告。这一户下一年的命运就根据他的报告被作出了决定。

使神道高兴或是不去触怒神道的愿望是一种对人们日常行为很重要的控制。标准就看是遵奉还是违犯传统的禁忌。我还不能列出一张表格来说明各种禁忌，但在日常生活中，却肯定地存在着一种模糊的恐惧，人们怕做出了使神道不悦的行为，而引起上天的干预。就我所知，这些禁忌可分为三类：第一类是以敬谷为基础的，有如不能踩踏或糟蹋稻米，甚至馊饭也不得随意抛弃。最规矩的方式，就是把每一粒米饭都吃下去。如果实在做不到，就把这些米饭抛到池塘中去喂鱼。第二类禁忌是和有关性的事物都是脏污的意识联系在一起的。所有与性有关的行为和东西，都必须从厨房中清除出去。妇女在月经期间，不准接触灶王爷神龛前的任何东西。第三类禁忌和尊敬知识相联系。任何字纸，甚至是新闻报纸，都应仔细地收集起来；废纸应加以焚化，但绝不在厨房里烧毁，而应送到庙宇中专门用来焚化纸帛的炉子中去加以焚化，或在露天烧掉。

有一个组织完善的天庭的观念，使得人类的行动与上天的干预这两者之间的关系复杂化了。任何违犯禁忌的行为，并不因触怒上苍而直接受到惩罚。这件事情要由天庭的管理机构来处理。因此，如果能防止上天派来的监察者——灶神看到或向上天报告人们的行为，则犯了禁忌也

不会受罚。人们并不认为上天的使者是无所不在和无所不能的。他们实际上只是一些肉眼所看不到的人，有着和普通人差不多的感情和愿望。既然他们和人们相像，他们也具有人们同样的弱点和愚蠢。因此，凡是人们所能使用来对付人间警察的各种方法，诸如欺骗、谎言、贿赂，甚至人身威胁等等对付天庭派下来的监察使者也都能用上。

In the last farewell feast before the kitchen god returns to his heavenly office, the people prepare a kind of cake made of sticky rice. This cake is a favourite of the god. It is believed that when the god eats the cake, his mouth will be stuck together; and when the heavenly emperor asks for his annual report, which is an oral one, he can only nod his head without saying anything. Therefore no unfavourable report will be possible. But it is not regarded as so certain a remedy as to be an infallible safeguard against any taboo breaking.

The police function of the kitchen god is clear from its mythology. At a certain time, when a foreign power had conquered China, every house was forced to support a foreign soldier as its inspector. This the people found intolerable and at last they made a plot each to murder his soldier at the same time. The sticky cake was prepared and offered to the soldiers, whose mouths were stuck together. They could thus make no noise when being murdered. This plot was successfully carried out at the twenty-fourth of the twelfth month. But the people at once realized the danger of revenge by the spirits of the foreign soldiers. Some sort of compromise was achieved by which from that time on the spirits of the soldiers were to be worshipped in the kitchen as the god of the household and carry on their function of inspectors.

I was told this myth by only a few informants. Most of the people do not know the origin of the god and do not care very much about it. But the myth actually reveals the attitude of the people towards the supernatural inspector. It shows their unwillingness to submit their personal freedom of action to the social restriction which is imposed on them in society. This is slightly different from ancestor worship, which reflects the sentiments of attachment to dead ancestors.

在送灶王爷上天之前的最后一次的祭灶之时，人们准备了糯米做的团子。这是灶神非常喜欢吃的小吃。大家都相信，灶王爷吃了糯米团之后，他的嘴就粘在一起了。当玉皇大帝要他作年度报告时——这是口头的报告，他只能点头而说不出话来，因此，他说坏话也不可能了。但这也不能认为是犯了禁忌之后的一个万无一失的补救办法。

灶王爷所具有的警察职能，传说中有过清楚的阐述。有一段时间，外国人统治了中国，每家中国人都被迫供养一个外国兵。每个兵监管一家人。老百姓受不了这样的管制，终于商定了一个计谋，各家都在同一

个时间把这些士兵杀掉。于是就准备了这种糯米团给士兵们吃，他们的嘴都粘到了一起。因此在他们被杀时不能发出任何声音。这个计谋在腊月二十四执行成功。但这些老百姓又立刻想起这些外国兵的鬼魂会向他们报复，于是作了这样的一种妥协：从那时起，把这些外国兵的鬼魂当作家里的神道，在厨房里受到祭拜，并继续行使监察者的职责。

这个传说只有少数人向我讲过。大部分人并不知道这个神道的根底，也不怎么关心这件事。但这个神话实际上揭示了老百姓对上天派来监管者的态度。这表明他们很不愿意把自己的行动自由驯服于社会性的限制，这种限制是社会强加于他们的。这与对祖先的祭拜是稍有不同的。祭拜祖先反映了对已故祖先的依恋之情。

Another god called *luiwan* is worshipped by a larger territorial group which consists of about thirty houses. This territorial group has a special term, *de*, meaning segment. There are eleven segments in the village:

- Ⅱ. Ch'eng Kioh yu
- Ⅲ. Liang Kioh yu
- Ⅳ. Hsi Chang yu
- Ⅴ. T'an Chia T'eng

Each segment has its own idol of the god. Every year households of the same segment, each represented by one member, male or female, will meet twice, in the first and eighth months. At this meeting, the god will be invited to one of the houses, and a big feast is prepared by the host in his honour.

Luiwan, *lui* being the personal name of the god and *wan* meaning king, is a popular god in that region. In my own childhood I was often told about this rather elaborate myth. But all my informants in this village were ignorant of this. They told me honestly that they did not know who *luiwan* was although they had worshipped him for years and years. The purpose of the meeting was said to be related to the harvest. But the link is very vague in the minds of the people. Some confessed that their real interest in the meeting was the feast. As I shall later show, the village is not a self-sufficient religious unit. In case of drought, locusts, or flood, all the religious and magical performances will take place in the district town. The town is not only the economic but also the religious centre. The god, *luiwan*, is the supernatural protector against the locust menace. His myth will be described later (X-3). But it may be interesting to point out here that the lack of independent religious activity in the village on the occasion of agricultural crises is correlated with vagueness and ignorance about the myth connected with the god.

About ten years ago, there used to be a kind of annual meeting for religious and partly for recreative functions. This would be held in

the autumn after the harvest. It served as a thanksgiving to the gods responsible for the harvest and at the same time as a request for blessing for the coming year. The images of local gods would be seated among the people and an opera company would be invited to play on the stage constructed specially for the purpose. The village was divided into five groups, called *degi*, meaning "the foundation of the stage." Each group was responsible for the management and expenses of this gathering in turn.

另外有一个崇奉神道“刘皇”的较大的地域性群体，由大约30家住户组成。这个地域性的群体有一个专门的名称“段”，是一个地域组织的单位。在这个村中，共有11段。

I. 城角圩.....	4
II. 凉角圩.....	3
III. 西长圩.....	2
IV. 谈家墩.....	2

每个段都有自己的刘皇偶像，同段的每一户每年要出一名男的或女的代表，在正月和八月里各聚会一次。聚会时，把神道请到其中的一户人家，这家的主人则准备好盛宴供奉。

“刘皇”——“刘”是神道个人的姓，而“皇”则是大神的意思。这个神道在这个地区很流行。在我幼年的时候，经常听到这个精心编制的神话。但村里经常向我提供情况的人对此却一无所知。他们坦白地告诉我，虽然他们祀奉刘皇已经多少代了，但他们却不知道刘皇是谁。每年两次聚会的目的据说与收成有关。但这种联系在人们的思想上是很模糊的。有的人承认，他们的真正兴趣是在聚会时的那顿盛餐。我在后面还要讲到，这个村庄不是一个自给自足的宗教活动单位。但凡遇到干旱、蝗灾或水灾，所有宗教和巫术的活动都在该区的镇内举行。镇不仅是经济中心，也是宗教中心。刘皇是上苍派来保护免遭蝗灾的神道。以后要讲到有关他的神话（第十章第三节）。在这里指出这点也许是有趣的，在遇到农业危机的时候，村里缺少独立的宗教活动，这是与人们对有关这神道的神话模糊不清或无知有联系的。

十年以前，这里每年有一次集会，它既是宗教活动，也是当地人的娱乐消遣。一般在秋后举行，一方面对专司收获的神道感恩，同时又是祈求来年的丰收。管这地方的神像被请来入座，还有一个乐队在一个专搭的戏台上演奏。全村分成五组，叫“台基”，即戏台的基础。每个组轮流负责这种集会的管理和开支。

With the deepening of the economic depression in the village, these annual meetings have been suspended and it is difficult for the present to say whether they will be revived when the economic depression is over. The interesting fact that there is no tendency to attribute the economic depression to the suspension of the gathering, but, on the contrary, the economic depression was regarded as the cause of the suspension. This shows that the nature of the gathering

was less religious or magical than recreative. The economic depression, which is due solely to the fall of silk and rice prices, is understood in its true nature, and thus the solution resorted to has been the perfectly reasonable one of introducing modern technique and new industries.

The local gods, who were invited to attend the opera in former days, are found in two temples in the village: one at the south end and the other at the west end (II-4). Each Chia sends its representative to visit the temple twice a month and make sacrifices individually. This is not obligatory and is usually neglected. But persons who continue this observance constantly direct their attentions to one of the two temples, which is determined by the location of their houses. The people living on Yu I, III and the north part of II, go to the west temple and the rest to the south temple. But individuals in the same area do not associate with each other in definite duties and obligations, as we found in the worship of *luiwan*. Their association is only through the temple. We must, in fact, say that there is not a religious group but a religious area.

The two temples are owned by different priests. The owner of the south temple lives in the temple, while that of the east temple is an absentee. The daily work in the temple is managed by a non-religious agent called *san-xo*, meaning "incense and fire." The priest, being himself a buddhist, lives on the income of the temple and keeps aloof from secular activities. Nevertheless, he has definite functions in the community. He entertains the visitors and participates in the funeral ceremonies of the people. These services are paid either by an amount of incense, which is kept by the priest for resale, or by cash. But these two temples do not monopolize the religious activities of the people in the village. On important occasions, such as "burning incense" for newly dead relatives and fulfilling certain promises to the god after recovery from illness, people go to the big temples in the town or at the bank of the Lake where the gods are more powerful.

随着村庄经济萧条的加深，这些集会已暂时停止；现在也很难说在经济不景气过去之后，这种集会是否还会恢复。有趣的是人们并没有认为由于是暂停了集会而造成了经济萧条；相反地，却认为是经济萧条造成了每年集会的中止。这表明聚会的真正意义是娱乐多于宗教或迷信。经济萧条唯一的真正原因是稻米和蚕丝价格的下降，人们对此能够正确地理解，因而最合理的解决办法就是引进新的工业和现代技术。

过去常被请来看戏的地方神道，现在村中的两个小庙里。一座庙在村北，另一座在村西（第二章第四节）。每家每月派代表到庙里去单独供奉祭拜两次。这不是强制性的，而且经常被人忽视。但那些继续供奉的人，经常只去其中的一个庙。去哪个庙，要由住家的位置决定。住在

第一圩、第三圩及第二圩北边的人家，常去村北的庙；其余人家则去村西的庙。但同一地区的个人，在承担一定的责任和义务时并不互相联合起来，如祭拜刘皇时那样做，他们只通过庙宇而有所联系。因此，应该说这里并没有宗教团体而只有宗教区域的存在。

这两个庙分别为不同的和尚所有。村北的庙里住着庙主；村西的庙主则不住在内，庙内的日常工作由一位非宗教代理人代管，人们叫他“香火”。和尚信佛教，靠庙的收入为生，远离俗务。然而在社区里他有着一定的职能。他负责招待到庙里去的人，并参加村中的丧事。为人举办丧事他可以得到一笔现金或是相当数量的香，香可以留下来以后再出售。但这两个庙并不垄断村中人的所有宗教活动。到了重要时节，如为新近亡故的亲属“烧香”，因病人康复而向菩萨还愿等，人们往往改去城中的大庙宇，或到太湖边去拜佛，因为那里的神道有更大的法力。

Another important function of the priest is to keep the ancestor records for the people, and this also takes him beyond the village temples. Genealogical records of the families are kept in different temples outside. Since the record keeper is rewarded by the family whose ancestor names are kept, the record book becomes in a way the personal property of the priest. Like other kinds of personal property, it can be bought and sold. Therefore the circulation of wealth among the priests has made the allegiance of the people to the temples more complicated.

The nature of their allegiance, however, has nothing to do with belief or with sects. The priest never preaches any religious doctrine to the people, except possibly to the dead. Even then he preaches in a language alien to the local people. The stranger the accent, the more valuable, in the popular view, is the preaching.

[4] The Village Government

For various social functions, households are associated together to form larger local groups. These groups do not form a hierarchical series but superimpose on each other. The village, being an aggregate of households in a compact residential area, separated from other similar units by a considerable distance, sets a limitation on the direct extension of territorial ties for various functions. It marks a common boundary for those intimate territorial groups. It synthesizes various social functions and also takes up special functions that cannot be fulfilled by smaller units—all these are performed through the village government by the village headmen.

Village heads are always accessible, because they are known to every villager, and a stranger will be received by them immediately. The visitor will be impressed by their heavy burden of work. They help the people to read and to write letters and other documents, to make the calculations required in the local credit system, to manage marriage ceremonies, to arbitrate in social disputes and to look after public property. They are responsible for the system of self-defence, for the management of public funds, and for the transmission and execution of administrative orders from the higher government. They take an active part in introducing beneficial measures such as industrial reform into the village.

There are two village heads at the present time. The following note gives a short sketch of them.

和尚还有一种重要的职能，他们把村民祖先的记载保存在手中。这使他们所干的事超出了村中小庙的范围。各家的家谱是由外边的不同庙宇保存的。由于家谱记载了家庭祖先的姓名，这些记录的持有者得到这些家庭的酬报，所以这种记录簿在某种程度上成为和尚的个人财产。这种记录簿可以购买或出售，就像其他私人财产一样。因而，僧侣之间这种财产的流动，使得村民对哪个庙宇更为忠诚这样一个问题，变得较为复杂了。

村民们的这种忠诚与他们的信仰或教派全无关系。僧侣们从来不向百姓宣讲宗教教义，除非是为死亡者念经；甚至那些僧侣用外地口音念经。但当地普遍认为，口音越陌生，念的经就越灵。

四、村政府

为了履行多种社会职能，各户聚合在一起形成较大的地域群体。这些群体并不构成等级从属的系列，而是互相重叠的。由于村庄是各户密集在一起的聚居区，村和村之间都间隔着相当的距离，这就使它在直接扩大地域联系以实现多种功能方面受到了限制。村庄为邻近地域的群体之间标出一条共同边界。村庄综合各种社会职能，有时承担一些小的单位不能胜任的特殊职能。这一切都由村长通过村政府来执行。

一般说来，村长易于接近，村中所有人都认识他，外来的生人总能很快地得到村长的接待。来访者会对他的繁重的工作感到惊讶。他帮村里的居民写信、念信，以及代办其他文书，按照当地借贷规则算账、办婚礼、仲裁社会争议、照看公共财产。他们有责任组织自卫、管理公款，并且要传达、执行上级政府下达的行政命令。他们还积极地采取各种有利于本村的措施，村中的蚕丝改革就是一例。

目前在这个村子里有两位村长。下述的记录可以给人们一个概貌：

Mr. Chen is an old man, nearly sixty. He received his order of scholarship—Hsiu Ts'ai—under the late imperial examination system which was abolished at the end of the last dynasty. He had failed to proceed further in his scholastic career and was invited to become a family tutor in the town. At the beginning of the Republic, he came back to the village to start a private school and remained as the only schoolmaster in the village, for more than ten years. From that time on he has assumed the leadership in the village under various formal titles according to the ever-changing administrative system. In 1926, he initiated the silk reform programme with the support of the Provincial Sericultural School and started the experimental station in the village. In 1932, he was formally responsible for the establishment of the co-operative silk factory. He then gave up his job as a schoolmaster and became manager of the factory. When the new administrative system, Pao Chea, was introduced, he found work with the government was not suited to his taste and thus retired from the office, but nevertheless he has remained the de facto head of the village, and is still responsible for community affairs.

The other head is Mr. Chou. He is younger, being about forty years of age. He was educated by family tutors but was too late to take the imperial examination. Without scholastic interest he was content to be a simple peasant with his brother. Being literate and honest, he was picked by the reform agent of the silk industry as an assistant. He has from that time on secured the confidence both of the

reformers and of the people and gradually shared with Chen leadership in public affairs in the village. When the Pao Chea system was introduced he was, on the recommendation of Chen, formally elected and actually appointed the head of the Hsiang which includes the village.

Headmanship in the village is not hereditary. Chou's father is engaged in the tile trade and his elder brother is still working on the farm. His son is in the town and is not likely to succeed him in the future. There is no kinship relation between Chen and Chou.

Although both Chen and Chou are well-to-do persons, neither is considered the richest person in the village. The richest person is, I believe, a man named Wang, who lives in obscurity and is without any outstanding prestige. It is true that a child of a poor family has less chance of attaining the position since headmanship has no direct economic reward and requires rather long and expensive preparation (to attain the necessary standard of literacy), but wealth alone does not give power or prestige.

陈先生是位老年人，近60岁。他在前清的科举制度下，曾考上了秀才。这种制度在清末已废止了。由于他在科举考试中未能进一步考中，所以被人请到城里去当家庭教师。到民国初年，他回村办私塾，自此时起十年多，他是村中唯一的教书先生。此后，他在村中担任领导工作，根据不断改变的行政系统的任命，他得到了各种正式的头衔。1926年，在省蚕桑学校的支持下，他开始实行蚕丝改良计划，在村中开办了蚕丝改进社。1932年，他正式负责合作丝厂的建厂工作。他放弃了教书的职务，担任丝厂厂长。当新的行政体制保甲推行时，他感到政府工作不合他的口味，于是退休了。然而他还是事实上的村长，并仍旧负责社区的事务。

另一位领导人是周先生。他较年轻，约40岁，他从家庭教师受业，但已不及参加科举考试。由于不再想做学问，他和他的兄弟在一起务农。他为人诚实，又有文化，被蚕丝改进社选用为助手。从这时起，他得到了改良工作者及当地人民两方面的信任，并逐渐地分担了村中公务的领导工作。当推行保甲制时，他经由陈先生推荐，正式当选并被任命为乡长，开弦弓村隶属于这个乡。

村长的职务不是世袭的。周的父亲是瓦商，他的哥哥仍在种田，他的儿子住在城里，将来不大可能接替他的工作。陈与周之间并无亲戚关系。

陈和周生活较富裕，但他们两人并不是村中最富有的人。最富的人姓王，他生活得默默无闻，在村中没有突出的威望。当一个领导人并没有直接的经济报酬，而且为达到此地位，需要经过相当长时间费钱的准备过程，才能使自己达到一定的文化水平。一个穷人家的孩子得到这种职位的机会是比较少的，但单靠财富本身也不能给人带来权力和威信。

Even legal status is not essential for the headmanship. Chen is still the senior head in the village, but he has no position in the formal administrative system. Elder persons tend to avoid the trouble of dealing with the higher government. The basis of the headmanship lies in public recognition and support in the leadership in community affairs, and in being the representative of the community against the outside world. Chen started his career as a schoolmaster and Chou as an assistant in the silk factory. Their service and ability have given them authority and prestige. In the village there are few who are literate and still less who are at the same time willing to take up the responsibility without economic reward. Young men of ambition are not satisfied with the position: it is considered by the two middle school graduates I met in the village, as sterile and hopeless. Thus the range for the selection of village heads is not very large.

Although they have no direct economic reward, they enjoy prestige and presents from the persons who have received services from them. For example, they are respected by the people, and can call the generation senior to them, except their own near kin, by their personal names without adding any relationship terms. This cannot be done by an ordinary person. Their leading position in the village also helps them to hold privileged jobs such as schoolmaster and manager of the silk factory.

Headmanship is not connected with any privileged "class." Even seniority in age is not an essential qualification, as is shown in Chou's case. But the sex disqualification has not yet been entirely overcome; women are excluded from public affairs. Only recently women have acquired the same position as men in the silk co-operative society, and a woman teacher has been appointed at the school; but the latter has very little influence in the community except among boys and girls.

[5] The Imposed Administrative System, Pao Chea

As mentioned, the village as such has no legal status because side by side with the functional territorial groups there is an administrative system imposed on the village organization. These two systems, which I have termed *de facto* and *de jure* respectively, do not coincide with each other. In this section, I shall describe the *de jure* system and compare it with the *de facto* system to show the discrepancies.

甚至法定地位对于当村长的人来说，也不是必不可少的。陈先生现在仍然是村中有资望的领导人，但他在正式行政系统中并不担任职务。年长的人都倾向于不和上级政府打交道，以避免麻烦。当村领导人的基础在于，不论他们代表社区面向外界时，或是他们在领导社区的事务中，都能得到公众的承认和支持。陈原职是教师，而周是以蚕丝厂的助理开始他的事业的。他们为公众服务的精神和能力，使他们得到了权力和威望。村中有文化的人很少，愿意在没有经济报酬的情况下承担起责任的人更少。有抱负的年轻人对这种职位并不感到满意，我在村里遇见过两位中学毕业生，他们认为这种工作枯燥无味，而且缺乏前途。因此，选择村长的范围并不很宽。

虽然他们得不到直接的经济报酬，但由于为村里人办了事，他们也乐于享有声誉，接受一些礼物。比如，他们受人尊敬，可以对长辈（除了近亲）直呼其名而不用加上辈分的尊称。普通人是不允许这样做的。他们在村里所处的领导地位也有助于他们保持有特权的工作，如当教师、当丝厂的厂长等。

当领导人并不与享有特权的“阶级”有关。从周的情况可看出，年长也不是必要的条件。但性别上的排斥却未能克服，妇女是不许参加公众事务的。只是在最近，妇女才在蚕丝合作社中获得了和男人相同的职位；学校也任命了一位女教员，但这位妇女，除了在男女学童中之外，在当地社区中的影响很小。

五、保甲——强加的行政体制

前面已经讲到，这样的村子是没有法定地位的。因为与这种功能性的地域性群体并行存在的有一个行政体制，它是强加于村的组织之上的。我把这两种体制分别称之为事实上的体制和法定的体制。它们两者之间不重合。在本节我将描述这个法定的体制，并把与事实上的体制相比较，以观察它们的差异。

The new administrative system is called Pao Chea. The term Pao Chea is an old one. The government recently had the idea of reviving an old administrative system which had been proposed by an administrative reformer in the Sung Dynasty (960—1276). How far this old system had actually existed is another question, but for this village it is entirely new. The head of the village explained that the arrangement for the new system had only recently been completed, and it had never within living memory been in existence. He added that the villagers had been summoned by the town head and told to arrange their houses in a manner prescribed by the district government. This had been done. To study this Pao Chea system, therefore, it is necessary to go back to the statute book to see what is the intention and what principle the government followed in its organization.

On June 5th, 1929, the National Government in Nanking promulgated the Law Governing the Organization of the District, based on the principle of local self-government of the late Dr. Sun Yet-sen. According to the law, each district (Hsien) must be divided into several Chu and each Chu into twenty to fifty Hsiang (in rural areas) and Chên (in urban areas). In the rural areas, villages with more than 100 house-holds would be taken as a Hsiang and those with less than this number would be combined with other villages to form a Hsiang. In urban areas, towns with more than that number would be taken as a Chên, and those with less would combine with other villages to form a Hsiang. The Hsiang is again subdivided into Lu (twenty-five households) and Lin (five house-holds). All these units were to be self-governing through their elected headmen and councils. The functions of these local governments are listed in the law as follows: Census taking, population registration, land survey, public works, education, self-defence, physical training, public health, water regulation, forest preservation, industrial and commercial improvement, food storage and regulation, protection and prohibition of plantation and fishery, co-operative organization, improvement of customs, public belief,

public enterprise, financial control, etc.

These functions are not altogether new to the local community, most of them having been carried out by various traditional *de facto* groups. The law created new territorial groups with the purpose of facilitating the self-governing administrative functions. But, in fact, there is the danger that it will actually hamper the normal functioning of the *de facto* groups. Thus in the Second National Administrative Conference in 1931 the rigidity in the size of the units was severely criticized. Consequently, an amending bill was introduced in the Legislative Yuan.

新的行政体制叫做“保甲”。保甲是个旧词。政府最近有意要恢复一种古老的行政体制。这种体制是宋朝（公元960～1279年）的行政改革者建议的。这个古老的体制究竟实行到什么程度是另一个问题。但对这个村子来说，它完全是新的。村长解释说，新体制的实施准备最近方告完成，它从来没有在人们的记忆中存在过。他说，镇长把村民都传唤去，告诉他们要按照县政府的规定来安排他们各户在行政组织中的地位，这件事已经完成了。为了要研究保甲制，必须从法令全书中找出它的意图，以及政府在保甲组织中所遵循的原则。

1929年6月5日，根据孙中山先生地方自治的原则，南京的国民政府颁布了一个《县组织法》（以下简称《法》——编者注），按此法律每个县必须分为几个区，每区又分为20～50个乡（农村地区）或镇（城市地区）。农村地区，凡有100户以上的村子，划为一个乡；不到100户村子，则和其他村子联合成为一个乡。城市地区，凡有100户以上的，可划为镇；如不足此数，则与附近村子合并建乡。乡则进一步分为闾（25户）及邻（5户）。这些单位都通过选出的领导人及地方自治会来实行自治。这些地方政府的职能在法律中已有规定，计有：人口普查及人口登记、土地调查、公益工作、教育、自卫、体育训练、公共卫生、水利灌溉、森林培植及保护、工商改良及保护、粮食储备及调节、垦牧渔猎保护及取缔、合作社组织、改革习俗、公众信仰、公共企业及财政控制等等。

这些职能对地方社区来说不完全是新的。其中许多项早已由传统的、事实上的群体所实施。为了促进自治政府的行政职能，法律创造了新的地域性的群体。但实际上，它会妨碍事实上的群体的正常职能。因此，在1931年举行的第二次全国行政会议上，对各种单位的大小所作的刻板规定受到了严厉的批评。结果是由立法院提出了修正案。

While the bill was still in the stage of discussion, another system was instituted which affected the local government. In August, 1932, the Headquarters of the Punitive Campaign Against the Communists in Central China issued a decree organizing the people in the area of military operation (Hopei, Honan, and Anhwei) into uniform self-defensive units under the system of Pao Chea. According to this system, each ten households (Hu) form a Chea and each ten Chea a Pao. The

intention of this organization was stated in the decree to be "to organize the people in the devastated area in a more effective way and secure an accurate census in order to increase the power of local self-defence against the communists and to enable the army to discharge its function more efficiently." This system was introduced mainly for military purposes. Unless the population could be accurately registered, it was very difficult to prevent the communists from mixing with non-communists in the disturbed areas. To counter the active propaganda of the communists the army introduced the system of mutual responsibility of the individuals in the same Chea and Pao, so that they could act as a check one upon the other.

In 1933, the spread of communist influence drew Fukien into the military area. In Fukien the provincial government had already started the organization of the local self-governing system according to the Law in 1929. The provincial government was ordered by the Headquarters to suspend the local self-governing system and to substitute for it the Pao Chea system. In their conflict between the Law and the Decree, the provincial government submitted to the central government; and the Central Political Council decided to absorb the Pao Chea system in the self-governing system. The Law of 1929 was superseded by a series of laws of 1935. These two systems were compromised in the following six points: (1) the uniform units of Pao and Chea were substituted for the old units Lu and Lin, and the units Chu, Hsiang, and Chên were to be on the same level; in other words, the original status of Chu as an intermediary unit between district and Hsiang or Chên was abolished; (2) before the completion of the Tutelage period, the method of indirect election was to be substituted for direct election according to the Pao Chea system; (3) a census was to be taken in the process of arranging the households in the Pao Chea system; (4) military training in the Pao Chea system was to be extended into a more general civil training; (5) the system of mutual responsibility was to be applied only in cases of emergency; and (6) the Pao Chea system was to take up the function of self-government, but local modifications were to be allowed to suit particular conditions.

当此修正案尚在讨论阶段，另外一个影响到地方政府的体制却实施了。1932年8月，华中的“剿共”司令部发布了一项法令，规定在军事行动区（湖北、湖南及安徽）的人民要在保甲制之下，组织起统一的自卫单位。按此制度，每十户为一甲，每十甲为一保。成立此组织的意图，在法令中有所说明，即：“在遭到破坏的地区有效地组织民众，取得精确的人口统计以便增强地方自卫反共的力量，并使军队能更有效地履行其职能。”此制度主要是为军事目的而实行的。除非人口登记做得十分精确，否则，在动荡的地区，很难防止共产党人和非共产党人混合在一

起。为了遏制共产党活跃的宣传活动，军队还实施了在同一个保甲之内，人与人互相担保的制度，使人们可以互相检查。

1933年，共产党影响扩展，福建成为军事地区。福建省政府已开始根据1929年的《县组织法》组建地方自治体系。司令部命令省政府停止地方自治体系而代之以保甲制。面对《法》与法令的冲突，省政府选择了服从中央政府，中央政治会议决定把保甲制纳入自治体系中。1929年的《法》被1935年的一系列法律所代替。这两种体系在以下六点中得到了妥协：（1）由统一的保甲单位代替老单位闾和邻，并使区、乡、镇等单位保持同等的级别。换句话说，原来处于县和乡、镇之间的单位——区取消了；（2）在结束训政时期前，按照保甲制度，以间接选举代替直接选举；（3）在按保甲制编户的过程中，进行人口普查；（4）把保甲制的军训扩大为普遍的民众训练；（5）只在紧急情况下，才实行互相担保的制度；（6）保甲制担负自治的职能，但允许进行地方性的修改以适应具体情况。

Obviously, the compromise has not solved the fundamental problem, that is, how far the *ad hoc* self-defensive units with their uniform size could undertake the general administrative functions listed in the Law of 1929. The real issue was not the legal conflict between the law and the decree but whether the traditional functions that have been carried out in the *de facto* territorial groups could be taken over by the arbitrarily created Pao Chea. Since the old units Lin and Lu, of a less rigid kind, had proved to be impracticable it did not seem that a more rigid system was likely to function any better. The effectiveness of the Pao Chea system in self-defence in cases of emergency also did not assure its suitability as a system for administrative self-government. It could indeed be argued that in the process of political integration in China it was desirable to substitute for the heterogenous traditional structure a rational and uniform structure. But it remains to be considered whether such a substitution was necessary and how much it will cost to enforce. Since this new system was only introduced less than a year before my visit to the village, it is too early to draw any conclusions. But an analysis of the working of the system against the background of the traditional structure will obviously throw light on the general problem, and will at least help to stress the importance of this issue in the future administrative policy.

The Pao Chea, as instituted in this village with allowance for local modifications, does not strictly accord with the numerical prescription of the law. The village with its 360 households is divided geographically into four Pao. As I have shown in the village plan, the houses in the village are built along both sides of the streams and are thus distributed in four *yu*. The houses in the same *yu* are grouped into one Pao. According to their positions, counting from east to west

and from south to north, the houses are arranged in order, approximately ten in number, to form the units of Chea. These four Pao are combined with another seven Pao in neighbouring villages into one Hsiang, which is called after the name of the village Kaihsienkung Hsiang. Pao and Chea are known by numbers. The four Pao in the village are numbered from eight to eleven. A further discrepancy between practice and law is that the Chu in the old law is still preserved as an intermediary unit between the district and Hsiang, and roughly corresponds to the functional unit of the marketing area of the town (XIV-8). This village can be defined in terms of the administrative system as:

很明显，妥协并没有解决根本问题，也就是，这些特别的、有统一规模的自卫单位在多大程度上能承担1929年的《法》所规定的一般的行政职能。真正的问题并不在于这个法律与那个法令之间的法律性斗争，而在于事实上的地域群体早已行使的传统的职能，能否被这种专横地创造出来的保甲所接替。老的邻、闾单位并不那么严格，但已被事实证明是行不通的；那么这种更为严格的保甲制度，似乎更不大可能行得通。若发生紧急情况，保甲制的自卫效能也并不能保证它是适合于行政自治的一种制度。的确可以争辩说，在中国政治结合的过程中，用一个合理的和统一的结构来代替参差不齐的传统结构，看起来比较理想。但应当考虑到，这种替代是否必需，以及需要花多大的代价去实施它。由于我访问这个村子时，这个新制度实行了还不到一年。因此，下结论还为时过早。但以传统的结构为背景，对照这个制度的实施状况进行一些分析，显然有助于了解问题的全貌，至少会有助于在将来的行政政策中强调这个问题的重要性。

这个村所实施的并允许进行一些地方性修改的保甲制，并不严格符合法律规定的数字。村中360户按地理位置被分编为四个保。从前面所示的本村详图中可看出，村中的房屋沿小河的两旁建造，并分为四个圩。在同一个圩里的户被合成一个保。按照它们所处的位置，从东往西，或由南往北数，大约每十户构成一个甲。这四个保和邻村的七个保合成一个乡，这个乡按本村名而被称为“开弦弓乡”。保和甲则分别冠以数字。村中的四个保是第八保至第十一保。另一个在法律与实践之间不相符合的事，是保持了旧法律中的区，它是县和乡之间的一个中间单位，它大致上和镇的腹地相当（第十四章第八节）。按照这个行政体制，这个村可称为：

Kiangsu (province)

Wukiang (district)

Chên tsê (Chu)

Kaihsienkung (Hsiang)

No. 8-11 (Pao)

To examine the nature of the Hsiang, we must inquire into the

problem of inter-village relations. Is there any special bond between the villages that are grouped into the same Hsiang? What is the functional group that corresponds to this administrative unit? Economically, villages in this region, as I shall show later (XIV-8), are independent of each other. Every village has its own agent boat which serves as the buying and selling agent of the villagers in the town market. A village, however large it may be, does not form a sub-marketing centre among its neighbouring villages. In other words, the town as the centre of the marketing area is able, owing to the ease of water transport and the institution of the agent boats, to collect from and distribute to its tributary villages without any need for intermediate stoppage of the movement of the goods. Within the area, there are several dozens of villages dependent on the town but independent of each other. These villages, which are occupied in similar work and produce similar goods, find little need for trade with one another. Thus the unit of Hsiang, standing between the marketing area and the village, has no economic basis. The same is true from the point of view of kinship relations. Although inter-village marriage is popular, there is no sign that those villages included in the same Hsiang, are preferred to those outside.

Linguistically the name Kaihsienkung in daily speech refers strictly to the village alone. It seems ridiculous to the local people to say that the neighbouring village is a part of Kaihsienkung. Their obstinacy in this is not unreasonable. The change means a great deal to the people. Some people told me, "If the neighbouring villages are part of Kaihsienkung, then the lake that belongs to Kaihsienkung people will be shared by the people of the neighbouring villages. But of course this cannot be permitted."

At present the increasing prestige and economic function of the silk reform movement, and the administrative status of the head of the Hsiang, which both have their head offices in this village, have drawn together the villages around it. I noticed that people from other villages, not limited to those of the same Hsiang, visited the village more frequently than formerly to order silkworm eggs, to supply cocoons for the factory, and to settle inter-village disputes. But in the last analysis, the head of the Hsiang, Chou, did not work in his legal capacity, but mostly through his own personal influence as the assistant manager of the silk factory, and he did not make any important steps without getting into touch with the de facto heads of the village concerned.

江苏 (省)

吴江 (县)

震泽（区）

开弦弓（乡）

第八至十一（保）

要剖析乡的本质，必须深入了解村与村之间的关系问题。在同一个乡的村子之间，是否有特殊的联系？与这个行政单位相当的职能群体是什么？我将在后面讲到（第十四章第八节），这个地区中的村子，在经济方面是相互独立的。每个村子都有自己的航船，充当村民到镇的市场出售或购买的代理。一个村子，不论它有多大，都不成为它邻村间的一个低级销售中心。换句话说，由于水运方便，并有了航船制度，因此作为销售区域中心的镇完全有能力向所属的村庄进行商品的集散，在商品流通过程中不需任何中间的停留。在这个地区内，有数十个村庄依赖这个镇，但它们彼此之间都是独立的。这些村子做的是相同的工作，生产同样的产品，互相之间很少需要进行贸易往来。因此，乡作为销售区域与村庄之间的一个层次，是没有经济基础的。从亲属关系的观点看，情况也完全一样。虽然村与村之间的婚姻是很时行的，但并没有迹象说明，在同一个乡内的村庄，宁愿到乡外的村庄去找婚配对象的。

从语言的角度看，人们日常叫的“开弦弓”这个名字，在当地群众用语中是指这一个村庄而言。把邻村都说成是开弦弓的一部分，当地人听来可笑。他们的这种执拗并不是不合理的。这个称呼的改变对当地人来说含义很多。有人跟我说：“如果邻近村庄都算开弦弓的一部分，那么，原来属于开弦弓村人的湖泊，也要被邻近村庄的人分去了。当然，这是不能允许的。”

目前，由于这个村庄的名声日增，蚕丝改良运动的经济功能及乡长的行政地位等因素，把开弦弓村周围的村子都吸引了过去。蚕丝改良运动和乡的首脑机关都在这个村里。我看到，不仅本乡的各村，而且外乡的人，也比过去更经常地来到这个村庄。他们前来订购蚕种，供给丝厂蚕茧，并解决村与村之间的争端。在前面的分析中所提到的姓周的乡长，并不是利用他的法定地位办事，而主要还是通过他个人的影响，即以蚕丝厂助理厂长的身份去办事的。同时，他也从不采取任何重要行动，除非他事先与各有关村庄的事实上的领导有过接触。

Of course, given time and increasing experience of the new administrative functions, there is no reason to say that the new unit will remain on paper for ever.

The unit of Pao, however, is different. To divide the village according to the boundary of streams is not likely to be successful. It is assumed in this case that the stream is a dividing line for social activities. This assumption is not true. As shown, boats are active on the water, and bridges are built to connect those separated pieces of land. They are means, not obstacles, of communication.

Lastly, we come to the Chea. Among the functional groupings, we have seen that there is a type of group called *shanlin*, the

neighbourhood, which consists of ten households. But it does not correspond with the Chea. Chea is a fixed local segment while *shanlin* is a chain of overlapping units; each house taking its location as the centre of reference. The segmentation of Chea is very artificial and contradictory to the idea of the people.

Nevertheless, it will be interesting to study the problem in a future investigation to see how far planned social change can be started from the social structure including the form of the group, formal rules of behaviour, and formal system of thought; such attempts are evidently becoming more and more popular in a situation where state uniformity is desired.

当然，如果给以时间，并取得新的行政职能的内容，没有理由说新的行政单位永远是停留在纸面上的一纸空文。

至于保这个单位，那就不同了。把村庄按小河为界而隔开的做法，不大可能成功。在此情况下，把小河假设为社会活动的一条分界线。但这种假设是不对的。正如已经说明的，船可以在水面上自由划动，造桥是为了把分割的土地联结起来。这些都是交通的工具而不是交通的障碍。

最后，我还要谈一谈甲。在职能性的群体中，我们已知有一种群体叫“乡邻”。它包括十户。但它与甲是不一致的。甲是一个固定的地段，而乡邻是一串相互交搭、重叠的单位。在乡邻这个结构中，每户都是以自己为中心，把左右五家组合起来。甲是一种非常人为的分段，它是同人们实际的概念相矛盾的。

然而，在将来再次调查时，来研究此问题是很有趣的，看一看有计划的社会变迁，从社会结构，包括群体形式、正式的行为准则、正统的思想体系等等开始，能进行到什么程度。在要求全国具有一致性的愿望之下，这种尝试显然会越来越普遍的。

[1] From the legal point of view, however, an individual not related in kinship but living permanently in the group is recognized as a member of the Chia (Code, No. 1,122-1,123). But this has not been accepted by the villagers. Even those who have lived a long time in the Chia are regarded as distinct from members of the Chia.

[2] 从法律观点来看，一个人虽然无亲属关系，但永久地住在此群体内者，亦应视为“家”的一员（《民法》第1,222—1,123条）。但此规定并未被村民所接受。甚至那些在“家”中居住了很长时间的人还是被认为与“家”的成员有区别的。

CHAPTER VII LIVELIHOOD

Having made a general survey of the geographical and social background of the village, we are now in a position to study the economic life of the people. I shall begin my description with the system of consumption and attempt to assess the general level of livelihood in the village. This level gives us some idea of the necessary requirements for ordinary living. To satisfy these requirements is the ultimate incentive to production and the impetus to industrial change.

From the point of view of consumption, there is no essential difference among the villagers, but in production, occupational differentiation is found. The present study is mainly limited to the farmers who form the majority. They are engaged in tilling land and in raising silkworms. These are two main sources of their income. Selling sheep and making periodic trading ventures are subsidiary sources. Before describing these activities, I will indicate through the calendar of work how these activities are arranged in a time sequence.

The legal aspect of the problem in relation to agriculture will be discussed in the chapter on land tenure. It would be sufficient to mention here that the traditional forces operating in this institution are strong enough to resist any significant changes. Even in technology, new methods and tools have not yet been successfully introduced. But in the silk industry, it is different.

The most urgent economic problem, from the point of view of the villagers, is industrial reform. The decline of the price of silk is the immediate cause of financial insolvency in the village. During the past ten years, a series of reforms have been introduced and as a result of these efforts both the technology and social organization of the silk industry have been radically changed. Therefore, we are able to analyse the process found in this village as a case study of industrial change in rural economy.

From the analysis of the systems of consumption and production we are led to the system of exchange. Through marketing, the villagers exchange their own produce for those consumed goods which they themselves do not produce. In marketing, we can see how far the village is self-sufficient and how far it is dependent on the outside world.

With the general picture of these economic activities before us, we can now examine the financial conditions in the village. As a result of the decline of domestic industry and the burden of high rent, the villagers are facing an unprecedented economic depression. The difficulty in securing credit and the danger of becoming a victim of usury place the villagers in a dilemma. This will be the end of my descriptive account of the village economy shortly before the bursting of the great storm of the Japanese invasion.

柒 生活

对村子的地理情况和社会背景进行了综合调查之后，现在我们可以开始研究人们的经济生活了。我想先描述消费体系并且试行估计这村居民的一般生活水平。分析这一生活水平，我们可以了解普通生活的必要条件。满足生活的这些必要条件是激励人们进行生产和工业改革的根本动力。

从消费的角度看，村里的居民之间没有根本性的差别，但从生产上看，职业分化是存在的。目前的研究主要限于构成居民大多数的农民。他们从事耕种及养蚕。这是他们收入的两个主要来源。饲养、定期出去做些贩运是次要的收入来源。在叙述这些活动之前，我将通过农历来表明这些活动是怎样按时序安排的。

有关农业法律方面的问题将在土地占有这一章中讨论。在此只略提一下，传统力量在这项制度中起着强大的作用，足以抗拒任何重大的变化发生。甚至在技术上，现在尚未成功地引进什么新方法和新工具。但在蚕丝业中，情况有所不同。

从村民的观点来看，最迫切的经济问题就是蚕丝改革。丝价下跌是农民无力偿还债务的直接原因。在过去十年中，努力进行一系列改革的结果使蚕丝业的技术以及社会组织都发生了根本性的变化。因此，我们能够把这个村子的变化过程作为乡村经济中工业化的一个实例来分析研究。

我们将从消费系统与生产系统的分析引导到流通系统。通过市场销售，村民用他们自己的产品来换取他们自己不生产的消费品。在市场销售中我们可以看到村子自给自足的程度，以及村子对外界的依赖程度。

有了这些经济活动的概况，我们现在就可以观察一下村里的财务状况。国内工业的衰落、高额地租的负担使村民面临着空前的经济不景气。村民难以取得贷款，或成为高利贷者牺牲品，他们的处境是进退维谷。我对这个村子在日本侵华战争爆发前不久的经济状况的描述将到此为止。

[1] Cultural Control on Consumption

Culture provides means to procure materials for satisfying human needs but at the same time defines and delimits human wants. It recognizes a range of wants as proper and necessary and those lying outside the range as extravagant and luxurious. A standard is thus set up to control the amount and type of consumption. This standard is a measurement for plenty and deficiency by the people themselves. It enables saving when there is plenty, and causes dissatisfaction when there is a deficiency.

To be content with simple living is a part of early education. Extravagance is prevented by sanctions. A child making preferences in food or clothes will be scorned and beaten. On the table, he should not refuse what his elders put in his bowl. If a mother lets her child develop special tastes in food, she will be criticized as indulging her child. Even rich parents will not put good and costly clothes on their children, for doing so would induce the evil spirits to make trouble.

Thrift is encouraged. Throwing away anything which has not been properly used will offend heaven, whose representative is the kitchen god. For instance, no rice should be wasted. Even when the rice becomes sour, the family must try to finish it all. Clothes are used by generations, until they are worn out. Those worn-out clothes will not be thrown away but used for making the bottom of the shoes or exchanged for sweets and porcelain (XIV-7).

In a rural community where production may be threatened by natural disasters, content and thrift have practical value. If a man spends all his income, when he fails to have a good harvest, he will be forced to raise loans which may cause him to lose a part of his right over his land (XV-3). To lose one's inherited estate is against filial obligations and thus will be condemned. Moreover, in the village there are few inducements to extravagance. Display of wealth in daily consumption does not lead to prestige. On the contrary, it may attract kidnappers as seen in the case of Wang several years ago.

一、文化对于消费的控制

为满足人们的需要，文化提供了各种手段来获取消费物资，但同时也规定并限制了人们的要求。它承认在一定范围内的要求是适当和必要的，超出这个范围的要求是浪费和奢侈。因此便建立起一个标准，对消费的数量和类型进行控制。人们用这个标准来衡量自己的物质是充足还是欠缺。按照这个标准，人们可以把多余的节约起来。有欠缺时，人们会感到不满。

安于简朴的生活是人们早年教育的一部分。浪费要用惩罚来防止。孩子们饮食穿衣挑肥拣瘦就会挨骂或挨打。在饭桌上孩子不应拒绝长辈夹到他碗里的食物。母亲如果允许孩子任意挑食，人们就会批评她溺爱孩子。即使是富裕的家长也不让孩子穿着好的、价格昂贵的衣服，因为这样做会使孩子娇生惯养，鬼怪就会来找麻烦。

节俭是受到鼓励的。人们认为随意扔掉未用尽的任何东西会触犯天老爷，他的代表是灶神。例如，不许浪费米粒，甚至米饭已变质发酸时，全家人还要尽量把饭吃完。衣物可由数代人穿用，直到穿坏为止。穿坏的衣服不扔掉，用来做鞋底、换糖果或陶瓷器皿（第十四章第七节）。

在农村社区中，由于生产可能受到自然灾害的威胁，因此，知足和节俭具有实际价值。一个把收入全部用完毫无积蓄的人，如果遇到欠收年成就不得不去借债从而可能使他失去对自己土地的部分权利（第十五章第三节）。一个人失去祖传的财产是违背孝道的，他将受到责备。此外，村里也没有什么东西引诱人们去挥霍浪费。在日常生活中炫耀富有并不会给人带来好的名声，相反却可能招致歹徒的绑架，几年前发生的王某案件便是一个例子。

But the idea of thrift is absent on ceremonial occasions. Expenses in funeral and marriage ceremonies are not considered as individual consumption but as fulfilment of social obligations. A good son must provide the best possible coffin and grave for his parent. In the marriage ceremony, as mentioned, the parents on both sides will try to provide the best marriage gift and dowry, and offer the richest feasts, as their ability permits.

Thrift only sets an upper limit for the variation of livelihood. It becomes meaningless when one is not able to reach the accepted standard of proper living. It is the idea of generosity and kinship obligation in helping relatives (XV-2), that keeps individuals from sinking too much below the standard. Therefore the unequal distribution of wealth in the village is not expressed in a marked

variation in the level of daily livelihood. Only a few persons have special and valuable clothes and there are no essential differences in housing and food.

[2] Housing

A house, in general, consists of three rooms. The front room is the largest. It is used for working, such as raising silkworms, manufacturing silk, threshing rice, etc.; for sitting, for dining when the weather is cold or wet, for receiving guests and for storing implements and products. It is also the place where the ancestral shrine is kept.

Behind the front room is the kitchen. It is only about one-fourth the size of the front room. One-third of it is occupied by the stove and the chimney. A small pavilion and a platform is constructed leaning upon the chimney for the kitchen god.

Next is the bedroom. It is sometimes divided by wooden partitions into two rooms if there are two family units in the Chia. Each room contains one or two beds. The married couple and their young child up to seven or eight years old share one bed. When the child grows up, he or she will have a separate bed first in the parents' room. An older but unmarried boy will sleep in the front room, as the employees do. A girl may remain until her marriage in her parents' room or may move to her grandmother's room, but never to the front room because women are not permitted to sleep in the room where the ancestral shrine is kept.

但在婚丧礼仪的场合，节俭思想就烟消云散了。人们认为婚丧礼仪中的开支并不是个人的消费，而是履行社会义务。孝子必须为父母提供最好的棺材和坟墓。如前面已经提到，父母应尽力为儿女的婚礼准备最好的彩礼与嫁妆，在可能的条件下，摆设最丰盛的宴席。

节俭仅仅为不同的生活标准提出了一个上限，当一个人未能达到公认的正常生活标准时，这个上限也就失去了意义。人们凭借慷慨相助和尽亲属义务的思想（第十五章第二节）去帮助生活困难的人，使他们的生活标准不致于同公认的标准相差太远。因此，村里财产分布的不均匀，并没有在日常生活水平方面表现出明显的不同。少数人有特殊的值钱的衣服，但住房和食物上并无根本的差别。

二、住房

一所房屋一般有三间房间。堂屋最大，用来作劳作的场所，例如养蚕、缫丝、打谷等等。天冷或下雨时，人们在这里休息、吃饭，也在这里接待客人或存放农具和农产品。它还是供置祖先牌位的地方。

堂屋后面是厨房，大小仅为堂屋的四分之一。灶头和烟囱占厨房面积的三分之一。紧靠烟囱有供灶王爷的神龛和小平台。

再往后是卧室，家中如有两个家庭单位时，就把卧室用木板隔成两间。每间房里放一两张床。已婚夫妇和七八岁以下的孩子合睡一张床。孩子长大以后，他或她先在父母屋里单独睡一张床，再大一些的未婚男孩就搬到堂屋里睡，像那些雇工一样。女孩出嫁前一直睡在父母屋里，也可以搬到祖母屋里去，但决不睡在堂屋里，因为妇女是不允许睡在供祖先牌位的房屋里的。

In its broad sense, a house includes an open field in front or behind the building. This open field is, at the same time, used as a public road as well as private ground for work and storage. All the threshed straw is heaped on this ground; it can also be used as a little garden where gourds or cucumbers are planted. Adjacent to the main building, there are little huts for the sheep and sometimes also for storage.

Human manure, being the most important fertilizer in the farm, is preserved in the pits made of earthenware, half buried in the ground at the back of the building. Along the southern bank of the Stream A, the public road is lined up with these manure pits. The government have ordered the villagers to remove these pits for hygienic reasons but nothing has been done about it.

Public road 路

Houses are built by special craftsmen from the town. During the period of raising silkworms, building is suspended, otherwise, according to the local belief, the industry of the whole village will be ruined. Breaking soil is considered as a dangerous action which might provoke supernatural interference. Thus it is necessary to perform certain magical rites which are done by Taoist priests. An ordinary house costs at least five hundred dollars for the total expenses. The length of life of the house is difficult to estimate. It depends on constant mending and oiling. Every two or three years the wooden parts of the house must be oiled once again and the tiles of the roof partially rearranged; this costs on the average ten dollars a year.

〔3〕 Transportation

Boats are extensively used for heavy and long-distance traffic. But the villages do not build their boats. They buy them from outside. Each boat costs, on the average, about eighty to a hundred dollars. Nearly every household possesses one or more boats except those who are not engaged in agricultural or fishing work. Both men and women can handle the boat. The art of rowing is acquired in childhood. Once having acquired this skill, one can row for hours without rest. The energy spent on rowing is not in proportion to the weight of the load but to the conditions of the water current and the direction of the wind. Therefore, the cost of this type of transport is reduced as the weight of the load is increased. If the boatman is able to use the wind, distance is a problem of time, not of energy; cost is thus further reduced. This is an important character of water transport. It makes possible the concentration of houses in one area and determines the position of the house near the stream. It also makes possible the system of scattered farm holding and influences the system of exchange by the part it plays in marketing. All these related aspects will be treated in other appropriate connections.

广义地说，一所房屋包括房前或房后的一块空地。这块空地既作为大家走路的通道，也用作一家人干活、堆放稻草或其他东西的地方。在这块地里种上葫芦或黄瓜就是小菜园。房屋附近还有养羊或堆放东西的小屋。

人的粪尿是农家最重要的肥料，在房后有些存放粪尿的陶缸，半埋在土地里面。沿着A河南岸，路边有一排粪缸，由于有碍卫生，政府命令村民搬走，但没有实行。

房屋是由城镇里的专门工匠来修建的。养蚕期间，停止房屋施工，否则当地人相信全村的蚕丝业会毁掉。他们认为破土是一种危险的行为，会招致上天的干预。于是就要请道士来做法事。修建一所普通的房屋，总开支至少500元。房屋的使用寿命根据修缮情况而异，难以作出肯定的估计。每隔两三年必须把房屋的木结构部分重新油漆一遍，部分瓦片要重新铺盖，诸如此类的修缮费用每年平均为10元。

三、运输

人们广泛使用木船进行长途和载重运输，但村庄自己并不造船，而是从外面购买。每条船平均价格约80~100元。除那些不从事农业、渔业劳动的人家以外，几乎每户都有一条或几条船。男人、妇女都会划船。人们在小时候就学会了划船。只要一学会这门技术，一个人就可以不停地划几个小时。划船所耗的力量并不与船的载重量成正比，而是与水流、风向等情况密切有关。所以，载重增加时，此类运输的费用就降低。如果船夫能够利用风向，距离只是一个时间问题，而不是花力气的问题，这样，费用就可进一步减少。这是水运的一个重要特点。这就有可能使一个地区的住房集中在靠河边的位置。它也使分散的农田占有制成为可能。此外，水运在市场贸易中的作用也影响了流通系统。所有这些有关的方面将适当结合其他有关内容进一步论述。

No animal labour is used in transport. On land, the men have to carry the load themselves.

[4] Clothing

The domestic industry of weaving in the village has been practically ruined. Although nearly every house has a wooden weaving machine, at the time when I was there, there were only two of them still working. The material for clothing thus largely comes from the outside, mainly linen and cotton. The silk industry works not for self-consumption but mainly for export. Only a few people wear silk dresses on formal occasions.

Owing to the wide variations of climate during the year, the villagers keep at least three sets of clothes: for the hot summer, for the mild spring and autumn, and for the cold winter. In the summer, men wear only shorts, but they will put on a skirt when meeting visitors or when going to town. Village headmen keep their silk gowns at least on their arms, when they leave the village even under the hot sun. Women wear sleeveless jackets and long skirts. Wearing a skirt is a characteristic of the region where women do not work on the farm. In colder weather, distinguished men wear the long gown when they do not work. The ordinary people only wear short jackets.

Clothing is not only for protecting the body but also for making social distinctions. Sex differentiation is clear. Age difference is also expressed; for instance, girls before maturity will not put on the skirt. Social status is directly indicated in the style. The long gown, for instance, is indispensable for persons of distinction. Two middle school students had changed their style of clothing when they came back from their school. They wore trousers and shirts in the European style but without coats.

畜力不用于运输。在陆地上，人得靠自己的力量来搬运货物。

四、衣着

村里的家庭纺织业实际上已经破产。我在村里的时候，虽然几乎每家都有一台木制纺织机，但仍在运转的只有两台。因此，衣料大部分来自外面，主要是亚麻布和棉布。村里的缫丝工业主要为商品出口，并非为本村的消费。只有少数人在正式场合穿着丝绸衣服。

由于一年四季气候变化很大，村民至少有夏季、春秋和冬季穿用的三类衣服。夏天，男人只穿一条短裤，会客或进城时便穿上一条作裙。村长要离开村子外出时，即使是炎日当头，至少手臂上要搭上一件绸子长袍。妇女穿不带袖的上衣和长裙。这里的妇女不下农田干活，穿裙子是这个地区妇女的特点。天气较冷时，有身份的男子不干活时就穿长袍，普通人只穿短上衣。

衣服并不仅仅为了保护身体，同时也为了便于进行社会区别。性别区分是明显的。衣着还表现出年龄的区别，譬如，未成年的女孩不穿裙子。社会地位直接在服装的款式上表现出来，例如，长袍是有身份的人不可缺少的衣服。村里两个中学生上学以后服装式样有了变化，他们穿西式长裤和衬衫，但不穿外衣。

Sewing is women's work, except for tailors. Most of the women have skill enough to make ordinary clothes for their husbands and children, because this is a necessary qualification for a bride. At the end of the first month of her wedding, the bride will send an article of her own sewing to each near relative of her husband, whose approval is her pride and a support of her position in the new social group. But for preparing dowries, marriage gifts, and dresses of higher quality for formal use, professional tailors are as a rule called in.

The total expenses for buying clothing materials for an average Chia is estimated as about thirty dollars a year, excluding ceremonial dresses.

[5] Nutrition

Food is the main item of household expenditure. It amounts to 40 per cent. of the total annual current expenses. Furthermore, it is different from the above-mentioned items. Housing does not involve expense every day, and clothing usually is not so urgent as food. The amount of food that is necessary in order to maintain a normal living is more or less constant and consequently represents a relatively constant item in the domestic livelihood.

The staple food is rice. According to my informants' estimate the quantities needed for the annual consumption of different individuals are as follows:

~~Old man~~ above 50
~~Old woman~~ above 40
~~Adult man~~
~~Adult woman~~
~~Child~~ above ten

For an average household, including an old woman, two adults, and a child, the total amount will be thirty-two bushels. This estimate is fairly exact because the people must know the amount they need before they store the rice. Rice is produced by the people themselves; the surplus is sold in the market to get money for other expenses. The estimate given above is the amount which the people consider to be necessary to reserve in store.

In vegetables, including cabbages, fruits, mushrooms, nuts, potatoes, turnips, etc., the village is only partially self-supporting. The people have only very small gardens adjacent to the houses and limited space under the mulberry trees for growing vegetables. They are largely dependent on the supply of the neighbouring villages along the Lake Tai where vegetable cultivation has become a specialization; and the produce has become one of the important sources of supply for the people in this region.

除裁缝以外，缝纫是妇女的工作。多数妇女的手艺足以为她们的丈夫和孩子做普通衣服，因为这是做新娘必备的资格。新娘结婚满一个月以后会送给她丈夫的每一位近亲一件她自己缝制的东西，亲属的称赞是她的荣誉，同时也是对她在这新社会群体中的地位的一种支持。但是在置办嫁妆、彩礼或缝制正式场合穿的高质量服装时，照例是要请专门的裁缝来做的。

一个普通的家，每年买衣料的费用估计为30元，礼服除外。

五、 营养

食品是家庭开支的一个主要项目，占每年货币支出总额的40%。而且它与上述几项支出不同。住房费用无需每天支付，衣服也不像饭食那样迫切。为了维持正常生活所必需的一定数量的食物，或多或少是恒定的，因此它在家庭生活中成为一个相对恒定的项目。

主食是稻米，为我提供情况的人估计，不同年龄或性别的人每年消费所需稻米数量如下：

50岁以上的老年男子.....	9 蒲式耳
40岁以上的老年妇女.....	7.5 蒲式耳
成年男子.....	12 蒲式耳
成年妇女.....	9 蒲式耳
10岁以上的儿童.....	4.5 蒲式耳

对一个有一名老年妇女、两个成人和一个儿童的普通家庭而言，所需米的总量为33蒲式耳。这一估计是相当准确的，因为农民在储存稻米以前必须知道他们自己的需要量。稻米是农民自己生产的，剩余的米拿到市场上去出售，换得钱来用于其他开支。上面的估计是人们认为必须贮存的数量。

蔬菜方面有各种青菜、水果、蘑菇、干果、薯类以及萝卜等，这个村子只能部分自给。人们只能在房前屋后的小菜园里或桑树下有限的土地上种菜。农民主要依靠太湖沿岸一带的村庄供给蔬菜。种菜已经成为这一带的专业，他们的产品已是这一地区人们蔬菜供应的重要来源之一。

Oil is produced by villagers themselves from the rapeseeds which are planted in spring before the rice. But owing to the low level of the farms in this part, the crop is very limited and the produce is enough only for domestic use. Fish is supplied by the fishing households in the village. The only kind of meat eaten is pork, which is supplied by the town through retailers in the village. Sugar, salt, and other necessities for cooking are bought daily from the town chiefly through the agent boat (XIV-5).

There are three meals a day: morning, noon, and evening. They are cooked separately. But during the period when men are busy on the farm they will prepare their lunch in the morning with the breakfast. The woman is the first to get up. She cleans the stove and warms the water and then prepares the meals. Breakfast consists of rice porridge and some preserved salty cabbage. Porridge is made by boiling the dried rice crust in the water. Lunch is the big meal of the day, but during the time when men have to work on the farm, they

carry with them their prepared lunch. They do not come back until evening. Women and children who are left in the house also take the prepared lunch which is rather light.

In the evening when the men come back, the whole household take dinner together, in the front room. But in the hot weather the table is arranged in the front of the house; it is very impressive to walk in the street on a summer evening. The street is lined by a row of tables. Neighbours talk with each other while they are eating at their own table. All the members of the household sit around the same table, except the woman who is busy in the kitchen and serves the table.

At the table they have definite positions, following the kinship order of the family. The head of the family sits at the "upper side," facing south. The left side, facing west, comes next and then the right side. The women, especially the daughter-in-law, take the lower side, or they do not appear at the table but take their food in the kitchen.

The commensalism of the evening meal is important in domestic life, especially for the father and child to see each other. The father is absent the whole day and the child may not be able to see him until that time. At the table they are together. The disciplinary function of the father operates at this time. Relevant to this context is the manner of eating.

食油是村民自己用油菜籽榨的，春天种稻之前种油菜。但这个地区农田水平面较低，油菜收成有限，产量仅够家用。鱼类由本村的渔业户供给。人们吃的肉类仅有猪肉，由村里卖肉的人从镇里贩来零售。食糖、盐和其他烹调必需品主要通过航船每天上镇购买（第十四章第五节）。

一天三餐：早饭、午饭、晚饭，分别准备。但农忙期间，早上就把午饭和早饭一起煮好。妇女第一个起床，先清除炉灰、烧水，然后煮饭。早饭是米粥和腌菜，粥系用干米饭锅巴放在水中煮开而成。午饭是一天之中主要的一餐。但农忙季节，男人们把午饭带往农田，直到傍晚收工以后才回家。留在家中的妇女和儿童也吃早上煮好的饭，但吃得较少。

晚上男人们回家以后，全家在堂屋里一起吃晚饭。但天气热的时候，就把桌子搬出来摆在房屋前面场地上；夏天傍晚，到街上走一走，印象非常深刻。沿街摆着一排桌子，邻居们各自在桌边吃饭，边吃边谈。全家人都围着桌子坐着，只有主妇在厨房里忙着给大家端饭。

家中每一个人在桌旁都有一定的位置。按家庭的亲缘顺序，家长面南，坐在“上首”，第二位面向西，在家长的左侧，第三位在右侧。主妇，特别是媳妇，坐在下首，或者不上桌，在厨房里吃饭。

同进晚餐，在家庭生活中是很重要的，父亲和孩子这时有机会互相

见面。父亲整天外出，孩子直到晚饭时才能见到他。他们一起在桌旁吃饭。父亲常利用这机会对孩子进行管教。吃饭要讲吃饭的规矩。

The child must not complain about the food or show special preference for certain dishes. If he does so, he will be at once scorned and sometimes beaten by his father. At the table the child is usually silent and obedient.

During the period of agricultural work, the dinner is comparatively rich. They have meat and fish. But in ordinary times meat is not very often served. Pure vegetarianism is rare except for a few widows. Ordinary women take vegetarian meals twice a month, the first and the fifteenth day; this is because of the religious teaching that heavenly gods do not like killing animate creatures. Thus vegetarian practice will help one to have a better after-life.

Food prepared in the kitchen should not be set aside for individual members. But occasionally the family unit may have some special dish for themselves out of their own expenses and eat in their own room. This is considered to be bad behaviour and offensive to the other members. Cakes and sweets bought with one's own pocket money are private.

[6] Recreation

Relaxation from muscular and nervous stress after hard work is a physiological necessity. In so far as recreation needs collective action, social institutions develop for this function. The collective action in recreation reinforces the social ties among the participants. Thus its function goes beyond pure physiological relaxation.

In the household the period for domestic gatherings is in the evening when the daily work is over. In this gathering the family bonds are strengthened and an intimate feeling develops.

Work in agriculture and in the silk industry affords periodical intervals. The people after having been busy for a week or ten days may have a pause. The period of recreation is inserted into the timetable of work. During the intervals, rich dinners are prepared and visits among relatives take place.

Men will use this pause to enjoy themselves in the teashops. Teashops are in the town. They bring together the people from different villages. Business bargainings, marital negotiations and arbitration of disputes take place. But they are, primarily, men's clubs. Only occasionally some women will appear with their men in the shop. Women spend their intervals of work in visiting relatives, especially their own parents and brothers. Most of the children go with their mothers.

孩子不准抱怨食物不可口，也不准挑食。他如这样做，就立刻会受到父亲的责备，有时还要挨打。通常在吃饭时孩子都默不作声地顺从长辈的意见。

在农忙期间，饭食较为丰富。他们吃鱼、吃肉。但平时不经常吃肉食。除去几个寡妇以外，很少有素食主义者。普通妇女每月素斋两次，初一和十五各一次，这是由于宗教告诫人们，天上的神仙不愿意伤害生灵。吃素被视为有利于人死后升天过好日子。

在厨房里做的东西不应该留藏给家里个别人独自吃。但是偶尔，小家庭可以自己花钱买些特别的菜在自己房间里吃。这种做法被认为是不好的，会惹得家里其他成员生气。一个人用自己的零花钱去买点心、糖果吃是私事，不一定告诉别人。

六、娱乐

辛勤劳动之后，放松肌肉和神经的紧张是一种生理需要。娱乐需要集体活动，于是社会制度发展了这种功能。娱乐中的集体活动加强了参加者之间的社会纽带，因此它的作用超出了单纯的生理休息。

在家中全家团聚的时间是在晚上，全天劳动完毕以后。大家聚集起来，家庭间的联系得到了加强，感情也更加融洽。

农业劳动和蚕丝业劳动有周期性的间歇，人们连续忙了一个星期或十天之后，可以停下来稍事休息。娱乐时间就插入工作表中。在间歇的时候，大家煮丰盛的饭菜，还要走亲访友。

男人们利用这段时间在茶馆里消遣。茶馆在镇里。它聚集了从各村来的人在茶馆里谈生意，商议婚姻大事，调解纠纷等等。但茶馆基本上是男人的俱乐部。偶尔有少数妇女和她们的男人一起在茶馆露面。妇女们在休息时期一般是走亲戚，特别是要回娘家看望自己的父母和兄弟。孩子们大多数是要跟随母亲一起去的。

The evening gathering of the domestic group, the gatherings in the teashops and frequent visiting among relatives during the rest periods are informal and not obligatory. In this respect, they are different from the festivals and formal communal gatherings. The time-table for social activities, given in Chapter IX, summarizes all the occasions of festivals in relation to other chronological activities.

It is fairly clear that festivals come always in between periods of industrial activity. The "New Year," celebrated in February by fifteen days for rejoicing and obligatory visiting of relatives, comes at a time of few agricultural activities. Wedding ceremonies also come in that period, which is regarded as a proper time for marriage. Shortly before the active period in the silk industry, is the festival of Ch'ing Ming for ancestral worship and visiting tombs. At the third exuviae of silkworms, a rejoicing feast is prepared at Li Hsia. After the silk reeling work and before the transplantation of young shoots of the rice to the main field, the festival of Tuan Yang comes in. Full moon in the eighth month, Chung Ch'iu, is celebrated at the time when the rice bears fruit and in the middle of the first long interval of agricultural work. At the end of that interval another festival of Ch'ung Yang is on the schedule. When the agricultural work is completed it is the festival of Tung Chih. All these festivals are obligatory and usually connected with religious worship of ancestors and of the kitchen god. Celebration of such festivals is limited to domestic groups and

intimate relatives.

Occasions for periodical obligatory gatherings of larger local groups, such as *luiwanwe* of the *de*, the annual meeting of the village (VI-3), and the inter-village parade every ten years along Lake Tai, *sanyanwe*, are also connected with religious ideas. For more than ten years all these occasions, except *luiwanwe*, have been suspended. The immediate reason for the suspension is the disapproval of the government. According to the government these activities are superstitious and luxurious, and it is one of the duties of the magistrate to prohibit them.^[1] But the ultimate and more effective cause is the economic depression of the rural district. When immediate needs such as food and clothes have become a burden to the people, there is no surplus money to finance such less urgent social activities.

How far the suspension of community gatherings has weakened the local ties among the people is difficult to ascertain from my present material. But when I sat among the people and listened to their narrations of the past exciting events of the inter-village parade, their feeling of loss and disappointment at the present situation was very clear to me. I am not going to try to reconstruct the grand occasion and estimate the social value involved in it, but the memory of the past forms an important element in the present attitude towards the existing situation. The suspension of these festivities is a direct indication, in the mind of the people, of deterioration of social life. In so far as they are looking forward for a return of the happy days, they will not reject any possible measure which they are convinced as making for improvement. This psychology has its significance in the lack of strong resistance to social change, as I shall show later (XII-2).

家人在晚间的聚会，朋友们在茶馆相会，以及农闲时看望亲戚，都是非正式的，不是必须履行的。从这一点来讲，这些活动与节日期间的聚会以及正式的社区聚会有所不同。第九章所列的社会活动时间表总结了一年中的所有节日，与其他活动一起按年月顺序排列。

很明显，各个节日总是出现在生产活动间歇之际。阳历二月份，农闲时节，庆祝“新年”十五天，人们欢欢喜喜地过年，并尽亲戚之谊，前去拜年。婚礼也往往在这时候举行，人们认为这是结婚的好时节。在蚕丝业繁忙阶段之前不久的是清明，进行祭祖和扫墓。蚕第三次蜕皮时，就到了立夏，有一次欢庆的盛宴。在缫丝工作之后，插秧之前，有端午节。阴历八月满月的日子是中秋。此时正值稻子孕穗，也是在农活第一次较长间歇期的中间。在此间歇的末尾是重阳节。农活完毕之后就是冬至了。每逢这些节日都要有一定的庆祝活动，通常是同祭祖和祭灶联系在一起。庆祝这样一些节日只限于在家人和近亲中进行。

较大的地方群体的定期集会有每年一次的“段”的“刘皇会”（第六章

第三节)，和每十年一次在太湖边举行的村际的庆祝游行“双阳会”，俗称“出会”，它们也与宗教思想有关。十多年来，除“刘皇会”以外，所有这些集会都已停止。停止的直接原因就是政府不赞同。政府认为，这些活动是迷信而且奢侈。地方行政官的职责之一就是禁止这些集会。^[2]但是更实际的根本的原因是乡村地区的经济萧条。当食品、衣服之类的必需品都成为人们的负担时，他们就不会有多余的钱去进行不太急需的社会活动。

根据我目前的材料，难以确定社区停止聚会在多大程度上削弱了当地人民之间的联系。但当我坐在人们中间，听着他们叙述村际“出会”那些令人兴奋的往事时，我明白地觉察到他们对于目前处境的沮丧和失望之情。我并不想再恢复那些盛大的场面，并对其社会价值进行估计，然而对往事的回忆是形成人们目前对现状的态度的重要因素。在人们心目中，停止这些庆祝活动，直接说明了社会生活的下降。由于他们盼望着过去的欢乐日子复而再来，所以他们不会拒绝任何可能采取的确信会改善社会生活的措施。在对社会变革没有强大抵触的情况下，上述这种心理至关重要，我以后还要说明（第十二章第二节）。

[7] Ceremonial Expenses

Ceremonial expenses connected with the crises of life—birth, marriage, and death—looked at from the economic point of view are indispensable items of liability to the domestic economy. Marriage gifts and dowries are the necessary provisions of the new family unit. Funeral arrangements are necessary measures of disposing of the dead. The sentiments arising from these crises of the individual life and of the related social groups cause the ceremonies to be more elaborate and to involve considerable cost. When the ceremonial procedure has been generally accepted, one cannot pass these crises except through this costly channel.

The economic depression has, however, affected the ceremonies. For instance, the institution of *siaosiv* has been adopted to modify the expensive marriage procedure (III-8). It is adopted for economic expedience but has far-reaching consequences in kinship organization. The total or partial reduction of affinal relationships has influenced the social position of women and children. The cancelling of marriage gifts and dowry prolongs the economic dependence of the young. All these illustrate the fact that the ceremonial expenses are not altogether waste or luxury. They perform essential functions in social life.

Again, the marriage feast provides an opportunity for the gathering of relatives for recognizing newly established kinship ties and reinforcing the old. The kinship tie is not a matter of sentimental relation only. It regulates various types of social relation. From the economic point of view, it prescribes the mutual obligation to join the financial aid society (XV-2), and the periodical offering of gifts. In the modified marriage ceremony, the list of guests invited is usually shortened. This loosens the wider kinship ties and thus closes, in the long run, a possible channel of financial help. These consequences may not be immediate and apparent but will be felt eventually. This is why the people reject the institution of *siaosiv* and revert to the normal course as soon as economic conditions allow. Many even, in order to maintain the traditional procedure, delay marriage or borrow money to stage the ceremony in an unimpaired form.

七、礼仪开支

礼仪开支与一生中的重大事件——出生、结婚、死亡——有着密切联系。从经济观点来看，这种开支是一家不可缺少的负担。彩礼和嫁妆是新家庭必要的准备。丧葬安排是处理死者所必须的措施。个人生活及其相关的社会群体所发生的这些红白大事里产生出来的感情，使得这些礼仪得到更加精心的安排而且花费相当的钱财。当一种礼仪程序被普遍接受之后，人们就不得不付出这笔开销，否则他就不能通过这些人生的关口。

然而，经济萧条使礼仪受到了影响。例如采取了“小媳妇”的制度来改变昂贵的婚礼（第三章第八节）。它是由于经济便利才被采用的，但对亲属组织却发生了深远的影响。姻亲关系的完全或部分退化已使妇女和儿童的社会地位受到影响。彩礼和嫁妆的取消延长了青年在经济上依赖父母的时间。所有这些说明了这样一个事实，礼仪开支不全是浪费和奢侈的。这些开支在社会生活中起着重要的作用。

再者，结婚时的宴会为亲戚们提供了一个相聚的机会，对新建立的亲属纽带予以承认，对旧有的关系加以巩固。亲属纽带不仅仅是感情上的关系，它还调节各种类型的社会关系。从经济观点来看，它规定了参加这种互助会的相互义务（第十五章第二节），以及定期互赠礼物。在已经改变了的婚姻礼仪中，所请客人的名单通常已经缩减。这使原来较广的亲属纽带变得松散。从长远看，就可能封闭了一些经济援助的渠道，这种结果可能不会很快或明显地表现出来，但最终会感觉到的。这就是人们拒绝“小媳妇”制度的原因。一俟经济条件许可，就要恢复正常的程序。为了维持传统的礼仪，甚至有许多人宁可推迟婚期或借钱也要把婚礼办得像个样子。

In view of the importance of ceremonial occasions in the life of the people, it is not surprising to find the high percentage of ceremonial expenses in the domestic budget. For an average family of four members, assuming the average length of life to be fifty years, there will be one ceremonial occasion every five years. The minimum expenses for these ceremonies are estimated as follows: birth 30 dollars, marriage 500 dollars, and funeral 250 dollars. The average annual expense will be 50 dollars. It amounts to one-seventh of the whole annual expenditure.

To this sum we must also add the gift presented by the house to their relatives who are passing through these life crises. Their presents vary according to the nearness of kinship and of friendship, from 5 dollars to 20 cents. The average amount per year per Chia is about 10 dollars at least.

These estimates seem to be rather high as compared with other rural communities in China. According to J. L. Buck's study, the average amount for a wedding per family is 114.83 dollars and for a funeral 62.07 dollars, in East Central China.^[3] The difference may be due to local characters or to the number of items of expenditure included in this heading. The expenses on the wedding day in Kaihsienkung lie between 250 to 100 dollars. There was a notorious case, quoted by my informants as exceptional, of a ceremonial manager who could conduct a wedding for less than 100 dollars. The estimate here given includes also the marriage gifts. So it is reasonable that it should be higher.

The funeral expenses vary greatly according to the social status of the deceased. As observed in Peiping, for children "the funerals cost a little more than one-eighth of the family's monthly income. The funerals of older people are naturally more expensive. The total varies from 1.25 to 1.3 months' income. None of these included a funeral feast. Funerals for husbands, wives, older brothers, mothers, cost their families from 2.5, 3.5, and 5.5 months' income." ^[4] Buck's average is derived from 2.8 per cent. of all the families that had funeral expenses to pay during the year. It may be a little lower than the amount regarded as proper expenditure for the funeral of an adult member of the family, as given by my informants.

从礼仪事务在人们生活中的重要性来看，就不难理解礼仪开支在家庭预算中占有很高的百分比。在一个普通的四口之家，假设平均寿命为50岁，那么每隔5年将有一次礼仪事务。对于礼仪事务的最低开支估计如下：出生30元，结婚500元，丧葬250元，平均每年开支50元，这个数字为每年全部开支的七分之一。

亲戚家有这些婚丧娶嫁等大事时，他们还须送礼，所以我们也必须把这笔开支计入总和。根据亲友关系亲疏的不同，礼品的价值从0.2至5元不等。每家每年的平均数量至少约为10元。

同中国的其他乡村相比，这些估值似乎相当高。根据巴克的研究，在华东每家用于一次结婚的平均费用为114.83元，丧葬费平均为62.07元。^[5] 差别可能由于地方的特点不同，或者由于列入礼仪开支的项数不同。在开弦弓，结婚当天的开销在100至250元之间。为我提供资料的人引述一个众所周知的例外情况：一家仅花了不到100元办了一次婚礼。此处所作对婚礼开支的估计还包括了结婚礼物的费用，所以总数理应高一些。

丧葬开支，根据死者社会地位的高低而大不相同。如在北平所观察到的，孩子的“丧葬费用比家庭每月收入的八分之一略多一点。年长者的丧葬费自然要贵一些，总共要花费月收入的1.25至1.3倍不等。但这些数字都不包括丧宴费用。丈夫、妻子、哥哥、母亲的丧葬，其费用为月收入的2.5、3.5、5.5倍。”^[6] 巴克的平均数是从有丧事的人家的2.8%中推

算出来的。该数字可能略低于本地人提供给我的有关该村一个成年人死后所需的适当的丧葬费用。

These periodical expenses demand saving during the interval. It may take the form of payment of loans, but usually, of subscriptions to a financial aid society, which is a local institution of saving (XV-2). Thus we can check the estimate of ceremonial expenses with the average annual amount of subscription per Chia. In general, as I found, each Chia joins two societies at the same time with a total annual subscription of 40 dollars. It tends to support the reliability of these estimates.

[8] Minimum Expenditure

All the quantitative assessments given in the above sections represent only the recognized minimum requirement of a proper living in the village. To secure these estimates, I consulted a number of informants. Differences between individual estimates were very small. It shows a high conformity of such estimates. The average Chia under consideration consists of four individuals: an old woman, an adult man, an adult woman, and a child, who are full owners of a holding of nine *mow* of land.

These estimates are useful for several reasons: (1) A single-handed field investigator finds it practically impossible to adopt the account-book method, especially in a village where keeping accounts is not a habit of the people, unless he devotes his whole time to investigating this problem. (2) These estimates can give a certain general idea of the livelihood of the villagers because they represent the minimum requirement of a normal living which cannot be very far from the actual average. (3) The lack of striking differentiation in the standard of living in the village allows such a simple approach. (4) As mentioned, these estimates form a standard in the minds of the people as a measurement of sufficiency of material well-being in the community, and consequently an actual social force in controlling consumption.

Moreover, in studying the problem of the standard of living in a rural community, the account-book method has its limitations. The rural community is partially self-supporting. The livelihood will not be comprehended in full in the daily accounts which are usually limited to money transactions. The account-book only reveals the extent to which the villagers depend on outside supplies of goods. The degree of dependence does not always indicate the standard of living. For instance, under normal conditions, the villagers will not buy rice because they have their own reserves. Only when the reserves have been sold under financial distress, will they buy rice to feed themselves. In this case the increased amount of money transactions is related to the decline of livelihood and not the reverse, as might appear from the accounts only.

这些定期的开销需要在平时积蓄起来。积蓄可能采取贷款的形式，但通常采取向互助会交纳储金的形式。互助会是本地的一种储蓄制度（第十五章第二节）。这样，我们可以把估计的礼仪开支费用同每家每

年交纳储金的平均数作一比较。我发现，一般每家同时加入两个互助会，每年总共交纳储金40元。这一数字有助于证实以上估计的可靠性。

八、正常生活的最低开支

前几节中所作的全部定量估计仅代表村里公认的正常生活的最低需要。为了取得这些估计，我曾请教了不少知情人。个人估计之间的差别非常小，这说明了这样的估计具有较高的一致性。我们所考虑的普通的家是由四个人组成：一位老年妇女、一位成年男子、一位成年妇女和一个小孩。这四个人是九亩土地的完全所有者。

这些估计之所以有用，有以下几条理由：（1）单独的实地调查者几乎不可能采用簿记研究法，特别是在村里，人们没有记账的习惯，除非调查者把他的全部时间用于研究记账问题。（2）这些估计可以使人们对本村人的生活得到一个一般的概念，它代表正常生活的最低需要，与实际平均数不会相差太远。（3）村里的生活标准没有显著的差别，因而可以使用这种简便的方法。（4）如上所述，这些估计在人们心目中形成了一个度量社区中物质福利充足的标准，其结果是产生了一种控制消费的实际社会力量。

此外，在研究乡村社区生活水准问题方面，簿记研究法有一定的局限性。乡村社区是部分自给经济，生活上的各项费用并不完全包括在日常账目之中，因为账目通常限于记录货币交易。账簿只能说明村民依赖外界商品供应的程度，而这种依赖程度并不一定能够表明生活水准。例如，在正常情况下，村民不会去买米，因为他们自己有储备。只有在家庭经济困难、储存的大米已被卖光时，村民才去买米来吃。在这种情况下，现金交易量的增加与生活下降有关而不是与生活改善有关。只有这种情况才会在账目中有所反映。

It is clear that in a study of the standard of living of a rural community it will not be enough simply to give a summary of the family budget in terms of money income and expenditure. The investigator must prepare a double entry for the goods consumed to assess those bought from the market and those produced by the consumers themselves. The former should be expressed in terms of money value. The sum of this category represents the amount of money needed to finance the life of the people. It determines the amount of produce sold by them in order to get that amount of money. Those goods produced by the consumers do not enter into the market. Their money value is unknown because the price would be affected if they entered the market. To express them in terms of market price is theoretically unsound. Indeed, without reducing them to a money value, it would not be possible to give a general index of the standard of living of the people. But such a general index is unreal and has little value in an empirical analysis. To keep these two categories apart will

help us to investigate the relation between them, and this relation is very important in the study of rural economy. For instance, one of the important problems in the present Chinese rural economy is the decline of the price of the rural produce. For a given necessary requirement of living, the villagers are forced to sell more of their produce to the market. It thus reduces the degree of self-sufficiency of the villagers. On the other hand, the process of de-industrialization in the rural districts has reduced the amount and type of rural produce and increased the need of money for buying manufactured goods. To approach these problems, it is important to analyse the relation of these two categories of consumers' goods.

This "double-entry" method demands much more work from the field investigator. It may be impractical for him to make statistical observations. Thus I suggest the method of consulting estimates. If possible, it could be supplemented by sampling observation—selecting a few representative cases and systematically assessing the amount of consumption for a period. But the present work is not able to provide this type of data. The following table gives only the money value of those items that the villagers have to buy from the market, and the obligatory payment of tax and rent. It is useful as an estimate of the minimum amount of money needed for the livelihood of the villagers.

很明显，在研究乡村社区生活水准时，简单地以货币的收支来总计家庭预算，是不足以说明问题的。调查者必须从两方面入手来对消费品进行估价：一方面是那些从市场买来的消费品；另一方面是消费者自己生产的物品。前者应以货币值来表示，其总和代表着人们生活所需的货币量。这个数额确定了人们为得到此数额的货币而出售的产品量。消费者自产自用的物品不进入市场。这些物品的货币值无人知晓。因为它们进入了市场，价格就会受到影响。如以市场价格表示这些物品，从理论上讲是不正确的。的确，若不把它们折合为货币价值，就不可能得出人们生活水准的总指数。但是，这样的一个总指数是不真实的。把这两类物品分开研究，有助于我们调查其间的关系，而这种关系在农业经济研究中是非常重要的。例如，目前中国农业经济中最重要的问题之一是农产品的价格下跌。为了满足必需的生活条件，村民被迫向市场多出售他们的产品。这样就降低了村民的自给程度。另一方面，农村地区的辅助工业的萧条，减少了农产品的品种和数量，增加了对货币的需要，以购买所需的工业品。为了探讨这些问题，分析这两类消费品之间的关系是很重要的。

这种“从两方面入手的方法”需要实地调查者付出更多的劳动。收集统计资料可能是不实际的，所以，我建议采用咨询估算的方法。如果可能的话，再用抽样观察来补充。选定几个有代表性的实例，在一个时期中，系统地记录消费项目和数量。但本文尚不能提供这一类的数据。下表仅仅列出了村民必须到市场上购买的物品之货币价值，以及强制支付的租金和税款。该表可以用来估计村民生活所需的最低货币量。

Those goods produced by the consumers themselves include the foodstuffs, such as rice, oil, wheat, and vegetable, and a part of the clothing materials. The most important part of the self-sufficient economy is labour and service. As mentioned, only a few households employ labourers on the farm. Further analysis of this category will be given in connection with the process of production.

I. Things bought from the market:

~~#~~Foodstuffs

~~V~~Vegetables and miscellaneous

Sugar

~~\$~~Salt

~~C~~lothing materials

~~P~~resents

B~~e~~el, light, etc

~~P~~ouse and boat oiling

T~~O~~ols and fertilizer

~~H~~ouses in silk industry

~~I~~Land tax

~~H~~Periodic expenses (expressed in saving)

~~\$~~263

消费者自己生产的物品包括食物，例如米、油、麦子、蔬菜及部分衣料。自给经济最重要的部分是劳动和服务。如上所述，只有少数农户雇工种田。关于这方面的分析，将进一步结合生产过程来进行。

CHAPTER VIII OCCUPATIONAL DIFFERENTIATION

[1] Agriculture as the Basic Occupation

In the process of consumption there are no essential classifications into which the villagers must be divided, but in the process of production occupational differentiation is found. According to the census, occupations are classified under four headings: (1) agriculture, (2) special occupations, (3) fishing, and (4) non-occupied.

These classes are not mutually exclusive. Persons not classified as agricultural may nevertheless be partly engaged in agricultural activities. Agriculture is the fundamental occupation common to nearly all the villagers except among the landless outsiders. The difference is only a matter of emphasis. Those who are classified under the heading of agriculture do not depend on land exclusively but are also engaged in raising silkworms and sheep, and in trade ventures. The fourth category includes households whose adult male members have died and where the widows or the children are living on the rent of the leased land but not through their own productive effort.

The occupation of a Chia is recorded in the census according to the occupation of its head. Members of the Chia may be engaged in different occupations—for example, the children of the store-keeper may be engaged in agriculture and the farmer's daughter engaged in industrial work in the town. This, however, is not indicated. The number of Chia in each category is given in the following table:

274	Agricultural
89	Special occupations
114	Fishing
173	Non-occupied

3601

The above table shows clearly that more than two-thirds, or 76 per cent., of the total population are mainly engaged in agriculture. Owing to the limited time of my field work, my investigations were chiefly concerned with this group. A fuller analysis of the productive

activities of the group will be given in the following chapters. Other occupational groups I can only describe briefly.

捌 职业分化

一、农业——基本职业

在消费过程中，没有必要把该村的居民进行分类，但在生产过程中，则有职业的区别。根据人口普查，有四种职业：（1）农业；（2）专门职业；（3）渔业；（4）无业。

这些职业类别并不是互相排斥的。没有被划入农业的人也可能参与部分的农业活动。除去无地的外来人以外，对几乎所有居民来说，农业是共同的基本职业，区别仅仅在于侧重面不同而已。被划归农业的人并不是只依赖于土地，他们还从事养蚕、养羊和经商。第四类人包含这样一些农户：成年男子业已死亡，寡妇和儿童靠出租的土地生活，而不是靠他们自己的生产劳动过日子。

在人口普查记录里，家庭的职业是根据一家之长的职业而定的。家庭的成员可以从事不同的职业，例如，店主的孩子可能从事农业，农民的女儿可以到城里的工厂工作。这些情况都没有表示出来。该村各类职业的家庭数字如下：

I. 农业.....	274
II. 专门职业.....	59
III. 渔业.....	14
IV. 无业.....	13
总数.....	360

上表清楚地说明，占人口总数三分之二以上即76%的人主要从事农业。由于实地调查的时间有限，我的调查工作主要是有关这个职业组的。下章再详细分析这个职业组的生产活动。其他职业组，我只能简单地描述一下。

[2] Special Occupations

A further analysis of the second category is given in the following table:

14	Engaged in special occupations in town
fi.	Silk spinners
110	Retail traders
W.	Agent boats
25	Crafts and professional services
carp	Carpenters
tail	Tailors
	Staff members of the co-operative factory
	Basket makers
	Barbers
	Millers
	Operators of modern pumping machines
	Mason
	Midwife
	Priest
	Shoemaker
	Silversmith
	Weaver
50	tal

The first heading includes only those Chia whose heads are living in the town engaged in trade or in other occupations. The girls working in the silk factories outside are not included.

Silk spinners represent a special occupation. They work for the silk houses in the town, which collect the native raw silk from the villagers. The quality of the silk is irregular, and it must be sorted out by means of spinning before it can be exported or sold to the weaving factories. This sorting work is done by the villagers. The collectors distribute the raw material to the spinner and collect the silk again. Wages are paid according to the amount of work done.

A description of the retail traders and of the agent boats is given in the chapter on marketing (XIV-4-6).

二、专门职业

第二类的进一步分析，见下表：

I. 在城镇从事专门职业的.....	14
II. 纺丝工人.....	6
III. 零售商.....	10
IV. 航船.....	4
V. 手工业与服务行业.....	24
木匠.....	4
裁缝.....	3
合作丝厂职工.....	3
篾匠.....	2
理发匠.....	2
磨工.....	2
抽水机操作者.....	2
泥水匠.....	1
接生婆.....	1
和尚.....	1
鞋匠.....	1
银匠.....	1
织工.....	1
总计.....	58

表中第一项，只包含那些家长在城里经商的家庭或家长从事其他职业，住在城里。不包括那些在村外丝厂工作的女工。

纺丝工人代表一种专门职业。他们为镇上的丝行工作，丝行从村民手里搜集土法缫制的生丝，质量不整齐，在出口或卖给丝织厂以前，必须通过反摇整理。这种整理工作由村民来做。丝行把原料分配给纺丝人，然后再收集起来，按照工作量给予工资。

零售商人和航船，在讨论贸易的一章中另作描述（第十四章第四节至第六节）。

The whole group of craftsmen and professional men includes only 7 per cent. of the total households in the village. This low percentage is striking. It is due firstly to the fact that such work is not exclusively specialized. Tailoring, shoemaking, and milling are common work in all households. Wood, bamboo, and mason's work of a crude type requires very little knowledge and skill and the necessary tools are found in most houses. The modern pumping machines are not in wide use, and are used mainly in time of emergency. Childbirth does not always need expert help. In the above list, besides the work of the operators of the modern pumping machines, perhaps only the work of

the barbers, the temple keeper, the priest, and the staff members of the co-operative factory is so specialized as not to be more usually undertaken by the farmers themselves.

Moreover, when the people need goods or services, they do not necessarily depend on the supply available in the village. Wood, bamboo, and metal articles of better quality can be bought from the town. Even the barber once complained to me that the villagers were gradually tending to have their heads shaved in the town. In the case of funeral ceremonies priests are sent for from distant temples. Serious cases of childbirth cannot be trusted to the village midwife.

All the outsiders living in the village are traders and craftsmen and form, in fact, one-third of the total number of that group (II-5). I have no information showing whether the trades and crafts were originally novel occupations introduced from outside, but there is good reason to suspect that new crafts are often introduced by their agents from outside. Since technical knowledge is usually transmitted through the kinship line, it is often not easily assimilated by the indigenous population. Moreover, even when the crafts are open for apprenticeship, parents who are able to provide their children with the opportunity of tilling land like to keep them on the farm. Land in the village is insufficient to support an increase of population. It is, therefore, difficult for an outsider to acquire land, and land in any case seldom comes into the market. Thus, as mentioned above, at present all the outsiders are landless and the only means for them to find a living is to engage in certain new crafts or in trades.

整个手工业和服务行业人员占这个村庄总户数的7%。这样低的百分比是惊人的。首先，这是由于这些行业还不完全是专业化的。缝纫、做鞋、碾磨等工作，是各户自己劳动的普通工作。比较粗糙的木工、竹工和泥水匠的工作不需非常专门的知识技巧，所用工具在大多数住家中都自备。现代抽水机尚未被广泛使用，主要在紧急时用。生孩子也不一定需要专家的帮助。在上表中，除了现代抽水机操作者外，也许只有理发匠、和尚、庙宇看守人和合作丝厂的职工的工作比较专业化，农民自己不能兼任。

此外，人们不一定都要村里供应他们所需的物品或依赖这个村里的人来解决他们生活服务的问题。质量较好的木器、竹器或铁器可以在城镇里买到。甚至于有一次理发匠对我抱怨说，村民逐渐倾向于到镇里去剃头了。有丧事时，人们往往到远处庙宇去请和尚。妇女难产时不能信托村里的接生婆来接生。

所有住在村里的外来人都是商人和手艺人，他们实际上占这个群体（第二章第五节）总人数的三分之一。关于商业和手工艺是否原来就是从外面传来的一种新的职业，我手头没有资料可以说明这一点，但我们有理由猜想一些新的手工艺往往是通过某些渠道从外边引进的。由于技术

知识通常是通过亲属关系传授，本地人不易很快地吸收这种知识。即使师傅可以公开传授手艺，但那些有条件让孩子们种地的父母仍愿意让他们种地。村子里的土地不足以提供额外人口谋生，因此，外来人很难获得土地，而且土地也很少在市场出售。所以，正如上面已提到的，目前，所有外来人没有地，其谋生的唯一手段是从事某种新手艺或经商。

[3] Fishing

There are two groups of fishing households, differing in methods of fishing and in their residential areas. The first group, living at the west end of the village on Yu I and II, only follow fishing as a supplementary occupation. Their method is by nets and hooks. Their heavy work is in the winter. At that time, when agricultural work is at a pause, they start their large scale "circle fishing." Several boats co-operate together to form a team. Small hooks are hung close to each other on a strong and long rope, to which are added several heavy weights. The fishing team distribute themselves in a circle, letting the hooks sink into the bottom of the lake. In cold weather, especially when snow has fallen, the lake does not freeze, but the fish are all half-hibernated in the mud, and, as the hooks drag through the mud, the fish are easily gathered. This "circle fishing" is sometimes continued for several weeks and yields a large return. On ordinary days the fishermen spread their large nets in the water and collect fish from them several times a day. This kind of fishing can be done only by those whose houses are near the lake. That is the reason for the localization of this group in the area at the west end.

Shrimps are collected from the lake by a kind of trap, made of basketry. Shrimp trapping is a common occupation of those households which live near the lake. According to reports I gathered in the summer of 1935, there were forty-three boats engaged in this work. The traps are connected by cords to a long line and put into the water. Every four hours they are cleared, because the shrimps will die if they are allowed to remain too long in the traps, and dead shrimps are of less value on the market. The average income is one dollar per boat per day worked by two persons.

The other group of fishing households are found along the middle course of Stream B, on Yu II. These raise fishing birds, which will dive into water to catch fish. Raising and training these birds requires special knowledge which is transmitted in the family, and thus this occupation is hereditary. These families form a special group and co-operate with their fellow professional men even in other villages. Since they may need to go very far from the home village and the birds must be carefully sheltered at night, they form a super-residential group based on their common professional interest. All the fishermen engaged in the same profession are obliged to extend their hospitality to their fellows.

三、渔业

有两类渔业户，他们的捕鱼方法不同，居住地区也不同。第一类渔户，住在村的西头，圩I、圩II，仅以捕鱼为副业。他们的捕鱼方法是用网和鱼钩。冬季工作较忙。那时，农活告一段落，他们便开始进行大规模的“围鱼”作业。几只船合作组成捕鱼队，在又粗又长的绳子上密挂小鱼钩，然后再加上一些重量，捕鱼队队员围成一个圈，把鱼钩沉入湖底。寒冷天气，特别是下雪以后，湖面不结冰，但鱼都在泥里冬眠，鱼钩在泥里拉过，很容易把鱼钩住。这样的“围鱼”作业有时持续数周，收获量颇大。平时，渔民撒大网捕鱼，一日数次。这种捕鱼方式只有那些住在湖边的居民才能采用。这也就是这群渔户局限在村西地区的原因。

虾是用一种竹编的捕虾篓从湖里捕捉。捕虾也是住在湖边的渔户的普遍职业。根据1935年夏我所收集的情况，共有43条船从事这项工作。捕虾篓用一条长长的绳索连结起来，放入水中。每四小时清一次篓子，因为时间过久，虾在篓里容易死去，死虾在市场上的价格低于活虾。两个渔民一条船，平均收入每天一元。

另一种渔户在B河中游沿岸圩II居住。这种渔民喂养会潜入水中捕鱼的鱼鹰。喂养和训练此种鸟需要专门知识，是由家庭传授的，因此是一种世袭的职业。这些家庭形成一个特殊群体，甚至与其他村里的同行渔民合作。由于他们需要到离本村较远的地方去，夜间鱼鹰需要细心保护，因此，这些渔民在共同的专业利益基础上形成了一个超村庄的群体。从事同一专业的渔民，对他们的同行都有友善招待的义务。

CHAPTER IX CALENDAR OF WORK

[1] Systems of Time-Reckoning

To study the productive system of a community, it is necessary to investigate how their activities are regulated in time sequence. It is especially so in analysing a rural economy because crops are usually directly dependent on climatic conditions.

The knowledge of the seasonal cycle of the organic world is of practical importance to the people. Their activities in production are not individualistic and spontaneous. They need collective actions and preparations. They must know when the seeds can be germinated in order to determine the date of sowing. They must know how long it will take for the bud to develop into the young shoot, so that they can determine when they should prepare the soil and transplant the shoot into the main field. The knowledge of the right time for certain actions cannot be secured without a system of time-reckoning.

Recognition of time is not a result of philosophical contemplation or of astronomical curiosity. As Professor B. Malinowski has clearly pointed out, "a system of reckoning time is a practical, as well as sentimental, necessity in every culture, however simple. Members of every human group have the need of co-ordinating various activities of fixing dates for the future, of placing reminiscences in the past, of gauging the length of bygone periods and of those to come."^[1]

The functional approach to the problem of time-reckoning leads us to examine the calendar in detail in order to see how the system regulates and is defined by the social activities.

The traditional calendar used in the village is based on the lunar system. The principle of the lunar system is as follows: the full moon is taken as the night of the fifteenth day of a month. Thus the number of days in each month is either twenty-nine or thirty. (The synodic lunar month consists of 29.53 days.) Twelve months will be counted as a year which contains 354.36 days. The total number of days fails to make the required total of 365.14 days a year for the solar system. An intercalary month is added every two or three years to make good the annual deficiency. But the seasonal cycle of the organic world is

due more to the relation between the earth and the sun than to the relation between the earth and the moon. Although the two systems are adjusted in the long run by the intercalary month, the date of one system can never regularly correspond with that of the other.

玖 劳作日程

一、计时系统

为研究一个社区的生产体系必须要调查他们的各种活动在时间上是如何安排的。在分析农村经济时更需如此，因为庄稼通常直接依赖于气候条件。

有机世界的季节循环的知识，对人们有重要的现实意义。农民的生产活动不是个人自发的活动，他们需要集体的配合和准备。他们必须知道种子何时发芽以便确定播种日期，必须知道秧苗需要多长时间才能长成以便把土地准备好进行移植。如果没有农时的计算，就不能保证在正确的时间里采取某种行动。

辨认时间不是出于哲学考虑或对天文学好奇的结果。正如布·马林诺夫斯基教授已明确指出的：“计时法不论如何简单，它是每一种文化的实际的需要，也是感情上的需要。人类每一群体的成员都需要对各种活动进行协调，例如为未来的活动选定日期，对过去的事进行追忆，对过去和未来时期的长短进行测量。”^[2]

从功能上来研究计时问题，我们就必须仔细地观察一下历法，以便了解计时系统如何安排社会活动，这一系统又是如何由社会活动来表示的。

中国农村中使用的传统历法是以纪月系统为基础的阴历。它的原理如下：望日被视作一个月的第十五天的夜晚。因此，每一个月的天数是29或30天（实际上一个月历时为29.53天）。12个月为一年，共有354.36天，其总数与纪日系统的阳历365.14天为一年的数字不合。每隔两年或三年有一个闰月以补足每年缺少的天数。但是有机世界的季节循环更多地是遵循地球和太阳之间的关系，与地球和月亮之间的关系较小。虽然两种系统最后有闰月来调整，但这两种系统的日期永远不能有规律地一致起来。

The date in the lunar system does not indicate consistently the position of the earth with reference to the sun and consequently the seasonal climatic changes. For example, supposing the people catch the right time for sowing at the seventeenth day of the fourth month this year, they will, owing to the intercalary month, be too late if they sow at the same date next year. The discrepancy between the lunar system and the seasonal cycle renders the former ineffective as a guide

in time-reckoning in agricultural activities. This theoretical consideration leads to a further examination of the traditional calendar.

In the traditional calendar, in fact, there is an underlying solar system. It indicates the exact position of the earth in its solar orbit at various periods. The unit in this system is Chieh, meaning section or joint. The whole solar year is divided into twenty-four Chieh. The total number of days of the twenty-four Chieh in 1936 was 364.75. It shows that there is still a slight difference of 0.59 day with the synodic solar year. The principle in determining the Chieh system is not known to me. But in the old-type calendar book, one can always find that the exact time for the commencement of each Chieh is defined in terms of Shih (two-hour), K'ê (quarter-hour) and Fen (minute). The intercalation takes place in the slight variation between the lengths of different Chieh in different years. It therefore needs no special indication for it. The following table gives the name and the time of commencement of each Chieh in the year 1936.

Winter of 1936	Beginning of 1st Chieh
Beginning of 1st Chieh	1936-1-1 12:00 a.m.
Beginning of 2nd Chieh	1936-1-1 12:00 a.m.
Beginning of 3rd Chieh	1936-1-1 12:00 a.m.
Beginning of 4th Chieh	1936-1-1 12:00 a.m.
Beginning of 5th Chieh	1936-1-1 12:00 a.m.
Beginning of 6th Chieh	1936-1-1 12:00 a.m.
Beginning of 7th Chieh	1936-1-1 12:00 a.m.
Beginning of 8th Chieh	1936-1-1 12:00 a.m.
Beginning of 9th Chieh	1936-1-1 12:00 a.m.
Beginning of 10th Chieh	1936-1-1 12:00 a.m.
Beginning of 11th Chieh	1936-1-1 12:00 a.m.
Beginning of 12th Chieh	1936-1-1 12:00 a.m.
Beginning of 13th Chieh	1936-1-1 12:00 a.m.
Beginning of 14th Chieh	1936-1-1 12:00 a.m.
Beginning of 15th Chieh	1936-1-1 12:00 a.m.
Beginning of 16th Chieh	1936-1-1 12:00 a.m.
Beginning of 17th Chieh	1936-1-1 12:00 a.m.
Beginning of 18th Chieh	1936-1-1 12:00 a.m.
Beginning of 19th Chieh	1936-1-1 12:00 a.m.
Beginning of 20th Chieh	1936-1-1 12:00 a.m.
Beginning of 21st Chieh	1936-1-1 12:00 a.m.
Beginning of 22nd Chieh	1936-1-1 12:00 a.m.
Beginning of 23rd Chieh	1936-1-1 12:00 a.m.
Beginning of 24th Chieh	1936-1-1 12:00 a.m.

*The translations follow Derk Bodde, *Annual Customs and Festivals in Peking*, 1935, p. 107.

阴历的日期不能始终如一地说明地球对太阳的相对位置，因而也不能表明季节性气候的变化。譬如说，假定今年人们抓住了正确的播种时间——四月十七，但由于闰月的关系，他们明年如果在同一天播种，就为时太晚了。阴历和季节循环两者之间的不一致性，使得阴历在农事活动中不能作为一种有效的推算农作物生长期的指南。这种理论上的考虑必然引导人们进一步来考察传统的历法。

实际上，在传统历法中，有一种潜在的纪日系统。它表明各个时期地球在其太阳轨道中的确切位置。这一系统中的单位是“节”，意思是“段”或“接头”。整个太阳历年分成24个节。1936年24个节的总天数为364.75天。这说明实际上一个年度的时间仍有微弱的0.59天之差。我不知道定节气的原理，但在旧历本中可以找到每个节气开始的准确时间，它是用时辰（两小时）、刻（四分之一小时）和分（分钟）为单位来表示的。在不同年份里不同节气的长短上，闰期的变化微小，因此不需要特殊的说明。下表为1936年每个节气开始的时间和节气的名称。

*翻译依照卜德所译的《燕京岁时记》，1935年，第107页。

The Western solar calendar has been also introduced into the village since it has been adopted as the legal system. It differs again from the traditional solar system because it takes a round day as a unit and consequently has a regular intercalary system. Thus they cannot have exact corresponding dates in different years.

[2] Three Calendars

These three calendars are all used by the villagers. But each has its own function and is used in its own particular context. The Western system is used in connection with those newly introduced institutions such as the school, the co-operative factory, and the administrative office. These institutions have to adjust their work with the outside world where the Western system is employed.

The traditional lunar system has its widest use in such situations as remembering sentimental events and making practical engagements. It serves as a system of names for the dates in the traditional social activities. In the sphere of religious activities, the lunar system is largely used. Regular sacrifices are offered to the kitchen god on the first and fifteenth day of each month. The people visit temples and observe vegetarian ritual also on these dates. Ceremonies of ancestral worship are carried out on the dates of birth and death of the ancestors and on regular festivals; though among the festivals some of them are regulated according to the traditional solar system.

The traditional solar system is used not as a system of dates but of climatic changes. With this general system, each locality can adjust its calendar of work according to its local conditions.

This system is used chiefly in reference to productive work. Beside daily conversations, the following folk song will document this statement:

Bai du bu wen indistinctly (referring to the blossoms of the rice).

Chiu fen di ch'hai fruit completely.

Shang giu ch'iang zai early rice.

Li tong giat'hi completely fall.

A part of a letter from my informant can also be quoted:

"People in the village have two periods of leisure every year. The first period is in the autumn from Ch'u Shu to Han Lu and lasts about two months.... The second period is in the winter from Ta Hsüeh to the end of the year, also covering two months. During this leisure time, we go out for trade ventures."

既然西方的阳历是法定通行的，自然也传入乡村，它又与传统的纪日系统的节气有区别，因为它以一个整天作为单位，所以有一个规则的闰日方法。这两种历法不同年份相应的日期不同。

二、三种历法

这三种历法均被村里的人们采用。但各有各的作用，西历通常在新建的机构如学校、合作工厂和行政办公室里使用。这些机构必须与使用西历的外界协调工作。

传统的阴历最广泛使用在记忆动感情的事件以及接洽实际事务等场合。它被用作传统社会活动日的一套名称。在宗教活动上，人们也广泛使用阴历。每月初一及十五要定期祭祀灶神。人们还在这两个日子里去庙宇拜佛或吃素斋。在祖先的生日、忌日和固定的节日要祭祖，但有些节日是根据传统的节气来安排的。

传统的节气并不是用作记日子的，而是用来记气候变化的。有了这一总的系统，每个地方可根据当地情况来安排农活日程。

这个系统主要用于生产劳动。除日常谈话外，下列歌谣说明了它的作用：

白露白迷迷（指稻花开）

秋分稻秀齐

霜降剪早稻

立冬一齐倒

向我提供情况的人曾来一信，也可引述其中一段：

“村里的人，每年有两个清闲的时期，第一个阶段是在秋天，从处暑到寒露，为时约两个月。……第二阶段是在冬天，从大雪到年底，也是两个月，在这农闲季节，我们出去经商。”

The villagers remember and predict their sequence of work in terms of the traditional solar system. But this system cannot stand alone because it is very difficult to understand without a system of dating. The system of date in the village is the lunar calendar. The people have to learn what is the corresponding date for each section in different years. For instance in the above table, the first Li Ch'un is on the 13th of the 1st month and the second is on the 23rd of the 12th month. Therefore it is also correct to say that the lunar calendar regulates the sequence of work of the people through the Chieh system.

The villagers do not arrange their calendar themselves. They simply follow the published calendar in the form of a little red booklet bought from the town. The principle of these systems is not understood by them. They even do not know where the calendar is

issued and who is the authority. Since the government prohibited the traditional calendar, publication of these booklets has been illegal. I was not able to find out who was the publisher responsible.

The government's action had not in any sense affected the popularity and prestige of the booklet. It is to be found in any house and in most cases it is the only book in the house. It is usually put on the stove before the kitchen god, and regarded as a kind of amulet. It is consulted not only for arranging work but also for various social activities and personal affairs. In the booklet, each day has a column indicating those things which are lucky or unlucky. For illustration I give a few columns below:

March 1st (1936), Sunday; 8th of 2nd month.

Birthday of Chang Ta Ti (God of flood).

Good for: Offering sacrifice, praying, asking for posterity, making petitions, visiting relatives, trading, accepting office, arranging marriage, offering marriage gifts, weddings, entering new houses, changing lodging, tailoring, mending buildings, laying foundations, fixing beams, mending storerooms, opening market, making contracts, opening storerooms, planting, breaking soil, burying dead.

Bad for: Thatching roof, introducing water to the field, hunting.

March 2nd, Monday; 9th of 2nd month.

Good for: Visiting relatives and friends, catching animals.

Bad for: Making accusations in court, curing diseases, taking medicine.

(Plants begin to bud.)

农民用传统的节气来记忆、预计和安排他们的农活。但节气不能单独使用，因为没有推算日期的办法，在使用上有困难。农村用阴历来算日子。人们必须学习每年各个节气的相应日期。例如上表所示，第一个立春是在正月十三日，而第二个立春则在十二月二十三日。因此，也可以这样说，阴历通过节气系统来安排人们的工作顺序。

历本并非村民自己编排，他们只是从城镇买来一红色小册子，根据出版的历本来进行活动。他们也不懂其历法的原理，他们甚至不知道历本是哪里发行或经谁批准的。因政府禁止传统历，出版这些小册子是非法的。我未能找到谁是负责的出版者。

然而政府的行动丝毫没有影响小册子的普及和声誉。在任何一家人的房屋中都可以找到这本册子，而且在绝大多数情况下，这往往是家中唯一的一本书。人们通常将它放在灶神爷前面，把它当作一种护身符。不仅在安排工作时，而且在进行各种社会活动和私人事务的时候，农民都要查询这本历书。在历书中，每一天有一栏专门说明哪些事在这一天

做吉利，哪些事不吉利。我列举数栏说明如下：

三月一日（1936年），星期日；阴历二月初八

张大帝（洪水之神）生日。

宜祭祀，祈福求嗣，还愿，会亲友，经商，上官赴任，结婚姻，行聘，嫁娶，迁入新宅，移徙，裁衣，修造，竖柱上梁，修店铺，开市，立券，开仓库，栽种，破土，安葬。

不宜用茅草铺盖房顶，灌田，行猎。

三月二日，星期一；阴历二月初九

宜会亲友，捕捉畋猎。

不宜诉讼，求医疗病。

（植物发芽）

March 16th, Monday; 23rd of 2nd month.

Good for nothing.

Bad for everything.

March 27th, Friday; 5th of 3rd month.

Good for: Taking a bath, fishing, catching animals, clearing houses.

Bad for: Fixing a bed, buying land and other properties.

(Beginning of thunder.)

It is not true that people always follow the advice of the column. But they actually consult the booklet in such activities as building houses, arranging marriages, starting long trips, etc. They generally distinguish "good day" and "bad day" according to the length of the column of "good for." They avoid taking any important and adventurous activities on these bad days, especially those which are explicitly stated as "good for nothing." At the end of the column every few days, there is an item, given in parentheses, indicating certain recurrent natural phenomena such as "Plants begin to bud" and "Beginning of thunder," etc. It is an additional system of reckoning time by recurrent natural phenomena.

〔3〕 Time-Table of Economic and Other Social Activities

With these systems of time reckoning, we are now able to tabulate the time-table of various economic and social activities in the village. It will serve as a system of reference for the further analysis. Explanations for specific items will be given elsewhere in their appropriate connections.

三月十六日，星期一；阴历二月二十三

诸事不宜。

三月二十七日，星期五；阴历三月初五

宜沐浴，畋猎取鱼，扫舍宇。

不宜安床，买地纳财。

（开始雷鸣）

农民并非完全按照栏内所列的忠告行事。但盖房、安排婚事、开始长途旅行等事，他们确实要查询此种历本。他们根据栏内所列吉利的事情多少，笼统地区别“宜”或“不宜”的日子。他们避免在“不宜”的日子——特别是那些表明“诸事不宜”的日子——进行重要的冒风险的活动。每隔数天，在这一栏的末尾有一项括号内的说明，如“植物发芽”和“开始雷鸣”等。这是用周期性的自然现象来推算时间的一种附加系统。

三、经济活动和其他社会活动时间表

有了以上的这些计时系统，我们便能列出村庄各种经济和社会活动的
时间表。它可供进一步分析作参考。对某些具体项目，将在其他恰当的
有关之处再作一些解释。

CHAPTER X AGRICULTURE

The importance of agriculture in the village economy has been shown in the above pages. More than two-thirds of the households are engaged mainly in this occupation. Nearly eight months are spent in work on the land. And for foodstuffs the people are entirely dependent on the produce of their own farms. Thus in a study of the problem of production, agriculture must come first in view.

The term agriculture is used here only in a narrow sense, and refers to the use of the land for cultivating desirable crops. The study of how the land is used must start with an analysis of the land itself. The chemical composition of the soil, the topography of the land and the climate—all these are conditions governing agriculture. It is also necessary to know the biological nature of the crop. But these analyses, essential as they are, demand special knowledge which an anthropologist does not usually possess. However, the land that enters into agriculture is more than a natural entity. It has been transformed by culture into farms. Moreover, what immediately directs human labour in agriculture is the knowledge about the land and the crop possessed by the people themselves as expressed in their technology and beliefs.

To start our analysis from the material substratum we will first attempt a description of the farm. The lay-out of the farm, based on technical considerations, has far-reaching effects on the organization of labour, on land tenure, and on the kinship organization. The study of it will be the best introduction to these more intricate aspects of the relation between man and land.

[1] Lay-out of the Farm

The lay-out of the farm depends on what kind of crop the people select for cultivation. In this village the chief crops cultivated are rice, rapeseeds and wheat. Rice starts in June and ends at the beginning of December. It is the main crop. After this crop a part of the higher land can be used for cultivating wheat and rapeseeds. But these two crops are only supplementary. The produce is only enough for domestic consumption.

More than 90 per cent. of the land is used for these crops. Along the margin of each *yu*, ten to thirty metres of land is left for plantation of mulberry trees and a wider space for house building. This land on the margin is higher. It also serves as a dyke for the farm.

拾 农业

农业在这个村子经济中的重要性，已经在以上章节中显示出来。这村有三分之二以上的农户主要从事农业。一年中有八个月用来种地。农民的食物完全依赖自己田地的产品。因此，要研究生产问题，首先必须研究农业问题。

本章所使用的农业一词，只是从它的狭义说的，指的是使用土地来种植人们想要种的作物。要研究如何使用土地，必须先分析土地本身。土壤的化学成分、地形和气候都是影响农业的条件。我们也需要了解谷物的生物性质。这些分析尽管比较重要，所需要的专门知识却往往是人类学者所不具备的。然而，农业占用的土地不只是自然实体，文化把土地变成了农田。此外，在农业中，直接指导人类劳动的是人们自身掌握的关于土地和谷物的知识，通过技术和信仰表现出来。

从分析物质基础开始，我们首先来描述一下这个村子的农田。根据技术需要出发的农田安排，对劳力组织、土地所有权和亲属组织都有深远的影响。研究这个问题对进一步研究人与土地关系问题的各个复杂的方面将是最好的开始。

一、农田安排

农田的安排取决于农民选择种植哪一种作物。这个村农业的主要作物是水稻、油菜籽和小麦。水稻的种植期从6月开始，12月初结束，这是主要农作物。收稻以后，部分高地可用来种小麦和油菜籽。但后两种仅是补充性的农作物，其产量仅够家庭食用。

村里90%以上的土地种植上述这些农作物。沿着每一圩的边缘，留有10~30米的土地种桑树，有三个圩再留一块大一些的空地盖房屋。在边缘的土地较高，也用作农田的堤堰。

The land used for the growing of crops is divided into farms. Rice cultivation requires a regular supply of water. Thus the lay-out of the farm depends on the measures for water regulation.

My informant said: "Water is the most important thing in the farm. The rice will die if the soil begins to break due to dryness and it will also die if water covers its 'eye'." The "eye" of the rice is the upper joint of the leaf with the stalk. When this point is covered by water, according to local opinion, the rice will wither within six or seven days. It may not perhaps be strictly true that this point in the rice plant is so vulnerable; nevertheless the "eye" is used as a mark for the proper level of water in the farm. This level must be adjusted to the growth of the rice and effort must be made to irrigate the farm when the level is too low and to drain it when the level is too high. Water regulation is one of the main tasks in agriculture and dictates the topography of the farm.

The land is divided up by streams into tiny pieces which are called *yu*. Each *yu* is surrounded by water. The accessibility to water of each particular farm depends on its location in the *yu*. The farther one goes into the centre of the *yu*, the more difficult is it to get supplies of water from the stream. In order to make it possible for the centre part to obtain water, the levels of the *yu* must be graded like a dish. But this dish-shaped surface creates a difficulty in the storage of water. The water tends to find its level and, instead of there being an equal distribution of water over the farm, there will be a pool in the centre with the marginal land left dry. Dykes, therefore, have to be constructed, parallel to the margin. Another difficulty is that water must be brought in from the lower level of the stream. Pumps must be used to carry the water up to the higher level. To fix the pump, a spot must be selected along the bank and a ditch is dug out leading to the interior parts. Each strip of land, depending on water supplies from

the same pumping spot, is marked out by dykes per-pendicular to the margin. These two kinds of dykes, crossing each other, divide the farm into small pieces which are called *be* or plots.

MAP IV Lay-out of the Farms in Hsi Chang Yu
地图IV 西长圩农田的安排

种庄稼的土地被分成若干农田。由于种水稻需要定期供水，因此农田安排还取决于水利管理措施。

向我提供情况的人说：“水是农田中最重要的东西。如果土壤干裂，稻就会枯死，如果水太多，淹过稻‘眼’时，稻又会淹死。”稻“眼”即上方叶和茎的接节点。当地人认为，这部分被淹了，六七天之内，稻就枯萎。把稻的这一部位说得如此脆弱，未必那么真实。但稻“眼”确实被用作标志稻田中水多水少的一个基准。必须按照稻的长势调节水面，水位太低时进行灌溉，太高时则及时排水。水的管理是农业中的一件主要任务，它决定农田的地形。

土地被河流分割成小块，称作“圩”。每一圩周围是水。每一块农田得水机会的多少视这块农田在圩中的位置而异。圩正中间的一块田离河最远，被灌溉的机会也最少。为使中间的农田得到足够的水，人们必须把圩的土地平整得犹如一个碟子。但碟状土地表面又为储水带来困难。

水总是趋向水平面，因此农田不能得到水的平均分配，反而中间形成水塘，边缘土地干旱。所以必须筑起与土地边缘平行的田埂。另一个困难是必须从较低的河流中将水引到较高的田地中来。这样，便必须用水车。人们在河岸上选择一个地点，安装好水车，同时还要挖一道水渠以便将水引到里面的稻田。靠这一车水点供水的每一大片田地，还要有与边缘相垂直的田埂。两种田埂相互交叉，把农田分成小块，称作小块田或“𦵏”。

Within each plot, the level must be even in order that there should be an equal distribution of water. This is a frequent cause of dispute among cultivators of the same plot when it is not owned by the same Chia. There is a common ditch running through each strip, and each plot in a strip has an outlet to it. When the farmers introduce water to the plots, they start from the marginal plot. They close the ditch just below the outlet of the particular plot so that the water runs onto it. When it is sufficiently irrigated, they close the outlet and open the ditch to irrigate the next plot in the same way. They go on until the last. Thus the strip is the unit of irrigation (Map V).

MAP V System of Dykes and Ditches in the Farm
地图V 田埂和水渠系统

When there is too much water on the farm, due to overabundance of rainfall, the system used for irrigation cannot be used for drainage because the water does not flow from the lower centre to

the higher margin. A big trench has therefore to be constructed in the lowest part of the whole dish-shaped *yu*. This collects the surplus water from all the strips and pumps are fixed at the end of the trench for draining it away. The different system in irrigation and drainage calls for different organization of work, as we shall show presently.

The difficulty involved in the problem of drainage, purely from the technical point of view, is the size of the *yu*. The size is determined by the natural distribution of streams. It varies enormously. For instance, in the village we are describing there are eleven *yu* which vary from eight *mow* to more than nine hundred *mow* (II-2). The bigger the size, the more difficult it becomes to fit it into the process of collective drainage. To meet the need of urgent and efficient work, the big *yu* must be divided into smaller drainage units, which are called *ʹcien*. Larger dykes are constructed to separate *ʹcien* from one another. These dykes are also used as the main roads in the farm.

The plan of the lay-out of the farm is illustrated in Map IV. It is much simplified but sufficient to show the principles just described.

每小块田的高低必须相同，以便能得到平均的灌溉。小块田的所有权如果不属同一个家，那么耕种者之间常常因灌水发生争执。每一片田地有一条共同的水渠通过，在每片田地的小块田间有一个通水口。农民引水进田时，先从边缘的小块田开始。在一小块田的进水口处下面把水渠堵住，这样水便流入这小块田地。水灌足后便堵住这一进水口，打开水渠再灌溉下一块田地。这样继续下去直到最后一块田浇灌完毕。一片田地为一个灌溉单位（见地图V）。

雨水多的时候，这一灌溉系统不能把田里多余的水排出，因为水不能从较低的田中央往较高的田边缘流出。所以必须在整个碟形圩地的最低部分挖一水沟。它汇集了各大片田里多余的水，水沟终端装部水车把水排出。接着，我们将看到灌溉和排水需要不同的社会组织工作。

单纯从技术观点来看，排水问题的困难主要是各圩面积大小不等的问题。圩的大小取决于河流天然分布的情况，大小相差极大。例如，这个村里有11个圩，大小从8亩至900余亩不等（第二章第二节）。圩的面积越大，将它纳入集体排水系统的困难越多。为适应紧急需要并提高工作效率，大圩必须分成较小的排水单位，称“塍”，各“塍”之间筑了较大的埂。也是农田里的主要道路。

农田安排平面图，如地图IV所示。图比实际情况简单得多，但足以说明刚才描述的情况。

[2] Rice Cultivation

The land is mainly, not exclusively, used for the cultivation of rice. The present study will be restricted to this aspect.

Rice cultivation starts in June. A small piece of ground is prepared as a nursery for the young shoots. Seeds are sown in the nursery. In about one month the rice has grown to about thirty centimetres in length. During this period the young shoots do not need much space but require more care in water regulation. It is thus convenient and economical to keep them in a small space while the main field is under preparation.

Before the young shoots can be transplanted into the main field, the soil must be prepared. Preparation consists of breaking, refining and levelling the soil, and then of irrigation. All the work is done by human labour. One characteristic of the agricultural work in this region is the absence of animal labour. As we shall see later, the size of the farm is small and the holding of each household is scattered in such widely separated places, that animal labour cannot be used. The farmers use only the implement called *tid'a*, which is an iron hoe with four teeth, fixed on a wooden stick about a man's height. These form a slight acute angle. Holding the implement by the end of the stick, the workman swings the hoe behind his back and over his head. The teeth strike with a considerable momentum and penetrate into the soil at a sharp angle. By pulling the hoe backwards, he is able to break the soil pressing on the teeth. Ploughs are not used in the village.

The surface of the soil, after having been broken, is rough and uneven. The second step is to refine the soil and to level the surface. The same implement is used in these processes. It takes about four days for the preliminary preparation of each *mow* of land by one man.

At this stage water is introduced onto the land. Dykes and ditches must be first examined and repaired if necessary. The water is introduced from the stream by a pump. A pump consists of a long, rectangular, box-like three-sided wooden tube in which there is a series of valves, made of small wooden plates connected by a chain of movable sections and forming a circle. The small valves touch the three sides of the tube and thus form a series of small empty squares in the tube. The chain is connected by a pivot to the wheel. When the farmer tramps on the projections of the wheel, the chain of valves revolve in a circle. The lower end of the tube is fixed in the water and

the upper end opens towards a little pool leading to the ditches. The small squares, formed by the valves and the sides of the tube, will be filled with water at the lower end. The revolving of the chain of valves in the tube carries the water contained in the small squares up to the upper end. As soon as a valve reaches the upper end, the direction of its movements turn upwards and the water falls into the pool. The water is brought up to the pool not through the differential air pressure but through the movement of the valves.

二、种稻

田地主要用来种稻，但不完全是种稻。目前只限于研究种稻这一方面。

6月开始种稻。先准备好一小块田地育秧，把种子撒在秧田里。约一个月以后，稻子长出30厘米长的嫩秧。这一时期稻秧不需要大的间隔，只是在浇灌方面需要细心调节。在小块田地上育秧，同时在大块田地上做准备工作，这样比较方便、经济。

移秧之前必须作好以下准备：翻地、耙地、平地，然后是灌溉。一切工作都是人力做的。这个地区农业劳动的一个特点就是不用畜力。下面我们将看到，农田较小，每户的土地又是如此分散，以致不能使用畜力。农民只用一种叫做“铁耨”的工具，它的木把有一人高，铁耙上有四个齿，形成一个小锐角。农民手握木把的一端，把耙举过头先往后，再往前甩，铁齿由于甩劲插入泥土，呈一锐角，然后向后拉耙，把土翻松。这个村子不用犁。

翻地以后，土块粗，地面不平。第二步就是耙细和平地，使用同一工具。一个人翻耙平整一亩地需要四天。

这一阶段要引水灌溉，必要时需检修田埂和水渠。用水车从河流水。水车有一个长方盒形的、三面用木板做成的管道，木管内有一系列用小木片做成的阀，由活动的链条连在一起形成一个环。小阀接触三面木头的管道便在管内形成一系列方形空间，链条通过枢轴与一个轮子相连。农民踏动轮旁的踏脚板时阀链便按圆环形转动。木管的下部置入水中，上部打开，对着一个通向水渠的小水塘。由阀和木管三面形成的小方空间在下端充满了水，阀链转动时便将水带上来，流入水塘。水并非通过空气压力的差别带入塘内，而是由于阀的转动把水带到水塘。

The implement is not very efficient in carrying water to the upper level. The squares formed by the valves and the sides of the tube can never be very tight and the friction is high. It takes about one day to fill one *mow* with ten or more centimetres above the land surface. The inefficiency of irrigation creates a difference in the value of the successive plots in each strip. As I have shown above, the water flows from the margin to the centre passing through successive plots. When water is needed, the central plot must wait until the marginal plot has been irrigated; and when there is too much water, the central plot must remain longer under water while the margin is drained. The length of time spent in waiting for irrigation and for drainage depends on the efficiency of the pump. The unsatisfactory system of irrigation and drainage is certainly a factor in reducing the amount of produce.

It is also responsible for a difference in land value. The difference between the marginal plot and the central plot sometimes amounts to ten dollars or one-fifth of the average value of the land.

In the past two years, two air pumps, run by motor engines, have been introduced into the village. One is owned by an individual and the other by the co-operative factory. A fee is charged per *mow* for the regulation of water during the whole year. This collectivizes the irrigation process and specializes the work. However, these machines have not yet been widely used, mainly because the labour saved by the machine has not yet found any productive use. From the point of view of the villagers, they still prefer working on the old pump to paying a fee and being themselves idle for months. Some told me that someone who was lazy and relied on the air pump had ruined himself in the gambling house in the town because he had nothing to do. It is still too early to see the effect of this labour-saving machine, and the process of collectivization in irrigation, on the social organization as well as the lay-out of the farm.

After water has been brought on to the land, it takes another day for each *mow* of land to be levelled. The total amount of time spent on the land for preparation can thus now be estimated. If there are seven *mow* for one person to work, it will take about thirty-five days, approximately equal to the amount of time needed for the growth of the rice in the nursery.

用这种工具把水车至高处，效率不很高。由木阀形成的方形空间结构不严密，阻力较大。为一亩地车水高出地面十余厘米约需用一天的时间。灌溉上的低效率使每一大片田地中相连的小块田地产生了不同的价值。我在前面已经提到，水从边缘的田地依次流到中间，中间的田地必须等边缘的田地灌溉结束后，才能得到它所需要的水。雨水太多时，中间的田地又必须等待边缘的田地排完水后，多余的水才能排除。而等待排灌时间的长短则有赖于水车效率的高低。排水系统的不能令人满意的效率，当然是产量降低的一个因素。因此也就产生了土地价值的差别。边缘田地与中间田地价值的差别有时可达十元或相当于土地平均价值的五分之一。

前两年，村里有了两台动力抽水泵：一台为私人所有，另一台为合作工厂所有。承包全年的灌溉，按每亩收费。这使整个灌溉过程逐步转入集体化和专业化。然而，这种机器尚未被普遍采用，主要是因为使用机械而节约下来的劳力尚未找到生产性的出路。从村民的观点来看，他们宁愿使用旧水车，不愿缴纳动力泵费用而自己闲搁数月。有些人告诉我，有个人依赖动力泵灌溉，自己没有事，便到城镇的赌场去赌博，害了自己。现在尚未看到节约劳力的机器和水利集体化过程对社会组织和农田安排的影响。

引水到田以后，每亩田还需要用一天的时间加以平整。现在就可以

估计在准备土地过程中总共需要多少时间。一个劳力如果种7亩地，大约需要35天，相当于稻秧在秧田里生长所需的时间。

There is no ritual ceremony at the beginning of the agricultural work and every household is free to determine its own time for starting. The difference in time covers a range of two weeks.

Transplantation of the young shoots from the nursery farm to the main field is a major part of rice cultivation. The people describe this period as "busy in farm." The farmers start in the early morning for the nursery, which sometimes is far from the main field; they must transport the young shoots by boat. Children are brought to help in the work, but not women. The young shoots are planted in the main field in bunches of six or seven stalks. Children make themselves useful by handing the young shoots to the leaders while they are planting. One person will plant six or seven bunches in one row within his reach without stepping sideways. Finishing one row he will take one step backwards and start another row. Finishing one strip he will start another from the beginning. If there are several persons at work on the same farm, they will form a row and move backwards at the same time. The rhythmic movement of the workers is very impressive. To maintain the rhythm, which is helpful in this monotonous work, they often sing rhythmic songs. Special songs have grown up under the name of *yengo*—"Young shoot song." But since in this region women do not participate in the work, the development of such songs is less than in the neighbouring areas.

Each person can plant about half a *mow* a day. To plant seven *mow* well thus takes about two weeks.

In July it is already summer. In hot weather (80°F.) rice grows very fast. During this period rain is plentiful (5.5 inches); heaven helps people to supply water to the young rice shoot. But nature cannot always be relied on. If there are two or three days without rain, the delicate young shoots will need to be watered by pumping, which calls for human labour. If it rains for three or four days continuously, the people will, on the other hand, be busy in pumping out the surplus water.

The wild grass mixed in the rice grows sometimes still faster. Only one week after the people have finished their work of transplantation, they must again be busy in weeding. A special instrument is used. This is a plate which has many nails on one side and is fixed to a long bamboo pole. The workman handles the pole by drawing the nails through the mud to uproot the wild grass.

When the field is weeded, the next task is to supply fertilizer for

the soil. Fertilizer consists of human and animal manures and bean cakes. Bean cakes are made of the sediment of the soya beans after the oil has been pressed out. The cake is minced into small pieces and is evenly distributed over the farm.

农活开始的时候没有什么仪式，每个农户自己掌握农活开始的时间。时间先后的差别约为两个星期。

把稻秧从育秧田里移植到大田里，是种稻的重要部分。人们把这段时间描述为“农忙”时节。农民一早出发到秧田去，秧田有时离稻田很远。农民必须用船来往运送秧苗，孩子们那时也被动员起来帮忙干活，但不用妇女。插秧时六七棵秧为一撮插在一起，孩子们的工作是把秧递给插秧人，一个人不旁移脚步，在他所能达到的范围内，一行可插六七撮，这一行插完后，向后移动一步，开始插另一行。插完一片地以后，再从头开始插另一片。在同一块田地，如果同时有几个人工作，他们便站成一行同时向后移动。插秧人那有节奏的动作给人留下深刻的印象。对这种单调枯燥的工作加点节奏是有益的，为保持这种节奏，农民常常唱着有节奏的歌曲。这随之发展而成专门的秧歌。但这一地区的女子不参加插秧，秧歌流传不如邻区广泛。

每人一天大约可插半亩，插七亩约共需两周。

7月已经是夏天了，在华氏80度的气温下，稻的长势很快。这时期雨水很多（5.5英寸），老天帮忙，为幼秧提供水源。但自然界不总是那么可靠的。如果两三天没有雨，秧就需要车水灌溉，这就需要人力。如果连续下三四天雨，人们又要忙着车出多余的水。

和稻混杂在一起的野草有时长得更快。插秧工作刚刚结束一个星期，农民便需忙于除草。专用于除草的工具是一片装在竹竿柄上的木板，上面有很多钉子，农民手握耙柄，把钉耙向后拉过泥土，便把野草拔除。

除草后，下一件工作便是给土地施肥。肥料有人粪肥、畜粪肥和豆饼。黄豆榨油以后剩下的渣压成豆饼。豆饼被碾成碎片，均匀地撒在田地里。

Human manure is preserved in special pits behind the house. Sheep manure is collected from the hut. After long exposure in the air, and after being mixed with grasses, it is distributed over the field. Fresh manure is not used.

When the rice has reached a considerable height, and before it blossoms, the farmer must weed it thoroughly. This time the nailed plate cannot be used, because it might damage the root of the rice. The farmer has therefore to use his hands. To avoid damaging the rice, a saddle-like bamboo basket is attached to the upper leg. This brushes the rice away as the farmer walks in the mud.

Weeding and watering take all the farmer's time from July to

September with several short intervals. The amount of work varies according to the amount of rain. In the early part of September the rice blossoms, and at the end of that month it bears fruit. No special work is necessary during that period. This is the long interval in agricultural work. During the latter part of October some of the early rice can be reaped. The instrument for reaping is a long curved sickle. The rice is cut near the root of the stalk, and is carried in bundles to the open space in front of the house. Threshing is done in the open space or in the front room, by striking the ears of the grain against the side of a big box. Grains are thus separated from the stalk and collected at the bottom of the box. Threshed stalks are heaped on the ground beside the public road.

Grains are hulled in a wooden mill. Husks are separated from the seeds by a whirling machine. The hulled seeds of rice can be sold but cannot be cooked without another process of refined husking. The last process has been entirely taken over by the modern machines. The old instruments of mortar and pestle are not used any more.

[3] Science and Magic

The knowledge embodied in the lay-out of the farm, in irrigation, in drainage, in breaking the soil, in transplantation, in weeding, etc., is accumulated from the long experience of the population, transmitted from generation to generation and learned by practical demonstration. It is an empirical knowledge that enables the people to control the natural forces in order to attain human ends. A detailed investigation would show how highly developed is the science of agriculture in this region. The above account has already indicated that the people understood definite general principles of biology concerning the process of growth of the rice, the quantity of water needed during different periods, the function of leaves and roots in plant physiology, and of physics concerning the level of surface and the movement of water.

人粪肥保存在房屋后面的专用的粪坑里。羊粪从羊栏里收集，曝露、晾晒并与草混合以后，撒在田里。不用新鲜粪肥。

当稻长到相当高度，开花以前，还需彻底除一遍草。这时便只能用手来拔草，因钉耙容易伤害作物的根部。为避免伤害稻，农民在大腿部系一马鞍形竹筐，他们在泥里行走时，它可先把稻撇开。

从7月到9月农民几乎都在除草和灌溉，中间有数次短的间歇。工作量的大小依据雨量的多少。9月上旬，稻子开花，月底结谷。这一时期没有特殊的工作可做，是最长的农闲时节。到10月下旬，某些早稻可以收割。长长的弯形镰刀便是收割的工具。割稻时把稻秆近根部割断，扎成一捆捆放在屋前空地上。打谷在露天空地或堂屋中进行，用谷穗打击着一个大打谷桶的一边，谷子便从秆上落下，留在桶底，然后收集起来。打过的稻秆便堆放在路边。

稻谷被放在一个木制磨里去壳，碾磨转动，壳便与米分开。粗磨的米可以出售，再经过一次精磨，才能食用。最后一次碾磨过程完全用现代机器进行。旧式工具杵臼已不再使用。

三、科学与巫术

在上述农田安排、灌溉与排水、翻土与平地、插秧与除草等农活中所用的知识，是通过农民的实践经验的长期积累一代一代传授下来的。这是一种经验性的知识，使人们能控制自然力量，以达到人们的目的。详细的调查研究会表明这个地区的农业科学发展到如何高的程度。上述情况已经说明，人们懂得稻的生长过程中的普通生物原理、不同时期所需的水量、植物生理中叶子和根部的作用以及有关水的运动、水平面等物理常识。

Their empirical approach to their enterprise is again seen in the way in which they adopt new technique and implements. The selection of implements is solely based on the principle of efficiency and economy. For instance, the air pump is used when there is urgent need of water regulation, but not when it proves to be expensive.

Science, however, only rules in so far that the natural factors can be successfully controlled by human effort. There are uncontrollable factors in nature. For instance, the primary need of a water supply can only be partially controlled by human means through irrigation, drainage, and the construction of dykes and ditches. It still largely depends on the rainfall. If there is too much or too little rainfall, rice will die regardless of how hard the people work on their pumps. Locusts may come unexpectedly. In this fateful sphere, and in this only, we find magical beliefs and practices.

It does not mean that the people conceive rain and locusts as supernatural manifestations. They have scientific meteorological knowledge. "When it is too hot, the lake will evaporate too much and when the temperature changes there will be rain." But these natural phenomena are beyond human control. They might be a great menace in practical life and turn all effort to nothing. At this vital point, the people say, "We depend on heaven." The recognition of human limitations gives birth to magic. But magic is not a substitute for science. It is only one means for combatting natural disasters. It does not rule out other means. Science and magic go hand-in-hand to attain a practical end.^[1]

Magic is not a spontaneous and individual action. It is an organized institution. There is a definite person who is charged with the function and possesses magical powers. Secondly, there is a traditional ritual to call in the supernatural intervention. Lastly, there are myths to justify the ritual and the ability of the magician.

The occasions for magical performances are threats of flood, drought and locust plagues. Whenever the occasion arises, the people go to the district government and appeal for magical help. By ancient tradition the district magistrate was the magician of the people. In case of flood, he would go to the river or lake to demand the receding of the water by throwing his official belongings into the water. In case of drought he would issue an order to stop killing pigs and would organize a parade with all the paraphernalia suggesting rain, such as umbrellas and long boots. In case of locust plagues he would parade with the idol of *luiwan*.

通过他们采用新技术和工具的方式，也可以看到他们对所经营的事业采取了一种经验式的方法。对工具的选择完全是从经济和效率原则出发的。例如，需要紧急排灌时就用水泵，但作为平时灌溉，花费太大时就不用它。

然而，科学只在人力可有效控制的自然因素方面才具有决定作用。自然界中尚有不能控制的因素方面才具有决定作用。譬如对水的基本需要只能通过排水、灌溉、筑堤、挖沟等人为的手段进行部分的控制，大部分还是要靠雨水。如果雨水太多或太少时，不管人们如何努力使用水泵，稻还是会枯死或淹死。蝗虫可能出乎意料地突然到来。在这种性命攸关的领域，也仅仅在这一范围内，我们发现人们有非科学的信仰和行动。

这并非意味着人们把雨和蝗虫当作是超自然的表现。他们有气象知识：“天气太热时，湖水蒸发太多，气温一有改变，就会下雨。”但这些自然现象，人不能控制。它们对实际生活可能是巨大的威胁，可能顿时把一切努力化为乌有。在这个关键时刻，人们说：“我们靠天吃饭。”承认人的力量有限，转而产生了种种巫术，但巫术并不代替科学，它只是用来对付自然灾害的一种手段。它不排除其他手段。科学和巫术同时被用来达到一个现实的目的。^[2]

巫术不是一个自发的个人的行动，而是一种有组织的制度。有一个固定的人，这个人拥有魔力并负责施展巫术。其次，有一套传统的礼仪来唤起超自然的干预。最后还有一些神话来维护这种礼仪和巫师的能力。

当遭到水灾、旱灾和蝗灾的威胁时，便要施行巫术。过去每逢这种时机出现，人们纷纷到县政府去要求巫术的帮助。按照古老的传统，县行政官就是百姓的巫师。有水灾时，他就到河边或湖边把供物扔进水里，祈求洪水退去。干旱时，他就发布命令禁止宰猪，并组织游行，游行带着一切象征雨的用具如伞、长统靴等。有蝗灾时，他就带着刘皇的偶像游行。

The obligation of the magistrate to act as the district magician and his efficiency in this rôle, is explained by the following myth. About a mile outside the north gate of the city of Wukiang, the

headquarters of the district, there is a temple worshipping the god called Chang Ta Ti (Chang the Big Emperor), whose birthday is on the 8th of the 2nd month (IX-2). According to the belief of the people he was a magistrate of the district at a remote historical period. During his term of office there was a threat of flood from continuous heavy rain and the overflow of the water in the lake. Going to the lake, he commanded the water to recede at once, and threw his shoes, his clothes, and his official jade girdle one after another into the water. But the water still overflowed, and rain continued to fall. At last, he threw himself into the water. The menace was conquered. At the present time, it is said that whenever there is a threat of flood in the district the gown of the idol will be always very wet because he still performs his function invisibly.

The myth connected with *luiwan* and his function in locust magic is not known in this village, so far as I could find out. But it is very popular in the neighbouring city of Wukiang. *Luiwan* was a historical person. He had been maltreated by his step-mother throughout his life. He was a very mischievous boy and possessed magical power. One night he invited all his friends to a big feast and killed all the cows of his family. In the morning he arranged the heads and tails of the cows in such a way that they looked half buried underground. But before he had finished the arrangement the day began to break. He ordered the sun to wait a minute. The sun went down under the horizon. Even at the present time, it is said, the sun will recede for a minute in the morning. When his step-mother found the cows half buried underground, the cows, owing to the magical power of the boy, lowed towards their master and moved their tails. As the result of his tormenting his step-mother, she treated him outrageously and he at last died. After his death his spirit has been believed to be continuously powerful in magic and able to drive away locusts. This myth testifies to the magical ability of the mischief-making boy and is the charter for the present belief and practice in locust magic of the people.

The magical function of the magistrate runs counter to the modern concept of civil office. Furthermore, the present government regards superstitious beliefs among the people as a great obstacle to social improvement. Various orders have been issued for the prohibition of magical performances of any sort. The present magistrate, therefore, not only denies his traditional function to be the people's magician, but is supposed to enforce the law against magic. But the natural menaces of flood, drought, and locusts continue to threaten the people. Their scientific knowledge and equipment are still not sufficient to control many of the disasters of nature, and the

need for magic remains unchanged.

以下神话解释了地方行政官担任巫术师的义务以及他担任这一角色的效果。在县政府所在地，吴江城北门大约一英里开外的地方，有一个拜祭张大帝的庙宇，他的生日是阴历二月初八（第九章第二节）。按照人们的信仰，他是很久以前历史上的一个县行政官。在他任职期间，有一次大雨连绵不断，湖水泛滥，造成了水灾的威胁。他便到湖边下令退水，把他的鞋、衣服和标志官衔的玉带，一件件扔进水里。但是水仍然上涨，雨继续不停地下着。最后，他自己纵身投入水中。水灾被征服了。直到现在，据说每当县里发生水灾时，张大帝偶像的长袍总是非常潮湿，因为他仍旧在暗暗地履行他的职责。

就我所知，村里不知道有关刘皇和他的灭蝗的神话。但在吴江附近的城镇里，刘皇是人人皆知的。刘皇是一个历史人物。他一生受后母的虐待。小时候是一个淘气的男孩，还能施展巫术。一夜，他邀请了所有的朋友来赴宴，还把他家中的牛全部杀死了。清早，他把牛的头和尾巴安放得犹如把牛半埋在地下一般。但天快破晓，他尚未安放完毕。他命令太阳慢些升起，太阳便又落到地平线下。据说，甚至到如今，早上太阳还推迟片刻升起。当他后母发现牛被半埋在地下时，由于刘皇的巫术，牛都哞哞地向主人呼叫，摇着尾巴。后母十分恼怒，后来便更加残暴地虐待刘皇，直至他死去。他死后，人们仍然相信他的阴魂有能力赶走蝗虫。这一神话证明了这个淘气男孩的魔力，也是目前人们信仰和施行驱蝗巫术的依据。

地方行政官的这种巫术师的职能是与现代行政公务的概念相违背的。而且，现在的政府认为人民中间的迷信是社会进步的障碍。因此政府发布了各种命令禁止任何巫术。所以现今的地方行政官不仅拒绝履行人民的巫术师的传统职能，而且还应该执行反对巫术的法律。但水灾、旱灾、蝗虫的自然威胁仍然危害着人民。他们的科学知识和装备仍然不足以控制许多自然灾害，对巫术的需要依然保留不变。

An ex-magistrate told me how the problem was solved. "Under the pressure of popular demand to do something against the drought, I had to issue an order to stop killing pigs. I considered it to be very useful since epidemics always go together with drought, and vegetable food helps to check an epidemic. This is the real function of the belief. The parade was organized in my absence. It was no good to force the people to do nothing against the drought."

Magic exists in spite of government orders and various justifications, so long as it plays a useful part in the life of the people. A change in theory from conceiving magic as a kind of pseudo-science, and obstacle to technological development to recognizing its practical function will throw light on practical measures for dealing with this problem. It is not a thing to be prohibited by order, but to be eliminated by providing more effective human control over nature. Since complete control is inconceivable at present, it is difficult to rule

out magic in human culture.

[4] Organization of Labour

Who are working on the land? On what occasions do the farmers need to co-operate? Who will co-operate? What kind of organization has resulted? Let us examine these questions—still from the technical point of view and leaving the legal problem to the next chapter.

I have said that the household is the basic economic unit. But the members of a household do not all participate in agricultural work; children go to the farm only occasionally and women are entirely free from it. Agriculture is chiefly men's occupation. This division of labour between men and women is a characteristic of the silk-producing area. It suggests that the development of the silk industry is a factor responsible for the practice. During the period when domestic reeling was prosperous, women were busy in reeling while men were busy in preparing the soil. On the other hand, the income secured from the silk industry was comparable to the income secured from agriculture. It enabled the people to live on small farms. The size of farms therefore remains limited and the amount of labour required in agriculture is correspondingly restricted.

一个前地方行政官告诉我这个问题是如何得到解决的：“在人们普遍要求对旱灾有所举动的压力下，我不得不发出命令禁止宰猪。我认为这是很有用的，因为流行病往往与旱灾俱来，素食能防止传染病流行。这是这种信仰的真正的作用。在我缺席的情况下组织了游行。强迫人们对旱灾不作为是不利的。”

只要巫术对人们的生活起着一些有用的作用，不管政府发出多少命令，阐述多少理由，它仍然会存在。在理论上，从把巫术当作一种假科学，并认为它对科学发展是一种障碍，转变到承认它的实际作用，对于处理这个问题采取实际态度方面，能给以一些启示。这种事情不是命令所能禁止的，只有提供更有效的人为控制自然的办法才能消灭巫术。既然目前不可能有完全的科学控制办法，那么在人类文化中也难以完全消除巫术。

四、劳动组织

谁在田里劳动？在什么情况下农民需要合作？谁和谁合作？形成了何种组织？让我们仍然从技术的角度来考察这些问题。把法律上的问题留到下一章去探讨。

我已经讲过，户是基本经济单位。但一户中并不是全体成员都参加农业劳动；孩子只是有时候到田地里去，女人完全不参加农业劳动。农业主要是男人的职业。男人和女人的这种劳动分工是产丝地区的一个特点。它说明了蚕丝工业的发展是产生这种特点的主要因素。在家庭缫丝业兴旺时期，女人忙于缫丝时，男人正忙着准备稻田。另一方面，从丝业得到的收入可与农业收入比拟。这也使人们有可能靠小块农地生活下去。因此农田的大小一直保持在有限的范围内，农业所需的劳动量也相应地有所限制。

To show how well adjusted are labour and land in the village, some statistics may be cited. The total number of adult men, the real or potential workers on the land, between 15 to 55, is 450. The total area of land, including a small percentage of non-cultivated land, is 3,065 *mow*. If the land is equally distributed among the workers, each will get 6.6 *mow*. In the above section, I showed the rate of work and the length of time needed for the growth of the rice, and came to the conclusion that the amount of land that can be cultivated by a single man is about seven *mow*. From the point of view of technology, I have also shown that the use of the hoe in cultivation has made most of the work very individualistic. Group work yields no more than the sum total of individual efforts. It also does not increase the efficiency very much. Present technology has fixed the amount of labour required by the size of the land. Thus we have approximately identical figures for the amount of land which can be cultivated by each worker. This fact has far-reaching influence on land tenure, on the scattered system of farms, on the frequency of family division, and on the small size of the household.

The present decline of the silk industry has dislocated the traditional adjustment of economic activities. The size of farms has remained the same while the silk industry has been taken over by modern factories. The small farm cannot absorb the female labour that has been set free by the industrial change. The maladjustment is seen in the leisure enjoyed by the women in the village and the higher mobility of female population from the village to the town. In the neighbouring villages where farms are comparatively large, in the

process of adaptation to the new situation female labour has been introduced into agriculture. This shows that the traditional division of labour, originating as a part of economic adjustment, is a practical arrangement and is not due to any non-empirical cause. So far as men work by themselves and so long as the farm cannot be extended, female labour is not needed in agriculture. The only occasion for female labour is during the urgent period of irrigation and drainage. Water regulation sometimes requires prompt action. Women will not hesitate to work on the pump when they are needed.

The male members of a household work together on the same farm. But they have no special division of work. Everybody does the same work, except that in transplantation the children do not take part in actual planting but supply the young shoots to the adults. Thus the work is largely individualistic.

The need of co-operative work is in water regulation. In the process of irrigation, the members of the household, including women and children, always work on the same pump. In the process of drainage, the water is pumped out from the common trench of a *ʃien*. The people who work in the same *ʃien* share a common fate. Hence develops a well organized system of collective drainage. To describe this system, I will take a concrete example of the North *ʃien* of the Hsi Chang Yu.

为说明村里的劳力和土地是如何恰当安排的，可引用几个统计数字。成年男子是实际的或潜在的农业劳动者，年龄在15至55岁之间，总数共450人。如果将2,758.5亩耕地平均分配给劳动者，每人将得6.1亩。上文我已经说明了工作速度、稻的生长所需时间，以及得出一个人可耕种约7亩地的结论。从技术上来说，我已经表明了使用铁耙耕作使得大部分劳动成为非常个体性的。集体工作不比个体劳动增加多少收成，效率也不会提高很多。目前的技术已决定了这样大小的一片土地需要多少劳动量。因此，我们也有了每个农业劳动者能种多少亩地的近似数字。这一事实对土地占有、对农田分散的制度、对分家的频率以及对小型的户都有深远的影响。

目前，丝业的衰落打乱了传统协调的经济活动。缫丝工业被现代工厂接收后，农田的大小仍然同过去一样。由工业变化而剩下的妇女劳力不能为这种小块农田所吸收。这种失调的情况可以从妇女在村里闲暇时间较多这一情形中观察到，也可以见于妇女人口从农村到城镇的高度流动性中。在邻近的村庄里农田较大，在适应工业变化的新情况过程中，妇女劳力被农业所吸收。这说明传统的劳动分工是出于实践的安排，而不是由于非经验的原因。它是经济调节的一个部分。在男子只靠自己劳动，而农田不能再扩大的情况下，农业是不需要女劳力的。唯一需要女劳力的场合是紧急灌溉或排水的时期。控制水有时候需要立即行动，女人便毫不犹豫地去车水。

一户里的男子在同一农田里工作。他们之间没有特殊的分工。每个人做同样的工作，除在插秧时，孩子不插秧而是给成人递秧苗。所以大部分劳动是个体性的。

水的调节是需要合作进行的。在灌溉过程中一户的成员，包括女人和孩子都在同一水车上劳动。在排水时必须把一壕地里的水从公共水沟里排出去。在同一壕地里劳动的人是共命运的。因此便出现了一个很好地组织起来的集体排水系统。为描述这种系统，我试举两长圩北壕为具体例子，加以说明。

This *čien* consists of 336 *mow* of land. The common trench opens on to the Stream A at the north margin. At the opening there are fifteen pumping spots. This means that there can be fifteen pumps working at the same time. Each pump requires three workers. The amount of labour contributed by each member of the *čien*, taking the household as a unit, is proportional to the size of his holding. The system of apportionment is calculated in terms of labour units. A unit is $1/3366$ of the total amount of labour in four days. Each of the fifteen pumps shares 22.4 units. Each person working for four days counts as 6 units and the contributor of the pump and manager of the team counts as 4.4 units. This system of counting is called "six *mow* starting." It means that each holder of six *mow* in the *čien* should contribute a person to work every day, each holder of three *mow* should contribute a person every alternate day, and so on. Every *čien*, owing to varying size, has its particular system of calculation.

The members of the *čien* are organized into fifteen teams corresponding to fifteen pumps. Each year one of a group will be charged with contributing the pump and managing the team. This position is taken in turn by the members of the group. Among the fifteen groups, there is a chief manager. This position is also taken in turn. At the beginning of the year, the chief manager calls the fourteen other managers to a meeting. A feast is prepared as a formal inauguration. The chief manager has authority to determine when the drainage should begin and stop.

Whenever drainage is needed, the chief manager will give orders to the managers. Early in the morning these managers will inform the workers on duty by beating a bronze brace. If anyone on duty does not show himself at the pump half an hour after the signal, the other two charged to work on the same pump will stop their work, take the pivot of the pump to the nearest grocery and bring back to the spot fifty-three pounds of wine and some fruit and cakes, the cost of which will be charged to the absentee as a fine. But if the manager has not informed the absentee he himself must bear the responsibility.

The collective responsibility of drainage has made the

introduction of the modern pumping machine difficult, because it requires the unanimous consent of the whole *ścien*. It still remains to be seen how this type of organization will adjust itself to the technological change.

这一壕地有336亩地。在北面边缘有一条通向河A的共同的水沟。在出口处有15个车水点。这就是说，可以有15架水车同时工作。每一水车需要3名劳动者。壕的每个成员所提供的劳动量，以户为单位，是同他所有的土地大小成比例的。派工是以劳动单位来计算的。一个单位是在4天内总劳动量的 $1/3366$ 。15架水车，每车分22.4单位。每个人工作4天算作6个单位，提供水车的人和小队管理人算作4.4单位。这种计算方法叫做“6亩算起”。这就是说这壕地里每6亩地的土地所有者应每天派一个人参加劳动，3亩地的拥有者每隔一天派一个人参加工作等等。每壕田，由于大小不同，各有其计算方法。

壕的成员按照15架水车组织成15个小队。每年由队里一个人负责提供水车并管理队的工作。这一职务由队里的成员轮流担任。15个队，有一个总管理人。这个职务也是轮流担任的。年初，总管理人召集其他14个管理人开会，准备筵席，作为正式开始的仪式。总管理人有权决定何时开始或停止排水。

每逢需要排水时，总管理人向其他管理人发布命令。清晨，这些管理人敲着铜锣通知值班人员。半小时以后，如果任一值班人员没有到水车前来，在同一水车前工作的另两个人就停止工作，拿着水车的枢轴到最近的杂货铺去并带回40斤酒和一些水果、点心等，这些东西的费用作为对缺席者的罚款。但如果是管理人没有通知那个缺席者，管理人自己必须承担责任。

排水的集体负责制使得引进现代水泵发生了困难，因为用新式水泵需要获得全壕的一致赞同。这种组织将如何适应技术改革的需要，还有待于进一步的观察。

[1] Theory of magic and science: see Professor B. Malinowski, "Culture," Encyclopædia of Social Sciences.

[2] 巫术与科学的理论，见布·马林诺夫斯基教授的"Culture"条，载《社会科学百科全书》。

Chapter XI LAND TENURE

Land tenure is commonly conceived as the customary or legal system of titles over land. "But," as Professor Malinowski has pointed out, "this system grows out of the uses to which the soil is put, out of the economic values which surround it. Therefore land tenure is an economic fact as well as a legal system.

"We could lay down at once the rule that any attempt to study land tenure merely from the legal point of view must lead to unsatisfactory results. Land tenure cannot be defined or described without an exhaustive knowledge of the economic life of the natives." [1]

"The maxim that you cannot understand the rules of the game without a knowledge of the game itself describes the essence of this method. You must know first how man uses his soil, how he waves round it his traditional legends, his beliefs and mystical values, how he fights for it and defends it; then and then only will you be able to grasp the system of legal and customary rights which define the relationship between man and soil." [2]

We have, in the last chapter, studied how the villagers use their land and water. We are now prepared to go into the problem of land tenure.

[1] Lakes, Streams, and Roads

In so far as the water is used for communications, it is not exclusively for anybody. But when one enters the village, one sees rails constructed at the entrance of the stream. These are closed during the night. In this way the use of the stream as a means of communication is restricted. The reason is to prevent the communication route being used in such a way as to threaten the life or property of the villagers.

On the other hand, since the communication route is not the exclusive right of anyone, nobody is allowed to interfere with the general convenience by stopping boats in the middle of the stream. The same restriction is found in the use of water for drinking and cleaning. The silk factory had to be built at the lower course of the stream, otherwise the sewage would have dirtied the water and prevented others from using it for drinking purposes.

拾壹 土地的占有

土地的占有通常被看作习惯上和法律上承认的土地所有权。马林诺夫斯基教授指出：“但是，这种体系产生于土壤的用途，产生于与其关联的经济价值。因此，土地的占有不仅是一种法律体系，也是一个经济事实。

“我们能够立刻提出这样一条原则，任何仅从法律的观点来研究土地占有的尝试，必然导致不能令人满意的结果。如果对于当地人的经济生活不具有完备的知识，就不能对土地的占有进行定义和描述。”^[3]

“对游戏本身一无所知，就不能理解游戏的规则——这句格言说明了这种方法的本质。你必须首先知道人类怎样使用他的土地；怎样使得民间传说、信仰和神秘的价值围绕着土地问题起伏变化；怎样为土地而斗争，并保卫它。懂得了这一切之后，你才能领悟那规定人与土地关系的法律权利和习惯权利体系。”^[4]

在前一章中，我们已经研究过村民是如何利用土地和水的。现在我们准备讨论土地占有问题。

一、湖泊、河流及道路

就水用于交通来说，它并不为任何人所专有。但是当你进村的时候，可以看到在河的入口处装着栅栏，夜间栅栏关闭。作为交通手段，河流的使用在这方面受到了限制。这是为了防止坏人利用此交通路线对村民的生命和财产进行威胁。

另一方面，由于交通航道不是任何人专有的权利，所以，不允许任何人将船只停在河道中央，干涉公众的便利。在饮用水及洗涤用水管理方面也有同样的限制。丝厂不得不建在河的下游，否则脏水就会污染河水，使得他人无法饮用。

Regulation of water for irrigation is much more complicated. People are not allowed to build dykes in the stream in order to monopolize the water supply. This is a common issue of dispute between villagers especially during drought. The water introduced on to the farm by human effort belongs exclusively to the person who has effected this by labour. The dykes are not allowed to be opened in order to "steal" water from the higher plot. But a single plot may be owned by several persons. Each has a part in it. Since there is no dyke to separate the parts owned by different persons, the water is shared by all. In such a case, the labour spent in irrigation is equally distributed between the owners according to the size of the land in the plot. Most important of all, the level of the plot is maintained evenly in order that there should be a fair distribution of water. This is another cause of dispute, because, as I witnessed on several occasions, each farmer tries to lower his own part in order to receive a favourable reserve of water.

The natural products of water—consisting of fish, shrimps, and weeds which are used for fertilizing the farm—are the common property of the village. This means that the inhabitants of the village have equal rights to these products, and that people from other villages are excluded. To illustrate the implication the following case can be cited.

The fishing right in a lake west of the village, was in 1925 leased by the village head, Chou, to people who came from Hunan Province. This was because at that time the village needed money to repair the rails on the stream for self-defence. When the contract was made, Chou announced to the villagers that henceforth no one would go to fish in the lake. The villagers kept this agreement. When I was in the village, there was a dispute. The Hunanese arrested a boat engaged in

shrimp trapping and took the fishermen to the police office in the town, accusing them of theft. Chou protested that it was not the lake that had been leased to the Hunanese but the fishing rights which did not include the right of shrimp trapping. Eventually the arrested persons were released.

The villagers also prevent outsiders from gathering weeds in the streams.

The right of collecting natural products in the water surrounding and inside the village is shared by the villagers, but those fish and weeds that have been collected are the exclusive property of the collectors.

The public road and dykes on the farm, so far as they are used for communications, are not the exclusive property of anyone, like the water route. No one can stop any other person walking on the public roads or dykes.

灌溉用水的管理要复杂得多。人们不允许为垄断水源而在河中筑堤。这是村民之间经常发生争执的问题，在旱期尤为如此。人力引入农田的水属于参加这项劳动的人所专有。为了从较高的地块“偷”水而掘开田埂是不允许的。但一块地可能属几个人共有，每人各占其中一部分。由于各人占有的各部分之间没有田埂隔开，所以水是大家分享的。在这种情况下，根据这块田地上各人地片大小不同来公平分配每个人在灌溉中应付出的劳动量。最重要的一点是，这块田的地平面要保持平坦，为的是使水的分配公平。这是产生争论的又一个起因。我目睹了几起这样的争执。因为每个人都想降低他那部分的地面，以有利于水的蓄留。

水中的自然产品包括鱼、虾和水藻。水藻可用来肥田。所有水产是村子的共同财产。这就是说，村里的居民对于这些水产享有平等的权利，其他村庄的人们则排除在外。为了说明其涵义，可以引用以下的例证。

1925年，周村长把村西的湖中捕鱼的权利租给了湖南省来的人。这是由于那时村庄需要钱来修理河上自卫用的栅栏。签订合同以后，周向村民宣布，今后不得有人去该湖捕鱼。村民遵守了这个协定。我在村里的时候，发生了一起争端。那些湖南人抓获了一条捞虾的船，把渔民押送到城里警察署，控告他们偷窃。周抗议说，租给湖南人的不是那个湖，而是在湖中捕鱼的权利，这个权利不包括捞虾的权利。最后，被抓的人获释。

村民还要阻止外来者在河里采集水藻。

在村内和村周围水中采集自然产品的权利由村民共享。但捞获的鱼和水藻是属于捞获者专有的财产。

田埂和公共道路，就交通用途而言，像水路一样，不是任何人的特有财产。任何人不得拦阻公共道路或田埂上行走的任何其他人。

But the roads and dykes are also used for growing vegetables. The right to use them for this purpose is exclusive to a group which have special claims—the Chia. The problem is complicated because the public road passes across the open space in front of houses, which is used for heaping straws, for fixing silk machines and manure pits, for arranging dining-tables, and for drying laundries. Each house has the exclusive right to the use of the road for these purposes.

[2] Ownership of Farm-Land

All the farms are divided between Chia for cultivation. Before we come to the owners, the idea of ownership of the farm-land must be clearly defined.

According to the native theory of land tenure, land is divided into two layers: namely, the surface and the subsoil. The possessor of the subsoil is the title holder of the land. His name will be registered with the government because he pays the taxes on the land. But he may possess only the subsoil without the surface, that is, he has no right to use the land directly for cultivation. Such a person is called an absentee landlord. The person possessing both the surface and the subsoil is termed the full owner. The one possessing only the surface without the subsoil is termed tenant. I shall use these terms only in the meanings defined above.

The owners of the surface, whether full owners or tenants, can cultivate the land themselves; this distinguishes them from absentee landlords. They also can lease the land to others, or employ labourers to work for them. The lessee who possesses the right of using the land temporarily can also employ labourers. In these cases, the person who owns the surface rights, may not be the actual cultivator of the land. Thus we must distinguish between the actual cultivator, the surface owners, and the owner of the subsoil. They may be the same persons and they may be different persons with reference to the same piece of land.

All of them have definite claims on the produce of the land. The owner of the subsoil can demand rent from the tenant. The surface owner can demand rent from the lessee. The employee can, in return for labour, obtain wage from the employer. The absentee landlord, the lessor, the employee receive fixed shares in terms of rent and wage irrespective of the actual return from the land. Therefore the risk involved is born by the full-owner, the tenant, and the lessee. The latter, except sometimes the employees, are also the owners of the implements used in cultivation. The following table summarizes these points.

但是道路和田埂也用来种菜。这种道路和田埂的使用权，是对此有特殊权利的家所专有的。因为公共道路要通过各家门前的空地，这空地是用来堆放稻草、安放缫丝机和粪缸、安排饭桌、晾衣服的地方，所以这个问题比较复杂。每一家都有把道路作这些用途的专有权。

二、农田的所有权

所有农田都划分归各家耕种。在我们讨论农田所有者之前，必须为农田所有制的概念下一个明确的定义。

根据当地对土地的占有的理论，土地被划分为两层，即田面及田底。田底占有者是持土地所有权的人。因为他支付土地税，所以他的名字将由政府登记。但他可能仅占有田底，不占有田面，也就是说他无权直接使用土地，进行耕种。这种人被称为不在地主。既占有田面又占有田底的人被称为完全所有者。仅占有田面，不占有田底的人被称为佃户。我将只按照以上定义使用这些词语。

无论是完全所有者还是佃户，只要是田面的所有者，就能自行耕种土地；据此可以把这种人与不在地主区别开来。这种人也能够把土地租给他人，或雇工为自己种地。承租人有暂时使用土地的权利，他也能雇工。根据以上情况，拥有田面权利的人可以不是土地的实际耕作者。因此我们必须把实际耕作者、田面所有者以及田底所有者区别开来。对于同一块土地，他们可以是同一个人，也可以是不同的人。

所有这些人都对土地的产品有一定的权利。田底所有者可以要求佃户交地租。田面所有者可以要求承租人交租。雇工可以从雇主那里取得工钱作为劳动的报酬。无论土地的实际收成如何，不在地主、出租者以及雇工分别取得固定的地租和工钱。所以，完全所有者、佃户和承租者都要承担风险。后者（有时雇工除外）也是农具的所有者。下表对以上几点进行了归纳。

~~Right of~~ Implements

~~Right of~~ Right

~~Right of~~ food and shelter

(b) Long-term.

[3] Farm Labourers and Land Leasing

Ownership of the land surface is always held by the Chia group, which supplies male members to work on the farm. But sometimes the group may not be able to supply enough labour and the institution of farm labourers comes into being. The persons thus introduced are long-term employees. They live in the house and are provided with food and shelter. They are paid a yearly wage of eighty dollars with two months' holidays at the new year when agricultural activities are suspended. Short-term employees are taken on when there is a short-period need for labour. They live in their own houses and provide their own food. They usually have their own land and are employed only when they have completed their own work.

The long-term employees sell their labour and do not possess means of production except sometimes the hoe. They come from those Chia whose land holding is too small to absorb their labour. Especially those in need of money to enable them to obtain a wife will seek employment for a few years. I did not meet anyone who had been landless all his life. The total number of employees in this village is only seventeen (VI-1). This shows that this institution does not play an important part in the village economy, and if we examine the population statistics this phenomenon can be explained. As mentioned (III-3), any Chia which has a land holding above the average is likely to raise more children. When the children grow up, the estate is divided. In other words, the chance of labour in the Chia proving insufficient is considerably reduced by the population pressure and the ideology of kinship. Moreover, there is no sign of people leaving their land in search of other occupations and meanwhile employing labourers to cultivate the land. This is due, first to the low degree of occupational differentiation (VIII-1), secondly to the special value attached to land (next section), and lastly to the under-development of industry in the town.

三、雇农及小土地出租

田面所有权通常属于家这个群体。家提供男子到田里劳动，但有时它也许不能提供足够的劳力，这就产生了雇农制度。从事这种劳动的人是长工。长工住在雇主家里，得到食宿供应。每年付给长工80元的工钱，在新年农闲期间有两个月的假期。在需要短期劳动力的时候就雇用短工。短工住在自己家中，自供膳食。短工通常有自己的土地，只有当他们完成了自己的工作后才受雇。

长工出卖自己的劳动力，不拥有生产工具，偶有锄头。长工来自那些土地太少，以致劳力有余的家庭。尤其是那些需要钱娶妻的人，他们愿意为别人做几年长工。我没有遇到过一辈子都没有土地的人。这个村庄中的雇工总共只有17人（第六章第一节）。这说明，在这个村子的经济生活中，雇工制度不起重要作用。如果我们考察一下人口统计数字，这个现象就能得到解释。前面已经提到（第三章第三节），任何一家只要其占有的土地在平均数以上，这家就很可能有较多的孩子。孩子长大之后就要分家产。换句话说，家中原来就不多的劳动机会，在人口压力和亲属关系的意识之下，更加减少了。况且也没有迹象表明人们要离开自己的土地去寻求其他职业而同时又雇工来耕种土地。首先，这是由于职业分化的程度很低（第八章第一节）；其次，是由于土地附有特殊价值（下一节）；最后一点是，由于城里的工业不发达。

The institution of land leasing is also very limited. It occurs in most cases when the male members of a Chia are dead and the widows and children are unable to work on the land. Leasing of land is quite different from tenancy. The lessor preserves the right of ownership. There is a definite period for the contract. He is free to choose his lessee and to make changes when the contract expires.

It is interesting to compare this with the situation in South China, where both the hired labourers and landless peasants are numerous and the system of land leasing is far more elaborate.^[5] This seems to be chiefly due to the presence of the system of "permanent tenancy" as a character of the absentee landlordship in Eastern China, while it has died out in South China. This leads us to an examination of the system of absentee landlordship.

[4] Absentee Landlordship

To study the institution of absentee landlordship, it is necessary to examine first the values attached to land. The primary function of land is to yield a food supply. But land is not only a means for producing food.

The productivity of land fluctuates according to the amount of attention and labour devoted to it. Furthermore, it is only partially controllable. There are unexpected risks. Thus land acquires its individuality through its variability in reacting to human expectation. Fear, anxiety, expectation, comfort, and love complicate the relation between man and land. People can never be certain what will come from the land. Land provides the means for self-assertion, for conquering the unknown and for the pleasures of accomplishment.

小土地出租制度也是非常有限的。出租土地大多是因为家里的男人死亡，孤儿寡母无力耕种土地。小土地出租与佃租是大不相同的。出租者保留土地的所有权。合同有一定的期限。出租者可以自由选择承租人，在合同期满时，可以更换承租人。

将这里的情况与华南的情况相比较是很有意思的。华南的雇工与无地的贫农为数较多，土地出租制要复杂得多。^[6] 这似乎主要是由于华东不在地主制的特点——“永久性佃权”制的存在；而在华南，不在地主制已经消失了。接着让我们来考察一下不在地主制。

四、不在地主制

为了研究不在地主制度，必须首先考察土地所附有的价值。土地的基本作用是生产粮食。但土地不仅仅是生产粮食的资料。

土地的生产率随着人们对农田的照料和投入的劳动量而波动。而且人只能部分地控制土地，有时会遭遇出乎意料的灾情。因此，对人们的期望来说，土地具有其捉摸不定的特性。恐惧、忧虑、期待、安慰以及爱护等感情，使人们和土地间的关系复杂起来了。人们总是不能肯定土地将给人带来些什么。人们利用土地来坚持自己的主张，征服未知世界，并表达成功的喜悦。

Although the productivity of the land can be only partially controlled, this partial control supplies an empirical measurement of workmanship. Honour, ambition, devotion, social approval are all thus linked up with the land. The villagers judge a person as good or bad according to his industry in working on the land. A badly weeded farm, for instance, will give a bad reputation to the owner. The incentive to work is thus deeper than the fear of hunger.

The relative inexhaustibility of the land gives the people a relative security. Although there are bad years, the land never disillusiones the people completely, since hope for plenty in the future always remains and is not infrequently realized. If we take the other kinds of productive work, we shall see that the risks involved in them are much greater. The sense of security is expressed in the following statement made to me by one of the villagers:

"Land is there. You can see it every day. Robbers cannot take it away. Thieves cannot steal it. Men die but land remains."

The incentive to hold land is directly related to the sense of security. The farmer says, "The best thing to give to one's son is land. It is living property. Money will be used up but land never."

It is true that there are many ways of getting food. But the people will not exchange their land for other means, even if more productive. They do take up other occupations, such as the silk industry and fishing, but agriculture remains the principal occupation in the village.

The deeper we analyse the situation, the more it appears, not only that land in general has a particular value to the people, but that the property inherited by a Chia has for it a particular value. Land is transmitted according to fixed rules (IV-3). People inherit their land

from their fathers. The sentiment originating in the kinship relation and reinforced by ancestor worship is manifested also in this personal attachment to the particular plots of land. Religious belief in the importance of the continuity of descendants finds its concrete expression in the continuous holding of land. To sell a piece of land inherited from one's father offends the ethical sense. "No good son will do that. It is against filial piety." This comment sums up the traditional outlook.

Personal familiarity with a particular piece of land as the result of continuous work on it is also a cause of personal attachment to the land. It is very common for people to work on the same piece of land from early adulthood to death. To say that their land is an integral part of their personality is scarcely an exaggeration.

尽管土地的生产率只能部分地受人控制，但是这部分控制作用提供了衡量人们手艺高低的实际标准。名誉、抱负、热忱、社会认可，就这样全都和土地联系了起来。村民根据个人是否在土地上辛勤劳动来判断他的好坏。例如，一块杂草多的田地会给它的主人带来不好的名声。因此，这种激励劳动的因素比害怕挨饿还要深。

土地那相对的用之不尽的性质使人们的生活有相对的保障。虽然有坏年景，但土地从不使人们的幻想彻底破灭，因为将来丰收的希望总是存在，并且这种希望是常常能实现的。如果我们拿其他种类的生产劳动来看，就会发现那些工作的风险要大得多。一个村民用下面的语言向我表述了他的安全感：

“地就在那里摆着。你可以天天见到它。强盗不能把它抢走，窃贼不能把它偷走。人死了地还在。”

占有土地的动机与这种安全感有直接关系。那个农民说：“传给儿子最好的东西就是地，地是活的家产，钱是会用光的，可地是用不完的。”

的确，获取食物的方法很多。可是人们不愿意拿自己的土地去和其他资料交换，即使其他的生产率更高，他们也不愿意。他们确实也从事其他职业，例如丝业和渔业，但农业始终是村里的主要职业。

对于情况的分析越深入，这个问题就越明显，土地不仅在一般意义上对人们有特殊价值，并且在一家所继承的财产中有其特殊价值。土地是按照一定的规则传递的（第四章第三节）。人们从父亲那里继承土地。起源于亲属关系又在对祖先的祭祀中加深的那种情感，也表现在对某块土地的个人依恋上。关于绵延后代的重要性的宗教信仰，在土地占有的延续上得到了具体表现。把从父亲那里继承来的土地卖掉，就是触犯道德观念。“好儿子不做这种事。这样做就是不孝。”这种评论总结了这一传统观念。

一直在某一块土地上劳动，一个人就会熟悉这块土地，这也是对土地产生个人感情的原因。人们从刚刚长大成人起，就在那同一块土地上一直干到死，这种现象是很普通的。如果说人们的土地就是他们人格整

体的一部分，并不是什么夸张。

The non-economic value of the land complicates the transactions in land. Although land has its non-economic value, it does not in any sense lose its economic value. The sentimental and ethical reactions to the selling of land do not rule out completely the possibility of land transactions. People sometimes need money urgently. Economic strain compels them to treat the land as an economic commodity. But I found no case of alienation except under real pressure. Even then the process usually takes a roundabout form.

A person needing money urgently, either for taxes or rent payment, is forced to borrow from the money-lender. After a definite period, if the borrower cannot pay back the capital as well as the interest, he is forced to transfer his title over the land, limited to the subsoil, to the lender.^[7] This transaction in practice means very little to the borrower, since the borrower under the ever-increasing burden of interest can hardly hope to repay his debt. To pay high interest is more unbearable than to pay a definite rent.

In fact the conversion from annual payment of interest to rent does not make a great difference to the debtor. I found one case where the person concerned did not even understand the meaning of the change. "I borrow his money, and he takes my land. I have no hope of redeeming my pledge. What does it matter whether the money I pay is rent or interest?"

The difference is again obscured by the existence of the native theory of land tenure. The tenant preserves his title to the land surface. This right cannot be interfered with by the owner of the subsoil. By this custom the tenant is protected from any direct intervention by the owner of the subsoil.^[8] His only obligation is to pay the rent. According to law, if the tenant is unable to pay his rent for two years, the landlord can give him notice to quit, but the law does not apply to those places where custom is paramount.^[9] The practical difficulty of ejecting a tenant is to find a substitute. Absentee landlords do not cultivate the land themselves. Outsiders from the villages will not be welcomed into the community if they come at the expense of old members. Villagers are not willing to cut the throat of their fellow members who for any good reason cannot pay their rent. In these circumstances it is in the interest of the landlord to tolerate the default in the hope of getting rent in the future. This situation does not really challenge the status of the landlord, since there are positive sanctions to enforce payment of rent whenever this is possible.

土地的非经济价值使土地的交易复杂化。虽然土地具有非经济价

值，但从任何意义上讲，它都没有失去其经济价值。在感情和道德上对于出卖土地的反应，并不完全排除土地交易的可能性。人们有时急需用钱，经济紧张迫使人们把土地当作商品对待。除了在真正压力很大的情况下，我没有发现其他转让土地的事例。即使在那时，出卖土地也要通过迂回的形式来完成。

一个急需用钱的人，不管是纳税还是交租，都是被迫向放债者借钱。在一定时期之后，如果借款者无力偿还本金及利息，他就被迫把土地所有权（限于田底所有权）转交给放债者。^[10] 实际上，这种交易对于借款者没有什么意义，因为在日益加重的利息负担下，借款者很难有希望偿还债务。偿还高利比交付定租还要难以承受。

事实上，从每年偿付利息变为每年交付租金，对负债者而言并无很大差别。我遇到一例情况，有关的人甚至还不理解这种改变的意义。“我借了他的钱，他占了我的地。我没有希望赎回我抵押出去的地。我付给他的钱到底是租还是利，这又有什么关系呢？”

当地的土地占有理论进一步掩盖了这种差别。佃户保留着他的田面所有权。这个权利不受田底占有者的干涉。按这种惯例，佃户的权利得到了保护，不受田底所有者任何直接的干涉。^[11] 佃户的唯一责任是交租。根据法律，如果佃户连续两年交不起租，地主即可退佃。但该法律并不适用于惯例至上的地方。^[12] 逐出佃户的实际困难在于寻找一个合适的替换者。不在地主自己不耕种土地。如果由外村人来挤掉本村人的位置，那么这些外村人也不会受到本社区的欢迎。只要有正当的理由交不起租，村民们是不愿意卡同村人的脖子的。在这种情况下，抱着将来收回租子的希望，宽容拖欠是符合地主利益的。这种情况并不会对地主的地位造成真正的威胁，因为，只要有可能交租时，就有规定的制裁办法迫使佃户还租。

By this analysis several important points in the problem of land tenure are cleared up. The actual cultivators of the land in the village—except labourers—continue unchanged even in the event of a change of ownership of the subsoil. Since the practice of usury is regarded as morally wrong, it is not possible for neighbours to squeeze each other. The institution of absentee landlord arises only in the relation between village and town. The ownership of the land surface remains in the hands of the villagers; even the outsiders who live in the village do not find it easy to become owners of land surface, i.e. cultivators of the soil (II-5).

The institution of absentee landlord, thus described, has acquired a new significance as the result of the close financial relation between the town and the village. Professor R. H. Tawney has rightly put it, "What appears to be occurring, in some regions at least, is the emergence... of a class of absentee owners whose connection with agriculture is purely financial." ^[13] Again he said, "Nor must it be forgotten that the nominal owner is often little more than the tenant

of a money-lender."^[14]

The change in ownership of the subsoil actually means the investment of town capital in the village. Thus the value of the land in the town market is quite different from the real value of the land. From the point of view of the landlords the value of the land resides in the ability of the tenant to pay rent. The price of land fluctuates according to the amount of capital available for investment in land and the security of rent collection. Thus the market price of land does not include the price of the land surface. As my informant told me, if his landlord likes to cultivate his land, he must buy the land surface from him. Since such a case has never been known, the price of the land surface cannot be calculated.

The ownership of the subsoil implies only a claim to rent and can be sold on the market in the same way as bonds and stocks. It may belong to any legal person, whether an individual, a clan, or the government. It can be private or public. But we cannot here go into details, since this would require an investigation beyond our present scope.^[15]

The security for rent payment, an important condition for the development of the institution of absentee landlordship, leads to an examination of the method of rent collection and the attitude of tenants towards this obligation. Owing to the free market for land (*i.e.* the subsoil) in the town, the personal relation between the owners and the land they own has been reduced to the minimum. Most of the absentee landlords know nothing about the location of the land, the crop raised upon it, and even the men who pay the rent. Their sole interest is the rent itself.

按以上分析，在土地占有问题中的几个重点已经明确了。村里土地的实际耕种者（雇工除外）保持不变，甚至在田底所有者变更后仍然如此。因为放高利贷被认为是不道德的，所以邻居不可能互相压榨。不在地主制度仅仅出现在农村和城市的关系之中。田面所有权一直保留在村民的手中；即使是住在村里的外来户也难以成为田面所有者，即土地的耕种者（第二章第五节）。

城镇和村庄之间发生密切的金融关系的结果，使上述不在地主制度获得了新的意义。R. H. 托尼教授正确地说道：“看来，在某些地区正在出现……不在地主阶级。这个阶级与农业的关系纯属金融关系。”^[16] 他又说道：“也不应忘记，土地的名义占有者常常和放债人的佃户差不多。”^[17]

田底所有权的这一变化实际上意味着城镇资本对乡村进行投资。这样，城镇市场中的土地价值与土地的真实价值相差甚大。从地主的观点来看，土地的价值寓于佃户交租的能力之中。土地的价格随着可供土地

投资的资本量以及收租的可靠性而波动。于是，土地的市场价格不包含田面的价格。正如我的情况提供者所说，如果他的地主想要种地，地主就得向他购买田面。因为从来没有听说过这种事，所以无法计算田面的价格。

田底所有权仅仅表明对地租的一种权利，这种所有权可以像买卖债券和股票那样在市场上出售。田底所有权可以属于任何法人，不论是个人、家族或政府。这个所有权可能是私人的，也可能是公共的。但在这里我们不能详加探讨，因为这需要进行超出我们目前范围的调查。[18]

交租的可靠性是不在地主制度发展的一个重要条件。由此引入了对收租方法和佃户对交租责任所抱态度的考察。由于城里土地（即田底）市场的交易自由，地主和他们占有的土地之间的个人关系弱化到最小的程度。大多数不在地主对于土地的位置、土地上种的庄稼、甚至对于交租的人都一无所知。他们的唯一兴趣就是租金本身。

Rent is collected in various ways. The simplest system is the direct one; the landlord comes in person to the village. But this is not a very efficient way. It takes time and pains for the landlord to visit each tenant in different villages. Most of the landlords are unwilling to burden themselves with this. Moreover, direct and personal contact sometimes handicaps the process of collecting. The tenants may be poor and always ready to ask for exemptions or reductions. The landlord, on the other hand, is not infrequently inspired by humanitarian teachings, especially if he belongs to the old literati. On several occasions I knew that they were reluctant to squeeze their tenants. The conflict between traditional ethics and the practice of living as parasites sometimes leads these gentlemen landlords to derive only moral satisfaction from their trip but not enough money to pay the tax. But this direct system is limited to a small group of petty landlords. The majority collect their rent through agents.

Landlords of big estates establish their own rent-collecting bureaux and petty landlords pool their claims with them. The bureau is called Chü. The tenants do not know and do not care who is their landlord, and know only to which bureau they belong.

Names of the tenants and the amount of land held by each are kept in the bureau records. At the end of October, the bureau will inform each tenant of the amount of rent that should be paid that year. The information is forwarded by special agents. These agents are employed by the bureau and have been entrusted with police power by the district government. The bureau is thus in fact a semi-political organ.

Before deciding the amount of rent to be collected the landlords will hold a meeting in their union to decide what exemptions are to be

made on account of flood or drought and also to decide the rate of exchange for converting rice rent to money. (The rent is regulated in terms of quantity of rice but payment is made in money.) The rate of exchange is not the market one, but is arbitrarily determined by the union of landlords. The peasants must sell their rice in order to get money for the payment of rent, and at the time when this is due the market price is usually low. Thus the combination of rent in kind and rent in money considerably increases the burden of the rent payer.

收租可以有各种各样的方式。最简单的一种是直接收租，地主亲自到村子里来收租，但是这种方式的效率不很高。地主跑到各村去找佃户要时间和力气，大多数地主不愿意自找麻烦，加之，地主与佃农的直接接触有时反而阻碍了收租的进程。佃户可能很穷，一开口就要求免租或减租。另一方面，若是这个地主属于老的文人阶层，他有时会受人道主义教育的影响。我知道几件地主不愿逼迫佃农的事。传统道德与寄生虫生活之间的冲突，有时使这些地主绅士们的乡下之行只能得到精神上的满足，而得不到足够的钱来纳税。但这种直接收租的方式限于少量的小地主，大多数地主通过他们的代理人收租。

家产大的地主建立自己的收租局，而小地主则与大地主联合经营，租款分成。收租所被称作“局”。佃户不知道，也不关心谁是地主，只知道自己属于哪个局。

佃户的名字和每个佃户耕地的数量，收租局均有记录。在阳历10月底，收租局就会通知每个佃户，当年该交多少租。通知由专门的代理人传达。这些代理人是租局雇用的，并且县政府把警察的权力交给他们使用。这样，收租局事实上是一种半政治机构。

在确定收租数量之前，地主联合会举行一次会议，根据旱、涝情况，商定该作何项减免，并决定米租折合成现金的兑换率（地租是以稻米数量为标准来表示的，但以现金交付）。这个兑换率并不是市场上的兑换率，而是由地主联合会专断制定的。贫农必须卖米换钱交租，并且往往正值通常市场上米价较低的时候。租米和租款的双重作用更加加重了交租者的负担。

Nine grades are made in rent for different qualities of land. The average is about eight pints (2.4 bushels) of rice per *mow*. This amounts to 40 per cent. of the total rice produce of the land.

In the village, rent is paid into the hands of agents of the bureau. This is a peculiar practice different from that of other parts of the same district. The actual amount of payment is not necessarily equal to the amount written on the demand notice. As an old agent told me, "The villagers are illiterate. They don't know how to calculate from rice to money. There is no receipt or anything like that." If the tenant refuses to pay, the agent has power to arrest him and put him into the prison of the district government. But if the tenant is really unable to

pay, he will be released at the end of the year. It is no use keeping him in prison and leaving the farms uncultivated.

A more detailed description of the system of rent collecting would be beyond the scope of the present study. But it is interesting to notice the different attitudes of the tenants towards their obligations.

By the old people, rent payment is regarded as a moral duty. As some of them said: "We are good people. We never refuse to pay our rent. We cannot steal even when we are poor. How then can we refuse to pay rent?"—"Why do you pay your rent?"—"The landlord owns the land. We cultivate his land. We only have the land surface. The surface cannot exist without the subsoil." These positive sanctions are adequate to maintain the institution. It is not only the fear of imprisonment that makes the tenants discharge their obligation. Where the tenant does not pay the rent, it is on account of distress for which he has no responsibility such as famine, illness, etc. A good landlord will then allow exemptions and reductions.

Recently the situation has been changing. The economic depression in the rural district has made rent a heavy burden on the peasant, and the income derived from the rent much more vulnerable for the landlord. The peasants are more susceptible to new ideas offered to the institution. "Those who till the land should have the land" is a principle laid down by the late Dr. Sun Yat-sen and accepted, at least theoretically, by the present government.^[19] A more extreme view is spreading among the communists and other left groups. All these ideas have affected the sanctions described above. Peasants unable to pay rent now feel justified in neglecting to do so, and those who are able to pay will wait and see if they are compelled to do so. On the side of the landlords, strong measures must be taken to maintain their privileges, and their available capital tends to be no longer in agricultural land. The result is an intensification of conflict between tenants and landlords, and a financial crisis in rural economy. The district jail has been repeatedly crowded with default cases. Organized action of the peasants in refusing rent payment has provoked serious conflict with the landlords who are backed by government force. In this part of China, a peasant revolt took place in 1935 and led to the death of many peasants in villages near Soochow. The value of land has depreciated rapidly, and the whole financial organization of the village is at stake. This situation is general in China. The gravest part is found in central China, where the issue has taken the form of a political struggle between Chinese Soviets and the Central Government. But in the village which we are now describing the problem is less acute. The better natural endowment and the partial success of reforming rural industry have been effective

palliatives. The positive sanction in favour of rent payment is still functioning.

对于不同品质的土地，地租被分为九等。平均每亩地约交2.4蒲式耳租米。这等于土地全部产米量的40%。

在村里，租金交付到租局代理人的手中。这是本村独特的做法，与本县中其他地方不同。交租的实际数量并不一定与收租通知上写明的数量相等。正如一个老代理人告诉我的：“村里的人不识字。他们不知道怎样把米折算为钱。没有收据之类的东西。”如果佃户拒不交租，代理人有权力把他抓起来关到县政府的监狱里去。但如果佃户真的没有能力交租的话，就会在年底得到释放，把他关在狱里无济于事，反而荒了田地，无人耕种。

更加详细地叙述收租方法，就会超出目前的研究范围，但注意佃户对于自己责任的不同态度，是非常有趣的。

按老年人的看法，交租被认为是一种道义上的责任。正如有些老人说的：“我们是好人，我们从不拒绝交租。我们就是穷，也不会去偷东西，我们怎么会拒绝交租呢？”——“你为什么要交租呢？”——“地是地主的，我们种他的地，我们只有田面。没有田底，就不会有田面。”这些习惯规定的约束力是有助于维护这个制度的，不仅是对于监禁的恐惧心理才使得佃户履行职责。佃户不交租是由于遇到了饥荒、疾病等灾难，佃户对这些是没有责任的。一个好心的地主，这时就会同意减免地租。

最近局势正在发生变化。乡村地区的经济萧条已使得地租成为贫农的沉重负担；对地主来说，地租收入很难得到保障。农民对有关土地制度的一些新思想比较容易接受。“耕者有其田”是已故孙中山先生提出的原则，至少在理论上已被现政府接受。^[20] 在共产党人和其他左派团体中，正传播着一种更加激进的观点。所有这些思想都已对上述的制裁措施发生了影响。交不起租的贫农现在感到不交租是正当的，那些交得起租的人则先观望是否要强迫他们交租。在地主方面，他们必须采取强硬措施来维护自己的特权，他们也不再把可用的资本放在农田上了。结果是佃户与地主间的冲突加剧，乡村经济发生金融危机。县监狱中不断挤满了欠租者。贫农组织起来采取行动，拒绝交租，与政府支持的地主发生了严重冲突。在华东，1935年发生了农民起义，导致了苏州附近农村中的许多农民死亡。土地迅速贬值，村子里全部财务组织濒临险境。这个局势在中国具有普遍性。局势最严重的地方是华中，以上问题已表现为中国的苏维埃政权与中央政府间政治斗争的形式。但在我们所述的开弦弓村，问题尚未如此尖锐。较好的天然条件以及乡村工业改造的部分成功，起了缓冲作用。有利于交租的那种约束力仍然在起作用。

[5] Full-Ownership

Absentee landlordship is only found when there is close financial relation between village and town. Corresponding to the investment of town capital in the countryside, the ownership of the subsoil of the farm land passes into the hands of the townspeople. At the present time, about two-thirds of the subsoil of the village is owned by absentee landlords. The other third is still in the hands of the villagers. (I am not able to give accurate statistics on this point. The estimate was given to me by my informants.) The villagers themselves may lease their land, may employ labourers, but never acquire the title to the subsoil only.

The full-owners, lessees and tenants do not form clear-cut or water-tight classes. The same Chia may possess all rights to some part of its land, may lease another part from or to others, and a part may belong to absentee landlords. The amount of land actually cultivated by each Chia is determined by the amount of labour available. Since the number of male adult members of each Chia does not vary much, the amount of land cultivated by each is much the same. But if we inquire how far a Chia is cultivating its own land, or how much land is fully owned by each Chia we find a considerable variation. The administration office of the village gave me the following estimate:

五、完全所有制

只有当城乡金融关系密切的时候才出现不在地主制。与城镇资本在乡下的投资相应，农田的田底所有权落到了城里人的手中。目前，该村约有三分之二的田底被不在地主占有，余下的三分之一仍在村民手中（对于这点，我不能提出精确的统计数。此估计数是我的情况提供者提供的）。村民自己也可以出租土地，也可以雇工，但绝对不会只拥有田底所有权。

完全所有者、承租者以及佃户并没有形成界限清楚、区分严格的不同阶级。同一个家可能拥有家里一部分土地的全部权利，可能承租或出租土地的另一部分，也可能还有一部分土地属于不在地主。每家实际耕种的土地量取决于可用的劳动量。因为每家的成年男性人数差别不大，所以每家耕种的土地量也相差无几。但如果我们来了解一下每家耕种自己土地的程度，或者说每家有多少土地是完全属于自己的，我们就会发现这个差别是相当大的。村公所向我提供了下列估计数：

Approximate land (Chiaiv)

50-60

30-49

15-29

10-14

5-9

1-4

According to this estimate, about 90 per cent. of the population in the village have less than ten *mow* or 1.5 acres of their own land. They have surplus labour but not enough land. Therefore they become lessees and tenants.

Theoretically the tenants are free from the obligation to pay taxes. Land tax falls on the owner of the subsoil. But the practice is somewhat different. The system of tax collecting in the region is a peculiar one, and differs from that of other parts of the same district.

From the ex-magistrate, I received the following explanation. At the end of the last imperial dynasty, the government tried to register the tax payers. But this was never completed. The tax in the region has been divided yearly between the cultivators of each *yu*; a definite amount is assigned to them. One of the cultivators who owns more than twenty *mow* in the *yu* will be responsible for collecting the sum. This job is taken in turn by all the qualified persons in the *yu*. The government will not interfere with the way in which the collector distributes the tax.

The amount of tax to be paid by each *yu* is determined by its size.

But since the land was only recently surveyed, and the land register has not yet been completed, the size is determined according to the estimate of the local collectors. The estimate is thus made not strictly according to the actual size of the land but according to the ability of the people to pay taxes. The collector is obliged to hand over the assessed amount to the government regardless of how much he has actually collected. To avoid the danger of having to pay a deficiency himself, he will submit a low estimate on the pretext that land has been deserted. In case of flood or drought, he will request the government to make reductions. (This request was formerly made in connection with petitions for magical help.)

Thus the actual distribution of the burden of tax is not rigid. The collector is able to use common sense in distributing the burden according to the ability of the people. Honesty and the sense of equality checks the abuses possible under such an informal practice.

土地的数量(亩)

500.670

300.749

150.929

104.014

58.0

05.8

根据这个估计，村中自己有地不到10亩（1.5英亩）的人口约为90%。他们有剩余的劳动力，但没有足够的土地。这样，他们就成了承租者或佃户。

理论上讲，佃户无交税的责任。土地税由田底所有者承担。但实际上，此地的税收制有些特殊，与本县其他地方不同。

我从前地方行政官那里得到了以下解释。在清朝末年，政府试图对纳税者进行登记，但没有完成。这个地方的税款每年一次分派给每一垧的耕种者，指定他们缴纳一定的数额。每垧中有地20亩以上的一个耕种者负责征收此款额。此工作由每垧中的各位合格者轮流担任。政府对收税人分派税款的方式不加干涉。

每一垧交税的数额取决于该垧的面积。但由于土地最近才得到测量，土地的登记尚未完成，所以现在还是根据当地收税者的估计来决定其面积。这个估计不是严格地根据土地的实际大小作出的，而是根据交税人的能力作出的。无论收税人实际收到多少税，他必须向政府上交估定的数额。为了避免他自己必须补足缺额的危险，收税人便以土地荒芜为借口，提出较低的估计。遇到水旱灾情，他就会请求政府减税（这种请求以前是与祈祷神明相助联系在一起的）。

于是，税款负担的实际分派并不严格。收税者可根据人们的能力，通情达理地分配负担。诚实与平等的观念可以防止这种非正规工作中可能发生的弊端。

Under the present system, tenants are not actually exempted from the obligation to pay taxes. I have no definite material on this point to show how the actual allocation is made.

The government will try to collect taxes according to the actual size of the land of each individual owner when the land survey and registration are completed. By this action the traditional system is likely to be changed. It may relieve the burden of the tenants but it will certainly increase the total sum of taxes if the rate is not reduced because the reported size is always smaller than the surveyed size. The villagers realize the possibility and frequently try to sabotage the government action. At present, the problem is far from settled.

[6] Inheritance and Agriculture

In Chapter III, I postponed the problem of how the land is actually divided in the process of transmission of property, because it required a prior knowledge of the system of land tenure. On the other hand, some points of land tenure and of agricultural technology still remain obscure unless the factor of kinship is taken into account. In this section, I intend to link the land tenure and agriculture with kinship.

Let us take the example, given in the previous chapter, of the division of a Chia among a father and two sons. The land is divided in this case into three unequal parts. Let us suppose that before division the Chia possesses a strip of farms consisting of four successive plots: A, B, C, and D. These four plots are different in value because their distances from the streams are different. In principle the father can choose his own share. Suppose he takes plot A and half plot B, which may be divided parallel to the margin. The rest of plot B is assigned to the first son as his extra portion. The remaining two plots are equally divided among the two brothers. To ensure equality of division, they must be divided perpendicularly to the margin. Each son takes one belt. If, on the death of the father, the share reserved to him is divided again, it would be divided in the same way. This is illustrated in the following diagram.

-  For the first son when the Chia is divided.
分家时给大儿子的。
-  For the second son when the Chia is divided.
分家时给二儿子的。
-  For the first son after the further division of their father's reserve.
再次分配父亲的地时给大儿子的。
-  For the second son after the further division of their father's reserve.
再次分配父亲的地时给二儿子的。

按目前实行的办法，佃户实际上没有免除交税的责任。关于这一点，我没有确定的资料来表明实际的分派是怎样进行的。

在土地的测量和登记工作完成之后，政府将根据每一个土地所有者拥有土地的实际面积征收税款。通过这一措施，传统税制很可能发生变化。佃户的纳税负担可能解除，但在税率不降低的情况下，肯定要使总额增加，这是因为以前上报的土地面积总是小于测量面积的。村民意识到了这个可能性，经常想方设法破坏政府的行动。目前，这个问题还远远得不到解决。

六、继承与农业

在第三章中，我推迟了对这个问题的论述，即在家产的传递过程中，土地实际上是如何划分的。这是由于谈这个问题需要预先了解土地的占有制。另一方面，如不考虑亲属关系这一因素，在土地占有及农业技术方面仍有些问题尚不明了。在这一节，我想把土地占有和农业与亲属关系联系起来。

让我们仍以前面章节中一父两子的分“家”为例。此例中土地被划分为三个不相等的部分。让我们假设：在分家前，这家有一片农田，包括相连的A、B、C、D共四块。因为这四块地距河流的远近不同，所以它们的价值亦各不相同。按照规矩，父亲可以挑选自己那一份。假设他选中了田块A和田块B的一半，这半块可以沿着地头平行划分。田块B的其余一半分配给大儿子，作为额外部分。剩下的两块田两兄弟均分。为了保证分配平均，必须使分界线垂直于地头，每个儿子取一条。如果父亲死了，他那一半地还要再分配，划分方式同上。上图说明了比例土地划分情况。

These lines of division, or the boundaries of holdings, do not necessarily coincide with the dykes constructed for the regulation of water. They are immaterial demarcations, and are marked by planting two trees at each end of the plot on the dykes. The boundaries of individual holdings become very complex as the result of successive divisions upon inheritance. The farms are divided into narrow belts, with a width of a few tens of metres.

Non-contiguity of farms is widely observed in China. It is found in the village. Although the frequency of land division cannot be taken as the origin of this, it definitely intensifies the scattering of holdings. Each Chia possesses several belts of lands widely apart. It sometimes takes twenty minutes for the boat to go from one belt to another. According to the estimate of my informants, few belts are above six *mow* in size. Most of them are not more than one or two *mow*. Each Chia, at the present time, has three to seven belts.

The narrow belt and the scattered holdings hamper the use of animal labour or other collective methods of farming. They are the chief causes of the technical backwardness of farming in China.

Moreover, in a single plot there may be several owners, each of whom is responsible for his own belt. We have seen how this gives rise frequently to disputes on water regulations.

The small size of holding of the Chia limits the number of

children who can be raised. On the other hand, the relatively large landholders will raise more children and consequently the size of their holding will be reduced within a few generations. Under these conditions, the ratio between land and population is adjusted.

这些划分线，或土地分界线，并不一定要同调节水的田埂一致。这些分界线是非实体的，在田块两端的田埂上栽两棵树，用来作为分界标志。遗产的各次相继划分，结果使个人占有土地的界线变得非常复杂。农田被分为许多窄长的地带，宽度为几米。

在中国广大地区都可见到农田的分散性。这个村子亦不例外。虽然不能认为频繁的土地划分就是农田不相邻的起源，但这种划分确实加大了土地的分散程度。每“家”占有相隔甚远的几条带状田地。从一条地带到另一条地带，有时要乘船20分钟。根据情况提供者的估计，极少有面积在六亩以上的地带。大多数地带不超过一两亩。目前，每一家有三至七条地带。

狭窄的地带和分散的地块妨碍了畜力的使用，也妨碍了采用其他集体耕作方式。这是中国农业技术落后的首要原因。

再者，一块田地可能有好几个所有者，而每人只对自己那一条地带负责。我们已经看到过这种情况怎样引起了用水方面的频繁争执。

每家土地面积窄小，限制了抚育孩子的数量。另一方面，土地相对较多的农户生养较多的孩子，从而在几代人之后，他们占有土地的面积就将缩小。在这些条件之下，人口与土地之间的比例得到了调整。

[6] 陈翰笙：《华南土地问题》，岭南大学，广东，1936年，第4页及第三章。

[7] It is also observed in South China that the land right is transferred through the intermediary step of mortgage. Chen Han-seng says, "Sometimes one-half of the peasant families have mortgaged their lands, as in many villages of Wung-yuen and Mei-hsien, where the percentage of land owning peasants is relatively high. The mortgaged piece is from 50 to 60 per cent. of the land price, very rarely 80 or 90 per cent. Of course, only a very few peasants would like to sell their lands, most of them prefer to mortgage in the hope of recovering them. But once the peasants have stepped into the sepulchre of usury, they are led to descend down the inescapable staircase with only a remote chance of coming out again. At least 70 or 80 per cent. of the landless peasants in Kwangtung have lost some of their land possessions through mortgage."..."According to the statistics of ten representative villages in the district of Pan-yu, the peasants there have mortgaged and sold 5 per cent. of their land area within five years." Op. cit. p. 96.

[8] Code Nos. 846 and 847.

[9] The system of permanent tenancy seems to be a protection of the peasant against a quick process of losing land rights owing to the financial needs of the rural industry. It should be studied not as a historical survival but as an adjustment of the

interests of cultivator and financier, an integral part of the absentee landlord system. This can be illustrated also by observation in South China. "It is a remarkable fact," says Chen Han-seng, "that nothing is ever heard of permanent tenancy in the south-western part of Kwangtung, just the sort of region where one would expect some such reminder of the old economy, because here, so far, the influence of modern commerce has been comparatively little felt. On the other hand, the custom does obtain, where it would least be expected, namely, in the extreme eastern part of the province, up and down the Han River where not only junks and barges but also modern steamers and a local railway ply a lively trade, emerging the modernizing influence of the Swatow business world far into the interior. Indeed, in the region there are not merely remnants of a system of permanent tenancy but a considerable part of the cultivated area is actually under this form of lease," *op. cit.* p. 52. Chen tends to solve the system by an historical explanation, p. 51, although, as the above quotation shows, the present fact does not fit in with his expectation. To me the historical explanation may be interesting by itself but is not important if we are trying to understand the function of the system in the institution of land tenure. Without his ungrounded expectation, Chen may be able to realize the importance of the financial problem in relation to the land problem which he has very rightly pointed out on several occasions in his analysis but not been able to emphasize.

[10] 在华南还可以看到，土地的移交是通过抵押这个中间步骤来完成的。陈翰笙说：“有时，半数的贫农家庭抵押了他们的土地，如在翁源和梅县的许多村子中那样。在那个地方，拥有土地的农民比例相对地较高。抵押的价格为土地价格的50%至60%，很少有80%到90%的。当然，只有极少数的贫农愿意出售自己的土地，多数人抱着赎回来的希望抵押自己的土地。但是，一旦贫农踏入了高利贷之墓门，他们就会被不容逃脱的阶梯一步步引入墓穴深处，再次离开坟墓的机会渺茫。在广东，至少有70%或80%的无地贫农在抵押中失去了一部分地产。”……“根据统计，在番禺县的10个有代表性的村子中，贫农在5年内抵押和出售的土地占他们土地面积的5%。”同前书，第95-96页。

[11] 《民法》第846及847条。

[12] 永佃制似乎保护了贫农不致因乡村工业需要资金而迅速失去土地权。不应把永佃制当作历史遗产来研究，而应把它作为耕种者与投资者利益的调节来看待，是不在地主制整体的一个部分。这也可以用在华南所作的观察来说明。陈翰笙说道：“一个明显的事实是，在广东的西南部尚未听说过永佃制，这里恰是那种人们预料会有旧经济陈迹的地方，因为至今这里还较少受到现代商业的影响。另一方面，在一些料想不到的地方，却见到了这种惯例。就是在广东省的最东端，韩江上往来来往的不仅有帆船、驳船，而且还有现代的轮船，以及一条地方铁路，经营得生意兴隆，汕头商业界的现代化影响出现在内地。在这个地区，的确不只是有永佃制的遗迹，而是已耕地的相当一部分实际上以这种形式出租。”（同前书，第52页）陈倾向于用历史观点来解释永佃制（第51页）。尽管上面的引语表明，目前的事实与他的期望并不吻合。对我来说，作历史的解释，其本身可能很有意义，但如果我们试图理解永佃制在土地占有中的作用，则这种解释并不重要。若不怀无根据的期望，陈就可能意识到金融问题与土地问题关系的重要性。他在分析中，曾几度非常正确地指出了这一关系，但未能加以强调。

[13] *Land and Labour in China*, p. 67-68.

[14] *Op. cit.* p. 36. The present material seems to confirm the general point suggested by Professor Tawney that the problem of tenancy is a function of the financial relation between village and city. "Occupying ownership," says he, "is least prevalent in the proximity of great cities where urban capital flows into agriculture—in the Canton delta 85 per cent. of the farmers, and in the neighbourhood of Shanghai 95 per cent., are said to be tenants—and most generally in the regions but little affected by modern economic developments. The provinces of Shensi, Shansi, Hopei, Shang-tung, and Honan, where some two-thirds of the farmers are stated to be owners, are the original home of Chinese agriculture. They have been little

touched as yet by commerce and industry. The yield of the soil is too low to make it an attractive investment to the capitalist, while the farmer has not the resource to rent additional land. In the south, where the soil is more productive, agriculture yields a surplus, the commercialization of economic relations has proceeded further and both the inducement and the ability to invest capital in land are accordingly greater. It is reasonable to expect that, with the expansion of modern industry and financial methods into regions as yet unaffected by them, similar conditions will tend to establish themselves in other parts of the country. In that case, the struggle which has so often taken place in Europe between the customary rights of the peasant, farming largely for subsistence, and the interest of the absentee owner in making the most of his speculation is likely, it may be anticipated, to be repeated in China. In parts of the country, it is being repeated already," op. cit. pp. 37-38.

[15] Cf. Chen Han-seng, op. cit. Chapter II, 24-41.

[16] 《中国的土地与劳动》，第67-68页。

[17] 同前引书，第36页。目前的材料似乎肯定了托尼教授提出的观点。租佃制问题是城乡间金融关系的职能。他说：“自耕所有制在大城市附近极不流行。在那里，城市资本流入农业，据说，在广东三角洲，85%的农民是佃农，在上海附近，95%是佃农。但在很少受到现代经济发展影响的地区自耕所有制却普遍盛行。陕西、山西、河北、山东、河南等省是中国农业的发源地，那里约有三分之二的农民据称是土地占有者。他们与工商业几乎没有什么接触，土壤的产量太低，不足以吸引资本家在那里投资，而农民也无能力租种更多的土地。在南方，土壤具有较高的生产率，农业产生了盈余，经济关系的商业化得到了发展，对土地进行投资的诱因和能力相应较强。可以合理地设想，随着现代工业和财务方法扩展到那些尚未受其影响的地区，中国的其他部分也会逐步产生类似的情况。在这种情况下欧洲经常发生的那种农民的习惯权利，为生存而耕作，同不在地主唯利是图地做投机生意这两者之间的斗争很可能在中国重新出现。在中国的某些地方，这种斗争已经发生了。”同前书，第37-38页。

[18] 参照陈翰笙，前引书，第二章，第24-41页。

[19] Declaration of the First National Congress of the Kuomintang, 1924, contains the following statements: "The principle of the People's livelihood—This principle of the Kuomintang contains two fundamental aspects. The first is the equalization of land and the second is the control of capital. In as much as the greatest cause of the inequality of economic organization lies in the fact that the right of land is controlled by the few, the Kuomintang proposes that the State shall prescribe the law of land, the law for the utilization of land, the law of the taxation of land, the law for the taxation of the value of land. Private landowners shall declare its value to the government, which shall tax it according to the value so declared with the option of buying it at the price in case of necessity. This is the essence of the equalization of land....

"China is an agricultural country, and the peasants are the class that have suffered most. The Kuomintang stands for the policy that those peasants that have no land and consequently have fallen into the status of mere tenants should be given land by the State for their cultivation. The State shall also undertake the work of irrigation and of opening up the waste land so as to increase the power of production of land. Those of the peasants that have no capital and are compelled to borrow at high rates of interest and are in debt for life should be supplied by the State with credit by the establishment of rural banks. Only then will the peasants be able to enjoy the happiness of life." T. C. Woo, *The Kuomintang and the Future of the Chinese Revolution*, Appendices C, pp. 255-6.

[20] 在中山县土地局《年鉴》的前言中，孙中山先生的一名拥护者写道：“土地问题是关系到我们国计民生的根本问题。如果这个问题能得到正确的解决，我们国计民生的问题也就自然迎刃而解。只有解决了这个问题，人类才能够逐渐摆脱战争。土地所有制中的平等权利是国民党提倡的原则，我们的首要目的是防止少数人的独占，为所有的人提供利用土地的平等权利和同等机会。”引自陈翰笙前引书，第23页。

在1924年《国民党第一次全国代表大会宣言》中有下列陈述：“民生主义——国民党之民生主义，其最要之原则，不外二者：一曰平均地权，二曰节制资本。酝酿成经济组织之不平均者，莫大于土地权之为少数人所操纵，故当由国家规定土地法、土地使用法、土地征收法及地价税法。私人所有土地，由地主估价呈报政府，国家就价征税，并于必要时依报价收买之，此则平均地权之要旨也……“中国以农立国，而全国各阶级所受痛苦，以农民为尤甚。国民党之主张，则以为农民之缺乏田地，沦为佃户者，国家当给以土地，资其耕作，并为之整顿水利，移殖荒徼，以均地力。农民之缺乏资本，至于高利借贷以负债终身者，国家为之筹设调剂机关，如农民银行等，供其匮乏，然后农民得享人生应有之乐。”伍朝枢：《国民党以及中国革命之前途》，附录C，第255-256页。

CHAPTER XII THE SILK INDUSTRY

The silk industry is the second main source of income of the villagers. This is characteristic of the villagers around Lake Tai. The domestic silk industry has been carried on by the people for more than a thousand years. But during the last decade, for the reasons mentioned above (II-3), it has been declining. A new factory system of silk manufacturing has been introduced. The industrial change has deeply affected the life of the people in the villages. It has also called forth various attempts on the part of the government and other institutions to control the change in order to reduce or eliminate its disastrous consequences. The village we are studying, being one of the centres of the industry, provides a typical case for analysing the process; and also, owing to the fact that an experiment has been made by the Sericultural School to reform the industry, it is specially interesting to see the possibilities and difficulties involved in such a deliberate effort of economic change.

[1] Scheme of the Process of Change

The present analysis will take into view the different forces effecting the situation. They are classified into outside forces working for the change and traditional forces bearing on the change. The interplay of these forces results in a changing situation. Thus the process can be schematically represented by three columns as follows.

[1] The items listed in the scheme will be discussed in the following sections.

[2] Conditions Working for Industrial Change

Several facts already mentioned in the above chapters must be noticed once more in order that a proper estimate may be made of the relative importance of agriculture in the domestic economy. The average holding of land is about $8\frac{1}{2}$ *mow* (III-3). Under normal conditions each *mow* can produce six bushels of rice every year. The total produce will then be 51 bushels for that average holding of land. The amount of rice needed for direct consumption by members of the household is 42 bushels (VII-5). Therefore there is a surplus of 9 bushels. At the time when the new rice comes to market the price of rice is about $2\frac{1}{2}$ dollars per bushel. If the surplus is sold the return will be about 22 dollars. But for current expenses alone a Chia needs at least 200 dollars (VII-8). It is thus evident that life cannot be supported by agriculture alone. The deficiency amounts to 175 dollars a year. The situation is much worse with the tenants, and these are the majority of the villagers (XI-4). Tenant farmers with an average holding have to pay 20 bushels of rice as rent to the landlord. This amounts to 40 per cent. of the total produce. The remaining 30 bushels are barely enough for the consumption of the household.

拾贰 蚕丝业

蚕丝业是这个村里的居民的第二主要收入来源，这是太湖一带农民的特点。农民从事家庭蚕丝业已有几千年的历史。但近十年来，由于上面已讲过的原因（第二章第三节），蚕丝业有所衰退，并引进了蚕丝业的新改革。蚕丝业的衰落深深地影响了农村人民的生活。政府和其他机构已经作了各种尝试来控制这个变化，以减轻或消灭其灾难性的后果。我们所研究的村庄是蚕丝业中心之一，它为我们分析这一过程提供了典型的例子；同时，江苏女子蚕业学校已经开展了改革蚕丝业的实验。因此对于这样一个有意识地进行经济改革过程中所遇到的各种可能性和困难进行观察更具有特殊的意义。

一、变迁过程图解

目前所作的分析将把影响情况的各种不同力量考虑进去。力量可分成两类：促使变化的外界力量和承受变化的传统力量，这两种力量的相互作用导致了情况的变化。因此变迁过程，可以三栏图解表示如下，[\[2\]](#)图表中所列的项目将在以下各节讨论。

二、促进工业变迁的条件

为了对农业在家庭经济中的相对重要性作恰当的估价，我们必须再注意一下在上述章节中已经提到过的一些事实。平均一户拥有土地约10亩（第三章第三节）。在正常年景每亩每年可生产6蒲式耳的稻米。对拥有平均土地量的农户来说，总生产量是51蒲式耳。平均一家四口，需直接消费米33蒲式耳（第七章第五节），所以有27.36蒲式耳余粮。新米上市后，每蒲式耳米价约2.5元，如把余粮出卖约可得68.4元。但一个家目前的开支需要至少200元（第七章第八节）。显然，单靠农业，不能维持生活。每年家庭亏空约为131.6元。佃农情况更为悲惨，而村民中大多数是佃农（第十一章第四节）。佃农按平均土地拥有量，必须向地主交付相当于总生产量的40%，即24蒲式耳米作为地租。剩余36蒲式耳仅仅够一户食用。

A. Outside Forces Making for a Change	B. Changing Situation	C. Traditional Forces Bearing on Change
I. World economic depression; and worldwide development of silk industry on scientific lines and by factory methods.	I. Decline of the price of raw silk. Decay of domestic silk industry. Resulting economic poverty in the Chinese village as seen in: (A) Deficiency in family budget and shortage of food. (B) Suspension of recreative meetings and postponement of marriage. (C) Usury.	I. Minimum standard of living. Domestic silk industry as an indispensable supplement to farming in a Chinese village. On which rest: (A) Daily necessities. (B) Ceremonial expenses. (C) Capital for productive work.
II. The Sericulture School as an active agent for industrial changes.	II. Readiness of the people for change. Support of the local leaders: (A) Assuming leadership in the reform. Increase of personal influence through participating in the reform. New leader created by the reform. (B) Economic benefit of the reform to the leaders.	II. Lack of sufficient knowledge for industrial change on the part of the villagers. Social position and function of local leaders. (A) Source of influence not hereditary, not by wealth but by strategic position in cultural contacts. (B) No direct economic reward for the position of the village head as such.

A. 促使变革的外界力量	B. 变化的情况	C. 承受变化的传统力量
I. 世界经济的衰退；及蚕丝业在世界性范围内向科学方法工厂企业的发展。	I. 生丝价格的下跌。家庭蚕丝业的衰退。中国农村经济贫困有以下三点表现： (A) 家庭收入不足，食物短缺。 (B) 文娱性活动停止，婚期推迟。 (C) 高利贷。	I. 最低生活水平。家庭蚕丝业是中国农村中对农业不可缺少的补充。 靠它来支付： (A) 日常所需。 (B) 礼节性费用。 (C) 生产的资本。
II. 江苏省女子蚕业学校是工业变革的积极力量。	II. 居民有变革的准备。当地领导人的支持： (A) 在改革中担任领导。通过参加改革扩大个人影响。在改革中产生新的领导人。 (B) 改革对领导人的经济利益。	II. 农民缺乏工业改革方面的知识。当地领导人的社会地位和作用。 (A) 声望的来源不是世袭，不是通过财富而是通过文化接触中的战略地位。 (B) 对这种村长职位没有直接经济报酬。

A. Outside Forces Making for a Change	B. Changing Situation	C. Traditional Forces Bearing on Change
III. Intentions of the agent of change: (A) To apply scientific knowledge of the silk industry in order to: (1) Prevent disease germs carried by the egg of the worm. (2) Increase the quantity and improve the quality of the cocoons. (3) Produce raw silk up to the export standard. (B) To organize the industry on the principle of co-operation.	III. Programme of Reform: (A) Initiating, organizing, and directing the reform programme by the staff and students of the School in: (1) Dependence on the specialists for egg supply. (2) Raising worms under the supervision of the teaching centre. (3) Establishment of factory equipped with modern machines. (B) In the reform programme. (1) Co-operative aspects: (a) Common house for raising young worms. (b) Co-operative factory. (i) Ownership belonging to members. (ii) Raw material supplied by members. (iii) Profit distributed among members.	III. Traditional method subject to change: (A) Technical defects of the traditional method: (1) Infected eggs produced by individual families or by local hatcheries caused widespread disease. (2) Customary method leaves the process of growth of the worm unregulated, causing high reduction in production and poor quality of the cocoons. (3) Irregular fineness and frequency of break of the silk fibre reeled by the old type of machine. (B) Individualistic nature of the domestic industry. (1) Confirmation of the new idea from the tradition: In classical teaching, and In practice in collective drainage and credit system.

A. 促使变革的外界力量	B. 变化的情况	C. 承受变化的传统力量
III. 变革力量的意图: (A) 应用蚕丝业的科学知识以便: (1) 防止蚕种带有病毒细菌。 (2) 增加蚕茧产量和改善质量。 (3) 生产合格的出口生丝。 (B) 以合作原则组织企业。	III. 改革的计划: (A) 蚕业学校师生发起、组织和指导改革计划: (1) 依靠专家供应蚕种。 (2) 在教学中心的监督下养蚕。 (3) 开设有现代机器的工厂。 (B) 在改革计划中。 (1) 合作方面: (a) 稚蚕公育。 (b) 合作工厂。 (i) 所有权属于社员。 (ii) 社员供应原料。 (iii) 利润分给社员。	III. 被改革的传统技术。 (A) 传统技术的缺点: (1) 个体家庭或当地育种者生产的受过感染的蚕种, 使传染病病毒广泛传播。 (2) 习惯的方法不能使蚕的生长过程得到控制, 因而大大降低蚕茧的产量和质量。 (3) 旧型机器缂丝粗细不一, 断率高。 (B) 家庭副业的个体性质。 (1) 传统观念认可的新思想: 在经典思想中, 在集体排水实践和信贷系统中。

A. Outside Forces Making for a Change	B. Changing Situation	C. Traditional Forces Bearing on Change
(C) To improve the economic condition of the village.	(2) Non-co-operative aspects: (a) Labour is paid by wage system. (b) Management is in the hand of reformers and local leaders. (c) Members have no practical control over the management. (d) Lack of initiation of the members and of auditing. (3) Counter-co-operative aspects: (a) Members refuse to subscribe their shares in full after the factory has failed to distribute annual profit. (b) Members reluctant to fulfil their obligation in supplying raw material. (C) Improved economic condition in the village. (1) Success: (a) Reduction of cost in the process of raising worms. Production of cocoons increased. (b) Wage as a new source of family income.	(2) Lack of education in practising the system of popular control and in exercising the new right. (3) Interested only in practical benefits. (C) Expectation of economic recovery. (1) (a) High cost of production of the traditional method. (b) Labour did not form a commodity.

A. 促使变革的外界力量	B. 变化的情况	C. 承受变化的传统力量
(C) 改善村庄的经济情况。	(2) 非合作方面： (a) 劳动由工资制付酬。 (b) 改革者及当地领导人进行管理。 (c) 社员没有参加实际管理。 (d) 社员缺乏创议力；缺乏账目审查。	(2) 对实施大众管理和行使新权利缺乏教育。
	(3) 反对合作方面： (a) 工厂不分年利后，社员拒绝续交全部股金。 (b) 社员不愿完成供应原料的义务。	(3) 仅对实际利益有兴趣。
	(C) 改善村庄的经济情况。	(C) 希望经济恢复。
	(1) 成功： (a) 养蚕成本降低。蚕茧生产增加。 (b) 工资是家庭收入的新来源。	(1) (a) 传统技术生产成本高。 (b) 劳动没有形成商品。

A. Outside Forces Making for a Change	B. Changing Situation	C. Traditional Forces Bearing on Change
	(2) Failure: (a) Profits have not reached the expected amount. (b) Waste of female labour in the household owing to the labour-saving of machine work. (c) Delayed payment of the full value of raw material supplied to the factory.	(2) Survival of traditional reeling. (a) Small profit in domestic industry. (b) Division of labour between sexes, small size of farm and no other work to absorb female labour. (c) Need of raw material for domestic reeling which is still partially preserved in the village.
IV. Government as change agent with the intentions: (A) Balance of international trade. (B) Rural reconstruction policies concerning rural industry. (1) Encouraging technical improvement. (2) Encouraging the co-operative movement.	IV. Government supports the reform programme. (A) Subsidizing silk export and giving high price for the production of the factory in 1935. (B) Governmental participation in the reform. (1) Inspection of egg production and taking over the work in supervising the raising of worms. (2) Dependence on governmental loans of the factory.	IV. Local autonomy and suspicion of the government by the people. (A) Importance of raw silk in Chinese export. (B) Economic obligation towards the government. (1) Inferior production affecting export. (2) Lack of financial ability of the people to maintain the new enterprise.

A. 促使变革的外界力量	B. 变化的情况	C. 承受变化的传统力量
	(2) 失败： (a) 盈利没有达到预期的数量。 (b) 由于使用机器，剩余女劳力在家庭中浪费掉。 (c) 延迟支付供给工厂的原料的全部价值。	(2) 传统缫丝的残存。 (a) 家庭企业利益微少。 (b) 男女劳动分工，农田面积小，没有其他工作吸收女劳力。 (c) 村里保留的部分家庭缫丝业需要原料。
IV. 政府作为变革力量所持的意图： (A) 平衡国际贸易。 (B) 有关农村企业的乡村建设政策。 (1) 鼓励技术改进。 (2) 鼓励合作运动。	IV. 政府支持改革计划。 (A) 1935 年对工厂产品付高价补助生丝出口。 (B) 政府参加改革。 (1) 检查蚕种生产，接办养蚕监督工作。 (2) 工厂依赖政府贷款。	IV. 地方自治及人民怀疑政府 (A) 中国生丝出口的重要性。 (B) 对政府的经济义务。 (1) 产品质量低劣，影响出口。 (2) 人民没有财力来维持新企业。

Thus it becomes clear that a supplementary industry is indispensable for maintaining a normal livelihood, which must be

sufficient to cover daily necessities, ceremonial expenses, tax and rent and capital for future production. (Col. C. I) When the silk industry was prosperous the production of raw silk could yield an average household about 300 dollars with a surplus (profit and wages) of 250 dollars. (The highest price of native silk exceeded 1 dollar per Liang, 1/14 lbs. and the total production for an average household is 280 Liang. The cost of production, excluding wages, is about 50 dollars.) Under these conditions the standard of living was much higher than the minimum expected standard given above (VII-8). The villagers had then sufficient money to finance the various recreative and ceremonial activities which have been suspended for more than ten years.

The price of native silk has fallen. In 1935 the price was 1 dollar for 3 Liang. Without any decrease in the amount of production, an average household could then only obtain a profit of 45 dollars. In such conditions and with the traditional system of production, it is difficult to balance the domestic budget. In the next chapter, I shall show how a new industry has been introduced and how the villagers have also attempted to increase their income by expanding their trading activities. But in many cases they have sold their rice reserves in the winter and borrowed rice from the shop in the summer (XV-3). In case of urgent need they have appealed to usurers (XV-4). On the other side they have tried to cut down expenses which are not immediately necessary, such as those for recreative meetings and marriage. (Col. B. I)

The fall of income of the villagers is not due to a deterioration of quality or decrease of quantity of their production. Villagers produce the same type and the same amount of silk but it does not command the same amount of money from the market. The factors affecting price lie, of course, outside the village, and here I will only note two of the most important of them, namely, the post-war depression of world economy and the uneven quality of the domestic silk which renders it unsuitable to the highly mechanized weaving industry. (Col. A. I)

因此，很明显，为维持正常生活所需，包括日常必须品、礼节性费用、税和地租以及再生产所需的资金等，从事辅助产业是必不可少的。（C栏I项）缫丝工业兴旺时，生产生丝可使一般农户收入约300元，除去生产费用可盈余250元（当地生丝最高价格每两超过1元，一般农户总生产量为280两。生产成本约50元。工资在外）。在这种情况下，生活水平要比上述预期最低水平高得多（第七章第八节）。这样，农民便有了一些钱可以开展各种文娱和礼节性活动。这种活动已停止了约十余年。

当地生丝价格下跌。1935年3两丝约值1元。生产量没有任何降低，但一般的户仅能获利45元。在这种情况下，用传统生产技术所获利益便难以平衡家庭预算。下一章我将叙述如何引进新的工业，村民如何尝试扩大商业活动来增加收入。很多人不得不在冬天出售存粮来维持生活，夏天到粮店借粮（第十五章第三节）。遇紧急需要时，他们不得不向高利贷者求援（第十五章第四节）。另一方面，他们试着削减非必需的开支，例如娱乐性聚会、婚事开支等。（B栏I项）

农民收入的减少不是由于他们的产品质量下降或数量减少的缘故。村民生产同样品种、同等数量的生丝，但从市场上不能赚回同等金额的钱。当然，影响生丝价格的因素来自外界，我在此仅举两个最重要的因素，即战后世界经济萧条以及质量不匀的家庭缫丝不适合高度机械化的丝织工业的需要。（A栏I项）

[3] Agents of Change and Their Intentions

The relation between the decline of silk prices and the increase of poverty was clear to the people. At first they tried to discover what changes in the industry were necessary in order to restore the former conditions. But with their limited knowledge they were by themselves not able to take any definite action. Initiative and direction in the process of change come from outside.

The initiating party in this case was the Sericulture School for Girls, in Houshukuan, near Soochow. This has had a profound influence on subsequent development but has of course been a factor outside the village.

A technical school in China is one of the centres for spreading modern technique in industry. Modern technique has been chiefly introduced from foreign countries, in the case of the silk industry chiefly from Japan. It is the result of the meeting of Chinese and Western civilizations—a typical contact situation. The difficulty of the technical school in fulfilling its function is that unless the new technique is accepted by the people, it cannot by itself serve progress. A failure in this respect is reflected in unemployment of the trained students. The situation there is most acute in the silk industry. The silk industry, especially the process of raising silkworms, is a kind of domestic work in the villages. In order to make the improved technique acceptable to the people and to find jobs for the students, industrial reform in villages has become an urgent problem for the technical schools. They cannot remain as purely educational institutions. Therefore, the Sericulture School has established a special department responsible for spreading in rural districts a knowledge of the new methods.

The nature of the change agent is important because it determines the change programme. The measure introduced to cope with the situation is formulated and actions are organized by the agent whose understanding of the situation is the premise. But the definition of situation influenced by the social setting of the agents is usually a partial representation of the reality.^[3] To come back to our village, the causes of the fall in silk prices are multiple. The capitalistic structure of world economy, the struggle among imperialistic countries, the control of world finance by a special "racial group," the

political status of oppressed nations as well as the modern girls' newly acquired æsthetic valuation of bare feet—all these might directly or indirectly be responsible for the decline of the price of the silk produced in Chinese rural districts, but not all of them came under the consideration of the change agent. Since the change agent in this case is the technical school, the situation is defined in terms of technical factors. The person responsible for initiating the reform programme in the village gave me the following account.

三、变革的力量及其意图

生丝价格低落及贫困加剧两者之间的关系，人们已经清楚。开始为了恢复原有的经济水平，他们试图发现技术上需要什么样的变革。但他们的知识有限，靠他们自己并不能采取任何有效的行动，发起和指导变革过程的力量来自外界。

在这种情况下，发起单位便是苏州附近浒墅关的女子蚕业学校。它对后来的发展起着深远的影响，当然这是来自村外的一种因素。

中国的技术学校是传播现代工业技术的中心。现代技术主要来自国外，至于缫丝工业则主要来自日本。这是中国和西方文明接触的结果，一种典型的接触情境。技术学校在执行任务过程中的困难是：除非新技术为人民所接受，否则单靠它本身，事业并不能开展。从这方面来说，受过训练的学生找不到职业便反映了这种失败。蚕丝业的情况最尖锐。蚕丝业——特别是养蚕的过程——是村里的一种家庭副业。为了使进步的技术为人们所接受，并为学生找到职业，村庄的工业改革便成为技术学校迫切需要解决的问题。技术学校不能停留在纯教育机构的性质。因此，蚕业学校建立了一个推广部门，负责在农村地区传播新的技术知识。

变革力量的性质如何是重要的，因为它决定变革的计划。它制定应付形势的措施并组织行动。它对形势的理解是行动的前提。但变革力量受其社会环境影响，对形势所作的阐述往往不能代表现实的全貌。^[4]再回头来说这个村庄，生丝价格下跌的原因是多方面的。世界经济的资本主义结构、帝国主义国家之间的斗争、被压迫国家的政治地位以及摩登女郎新近接受的赤脚审美观等等，这一切都可能直接或间接成为中国农村生产的生丝价格下跌的原因，但变革力量不会把这些全部都考虑进去。由于当前的变革力量是蚕业学校，对情况的阐述是从技术因素来考虑的。村里负责改革计划的人对我讲了以下情况。

In the worst years, by means of the traditional method only about 30 per cent. of the total silkworms reached the final stage and produced cocoons. The amount of silk given by the worms was small. This unsatisfactory state of affairs was due to the lack of preventive measures against the spread of disease among the worms. The micro-organism responsible for the disease was carried by the mother moth to the eggs through physical contact between them. Thus disease was handed down from generation to generation, and there was no way of stopping it. The house and the implements were not disinfected before they were used for raising new worms. Once a house was infected by disease, it would suffer for years and years. The diseased or dead worms were cast under the mulberry trees. People thought that these

dead worms were fertilizer for the trees. But actually they spread the germs, which were brought back with the mulberry leaves to the house. (Col. C. III. A. 1.)

The temperature and humidity, which are very important conditions in the process of the growth of the worms, were left unregulated. According to custom, after the third exuviae, fire was put out regardless of the actual fluctuation of the climate. In the village there were not enough mulberry trees. The people had to buy mulberry leaves from neighbouring villages. Owing to the difficulties of transport they usually fed the worm with leaves already withered. The quantity and frequency of feeding were irregular. Even those worms unaffected by disease were unhealthy and not able to produce good cocoons. (Col. C. III. A. 2.)

The fundamental principle in silk reeling is to draw the silk fibre from the cocoon and to combine several fibres into one thread that can be used in weaving. The old type machine used for reeling consisted of three parts, namely, a furnace to boil water, a wheel to collect the thread after the fibre had been combined into one thread, and a rotating axle connected to a plate for treading by foot. Warmed water was used for dissolving the sticky matter of the cocoon. But the temperature was not constant. Thus the degree of dissolution was uneven. This affected not only the lustre of the silk thread but the frequency with which the fibre broke.

Several cocoons are drawn at the same time by the movement of the wheel. The fineness of the thread depends on the number of fibres combined. The fibres from different layers of the cocoon are not of the same fineness. To maintain regular fineness of the thread, it is essential to keep a constant number of fibres and adjust the fibres from different layers of the cocoon. This was not easy to attain by hand reeling, because firstly, the frequency of breakage was high, secondly the movement of the wheel was not even, and thirdly the workers were not specially trained. (Col. C. III. A. 3.)

用传统方法养蚕，在最坏的年景里，只有30%的蚕能成活到最后阶段并结茧。蚕的吐丝量少。这种不能令人满意的情况是由于对蚕的病毒传播没有预防措施。蚕蛾通过接触把致病的微生物带给蚕卵。这样，病毒便一代代传下去，无法控制。喂养新蚕前，房屋和器具未经消毒。一旦房屋被病菌污染，蚕便连年闹病。病蚕或死蚕被扔在桑树下。人们以为死蚕可用作桑树的肥料，但实际上它们传播细菌，桑叶又把细菌带回到养蚕的房子里。（C栏，III项，A.1）

蚕生长过程中的重要条件——温度和湿度——得不到调节。按照习惯，不管气候有何变化，蚕第三次蜕皮后就停止烧火。村里桑树不足，人们必须从邻村购买桑叶。由于运输困难，他们往往用干萎的桑叶喂

蚕。喂食的质量和次数都没有规则。即使那些没有感染病毒的蚕也不健康，不能结出好的茧子。（C栏，III项，A.2）

缫丝的基本原则是把蚕茧的丝纤维抽出来，把数条纤维合成一根丝线供纺织用。旧式缫丝机器分成三部分：煮水的炉子、绕丝线的轮子和连着脚踏板的旋转轴。当纤维合成一股丝线后，用脚踏板使轮子转动，抽缫丝线。用热水可以把蚕茧的粘性物溶解。但水温不稳定，因此溶解的程度不匀。这不仅影响丝的光泽而且影响纤维的折断率。

轮子转动，同时从几个蚕茧抽丝。丝线的粗细取决于合成的纤维数目。从蚕茧的不同层次抽出来的丝，粗细不同。为保持丝线粗细的匀称，必须保持抽取固定数目的纤维，并不断地调整从不同层次里抽出来的纤维。手工缫丝不易达到这一目的，因为首先，纤维折断率高；第二，轮子转动不均匀；第三，工人没有受过专门训练。（C栏，III项，A.3）

Silk is the raw material for the weaving industry. Since the silk produced in the village is mostly exported, it must be adjusted to the technical development in the weaving industry in Western countries. The highly mechanized weaving industry has imposed a new standard on the raw silk. The degree of fineness should be uniform and accurately defined. Breaks should be reduced to a minimum. Such requirements cannot possibly be fulfilled by traditional hand reeling. The result is that the silk produced by the villagers is unsuitable for the improved weaving industry. The decline of demand for such crude silk leads to a decline of price. That is the reason why we must introduce the scientific method to the village. (Col. A. III. A.)

But technical change cannot be produced without corresponding changes in social organization. For instance, the smooth movement of the wheel can be attained only through the regular mechanical movement of a central power. Introduction of the steam engine for technical purposes leads to a change from individual domestic work to collective factory work. The use of electric power, which might again decentralize the productive process, requires a much more complicated co-ordination among industries. Under a system of collective enterprise, the relation between the means of production and labour also becomes more complicated. To introduce new social organizations for production, the agent must also teach new social principles. The selection of the social principle in organizing the new industry is also related to the interest of the agent. The technical school is not interested in making a profit for itself because it is not an economic institution. Who would therefore gain from industrial reform? The agent's answer is the people. The organization of the new industry is on the principle of "co-operation." (Col. A. III. B.) The agent justified this change as follows:

Machines should be used to increase human happiness. Unfortunately, they have been used for the contrary purpose. But I still believe that it is the duty of the reformer who is trying to introduce these types of tool into China to find a way of using them properly. To me, the most important thing is that men should not be the slaves of machines. In other words, machines should be owned by those who use them as a means of production. That is why I insist on the principle of co-operation. It would be much easier to organize the new factory on capitalistic lines, but why should I do it? Should I work for the interests of the capitalists and intensify the sufferings of the people? The profit secured from the improved technique should go to the people who share in the production.

生丝是纺织工业的原料。既然农村生产的生丝大部分出口，它就必须与西方国家的纺织工业技术发展相适应。高度机械化了的纺织工业为生丝规定了一个新的标准。粗细程度必须一致，而且有精确的规定。断头现象必须减到最少程度。这样的要求，用传统手工缫丝是不能满足的。结果是，村民生产的生丝不适用于改进了的纺织工业。西方纺织工业对这种生丝需求下降，因而价格下跌。这也就是为什么我们必须把科学方法引进村里的原因。（A栏，III项，A.）

但如果沒有社會組織的相應變革，技術變革是不可能的。例如，輪子平穩的轉動只有通過中心動力有規則的機械運動才能達到。為了改進技術，引進蒸汽引擎，必然引起一種從家庭個體勞動到工廠集體勞動的變革。電力的使用，又可能使生產過程分散，從而需要各產業之間複雜得多的協作。在一個集體企業系統下，生產資料和勞動之間的關係也變得更加複雜。為了生產，引進新的社會組織，變革力量也必須傳授新的社會原則。在組織新工業中選擇社會原則也與變革力量的利益相關。蠶業學校本身對盈利不感興趣，因為它不是一個企業機構。那麼工業改革使誰得益呢？變革者的回答是人民。新工業組織的原則是“合作”。（A欄，IV項，B.）變革者對變革的正確解說如下：

機器用來增添人类的幸福。不幸的是，它被用來為相反的目的服務。但我仍然相信，試圖把這些工具引進中國的改革者的責任，是尋找一種正當的辦法使用機器。對我來說，最重要的是，人不應該成為機器的奴隸。換句話說，把機器當作一種生產資料的人應該擁有機器。這就是為什麼我堅持合作的原則。要按照資本主義的方式來組織新的工廠容易得多，但我為什麼要這樣做呢？我應該為資本家的利益工作而使人民更加痛苦嗎？技術改革所得到的利益應該歸於參加生產的人們。

My other conviction is that the silk industry has been, and should remain, a rural industry. My reason is that if we attract the industry away from the village, as has been done by many industrialists and is so easy to accomplish, the villagers will in fact starve. On the other hand, I know very well how the workers are living in the cities. Village girls have been attracted by the opportunity to work in the city

factories for a small wage, on which they can hardly support themselves. They have left their own homes. This process has ruined both the city workers and the village families. If Chinese industry can only develop at the expense of the poor villagers, I personally think we have paid too much for it.

The aim of my work is to rehabilitate the rural economy through the introduction of scientific methods of production and the organization of the new industry on the principle of co-operation.

The socialistic ideas of the reformers represent a part of the current ideology of the present literate class in China. In their new version they are introduced from the West, side by side with the modern technology and capitalistic system of industry. The position of the Chinese people in the world economy and the repeated struggle with the Western powers have created a situation favourable for the spreading of socialist ideas. A reaction against capitalism, as understood by the Chinese people, prevails among the general public. Even those who stand for capitalism do not dare openly to justify its principles. This attitude was explicitly stated in the "Three people's principles" of the late Dr. Sun Yat-sen, which have been accepted, theoretically, by the present government as the guiding principle of its national policies.

On the other hand, socialist ideas are nothing new in China. The basic political idea of Dr. Sun Yat-sen was to realize the traditional teaching such as, "Under the heaven every thing is public," or "Those who till the land should have the land." (Col. C. III. B. 1.)

我的另一个信念是，蚕丝工业曾经是而且应该继续是一种乡村工业。我的理由是：如果我们把工业从农村引向别的地方，像很多工业家所做的那样，也是非常容易做到的，农民实际上就会挨饿。另一方面，我也很了解，工人们在城市里是如何生活的。农村姑娘被吸引到城市工厂去工作，挣微薄的工资，几乎不能养活自己，她们离开了自己的家。这种过程既损害了城市工人，又破坏了农村的家庭。如果中国工业只能以牺牲穷苦农民为代价而发展的话，我个人认为这个代价未免太大了。

我工作的目的是，通过引进科学的生产技术和组织以合作为原则的新工业，来复兴乡村经济。

变革者趋向社会主义的思想代表了当前中国知识阶级的部分思想状况。这是同西方的现代技术和资本主义工业系统一起引进的新看法。中国人民在世界经济中的地位以及同西方列强的不断斗争，为传播社会主义思想创造了有利条件。正如中国人民所了解的，公众普遍反对资本主义，甚至于那些代表资本主义的人也不敢公开为资本主义的原则辩护。这种态度在已故孙中山先生的“三民主义”里阐述得很清楚，从理论上说，它被现今政府所接受并作为国家政策的指导原则。

另一方面，社会主义思想在中国并非新的东西。孙中山先生的基本政治思想是实现传统的教导，诸如“天下为公”和“耕者有其田”。（C栏，III项，B.1）

[4] Local Support for Change

As we have seen, the Sericulture School, being outside the village, was only a potential agent. To turn the potential agent into an active one there was needed another factor. There was no direct social relationship between the School and the villagers. The group which possessed the new knowledge had no direct use for it and the group which needed the knowledge had no opportunity of acquiring it. A bridge by which the agent of change could be made to function in the village was essential. It was found in the local leaders.

According to the published report of the co-operative factory the initiative was due to the local leaders. The following passage written by Chen may be quoted.

Kiangsu is known as a silk-producing area. But the industry depended more on natural factors than upon human effort. The result was the failure of the villagers in the industry. This had frequently ruined the people. In view of such conditions I (Chen) and Mr. Sen (a local leader in the town, Chên Tsê), proposed to the town council, in the regular summer meeting in 1923, that a teaching centre should be established to reform the method of raising silkworms. The proposal was passed and 600 dollars were allotted for the purpose.

It happened that the president of the Sericulture School had, also as a result of the fall of silk prices, started a department for extension work for reforming the traditional methods of the silk industry. In the winter of that year, he came to Kaihsienkung, accompanied by Misses Fei and Hu and gave a series of public lectures. The people were greatly interested. Then the chairman of the town council, in accordance with the resolution, authorized the president to organize the proposed teaching centre. The president consented to co-operate with the town council and subsidize the plan, and it was decided to start the work also in Kaihsienkung.

In addition to my own family, I called together twenty other families which had suffered very much in the past from continuous failure in the industry. The reform work was started in the spring of 1924.^[5]

I have mentioned that the village headmanship is not a hereditary office. He has no other ground for his authority than the usefulness of his services to the community (VI-4). One of his most important

functions is to interpret local needs and to assume leadership in taking necessary measures. The village head receives no economic reward for his position. But through introducing special work in the village, he can derive economic benefit from it. These were the intentions of Chen in supporting the programme of industrial reform. (Col. B. II. A. and B.)

四、当地对变革的支持

我们已经看到，蚕业学校由于在村外，因此仅仅是一种潜在的力量。为把潜在力量转变成现实力量，还需要另一个因素，学校和村民之间没有直接的社会关系。占有新知识的群体没有直接使用知识，而需要这种知识的群体又没有机会获得知识，要使变革力量在村中起作用，中间必须有一座桥梁，这是重要的。当地领导人是充当这个桥梁的角色。

根据合作工厂已公布的报告，主动在于当地领导人一边。可以引陈写的一席话来说明：

江苏以产丝著称，但这一工业更多地依赖自然因素而不是人的力量，结果是农民在丝业中失败了。这经常损害人民。鉴于这种情况，我（陈）和沈先生（震泽镇的一个领导人）在1923年的夏季例会中向镇改进社建议，应设立一个教学中心以便改革养蚕方法。建议获得批准后，拨款600元来筹办此事。

恰巧蚕业学校的校长也因生丝价格下跌正想为改革缫丝工业传统技术开办一个附设的推广部门。当年冬天，他由费女士和胡女士陪同来到开弦弓，并讲了一些课。人们都非常感兴趣。然后，镇改进社的主席根据决议，授权校长组织拟议的教学中心。校长同意与镇改进社合作，资助这一计划并决定就地在开弦弓开始工作。

除了我自己的家庭以外，我还把过去由于丝业的不断失败而受苦的20家召集在一起。改革工作于1924年春开始了。^[6]

我已提过，村长的职务不是世袭的。除了他的服务对社区有用以外，他的权威没有其他的凭借（第六章第四节）。他的一项最重要的职能是了解当地的需要，采取必要的措施来实行领导。村长的职务没有经济报酬，但通过为村里做一些特殊的工作，他可以得到经济上的收益。这就是陈支持蚕业改革计划的意愿。（B栏，II项，A.及B.）

The strengthening of the social position of the local leaders by industrial reform appears still clearer in the case of Chou. Chou had had no social influence before the industrial reform was introduced. Owing to his literacy and ability, he became an assistant in the work and gained prestige from it. Finally he was appointed by the higher administration to be the head of the Hsiang (VI-5). His social position has been acquired wholly through his participating in the reform programme.

This analysis is important in explaining why the village heads did not prove, on the contrary, a force resisting social change. Active resistance against the reform was not experienced at the initial stage. There was promise of improved condition on the side of the

Sericulture School, and hope on the side of the people.

The rapid fall in prices had forced the people to accept certain changes in the traditional industry. But they lacked sufficient knowledge to define the situation or to formulate a definite programme of change. (Col. C. II.) They were also not properly equipped to judge the desirability of the proposed programme. The suspicion of novelty went hand-in-hand with the readiness to accept reforms when, by demonstration, the new technique could be proved useful. That is why at the beginning there were only twenty-one households in the programme, and, as the report specifically stated, these had suffered from hopeless failure when working by traditional methods. But it took only two years to draw the whole village under the supervision of the teaching centre.

[5] Programme of Change in Raising Silkworms

The primary aim of the reformers, as I have explained, is the technical improvement of rural industry, but change in one aspect of culture automatically calls forth a series of changes in other aspects. Such a process once started tends to go on until a complete reorganization of the whole system has been affected. The sequence of change is of special interest for studying the functional relations between social institutions.

当地领导人的地位通过丝业改革加强了，这从周的情况来看更为明显。在丝业改革以前周没有什么社会影响。由于他识字，有能力，他成为这项工作的助手并提高了声望。最后，他被高一级的行政管理机构任命为乡长（第六章第五节）。他的社会地位是通过参加这项改革计划而获得的。

在解释村长在社会变革中为什么不是一股反对改革的力量时，上述分析有重要参考价值。在最初阶段没有人积极反对改革。蚕业学校作了情况会得到改善的允诺，在人民一方面则抱着希望。

蚕丝价格的急剧下跌迫使人民接受对传统丝业的某些改革。但他们缺乏足够的知识来判明情况或制定变革计划。（C栏，II项）他们对已经提出的计划所要达到的要求也缺乏判断能力。新的技术虽然已被证明有用时，人们一方面准备接受改革，一方面还在怀疑新鲜事物。这就是为什么一开始参加这项计划的仅有21户，正如该报告具体说明的那样，这些户用传统技术操作时遭受了惨痛的失败。但总起来说，只用了两年工夫便把整个村子纳入蚕业教学中心的指导。

五、养蚕的改革计划

如同我已经解释过的，改革者的主要目的是从技术上改进农村企业，但是对文化的某一方面进行变革，自然会引起其他诸方面的变化。这样的过程一旦开始，便会继续下去，直到整个系统完全重新改组为止。在研究社会制度之间的功能关系时，研究变迁的顺序是特别有意义的。

The reform programme has proceeded along the line of the natural process of the silk industry. This starts from the production of eggs through the breeding of moths and continues with the hatching of the eggs and raising of the silkworms, and collection of cocoons; it ends, as far as the village is concerned, with the reeling of the silk thread. The problem of marketing I shall deal with in the chapter after next.

Scientific knowledge in egg production consists of two parts, namely, the breeding of superior species through experimental crossing, and the separation of infected eggs through microscopic examination. Formerly the people produced eggs through pure line breeding of their own worms. They would also allow the germs to be handed down to the second generation. To reform the system of egg production, it was not practical to teach each villager the principles of genetics and the use of the microscope. It is much cheaper to employ a specialist to produce the eggs for the use of the villagers. The School therefore took over this work at first and supplied the villagers. It is interesting to note that in this respect the reformers were inconsistent in their aims. They decided to keep industry in the village, but egg production has been removed from the village into the hands of specialists. But egg production is economically unimportant, because the cost of the eggs is only 3 per cent. of the total cost of the production of raw silk.

The demand for disinfected eggs increased rapidly as the silk reform gradually spread over the whole region of the lower Yangtze valley. The School could not meet the demand and thus many private egg producers seized the chance to make a profit. The quality of eggs could not be maintained and the bad effects on the reform programme became evident. This situation led to government interference. A bureau for censoring the eggs was established by the provincial government with authority over the private producers and prices were also controlled. (Col. B. IV. B. 1.)

The people receive their eggs only a short time before the period for hatching. Eggs are treated by the producers with special care. From hatching up to the collection of cocoons, the whole process of work is comprised in the term "raising silkworms." This process is carried out in the village under a special organization. At the beginning of the reform, directors were sent from the teaching centre to teach the villagers how to make use of scientific knowledge, especially in the prevention of disease of the worm and in the regulation of temperature and humidity. To facilitate management and supervision, the young worms of different owners are concentrated in a common house, on the principle of co-operation.

改革计划是沿着蚕丝业的自然过程向前推进的。这是从蚕蛾产卵生产蚕种开始，接着是孵化、养蚕、收集蚕茧，从农村来说，到缫丝作为结束。关于市场销售问题，将在以后章节中讨论。

生产蚕种的科学知识可分成两个部分，即通过实验杂交培育良种，以及通过显微镜检查分离受感染的蚕种。过去，人们是通过他们自己喂养的蚕的纯系繁育生产蚕种的。这也会使病菌传给第二代。为了改革蚕种生产系统，把遗传学的原理和使用显微镜的方法教给每一个农民是不实际的，聘请一个专家为农民生产蚕种要便宜得多。因此，蚕业学校首先接过了此项工作，供应村民蚕种。有趣的是我们发现在这一点上，改革者的行动与他们的目的不那么一致。他们决定把工业留在农村里，却把蚕种的生产从农村转移到专家手里。但蚕种的生产从经济上来说是不重要的，因为蚕种的价格仅为生丝生产总费用的3%。

当蚕丝改革工作逐步普及到整个长江下游地区时，对于灭菌蚕种的需求量迅速增加。蚕业学校已不能满足需要，很多私人便来生产蚕种，乘机机会牟取利益。蚕种的质量不能保证，对改革计划的坏影响明显起来，这引起了政府的干预。省政府成立了蚕种检查局，对私人生产的蚕种有权检查，并进行价格控制。（B栏，IV项，B.1）

人们只在孵化前不久收到蚕种。蚕种在生产者手里是得到特殊照料的。从孵化到收茧子，这整个工作过程都包括在“养蚕”这个词中。这个过程是在一个特殊组织之下在村里开展起来的。改革开始阶段，学校派出指导人员教村民如何利用科学知识，特别是在防止蚕病、控制温度和湿度方面。为了便于管理和指导，各家的幼蚕，按照合作的原则，集中到公共房屋里，称作“稚蚕公育”。

Expense and labour are shared by the owners in proportion to the amount of worms put in the common house. At present there are eight common houses in the village, containing practically all the young worms raised in the village. A special building with eight big rooms was built for this purpose. The money for the building was collected by adding 20 cents to each sheet of eggs during the years 1923 to 1925. (Col. B. III. B. 1. a.)

The collective process of raising silkworms can be effective only when the worms are young and small. Within six weeks they grow from a tiny size to two and a half inches at the time of maturity. After the third exuviae the present common houses are not large enough to accommodate the worms. The collective system has then to be discontinued unless big buildings are available. The construction of such buildings is economically not worth while, because the period during which a large space is required is short, and it is much more convenient to use private houses. For the last two weeks all the rooms in the house, except the kitchen and half of the bedrooms, are occupied by the worms. This fact alone means that, unless the material substratum of the village is radically changed, silkworm raising must remain mainly a domestic industry.

After the third exuviae, the worms are removed to the private houses and each household raises its own worms separately. Before the removal, the private houses are disinfected under instructions given by the teaching centre. Constant supervision is maintained during this process. Diseased worms are removed at once to prevent the disease spreading. Temperature and humidity are regulated according to the need of the worms. (Col. B. III. A. 2.) The result of these measures is that the loss of worms due to disease has been kept under 20 per cent., and the total production of cocoons has increased at least 40 per cent. as compared with that under the traditional method.

When the teaching centre had proved its success in the village, the provincial government extended its work to the whole silk-producing area. We will describe this more fully in another section.

Before we go into the process of reeling, an estimate of the production and cost in this part of the process may be attempted. The total amount of silkworms that can be raised by a Chia depends on the size of the house and the labour available. Silkworms are raised in rectangular and shallow containers about $1\frac{1}{2}$ by 1 metre in size. They are put on the shelves of a stand. Each stand has eight containers. Each house has enough room for five stands. The silkworms hatched from a sheet of eggs (which is of standard size), require in the final stage of development a whole stand for accommodation. One person can manage two or three stands. Each stand will yield 34 pounds of cocoons which can be reeled into 48 Liang (or 3.4 pounds) of raw silk. Under reformed conditions, the total amount of cocoons produced by an average Chia is about 200 pounds, which can be sold at a price of 60 to 70 dollars per 100 pounds (according to the reports mentioned above).

费用和劳动根据蚕主放在公用蚕室内的蚕种按比例分摊。目前村里共有八间公用蚕室，基本上包括了村里养的全部幼蚕。为了这一目的，专门造了这所有八间房屋的建筑物。从1923年至1925年对每张蚕种增收两角作为建筑费。（B栏，III项，B.1.a）

集体养蚕的方法只有在幼蚕时期有效。六个星期之内，它们从极为细小的“蚕蚁”长到两英寸半长蚕身。第三次蜕皮以后，目前公用的房间便不足以容纳这些蚕了。如果没有更大的房屋，集体喂养的方法便只得中断。建造能容纳全部的蚕的一所房屋从经济上来说并不值得，因为需要大地方喂养的这一段期间较短，用私人的房子方便得多。最后两个星期，家里的全部房间，除去厨房和一半卧室以外，都用来养蚕。仅这一事实就意味着除非村里的物质基础有根本的改变，否则养蚕基本上只能依旧是家庭副业。

第三次蜕皮以后，蚕被搬到各户。每户分别喂养自己的蚕。在搬蚕以前，个人养蚕的房子要经过消毒，学校的指导员要告诉他们注意事项。在这一阶段经常要去检查。有病的蚕立即消灭以防传染。根据蚕的需要控制室内温度和湿度。（B栏，III项，A.2）采取这些措施的结果是，因病而损失的蚕，其数量控制在20%以下，蚕茧的总生产量同用传统方法喂养时相比至少增加40%。

当学校指导工作在村里被公认取得成功时，省政府便把它的工作向整个产丝区推广。在以后章节中我们再进行描述这一情况。

在讨论缂丝程序以前，可尝试估计一下这一部分的生产及其成本。一家养蚕的总数取决于房屋大小和劳力多少。蚕是养在约 1.5×1 米大小的长方形匾里。匾放在支架的搁杆上。每一个支架可放8个匾。每间房间可放5个支架。一张蚕种（标准大小）孵出来的蚕，到最后阶段需占一个支架的地方。一个人可管理2或3架。每架可收蚕茧34磅，可缂生丝48两（或3.4磅）。在改革条件下，一户一般可生产蚕茧约200磅，每100磅可卖60至70元（根据上述报告）。

Each stand of silkworms needs about 400 pounds of mulberry leaves. The price of mulberry leaves fluctuated very much during the period of silkworm raising. The highest price for a 100 pounds sometimes exceeds $3\frac{1}{2}$ dollars, and at the lowest is under $1\frac{1}{2}$ dollars. The total expense for feeding worms lies between 30 to 40 dollars. In addition to other expenses, the cost of cocoon production, excluding labour, is about 50 dollars per Chia. If the cocoons are sold, this will give an income of 70 to 90 dollars for an average Chia.

The reform programme has also included the introduction of multiple crops. In this region three crops can be grown. But owing to the climate, more equipment and precautions are needed in summer and autumn crops. At present, these two crops are still very limited.

[6] The Co-operative Factory

We now come to the process of reeling, that is, the transformation of cocoons into the final stage of raw silk. Reform in this process is directed to producing a better quality of raw silk. Quality is judged by uniformity in fineness and reduction of frequency of breaks in the thread. According to the expert of the Sericulture School, the weakness of the traditional method lies in (1) the irregular temperature of water used in dissolving the sticky matter of the cocoon, (2) the indefinite number of fibres forming a thread, (3) lack of regard for the different fineness of the fibres from different layers of the cocoon, and (4) the irregular movement of the wheel. To improve the quality of the silk, the reformers have tried several methods. The following statement made by the agent will explain the situation.

At the beginning, we had no idea of introducing the factory system. We tried to keep the work in the household. As a substitute for the old type of machine, we introduced a better wooden machine which is only a modification of the old. The wheel was turned by foot and everyone could work separately in her own house. Chemicals were used in dissolving the sticky matter, but the temperature of the solution could not be strictly controlled. Skill in maintaining a constant number of fibres and in adjusting the combination of different layers of the cocoons was taught in training classes lasting three months, organized by the School in the town. In 1924, there were only ten machines of this type in the village. But in 1927, the total number had increased to more than one hundred. More than seventy young women were trained in the special class. But owing to the irregular movement of the wheel, the quality of the produce was still below the requisite standard for export. On the other hand, the depression of the market was more acute. In 1928, the price for this type of "reformed silk" had dropped to sixty dollars per hundred Liang. Although it was better than the native silk, we were not satisfied with its condition. We knew very well from the experiment that unless we could have a central power equipped with a steam engine, the quality could not be raised to the export standard. But the introduction of the steam engine must go hand-in-hand with the collective factory system. In other words the domestic system of production could not be retained if we were to improve the quality of the produce. We decided therefore to test out what is the smallest size of silk factory in which all the advantages of applying modern technique of production can be

realized but which at the same time is not too large to be maintained in the village and to use local labour and local supplies of raw material. This experiment has a wider significance. If we can produce, with lower labour costs, silk equal in quality to that of the larger scale factories, we can extend this system without fearing competition from factories in the cities. Through this small scale factory, rural industry can get a firm basis and the rural economy can be rehabilitated. We started the experiment in 1929. Our experiment proved to be successful only after the re-equipment in 1935, with the new machine which is a modified form of the latest Japanese type. With this we are able to produce the best silk in China. In 1935 the produce of this factory was ranked by the export bureau as of the highest grade.

每养一架蚕约需400磅桑叶。在养蚕期间，桑叶价格升降幅度很大。每100磅的最高价格有时超过3.5元，最低价格不到1.5元。养蚕所需总的开支约30至40元。除其他费用以外，蚕茧生产费用不包括劳动，每户约需50元。如果出售蚕茧，一般的户可收入70至90元。

改革计划还包括引进秋种。这个地区一年可育三次蚕。但因气候关系，夏季和秋季养蚕需要更多的设备和注意的地方。目前，养夏季和秋季蚕的仍然非常有限。

六、合作工厂

现在我们要说到缫丝过程，这就是把蚕茧缫成生丝的最后阶段。对这一过程的改革主要目的是生产质量较好的生丝。根据丝的粗细划一、断头减少来评定生丝的质量。据蚕业学校的专家说，传统方法的缺点在于：（1）用于溶解蚕茧上胶质的水温不恒定；（2）一股丝线中所含纤维数不固定；（3）从蚕茧不同的层次抽出来的丝粗细不同，未予重视；（4）缫丝机轮子的运动不规则。为了改进生丝质量，改革者试了数种方法。他们的下述谈话将说明这个情况。

一开始，我们并没有想要引进工厂。我们想的是继续在家里进行这种劳动。我们只不过采用一种改良的木制机器来代替旧式机器。用脚踏转动轮子，每个人可分别在自己家中工作。用化学品来溶解胶质，但溶液温度无法达到严格的控制。蚕业学校在镇里组织了训练班，为时3个月，教授调整蚕茧各层的丝以及保持固定数量纤维的技术。1924年的时候，村里只有10台这样的机器。到了1927年，机器总数增加到100多台。在训练班里有70多名年青妇女。但由于轮子的运动不规则，产品质量仍然达不到出口标准的要求。另一方面，市场萧条更加严重。1928年，这种“改良丝”的价格跌到每100两60元。虽然它比土产丝好些，但我们不满意这种情况。我们从实验中了解到，除非能有一个用蒸汽引擎的中心动力，质量就不易达到出口水平。但引进蒸汽引擎必须同时有集体工厂系统。换句话说，如果我们要提高产品质量，就不能保持家庭手工业的生产方式。所以我们决定试验设计一个要能实现应用现代生产技术的一切有利条件的工厂。这个工厂同时又不宜太大，要能办在农村里，用当地的劳力和由当地供应的原料。这个试验具有比较广泛的意义。如果我们能用较便宜的劳动力生产与大工厂同等质量的生丝，我们就能扩大这种缫丝工厂而不必惧怕城里工厂的竞争。通过开办这种小规模工厂，乡村工业能打下一个坚实的基础，乡村经济从而可以复兴。1929年我们开始试验。我们的试验直到1935年重新装备了新机器之后才证明是成功的。这种机器是由日本最新型机器修改而成。我们用它生产出中国最好的生丝。1935年，这个工厂的产品被出口局列为最佳产品。

From this account it is very clear that the substitution of the collective factory for the domestic system was dictated by technical considerations. The steam engine which makes possible a controlled and smooth movement of the wheel, and consequently speed and evenness in drawing the fibres from the cocoons, leads inevitably to a centralized system. Whether the introduction of electric power might gain change the centralized system is a matter for future experiment. (Col. B. III. A. 3.)

从上述情况可以明显地看到合作工厂代替家庭手工业是由技术考虑决定的。蒸汽引擎使轮子转动可以控制，并且平稳，从而使抽丝均匀，速度加快，因而不可避免地产生了一种集中的系统。至于引进电力是否会再改变集中的系统，则是将来试验的问题了。（B栏，III项，A.3）

A factory system of production requires a building suitable for equipment with machinery. To construct the factory needs technical knowledge and money. Technical knowledge was supplied by the School, but where did the money come from? This question led to the problem of ownership and the problem of distribution. According to the intentions of the reformers, the basic principles on which these were regulated had been laid down before the factory was established. The principle was that the factory should be owned by the people. But how can the people own it and who are the people?

Ownership is vested in the group of people who are members of the co-operative society. Their liability towards the factory is limited to the share they contribute. Membership is voluntary and is not limited to the people of this village. Anyone who observes the obligations of membership can be admitted as a member of the society. The obligation of a member is to hold a share in the factory and to supply a definite amount of raw material, cocoons, every year. There are 429 members of the society, including practically all the households in the village, and more than fifty members from neighbouring villages.

Final control of the factory is, according to the regulation, vested in the general meeting of the members. At the general meeting an executive council is elected, which is in theory responsible to the general meeting. In practice, it works the other way round. The people work according to the instructions of the local leaders, the executive council, and the local leaders work according to the instruction of the reformers, the School. The members have nothing to say, since the whole work is under the direction of the reformers, and the people have not sufficient knowledge to run the factory by themselves. A high percentage of illiteracy and the lack of educational opportunity on the part of the villagers have made it very difficult for the reformers to carry out their plan of training the villagers, the real masters of the factory. (Col. C. III. B. 2.) There has been no attempt by the members to exercise their right of vote to control the factory, since the ballot system is entirely new to them. The members do not understand more of the factory than that its practical benefit in terms of profit are distributed among them. (Col. C. III. B. 3.) They do not know on what basis they have a claim to the profit, just as they do not know on what basis they should pay rent to the landlord. Ownership then actually means to them only a grant for the distribution of profit. This will be

still clearer when we examine the financial side of the factory.

一个从事生产的工厂需要有适合安装机器的房子。建造工厂又需要技术知识和经费。技术知识由蚕业学校提供，但经费从哪儿来呢？这个问题就关系到所有制和分配问题。根据改革者的意图，在工厂开办以前，制定这些规章所依据的基本原则都已经确定了。原则是工厂应属于农民。但农民如何拥有它，谁是农民？

所有权属于这个合作社的社员。他们对工厂的责任限于他们所贡献的股份。入社以自愿为原则，并不限于本村的人。凡愿遵守社员义务者便可被吸收为社员。社员的义务是在工厂里有一份股金，每年供给工厂一定数量的蚕茧作原料。这一合作社共有429名社员，基本上包括了村里所有的住户及邻村的50多户。

根据规章，工厂的最高权力机构是社员全体大会。大会选出一个执行委员会，理论上它对大会负责。实际上恰恰相反，人们按照当地领导人和执行委员会的意见工作，当地领导人遵照改革者和蚕业学校的意见行事。由于整个工作是在改革者的指导下进行，人们对开办工厂也没有足够的知识，社员没有什么可以说的。由于农民缺乏受教育的机会，文盲率高，这使改革者在实施训练计划中发生很大困难，这些需要受训练的农民才是工厂的真正的主人。（C栏，III项，B.2）社员对投票制度完全不熟悉，他们也未想过行使投票的权利来管理工厂。他们只关心以利润形式分给他们的实际利益，对工厂的其他工作很不了解。（C栏，III项，B.3）他们不知道根据什么他们可以要求利润，正如他们不知道根据什么他们应该给地主交租。对他们来说，所有权只意味着他们可以分得一份利润。当我们讨论工厂的财务问题时，这个问题将表现得更加清楚。

There was of course no surplus capital in the village to finance the factory (Section 2). The total expense of its establishment was 49,848 dollars (about £3,000). This amounted to 114 dollars, or £27, from each member. In fact, of the total amount, the share contributed by the members in the first year, was only 2,848 dollars, about £180, i.e. 5.7 per cent. of the total.

Nominally, the "capital," or the contribution of the owners of the factory or the limits of the liability of the owners, is fixed at 10,000 dollars (£625). This is divided into a thousand shares of 10 dollars each. Each member subscribes at least one share. In the first year, 700 shares were taken up. These shares were payable over five years. At present only half of the amount has been collected. (Col. B. III. B. 3. a.) It is clear, therefore, that the finance of the factory depends on other sources than the owners.

The steam engine and the machines (of older type) were borrowed from the School. Their value was assessed as 4,000 dollars or £250. It was agreed that the factory would pay back that amount,

out of profits, to the School within five years. But, owing to financial conditions, the factory has not yet fulfilled the promise. For the building and other expenses the factory had secured a long-term loan from the Provincial Peasant Bank of 15,000 dollars (or £800). This loan was not granted by the bank for strictly commercial reasons. It is clear that the liability is limited by the "capital," 10,000 dollars, and in case of bankruptcy the buildings and other immobile property could not be put up to auction since it is located in the village. But it was the government's policy to finance rural industry and this made it possible to raise the loan. (Col. B. IV. B. 2.) Another short-term loan of 3,000 dollars, or £190 (with land and building as mortgage) was secured from a local bank in Chên Tsê, the nearest town. From this examination of the financial basis of the factory, it is clear that the factory is actually based on government credit, not on the investment of the people.

The raw material is supplied by the members. Fresh cocoons are collected every year. Members receive a payment of 70 per cent. of the value of the cocoon supply at delivery. The money for this is borrowed yearly from the Provincial Bank, cocoons being accepted as mortgage.

As 30 per cent. of the payment is delayed, the members do not take much interest in supplying more than the lowest limit, especially since 1930, which was the last year that profit was distributed among the members. The following statistics supplied by the factory can be quoted.

当然，村里没有多余的资金来资助工厂（本章第二节）。开办工厂所需的经费总共为49,848元。每个社员约需分担114元，第一年，社员入股金额实际上仅2,848元，约为总额的5.7%。

名义上，“资本”，或工厂所有者的贡献，或工厂主的有限责任固定在10,000元。这一数目被分成1,000股，每股10元。社员每人至少购买一股。第一年，认购了700股，可在五年期间交款。目前，只收到一半的股金。（B栏，III项，B.3.a.）显然，工厂的资金还需靠其他来源。

蒸汽机和机器（旧式）是从蚕业学校借来的，估计价值4,000元。有协议规定，五年以后工厂从利润中抽出钱来还给学校。但由于经济困难，工厂尚未履行这一诺言。为建造厂房和其他开支，工厂向省农民银行借了15,000元的一笔长期贷款。农民银行并不是由于商业上的原因才批准这笔贷款的。显然，负债是受“资本”10,000元的限制的，由于工厂在农村，一旦工厂破产，厂房和其他不动产无法拍卖。但政府的政策是要为乡村工业提供资金，这才有可能向银行借贷。（B栏，IV项，B.2）另外，工厂向最近的镇——震泽的一个地方银行借了一笔3,000元的短期贷款（用土地和厂房作抵押）。从上述情况可以看到，工厂资金的基础实际上主要是政府的信贷，并不是靠人民的投资。

原料由社员供应。每年收集新鲜蚕茧。社员交蚕茧时，工厂交付蚕茧价值的70%。这笔钱是每年从省银行借来的，蚕茧作为抵押。

由于30%是延期付款，社员多交蚕茧也得不到多少好处，因此他们只交最低限额的蚕茧，尤其是1930年以后。1930年是把利润分给社员的最后一年。以下是工厂提供的统计数字。

(取掘金单位)

上表说明从1930年到1935年社员供应蚕茧的数量逐渐下降。(B栏, III项, 3.b) 1932年总供应量还不足以供工厂开工一百余天之用。机器闲着不转是不经济的, 因此, 还需从市场购买一些蚕茧。1934年从市场购买的蚕茧量比社员供应的多。在另一方面, 工厂还接受其他工厂供给的原料代为缫丝的订货。这种方法被称为“代缫”, 即为其他人缫丝。1932年为别厂缫丝超过25担, 实际上相当于从村里供应原料的缫丝量。1935年工厂重新装备以后, 丝的总产量超过前几年平均量的三分之一。但社员的蚕茧供应没有跟上来, 虽然1935年稍有增加。在原料供应方面, 工厂是半依赖于外界的。

劳力来自社员。由于引进工厂, 生产中所需的劳力比在家庭手工业中所需的劳力少得多。这个工厂的缫丝部分30个工人已足够。她们都是年轻妇女, 年龄从16至30岁不等。选茧和清洗蚕茧需要非技术工人10名。丝抽出来以后必须重新整理并按出口标准包扎, 这一部分工作需要6至8名技术工人。工人总数约50人。此外, 尚有两名经理、一名技师、一名司库、一名机器维修保养工、两名杂工。

In reeling and re-wheeling special training is needed. Thus employment and membership must be differentiated. Those who work in reeling and re-wheeling are paid in terms of a daily wage, forty to sixty cents a day. Those who work in selecting and cleaning cocoons are paid by piece-work. They receive about twenty to thirty cents a day. (Col. B. III. B. 2. a.)

The technical director is recommended by the School and the treasurer is recommended by the local bank. General business management is in the hands of local leaders, Chen and Chou. But the final authority is the Extension Department of the School. The staff are all paid fixed salaries. The total amount of wages and salaries, in 1929, was 7,557 dollars, or 57 per cent. of the total current expenses. Each common labourer can get roughly 70 dollars a year from 150 days of work.

From the above analysis, we can see that the factory is (1) owned by the members, (2) financed largely by the Provincial Peasant Bank, (3) managed by the School through the local leaders, and (4) worked by a part of the members. The so-called co-operative principle is significant chiefly in the problem of distribution.

The profit made by the factory in 1929, the first year, was 10,807.934 dollars. It was distributed according to the following

principle:

"To encourage the members and to expand the organization, we decided to fix a high percentage for dividends. It should amount to seventy per cent. of our total profit. We will ask the members to lend half of their dividend to the factory to clear the loans. Fifteen per cent. of the profit will be our reserve fund. The rest will be divided into (1) reserve for improvement, (2) allowance for next year's current expenses, and (3) bonus for the staff, in the proportion of 4 : 3 : 3." [7]

In that year the amount of dividend actually received by the members was double the share they had contributed. But since that year, the price of silk had dropped to such a degree that no profit was made. The balance sheets since 1931 have not been published. I can only give the figures of the first three years.

Net Profit
\$92,807.934
\$9,310.330
\$9,3183.655

From 1931, the factory has tried to pay back the loan. For instance, in 1929, as shown in the balance sheet, the loan amounted to 135,663.763 but in 1931 it was reduced to 77,271.544. The interest of the large loan was also a cause for the loss. In 1929 it was 5,060, in 1930, 5,500, and in 1931, 4,121. In 1935, the factory was reequipped with modern machinery. It is expected to gain some profit after 1936. They want to revise the principle of distribution. Both the change agent and the local leaders told me that to give a high dividend in the beginning was a mistake. The members took it as a matter of course. But when the factory failed to distribute profit, they complained and were disillusioned. They realized that it would be better in the future to distribute a constant but small dividend every year instead of high dividends periodically.

在缫丝和整理丝时需要特殊训练。因此，工种不同，待遇也不同。缫丝和整理工按日工资计算，每天4至6角。挑选和清洗蚕茧工按计件工资计算，一天可得约2至3角。（B栏，III项，B.2.a）

技师由蚕业学校推荐，司库由当地银行推荐。总的管理业务由当地领导人陈和周负责。但最高职权在蚕业学校推广部。职员均是固定工资。1929年总工资为7,557元，占当时总开支的57%。每一个普通工人一年工作150天约可得70元。

从以上分析，我们能看到工厂：（1）属于社员所有；（2）主要由农民银行给予资金；（3）由蚕业学校通过当地领导人管理；（4）部分社员参加劳动，担任工作。所谓合作原则其意义主要在于分配上。

1929年即第一年，工厂的利润为10,807.934元，按下列原则进行分配：

“为鼓励社员并扩大组织，我们决定提高红利，约为总利润的70%。我们要求社员借一半红利给工厂以便工厂还债。利润的15%将作为我们的储备基金。其余金额将被分成：（1）改良储备金；（2）明年开支津贴；（3）职员奖金。比例为4：3：3。”^[8]

那一年，社员所分到的红利确实相当于他们所购股份的两倍。但自从那年以后，丝价跌落到如此程度，以致毫无利润可得。1931年以来一直没有公布资产负债表。我只能提供头三年的数字。

纯利润

~~1929~~ 1929 3308元

~~4933~~ 4933.655元

1931

1931年起，工厂想开始还债。如1929年资产负债表上所示，负债达135,663.763，但1931年减为77,271.544元。大笔借款的利息也是亏损的一个原因。1929年利息为5,060元，1930年为5,500元，1931年为4,121元。1935年工厂重新装备现代机器。预期在1936年之后可有一些盈利。他们想要修改分配原则。改革者和当地领导人都认为一开始分配这样高的股息是错误的。一般社员把这看成是理所当然。但当工厂不能分配利润时，他们便抱怨和失望。他们认识到以后如能每年分到少一些但固定的红利比在一个时期分到一大笔红利要好。

[7] Government Support

I have indicated above how the government had entered into the change situation. In the very beginning, the local government in the town, the town council, co-operated with the School to start the reform programme. But at that time, 1923, the Provincial government was in the hands of a war lord who had no interest in any measure of that kind. Only after the establishment of the Nationalist Government in Nan-king in 1927 had rural reconstruction gradually become one of the main policies of the government. Special attention has been paid to the rural silk industry as well as to the co-operative movement. The co-operative factory in this village was therefore able to secure its financial support from the government. Moreover, the experiment in the village was the forerunner of the big programme of change in this rural industry in China; it will be interesting to review how the government took up the trend and spread the programme to many silk-producing areas in China.

The following quotations from The Chinese Year Book are selected to represent the governmental programme in this connection.

(1) Sericulture Reform

"One of the most important of China's rural industries is sericulture, but of recent years it has been hard to stand up against Japanese competition, largely because of the superiority of the silkworms bred in that country.

"In all the provinces where the production of silk is extensive, the local authorities are either acting in co-operation with the National Government, or taking special measures to improve the condition of those engaged in sericultures. What is being done in Kiangsu and Chekiang may be cited as typical of the measures being taken all over the country to revive the silk industry. The raising of the silkworms was formerly left in the hands of the farmers, whose conservative attitude and lack of resources precluded the possibility of introducing reforms to improve the industry.... The Kiangsu and Chekiang officials, as a preliminary step towards improvement, organized a Commission for controlling the silk industry. At the outset the Commission contented itself with preventing competition among cocoon merchants by suggesting an official price for fresh cocoons. In the autumn season the Commission's attention was directed to stock improvement, which it tried to accomplish by replacing inferior

indigenous varieties of silkworms with improved breeds. The egg-cards used by the Chekiang farmers were issued by the government sericultural experimental stations, the production of egg-cards by private hatcheries being prohibited. In Kiangsu similar control was exercised during 1934, though the measure, being tentative, was not so thorough-going as in Chekiang.... In addition to stock improvement, the Commission also fixed an official price for fresh cocoons and limited the number of collecting agencies in each locality.

七、政府的支持

上面我已说明政府是如何进入改革事业的。一开始，镇地方政府，即镇公所与蚕业学校合作草拟改革计划。但1923年那时候，省政府在一个军阀手里，他对那种措施没有任何兴趣。南京国民党政府在1927年成立以后，农村建设才逐渐成为政府的主要政策，对乡村丝业和合作运动给予特殊关切。所以，这个村子的合作工厂才能得到政府提供的资金。此外，村里的试验是中国农村工业中大的改革方案的先驱。回顾一下政府是如何接受这个趋势并把这种改革计划传到中国产丝的其他许多区域，是颇有意思的。

下面摘引的几段文章是选自《中国年鉴》中有关这个问题的、有代表性的官方计划。

(1) 蚕丝业改革

“中国农村工业中最重要的一项是蚕丝业。但近年来甚难与日本竞争，主要是因为在该国培育了最好的蚕。

“在所有大量生产蚕丝的省份中，地方当局或与国民政府合作，或采取特殊措施，都努力改善蚕丝生产的条件。江苏、浙江两省之所为，可作为全国各地为振兴蚕丝业而采取的措施的典型。过去，蚕都由农民饲养，他们的保守态度以及缺少资金的条件，阻碍了引进改良办法来改进工业的可能性。……江苏、浙江的官员组织了一个蚕丝业委员会，作为改良工作的第一步。一开始，委员会为避免与茧商竞争，提出了收购鲜茧的官价。在秋季，委员会倾注全力于改进蚕种，用改良的品种来代替当地的蚕种。浙江农民用的蚕种由政府的蚕丝实验站颁发，私人培育的蚕种禁止使用。1934年江苏实行了同样的控制，措施是试验性的，不像浙江那样彻底。……除改良品种外，委员会还对新鲜蚕茧规定一个官价以及对每一地区的收购代理处限定了数目。

"A three-year plan for the improvement of the silk industry in the provinces of Kiangsu, Chekiang, Shantung, Szechwan, and Kwangtung has also been drawn up by the Sericulture Improvement Commission of the National Economic Council. The scheme calls for the expenditure of \$1,500,000 for the realization of the first year's plan in 1935.

"For the financial year, July 1934, to June 1935, the National Economic Council has allotted \$400,000 for the use of the Sericulture Improvement Committee."^[9]

(2) *Co-operative Movement*

"Since the introduction of the Co-operative Movement in China in

1919 it had enjoyed only a slow development; but with the success of the Northern Expedition and the unification of the country, the Co-operative Movement began to occupy an important place in the programme of the Kuomintang, which was dedicated to developing China on a basis of equality with foreign nations. Since then, the Co-operative Movement has enjoyed a very rapid growth. The Kuomintang began to be interested in the Co-operative Movement as early as 1919. In his lecture on local government, Dr. Sun Yat-sen once suggested the promotion of co-operative enterprises among workers and farmers.... At the second National Congress of the Kuomintang, it was resolved to organize farmers' banks and to promote co-operative enterprises among the Chinese peasants. During the Plenary Session of the Central Executive Council of the Kuomintang in August 1936, it was resolved that the government should push the organization of co-operative societies among farmers....

“江苏、浙江、山东、四川、广东等省改进蚕丝工业的三年计划也由国家经济委员会的蚕丝改良委员会制定。为实现1935年的第一年计划，所需经费为1,500,000元。

“1934年7月至1935年6月的财政年度，国家经济委员会为蚕丝改良委员会拨款400,000元。”^[10]

(2) 合作运动

“自从1919年中国开始了合作运动以来进展很慢；但随着北伐胜利和国家统一，合作运动在国民党计划中开始有了重要的地位，这个计划旨在同外国平等的基础上发展中国。从那时起，合作运动迅速发展。国民党早在1919年便对合作运动有了兴趣。孙中山先生在地方政府的演说中曾建议，在工人、农民中促进合作企业。.....国民党第二次全国代表大会决定组织农民银行，在中国农民中间推广合作企业。1936年8月国民党中央执行局全体会议决议中指出政府应在农民中推进合作社的组织。.....

"With the establishment of the Nationalist Government in Nanking many provinces began seriously to push the Co-operative Movement. At the fourth Plenary Session of the Central Executive Council of the Kuomintang in February 1928, General Chiang Kai-shek and Chen Ko-fu jointly proposed the organization of a special Committee on Co-operation. In October of that year, the Central Executive Council of the Kuomintang issued an order to all the branches in the country, asking them to include co-operative work as a part of their political activities.

"In addition, the Kiangsu Provincial Government promulgated a set of Provisional Regulations regarding Co-operative Societies and

organized the Kiangsu Agricultural Bank on July 16, 1928, with a view to developing rural economy, and to offering credit facilities to the farmers at low costs."[\[11\]](#)

[8] Difficulties in Change

The intention of the people to accept the reform is due to its practical benefit as expressed in increase of family income. Now we can examine how far the reform programme has met this expectation.

The disinfection of silkworm eggs, the organization of a common room for raising young worms and the supervision given by visiting instructors in the later stages have reduced the cost and increased the production of cocoons. This part of the reform has enabled the people to get an income roughly twice as much as they had before. (Col. B. III. C. 1. a.) The result of the reform in reeling is not so promising. In 1929, the members had received as dividend about ten dollars per share. But ever since that year, they have got nothing of that sort from the factory. On the other hand, they were under obligation to supply raw materials with a delayed payment of 30 per cent. Up to the present, those whose income has actually been increased by the introduction of this factory are the labourers and the staff in the form of wages and salaries. They are the minority of the community. (Col. B. III. C. 1. b.)

The inability of the factory to distribute yearly profit among the members is due to two fundamental factors. First of all the reformers are not able to control the price level. They have succeeded in producing silk of high quality, but between the quality and the price the ratio is hardly proportionate. It is true that better silk can be sold at a higher price, but the price of silk in general fluctuates at different times. So long as the reformers cannot control the market, mere improvement in the quality of production cannot necessarily bring back higher returns and is not able to increase the income of the villagers.

“南京国民党政府成立以后，很多省开始认真推动合作运动。1928年2月国民党中央执行理事会第四次全体会议上，蒋介石将军和陈果夫联合提议组织专门的合作委员会。当年10月，国民党中央执行局向所有分支发布命令，要求它们把合作事业作为其政治活动的一个组成部分。

“此外，江苏省政府颁发了一系列有关合作社的暂行规章制度，并于1928年7月16日组织了江苏农民银行以便发展农村经济，并为农民提供方便的低息贷款。”^[12]

八、改革中的困难

人民愿意接受改革，主要在于实际利益，例如增加了家庭收入。现在我们可以看一看改革计划在多大程度上满足这种期望。

蚕种的消毒、稚蚕公育、教员的定期指导使成本有所降低，蚕茧增产。这一部分改革使得农民的收入大约比以前增加了一倍。（B栏，III项，C.1.a）缫丝改革的成果并不理想。1929年每股分得红利约10元。但自从那年起，他们再也没有从工厂拿到什么。相反，他们还有义务供应原料，而且是延期付款30%。至目前为止，由于有了工厂而收入真正有所增加的是工厂的工人和职员，以工资的形式增加了收入。他们是这一社区的少数。（B栏，III项，C. 1. b）

工厂未能分给社员年利是由于两个基本因素。首先，改革者不能控制价格水平。他们成功地生产了高质量的丝，但质量和价格之间比率不相称。确实，好丝应该能卖好价，但丝的总的价格在不同时期波动较大。只要改革者不能控制市场，单是改进产品质量未必能获取高的报酬，因此，村民的收入未见提高。

A more immediate factor responsible for the present state of affairs is the financial problem. It is not true that the factory has not made profit during the years 1930 to 1936, because the total amount of loans has been reduced every year. In other words, the factory saved from its own profit in production so as to buy over the means of production which was so far borrowed. The people do not account for this. They only know the concrete income of the family. As soon as their expectations could not be realized they began to be disillusioned. The direct reaction was discontinuance of further payments of their subscriptions. Up to the present time, only about one-half of the amount subscribed has been paid in.

Of course, according to the regulation, the members have the right to audit the account themselves and demand explanations from the manager. But the people are satisfied on the level of suspicion and occasional gossip without taking any definite steps to investigate. They are mostly illiterate. They do not understand what is written on the balance sheet. Their rôle given in the regulation is new to them. The reformers have only taught the girls how to reel silk but not the members how to be the masters of the factory. They have no knowledge of their own responsibility. As long as the educational work cannot keep pace with the industrial reform, the co-operative factory can be only run for the people and can partially belong to the people but can never be really controlled by them.

Introduction of modern machinery into the village economy, as we have seen in the case of water pumping in agriculture, has created a new labour problem under the domestic system where every household had its own reeling machine. In other words, there were at least three hundred and fifty women in this village engaged in the work of reeling silk. Now under the factory system, the same amount of work can be done easily by less than seventy persons. The amount of labour needed in production has been reduced. For instance, by the present reeling machines, each worker can look after twenty spindles at the same time while with the older machines one could only handle four or five. From the technical point of view it is a great improvement. But what does this improvement mean to the rural economy? Nearly three hundred women have lost their opportunities to work. (Col. B. III. C. 2. b.) The problem of "unemployment" has its wider repercussions—the traditional division of work according to sex remains unchanged, but the size of the farm is so small that introduction of female labour to the land is impossible; and no new industry has been introduced to absorb the surplus of female labour. (Col. C. III. C. 2. b.)

造成目前这种状况的更直接的因素是资金问题。在1930年至1936年间工厂并不是没有盈利，因为贷款的数目每年有所降低。换句话说，工厂节约下自己生产的盈利，买回了借来的生产资料。人们不算这笔账，他们只知道家庭的具体收入。一旦他们的愿望没有实现，他们就会感到希望破灭，其直接反应就是不再继续向工厂交纳股金，至目前为止，只缴纳了认购股金的半数。

当然，根据规章，社员自己有权查账，并可要求经理解释。但人们只停留于怀疑和偶尔的议论上，而不采取切实的措施进行调查。他们大多数是文盲。他们不明白写在资产负债表上的数字。规章赋予他们的角色，对他们来说是新的。改革者只教授女孩子如何缫丝，而没有教社员如何当工厂的主人。他们对自己的责任没有认识。只要教育工作跟不上工业改革的步伐，合作工厂可以只是为人民而开设，部分属于人民，但决不可能真正由人民管理。

现代机械被引进农村经济，正如我们已经看到在农业中引进了水泵，使有缫丝机的家家户户发生了一个新的劳动力的问题。换句话说，这个村庄过去至少有350名妇女从事缫丝工作。现在开办了工厂，同等量的工作，不到70个人就能轻易地担负起来。生产所需的劳动量减少了。例如，现代的缫丝机，每个工人同时能照看20个锭子，而旧缫丝机一个人只能掌握4至5个。从技术观点来看，这是一个很大的改进。但这一改进对农村经济意味着什么呢？将近300名妇女失去了她们的劳动机会。（B栏，III项，C. 2. b）“失业”的问题引起了比较广泛的反响——根据男女性别不同的传统分工仍然不变，但农田面积如此之小，要把妇女劳力引向田地是不可能的。然而也没有引进新的工业来吸收多余的妇女劳力。（C栏，III项，C. 2. b）

The reformers have tried to solve the problem by the system of distribution of profit. But it has not been successful, as we have shown above. The results are (1) for those who cannot go to town for various reasons, survival, or, to a certain extent, revival of the traditional domestic industry which becomes a kind of resistance of the reform programme through competition in securing raw material, (2) movement of the female population to the towns, which is contradictory to the original intention of the reformers, and (3) creation of a special wage-earning class in the village.

The survival of the traditional domestic industry can be quantitatively estimated. The total amount of cocoons produced in this village is about 72,000 lbs. The decrease of members' supply to the factory indicated the increase of domestic reserve, taking the total production as constant and the amount of cocoons directly sold to the town as insignificant. In 1929 the reserve was about one-sixth of the total production but in 1932 it increased to two-thirds. In 1936, before I left the village, the reserve was about one-third. How much more one can get by selling native silk instead of selling cocoons, it is difficult to say, because the prices of cocoon and that of silk fluctuate and villagers do not know how to forecast them. As we can see under the lowest price of native silk, one dollar for three Liang, the producer can get little more than the value of the raw material, if the price of the latter is about fifty dollars per picul. But the price of native silk is not known when the market for cocoon is open. It is not the real calculation of the prices of silk and cocoon that makes the people reserve their raw material for domestic reeling but the belief that they can get more money if they reel silk instead of selling the raw material.

The substitution of the factory for the domestic system in the silk industry is a general process which is not limited to the village. The development of silk filature in the nearby cities in the last twenty years has been rapid.^[13] The urban industry attracts rural labour. This movement of population undoubtedly is a disruptive force in the traditional social structure of the rural community. To counter this process was one of the original intentions of the reformers. But the small-scale factory in the village, as limited by its local supply of raw material, cannot fully utilize the available labour in the village. On the contrary, it has not been able to check the outflow of rural population. I have shown above that in 1935 there were thirty-two girls between the ages of sixteen to twenty-five who lived outside the village (VI-1). They were engaged in silk factories in Wuhsi. At the time when I was in the village another silk factory was established in Chên Tsê. More girls were recruited from the village. The total number of girls

between the age of sixteen to twenty-five is one hundred and six in this village. More than 80 per cent. of them are now engaged in factories outside of the village or in the co-operative factory. They are new wage-earners.

改革者曾经想用分红的办法来解决问题。但如我们在上面表明的，这并未获得成功。结果是：（1）为那些由于多种原因不能到城镇去的人保存了或在某种程度上恢复了传统的家庭工业，原料的竞争使其成为改革计划的一种阻力；（2）妇女向城镇移动，这是与改革者原来的意图相矛盾的；（3）农村中产生了一种特殊的挣工资的阶层。

对残存的传统家庭工业，可以作量的估计，这个村庄蚕茧的总生产量约为72,000磅。假定这一生产量是稳定的，直接卖给城镇的茧子为数极少，那么对工厂的供应减少表明了家庭的储存增加。1929年，留给家庭的蚕茧约为总生产量的六分之一，但1932年增加到三分之二。1936年我离开村庄以前，留给家庭的约为三分之一。卖生丝能比卖蚕茧多得多，很难说，因为蚕茧和生丝价格都有波动，农民不知如何预测。如果我们按生丝最低价格看，一元钱三两，生产者仅能比原料的价值多拿少许，如果后者的价格约为每担50元。但蚕茧市场开放时生丝的价格还是未知数。农民保留原料从事家庭缫丝的原因，并不在于实际考虑丝和茧的价格，而是因为他们相信缫丝能比卖原料多挣钱。

在蚕丝工业中工厂取代家庭工业是一个普遍过程，并不限于这个村庄。近二十年来附近城市缫丝业的发展极快。^[14] 城市工业吸引农村劳力，无疑这种人口流动对农村社区的传统社会结构是一种破坏性的力量。改革者的原意之一就是要阻止这一过程。但村庄里的小型工厂为当地原料供应所限，未能充分利用村里现有的劳力。相反，它也不能阻止农村人口的外流，我已经在上面表明，1935年有32名16~25岁的女青年住在村外（第六章第一节），她们在无锡丝厂工作。我在村里的时候，震泽又开了一家蚕丝工厂。村中更多的女青年被吸收到工厂里。本村16~25岁的女青年共有106名，80%以上现在村外的工厂或在合作工厂工作。她们就是新的挣工资的人。

A wage-earning class is not traditional in the village. The employees in agriculture are few. Labour enters into the realm of commodity in a very limited sense. Only by the decline of domestic industry, female labour has created a labour market in the village. To this problem we shall devote our discussion in the next section.

[9] Effects on Kinship Relations

Wage-earning is now regarded as a privilege, because it makes an immediate contribution to the domestic budget. Those who have no adult daughters begin to regret it. The woman's position in society has undergone a gradual change. For instance, a girl who was working in the village factory actually cursed her husband because he forgot to send her an umbrella when it rained. It is interesting because this little incident indicates changes in the relation between husband and wife. According to the traditional conception, the husband is not supposed to serve his wife, at least he cannot do so in public. Moreover, the husband cannot accept his wife's curse without any protest or counter-curse.

The traditional economic status of a girl is subordinate to her father or to her husband. She has no opportunity to possess any large amount of money (IV-2). The financial power of the Chia is in the hands of the head. It is correlated with the traditional system of collective production. The men who work on the farm are dependent upon their women for the supply of their food. The mulberry leaves needed in feeding the silkworms are carried from a distance by the man. The private sense of the production is overshadowed by the collective aspect. But the wage-earning is essentially individualistic. The earner feels that the wage is the result of her own effort. This sense is shared by both parties, the owner herself and the head of the Chia. Furthermore, the wage is paid by the factory to the earner herself. At least during that moment, she is able to spend a part of her earnings in accordance with her own wishes. Therefore, the economic relation in the Chia is gradually modified. For instance, if the girl spends her wage within reasonable limits and for proper purposes such as buying clothes, it will be accepted without interference. But she is not allowed to spend all her wage; a large portion of it must be handed over to the head to go into the common budget. To maintain the collective and centralized system of economy under the new situation, the head of the Chia, even at the expense of his authority, will be forced to be considerate towards fellow members of the Chia. Complications come again in the problem of to whom she will hand over her earnings. When the girl is not married and has a mother, but when the head of the Chia is her grandfather, her mother may hold up a part of her earning for future use in her marriage. If the economic condition is not favourable for saving, the amount will be absorbed in

the general budget. A married woman will keep a part of her earnings as her own savings. These facts show the increasing differentiation of the individual family from the compound group Chia.

挣工资的阶层并不是村里传统的结构。农业雇工非常少。劳动在非常有限的意义上进入商品领域。只有在家庭手工业衰落的情况下，妇女劳动力才在村里形成了一个市场。我们将在下一节再讨论这个问题。

九、对亲属关系的影响

现在挣工资被看作是一种特殊的优惠，因为它对家庭预算有直接的贡献。那些没有成年女儿的人家开始懊悔了。妇女在社会中的地位逐渐起了变化。例如，一个在村中工厂工作的女工因为下雨时丈夫忘记给她送伞，竟会公开责骂她的丈夫。这是很有意思的，因为这件小事反映了夫妻之间关系的变化。根据传统的观念，丈夫是不侍候妻子的，至少在大庭广众之下，他不能这样做。另外，丈夫不能毫无抗议或反击，便接受妻子的责备。

一个女孩的传统经济地位是依附于她的父亲或丈夫的。她没有机会拥有大宗的钱财（第四章第二节）。家的财权在一家之长的手里。这与传统的集体生产相互关联。在地里工作的男人靠他们的女人送饭，饲养蚕所需的桑叶由男人从远处运来。个人不容易意识到在一家集体生产中的贡献。但挣工资基本上是个人的事。挣钱的人能感觉到她的工资收入是她自己劳动的结果。这是收入者本人和家长都会感觉到的。此外，工资由工厂直接付给她本人。至少在这个时候，她可以将她的一部分工资按她自己的愿望去花费。因此，家中的经济关系就逐步地得到改变。比如，女孩子在合理范围内，为了正当的目的，如买一些衣服，那是可以允许而不受干涉的。但不允许她把所有的工资都花掉，工资的大部分要交给家长，归入一家的共同预算。在这个新的形势下，为了保持集体和集中的经济体系，即使牺牲他的权威，家长也必须对家中的成员作出考虑。女孩子挣的钱交给谁，是一个复杂的问题。女孩子未婚时，如果她有母亲，而家长是她的祖父，她的母亲会将她的钱收下一部分以供她将来结婚时所用。如果经济状况不允许存钱，全部金额归入家的总预算之中。一个已婚的妇女则将她收入的一部分留作她自己的积蓄。这种情况说明了单个家庭不断从家的复合群体中分化出来。

The physical separation of the wage-earner from the members of her family may also produce essential changes in the kinship relations. The separation of a daughter-in-law from her mother-in-law will reduce the possibility of daily conflict. But the separation of wife from husband will loosen the marital tie. One extreme case can be cited for illustration. A girl left her husband about one year after she had married. She stayed in a factory in Wuhsi and fell in love with a workman in the same factory. They were both discharged by the factory when the illegal union was discovered. Having lived together for two months, but being pressed for money, they separated. The girl returned to the village and was greatly disgraced. Her parents-in-law refused to admit her, but afterwards accepted her because they planned to arrange a remarriage for her in order that they could get a sum of money for compensation. Later, in view of her earning capacity

in the silk factory in the village, her parents-in-law cancelled their plan and treated her as usual. Her husband took a passive attitude towards the entire affair.

The separation of the child from its mother rearranges the intimate relation in the Chia. The suckling period is shortened. The grandmother will take up the mother's obligation in further nursing and care of the child. This also establishes new relations between the daughter-in-law and mother-in-law. Similarly, with those women who work in the village factory and cannot bring their children with them, the same situation is found.

All these facts point to the re-organization of the kinship relations in a new pattern which will find adjustment with the industrial changes. My present material is only sufficient to suggest the problem for further investigations.

挣钱的人同其他家人分开，对亲属关系也产生了实质的变化。儿媳从婆母处分离出来可以减少日常的争吵。但妻子同丈夫分开会使婚姻的关系松散。可以举出一个极端的例子来说明。有一个妇女，在结婚一年后离开了他的丈夫。她在无锡的一家工厂里工作，并和这个厂里的一个工人发生了恋爱。他们这种不合法的结合被发现之后，他们被厂方开除。他们同居了两个月，由于经济所迫不得不分离。这妇女回到村中，受到很大的羞辱。她的公婆拒绝再要她，但后来又收留了她，因为她的公婆准备将她另嫁他人，以便可以收到一笔钱作为补偿。最后，考虑到她在本村丝厂里能工作的本领，她的公婆取消了原来的打算，待她一如既往。她的丈夫对这件事则完全采取被动的态度。

孩子从母亲处分开，就会使家中的亲密关系发生新的安排。母亲喂奶的时间缩短了。当祖母的接过母亲的责任，继续照看、抚养孩子。这也使婆媳之间产生了新的关系。那些在本村工厂里工作而不能带孩子的女人，也有类似的状况。

以上事实说明了亲属关系以新的形式进行着重新组合，并将随着工业的变迁得到调整。我现有的材料只能为进一步的调查提出一些问题。

CHAPTER XIII SHEEP RAISING AND TRADE VENTURES

The reform of the silk industry is only one of the attempts being made in the village to increase income and thus to counteract the decline in silk prices. But my present material does not allow me to give such a detailed analysis of the other measures which are being taken.

The most important of the new enterprises is sheep raising. This was introduced about ten years ago, but only recently became an important industry. Its development was not due to the initiative of any one agent. People in the village learned from their neighbours that in the town there was a new shop collecting sheep foetus, or newly born sheep. The demand in the market called forth the new industry in the village. Even now the people have no exact knowledge of what is the use of the sheep foetus, and they often asked me about this. Some supposed that the mother sheep was killed in order to get the foetus, the skin of which is valuable. This idea does not accord very well with traditional ethics, although the people themselves practise infanticide.

The main difficulty in sheep raising is the problem of feeding. 90 per cent. of the land is used for farming (X-2). Except for a few plots of ground occupied by tombs belonging to the people of the town, there is practically no pasture land available for sheep. The farms are open; there are no fences to prevent possible damage by wandering animals. In such circumstances it is impossible to raise sheep in the open. Therefore special huts have been built, and the sheep are kept enclosed. As I mentioned above, the sheep hut has become a common appendage of a house.

To feed the sheep, grass must be collected; in winter dried mulberry leaves are used. A new division of labour in the household has been developed in this connection. Collecting grass is left to the children. Walking through the village you will see children even below ten scattered everywhere in small groups, collecting grass under the mulberry trees, along the streams, and on the open tomb ground. The children's labour is thus incorporated into the domestic economy. This has created a new problem for the public school. Literary

education seems to the people less valuable than the immediate contribution which children can make to the family income. The list of absentees in the classes is correlated with the number of sheep raised in the village. Chen remarked with regret that the school curriculum is too rigid to be adjusted to present economic conditions (III-5). This leads to interesting questions on the relation between economics and education, but this I cannot deal with at present.

拾叁 羊与贩卖

进行蚕丝业的改革仅仅是为增加居民的收入、抵制丝价下跌所做的各种努力之一。但根据我现有的资料不可能对目前采取的其他措施进行详尽的分析。

新兴事业中最重要的一项是养羊。大约十年前就有人开始养羊。但到最近才变得重要起来。养羊业的发展并不是由于某个人的倡议。村里的人从邻居那里听说，镇里新开了一家店铺，收购羊胎和新生的羊羔。市场的需要使这个村子里兴起了这项新事业。但甚至到现在，人们还不甚了解羊胎究竟有何用处，他们经常向我提出这个问题。有些人想要杀掉母羊好取羊胎，羊胎皮是值钱的。这个主意与传统的伦理观念很不相符，尽管人们自己还要溺杀婴儿。

养羊所遇到的主要困难是饲养问题。土地的90%是农田（第十章第二节）。除几块属于城里人的坟地外，几乎没有适于放羊的场地。农田是敞开的，没有篱笆，牲畜乱走，可能损害庄稼。在这种情况下无法在田野中放羊。所以，就盖起了专用的羊圈，把羊关在里面。正如我上面提到的，羊圈已变成了住家普遍都有的附属建筑了。

为了喂羊，就必须割草，冬天用干桑叶喂羊。就这一点而言，家庭劳务中就产生了一种新的劳动分工。割草的事由孩子们担任。如果你在村里走一走，就可以看见到处有三五成群割草的孩子，有些还不到十岁，他们有的在桑树下，有的沿着河边，还有些在坟地里。这样，孩子们的劳动与家庭经济结合了起来。对于小学校来说，这就产生了一个新问题，文化教育的价值在人们眼里，还不如孩子们割草为家庭收入作出的直接贡献有价值。缺课人数与村里养羊的头数相关。陈曾遗憾地表示，学校的课程过于死板，难以与目前的经济状况相适应（第三章第五节）。这使人们注意到关于经济与教育的关系的令人感兴趣的问题，但目前我不能讨论这个问题。

Another advantage of keeping the sheep enclosed in the hut, is that the sheep manure can easily be collected. This is a valuable fertilizer. There are more than three hundred small huts in the village. The number of sheep in each hut varies from one to five. A rough estimate of the total number of sheep raised in the village is about five hundred.

For starting sheep raising, a certain amount of capital is necessary, at least enough to buy the ewe. Rams can be borrowed from relatives or hired for breeding. Payment for this service is not fixed and is made mostly by means of gifts. If a farmer cannot himself

raise the money to buy an ewe, he can raise sheep belonging to other people. A special system is thus developed, which the villagers call *fenyan*, literally "dividing sheep." The person raising the sheep is responsible for their feeding and gets half the young sheep as well as the manure in the hut. Chou's father is the biggest owner of sheep. He owns forty sheep, of which only four are kept in his own hut.

The ewe can be sold shortly before the foetuses are fully developed. The price for each foetus is three to five dollars. The owner can also sell new-born sheep and keep the mother. In this case the price is lower. But a mother sheep may bear young ones once or twice a year, while to raise a young sheep to maturity takes more than a year. People therefore prefer to sell young sheep instead of the foetus. The tradition against killing pregnant animals reinforces this preference. On the average a mother sheep produce two to four young ones every year, which will yield the owner an income of twenty to thirty dollars.

Another source of income to the people is trade ventures, which are embarked on in the lengthy intervals in the agricultural activities (IX-3). The people go to the neighbouring province, Chekiang, to transport goods—not those produced by themselves—by their own boats, and from there to some towns along the coast. This is a kind of interlocality trade. But from the point of view of the villagers, it is really selling their services as trading agents or as transport hands.

把羊关在羊圈里饲养的另一个好处是便于收集羊粪。羊粪是一种有价值的肥料。村里有300多个小羊栏。每个羊圈养1~5只羊。粗略估计，村里养羊的总数约为500头。

为了开展养羊业，需要一定数额的资金，至少要有足够购买母羊的钱。公羊可以从亲戚那里借来或者租来为繁殖之用。对于这项服务所付的报酬没有固定的数目，多数是采取送礼的形式。如果一个农民自己筹不起款子来买母羊，他可以养别人的羊。这样就产生了一种特有的方式，村民称之为“分羊”，从字面上讲就是“把羊分开”。养羊的人的责任是饲养，到时便能分得半数小羊羔和羊栏里的一半粪肥。周的父亲是最大的羊主，他有40只羊，其中只有4只养在他自己的羊圈里。

当羊胎即将长成前不久，就可以把母羊卖掉。每只羊胎的价格为3~5元。羊主也可以把刚生下的羊羔卖掉，把母羊留下。这时，羊羔的价格略低，但一只母羊一年能生一两次羊羔，而把羊羔饲养成熟却需要一年多的时间。所以人们喜欢卖羊羔，而不卖羊胎。反对屠杀孕期动物的传统也使得人们更加愿意这样做。一只母羊平均每年生产2~4只羊羔，能为羊主增加20~30元的收入。

农民收入的另一个来源是贩卖。在较长的农闲季节里，人们从事这种买卖（第九章第三节）。货物并非自己生产，而是用自己的船从邻省

浙江运至沿岸的一些城镇贩卖。这是一种地区之间的流通。但从村民的观点看来，这实际是像贩卖或搬运工一样出卖自己的劳务。

My informants stated that each boat engaged in this venture can yield forty dollars a year. Of course, this depends on the type of goods transported and sold and the fluctuation of their price. I had no chance of following their route because their activity in this line takes place from the end of August to the middle of October, and from the middle of December to the end of January, when I had already left the village. These ventures are regulated by the solar calendar. I cannot go into details here, except to mention that this is an important source of income. According to my informants, the number of boats thus engaged has increased in recent years.

为我提供情况的当地人说，每条贩运船一年可赚40元。当然，收入取决于贩运货物的种类及其价格的波动情况。我没有机会跟着他们一起去，因为他们这行的活动时间是8月底至10月中，然后又从12月中至1月底，那时我已经离开这个村庄。这些商业活动都是按阳历时间安排的。我不能在此作很深入的分析，只是想说明，这是农民收入的一个重要来源。根据提供情况的人说，从事该项行业的船只数目近几年来有所增加。

CHAPTER XIV MARKETING

[1] Types of Exchange

Exchange is a process of reciprocal transfer of goods or services between individuals or groups of individuals on the basis of some sort of equivalence. Exchange is necessary wherever there is specialization of production. Specialization of production takes place even between the members of a family. But the process of exchange within a family takes a form different from that found in the market. For in the first place the processes of distribution and exchange in a collective economy are not easily differentiated. The husband who works on the farm depends on his wife for the cooking of his food. In so far as the wife has contributed to the process of production, her claim on the farm produce comes under the head of distribution of the product. But when she consumes more than her share, exchange actually takes place. Secondly, the element of exchange is obscure where property is held in common by the members of a group. Where there is division of labour, the members contribute by their different occupations to the common source from which each derives his living. What exchange actually takes place between the members is thus not apparent.

This does not mean that the ideas of reciprocity in privilege and obligation, and of equivalence in contribution and share do not exist in the intimate social groups. On the contrary, they are among the most frequent causes of disputes and dissatisfactions in domestic life and are jealously upheld. Quantitative assessment of these economic relations in the domestic group requires a very refined field technique, but is not impossible.

The less apparent and less immediate forms of exchange are made possible by positive sanctions inherent in the institutions of the group. For example, parental obligation towards the child is balanced by the support given later by the young to the old, by the obligation to the next generation, or both. The longer the time involved and the more roundabout the transfer of goods and services, the stronger are the social ties in the group. The exchange of goods or services is a concrete expression of social ties. Where obligations can be fulfilled only over a long period of time the individuals involved tend to feel

more strongly their social relationship. This is in consequence one of the cohesive forces of the group. From this angle generosity can be viewed as the advance from one person to another of services or goods, bringing in consequence the persons closer to one another.

拾肆 贸易

一、交换方式

交换产生于个人之间或一些人之间，是物品或劳务在某种等价的基础上相互转换的过程。哪里有专业化的生产，哪里便需要交换。生产专业化甚至发生在家庭的不同成员间，但在家庭中，交换方式同在市场中所见到的不同。因为首先在集体经济中，分配和交换的过程不易区别。在田里劳动的丈夫靠妻子为他煮饭。从妻子对生产过程的贡献来说，她对农产品的权利，应该列在产品分配的项目下。但如果她消耗的要比她分配所得的那一份多，实际上便产生了交换。其次，当财产为一个群体的成员共同所有时，交换的要素是模糊不清的。有了劳动分工，成员通过不同的职业向共同生活的来源作出自己的贡献，同时从这一来源获取各自生活所需的资料。各成员之间究竟作了些什么交换因而是不明显的。

这并不意味着权利和义务的相互关系的概念、贡献和享受对等的概念不存在于亲近的社会群体中。相反，它们是家庭生活中发生争吵和不满的最常见的原因，并且往往发生一种出于妒忌而坚持不下的局面。对这种家庭群体的经济关系作出定量分析，需要精确的实地调查技术，但并不是不可能的。

比较不明显的、不直接的交换形式通过群体固有的制度的约束，已经成为可能了。例如，父母对孩子的义务可以通过年轻一代以后对父母的赡养，或者年轻一代对下一代的义务来取得平衡。时间越长，物品和劳务的转换范围越大，群体中社会纽带亦越强。物品或劳务的交换是社会纽带的具体表现。只有在一些需要很长时期才能相互完成的义务，有关的个人才会更强烈地感受到他们之间的社会关系，其结果是形成了群体的一种内聚力量。从这一角度考虑，慷慨可以被看作是一个人向另一个人预付的劳务或物品，这种行为使两个人之间的关系更加密切。

A similar type of exchange is found in larger social groups such as extended kinship groups and neighbourhood groups. Neighbours in the village are often allowed to take things from each other for consumption or other use in case of need. Within certain limits a man is glad to be useful to his neighbour. If the borrower makes repayment immediately and states the equation of exchange explicitly, the lender will be offended. "We are not outsiders to each other," they will say. In case extra labour is needed on the farm, relatives living nearby will

come to help without payment; so will neighbours on ceremonial occasions (VI-2). Mutual accommodation and services between relatives and neighbours are balanced out in the long run. Exchange on the basis of definite and calculated equivalence tends to diminish in proportion to the intimacy of social relationships.

The making of gifts may be considered as another type of exchange. This is not a result of specialization of production. Even relatives who are engaged in different occupations do not present their special produce as gifts. The type of objects used for formal gifts is prescribed by customs and consists mostly of food, besides offerings of cash on ceremonial occasions. The food offered as gifts is either bought from the market, such as ham and sweets sent at the end of the year, or produced by the people themselves such as special kinds of triangular-shaped rice pudding sent at the festival of Tuan Yang (IX-3). The receiver makes the same type of pudding and buys similar objects to offer to his relatives in return. This type of transfer of goods is significant not in making up mutual deficiency but in strengthening social ties.

From the foregoing analysis, it will be seen that social obligations, mutual accommodations and gift-making are not sufficient to enable a household in the village to secure all the daily necessities which it does not itself produce. Of goods consumed, those produced by the consumers are less than one-third of the total (VII-8). On the other hand, of the goods produced in the household, many are not consumed by the producers. The actual use of the young sheep and sheep foetus does not even seem to be known to the people who raise the sheep (XIII). In the silk-producing area, silk clothes are rare.

在大一些的社会群体中有同类的交换。例如扩大的亲属关系群体和邻里群体。在村里邻居之间，需要时可以互相挪拿东西用于消费或其他用途。在一定的限度内，一个人对他的邻居有用，他会感到高兴。如果借用者立刻要付酬并说明同等交换，出借者便会很不高兴地说：“我们不是外人。”田里如果需要额外劳力，住在附近的亲戚便来帮忙，不要报酬；有重大婚丧喜事时，邻居也这样来帮忙（第六章第二节）。从长远看，亲戚和邻居之间的互相接待、留宿和服务都是取得平衡的。社会关系越亲密，经过计算的绝对的对等交换也越少。

送礼亦可被看作是另一种交换。这不是专业化生产的结果。不同职业的亲戚，也不把他们的专业产品作为一种礼物。用来作为正式礼品的一些东西是根据习俗而来的，主要是食品。在重要礼仪场合则送一些现金。人们送礼的食品，或是从市场买来的，如年底送的火腿和糖果；或是自己制作的，如端阳节（第九章第三节）送的三角形的糯米粽子。接受礼物的人，也做同样的粽子，买相同的东西回送亲戚。这种类型的物品转让意义不在于弥补相互间的欠缺，而是加强社会联系。

从上述分析可以看出，社会义务、互相接待、留宿和互赠礼物是不够的，它不足以使村里的一个农户获得他自己不生产的日常必需品。在消费品中，消费者生产的只占总数的三分之一（第七章第八节）。另一方面，农民生产的东西，很多不是生产者消费的。羊羔和羊胎的真正用处，看来养羊人本身也不知道（第十三章）。在产丝区，

Even the rice is only partly consumed by the people themselves. Thus it is clear that there must be an extensive exchange system. The predominant type of exchange in the village is marketing.

[2] Internal and External Marketing

By marketing is meant the type of exchange in which equivalence in value is explicitly expressed in the transaction and immediately given or promised. In simple language, it is the process of buying and selling. In the village it is carried out, with a few exceptions, through money.

We can distinguish two types of marketing: internal and external. Internal marketing is the exchange of goods and services within the village community, and external marketing is that between the village and the outside world. They are interdependent.

The internal market of the village is bound up with the occupational differentiation in the community (VIII-1). As we have seen, more than two-thirds of the total population in the village are engaged in producing rice, silk, and sheep. These do not sell their produce in the village but to the town. Those engaged in fishing sell only a small portion of their produce to their fellow villagers. Those who produce special goods and render special services to the villagers are limited to a small group which is only 7 per cent. of the total population (VIII-2). Most of their work is not exclusively specialized but is supplementary to common household work. Carpenters, basket makers, and masons are engaged mostly in repair work. They keep a working place in their own house but they also work in the houses of their clients. Tailors work mostly in clients' houses.

The small degree of occupational differentiation in the community has made the internal market very narrow. People depend on the outside world for the supply of goods and services. This raises a general problem: how do the goods flow into the village? Goods may be bought by the villagers directly in the outside market and brought back to the village. Or they may be carried to the village by different kinds of middlemen. Among these three general types can be distinguished:

(1) Pedlars who visit the village periodically and sell goods at the house of the buyer.

(2) Retail stores which keep a permanent place in the village to store imported goods and attract buyers to their places.

(3) Agent boats which buy goods from the town on behalf of the consumers and transport the goods to the village.

丝绸衣服很少。甚至于米，也只是部分地供人们自己消费。所以非常明显，必须有广泛的交换系统。村里最主要的交换类型就是购销。

二、内外购销

购销是一种交换方式，在交易中对等的价值被明白地表达出来，立即付给或许诺偿付。简单地说，这就是购买和销售的过程。在农村里，除少数例外，交换一般是通过货币来进行的。

我们可以把购销分成内部和外部两种：内部购销是在村庄社区范围内交换货物和劳务，外部购销是村和外界进行的交换，它们是互相依赖的。

村的内部市场是同这个社区的职业分化有密切联系的（第八章第一节）。我们已经看到，村里三分之二以上的人口从事生产稻米、生丝和养殖羊羔的工作。他们不在村里出售这些产品，而要到城镇里去出卖。从事渔业的也只能出售一小部分产品给同村的人。生产专门货物和给村民提供专门服务的限于少数，只占总人口的7%（第八章第二节）。大部分工作并非完全专业化而是普通农户所需工作的一种补充。木匠、篾匠、泥水匠主要是从事修理工作，他们在自己家里干活，也到顾客家中去做活。

职业分化程度小，这使社区内部市场非常狭窄，人们靠外界供应货物和劳务。因而，产生了一个问题：货物如何运到村里来？农民可以直接在外部市场购买货物并带回村来，或者货物可由不同的中间人带到村里来。中间人主要可分三类：

（1）定期到村里来的小贩，在买主家门口卖东西。

（2）零售店，在村里有固定的地点，店铺里存放着从外界买来的货物，吸引顾客去购买。

（3）航船从城镇代消费者购买货物并运到村里。

[3] Pedlars

Pedlars may be regular or irregular. This depends on the type of goods they sell. Goods may be produced by the pedlars themselves or may be retailed from the market. Most of the irregular pedlars sell their own produce and do not come from the town but from other villages. This is a type of decentralized inter-village marketing outside the town. The extent of such markets is limited by the fact that the local differentiation of production within the nearby villages is not very far developed. The only differentiation, as mentioned (VII-5), is in vegetable cultivation. In the village gardens are too small to grow an amount sufficient for the consumption of the villagers. But the villagers near Lake Tai can produce large quantities of vegetables, and find their market among the nearby villages. Similarly seasonal fruits which are not grown in the village are supplied by neighbouring districts. The sellers carry their produce by boat and visit the surrounding villages.

These pedlars start with only a general expectation of a gross return and do not insist on a fixed price for each particular transaction. The seller offers a price, for instance, two coppers for three sweet potatoes. The buyer will not negotiate on the money value, but after the money has been given to the seller she will take several extra pieces. The seller may resist or pretend to resist, but I have never seen the transaction repudiated because the buyer takes too much. Such a kind of bargaining is made possible by various factors: the seller has no rigid conception of price, and the buyer no rigid idea of his demand. Moreover, there is no immediate competition on the side of either the seller or the buyer. The amount of extra goods taken will not exceed what seems reasonable to the buyer, and also varies according to many factors. For instance, men will not ask for extra pieces since, as they put it, this would hurt their self-respect; but their wives are free to do so. Conversation and joking, especially between different sexes, will increase the number of extra pieces. In such cases, the seller will voluntarily offer the extras without persuasion. Of course, the taking of extras cannot go too far, except the extras approximate to presents. In the long run it appears that the prices determined by this kind of bargaining are not higher than the market price in the town; for if it is discovered that this is in fact the case, the seller will not find it easy to sell his goods next time. Probably the price will also not be lower than the town price, for if

the gross return obtained by the seller is less than he could obtain from selling to the stores in the town, eventually he will not come to the village. But this leaves a large margin for fluctuation in particular transactions.

三、小贩

小贩可以是固定的或不固定的，根据他们出售的货物种类而定。小贩卖的货可以是他们自己制作的，也可能是从市场上零买来的。大多数不固定的小贩出售他们自己的产品，他们来自其他村，不是来自城镇。这是一种城镇外的分散性的村际贸易活动。这种市场的范围受到这种情况的限制，即附近村子的地方生产方面分化程度不大。如已经提到过的（第七章第五节），唯一的分化是蔬菜的种植。在村里，菜园太小，不能种足量的蔬菜供村民消费。但太湖附近的农民可以种植大量蔬菜，并把附近的村子作为他们的市场。同样，时令水果，村里没有种植，是邻县供应的。卖者用船载着他们的产品到周围的村子来兜售。

这些小贩只盼望回去时赚到一些钱，对每一笔交易并不坚持一个固定的价格。譬如卖者报一个价，三个甜薯卖两个铜板，买者并不和他讨价还价，而是给了钱以后，再拿几块甜薯。卖者可能拒绝不给或装着拒绝，但我从未见到过因为买者拿得太多而取消交易的。这种讨价还价之所以可能是由各种因素造成的：卖者对价格没有严格的观念，买者对他自己的要价也没有严格的想法。卖者和买者都没有直接竞争者。付钱以后买者拿取额外货物的量不会超出买者看来是合理的范围，同时还有其他不同的情况。譬如说，男人就不拿额外的货物，因为他们认为，这有损于他们的自尊心；但他们的妻子可以随便这样做。对话和开玩笑，特别是异性之间开玩笑，将增加拿取额外货物的数量。在这种情况下，卖者将不经要求自愿多给一些。当然，不能拿得太多，除非把额外货物当作礼物来送。从长远看来，这种买卖的价格不比城镇里的市场价格高，因为如果买家发现小贩的价格确实比城里的市场价格高，卖者下次将不易出售他的货物。可能价格也不低于城镇的商品，因为如果卖家的利润比他把商品卖给城镇的店铺要少，最后他就不到农村来卖货了。但在某些具体交易中价格上下的界限是比较宽的。

There are two regular pedlars from the town: one sells tailoring and toilet articles and the other sells sweets for the children. The women in the village go to the town less frequently than the men, since they have duties in household work and care of the children. Tailoring and toilet articles are solely for women consumers. Moreover, these goods are connected with personal tastes. Women will not trust their agent or their husbands to buy for them, and it is this which gives the pedlar his market. Bargaining with such a pedlar takes a different form from that described above. The buyer will not accept the price offered and then ask for extra pieces but will try to reduce the price for a fixed amount of goods. Thus the transaction may not take place if a price satisfactory to both parties cannot be arrived at. The lowest price which the pedlar will take is determined

by the amount he paid for the goods, and the amount of profit necessary to maintain his living. Since the goods are not perishable, he can wait for better terms.

The pedlar selling sweets follows another method. The demand for such goods must be artificially created by the seller. A loud bugle is used to attract children. Usually not all the children possess petty cash. Many have to ask adults to buy for them. The pedlar thus often causes dramatic domestic scenes. Children's cries and mothers' curses are mixed with the transaction of buying and selling. Bargaining is not keen because the buyer is either the child who does not know how to hide his real interest or the mother whose main purpose is to get rid of the nuisance. Part of the sweets are made in the pedlar's own house. The raw material is cheap. The price is thus determined largely by the living expenses of the pedlar.

Each of these pedlars has a customary area of peddling which includes several villages, and the area of which is determined by the distance the pedlar can walk and the profit he can make. The frequency of his visits is also thus determined. The pedlar selling tailoring and toilet articles comes to the village every two or four days, while the pedlar selling sweets comes nearly every day.

从城镇来的有两名固定的小贩：一个卖缝纫和梳妆用品，另一个卖小孩吃的糖果。女人由于有家务在身，还需照顾孩子，因此到城里去的机会比男人少。缝纫和梳妆等用品是专为妇女的消费品。此外，对这些商品的需求与个人喜好有关。妇女不愿托别人或丈夫替她购买，这才使小贩有他的市场。与这种小贩议价的形式和上述有所不同，买主不是先接受小贩的要价然后拿取额外的商品，而是先还价。因此价格如不能使双方满意时便不能达成交易。小贩要的最低价格取决于他买货时付的价钱和维持他的生活所需的利润。货物是经放的，他可以等待好一些的价钱。

卖糖果的小贩用另一种方式。对这种货物的需求必须通过卖者人为的创造。小贩用一个很响的喇叭来吸引孩子。通常孩子们不是都有零钱用的，很多孩子必须要求大人买给他们。因此，小贩常常会引起戏剧化的家庭场面。孩子的吵闹和母亲的呵责往往与买卖糖果声混杂在一起。这种买卖，讨价还价并不厉害，因为买主或是不懂得隐瞒自己真正兴趣的那些孩子，或者是一心想摆脱麻烦的孩子母亲。部分糖果是在小贩自己家里做的，原料便宜。因此糖果的价格主要取决于小贩的生活费用。

每一个小贩都有一个习惯卖货的地区，有时是几个村，范围的大小取决于小贩能走多少路，能赚多少钱。售货的次数也取决于上述因素。卖缝纫和梳妆用品的小贩每隔两天或四天到村里一次，而卖糖果的则几乎每天都来。

[4] Retail Stores

Pedlars do not live in the village. They visit the consumers periodically. Retail stores, on the other hand, are located at permanent places and attract buyers to the stores. This gives rise to a group of people who specialize in trading. They do not produce the objects which they sell, but buy them from the town and sell them to the villages. The following table shows the number of stores in their respective trades:

Grocers	3
Meat sellers	3
Bean cake sellers	2
Medicine seller	1
Brick seller	1
Toatal	10

The three groceries are located near the three bridges. They sell mainly cigarettes, matches, sweets, paper, candles, paper-money and other religious articles. I was not able to assess the total amount of their stock. Neither was I able to discover their average sales each day. The main difficulty is that they do not keep accounts. According to their information their daily sale varies from one dollar to twenty cents, and it is obvious that they are not able to supply the whole village with daily necessities of miscellaneous types. As we shall describe presently, the majority of purchases are made from the town by means of the agent boats. Chou described to me the function of these groceries, "We go to the groceries to buy cigarettes when we have guests." In other words, they are only supplements of the agent boats. The agent boats take a whole day to fulfil their customers' orders, and in urgent cases, people cannot wait until their return. They will then go to the stores. Religious articles are never needed at a very short notice, but are used at definite periods which can be foreseen. These appear in the retail stores because of the difficulty of transporting them in the agent boats. The paper-money is made of tin foils in the shape of old silver ingots. It is empty inside and so cannot be compressed. A larger space is therefore required for its transport than is available in the agent boats.

Meat is an important article of diet in the village. This is supplied by the butchers in the town through the meat dealers who go to the town at midnight and bring back to the village the amount needed in the morning. Consumers are thus able to get their meat when they

cook their meal at noon. Since there is no means of preserving fresh meat, the dealer will not bring more than he is certain to sell. This is often exhausted before the last buyer comes to the store, and if one wishes to make sure of the supply one must order it the evening before.

四、零售店

小贩不住在村里。他们定期到消费者那里去。而零售店则坐落在一个固定的地方吸引顾客到店里来。这就产生了一群专门从事商业的人。他们出售的东西并不是自己生产的，而是把从城镇里买来的东西再卖给村庄。下表说明了各行业的店铺数目：

杂货店.....	3
肉店.....	3
豆腐店.....	2
药店.....	1
砖瓦店.....	1
总共.....	10

三家杂货店在三座桥附近。它们主要出售香烟、火柴、糖果、纸张、蜡烛、纸钱及其他带宗教色彩的物品。我未能估计他们的存货数量。我也无从计算他们每天的平均销售量。主要困难是他们不记账。按他们所说，每天销售额两角至一元不等，很明显，他们不能供应全村以各种日用必需品。我即将谈到，大多数货物是靠航船从城里购运来的。周向我描述了杂货店的功能：“我们有客人时，便到杂货店去买纸烟。”换句话说，这只是航船的一种补充。航船为了满足顾客的订货，需要花一整天的时间在城里购买，紧急需要时，顾客等不及它们回来，便到店铺里去买。带宗教色彩的东西不属于紧急需要，但在预期的某一时间内使用。又由于这些东西用航船运输有一定困难，所以人们常常可在零售店里见到这些东西。纸钱是用锡箔做成旧的银锭形，里面是空的不能受压，航船无法提供如此大的空间来运输它。

在村里，肉类是重要食物之一。肉贩在半夜去到城镇屠夫那里购买第二天早晨需要的猪肉后，将其运回村里。消费者到中午煮饭时就能有肉。由于没有保存鲜肉的手段，所以卖肉的商人根据他能卖出多少来买进。最后一个主顾去买肉时往往就销售一空，如果有人一定要买到肉，必须在前一天傍晚订购。

Bean cake is used as fertilizer on the farm. This is heavy and takes up much space like bricks. The agent boat cannot be cumbered with this type of goods. Thus there are special stores for them in the village. The medicine store sells Chinese herbal medicines. These are usually sold at high retail prices and are often needed at a moment's notice, therefore the store finds a place in the village.

[5] Agent Boats as Consumers' Buying Agent

The village stores cannot meet all the daily needs of the villagers. For instance, there is no place in the village from which such essential goods as salt and sugar can be bought. These must be fetched by agent boats. The agent boats offer a free daily service to purchase necessities from the town and derive their income from acting as selling agents of the villagers. They play an important function in the village economy. This institution is common in the region round the Lake Tai, and it has led to a special development of the neighbouring towns.

Every morning, about seven o'clock, the agent boats begin to be active. There are four boats in the village; two plying on Stream A and two on Streams B and C (II-4). As the boats move along the stream, the villagers give their orders to the agent, "Twenty coppers of oil for this bottle and thirty coppers of wine in that container, please." The agent collects the bottles and money. Without counting he throws the money on the floor of the hinder part of the boat. He will talk freely with his clients on other topics. When the boat reaches the west end of the village, from where it proceeds directly to the town, the agent has collected a few dozens of bottles and a large number of coppers. The people going to the town board the boat as it passes their houses. They do not pay any fare.

Each boat has its own regular clients. The village can be divided into two areas each served by two boats. The two boats plying on the same stream draw their clients from the same area. Thus they are in competition with one another. But it is friendly competition. If there are few passengers in one boat, it will wait for the other and all the passengers will be transferred to the one boat. The boat is rowed by the young men passengers. The agent will classify the bottles and containers according to the orders and collect the coppers on the floor, he will join the passengers in talking or will help them to bind the silk in a proper form for selling.

豆饼是农田的肥料，份量重，像砖一样，也占地地方。航船不能运这类货物。所以村里有专门出售砖和豆饼的店铺。药店出售中草药，零售价格较高，又常常是急需的，所以药店在村里有一席之地。

五、航船，消费者的购买代理

村庄店铺不能满足农民全部日常的需求。例如村里没有地方卖盐和糖这样的重要物品。这些东西必须由航船去买。航船提供免费的日常服务，从城里购买日常必需品，同时充当村民的销售代理，从中赚得一些收入。他们在乡村经济中起着重要的作用。这种制度在太湖周围地区非常普遍，它促使附近城镇有了特殊的发展。

每天早晨约7时许，航船开始活跃起来。村里共有4条船，两条往返于河A，两条往返于河B与河C（第二章第四节）。船沿着河划出村时，农民们便向航船主订货。“请在这个瓶里打20个铜板的油，在那个坛里打30个铜板的酒。”航船主收了瓶和钱，数也不数，他把钱扔在船尾的底板上，便和顾客随便交谈起其他的话题来。船到了村的西端，从这里就可以直接到城里，那时他已经收了数十个瓶子和很多铜板。那些要到城里去的人，船经过他们的家门口时便搭上船，他们不用付船费。

每一条船有它自己固定的顾客。村子可分为两个区域，每个区域有两条船为他们服务。在一条河里的两条船，它们的顾客是同一区域的。这两条船互相就有竞争，但是友好的竞争。如果一条船上的乘客很少，它就会等另一条船，把乘客都合到一条船上。摇船的是年轻乘客。航船主按照顾客订货把瓶子和容器分类，把船板上的铜钱收起来，一面与乘客聊天，或帮助他们把蚕丝按照出售的要求捆起来。

From the village to the town takes two and a half hours. The boat arrives there at about ten o'clock. Each boat has connections with several stores in the town, and from these the agent will buy the articles ordered by the villagers. Salesmen in the stores come down to the boat to fetch the bottles and containers and to receive their orders from the agent. Before he returns to the boat in the afternoon, the agent will visit the stores and pay the bills. The boat begins to return at about two in the afternoon, and reaches the village between four and five. Villagers wait at their door to receive their goods as the boat passes.

One of the four boats had begun its service only about two months before I reached the village; the other three have run for many years. One of the agents, now an old man, himself inherited this profession from his father. Thus we can see that it is a very old institution.

Theoretically anyone can start an agent boat. There is no formal qualification for the agent. He has only to announce to the public that he will be an agent and will receive orders. But once started, he must

carry on the business regularly every day regardless of how many orders he has received. One agent, Chou Fu-sen, was very sick when I was there, but he could not stop his service because all the clients depended on him for their daily supply. The new agent, Chou Chi-fa, often went to the town without a single order. This means that the agent must devote his whole time to his job, and this is a requirement which most of the villagers who have land to cultivate cannot fulfil. Moreover, the agent must be connected with the stores in the town, especially when he acts as the selling agent. To acquire the knowledge and custom of the trade takes time and practice.

The number of agents in an area depends on the number of orders and personal ability of the agent. An unusually able man like Fu-sen could, in the past, monopolize the whole area around Stream A, more than a hundred and fifty households. Personal ability consists of clear-mindedness and a good memory which enables an agent not to make mistakes in the numerous oral orders. It is unbelievable at first sight that anyone can manage so many orders without the help of written notes. It is in fact possible only through a slow process of becoming familiar with the particular bottle or container of each client, and through training the powers of memory. Mistakes are sometimes made. Once a client claimed that he had given Fu-sen a dollar but Fu-sen could not remember the order. Although Fu-sen bore the responsibility for returning the money, the client complained. As Fu-sen's powers were thus gradually failing, Chi-fa was able to look forward to succeeding him in his area.

从村庄到城里需要两个半小时。船约于10点到达。每条船与城里的一些店铺有联系，航船主就向这些店铺购买农民订购的东西。店里的学徒下船来拿瓶子和容器并接受订货。下午航船主回到船上以前，要到店铺去结账。下午两点，航船开始返回，约四五点钟到达村里。船经过时，村民都在门口等待，接受他们托买的东西。

其中有一条船在我到村子以前约两个月才开始做此项经营，另三条船已做了多年。有一个航船主，现在已年老，这一职业是从他父亲处继承的。因此，我们可以了解到，这是一个存在已久的制度。从理论上讲，任何人可以经营航船，航船主没有正式资格，他只要向公众宣布，他将做航船这行业，接受别人委托买东西即可。但一旦开始了这个行业，他必须每天有规律地继续下去，无论他接受多少委托。有一个航船主名叫周福生，我在村里时，他病得很厉害，但他无法停止他的服务工作，因为所有顾客都靠他供应日常必需品。有一个新经营这行业的叫周志法，他有时到城里去，连一家订户都没有。这意味着，航船主必须把全部时间和精力花在经营这个行业中，大多数有地种的农民是不可能达到这种要求的。此外，航船主必须与城里的店铺有关系，特别是作为一个销售代理人。要懂得商业上的知识和习惯，需要时间和实践。

一个地区有多少航船，要看有多少居民及航船主个人有多大能力。一个像福生这样有非凡能力的人，过去垄断沿河A的整个地区，约150多户。个人能力即脑子清楚，记忆力好，不会记错各种口头的委托。一眼看去，不借助任何记录，能处理这么多瓶瓶罐罐，简直是使人无法相信的。实际上，只有经过一个缓慢的过程，才能逐渐熟悉每一个顾客的瓶子或罐头，记得每个顾客经常的需要。有时也会记错，有一次一个顾客说，给了福生一元钱，但福生不记得他这件事了。虽然福生毫不犹豫地负责还了他一元钱，但顾客还是埋怨。当福生的能力逐渐衰退时，志法已能够在他这地区开始接替他了。

The agent does not ask for any commission from his clients for his service, nor make any profit therefrom, except the periodical gifts and entertainments which the stores in the town offer him. Therefore the price of articles does not rise in passing through the hands of the agent. If the villagers go to purchase directly from the town, they may sometimes get worse and less goods than if they buy through the agents. The traders in the town may cheat the individual buyers, but he cannot so treat the agents. This is not due so much to the personal ability of the agent as to the competition among the town traders to secure constant customers. Most of the stores in the town depend on the agent boats for their wide market in the villages. Losing a single boat will mean a lot to the traders. They try to keep old customers and attract new. Thus the agents gain a favourable position in the transaction.

The existence of the agent boats has put the village stores into a supplementary position. Village stores cannot compete with the agent boats. They are too small to order goods directly from big wholesale stores in the cities, as the town stores do. They buy from the town stores like the agent boats. But the agent boats offer free services in buying while the village traders have to make a profit from retailing. As shown above, the village stores can only find a market in articles which are urgently needed and those which are too heavy to be transported by the agent boats.

The agents do not keep written accounts. I therefore found it rather difficult to assess the amount of their transactions. Fu-sen gave me his estimate as about ten to twenty dollars a day. The highest record was forty dollars a day near the end of the year. This seems to be a reasonable estimate, because it can roughly be checked with the general amount of goods that the village obtains from outside. According to the estimate given in the analysis of household expenditure (VII-8), this is about 80,000 dollars every year. If we exclude from this amount the expenses for clothing, vegetables, heavy tools, and mulberry leaves, which are not purchased through the agent boats, it amounts to 30,000 dollars, and this gives an

approximate average similar to the above estimate.

航船主为顾客服务并不向顾客索取佣金，也不从中赚钱，城里的店铺定时送他一些礼物或招待他。货物通过航船主的手，价格并不提高。如果农民自己直接到城镇商店去买，他们可能得到更少或更坏的东西，城里的商人可能欺侮个别来的买主，而他不敢欺侮航船主。这并不光是因为航船主个人能力比城里的商人强，更是由于城镇商人竞争需要保持经常的主顾。大多数城里的店铺依赖航船来得到农村这个广阔的市场。对商人来说，失去一条船即意味着很大的损失。他们力图保持旧主顾，吸引新主顾。因此行贩在交易中是处于有利地位的。

航船的存在使村庄的店铺处于一种辅助性的地位。村庄店铺无法与航船竞争。它们太小，不能像城镇商店那样直接向城市里的大批发商店订货。它们也像航船一样向城镇店铺购货。但航船代客买东西免收服务费，而村庄的商人零售时要赚钱。如上所述，村庄小店里只有那些急需品以及航船不能运输的货物才有买主。

航船主不记账，所以我无从估计他们的交易额。福生作了一个估计，每天约10~20元。快到年底时，最高记录为每天40元。看来，这一估计是可靠的，可以从农民向外购货的总金额来核对一下。按农户开支的分析（第七章第八节），估计每年约为8万元。如果我们从这一数字减去衣服、蔬菜、重型工具和桑叶的费用，这些东西不是通过航船购买的，约为3万元，这与福生的估计大致相似。

I was not able to make a complete list of articles that the agent boats buy from the town. The list must be a very long one because all goods that can be bought in the town and can be transported by boat are ordered from the agent. Small quantities of those things such as bean cakes, bricks, and paper-money, during the time when the boat is not crowded, are also orderable. The most common goods found in the agent boats are food and ingredients for cooking.

To complete the description of the buying process, it is necessary to mention again the direct purchase by the consumers in the town market or from other villages. For instance, not enough mulberry leaves, the essential raw material for the silk industry, are grown in the village. The villagers must buy them from the other villages near the Lake Tai. The buyer goes personally and transports the goods himself. Every time people come to the town they will do some shopping. The amount of trade through this process is difficult to estimate. But as the villagers do not go to the town very often, it is thus limited.

[6] Agent Boats as Producers' Selling Agent

One important feature of the agent boat is that it does not make any profit as a buying agent of the consumers. Similarly passengers do not pay any fare (except that the young men are obliged to row the boat). The gift given by the town stores are far from enough to provide the agent with a living. The agents obtain their reward by acting as the selling agents of the producers.

The process of selling requires much skill and knowledge of the market which the villagers do not necessarily possess. When they sell their produce, they rely on the agents. The agents are constantly in touch with the collectors in the town and know every detail about the different collectors. Because the collectors are connected with different traders or weaving factories they have particular preferences in what they purchase. It is essential for the producers to get in touch with the right collector for his particular produce. Moreover, in collecting silk, there is an accepted practice by which the producer is allowed to add a certain amount of cotton and water to the silk in order to increase its weight. But if the conventional limit is exceeded the collector will deduct from his payment more than the weight of the cotton and the water added. Therefore the expert advice of the agent is needed.

我不能把航船从城镇购买的商品开列一个清单。这个清单一定会很长，因为所有可从城镇购买的、航船可以运输的商品都可以委托航船去购买。船不挤的时候，少量的豆饼、砖、纸钱一类的商品也可代购。委托航船购买最多的东西是食品和烹调用配料或调料。

为了对购买过程进行全面的描述，必须重提一下消费者从城镇市场或其他村庄直接购买的商品。譬如，村里桑叶不够，这是蚕丝工业的重要原料。村民必须从太湖附近的其他村庄购买。买主自己去购买和运输，每次他们进城，都要买些其他东西。通过这一渠道进行的贸易额就难以估计。但由于村民不常进城，所以买的东西也有限。

六、航船，生产者的销售代理

航船的一个重要特点是作为消费者的代购人，是不赚钱的。同样，乘客也不付船费（年轻人得出劳力划船除外）。城镇店铺给航船主的礼物远远不足以维持他们的生活。他们只有在充当生产者的销售代理人时才得到报酬。

销售货物需要更多的技巧和有关市场的知识，农民不一定具备，因此他们出售产品时需要依靠航船主。后者经常与城镇里的收购商品的行家保持联系。他了解各个行家的情况。行家与不同的商人或纺织厂相联系，他们收购货物是有挑选的。生产者为了出售他们的某种产品应该知道与那些有关的收购人保持联系，这是很重要的。此外，在收购生丝的时候，有一种已经被收购者接受了的习惯做法，即允许生产者在丝里加一定量的棉花和水以加重分量。但如果超过惯常的限量，收购者便要扣钱，扣的数量比外加分量的钱更多。因此，生产者需要就这方面的业务与内行的代理人商量。

The agent will help the producer to bind the silk in a proper way so that the same amount and quality of silk will yield the highest possible return. The producer goes with the agent to the collector. But the collector will recognize only the agent whose name appears on his account. If the producer does not accept the price, he is free to withdraw his produce. But generally he will follow the advice of the agent whom he trusts. When the producer sells 100 Liang (11.3 lbs.) of silk, about 25 dollars at the present price, he will pay the agent 1 dollar commission. In other words, the agent will get 4 per cent. commission from the amount of silk sold. The amount of the reward does not change according to the price. So when the price is high, the rate of commission is much lower. In the case of rice, the commission is 5 cents for 3 bushels, which will yield about 7 dollars for the producer. The percentage of commission is about 0.7. The total production of silk in this village is about 90,000 Liang which will give 900 dollars for the agents' commission. The total exported rice is about 7,000 bushels which will give a total commission for the agents of about 650 dollars. If this amount is equally divided among the four agents, each will get about 400 dollars a year. That amount will provide them with a fairly good living.

Those who have paid commission to the agents on the sale of their produce are entitled to use the boats for communication and to order goods through them. The payment for this service is thus distributed according to the amount of production but not to the

amount of consumption of the clients.

The sheep raising recently introduced has added a new source of income to the agent; but I do not know the exact system of commission for selling sheep.

The change in the silk industry had challenged the very existence of the institution. The new silk factory does not make use of the selling agents in the town market. The produce is sold directly to Shanghai. At the start, the agent appealed for compensation. The reformers regarded the agent boats as a useful institution in the village and decided to support it by giving compensation according to the traditional amount of commission. Each member of the co-operative society receives a card on which the amount of his cocoon supply is recorded. The producer can give the card to the agent whom he uses as his buying agent. The agent in return receives compensation according to the total amount of cocoons recorded on the member's card. In this way the institution of the agent boat has been saved.

航船主还帮助生产者按照购买者的要求来包装蚕丝，以便使同样数量、质量的丝能卖到较高的价钱。生产者与航船主一起到收购人那里去，但收购人只认识航船主，他的账上有航船主的户头。如果生产者不接受对方的价格，他可以不出售他的产品。但在一般情况下，他听从他所信任的航船主的忠告。生产者如果出售100两蚕丝，约合当前的市价25元，他便付给航船主1元钱佣金。换句话说，航船主按生产者出售蚕丝的数量拿4%的佣金。佣金数不随蚕丝价格的变化而变化。因此，蚕丝价格高时佣金率反而低。每出售3蒲式耳米要给佣金5分，生产者收益约合7元，佣金百分率约为0.7%。这个村庄的蚕丝总生产量约为9万两，航船主可得900元佣金。大米的总出口量为7,000蒲式耳，航船主可得总数约为650元的佣金。如果四个航船主平分这个数额，每人一年约得400元。有这样一笔数目，生活可以过得不错了。

那些卖出产品后付给航船主佣金的人，有权把船当作交通工具使用，而且可委托航船主购买货物。因此，此项服务的支付额是根据生产量来定，而不是根据顾客的消费量来定的。

新近的养羊工作为航船主增加了一项新的收入来源，但我不知道卖羊收佣金的确切办法。

蚕丝业的改革对航船制度的存在提出了挑战。新的丝厂不利用航船到城镇市场去代销蚕丝，产品直销上海。开始时，航船主要求补偿。改革者考虑到航船是村里一种有用的制度，因此决定根据传统的佣金额给他们补偿。合作社的每一个社员收到一张卡片，上面记录着他供应蚕茧的数量。生产者可以把卡片交给他委托购买东西的航船主。根据合作社社员卡片上记载的蚕茧供应数量，航船主可收到一定数量的补偿费。这样才把航船制度保存了下来。

[7] Other Types of Collecting

The staple rural products are collected by the town through the agent boats or by the city through the factory. But for minor objects—and waste goods—such as old clothes, the ashes of paper money and old metal objects, there is yet another manner of collection. Sometimes this takes the form of barter, that is, direct exchange of objects. The collector carries with him porcelain articles or a special type of sweets to exchange for old clothes and metal objects. Ashes of paper-money, which contain tin, are exchanged for sheets of tin foil from which the paper-money is made.

[8] Marketing Areas and the Town

The size of a marketing area is determined by the system of transport—the cost and time involved in the movement of persons and goods. The primary market, in which the consumers buy their goods directly, is limited to an area in which the buyer can get his goods without spending so much time as to hamper his other activities. In this village we can distinguish two primary marketing areas. The people living near the bridge on Stream B will not make purchases from the stores near the bridge on Stream A. For instance, barbers, meat sellers, groceries, and temples are all segregated in these two areas, roughly corresponding to the areas divided by the activities of the agent boats. But the silversmith, the shoemaker, and the medicine store are located near the west bridge on Stream A, the centre of the intra-village route system (II-4). These are the only stores of their kind in the village. To this extent, the village is also a primary market.

The secondary market is that from which the retail dealers in the primary market draw their goods at wholesale prices. In this region, the agent boat cannot be considered as a retailer. It makes purchases on behalf of the consumers, but, as we have seen, without making a charge for this service. The agent boat thus restricts the function of the primary market in the village and enables the distant town to be the centre of primary purchase of the consumers.

The agent, specializing in this function, can spend all his time in this activity. Thus the distance between the buyer and the seller is lengthened to that practicable for a daily return trip. The actual distance depends on the rate of movement of the boat, which is estimated at about 1.6 miles per hour. The farthest village that is able to send its agent boat to the town cannot lie farther than 5 miles distant. The diameter of such a marketing area is thus between 8 and 10 miles.

七、其他收集方式

大宗的农村产品由城镇通过航船或由城市通过工厂收购。但对一些零星物品和废品——如旧衣服、纸钱灰、废铜烂铁等还有另一种收购方法。有时候是以货易货的形式出现，即货物直接交换。收购者带着陶瓷器或一种特别的糖果来换取旧衣服和金属器皿。纸钱灰含锡，可换叠纸钱的锡箔。

八、贸易区域和集镇

贸易区域的大小取决于运输系统——人员及货物流动所需的费用和时间。消费者直接购买货物的初级市场局限于这样一个区域，即买者不需要花很多时间以致妨碍他的其他活动便可在其中买到货物。在这个村里我们可以看出来，有两个初级购销区域。住在河B的桥附近的人们不会到河A的桥附近的商店去买东西。例如，理发店、肉店、杂货店和庙宇都分设在两个地区，大致与航船活动分工范围相当。但银匠、鞋匠和药店坐落在河A的西桥附近，这里是村内道路系统的中心（第二章第四节）。这些行业在村里各自只有这一家店。从这个意义上说，这个村子也是一个初级市场。

中级市场就是初级市场的零售商用批发价格购买货物的地方。在这个地区，航船不能被看作是一个零售商。它代替消费者买货，但正如我们知道的，这项服务不收费。这样，航船便限制了村里初级市场的作用，并使远处的城镇成为消费者初级购买的中心。

专门从事这项工作的航船主能把他的所有的时间用于这一活动。因此，购买者和出售者之间的距离便延长到适于当日往返的旅程。实际距离取决于船的速度，估计每小时为1.6英里。能够派出航船到镇上代购货物的村子，其最远的距离不能超出5英里以外。因此，这样一个购销区域的直径是8~10英里。

At the centre of each marketing area is a town, the essential difference of which from the village lies in the fact that the population in the town is mainly occupied in non-agricultural work. The town is for villagers the centre of exchange with the outside world. The villagers buy most of their manufactured goods from the middlemen in the town and supply their produce to the collector there. The development of the town depends on the number of customers that can be attracted to it. As we have seen, the institution of the agent boat enables the town in this region to concentrate the primary purchase from its tributary villages and thus reduce the function of the village traders. The size of the marketing area of this type is much larger than that found in North China, where land transport is predominant and the agent system is not developed. A study by C. K. Yang^[1] showed that the marketing area, above that of the primary village market, typical in North China, is about $1\frac{1}{2}$ miles to 3 miles in diameter. The marketing area of a higher order, consisting of six basic marketing areas, is about 8 to 12 miles in diameter. The latter type is comparable in size to the town market in the region we are investigating.

The town on which the village depends—that is, the town to which the agent boats go daily—is called Chên Tsê, about 4 miles south of the village. It is true that the town does not monopolize all the marketing activities of the village. There is another town in the north, called Tai Miao Chiung, about $1\frac{1}{2}$ miles from the village on the bank of Lake Tai (Map II). This is a small town specializing in trade with the islands in the lake. Near the town is a temple of the God of Lake Tai from which the name of the town is derived. When the people visit the temple they usually do some shopping in the town. To walk there takes about $1\frac{1}{2}$ hours. But trade between the village and Tai Maio Chiung is insignificant as compared with that with Chên Tsê.

In the process of collecting rural produce, Chên Tsê monopolizes nearly all the rice trade of the village. But it has never completely monopolized the silk produce, and since the establishment of the silk factory in the village, manufactured silk has been directly transported to Shanghai. Even in former times, when the village supplied a large quantity of raw silk for the weaving industry in Sheng Tsê, a town about 12 miles east of the village, there was a boat which plied direct to that town. It was too far for a daily return trip, and the service was irregular, so the boat was only engaged in selling. It ceased to run more than ten years ago owing on the one hand to the decline of the weaving industry of the town, and on the other to the reform of the silk industry in the village.

每个贸易区域的中心是一个镇，它与村庄的主要区别是，城镇人口的主要职业是非农业工作。镇是农民与外界进行交换的中心。农民从城镇的中间商人那里购买工业品并向那里的收购的行家出售他们的产品。城镇的发展取决于它吸引顾客的多少。正如我们已经了解的，航船的制度使这一地区的城镇把附属村庄的初级购买活动集中了起来，从而减弱了农村商人的作用。这一类购销区域的范围比中国北方的购销区域大得多，中国北方主要是陆路运输，代购或代销体系不发达。杨庆方的研究[2]说明了在村庄初级市场之上的典型的中国北方购销区域的直径约为1.5~3英里。更高一级的购销区域，包含6个基本购销区域，其直径约为8~12英里。后者与我们现在正在研究的城镇市场规模相仿。

这个村庄所依托的城镇，就是航船每天去的镇，叫做震泽，在村庄以南约4英里的地方。其实，这个镇没有垄断这个村庄的全部贸易活动。在北面，还有一个镇，叫大庙港，离村庄约1.5英里，在太湖边上（见地图II）。这是一个专门与太湖里的岛屿进行贸易的小镇。镇附近有一座太湖神庙，镇由此而得名。人们去庙宇的时候，通常在这个镇里购买物品。徒步走去需要约1.5小时。但这个村庄和大庙港之间的贸易同这个村庄和震泽镇的贸易相比是无足轻重的。

在收购农产品的过程中，震泽镇垄断了这个村庄全部大米的贸易。

但它从未完全垄断蚕丝产品，而且自从村中丝厂成立以来，加过工的蚕丝被直接运到上海。即使在过去，这个村庄也供应大量生丝给村东约12英里处的盛泽镇丝织工业，那时还有一条航船直接往返此镇。路程太远，不能当天往返，班次也不定期，所以只管售货。十多年前，一方面由于该镇丝织工业衰落，另一方面由于这个村庄的蚕丝业改革，此船就已经停止了。

An interesting study might be made of the competition of the towns to secure tributary territories. But a detailed analysis of this problem requires a wider investigation of the whole region than the present study could afford.

[9] Marketing and Production

Silk and sheep are produced entirely for selling. We have already seen how the price has affected the production in these industries. The low price of native silk stimulated the reform programme. As a result of the reform, the amount of the production of native silk was greatly reduced. But in recent years, the amount has not declined in proportion to the decline of price. On the contrary there are signs of an increase. As explained, this is due to the lack of other work to absorb the surplus female labour in the village. Sheep raising was started because of the new demand of the market. But the amount of production cannot be increased while supply of grass is limited as at present. Price is thus not the only factor determining the volume of production.

Rice is produced partly for selling and partly for consumption. The amount of reserve does not necessarily fluctuate according to the price. Each household will try to reserve enough rice for a year's consumption. A high market price of rice will not induce the producer to sell his reserves, because the future price level is uncertain. But a low price will force people to sell more rice to the market; this is because the amount of money income needed by each household is more or less known at the time of harvest when the tenants are required to pay their rent in terms of money. This fact is important for the rice collectors. They usually try to force down the price in order to increase the volume of trade. The villagers' total reserve is frequently so reduced as to be insufficient for their own consumption. In the following summer the villagers will be dependent on outside supply (XV-3). This also is to the benefit of the trader.

The fluctuation of price does not affect the total production of rice. The total amount is determined by the size of the land, the technique of production, and last, but not least, the supply of rainfall. These are matters over which the people have little control. Change of occupation is difficult and even change of crop seldom comes to the minds of the villagers.

关于城镇之间如何竞争以保持它们的附属村庄，将是一个有趣的研究。但是对这一问题的详细分析，需要对整个地区作更广泛的调查，这不是目前的研究所能达到的。

九、销售与生产

丝和羊完全是为出售而生产的。我们已经看到，在这些行业中，价格是如何影响生产的。土产生丝的价格低廉，催生了改革计划。改革结果是土产生丝产量大大下降。但近年来，其产量并未按其价格下降的比率下降，相反，还有一些增加的迹象。正如已经解释过的，这是由于缺乏其他工作来吸收村里剩余的妇女劳力的缘故。村里开始养羊，这是因为市场有新的需要。但目前缺乏草的供应，产量不可能增加。因此，价格不是决定产量的唯一因素。

生产大米，部分是为出售，部分是为消费。储备粮的数量不一定根据价格的波动而升降。每一户都要准备够一年消费的储备粮。市场大米价格上涨不会诱使生产者出售他的存粮，因为未来的大米价格不确定。但大米价格低会迫使农民出售更多的大米。这是因为收割的时候要求佃农用钱交租，那时每户所需要的货币收入或多或少都已知道。这一事实，对大米收购者来说很重要。他们通常为了增加贸易额而压低大米价格。农民的总储备量往往就这样被减少到不够他们自己消费。来年夏季，他们就只得靠外界供应（第十五章第三节）。这样商人也有利可图。

价格波动不影响大米的总生产量。总生产量取决于土地的大小、生产的技术以及最终取决于降雨量的多少。这些都是人们几乎不能控制的事。改变职业是困难的，甚至改变农作物，村民都很少想到。

Thus the structure of production is a rigid one and does not react elastically to the demand of the market. When changes take place, they are gradual and far-reaching.

Let us take the silk industry as an example. The adjustment between the new demand of the market and the productive system has taken nearly ten years in spite of a well-planned programme and special efforts. From our analysis of the changing process (XII), we have seen that the effectiveness of supply and demand depends on a knowledge of the market which villagers do not always possess. Without some special agents to affect a change, the people would hardly understand the cause of the decline of price and still less define the type of goods that would meet the new demand of the market. To bring about a change in the industry, special knowledge and social organization are needed. All these factors delay an immediate and automatic adjustment of supply and demand in the rural economy.

Change of occupation in the village is more difficult than reform of an existing industry. No serious attempt has yet been made to find

out the possibility of introducing new industries to the village besides sheep raising. Even the latter is only a supplement to the existing productive system and not a change of occupation. Villagers can change their occupation only by leaving the village. In other words, occupational mobility under the present situation means a mobility of population from the village to the town. In the village, those who go out to find new occupation are mostly young girls who have not yet entered into a fixed social place in the community. Even in this group, such mobility has already challenged the traditional kinship relation and the stability of the domestic group (XII-9). The reaction against the disruptive forces in social stability becomes a force to counteract the present mobility. It is difficult to say at the present stage how far the traditional forces will give way in the novel situation. But on the whole the slow mobility of population, especially of the male population, indicates the slow effect of the outside demand for labour and the rigidity of the traditional productive system in the village.

Nevertheless it is clear that the market affects production strongly. It has led to various changes which are not limited to economic life only. The reaction of the productive system to market conditions does not take a simple course but is a long and involved process which requires investigation in a wider perspective than that of a purely economic inquiry.

因此，生产结构是受到严格限制的，它不能随着市场的需求作出灵活的反应，变化是缓慢而长远的。

让我们以丝业作为例子。尽管在蚕丝业方面有很好的改革计划，计划者对改革也作出了特殊的努力，但市场的新需求与生产系统之间的调整过程经历了几乎十年的时间。从我们对变迁过程的分析（第十二章），我们看到供应和需求的有效性取决于对市场的了解，这是农民不具备的。如果没有特殊的力量来影响并促使变革，人们几乎不理解蚕丝价格下跌的原因，更不明白什么样的货物类型才能满足市场的新需求。为了实现蚕丝改革，需要专门的知识和社会组织。所有这些因素都会延误乡村经济在供求方面的及时自动调整。

在农村，改变职业比改革现有作业更加困难。除养羊以外，没有发现人们想在村里发展新的职业。甚至养羊也仅仅是现有生产系统的一种补充，而不是职业的改变。农村居民只有离开农村才能改变他们的职业。换句话说，在目前情况下，职业流动意味着人口从农村流向城镇。在村里，出去找新职业的大多数是女青年，她们在这个社区里尚未进入一个固定的社会位置。甚至在这个群体里，这种流动已经向传统亲属关系和家庭群体的稳定性提出了挑战（第十二章第九节）。反抗破坏社会稳定的力量变成了一股阻碍当前人口流动的力量。目前很难说，在新的情况下，传统力量会作多少让步。但总的来说，人口流动是缓慢的，特别是男性人口流动得很少，这说明了外界对劳动的需求不大和村里传统

生产系统的僵化。

尽管如此，市场强烈地影响着生产，这一点是显而易见的。它导致了各方面的变化，这些变化不仅仅局限于人们的经济生活。生产系统对市场情况的反应不是一个简单的过程，而是一个长期复杂的过程，要了解这一过程需进行范围更广泛的调查研究，单纯从经济方面研究是不够的。

CHAPTER XV FINANCE

The problem of credit rises when, in the process of exchange, the return either in the form of goods and services or of money is delayed. Credit, in its simple sense, is the trust by one party in another for an eventual return after a certain lapse of time.

In this sense non-immediate forms of exchange such as mutual obligation, mutual accommodations, and gift-making, are forms of credit. The return of these types of credit is secured by the principle of reciprocity inherent in the social institutions and is bound up with the ties of kinship and friendship. For transactions outside the group thus related, the time for repayment has to be explicitly agreed upon and credit can only be received by the economic benefits of the transaction.

The loan may be used for any purpose or may be limited to certain uses prescribed by the agreement. But the term credit cannot be limited to refer only to advances for future production. In the village, credit is in most cases for consumption or for payment of tax and rent which is only indirectly related to the process of production. Similarly it is difficult to regard (except in a very metaphorical sense) the money borrowed to finance a marriage ceremony as a help to the borrower's productive ability.

Professor Tawney, in his discussion on the problem of the credit system in rural China, says, "The characteristic feature of the system... is that neither borrower nor lender appears to make any clear distinction between loans needed to finance the business of farming, and loans sought to eke out the domestic budget. Everything goes down, so to speak, in a common account, with the result that there is no discrimination in the mind of either debtor or creditor between the borrowing and advancing of money for productive purposes, which should yield a return sufficient to meet the interest, and household expenses which ought, in the absence of exceptional misfortune, to be met out of income."^[1]

In this chapter, I shall use the term credit in its broad sense.

[1] Saving and Deficiency

Credit is possible only when there is saving on the one hand and deficiency on the other. Saving is the surplus of income over expenditure in an economic unit, in the village the Chia. Income is the total production of the Chia. It may or may not be converted into money. Expenditure includes all the goods, produced by the unit or purchased on the market, used by the members for consumption, for fulfilment of social obligation and for production.

拾伍 资金

在交换过程中，以货物、劳务或现金不能及时偿还时便发生了信贷。简单地说，信贷就是一方信赖另一方，经过延迟一段时间，最后偿还。

在这一意义上讲，相互之间的义务、互相接待留宿、互赠礼物等非即刻交换的形式也是信贷的形式。这些信贷的偿还是通过社会制度中固有的互惠原则来保证的，并与亲属关系及友谊有密切关系。对于有这种关系的群体之外的交易，偿还的时间必须有明确的协议，并且信贷只有对贷方有利才能被接受。

贷款可以作任何用途，或可能限于协议中规定的某种用途。但信贷一词不能仅限于指对未来产品的预先付款。在这个村里，信贷在多数情况下是用于消费或付租付税，租和税与生产过程仅有间接的关系。同样地，也很难把借来办婚事钱看作是对借钱人的生产能力有所帮助（除非是隐喻的意义）。

在讨论中国农村的信贷体系时，托尼教授写道：“这个体系的特点……是借钱人和出借人对用于农业生产的信贷和补助家庭开支的借款两者之间的区别看来都不清楚。这就是说，把一切都记作一笔笼统的账，结果，在欠债人或债权人的脑海中对借贷来作生产用途或家庭用途的钱无所区别。他们不明白：用于生产的钱最后应该产生利润并足以偿还利息，家庭开支在没有意外的不幸事故的情况下，应能以收入偿付。”^[2]

在本章，我将从信贷的广泛意义上来使用这一术语。

一、积蓄与亏空

信贷只有在一方面有积蓄、另一方面亏空时才可能产生。积蓄是指村里的经济单位家庭的收入超过支出时的剩余。收入指家庭的全部产品。它可以转换为钱，也可以不转换为钱。支出则包括家庭的成员用于消费、用于完成社会义务和用于生产而由自家生产或从市场购买的全部物品。

The amount of production of each Chia in the village does not vary much because the groups are very similar in size, and in their technique of production. There is also uniformity in the amount of consumption among them (VII-1). The inequality in the distribution of wealth is, apart from special reasons in individual cases, mainly due to the system of land tenure. A tenant has to bear a heavy burden of rent. Two-thirds of the land in the village is now in the hands of absentee landlords. Each year the villagers pay in total 4,800 bushels of rice for rent. This burden is not shared equally by the villagers, but is spread over about 70 per cent. of the people. Among these again the burden is not equal (XI-5). The system of land tenure has resulted in an annual outflow of a large quantity of wealth from the village to the town and an unequal distribution of wealth in the village.

When the silk industry was prosperous the villagers, in spite of high rents, were able to enjoy a sufficient standard of living and could in consequence save. This saving was usually hoarded. The opportunity for investment in the village is limited and there is no other means, except in rent, for the town to absorb its accumulated wealth. The goods or money hoarded were used firstly for a reserve against recurrent disaster and secondly for financing expensive ceremonies. The elaborate ceremonies in connection with individual life crises or periodical religious meetings of the local groups were in fact an important outlet for the hoarded wealth of the rural district. On ceremonial occasions the idea of thrift gives place to competitive display. Wealth was lavishly expended in burials, on marriage gifts, on dowries and feasts, and especially in inter-village parades (VII-7).

The depression of the silk industry has caused a decline of one-third of the average income of the village (XII-2). On the side of expenditure, consumption and social obligations have remained largely as they were. The only elastic item that can be reduced or suspended is ceremonial expenditure; and according to my estimate, the minimum amount of such expense at present is only one-fifth of

the total money expenditure (VII-8). With the rapid decline of the income level, accompanied by a rigid level of expenditure, deficiency is the result.

村里每家的生产量相差不大，因为这种群体的大小大致相仿，生产技术亦基本相同。它们的消费量也有一致性（第七章第一节）。除个别情况有特殊原因外，其财产分配不平等的原因，主要是土地占有制问题。佃农必须负担很重的地租。村里三分之二的土地为不在地主掌握。村民每年交付租米总额为4,800蒲式耳。这一负担并不是平均分摊在村民身上，而是由约70%的人分担。在这些人中间，负担又不同（第十一章第五节）。土地占有制的这种情况导致了每年大量财富从村里外流到城镇，以及村中财富分配不均的情况。

蚕丝业兴旺时，尽管地租很高，但村民仍可维持足够的生活水平，并且尚可有所积蓄。这种积蓄通常被储藏起来。在村里，很少有投资的机会，除交租以外，城镇没有其他手段吸收积累的财富。农民储藏的货物或金钱首先是用作储备以对付经常发生的灾难，其次是供昂贵的礼节性开支。与人生大事相关的繁重礼节或当地群体定期的宗教集会实际上是农村地区所积蓄的财富的重要出路。在礼节性场合，炫耀财富的思想替代了勤俭节约。在丧葬、结婚聘礼、嫁妆、宴席等方面，特别是举行村际游行时，财富挥霍严重（第七章第七节）。

蚕丝业的萧条使村里的平均收入减少了三分之一（第十二章第二节）。在开支方面，消费和社会义务仍然像过去一样。唯一可以缩减或暂缓的款项是礼仪性开支，据我估计，目前这种开支占总货币开支的五分之一（第七章第八节）。由于收入迅速降低，支出依然不变，结果是亏空。

Deficiency may be urgent or may not be urgent. Urgent deficiency calls for immediate measures. It is found in such situations as food shortage, lack of capital goods, and inability to pay rent and tax. Unless financial aid in these cases is forthcoming there will be disastrous consequences to the individuals concerned. Owing to the unequal distribution of rent obligations, deficiencies of this urgent kind are confined to a part of the villagers. There is still a small group which, even in present circumstances, is able to save and another group which is able to meet all the minimum requirements of subsistence. But deficiency of a less urgent nature, such as inability to pay for ceremonial occasions, is more common even among the better-off group. I have already described how the villagers have suspended their annual meeting, delayed their marriages, and reduced their ceremonial expenses.

The decline of the ability to save has caused an increasing need for outside financial help. The internal credit system functions only as a means to cope with the unequal distribution of wealth within the community. It cannot meet the situation of general insolvency. Thus

external aid has become the urgent financial problem in the village.

In the following sections, I shall describe the working of various internal and external credit systems. But the present material is not sufficient to define their relative importance in quantitative terms. Such data, important as they are, require more extensive inquiries than I was able to make.

[2] Financial Aid Society

As with goods and services, small sums of money can be borrowed from relatives or friends for a short term without interest. This system of mutual allowance is found chiefly in cases of temporary deficiency, and the creditor is confident in the ability of the debtor to repay within a short time. But the term of such allowance may extend over a period of months. Such relatively long-term credit is frequently found among brothers after division of the Chia. Although they may have separate houses and properties, they are still bound by social ties to look after each other's welfare. To demand interest from a brother for any small loan is considered to be impossible.

But when a large sum is needed, it is difficult to borrow from one individual and to repay in a short time. Here the mutual help among brothers or other relatives becomes inadequate. Hence there is the financial aid society.

亏空可以是紧急的或非紧急的。紧急亏空需要立即采取措施。食物不足、资本货物缺少、无能力付租付税等属于这种情况。除非给以资助，否则对有关个人会产生灾难性结果。由于付租义务并不是人人都有，这种紧急亏空限于一部分村民。一小部分人，即使在目前情况下，仍能有些积蓄，还有另一些人则可以维持最低限度的生活。非紧急亏空，例如无力支付礼仪所需的费用，即使在比较有钱的人中间也比较平常。我已经描述过村民是怎样推迟婚期、暂停每年的团聚、缩减礼仪性开支等情况。

积蓄减少造成了对外界资金支援的需求增加。内部借贷系统只能对付这个社区内部财富分配上的不平等，不能解决普遍无力偿付债务的问题。因此外界资金援助便成为村里紧急的金融问题。

以下各节，我将描述各种内部和外部的信贷系统。但目前掌握的材料不足以从定量分析方面来阐明它们相对的重要性。这种数据很重要，但需要比我现在所能做到的更广泛的调查研究。

二、互助会

物品、劳务和少量的钱可以不付利息，短期地向亲戚朋友借用。这种补贴的办法主要见于遇有暂时性亏空时，债权人相信借款人有能力在短期内还债。此类借贷可能延续数月。这种相对较长的信贷在分家后的兄弟之间常见。他们虽然有各自的房子和财产，但仍然有社会纽带把他们联系起来，照顾彼此的福利。为少量借款向兄弟要利息，被认为是不可可能的。

但需要大笔款项时，向个人商借并在短期内归还常有困难。因此，兄弟之间或其他亲戚之间的互相帮助便不能满足需要。这样才产生了互助会。

The financial aid society is a mechanism for collective saving and lending. It consists of a number of members and lasts for a number of years. The members meet several times a year. At each meeting, each subscribes a share. The total subscription of the members is collected by one of the members who can thus use the money to finance his activities. Each member in turn collects the sum. The first collector is the organizer. From the very beginning, he is a debtor to the society. He repays his loan bit by bit during the whole course with a certain amount of interest. The last collector is a depositor. He collects at the end the sum of his deposit and its interest. Other members change from depositor to debtor as they collect the sum. The order of collection is determined either by contract or by lot, or by auction. The system of calculating the amount of subscription of each member in each meeting is sometimes complicated by various factors which will be described later.

Such a society is organized on the initiative of the person who needs financial help. Members who join the society are considered as having rendered help to the organizer. According to the system described above, it would appear that all the members in turn would profit by the society. But we must remember that, with the limited opportunity of investment, to raise a loan and to pay interest on it may be uneconomical. Moreover, owing to the uncertainty of time of the collection, it may be difficult for the collector to find a profitable use for the money collected. Therefore, the organizer cannot appeal to members on economic grounds only. He must state his need of aid and ask for help. Membership is thus usually limited to certain groups of persons who are obliged to help the organizer and those who are willing to join for other purposes.

The usual purpose of organizing such a society is to finance marriage ceremonies. Repayment of a debt incurred for such proper reasons as the financing of a funeral ceremony may also be regarded as acceptable ground. But productive purposes, such as starting a business or buying a piece of land, are not so regarded.

Given a proper purpose, the organizer will approach his relatives: father's brother, brother, sister's husband, mother's brother, wife's father, etc. These have an obligation to join the society. Even when they are unable to subscribe, they will find some of their relatives to take their place.

The number of members varies from eight to fourteen. In the village the kinship circle, in which intimate relations are maintained, is sometimes smaller. Membership may then be extended to relatives' relative or friends. These are recruited by appealing, not to social obligations but to mutual benefits. If someone needs financial help which does not justify organizing a society by himself he will join a society formed by others. Those who are known in the community to be rich will respond to a justifiable appeal for help in order to show generosity and to avoid public criticism. For example, Chou has gained much prestige by subscribing to more than ten societies.

互助会是集体储蓄和借贷的机构，由若干会员组成，为时若干年。会员每年相聚数次。每次聚会时存一份款。各会员存的总数，由一个会员收集借用。每一个会员轮流收集使用存款。第一个收集人即组织者。一开始，他是该会的借债人。他分期付款，交一定量的利息。最后一个收集人是存款人。他最后收集自己那笔存款和利息。其他成员则依次收集存款，从存款人变为借债人。收款次序按协议、抽签或自报公议的办法决定。每次聚会时，每一会员存款数目的计算往往由于各种因素而变得较为复杂，我将在以后描述。

这种互助会，经常是由于某人需要经济援助而发起组成的。参加互助会的会员被认为是对组织者的帮助。按以上描述的办法，每个人似乎都轮流得到好处。但我们必须记住，投资的机会有限，借一笔款并付利息，可能是不经济的。此外，由于收钱时间不定，收款人可能难以把收来的钱用于最适当的需要。所以组织者对会员不能只强调他们在经济上会得到什么好处，而必须说他自己需要经济上的帮助。因此，会员通常只限于某些有义务帮助组织者的人或一些为了其他目的自愿参加的人。

通常组织这种互助会的目的是为办婚事筹集资金、为偿还办丧事所欠的债务。这些也是可以被接受的筹集资金的理由。但如为了从事生产，譬如说要办一个企业或买一块土地，人们往往认为这不是借钱的理由。

有了一个正当的目的，组织者便去找一些亲戚，如叔伯、兄弟、姐夫、妹夫、舅父、丈人等。他们有义务参加这个互助会。如果他们自己

不能出钱，他们会去找一些亲戚来代替。

会员的人数从8~14人不等。在村庄里，保持密切关系的亲属圈子有时较小。因此，会员可能扩展至亲戚的亲戚或朋友。这些人不是凭社会义务召集来的而必须靠互利互惠。如果一个人需要经济上的帮助，但他没有正当的理由来组织互助会，他将参加别人组织的互助会。社区公认的有钱人为了表示慷慨或免受公众舆论的指责，也会响应有正当理由的求援。例如，周加入了十多个互助会，他的声誉也因此有很大提高。

But the nucleus of such a society is always the kinship group. The person who has a larger sphere of relatives has a better chance of gaining support in a financial crisis. In this connection we can see that institutions such as the *siaosiv* (III-8), which diminish the kinship circle, will in the long run produce unfavourable economic consequences. On the other hand, the widening of kinship relation, even through such means as pseudo-adoption, has an important economic significance (V-3).

In theory the organizer will be responsible for any default by the members, and will pay the share of the defaulters. But since he is usually in need of financial help himself, his responsibility does not give a real guarantee of security. Default is prevented not by legal sanction but by the acknowledged social obligations between relatives. The possibility of default is again diminished by the supplementary system of mutual allowance. It is easy for a person to raise an allowance in such a situation, especially when he has the prospect of collecting a sum from the society. Reciprocity is also an essential consideration. The defaulter will find it difficult to organize his own society in case of need. Nevertheless defaults do occur, and have done so especially during the past few years. As I have mentioned, the efficiency of the local credit system depends on the general saving ability of the villagers. The economic depression has caused defaults to be increasingly frequent, and these have threatened the local credit system. This has had far-reaching consequences in disrupting the existing kinship ties. But as I did not make a detailed study of this problem, I can only leave it for further investigation.

There are three types of financial aid societies. The most popular one is called Yao Hui. In this the organizer gathers fourteen members, each of whom subscribed 10 dollars. The organizer thus gets 140 in all. The society will then meet twice a year: first in July or August when the silk industry is completed, and again in November or December, when rice is reaped. At each meeting, the organizer will repay to the society 10 dollars of capital and 3 dollars of interest. He will thus clear his debt at the end of the fourteen meetings.

但这种互助会的核心总是亲属关系群体。一个亲戚关系比较广的

人，在经济困难时，得到帮助的机会也比较多。从这一点来说，我们可以看到，像“小媳妇”（第三章第八节）这样的制度，使亲属圈子缩小，最终将产生不利于经济的后果；另一方面，扩大亲属关系，即使是采取名义领养的方式，在经济上也有重要的意义（第五章第三节）。

在理论上，组织者将对会员的任何违约或拖欠负责，他将支付拖欠者的一份款项。但由于他自己需要别人的经济援助，因此他的负责是没有实际保证的。拖欠或违约并不是通过法律的制裁来防止，而是通过亲戚之间公认的社会义务来防止。拖欠的可能性又因互相补贴的辅助办法的存在而减少。一个人在这样的环境中，很容易提出要求补贴，特别是他届时有从互助会中收集存款的机会。相对的后果也是一项重要的考虑。拖欠人会发现，他需要帮助时便难于组织起他所需的互助会。然而事实上还是有违约或拖欠的，尤其是以往数年来，有这种情形发生。正如我已提到过，当地信贷系统的有效程度取决于村民普遍的储蓄能力。经济萧条使拖欠人数增加，从而威胁着当地的信贷组织。这对现存的亲属联系起着破坏的作用。但由于我对此问题没有详细的调查，只好将它留待以后作进一步的研究。

有三种互助会，最流行的一种叫“摇会”，在这个会中，组织者召集14个会员，每人交纳10元。组织者总共得140元。摇会每年开两次会：第一次在7月或8月，那时蚕丝生产告一段落，第二次在11月或12月，水稻收割完毕。在每一次会上，组织者偿还摇会10元本钱和3元利息。这样，在第十四次会结束时， he 可以把债还清。

At each successive meeting, one of the members will collect a sum of 70 dollars. The one who has collected this sum is a debtor to the society and will repay at each succeeding meeting 5 dollars of capital and 1.5 dollars of interest. The system of calculation is complicated by the fact that the member's sum is reduced to half of the organizer's own. Thus half of the organizer's annual subscription will be equally divided among the members ($13/2 \div 14 = 0.464$), this being called the organizer's surplus. The actual member's sum is $70 + 0.464$, and the actual debtor's annual subscription is 6.036 ($6.5 - 0.464$).

The organizer's and the debtors' annual subscriptions and the member's sum of collection are constant. Those who have not collected the member's sum are depositors of the society. Since at every meeting there is a member who collects the sum, the number of debtors increases and the number of depositors decreases accordingly. The depositors' subscription at each particular meeting is determined by the following formula: $\text{Member's sum } (70.464) - \{ \text{Organizer's subscription } (13) + [\text{Number of debtors} \times \text{Debtor's subscription } (6.036)] \} \div \text{Number of depositors}$.

The total amount of the depositor's subscriptions decreases at every meeting.^[3] For each individual member, the total amount of subscription decreases according to the order of collection. Since the

amount of collection is constant, the difference between the amount of subscription and the amount of collection is the interest either paid for the loan or received from the deposit. The rate of interest fixed for the debtor is 4.3 per cent. per annum. But owing to the combination of deposit and loan as well as the two kinds of surplus, the actual rate of interest is different among the members and from each year.^[4] The collector at each meeting is determined by lot. Each member throws two dice, and the one who scores the highest points is the collector. A feast is prepared at each meeting by the organizer and paid by the collector of that particular meeting. Lot drawing comes after the feast, when all the subscriptions, having been collected, are in the hand of the organizer.

This system is rather complicated. But it has its merits—

(1) The members who join the society have no definite prospective use for the sum collected. By reducing the member's sum, the burden of the members is reduced. Thus it diminishes the risk of default. (2) To determine who is to be the collector by lot gives every depositor an equal hope of collecting. This induces subscription by those who are in need of financial help. (3) The rapid decrease of subscriptions of the depositors compensates their delayed collection. (4) The rich feasts attract the members. Some people had modified the system by offering the feast once a year in the winter, and the collector for the next period was determined beforehand. It has been found that collection of the shares in the spring was very difficult. Therefore the practice was given up.

在相继的每一次会上，有一个会员收集70元钱。收这笔钱的人就是摇会的借款人，他在以后的每一次会上应还5元本钱及1.5元利息。由于会员只拿相当于组织者一半的钱，所以计算时稍为复杂。组织者每年交款的半数将在会员中平分（ $13/2 \div 14 = 0.464$ ），这叫组织者的余钱。会员拿的实际数为 $70 + 0.464$ ，借款人每年交款为 6.036 元（ $6.5 - 0.464$ ）。

组织者和借款人每年交的钱和会员收的钱数均为恒定。没有收款的那些人为摇会的存款人。由于每一次会有一个会员收款，所以借款人逐步增加，存款人随之减少。在每一次会上，存款人存款数目根据以下公式计算：会员的款数（ 70.464 ）- { 组织者的存款（ 13 ）+ [借债人数 $\times$ 借债人存款（ 6.036 ）] } $\div$ 存款人数。

在每一次会上存款人存款总数减少。^[5] 对每一个会员来说，存款总数，按照收款的次序逐步减少。由于收款数不变，存款和收款数目之间的差即借债人付的利息或存款人收的利息。借债人的利率规定为年利4.3%。但由于存款和借款以及两种余额混在一起，因此，会员之间以及每年的实际利率不同。每次会的收款人根据抽签的办法决定。每个会员掷两颗骰子，点数最高者为收款人。组织者为每次摇会准备了宴席，由

各次摇会的收钱人负担宴席费用。席后，组织者收齐了会员交纳的款项，再进行抽签。

摇会的办法比较复杂，但有它的优点：

（1）参加会的会员对收来的钱没有预计肯定的用处。减少会员交纳的钱数，会员的负担减少，从而也减少了拖欠的危险。（2）用抽签办法决定收款人，每个存款人都有收款的均等希望。这促使需要经济援助的人去交款。（3）存款人交款数迅速下降弥补了他们延期收款的不足之处。（4）丰盛的宴席吸引会员。有些人把宴席改在冬天，每年一次，下一阶段的收款人预先决定。人们发现春天收款极为困难，所以放弃了这种办法。

The complexity of this system is too difficult for every ordinary villager to understand. In fact, very few persons in the village know the system of calculation. They have therefore to invite the village heads to instruct them. To meet this difficulty, another and simplified system was introduced a relatively short time ago. This is called Hui Hui, because it is supposed to have originated in Anhwei Province. According to this system, the order of collection and the amount to be subscribed by each member is fixed in advance. [6]

The total collected at each meeting is constant. This is 80 dollars, including the collector's own share. This system is convenient for calculation, and each member can foresee his turn of collecting and adjust it to his need.

A third type is called Kwangtung Piao Hui, an auction system supposed to be originated in Kwangtung. All depositors will offer a sum expected to collect from the meeting. The one who offers the lowest bid will be the collector. The surplus of subscription, after the sum for the collector is deduced, will be equally divided among the members, both the debtors and the depositors. This type is not popular in the village because, as my informant put it, there is too much gambling.

每个摇会次数存款
第12次
第12次
第12次

这种会的办法比较复杂，普通农民很难理解它。事实上在村子里，懂得这种计算办法的人很少，所以必须请村长来教。为了解决这一困难，不久以前，有人提出一个比较简单的互助会办法，叫徽会，因为据说这是从安徽传来的。这个会的收款次序及每个会员交纳的款数，均事先规定。

每次会收款总数不变，规定为80元，包括收款人自己交纳的一份。这一借贷办法便于计算，每个会员能预知轮到他收款的时间并纳入他自己的用款计划。

第三种互助会称广东票会，来源于广东，采取自报的方式。所有存款人自报一个希望在会上收款的数目，报数最低的人为收款人。存款余钱减去收款人的款数后，在会员中平分。在村子里，此种会不很普遍，向我提供材料的人告诉我，这种方式的赌博性质太重。

[3] Agent Boats as Credit Agent

Kinship ties between the village and the town are very limited. The number of villagers living in the town is small. Those who have been resident in the town for some generations, have allowed kinship ties with their clansmen in the village to become very loose. As I have mentioned, the clan is usually divided when the members disperse (V-1). Marriage between village and town is rare, except in the case of maid servants in the town who may return to the village upon marriage. It appears to me that the relation between the town people and the villagers is mainly of an economic nature. It may, for example, be the relation between landlord and tenant, which under the present system of land tenure, is impersonal. More intimate relations are found between the master and the servant who temporarily works in the town; but on the whole, the social relation between townsmen and villagers is not strong enough to maintain a system of mutual allowance or the financial aid society. When the villagers need external financial help, they usually resort to the system of rice-lending and usury.

Deficiency of food supply is extraordinary in a village where rice is the staple produce. It is a result of the decline of price of rural produce. To receive the same money income as formerly, the amount of output must be increased. As a result, the rice reserve of the villagers is sometimes exhausted before the new rice is ready. In this connection the agent boat plays an important function in the village economy.

The villagers sell their rice to the town collectors through the agent boat. The collector deals with the agent, not with the real producers. To secure a constant supply, especially against the competition of the town market, the collector must maintain good relations with the agent. On the other hand, the agent is indispensable to the producers. They rely upon him for selling and buying. These relations enable the agent to bring the collector and the villagers into financial relationship in case of need.

The agent will ask the collector on behalf of his clients to lend rice and he will guarantee the return when the new rice comes to market. His guarantee is effective because the rice produced by the debtor will pass through his hand. Moreover, by extending credit, the collector can not only make a profit, but ensures his future supply.

The rice borrowed from the collector is valued at 12 dollars per 3 bushels, which is higher than the market price. The debtor repays an amount of rice equivalent to 12 dollars at the market price (which during the winter is about 7 dollars per 3 bushels). The rate of interest works out at about 15 per cent. per month if the term is two months. This rate is comparatively low. It is made possible because the creditor does not run much risk owing to the institution of the agent boat and the economic value for the collector of insuring his future supply. The existence of a number of collectors on the market makes the supply of credit more elastic and gives the debtor a better position in negotiation.

三、航船，信贷代理

村庄和城镇之间亲属关系非常有限。住在城镇的农民很少。几代在城镇居住的人，他们与村子里同族的关系已经比较疏远。我已提到过，族人分散后，族就分开了（第五章第一节）。城镇与农村通婚也很少，除了在城里的女佣嫁回村里这种情况。在我看来，城里人和村民的关系主要是经济性质的。例如，他们可能是地主和佃农的关系，在目前的土地占有情况下，他们之间的关系不是个人的关系。主人和暂时在城里当女佣的妇女，他们之间的关系较密切。但就整体来看，城里人和农民之间的社会关系不密切，不足以保持一个在经济上互相补贴或互助会的系统。当村民需要外界资助时，他们通常只得求助于借米和高利贷系统。

在稻米是主要产品的农村里，粮食供应不足并非常态。这是农产品价格下降的结果。要使收入与过去一样不变，产量必须增加。结果是村民的稻米储备往往在新米上市以前便消耗尽，以致需要借贷维持。从这方面讲，航船在村庄经济中起着重要的作用。

村民通过航船出售稻米给城镇的米行。米行与航船主联系，而不是与真正的生产者联系。为了能得到经常不断的供应，特别是为对付城镇市场的竞争，米行必须与航船主保持友好的关系。另一方面，航船主对生产者来说也是不可缺少的。生产者依赖航船主进行购销。这些关系使航船主在需要时建立起米行和村民之间的借贷关系。

航船主代表他的顾客向米行借米，并保证新米上市后归还。他的保证是可靠的，因为借米人生产的米将通过他出售。此外，收购人出借大米不但可以获利，而且也有利于保证未来的供应。

向米行借米的价格为每3蒲式耳12元，比市场价高。借债人将以市场价格偿还相当于12元钱的大米（冬天，3蒲式耳米约为7元）。如果借期两个月，每月利率约为15%。这一利率比高利贷还算低些。这是因为一方面有航船主作为中保，另一方面对米行来说，可以保证其未来的大米供应，出借人所担的风险不大。由于镇上存在好几家米行，出借大米的价格并不划一，有利于借米人以较低的利息借进大米。

This credit system is comparatively a recent one. It has not been developed beyond the sphere of rice-lending. But by the same principle it might be gradually extended to money-lending through rice and silk collectors as a payment in advance for produce which is relatively stable and can be counted on beforehand.

[4] Usury

Money-lending from the town to the village is indispensable when the village finance is in distress. Villagers borrow money from wealthy people in the town with whom they have relations. The interest on such a loan varies according to the closeness of the personal relation between the debtor and the creditor. But, as I have mentioned, the personal relation between villagers and townsmen is limited, and the townsmen with whom the villagers have personal relations may be unable to lend money. As a result there emerge professional money-lenders in the town. Professional money-lenders advance money to the villagers on very high rates of interest. This traditional institution we may term usury.

A person who finds himself unable to pay land tax, for instance, and is not prepared to spend the whole winter in prison, has to borrow money. The usurer's door is open to him. The money from the usurer is expressed in terms of an amount of mulberry leaves. At the time of the transactions, there are no mulberry leaves at all and a market price does not exist. The price is arbitrarily set at 70 cents per picul (114 lbs.). For instance, a loan of 7 dollars will be regarded as a loan of 10 piculs of mulberry leaves. The term of the loan expires at Ch'ing Ming (April 5th), and it must be repaid not later than Ku Yü (April 20th). The debtor has to pay an amount of money according to the market price of mulberry leaves, which at that time is about 3 dollars per picul. Thus a loan of 7 dollars or 10 piculs of mulberry leaves, concluded in October, yields a return of 30 dollars to the creditor in April. During these five months, the debtor is paying an interest of 65 per cent. per month. This system of money-lending is called "living money of mulberry leaves."

这是一种比较新的信贷系统。它尚未超出借米的范围。但用同样的原则，这种系统可逐步扩展至通过米行和丝行借钱，作为对收购产品的预先支付。这种产品相对来说比较稳定，而且是可以预计的。

四、高利贷

当农村资金贫乏时，从城镇借钱给农村是必然会发生的。农民向城镇里有关系的富裕人家借钱。其利息根据借债人与债权人之间关系疏密而异。然而，如我已经提到过的，农民和城里人之间的个人关系有限，而且与农民有个人关系的人也可能没有钱可出借。结果城镇里便出现了一种职业放债者。职业放债者以很高的利息借钱给农民。这种传统制度，我们可称之为高利贷。

例如，无力支付地租并不愿在整个冬天被投入监狱的人，只得向别人借钱。高利贷者的门是向他敞开的，出借的钱按桑叶量计算。农民借钱时并没有桑叶，也没有桑叶的市场价格。价格是人为制定的，每担（114磅）7角。譬如，借7元钱，可折算成10担桑叶。借期在清明（4月5日）结束，必须在谷雨以前还款（4月20日）。借债人必须按照当时桑叶的市场价格归还相当于10担桑叶的钱，那时每担桑叶为3元。因此，如10月份借7元钱，到第二年4月必须还高利贷者30元。在这五个月中，借债人每月付利息65%。这种借贷办法被称为“桑叶的活钱”。

At the time of Ch'ing Ming the people are just starting their silk industry. This is a financially vulnerable period in the village. Persons who were unable to pay their rent in the winter are not likely to be able to pay the amount back to the creditor. In the previous five months, they have been engaged on no major productive enterprise, except trade ventures. In these circumstances, the debtor may ask the creditor to renew the loan in terms of rice. This process is called "changing to rice." The price of rice is counted, irrespective of the market, at 5 dollars per 3 bushels. The term is extended to next October. Repayment will be made according to the highest market price of the rice, which is about 7 dollars per 3 bushels. The person who borrowed 7 dollars in one October will thus repay 48 dollars in the next October. The rate of interest is thus about 53 per cent. per month on the average.

If the debtor is still unable to clear up his debt, no prolongation of the term will be allowed. The debtor must settle by handing the legal title of his land to the creditor. In other words, he will transfer the right of ownership of the subsoil of the land to the creditor. The price of land is counted as 30 dollars per *mow*. From then on, he is no longer a debtor but a permanent tenant. Instead of paying interest, he will pay an annual rent (XI-4).

The rent is 8 pints (2.4 bushels) of rice or about 4.2 dollars per *mow*. If we take Professor Buck's estimate of the average rate of

interest from the investment in rural land as 8.5 per cent.,^[7] we find that a *mow* of land has a money value of 56 dollars. Thus a loan of 7 dollars will ultimately in one year yield as return to the creditor a piece of land worth 89 dollars.

Through the usurer, the ownership of the subsoil is transferred from the hand of the cultivators to the absentee landlords who buy the land titles from the usurer. Upon this financial institution, the system of absentee landlordship is based (XI-4).

Usury is an extra-legal system. According to law, if the rate of interest agreed upon exceeds 20 per cent. per annum, the creditor is not entitled to claim any interest over and above 20 per cent.^[8] Therefore, the contract must be enforced by other means than legal force. The usurer employs his own collector to force the debtor to pay when the term has expired. If payment is refused, the collector will use violence and take off or destroy anything at his disposal. In one case, I know, on the death of the debtor, the creditor took off a girl of the deceased to town as his slave. The debtor is usually too ignorant to seek the protection of the law and the community gives him no support. He is actually at the mercy of the usurer. If the debtor really has nothing to pay the debt with, and possesses no subsoil of land, the creditor will find it to be wiser to let him continue farming and reserve his claim on the future produce. In the worst situation, the debtor may commit suicide at the house of the usurer. The usurer will then face the revenge of the spirit and also the pressure of public resentment which will force him to forfeit his claim. This drastic means, though rarely used, is, to a certain extent, effective in preventing the usurer from going too far.

清明时节，人们正开始从事养蚕业。在村里，这是经济上最脆弱的时期。冬天付不起地租的人，也不见得有能力还钱给债权人。在前五个月中，人们除了做一些生意外，不从事大的生产活动。在这种情况下，借债人可以向债权人续借贷款，按米计算。这种方式被称作“换米”。不论市场米价如何，借米的价格为每3蒲式耳5元。借期延续至这一年10月。偿还时按市场最高米价计算，每3蒲式耳约7元。一个人在10月借7元，到第二年10月应还48元，利率平均每月53%。

借债人如果仍无力还清债务便不允许再延长借期。借债人必须把手中合法的土地所有权交给债权人。换句话说，他将把田底所有权移交给债权人。土地价格为每亩30元。从此以后，他再也不是一个借债人而是一个永佃农。他每年须付地租（第十一章第四节）而不是利息。

地租为每亩2.4蒲式耳米或约4.2元。如果我们按巴克对农村土地投资所估计的平均利率8.5%计算，^[9]我们发现每亩地值56元。因此，7元钱的贷款一年之后使债权人最终得利为一块价值89元的土地。

通过高利贷者，田底所有权从耕种者手中转移到不在地主手中，不在地主系从高利贷者手上购得土地所有权。不在地主制便是以这种金融制度为基础的（第十一章第四节）。

高利贷是非法的制度，根据法律，约定年利率超过20%者，债权人对于超过部分之利息无请求权。^[10] 所以，契约必须用其他手段来实施而不是法律力量。高利贷者雇用他自己的收款人，在借债满期时迫使借债人还债。如果拒绝归还，收款人将使用暴力并拿走或任意损坏东西。我知道一个实例，借债人死的时候，债权人便抢走死者的女儿，带到城里作他的奴婢。借债人通常无知，不懂得寻求法律保护，社区也不支援他。他完全受高利贷者的支配，如果借债人既没有钱还债，也没有田底所有权，债权人认为比较巧妙的办法还是让借债人继续耕种，这样可以保留他向借债人未来产品提出要求的权利。借债人被逼得毫无办法时，可能在高利贷者家里自尽。高利贷者便面临着鬼魂报复，也会引起公愤而被迫失去债权。这种极端的手段虽然很少使用，但在某种程度上，对防止高利贷者贪得无厌的做法是有效的。

Usurers live in the town. Each has a nickname. The one connected with the village of our study is Sze, the Skin-tearer. This nickname indicates the public hatred. But he is an important source available to the villagers in case of urgent need. The supply of credit is very limited while the demand is urgent. The consequence of being imprisoned or losing the entire silk crop is more immediate and irreversible. To borrow money from the usurer at least leaves open the possibility of repaying when the time comes.

I was not able to calculate the total amount of loans from usurers outstanding in the village. Since there are few, if any, other ways for the ownership of the subsoil to pass out of the village, the extent of tenancy might be an indication of the extent of the usury system (XI-5).

The existence of the system is due to the lack of a better financial organization between the town and village. Under the present system of land tenure, the villagers supply an increasing amount of produce to the town in terms of rent while there is no means for the villagers to draw back an equivalent amount from the town. Formerly when the chief textile industries in China, such as silk and cotton, were developed in rural districts, the villagers were able to offset the outflow of rural wealth by the profit made from the industrial export. The rapid de-industrialization of the rural district has dislocated the financial balance between town and village. The rural problem, broadly speaking, originated in de-industrialization, finds its concrete expression in financial insolvency and is crystallized in the issue of land tenure. In the village, effort for an immediate solution has been directed to the rehabilitation of the silk industry. The partial success

of this industrial reform is significant also as a factor relieving the acute land problem.

高利贷者住在城里，每人有一外号。同我调查的这个村庄有关系的一个高利贷者，姓施，叫剥皮。这一外号说明了公众的愤恨。但他却又是农民急需用款时的一个重要来源。可供借贷的款项极为有限，而需求又很迫切。入狱或者失去全部蚕丝收益的后果更加不可逆转。向高利贷者借款至少到一定的时候，还可能有一线偿还的希望。

我未能计算出村里高利贷者放债的总数。因为田底所有权转移到村外的其他方式即使有的话，也是很少的。租佃的范围可能就说明了高利贷制度的范围（第十一章第五节）。

高利贷的存在是由于城镇和农村之间缺乏一个较好的金融组织。在目前的土地占有制下，农民以付租的形式，为城镇提供了日益增多的产品，而农民却没有办法从城镇收回等量的东西。从前，中国的主要纺织工业，例如蚕丝和棉织工业在农村地区发展起来，农民能够从工业出口中取得利润以补偿农村的财富外流。农村地区工业的迅速衰退打乱了城镇和农村之间的经济平衡。广义地说，农村问题的根源是手工业的衰落，具体地表现在经济破产并最后集中到土地占有问题上来。在这个村子里，为了解决当前的问题，曾致力于恢复蚕丝业。这种努力的部分成功是很重要的，它也是在尖锐的土地问题下减轻农民痛苦的一个因素。

[5] Co-operative Credit Society

In this connection I should also mention the well-intentioned measure by the government for stabilizing rural finance through the co-operative credit system. The co-operative credit system, introduced into the village, in fact, is not an organization of the villagers themselves but a means for them to borrow money from the national bank at low interest rates. A sum was allotted by the Provincial Peasant Bank for credit to the villagers. This system promised a fundamental solution of the problem of rural finance. But the success of this system depends on its administration, and the capacity of the government to afford the credit. In our village, I found that a few thousand dollars had been borrowed by the people from the "co-operative society." But owing to the financial insolvency of the debtors, they were not able to repay their debt when the term expired. The creditor does not possess the same extraordinary means as the usurer to compel the debtor to pay, and the small interest on the loan is not enough to finance an elaborate administration. When the small sum allotted was exhausted, the society ceased to function and had a full list of black debts.

The present failure of the experiment, at least in the village, teaches the importance of a full knowledge of the local financial organization. It might be better if the government could use the existing system, such as the agent boat and the financial aid society, to finance the people. To introduce a new credit system requires a new system of sanctions. In the local credit system, sanctions are ready. There seems better chance of success if the traditional channel can be utilized and improved by governmental effort.

五、信贷合作社

关于信贷问题，我也应该提一下政府为稳定农村金融而采取的措施。农村的合作信贷系统实际上不是农民自己的组织，而是农民用低利率从国家银行借钱的一种手段。江苏省农民银行专拨一笔款项供农民借贷。这一措施指望基本解决农村资金问题。但它的成功与否取决于它的管理水平和政府提供贷款的能力。在我们这个村里，我知道这个“合作社”借出了数千元钱。但由于借债人到期后无能力偿还债务，信贷者又不用高利贷者所用的非常手段来迫使借债人还债，借款利息又小，不足以维持行政管理上的开支。当这笔为数不大的拨款用完后，信贷合作社也就停止发生作用，留下的只是一张写得满满的债单。

目前，至少在这个村里，这种实验的失败告诫我们，对当地的信贷组织有充分的了解是很重要的。如果政府能利用现有的航船、互助会等系统来资助人民，效果可能要好一些。建立一个新的信贷系统需要有一个新的约束办法。在当地的信贷系统中，对到期不还者有现成的约束办法。如果能利用传统的渠道，再用政府的力量将其改进，似乎成功的机会会大一些。

Order of Meeting 集会次数	Number of Depositors 存款人数	Amount of Subscription of Each Depositor 每个存款人缴纳的数额
1st	13	4.420
2nd	12	4.286
3rd	11	4.126

(续表)

Order of Meeting 集会次数	Number of Depositors 存款人数	Amount of Subscription of Each Depositor 每个存款人交纳的数额
4th	10	3.936
5th	9	3.702
6th	8	3.410
7th	7	3.035
8th	6	2.535
9th	5	1.838
10th	4	0.785

At the eleventh meeting, the sum of subscription of the organizer and the debtors has already exceeded member's sum of collection. The depositors need not pay anything but share the new surplus. The principle of distributing the surplus is that, excluding the organizer and the collectors of first four meetings, all the members will have a share in proportion to the order of their collection. For instance, in the eleventh meeting the collector of the fifth meeting will get a share of 0.11 dollars or $5/110$ of the total surplus (2.432). But the three depositors in that meeting, whose orders of collection are still not certain, will have an equal amount of $13/110$ of the surplus. The total amount of surplus of each meeting from the eleventh is:

CHAPTER XVI AGRARIAN PROBLEMS IN CHINA

The above account of the economic life of a Chinese village is the result of a microscopic examination of a specimen. The phenomena observed in this confined area undoubtedly are of a local character. But they also have wider significance because this village shares a common process with most other Chinese villages. Hence we can learn some of the salient features of the agrarian problems in China.

The essential problem in Chinese villages, putting it in the simplest terms, is that the income of the villagers has been reduced to such an extent that it is not sufficient even to meet the expenditure in securing the minimum requirements of livelihood. It is the hunger of the people that is the real issue in China.

In this village, the immediate cause of the present economic depression is the decline of domestic industry. The present depression is not due to a deterioration of quality nor to a decrease of the quantity of production. Had the villagers produced the same type and the same amount of silk, they could not get the same amount of money from the market as before. The cause of depression lies in the relation between the village industry and the world market. It is the lack of adjustment between production and demand that accounts for the fall in the price of silk.

In view of the decline of domestic industry, the only alternatives open to the peasants are to improve their produce or to give up the industry. To improve the produce, as I have shown, is not only a matter of technical improvement but also a matter of social reorganization. Even this is not enough. A successful reorganization of rural industry depends ultimately on the prospects of industrial development in China. The present analysis is a warning to reformers who tend to underrate the force of international capitalist economy.

If there is no immediate recovery of rural industry, the peasants will be forced to adopt the second alternative. They will in despair give up their traditional source of income, as has already happened in the weaving industry. If the labour released from the doomed domestic industry could be used in other productive activities, the situation would not be so desperate. It must be recognized that in

industrial development there are certain industries which it may not be advisable to retain in the village. But in so far as there is no new occupation to take the place of the old, the waste of labour will mean a further reduction in family income.

拾陆 中国的土地问题

上述一个中国村庄的经济生活状况是对一个样本进行微观分析的结果。在这一有限范围内观察的现象无疑是属于局部性质的。但他们也有比较广泛的意义，因为这个村庄同中国绝大多数的其他村子一样，具有共同的进程。由此我们能够了解到中国土地问题的一些显著特征。

中国农村的基本问题，简单地说，就是农民的收入降低到不足以维持最低生活水平所需的程度。中国农村真正的问题是人民的饥饿问题。

在这个村里，当前经济萧条的直接原因是家庭手工业的衰落。经济萧条并非由于产品的质量低劣或数量下降。如果农民生产同等品质和同样数量的蚕丝，他们却不能从市场得到同过去等量的钱币。萧条的原因在于乡村工业和世界市场之间的关系问题。蚕丝价格的降低是由于生产和需求之间缺乏调节。

由于家庭手工业的衰落，农民只能在改进产品或放弃手工业两者之间选择其一。正如我已说明的，改进产品不仅是一个技术改进的问题，而且也是一个社会再组织的问题。甚至于这些也还是不够的。农村企业组织的成功与否，最终取决于中国工业发展的前景。目前的分析对那些低估国际资本主义经济力量的改革者来说，是一个警告。

如果农村企业不立即恢复，农民只得被迫选择后者。他们将失望地放弃传统的收入来源，正如在纺织工业中已经发生的那样。如果从衰败的家庭手工业解除出来的劳动力能用于其他活动，情况还不至于如此严重。必须认识到工业发展中，某些工业并不一定适合留在农村。但就目前来说，尚无新的职业代替旧职业，劳力的浪费将意味着家庭收入的进一步减少。

As their income is diminishing and as there is no hope of immediate recovery, the peasants can naturally only resort to a corresponding reduction of expenditure. In expenditure, as the Chinese peasants are concerned, there are four categories: necessary daily account, periodical ceremonial expenses, capital for production, and interest, rent, and tax. As we have seen, the villagers have already suspended ceremonies as far as possible, and even sold their rice reserve when necessary. It appears that the most rigid category is the last one. If the people are not able to pay their ever-increasing interest, rent, and tax, they will be threatened by brutal treatment from the usurers, and rent and tax collectors, and by legal enforcement through imprisonment. But when hunger is stronger than the fear of being shot, peasant revolts take place. Perhaps, this is the

situation that has resulted in the disturbance of the Red Spear Club in North China and the Communist movement in Central China. If the author of *Red Star Over China* is right, the main force that drove millions of peasants in the heroic long march was nothing but hunger and its derived hatred of landowners and tax collectors.

In the present study, I have tried to show that it is incorrect to condemn landowners and even usurers as wicked persons. When the village needs money from outside to finance their production, unless there is a better system to extend credit to the peasants, absentee-landlordism and usury are the natural products. Without them, the situation might be still worse. At present, owing to the insecurity of rent, there is already a tendency for urban capital to move into the treaty-ports instead of into rural districts, as seen in the recurrence of crises in Shanghai speculative enterprises. The scarcity of capital available in rural districts encourages the development of usury in the town. The more depressed is the country, the less capital is available, and the more active is the usury—a vicious circle which saps the life of the peasants.

There was another dilemma in the Chinese land problem. The national government with all its promises and policies on paper was not able to carry out any practical measures owing to the fact that most of the revenue was spent in its anti-communist campaign, while, as I have pointed out, the real nature of the communist movement was a peasant revolt due to their dissatisfaction with the land system. Despite all kinds of justification on either side, one thing is clear: that the conditions of the peasants are getting worse and worse. So far no permanent land reform has been accomplished in any part of China since the recovery of the Red Area by the government.

当他们的收入不断下降，经济没有迅速恢复的希望时，农民当然只得紧缩开支。中国农民的开支有四类：日常需要的支出，定期礼仪费用，生产资金，以及利息、地租、捐税等。正如我们已经看到的，农民已经尽可能地将礼仪上的开支推迟，甚至必要时将储备的粮食出售。看来，农民的开支中最严峻的一种是最后一种。如果人民不能支付不断增加的利息、地租和捐税，他不仅将遭受高利贷者和收租人、税吏的威胁和虐待，而且还会受到监禁和法律制裁。但当饥饿超过枪杀的恐惧时，农民起义便发生了。也许就是这种情况导致了华北的“红枪会”和华中的共产主义运动。如果《西行漫记》的作者是正确的话，驱使成百万农民进行英勇长征的主要动力不是别的，而是饥饿和对土地所有者及收租人的仇恨。

在现在这个研究中，我试图说明单纯地谴责土地所有者或甚至是高利贷者为邪恶的人是不对的。当农村需要外界的钱来供给他们生产资金时，除非有一个较好的信贷系统可供农民借贷，否则不在地主和高利贷

是自然会产生。如果没有他们，情况可能更坏。目前，由于地租没有保证，已经出现一种倾向，即城市资本流向对外通商口岸，而不流入农村，上海的投机企业危机反复发生就说明了这一点。农村地区资金缺乏，促使城镇高利贷发展。农村经济越萧条，资金便越缺乏，高利贷亦越活跃——这个恶性循环耗尽了农民的血汗。

中国的土地问题面临的另一个困境是：国民党政府在纸上写下了种种诺言和政策，但事实上，它把绝大部分收入都耗费于反共运动，所以它不可能采取任何实际行动和措施来进行改革，而共产主义运动的实质，正如我所指出的，是由于农村对土地制不满而引起的一种反抗，尽管各方提出各种理由，但有一件事是清楚的，农民的境况是越来越糟糕了。自从政府重占红色区域以来到目前为止，中国没有任何一个地区完成了永久性的土地改革。

It must be realized that a mere land reform in the form of reduction of rent and equalization of ownership does not promise a final solution of agrarian problems in China. Such a reform, however, is necessary and urgent because it is an indispensable step in relieving the peasants. It will give a breathing space for the peasants and, by removing the cause leading to "revolt," will unite all forces in finding the way to industrial recovery.

A final solution of agrarian problems in China lies not so much in reduction of expenditure of the peasants but in increasing their income. Therefore, industrial recovery, let me repeat once more, is essential. The traditional industry of China was mainly rural; for example, the entire textile industry was formerly a peasant occupation. At present, China is, in fact, facing a rapid decay of this traditional industry directly due to the industrial expansion of the West. By arresting this process, China comes into conflict with the Western Powers. How this conflict can be solved peacefully is a question I would like to leave to other competent scientists and politicians.

But one point connected with the future industrial development in China must be stressed here. Being a late comer in the modern industrial world, China is in a position to avoid those errors which have been committed by her predecessors. In the village, we have seen how an experiment has been made in developing a small-scale factory on the principle of co-operation. It is designed to prevent the concentration of ownership of means of production in contrast with the capitalist industrial development in the West. In spite of all difficulties and even failures, such an experiment is of great significance in the problem of the future development of rural industry in China.

Finally, I would like to emphasize that the above-mentioned

problems have not disappeared since the present Japanese invasion. The tragedy is unavoidable in building our new China. It is a part of our international adjustment that sooner or later we must face. Only by going through it, can we hope for a real reconstruction of our country. During the struggle, the agrarian problems in fact have become more vital. Our victory against foreign aggression can be insured only by removing internal conflicts through relieving the peasants by a reasonable and effective land reform. Now Japan has offered us an opportunity to break our old vicious circle in the land problem. It is true that thousands of villages have already, like Kaihsienkung, been destroyed by the invaders, but in their ruin our internal conflicts and follies should find their last resting-place. From the ruin, a new China will emerge. The coming generation will, I sincerely hope, credit us with facing the problems of our age in a spirit of understanding and sympathy; our sacrifices and the hardship we are undergoing shall stand vindicated only if we look forward to the future with oneness of purpose and clarity of vision.

我们必须认识到，仅仅实行土地改革、减收地租、平均地权，并不能最终解决中国的土地问题。但这种改革是必要的，也是紧迫的，因为它是解除农民痛苦的不可缺少的步骤。它将给农民以喘息的机会，排除了引起“反叛”的原因，才可以团结一切力量寻求工业发展的道路。

最终解决中国土地问题的办法不在于紧缩农民的开支而应该增加农民的收入。因此，让我再重申一遍，恢复农村工业是根本的措施。中国的传统工业主要是乡村手工业，例如，整个纺织工业本来是农民的职业。目前，中国实际上正面临着这种传统工业的迅速衰亡，这完全是由于西方工业扩张的缘故。在发展工业的问题上，中国就同西方列强处于矛盾之中。如何能和平地解决这个矛盾是一个问题，我将把这个问题留待其他有能力的科学家和政治家去解决了。

但是有一点与中国未来的工业发展有关，必须在此加以强调。在现代工业世界中，中国是一名后进者，中国有条件避免前人犯过的错误。在这个村庄里，我们已经看到一个以合作为原则来发展小型工厂的实验是如何进行的。与西方资本主义工业发展相对照，这个实验旨在防止生产资料所有权的集中。尽管它遇到了很多困难甚至失败，但在中国乡村工业未来的发展问题上，这样一个实验是具有重要意义的。

最后，我要强调的是，上述问题自从日本入侵以来并未消失。这种悲剧在建设我们的新中国过程中是不可避免的。这是我们迟早必然面临的国际问题的一部分。只有经历这场斗争，我们才有希望真正建设起自己的国家。在斗争过程中，土地问题事实上已经成为一个更加生死攸关的问题。只有通过合理有效的土地改革，解除农民的痛苦，我们与外国侵略者斗争的胜利才能有保证。现在日本入侵，给我们一个机会去打破过去在土地问题上的恶性循环。成千个

村庄，像开弦弓一样，事实上已经被入侵者破坏，然而在它们的废

墟中，内部冲突和巨大耗费的斗争最后必将终止。一个崭新的中国将出现在这个废墟之上。我衷心希望，未来的一代会肯定我们以理解和同情的态度正视我们时代的问题。我们只有齐心协力，认清目标，展望未来，才不辜负我们所承受的一切牺牲和苦难。

APPENDIX A NOTE ON CHINESE RELATIONSHIP TERMS

In view of the special interest in anthropology on the problem of relationship terms, I would like to add an appendix to the present book as a supplement to the chapter on kinship extension.

It is essential to make clear that a structural analysis of relationship terms, at best, covers only a part of the whole problem of kinship system and that a mere presentation of a chart of terms is of little use by itself because it fails to show their sociological implications. Such a treatment, which most of the previous studies have followed, from the old work of Morgan and Hart up to the recent publication of H. Y. Feng,^[1] is resulted from the unsound conception of language which views words as representations of reality. Therefore it is believed that an analysis of the relationship terms will be enough to understand the organization of kinship.

Relationship terms, like all other linguistic data, should be studied in their contexts. They are used for pragmatic purposes in establishing claims, in expressing affectional attitudes and, in short, as a part of the behaviour of the speaker towards his relatives. An adequate analysis must be carried out by direct observation of how the terms are actually used.^[2] But in the present note it is not possible to treat the problem in detail; I only intend to suggest an outline for further investigation.

Chinese relationship terms can be classified into four categories based on the general contexts of speech: (1) the context in which a person addresses his relatives directly, (2) the context in which a person refers his relative indirectly, (3) the context in which a person describes the relationship as such in colloquial language, and (4) that in literary language.

[1] Terms of Address

Terms of address are the first set of relationship terms used in individual life. A child is taught to name different persons in contact by relationship terms. The first group of persons whom the child will come into contact and whom he will address are his fellow members in the Chia—his parents, father's parents, sometimes father's brothers and their wives and children, and father's unmarried sisters. Most of the time the child is in the arms of its mother, but when the mother is busy in her household work, she will put it in the arms of other persons.

附录 关于中国亲属称谓的一点说明

由于对人类学中亲属称谓问题具有特殊的兴趣，我想为本书增写一个附录，作为“亲属关系的扩展”这一章的补充。

必须弄清楚亲属称谓的结构分析至多只能作为研究整个亲属系统问题的一部分，如果仅仅提供一个称呼表是没有什么用处的，因为这不能说明它们的社会意义。过去的有关研究都用这种方法处理，从摩尔根和哈特的旧著直至冯汉骥最近的出版物^[3]都是如此。这是由于对语言的概念谬误，把词语看作是表现现实的结果，因此才相信对亲属称谓的分析就足以了解亲属关系的组织情况。

像其他一切语言资料一样，亲属关系的称谓应该结合其整个处境来研究。它们被用来表示某人身份或对某物享有某种权利，表达说话人对亲属的感情和态度，总之是说话人对亲属的部分行为。我们必须直接观察称谓究竟是如何使用的，然后才能充分地分析。^[4]但在本说明中不可能详尽地研究这一问题，我只想为今后的进一步调查研究提供一个提纲。

中国亲属称谓从语言处境来说大致可分为四类：（1）某人直接与亲属说话；（2）某人说话时间接提到亲属；（3）某人用通俗口语描述亲属关系；（4）用书面语表达亲属关系。

一、对话时的称呼

对话时的称呼是个人生活中最早使用的一套亲属称呼。人们教孩子用亲属称谓称呼他所接触的不同的人。孩子最先接触要称呼的人便是家里的人——父母、父亲的双亲，有时父亲的兄弟和他们的妻子、孩子以及父亲的未婚的姐妹等等。在多数情况下母亲抱孩子，母亲的家务繁忙时，她便把孩子交给别人抱。

The child's grandmother, father's sister, own elder sister, and wives of father's brothers are candidates to take up the mother's function.

Male members of the Chia have less direct a duty in caring for the child. But when it grows up, the father as a source of discipline becomes more and more important. (The relation of the child with its relatives, cf. III-4 and V-1, 2). Terms used for this group of fatherside relatives are given in the following table.

All the relatives of descending grade are called by their personal name or by simple numbers.

Terms for males in capitals, for females in small type, = for marriage bond, F. for father, m. for mother, B. for brother and sis. for sister, > for elder and < for younger, () for the terms recently introduced.

这时孩子的祖母、父亲的姐妹，孩子的姐姐以及父亲兄弟的妻子将代替母亲担任起照看孩子的功能。

家中的男性成员对照看孩子负较少的直接责任。但当孩子长大后，父亲作为孩子的纪律教育者，他的作用便逐渐显得重要起来（孩子与亲属的关系，参看第三章第四节和第五章第一、二节）。父亲方面的亲属称谓见下表。

所有下代的亲属均用个人名字或以简单数字称呼。

= 代表婚姻关系；> 代表年长的；< 代表年幼的；() 表示近来用的称谓。下同。

The terms recorded in the table are sometimes only radicals of the terms actually used. For an addresser, each term stands for a definite person. If there are two or more persons bound with him in a similar

relationship, such as two elder brothers of his father, modifiers will be added to the radicals for particularization. He will call the eldest as DA PAPA (DA meaning large or elder) and the second as N'I PAPA (N'I meaning the second). Modifiers are of two types: numbers and personal names. As a rule, in reference to intimate and senior relatives, such as father's brother and sister, elder brother and sister, numbers are used, while for remote relatives and younger brother and sister personal names are used.

Several principles in classifying paternal relatives can be seen in the above list:

(a) Distinction of sex: No exception of this principle is found. The correlation between linguistic distinction and sociological distinction is high in this case. Sex differentiation in the household work and in other social functions, privileges and duties has been shown in above description.

(b) Distinction of kinship grade:^[5] The differentiation of social obligations and privileges according to kinship grade is well expressed in kinship sociology. The grandfather, for instance, does not exercise authority very often as the father over the child but very frequently indulges him and acts as mediator between the father and son. The grandson has no specific economic obligation towards his grandfather so long as his father is living. But the terms for male relatives of the second and third ascending grade, except father's father, have the same root, GON; TA being a modifier meaning great. In fact, the term TAGON is very seldom used in direct address because it is rarely seen that four kinship grades exist in the same group.

(c) Distinction between consanguinity and affinity: Relatives resulted from marriage are always distinguished from relatives resulted from procreation. For instance, father's sister is differentiated from father's brother's wife. This distinction is maintained in daily life. Father's brother's wife, does not live very far if not in the same house, while father's sister after marriage usually lives in another village. The former is available to take up the mother's function in case of need while the latter is met mostly in occasional visitings.

表中所记载的有时只是实际生活中所使用的称谓的基本词。对讲话的人来说，每一个称呼代表一个确定的人。如果与讲话人有同样关系的有两个以上的人，例如他父亲的两个哥哥，则须在基本称呼词前面加修饰词，以表示特指的关系。他将称父亲的大哥为DA PAPA (DA意思是年纪大的或年长的)。称父亲的二哥为N'I PAPA (N'I意思是第二)。修饰词有两种：数词和个人名字。一般说来，对近亲或亲属中年纪大的，如父亲的兄弟姊妹及自己的哥哥、姐姐加数字。对远亲和弟弟妹妹则加个人的名字作为称谓前的修饰词。

对父系亲属分类时可从上表看出几个主要规则：

(a) 性的区别：这一规则没有发现例外。在这一页中，语言区别与社会关系方面的区别两者之间的相关关系大。在家务劳动、其他社会功能、权利和义务方面的性的区别在上面已有描述。

(b) 亲属关系级别的区别^[6]：根据亲属关系级别而分化的社会义务和权利，在亲属关系社会学中已有很好的表述。例如，祖父对孙子往往不像父亲对儿子那样行使他的权威，相反还经常姑息孩子，在父亲和儿子之间充当调停者。只要父亲还活着，孙子对祖父没有特定的经济义务。但上两代、上三代的男性称谓，除父亲的父亲外有同一个基本称谓GON;TA是修饰词，意思是辈份高的。实际上，TAGON这个称呼在直接对话中很少用，因为罕见有四代同堂的。

(c) 血亲关系与姻亲关系之间的区别：由于婚嫁而产生的姻亲与由于生育而产生的血亲总是有区别的。譬如，父亲的姊妹与父亲的兄弟的妻子有区别。在日常生活中就保持这种区别。父亲的兄弟的妻子即使不住在一所房屋内，也住得不远，而父亲的姊妹出嫁后通常便住到另一个村子里。前者在需要的时候便接替母亲的任务，后者则多数在逢年过节、走亲戚时才见面。

(d) Distinction between the elder and younger relatives in reference to ego or ego's direct ascending male relatives: This distinction holds good only in ego's own grade and the first ascending grade. But in the latter, it is not so pronounced because father's elder and younger brothers are distinguished only by a slight change in articulation of the sounding PA, shorter for the younger and longer for the elder although such difference is always distinguishable. Father's sisters are called by the same term without distinction of elder and younger and similarly their husbands.

The distinction between elder and younger brothers may be correlated with the special privilege and obligations of the eldest son (IV-3). The less differentiation in social relation with the relatives of higher grade also reflects in the fusion of terminology.

(e) Distinction of family groups. This principle does not effect ego's own grade. In the first ascending grade, the term for father has the same root, PA, as found in the terms for father's brothers. Only recently, a new term JAJA has come into use. JA is the term for father used in the context of describing the relationship as such. Terms for mother and father's elder brother's wife have also the same root ma. Nevertheless, the maintenance of the distinction shows the same fact as indicated above that the family nucleus is not entirely submerged in the larger kinship unit Chia.

From this examination, we can see there is a rough correlation between kinship language and kinship sociology. This correlation is

found only in the general principle of classification but not in specific terms.

The second group of relatives come from the child's mother's kindred who usually live in some neighbouring village. Although his mother's mother assists his mother in child delivery, she does not stay long in the house; this is one of the few occasions when the mother of a daughter-in-law will spend a night in her daughter's husband's house. The child will however very often go to his mother's parents' house with his mother and will stay there several times a year for periods of ten days or more. In his mother's parents' house, he is a guest and enjoys indulgences (V-2). He learns the relationship terms for his mother-side relatives in a context which is different from that in which he learns the terms for his own kindred. The sentiments attached to these terms are thus different.

(d) 自己同代中，年长的或年幼的亲属的区别或自己直接的男性上代中，年长的和年幼的亲属的区别：这种区别只存在于自己的一代或自己的上一代。但称呼后者，发音区别不大，因为父亲的哥哥和弟弟都用PA这个音，只是称呼哥哥的音长一些，称弟弟的音短一些，然而区别还是有的。对父亲的姊妹用同样称呼，大小没有区别，称呼她们的丈夫，也是如此。

哥哥和弟弟称呼的区别可与长子的特殊权利和义务联系起来（第四章第三节）。上代亲属的社会关系区别较少，从称谓的融合来看也反映了这一点。

(e) 家庭群体的区别。这一规律不影响自己这一代。自己的上一代，父亲这个称谓与称呼父亲的兄弟用同一个主要词素PA。而近来又有一种新的称谓AJAJA。用于描述这种关系时，JA是父亲的称谓。母亲和父亲兄长的妻子用同一个主要词素ma。虽然如此，保持的区别说明了同样一个事实，即在较大的亲属关系单位的家中，家庭核心并未完全被淹没。

从上述情况，我们可以看出亲属关系的语言与亲属社会学之间大体上是相关的。这种关系只能在分类的普遍规律中找到，而不能在具体称呼中找到。

第二类亲属是孩子母亲方面的亲属，他们通常住在邻近的村子里。虽然，孩子的外婆在他母亲生孩子时就来帮忙，但她呆得不长；女儿出嫁以后，母亲只是在这种情况下偶尔在女婿家呆一夜。但是孩子却常常和母亲一起到外婆家去，每年数次，每次住十天或十多天。在外婆家，他是客人而且是受娇宠的（第五章第二节）。他在这个环境中学到了母亲一方的亲属称谓，这个环境不同于父亲一方的环境，他在那里学到自己的亲属称谓。因此，他对这些称谓的感情也不同。

The list of maternal relatives is given in the following table:

is constantly attached to her. Kinship terminology is a part of this education. On these occasions, when making inquiries for or about her child and teaching her child to recognize relationships, she uses the terms that should be used by her child. For instance, she will call her father-in-law *DJADJA* the term for grandfather, in this context. But this does not mean the abandonment of the special term *TCHINPA*, which is used on other occasions. In fact, she has a choice of her own special term, her husband's term and her child's term, according to the context.

A man will call his wife's father as *TCHINPA* and mother as *tchinm*. The term *TCHINPA* is also used for father's sister's husband. Since it is also used by a daughter-in-law to call her father-in-law, it indicates both types of cross-cousin marriage—the up-hill type and the reverting type (III-8). In practice the reverting type is not preferable. Therefore, the identification of terms cannot be interpreted only by the married system.

The other relatives of his wife will be addressed by the term used by his wife or his children, according to the appropriate contexts.

The number of terms actually used depends on the size of the kinship groups. In the village, the size of the Chia is small, therefore, the number cannot be large. Moreover, for the child of a mother who had been married through the institution of *siaosiv*, the entire group of mother-side relatives may be eliminated.

[2] Terms of Reference

If a person talks about a certain relative to another person, what term will he use for that relative? There are three persons involved: A the speaker, B the person A speaks to, and C the person A and B talk about.

因此，彼此间没有特别的称呼。例如，她烧好了饭，便招呼“大家”，意思是大家来吃饭。这种无名的称呼是大家认可的做法。她要提起丈夫时，用一个简单的代名词就足够了。但如果她必须称呼亲戚时，她用丈夫所用的称谓。生下了孩子后，她代表着孩子，与丈夫一方亲属的接触增多。孩子常常和她在一起，她也有义务教育孩子。亲属关系称谓是这种教育的一个组成部分。代孩子问询或问到孩子并教孩子认识亲属关系时，她用孩子应该用的称谓。例如，在这种情况下她叫孩子的祖父为DJADJA。但这并不意味着，放弃在别的场合用TCHINPA的称谓。事实上她可以根据不同情况选择她自己专用的、她丈夫用的以及孩子用的称谓。

一个男人称他妻子的父亲为TCHINPA，称妻子的母亲为tchinm。TCHINPA的称呼也用于父亲的姊妹的丈夫。它既然也被媳妇用来称呼公公，这表明了两种表亲婚姻——“上山”型和“回乡”型（第三章第八节）。在实际生活中“回乡”型不受欢迎。因此，称谓的识别不能只用婚姻方式来理解。

对于他妻子的其他亲戚，根据不同的场合用他妻子或孩子用的合适的称呼。

实际使用的称谓，其数目取决于亲属关系群体的大小。在农村，家的规模小，所以称谓数目不会大。此外，一个孩子的母亲如果是通过“小媳妇”制度成婚的，则整个母系亲戚群可能就消灭了。

二、间接称谓

如果一个人对另一个人谈起某一个亲戚，对这个亲戚用什么称呼呢？这牵涉到三个人。A，说话人；B，同A谈话的人；C，A和B谈及的人。

A may refer C to B

(I) by the term he uses to address C, or

(II) by the term which B uses to address C, or

(III) by the term used to describe the relationship between A and C or B and C in colloquial or in literary language (see next section), or

(IV) by the terms referring to the non-relatives (see V-4).

Application of these principles depends on the relation existing among A, B, and C—whether they belong to the same kinship group and who is senior in kinship grade and in social status.

The general rules can be formulated as follows but space does not allow me to give examples of each case and to qualify them with exceptions.

(1) A, B, and C are of the same Chia:

(a) $C < A$ and B—personal name of C

(b) $C = A$ and B—I

(c) $C > A$ and B, $A < B$ —I

$A = B$ —I

$A > B$ —II

(2) A, B, and C are of the same extended kinship group:

(A) C is in A's Chia:

(a) —III or personal name,

(b) —III or personal name,

(c) $A < B$ —I or III

$A = B$ —III

$A > B$ —II

(B) C is in B's Chia:

(a) —personal name of C

(b) —II, III, or IV

(c) $A < B$ —I

$A = B$ —I or III

$A > B$ —II, III, or IV

(3) A and B have no kinship relation (seniority is counted according to age and social status):

A对B谈及C时可用：

(I)他招呼C时所用的称谓，或

(II)用B招呼C时所用的称谓，或

(III)用口语或书面语描述A和C之间的关系或B和C之间的关系时所用的称谓（见下节），或

(IV) 用提及非亲属时所用的称谓（第五章第四节）。

应用这些原则还须视A、B和C之间存在的关系而定——他们是否属于同一亲属群体，在亲属级别和社会地位方面哪一个尊者。

一般的规则可列公式如下，但没有篇幅一一举例说明并描述特殊例外。

(1) A、B和C属于同一家：

(a) $C < A$ 和B，用C本人的名字

(b) $C = A$ 和B，用(I)

(c) $C > A$ 和B, $A < B$ ，用(I)

$A = B$ ，用(I)

$A > B$ ，用(II)

(2) A、B和C属于同一个扩大了亲属群体：

(A) C在A的家中：

(a)用(III)或个人名字，

(b)用(III)或个人名字，

(c) $A < B$ ，用(I)或(III)

$A = B$ ，用(III)

$A > B$ ，用(II)

(B) C在B的家中：

(a)用C的个人名字

(b)用(II)、(III)或(IV)

(c) $A < B$, 用(I)

$A = B$, 用(I)或(III)

$A > B$, 用(II)、(III)或(IV)

(3) A和B之间没有系属关系(哪一个系按年龄大小和社会地位高低来计算的) :

(A) C is a relative of A,

(a) —III or personal name,

(b) —III or personal name,

(c) $A < B$ —I or III

$A = B$ —III

$A > B$ —III or IV

(B) C is a relative of B,

(a) —III or personal name,

(b) —III or personal name,

(c) $A < B$ —IV

$A = B$ —III or IV

$A > B$ —II, III or IV

In the contexts listed above, A and B are in direct conversation while C is indirectly referred to. There is another type of context in which A addresses C taking B as the centre of reference. I have already pointed this out in the case of a child for whom somebody else is acting as spokesman. His mother addresses her father-in-law as *DJADJA*, grandfather, for the child. In these contexts, A is speaking not as himself or herself but for somebody else. But this must not be confused with the terms used in direct address.

[3] Terms to Describe Relationships

Terms of this type differ from those of the above types in that the latter refer to particular persons and the former refer to relationships as such. A child calls his mother *mma* but the relationship between them is described as *NITZE* (son) and *njian* (mother).

These terms are also used, as shown in the above section, in indirect reference. For instance, a child may be asked by a senior, "How is your *njian*?" or "Is *his njian* well?" In such a case, a pronoun is usually added, unless in a context no confusion can be made.

The general term for describing relationship may be "classificatory," because there may be a group of persons related to ego in similar relationships. For example, if there are two father's younger brothers, the relationship existing between them and ego are the same, that is, *SOSO* (father's younger brother) and *ADZE* (brother's son).

(A) C是A的亲属，

(a)用(III)或个人名字，

(b)用(III)或个人名字，

(c) $A < B$ ，用(I)或(III)

$A = B$ ，用(III)

$A > B$ ，用(III)或(IV)

(B) C是B的亲属，

(a)用(III)或个人名字，

(b)用(III)或个人名字，

(c) $A < B$ ，用(IV)

$A = B$ ，用(III)或(IV)

$A > B$ ，用(II)、(III)或(IV)

在上述情况中，A和B是直接对话，C是间接地被谈及。另一种情形是A和C对话，B作为涉及的中心。我已经在孩子由别人作为代言人的例子中指出过这种情况。孩子的母亲代孩子说话称公公为DJADJA，即祖父。在这种情况下，A并不是作为他或她自己在说话，而是替别人说话。这不能同直接对话时用的称呼混淆。

三、描述亲属关系用的称谓

这类称谓与上述称谓不同，后者指特定的人，前者指这种关系。一个孩子叫母亲ma，但两者之间的关系被描述为NITZE（儿子）和njian（娘）。

如上节所示，这种称谓在间接提到时也使用。例如，一个大人问小孩“你的njian怎么样了？”或“他njian好吗？”在这种情况下，除非完全不可能混淆，一般要加一个代名词。

描述关系用的一般称谓是可以“归类的”，因为可能有一群人与自己有同一类关系。例如，父亲有两个弟弟，他们同自己的关系是一样的，即SOSO（叔叔——父亲的弟弟）和ADZE（阿侄——兄弟的儿子）的关系。

The classification of relatives expressed in using the same radical in the terms of address may be different from the classification given in the terms to describe relationships. For instance, mother's brother's son is called by the same term used for brother. But the former is described as *PIAOGA* and the latter as *AGA*. All the relatives of descending grades are called by personal names or by numbers, but they are classified by the terms to describe relationship, one's own son is *NITZE*, brother's son *ADZE*, sister's son *WASEN*, etc.

In this type of terms, decrepancies may be found between colloquial and literary languages. A general distinction between colloquial and literary language is that the former is spoken by local people and the latter is written by all the literate Chinese. Indeed, both of them can be spoken and written, but in actual usage the distinction is on the whole maintained. Although recently there is an attempt to develop colloquial literature, in other words, to write in spoke form, nothing has been done besides the *Pai-hua* actually the "Peking dialect." On the other hand the literary language, which has been used through thousands of years and by all the literate Chinese, are expressed in system of written characters which can be read differently according to local phonetic peculiarities. It remains on paper and ready to be read. Since the grammar of the literary language is different from that of the colloquial language, the former cannot be understood by ordinary people in its reading form. The literary terms enter in the spoken language only in special context. The literary term for a thing or a relation may be different from the colloquial term for the same thing or relation. This difference may be illustrated by the relationship terms. Take the term describing the

relationship of father as an example: the literary term is *FU*, but the colloquial term in the village is *JA*. Moreover, the classes of relatives made in literary language may be undifferentiated in colloquial language; for instance, the relationships of father's brother's son and father's father's brother's sons' son are all described in colloquial terms as *Z-ZOSHONDI* (brothers of my clan) but are distinguished in literary terms as *TONSHON* and *ZETONSHON* respectively.

I cannot in my present note discuss in full on the problem of the relation between the literary and colloquial relationship terms. I have given elsewhere a summary of my view. "In the written system the theorists had systematically and thoroughly carried out those principles of classification, which had been noticed by them empirically in the process of change in the relationship system. Each generation is designated by the same stem, vertically split into two groups of older and younger, and then the family group is distinguished, by using modifications of the terms, from the other groups which are again differentiated according to their closeness to the family group. Such logical construction has not only over-shadowed the existence of the senior-junior classification, especially the fact of the absence of special terms of address for the junior class, but also misrepresented the relative working influence of these principles. As a result of such a construction, the literary system went too far from the actually practised systems. Of course, the process of change in the above mentioned direction has been greatly helped by the literary system. However, new changes in the Chinese social organization, such as the partial disintegration of the clan organization, the growing importance of the mother clan, and the change of the social status of the females, as shown in the analysis of the Wukiang system, has resulted in a direction of change which was not foreseen by the old theorists and is not to be found in the codified written system. Thus, the new social change will carry the actual practice still further from the written one." [7]

对话时用同一个基本称谓表述的亲属分类与描述亲属关系时用的称谓的分类不同。例如，称母亲的兄弟的儿子与称父亲的兄弟的儿子用同样的称呼。但在描述关系时，前者为PIAOGA（表哥）后者为AGA（阿哥）。称呼所有下代的亲戚用个人名字或用数字，但描述关系的称谓则分类了，自己的儿子叫NITZE（儿子），兄弟的儿子叫ADZE（阿侄），姊妹的儿子叫WASEN（外甥）等。

在这一类称呼中，口头语言和书面语之间可能不一致。口语和书面语的总的区别在于前者系当地人口说的，后者为所有有文化的中国人写的。当然两者都可以口头说和用文字写，在实际运用中，总起来说，一直保留着这种区别。虽然近来有一种发展口头文学的尝试，换句话说，就是写成口说的形式，即白话，实际上是“北京话”。另一方面，几千年

来有文化的中国人用的书面语言是以书写的文字表达的，可以根据地方的特有语音，读法不同，但总是写在纸上，随时可以读它。由于书面语的语法与口语语法不同，将前者读出来，普通人听不懂。书面的词语仅在特殊的情况出现于口语中。书面表示一件东西或一种关系与口头表达所用词语可能不同。这种区别可以用亲属称谓举例说明。例如，描述父亲的关系：书面词用FU（父），但口语，在村庄中用JA（爷）。此外，在书面语中分类别的亲属在口语中可能就没有区别。例如，父亲的兄弟的儿子这一亲属关系和父亲的父亲的兄弟的儿子的儿子，在口语中都叫Z-ZOSHONDI（自族兄弟——我本族的兄弟），但在书面则分别称TONSON（堂兄）和ZETONSHON（族堂兄）。

我不能在此充分阐述书面的和口头的亲属称谓之间的关系问题。我已在别处扼要发表了观点：“在称谓的书写系统中，理论家系统地、完全地实现了分类原则，这些分类原则是他们在亲属关系系统变化的实际过程中注意到的。每一代用同一主干定名，垂直分裂成两组，年长的和年轻的，然后在这个‘家庭’（父母子女这个团体）的称谓前加修饰词以此表示它不同于其他‘家庭’；其他‘家庭’又根据其与这个‘家庭’的亲疏加以区别。这种逻辑结构不仅模糊了年长和年轻的类别的存在，特别是年少的一类失去了特殊的称呼，而且还错误地表述了这些原则实际应用时的现实性。这种结构的结果是，书面语的称谓系统与实际上实行的称谓系统相去甚远。当然，上面提到的变化方向曾受到了书面称谓系统的很大影响。然而中国社会组织的新变化，如族的部分瓦解、母系亲属的日益重要、妇女社会地位的变化等，正如对吴江情况分析中所显示的，已经形成了一种变化的趋向，这些是过去的理论家所未预见到的，同时也是在已编纂的书面称谓系统中找不到的。故新的社会变化将促使实践中的称谓系统更加远离书面的称谓系统。”^[8]

口语的称谓，书写的称谓系统指书面称谓。书面称谓的详单可见陈和施赖奥克：《中国亲属称谓》，载《美国人类学家》，1932年，第34卷第4期；或冯汉骥，同前引文，载《哈佛亚洲研究杂志》，1937年，第2卷第2期。

后记 重读《江村经济·序言》

去年在北大社会学人类学研究所召开的高级研讨班上我许下一个愿，要在90年代余下的几年里对自己一生中“已经写下的东西多看看，反思反思，结结账”。而且还说“我想结合《江村经济》写一篇关于马老师论社会和文化变迁的文章”。许下的愿还得及早还清。半年多来心上老是挂念着这篇欠账。人世纷扰，抽空下笔的闲暇不多。说实话，我送出该书中文版的清样以来的10年中，还没对这本书从头到尾重读过一遍。在1986年中文版发布会上，曾说“愧赧对旧作，无心论短长”，这种心理长期来尚未克服。这次为了已经当众许下了愿，不能不硬着头皮，重新读一遍。

—

重读旧作，开卷就是马林诺夫斯基老师为这本书写的序言。这篇短短8页的文章里触及到社会人类学里许多至今还应当反复琢磨的基本问题。我想就在这些问题中挑选一些出来，谈谈我经过60年的实践后的思考。我原想用《重读〈江村经济〉》作为本文的题目，现在既把范围缩小了，题目也得改为《重读〈江村经济·序言〉》。

关于我写这本《江村经济》和马老师为此书写序言的经过，我在1962年写的《留英记》（收入《芳草天涯》第一篇）中已有交代，在此不必再重复，于是发生了我这篇文章从何下笔的难题。正在踌躇中，我突然想起不久前有一位朋友送我一篇1962年伦院（L. S. E.即伦敦经济政治学院）纪念马老师的演讲会上宣读的一篇讲词的复制件。讲员是英国人类学者弗里德曼（Maurice Freedman）教授，讲词的题目是“A Chinese Phase in Social Anthropology”。这篇讲词正好给了我一个下笔的入口。

先交代一下这位作者和这篇讲词。

我没有见过这位弗里德曼教授，但80年代我又获得出国访问的机会时，在国外一路听到许多同行朋友谈到关于弗里德曼的话。语气中都为我没有见到这位对中国社会文化研究具有突出热情的社会人类学家而惋惜，甚至有人听我说还没有读过弗里德曼的著作感到奇怪。事实是这样：我于1948年暑期离英返国后，由于战争的原因，我和国外的学术界已无法继续来往。大概在50年代末和60年代初这段时间里，弗里德曼在英国人类学界初露头角，而且名声日著，1962年已在高规格的伦院纪念马老师的会上发表讲话。听说后来1968—1970年曾一度当过伦院人类学系主任，成了马老师的接班人之一。他极力提倡研究中国社会文化，而且身体力行，做出成绩，获得“汉学人类学家”的名声。他培育了一批

对中国社会文化有研究兴趣的社会人类学者，甚至有人认为他实现了马老师曾表达的愿望，开创了一代用社会人类学方法研究东方有悠久历史的国家的社会文化的风气。但不幸他在1975年过早逝世了，享年55岁。那时正在“文革”末期，我刚从干校回到北京不久，还戴着“脱帽右派”的帽子，尚未恢复正常的社交生活。如果他能增寿10年，有机会来华，想来我们双方都会感到知己难逢、相见恨晚了。但天不作美，良缘难得，交臂错失，只能说是天意了。

再说他在那篇讲词的题目坦率指出了社会人类学这门学科的"Chinese Phase"。这个提法怎样译作中文？据《英华字典》phase有两解：一是方面，一是时期。用方面来译，意思是在社会人类学中有研究中国的一方面，那是比较普通的译法，因为一门学科可以有多个方面。如果译作时期，意思就有中国研究可以成为这门学科在一定时期里的主流，那就有一点自负的味道，至于译成社会人类学的中国时代，那么这个味道更重了。我倾向于用“方面”，但用“时期”也不能说超越了弗里德曼的本意，因为我读了他的讲词，觉得他是有点想把马老师在序言里所提出的“社会学的中国学派”Chinese School of Sociology提高一下，把研究文明国家的社会文化作为社会人类学的奋斗目标。这是弗里德曼的“预言”。他们两人都寿命不够长，没有看到所预言的“学派”或“时期”实现于世，令人遗憾。

有人称弗里德曼为“汉学人类学家”，我也想加一点注释。这个名字是最近我从北大社会学人类学研究所副教授王铭铭同志的一篇《社会人类学与中国研究》一文（《人类学与民俗通讯》，第20—21期）看到的。原文是：“后来，弗里德曼成为了研究中国的人类学家（或称“汉学人类学家”）共同推认的学术导师。”

汉学人类学的英文对译我没有见到过，这可能是由于我和外文资料接触太少所致，如果在英国此词现已流行，则弗里德曼所说的Chinese Phase确应译作“中国时期”甚至“中国时代”了。

这里插入一段有关掌故可能会有些启发。西欧各国学者研究中国文化已有好几个世纪，一般包括在东方学Oriental Studies之内，研究中国的东方学称Sinology，这类学者称作Sinologist。汉学或东方学来源于此。记得我在《留英记》里说过，我在接受博士考试时，有一位考官是罗斯（Sir Denison Ross），就是一位当时有名的东方学者。马老师事后曾为我解释说，关于中国社会文化的研究有需要得到东方学者的认可。可见直到30年代中国文化的研究在英国还属于东方学者的“领地”。但是马老师取得罗斯的同意把社会人类学跨进了这种学术王国里的传统界线。弗里德曼接着在60年代就在这块园地上撑起了“研究中国的人类学”甚至有人称之为“汉学人类学”这面旗子了。如果东方学者不出来抗议，就表明英国学术界里发生了变化。

书“将被认为是人类学实地调查和理论工作发展中的一个里程碑”这句话作为在社会人类学的领域里开创一个新风气的根据。这个新风气就是从过去被囚禁在研究“野蛮人”的牢笼里冲出来，进入开阔庞大的“文明世界”的新天地。

不论在英国还是美国，社会或文化人类学在30年代前一直是以当时被欧洲人称为“野蛮人”作为研究对象的。他们把“人类学”实际上等同于“野蛮学”，但并不觉得这是对人类学的讽刺。马老师是在这陈旧的空气里熏染成长的，当他发表他的成名之作时，竟也把“野蛮人”这个我们现在听来十分刺耳的污辱人的名称用在他所著的书名里，但他醒悟得比别人早些，并公开发出了预言说：“未来的人类学不仅对塔斯马尼亚人、澳洲土著居民、美拉尼西亚的特罗布里恩德群岛人和霹雳的俾格米人有兴趣，而且对印度人、中国农民、西印度群岛黑人、脱离部落的哈勒姆非洲人同样关注。”他在给《江村经济》写序言时，就引用了这句预言，并表示终于看到了这预言开始实现的喜悦。至于这句预言原来的出处，在序言中并未注明。

其实他这句预言是用了极为温和的口气表达的。只希望人类学对当时被划分为文野的两类人等同“关注”。这种口气相当于为人类学开阔一个研究的“方面”。60年代弗里德曼用的phase一字就注入了“新时期”甚至“新时代”的意味了。这30年里怎样会发生这么大的变化呢？我不能不想起就在这30年里发生过震动全人类的第二次世界大战。这次大战使大英帝国瓦解了，世界各地被殖民主义压迫下的民族在不同程度上得到了解放。人类学者还想用过去那种气势凌人地到原来殖民地上的人民中间去进行所谓调查研究的田野作业，免不了要吃闭门羹了。这是大势所趋，人类学这门学科要能继续生存下去，就得另辟路径，开拓新的研究园地。这时自会有人想起马老师的预言。当时在伦院人类学系后来接班当主任的弗里德曼反应得比较迅速，跟着马老师指导的方向，看到了中国，想一举而抹掉“文野”之别。现在又过了30多年回头看，他未免急躁一点，在当时要树立起“社会人类学中国时代”或“汉学人类学”，条件似乎不够成熟，以致壮心未酬，赍志而殁。文野这条人为的鸿沟仍未填平。

马老师在序言里提到这预言时，心里明白要跨过这文野之别并不是那么轻松容易的。他在序言里接着说“这一段引语中包含着对现代实地调查和理论工作提出的重要基本要求，研究文化变迁、文化接触的现象、现代文化的传播”。他在写序的当时自己就在非洲研究现代各民族的关系、触及现代文明和土著文化中间这条文野鸿沟，也面对着一系列对他原有实地调查方法和理论的挑战。他也明白自己的探索就会在这条路子上爬上一个台阶，他要为人类学更上这层楼，从对野蛮人的研究过渡到对文明人的研究，筑好一顶楼梯。但是由于生命的限制，只遗下了一大堆残稿，后来，虽经他的门生于1945年整理成了*Dynamics of Culture Change*一书，但他想建立的这顶楼梯还只是一个初步设计的图稿，留下许多空隙没有填实。

马老师看重《江村经济》的原因，到现在我才有了进一步的体会，

可能是他在我这本书的骨子里看到了一些所希望培育的苗头。也许他曾考虑过，吴文藻老师所带领的这个小小队伍有可能就是实现他的宏图的一个先遣队，为人类学跨过“野蛮”进入“文明”进行一次实地探索。我当时实在不太能领会他说“社会学中国学派”时的期待心情。我曾多次坦白地说过，这本《江村经济》在我是一棵“无心种下的杨柳”。当时我哪里会有这种本领看出了马老师的用心？经过了30年的坎坷境遇之后，才如梦初醒，在1985年不自觉地吐出“愧赧对旧作”这句话。今天又过了10年才进一步发觉当时感到愧赧的原因是辜负了老师当时的这片心愿。能有此悟，还得感谢弗里德曼这篇演讲的启发。

三

弗里德曼在这篇演讲里，讲到了马老师离英后海外人类学者研究中国的企图和困惑。马老师这一代人在社会人类学里奠定了着重“田野作业”的传统，就是要从人们的实际生活中去观察他们的社会和文化。这个“田野作业”的调查方法虽不能说是从马老师开始，但他以后的社会人类学者都以他在特罗布里恩德岛上土人中的实地研究作为范本。马老师研究过的特罗布里恩德群岛上的土人是世代代在这小岛上生活的人，为数不过几千人，长期和外界隔绝，往来稀少，有一点像陶渊明所描写的桃花源里的人物。像马老师这样有经验的人类学者在这岛上住上几年，用当地土语和当地土人亲密往来是不难做到的，可以说具备亲自接触和参与当地土人生活的条件，这就是为社会人类学者采取田野作业布置下的理想环境。马老师充分利用这些客观条件结合了主观的才能和努力，为社会人类学提升了一个阶段，走出书斋进入田野。

现在要从这种对过去曾被称过“野蛮人”的研究所用的田野方法去研究“文明人”行得通么？这是一个想把社会人类学再提高一个阶段必须解决的问题。马老师在《江村经济》的序言里一开始就列举若干他认为本书的优点，其中，第一点就是“一个土生土长的人在家乡人民中间进行工作的成果”。他加上一句提醒西方的读者说，中国是“一个世界上最伟大的国家。……本书的内容包含着一个公民对自己的人民进行观察的结果”。

上面的引语，我是用了中文版的译本。原文中前一句是"It is the result of work done by a native among natives"。他写完这篇序言后，特地打电话要我去他家吃便饭。在饭桌上边吃边谈，谈话中提到序里的这句话时着重说明"native"意思是指“本地人”。我当时觉得这位老人家心眼儿真不少。他怕我见怪，因为在西方native一词通常带着贬意，用来指殖民地上的野蛮人。当时我怪这位老师连这一点也值得要当面向我特地说明一下的么？随后我想起这次谈话时，发觉西方殖民主义确已深入民间的语言感觉之中。我觉得这位老师还不明白我们中国人的心态。我们也有野蛮这个词，不过只指粗鲁无礼，并不是人格的区别，更不触及人的尊严，不等于说“你不是人”。而西方把文野区别提高到了人和不是人的界线。在这一点上我们也许能看到至今还十分严重的西方种族矛盾的心态根源。说不定这个以种族绝灭到种族奴役为手段起家的现代西方

文明会被这段历史在人们心态里的沉淀物所颠覆。天道轮回，报应说不定还是历史的规律。

话似乎说远了。但这次饭桌上的谈话，还是可以和社会人类学的发展主题联系起来。我在这次读这篇序言时，又深一层考虑到这位老人家既有用native这个词来指我和我所调查的家乡父老而怕我见怪之意，为什么偏要用这词，说这句话呢？看看前后文就不难明白这是有意说给有种族歧视的西方人听的，尤其是西方人类学者听的。这句话的前文是“作者并不是一个外来人在异国的土地上猎奇而写作的，本书的内容包含着一个公民对自己的人民进行观察的结果”。后文是“如果说人贵有自知之明的话，那么，一个民族研究自己民族的人类学当然是最艰巨的，同样，这也是一个实地调查工作者的最珍贵的成就”。重读生新意，联系着弗里德曼的演说来看，马老师死后，英国的人类学者中间对马老师这预言的反响就真使我另有一番滋味在心头了。

最令人深思的：马老师在上引这些话中明确反对的是“在异国的土地上猎奇而写作”，提倡的是“一个民族研究自己民族的人类学”。这样明确的态度却没有灌入他的一些学生耳中。由于我长期没有与国外社会人类学者有过深入接触，对国外文坛不应凭传说任意作出议论。事实是我实在还没有听说过国外的人类学家中有对自己民族或国家的人民进行过严肃的研究。我希望我这样说是出于我的孤陋寡闻。但是反对研究自己社会文化的人却是有的，比如利奇（Edmund Leach）教授在1982年出版的*Social Anthropology*里明白表示，他根本不赞成一个初学人类学的人从研究自己的民族入手，就是说他怀疑本民族的人从研究本民族能进入社会人类学的堂奥。我实在不明白他这种成见是否能说还是欧洲人的种族优越感在作弄他，连人类学者都跳不出这个魔掌？对此我们可以不去深究了。重要的是既然排除了自己的民族作为研究对象，而英美的人类学到他们这一代已面临过去出入无阻的“野蛮人世界”对他们关了门，除了回到书斋里去之外，还有什么地方可去呢？迫于无奈，这一代英美人类学者不能不转向自己国土之外的文明世界了。

四

弗里德曼在那篇讲演中提到了一系列在30和60年代研究中国的英美人类学者，这些都是1938年我离开伦敦之后所发生的事。当时我已是西方社会人类学界的局外人，看了弗里德曼这篇演讲的复制件才得知有些西方人类学者把研究对象指向了中国。

我特别注意到弗里德曼首先提到的是现在还和我通信问好的伦院的老师弗思（R. Firth）教授，现在已是雷蒙德爵士（Sir Raymond）了。他是最早赏识我这本《江村经济》的老师。我在《留英记》里已讲过，我初到伦院时，他是系里为我指定的导师。他和我商量写论文的内容时，我先提出“花蓝瑶的社会组织”，后来补充说我在来英之前又调查了一个家乡的农村。他看了我两篇节略后，建议我写《江村经济》，我一直不明白他作出这个选择时的考虑。现在联系了当时社会人类学的处境来说，可以猜测他已看到这门学科正面临从研究野蛮人转向研究文明人

的起点上。他这个选择可以说是扭转方向盘的第一手。

弗里德曼的演讲里提到一段我过去不知道的事。他说1938年，应当是在我离英之后，弗思曾寄了一篇论文给燕京大学出版的《社会学界》，这一期还标明专门献给“L. S. E.的人类学”。在这篇论文里他提出了“微型社会学”的概念，用来专指马老师所说“社会学的中国学派”的特点。马老师的那篇序言里曾说过“通过熟悉一个小村落的生活，我们犹如在显微镜下看到了整个中国的缩影”（中文版第4页）。六年后（1944），弗思又在伦院的讲坛上再一次说微型社会学是人类学在战后可能的发展方向。微型社会人类学是指以小集体或大集体中的小单位作研究对象去了解其中各种关系怎样亲密地在小范围中活动。他加重了口气说：我想社会人类学者可以做出最有价值的贡献或许依然就是这种微型社会学。他在1952年又强调了局限于小单位的观察有多种好处。关于这个问题我在下面还要提出来讨论。这里要指出的是，弗思把研究中国的社会人类学提高到了社会人类学发展方向上来了。从马老师的“社会学的中国学派”到弗思的“微型社会学”是一个飞跃，并为弗里德曼后来提出的“社会人类学的中国时期”开辟了道路。

弗思教授不但在理论上作出先导，而且就在这时候准备在行动上付诸实践，就是打算到中国来做“微型社会学”的试验。他开始学习汉文汉语，据说后来他发现汉文汉语不容易在短期内掌握，所以不得不改变计划，半途在马来西亚停了下来。1939年他选择了马来半岛东北角沿海的吉兰丹（Kelantan）地方的一个滨海的渔村开始用社会人类学方法进行微型社会学的田野工作。弗思教授这次亚洲之行并没有同我和吴文藻联系，当时我国对外通信渠道已经断绝。他改变计划的原因可能并不完全是弗里德曼所说的在语言上的困难，而是当时的国际形势。他启程时日本侵略军已攻占了半个中国，前锋已到达桂黔边境，而日本还没有发动太平洋战争，马来西亚尚未进入战时状态。弗思教授就利用这短短一年多平静的时期取得研究一个亚洲的渔村的机会。他在日军进入马来西亚的1941年返回伦敦，编写他那本*Malay Fisherman*的初版。大战结束后，他于1946和1963年又两次重访这个渔村，改写了这本微型社会学的代表作，正是在弗里德曼发表那篇演讲的下一年出版。

说来也很有意思的是，一向不主张人类学者从微小社区入手研究一个文明的大民族文化的利奇教授，自己却利用参加英国军队进入缅甸的机会，大概在1940年前后，在中缅边境开始研究缅甸境内的景颇族的山官制度（所著的书是1954年出版的）。他在英军溃退时，靠我们的军队掩护，从滇缅路撤退，到达昆明时，我还在云南大学教书，他的临时住所就在翠湖边，和我只隔了一条街。可是他没有通知我，以致我们两人失之交臂，没有见面。

在弗里德曼的演讲中提到的西方人类学者在1938年之后到中国来研究的还有牛津（Oxford）的纽厄尔（W. H. Newell），科内尔（Cornell）的斯金纳（C. W. Skinner），哥伦比亚（Columbia）的弗里德（M. H. Fried）和L. S. E.的克鲁克（I. Crook）。在北京解放前不久，芝加哥（Chicago）的R. Radfield应邀来清华讲学。他是继R. Park

和A. R. Radcliffe-Brown极力主张中国社会学和人类学者研究中国社会文化的有力支持者，不幸都没有看到他们所催生的婴儿的成长而逝世了。中国大陆解放之后，以上提到的这些西方学者除了克鲁克之外都离开了中国。直到80年代改革开放之后，才又有一些人类学者来华做研究工作。

令人遗憾的是弗里德曼在世时，至少在他发表这篇演讲前，并没有看到我1945年在美国芝加哥大学出版社出版的介绍我们抗战时期在云南内地农村调查的*Earthbound China*一书。在他这篇演讲里只能说到我返国后在左右两堵政治墙壁上撞破了头，似乎从此休矣。这怪不得弗里德曼，当时国际信息远不如当前这么发达，曾有一个时候西方曾盛传我已不在人世。但是马老师赞扬的研究自己民族的人类学在西方固然没有得到响应，我们中国学者却还守着他的遗训，而且有所发展。他如果在世时能看到我们在中国做出的探索，也许对他所主张的“社会人类学的中国时期”可以提供一些有力的支持。

我觉得抱歉的是在这篇文章中对弗里德曼本人用人类学方法研究中国社会文化的业绩不能多说几句。一是因为我们并无一面之缘，第二是因为除了这篇演讲的复制件外，我还没有机会读到过他的著作。我只能借上引王铭铭的文章里的话来说，他是现在英国“研究中国的人类学家（或称‘汉学人类学家’）共同推认的学术导师。其影响至今不衰，他的后代现在已成为西方汉学人类学的中坚力量”。他在社会人类学历史上的地位，这几句话已足够定论了。希望有一天我还能向弗里德曼的原著认真学习，提高我对我自己的国家和民族的科学认识。

下面接着我想就我自己实践中得来的思考，对用人类学方法研究中国社会所需解决的几个理论问题发表一点意见，我倒并不急于和西方人类学者对话，更不想抬杠，还是为了推进我们中国人研究中国社会文化，用此余生作出一分努力。

五

马老师在《江村经济·序言》中重提他的预言，社会人类学的研究对象应当包括文明人，又鼓励本民族人研究本族的社会文化。如我在上节提到的，第一个在他指导下得到博士学位后来又成为他接班人的Firth教授曾依他所指出的方向，在马来西亚用马老师一贯强调的田野作业方法和功能主义理论，研究了一个海滨的渔村。他在实践中提出了“微型社会学”的概念。微型社会学是以一个人数较小的社区或一个较大的社区的一部分为研究对象，研究者亲自参与当地的社会活动，进行亲密的观察。在研究方法上还是等同于马老师在特罗布里恩德群岛土人中和弗思自己在提科皮亚（Tikopia）岛土人中所用过的田野作业方法。弗思的实践认为可以证明这种微型社会学是可行的。实际上他是想在人类学领域里一步直接跨过了我在上边所说的“文野之别”。

他这样一步跨越的试验，基本上消除了西方社会人类学的研究对象被困住在“野蛮人”里的传统桎梏。但是这也引起了许多值得注意的方法

上和理论上的问题。这些问题的来源首先是出于“文野之别”的“别”在哪里。我们不应过于简单地以西方的种族成见一语把这区别予以抹掉。特罗布里恩德群岛土人和中国农民以及伦敦的居民存在着相同的一面是基本的，因为他们都是人，所以应当都是人类学的研究对象。这一点我在那篇讲马老师的文化论中已经说清楚了。我认为马老师和功能论就是要想以一切人类文化都是人类依据自己的生物需要和集体生活的需要而产生的这种基本认识，来消除人文世界中本质上文野的差异，比如他批判了把理知思考作为文明人所独具的特性等，就是为“文野一致”论找根据。但如果我们只讲文野一致也会导致文野无别的错觉，也就是忽视了人本身在文化上的演化，忽视了人的历史。所以我们既要根本上肯定人类的一致性，也要注意人类本身还是处在自然的演化过程之中。这个过程首先表现在：人在发挥它生物遗传的底子上创造的人文世界，因处境不同存在着各种不同的选择。所以不同民族在社会文化上可以有差别，这种差别也是客观存在的，而且这种差别也曾引起了不同民族在过去的历史里产生了不平等的地位。我们不当因为反对这种不平等而把差别也根本否定掉。我们既要承认文化本质的一致，也要重视文化形式上的差别。

我并不同意文化的发展是有一定不移的阶段，但也不同意完全是偶发的和无序的。从整个人类历史过程中看去，总的来说大体上是：一个社区里共同生活的人是由少而多，人所能支配的环境是由小而大，人和人的关系是由简而繁等等，这些基本上都是日常可见的实际情况。即以Firth自己研究过的Tikopia人和马来西亚渔民相比较，我想也会看到两者在这些方面的差异。

人口既有多少、社区既有大小、社会既有繁简，有人提出对“微型社会学”的责难就值得我们认真对待。责难是：一个包括人数众多、历史悠久、文化复杂的民族或国家，只研究其中的一个由少数人组成的小社区，能不能了解这个民族整体的社会文化？这正是利奇教授在1982年所写的*Social Anthropology*一书中向研究中国农村的社会人类学者提出的责难。

利奇教授责难我们从一个小小农村入手研究中国社会文化时提出了的这样一个问题，就是“中国这样广大的国家，个别社区的微型研究能否概括中国国情？”我在1990年所发表的《人的研究在中国》一文中答复了这个问题。我在当时的答复中首先承认他的“局部不能概括全部”的定式，即方法上不应“以偏概全”，而提出了用“逐渐接近”的手段来达到从局部到全面的了解。

后来我又提出在云南内地农村调查的实际中采用的“类型”的概念，和在90年代城乡经济发展的研究中提出了“模式”的概念，对局部和全面的关系作了进一步的修正。我认为：“把一个农村看成是一切都与众不同、自成一格的独秀*Sui generis*也是不对的。一切事物都在一定条件下存在的，如果条件相同就会发生相同的事物。相同条件形成的相同事物就是一个类型。”（《人的研究在中国》，第6页）以江村来说，它虽然不能代表中国所有的农村，但是确有许多中国的农村由于所处条件的相

同，在社会结构上和所具文化方式上和江村基本上是相同的，所以江村固然不是中国全部农村的“典型”，但不失为许多中国农村所共同的“类型”或“模式”。我这种思考，使我进一步摆脱了利奇的责难。我认为有可能用微型社会学的方法去搜集中国各地农村的类型或模式，而达到接近对中国农村社会文化的全面认识。

最近我在重温马老师的文化论时，又有所启发。在人文世界中所说的“整体”并不是数学上一个一个加起而成的“总数”。同一整体中的个体有点像从同一个模式里印刷出来的一个个糕饼，就是这个别是整体的复制品。生在社会里又在社会里生活的一个个人，他们的行为以至思想感情的方式是从先于他存在的人文世界里学习来的。学习基本上就是模仿，还加上社会力量对个人发生的规范作用，即所谓教育，社会用压力强制个人的行为和思想纳入规范中，一个社区的文化就是形成个人生活方式的模子。这个模子对于满足个人生活需要上是具有完整性的，每个人生活需要的方方面面都要能从这个人文世界里得到满足，所以人文世界不能是不完整的。关于这层意思我在关于学习马老师的文化论的体会那篇文章里已经说过，这里不再重复了。

这样看来，如果能深入和全面观察一个人从生到死一生生活各方面的具体表现，也就可以看到他所处的整个人文世界了。在实际田野作业里，要观察一个人从生到死一生的行为和思想是做不到的。所以实际研究工作是不同个人的片断生活集合起来去重构这个完整的“一生”，从零散的情境中见到的具体镜头编辑成整体的人文世界。他所以这样做，是因为每个人在一定社会角色中所有的行为和感情都不应看作是“个人行为”，而都是在表演一套规范的行为和态度。我们都知道每个当父亲的人在他当舅舅时就不是一个面孔。社会人类学者首先要研究的对象就是规范各个个人行为的这个“模子”，也就是人文世界。从这个角度看去，人文世界里的“整体”必须和数学里的“总数”在概念上区别开来。这是“微型社会学”的基本理论根据。

利奇认为我们那种从农村入手个别社区的微型研究是不能概括中国国情的，在我看来，正是由于混淆了数学上的总数和人文世界的整体，同时忘记了社会人类学者研究的不是数学而是人文世界。其实利奇也明白这个道理。因为他在自己的*Political Systems of Highland Burma*一书里所分析的克钦人的社会结构时也只根据他在缅甸的一部分被称作克钦人的景颇族中所调查到的资料。他根本没有对跨越中缅两国的景颇族全部进行调查，而敢于下笔把在其中一部分克钦人中观察到的政治关系着手分析解放前在景颇族里广泛实行的山官制度。他在社会人类学研究实践中实际也是采用了“微型社会学”的理论根据：只要在一部分克钦人中深入细致观察他们政治生活中所遵守的规范就可以用来概论跨越中缅边境的景颇族的整个山官制度了。如果他有机会在解放后看到在我国境内的景颇族实行了民族区域自治，他可以说历史的条件变了，所以两地发生了不同的政治结构，而且进而可以用缅甸境内克钦人的山官制度来作了解我国境内景颇族区域自治的参考体系了。这种研究方法，我是可以赞同的。我也同意在人文世界里不必去应用“典型”这个概念，道理是在人文世界有它的特点。但是他在对待我们中国人研究农村时却忘记了这

既然我对利奇教授翻了一笔旧帐，对他提出的微型研究是否能概括中国国情的问题上发了一通议论，补充我在《人的研究在中国》一文中未尽之意，不妨接下去对他提出的另一个问题“像中国人类学者那样以自己的社会为研究对象是否可取？”也附带说几句。虽然不免是炒冷饭，炒炒热可能也有好处。

利奇公开认为中国人类学者不宜从本国的农村入手进行社会人类学的研究工作。这是他用委婉的语气反对马老师所赞赏的“本地人研究本地文化”的主张。他批评若干本中国学者出版的研究中国农村的著作作用为例证之前，有一段他自己的经验之谈。他说：“看来似乎是很怪怪的，在亲自具有第一手经验的文化情境里做田野作业，比一个完全陌生的外客用天真朴素的观点去接近要观察的事物困难多得多。当人类学者研究他自己社会的一鳞一爪时，他们的视野似乎已被从公众的基于私人的经验得来的成见所扭曲了。”（第124页）

他的意见简单地说是自知之难，知己难于知人。这一点可以说和我国常说的“贵有自知之明”颇有相同之处。但这是一般印象的总结，并不是经过了实证性的分析推考得出的定论。

利奇也许心里也明白他这样说不一定站得住脚，所以翻过几页，在他逐一批评过了中国学者的著作之后，又把已说过的调子收了回来。在第127页最后一段里，语气改了，“尽管我对直接对本人自己的社会作人类学的研究采取消极的态度，我依然主张所有人类学者最重要的见识总是植根于自我的内省。研究‘别人’而不研究‘自己’学术上的辩解是虽则我们起初把别人看成是乖僻，但到头还得承认人们的‘异相怪样’正是我们从镜子里看到自己的模样”。这段话我觉得他说到点子上了。利奇毕竟还是马老师的及门弟子，他尽管可以另有所好，但是功能派的一条基本“律令”他是丢不掉的，那就是“众出于一，异中见同”。

利奇说人类学者的见识根源还是在自我内省。我想就这句话补充一些自己实践的体会。我很赞同利奇从人类学者在田野作业切身的体会说起。我生平说得上人类学的田野作业，只有三次。第一次是在广西金秀瑶山，第二次是在江苏江村，第三次是在云南禄村。这三次都可以说是中国人研究中国社会文化。但是第一次我是汉人去研究瑶人。既不能说我是研究本土文化，又不能说完全是对异文化的研究。实质上我研究的对象是“我中有你，你中有我”，而且如果按我主观的估计，同多于异，那就是说汉人和瑶人固然有民族之别，但他们在社会文化生活上在部分已十分接近相同的了。这是中国少数民族研究的一个特点，各族间存在不同程度的相同和相异之处，似乎不能简单地以“本文化”和“异文化”的区别来定位。

江村离我出生的吴江松陵镇只有十多公里，同属一个县域，两地居民说是同乡，没人会提出异议。但是我和江村的“乡亲”们能不能说在社

会文化生活上只有“同”而没有“异”呢？我觉得没有人会看不到“异”的存在，甚至江村的居民也并不真的感觉到我是他们所说的“自家人”。即以语言说，尽管都是吴语，但是他们讲的话我很多听不太懂。我所说的，他们更不容易一下就明白。若说《江村经济》是本土文化研究的代表作，我总觉得还不够格。这里所包括的复杂性，在下文还要细说。

再说禄村。禄村是我一位燕京大学同学的家乡。他和禄村的关系有点近于我和江村的关系，但也不尽然。无论如何我和禄村居民又隔了一层，本村人间用本地话进行的亲谈杂语，我根本听不懂。他们和我说话时也要改口打“官腔”，异于他们日常的用语。《禄村农田》的本土性比了《江村经济》又少了些。所以严格说两者都还不能说是十足的“土生土长的人在本乡人民中间进行工作的结果”。

如果我自己把这三次田野工作互相比较，我对所接触到的人、事、物能心领神会的程度确是不同的。在江村，基本上我不必通过第三者的帮助就能和对方交往，在禄村就不能那么随心所欲了，在瑶山里我离不开能说汉语的人的帮助。如果社会人类学的田野作业离不开语言作为取得认知的工具，我实在不能同意利奇所说的在熟悉的田野里工作比在不熟悉的田野工作更困难的说法。

更进一步来推考，我们怎样去认识一个和自己文化不同的所谓“异文化”的呢？我在学习马老师文化论的体会中已经讲过我怎样开始我在瑶山里的“田野工作”的情形。我曾说：我记得最初在瑶山里住下已是晚上，我们进入一间为我们准备下的小楼，顿时被黑黝黝的一群人围住了，我们进入了一个“友好但莫名其妙的世界”。这正是我们要认识的对象。怎么办？首先我们只有依靠在自己社区里待人的经验和他们作有礼貌的接触。在和他们接触中逐渐发觉这一群人对我们的态度、行为、感情都有差别。而且这群人之间相互对待也不相同。我们通过这些差别，用自己社会里看到过的关系，分辨出他们之间的社会关系，和他们在这群人中不同的地位。我们首先看出了他们之间也存在母子关系，从母子关系再看出了夫妇关系等等。我把这段回忆在此重述，目的是要说明，我是从比较自己熟悉的文化中得来的经验去认知一个不熟悉的文化的。这是我认为是利奇所说“反省”的一种具体表现。

当然这个认知过程并不是套取已知的框架，而是依靠已有的经验和新接触的事物相比较，起着参考体系的作用。两者不同之处是作为参考体系的只引导在比较中注意新事物的特点，由相同引路，着重注意其相异，就是作为认知的依傍，而不作为范本。如果遇到轶出于已有经验范围的完全新鲜的事物，作为参考体系的已有经验正可肯定其为新事物，而作为完全新的经验来接受，扩大已有知识的范围。用已有经验作参考体系，在心理过程上我认为就是利奇所说的“反省”。如果把这种参考体系本身有系统地综合起来也可能就是马老师所说的“文化表格”。马老师是根据他本人的和其他人类学者的田野经验归综成一个可用以帮助田野作业的比较完整的参考体系。这个体系的原料是田野作业者的个人经验，个人经验要个人反省才能表达出来。

社会人类学田野作业的对象，以我以上的思路来说，实质上并没有

所谓“本文化”和“异文化”的区别。这里只有田野作业者怎样充分利用自己的或别人的经验作为参考体系，在新的田野里去取得新经验的问题。我们提出“社会学中国化”或本土化是因为当时我们中国学者忽视了用田野作业的方法去研究我们自己的中国社会和文化。我们绝没有拒绝出生于异文化的学者来中国进行田野作业。如果要以研究者自己不同的文化出生来比较在工作上哪里方便，根据我的经验，只以传媒手段的语言来说，本土人研究本文化似乎占胜一些，当然还得看研究者掌握当地语言的能力。至于利奇所提出的“私人的”或“公众的”成见问题，我在《人的研究在中国》一文已经发表过我的意见。我认为这是个“进得去”——“出得来”的问题，在这个问题上双方各有长短。我不再重复申论了。

七

用微型社会学的方法去调查研究像中国这样幅员广阔、历史悠久、民族众多的社会文化，不应当不看到它的限度。拉德克利夫-布朗和弗思两位前辈鼓励我们的农村研究，以我现有的体会来说，其实不过是指出一条入手的门径，并不是说要了解中国国情，农村研究已经足够。这一点无需我多作说明。如果要加一条补充的话，农村研究实在是了解中国国情的基础工作，只从80%以上的中国人住在农村里这一事实就足够作为这句话的根据了，而且还可以说即是那小部分不住在农村里的人，他们的基本社会结构和生活方式大部分还是等同于农民或是从农民的模式中发展起来的。因之至少可以肯定研究中国社会文化应当从农村研究入手。到目前为止，对中国农村社区进行比较全面的研究还不多。这方面工作自应更认真地继续做下去。

如果再读一下马老师在《江村经济·序言》里所表达对“社会学的中国学派”所抱有的期待，就可以看到这种微型研究事实是存在着相当严重的不足之处。他说：“这本书集中力量描写中国农民生活的基本方面。我知道，他打算在他以后的研究中说明关于崇祀祖先的详细情况以及在村庄和城镇中广为流传的关于信仰和知识等更复杂的体系。他还希望终有一日将自己的和同行的著作综合起来，为我们展示一幅描绘中国文化、宗教和政治体系的丰富多彩的画面。对这样一部综合性著作，像这本书这样的专著当是第一步”。

马老师心目中我这本《江村经济》只是一部综合中国国情的巨著的初步起点。他还为这部巨著的内容做出了一个启发性的提纲，就是除了我在《江村经济》所勾画的该村土地的利用和农户家庭中再生产的过程，也就是社会基层结构和经济活动之外，还应当包括文化、宗教、政治等方面的社会规范和意识形态方面的叙述和分析，并且把这类研究成果综合起来，成为一幅“丰富多彩的画面”，其实他可能已看到要达到他的要求，当时我采用的微型研究的方法和理论是不够的，所以像这本书那样的著作只能是编写这样一部综合的有关中国国情的长卷的起步工作。

如果把马老师提出的要求作为我们的目标，我们不能不承认微型社会学的限度，承认限度并不是否定在限度内的成就和它的价值。以微型

研究为“第一步”可以得到比较结实的基础。我们应当从这基础上走出去，更上一层楼。怎样走，怎样上，首先要在实践中去发现“微型”的限制在那里。

我在上面各节里已肯定了一个像农村一样的社区可以作为社会人类学的一个研究的适当对象，因为这个社区的人文世界是“完整”的，从功能上说能满足每一个社区居民生活各方面的需要。从这个意义上Leach说我这本《江村经济》不失为一本功能主义的著作，虽则我并没有把社会各方面的功能全面顾及，但是从整体出发有重点地叙述了这个社区的经济生活，也就是马老师所说的“农户家庭再生产的过程”。我后来用建立类型来补充这种研究方法，用以区别于通过数量上的增加以取得总体的认识。

抗战时期我在云南内地农村的研究工作中充分利用了类型这个概念，进行比较的研究工作。江村、禄村、易村、玉村等名称就表示了我的研究方法。我认为可以从发现各种类型的方法逐步接近认识中国全部国情的目的，也就是通过“微型社会学”累积各种类型，综合出马老师所要求我做的那部有关中国文化和社会的巨著。

直到80年代，我第二次学术生命开始时，才在总结过去的实践中，清醒地看到了我过去那种限于农村的微型研究的限度。我在60年代提出的“类型”概念固然可以帮助我解决怎样去认识中国这样的大国对为数众多、结构不同的农村的问题，但是后来我明白不论我研究了多少类型，甚至把所有多种多样的类型都研究遍了，如果把所有这些类型都加在一起，还不能得出“中国社会和文化”的全貌，因为像我所研究的江村、禄村、易村、玉村等等的成果，始终没有走出“农村社区”这个层次的社区。整个“中国文化和社会”却不等于这许多农村所加在一起的总数。农村不过是中国文化和社会的基础，也可以说是中国基层社区。基层社区固然是中国文化和社会的基本方面，但是除了这基础知识之外还必须进入从这基层社区所发展出来的多层次的社区，进行实证的调查研究，才能把包括基层在内的多层次相互联系的各种社区综合起来，才能概括地认识“中国文化和社会”这个庞大的社会文化实体。用普通所熟悉的现成概念来说就是中国文化和社会这个实体必须包括整个城乡各层次的社区体系。

在《江村经济》中我早已看到江村这个村一级的社区并不是孤立和自给的。在这方面和太平洋岛屿上的社区比较，江村这一类中国农村的社区居民固然在本社区里可以取得满足他们基本的需要，但这些都不是封闭的社区，或封闭性远没有特罗布里恩德群岛土人或提科皮亚岛土人那样强。当然当前世界上绝对封闭孤立的人群已经可以说不再存在了，或是只是极为个别的例外了，但在和社区外的联系程度各地方的情况可以差别很大。自从航海技术有了大发展以来，几个世纪海运畅通。全世界的居民已抛弃了划地聚居、互不往来、遗世孤立的区位格局，不同程度地进入了稀疏紧密不同的人和人相关的大网络。就在这个历史的变化中，在农村社区基础上发展出了若干农村间在生活资料上互相交换的集散中心的市镇。

传统市镇的出现在中国已有几千年的历史。在本世纪的近一百年里，特别是近几十年里，中国传统市镇发生了巨大的变动。城乡关系已脱颖而出，成了一个特别引人注意的理论和实际问题。

城乡关系不但把分散的自成一个社区的许多农村联系了起来，形成一种有别于农村的市镇社区。它的社会和文化内容可以说是从农村的基础上发展出来的，所以保留着许多基本相同的一面，但是又由于它作为一个社区的功能已不同于农村，因而也自有其不同于农村的一面，它属于与农村不同层次的社区。

在研究方法上说，在研究农村这种基层社区时，只要不忘记它是有许多方面和本社区之外的世界相联系这一点，然后集中注意力在本社区的自身，还是可以在既划定的范围内观察到社区居民社会生活各方面的活动，并把本社区和外界的关系交代清楚，还是可以在这既定的空间范围内把这个社区人文世界完整地加以概括。比如我在《江村经济》中把居民依靠区外供应日常所需的油、盐、酱、醋、糖、酒，在“航船”的一节里讲清楚了，在江村的经济体系中也不留下很大的缺漏。又比如在《禄村农田》里把当地农业里重要的劳力供应，说明是从附近各地集中到禄村来卖工的劳动市场里得到的，而并没有去追踪这些出卖劳力的人的来源是外村的少数民族，也可以交代过去了。这些例子说明，“微型社会学”虽则带来了限制，如果说明把研究的范围限于基层社区，这样做法还是可以说得通的。但也必须承认这些“微型”资料是不可能综合起来说明高一层次的社会情况。

如果我自己不满足于完成一本不失为“功能主义的著作”或是还想沿着马老师在该书序言中希望我能进一步完成一部有关中国社会和文化的综合性的著作，我就不能停留在这本《江村经济》的著作上了，而且也不能只走“云南三村”的老路，尽管这条路还应当走下去。为了更上一层楼，我就势必走出农村社区这个范围而从农村里发展出来、为农村服务的市镇社区拓展我的研究领域了。

至于我怎样从《江村经济》里走出来进入小城镇的研究，这一段叙述，我觉得已超出了对《江村经济·序言》的体会的范围，尽管这一步还是从《江村经济》的基础上走出来的。我在去年年初写了一篇《农村、小城镇、区域发展》，可以作为本节的参考，在本文里不再重复了。

八

“微型社会学”有它的优点，它可深入到人际关系的深处，甚至进入语言所难于表达的传神之意，但是同时有它的限制。我在上一节里指出了在空间坐标上它难于全面反映和该社区有密切的联系的外来辐射，如我已提到的一个农村所倚赖的市镇，和没有提到而同样重要的亲属和行政上的种种关系，这是因为社区是通过社会关系结合起来的群体，在这种人文世界里谋取生活的个人已不是空间的一个点，而是不断在扩大中的一堆堆集体的成员，就是在幅员可伸可缩的一堆堆集体中游动着的分

子，这是很难用普通几何学图形予以表述的。

如果我们从空间转向时间，社区的人文世界同样是难用几何形象来加以表述的。这正是社会人类学和历史学争论已久的问题的根子。时间本身，以我们常识来看，日换星移总是在一条线上向前推进，以个人生命经历来说，从幼到老，不能倒流。这就是我们熟悉的过去、现在和未来后浪推前浪的程序。在西方拉丁语系的语言中的动词还要用这个三分法来定式。这三分法就成了我们一般认识历史的标尺。这种以时间里运行的一切事物总是按照先后次序一幕幕地层次井然地推演的认识框架在社会人类学里也就出现了所谓社会演化规律。把人类的历史看成和其它事物的历史一般像是一条流水线。这线又可以划成若干段，一段接一段，如野蛮、未开化、文明等等。一个人不论生在什么地方，都可以根据他生活上一部分的表现，划定他在历史框架里的地位，而推论他全部生活的方式和预测他的未来。这种方法的内容可以搞得很复杂，其实把人文世界看得太机械化和简单化了。

马老师对这种机械的社会演进论是深恶痛绝的，但也由于他反对这种错误的历史观，又由于他主要的田野作业是在特罗布里恩德这一个太平洋小岛上居民中进行的，这些小岛上的居民生活比较简单而且看来长期没有发生过重要的变动，以致他的著作给人一种印象就是研究这类居民的人文世界可以不必去追问他们的历史演变，甚至误解功能主义是非历史主义的。功能主义确是主张一件事物的功能是它对人生活发生的作用，这里所说的作用又被认为是这事物当地当时对个人需要的满足。个人的需要持续的时间和包括的范围也就成了人文世界的时间和范围。因而被认为功能主义的社会人类学可以不讲历史。我认为这是一种误解。马老师在他的著作里可以说确是没有历史的分析，但这是出于他所研究的对象首先是在他进行田野作业这段时间里社会变动不大，其次当地居民并没有文字去记下他们的历史和他们的历史还是靠个人的头脑里记下的上辈人口头传下来的传说。这就使过去的历史和现在的传说分不清，以致这两者之间在时间框架里互相融合了。传说有它当前的作用，满足当前的需要，并不一定符合已过去了的事物发生当时的实际。在了解当前的人文世界自应当把两者分开而着重在当前发生作用的功能。这就出现了他强烈否定所谓“遗俗”这一类“失去了功能的事物”，因而他被认为不注意在客观时间中发生过的一般所谓“历史”了。

以上是我个人的体会，就是说在功能的分析里，一件人文世界中的事物都可以存在时间框架上的多重性，即我们习以为常的过去、现在、未来结合在一起的情况。上面我已说过人们对过去的记忆可以因当前的需要而和实际上过去的情况不相符合，而且在当前决定个人行为心理因素里还包含着对未来的希望和期待。早在《江村经济》一书的“前言”里我也说过以下一段话：

“任何变迁过程必定是一种综合体，那就是：他过去的经验，他对目前形势的了解以及他对未来结果的期望。过去的经验并不总是过去实事的真实写照，因为过去的实事经过记忆的选择已经起了变化。目前的形势也并不总是能得到准确的理解，因为它吸引注意力的程度常受到利害

关系的影响。未来的结果不会总是像人们所期望的那样，因为它是希望和努力以外的其他许多力量的产物。……”

我全部引用60年前的话，因为这段话里我表明了我们习以为常的时间的三分法，不能简单地运用在分析变动中的人文世界。我当时所说的时间上的“综合体”，其实就想指出我们单纯常识性的时间流程中的三分法是不能深入理解人文世界的变动过程，我在《学习文化论的体会》一文中所说“三段直线的时间序列（昔、今、后）融成了多维的一刻”也就是这个意思。在这个问题上我总觉得不容易说清楚，所以反复地用不同说法予以表述。

马老师在《江村经济·序言》中已说明了他对历史的态度。“正因为那个国家有着最悠久的没有断过的传统，要理解中国历史还必须从认识中国的今天开始。这种人类学的研究方法对于现代中国学者和欧洲的一些汉学家所进行的以文字记载为依据的重要历史工作是一种不可缺少的补充。研究历史可以把遥远过去的考古遗迹和最早的记载作为起点，推向后世；同样，亦可把现状作为活的历史，来追溯过去。两种方法互为补充，且须同时使用。”

马老师当时已看到中国社会的特点是在它有考古遗迹和文字记载的悠久文化传统。这是和殖民地上土人的重大的差别。但由于自己没有像在像中国这样的地方进行过田野作业，所以他只能做出原则性提示，认为历史学和社会人类学应当是两门可以互为补充的学科。至于在具体研究工作上怎样合作和补充，他并没有详细说明。但这却直接涉及到是否能应用“微型社会学”的方法来研究中国农村的问题，或“从农村社区能否全面研究中国国情”的问题了。

以《江村经济》来说，我在关于历史材料方面应用得确实很少，而且很简单。像在江村经济中起重要作用的蚕丝副业，我只查了赖特（A. Wright）的一本关于20世纪对香港、上海等商埠的印象记，和用了他1908年在这本书里所写的有关“辑里丝”的一段话。有关江村的人口数字我只用了1935年的普查数字。当然我在许多地方讲到开弦弓的传统时，除了我从现场视察到实事外，也以我自己过去的的生活经验来加以说明，而我的生活经验最早只能推到1910年。总括一句，我在这本书里并没有如马老师所说的结合了历史来进行的。我自己也多次说所写的这些记录今后将成为历史，时至今日这本书确可以说是一本记载了这个村子的历史。当时是活历史，现在只能是已过去了的历史，所以决不能说是结合了历史的社会学分析。

在实践中我不能不怀疑像《江村经济》一样的村一级“微型社会学”调查、社会学和历史学结合的田野工作是否切实可行？同时我是赞同马老师所说的话，要读这部历史得有历史学者和考古学者从文字和实物中得来的有关过去情况的知识作为补充。至少我认为今后在微型社区里进行田野工作的社会人类学者应当尽可能地注重历史背景，最好的方法是和历史学者合作，使社区研究，不论是研究哪层次的社区都须具有时间发展的观点，而不只是为将来留下一点历史资料。真正的“活历史”是前因后果串联起来的一个动态的巨流。

写完了上一节我总觉得意犹未尽，问题是在对马老师的“活历史”怎样理解。序言里的原文是“History can be read back, taking the present as its living version”。（原书p. xxii）中文版的译文是“可把现状作为活的历史，来追溯过去”。我心里对这句话反复琢磨，想进一步体会马老师的原意。从我所理解的马老师对文化的分析中可以说他是着重从活人的生活中认识文化的。在活人的生活中他不能不看到很多行为和思想是从前人学来的，这里见到了文化有传统的一面。文化是在时间里积累而成的，并不一切都是现在活着的人自己新创的。如果从上节里所说到的昔、今、后三段的直线延伸观念来说，就得承认今日的传统就是前人的创造和昔日传下的“历史”了。这样的思路就会给马老师一向反对的“遗俗”这个概念一个结实的基础。为了否认从今日文化里的传统拉出这条一线三维的时间序列，他提出了“活历史”的概念。“活历史”是今日还发生着功能的传统，有别于前人在昔日的创造，而现在已失去了功能的“遗俗”。传统是指从前辈继承下来的遗产，这应当是属于昔日的东西。但是今日既然还为人们所使用，那是因为它还能满足人们今日的需要，发生着作用，所以它曾属于昔，已属于今，成了今中之昔，至今还活着的昔，活着的历史。

历史学者和人类学者在这个今中有昔的问题上出现了分歧的态度。历史学者咬定历史是一线三维的序列，对于文化的传统必须回顾它本身的面目，那就是要追根求底。人类学者着眼于人们当前的生活，所以马老师主张到活生生的生活中去观察才能明白人们为什么这样生活。他不否认活生生的生活中有许多是从过去传下来的，但这些传下来的东西之所以传下来就因为它们能满足当前人们的生活需要。既然能满足当前人的生活需要，它们也就是当前生活的一部分，它们就还是活着。这也等于说一个器物、一种行为方式之所以成为今日文化中的传统是在它还发生“功能”，即能满足当前人们的需要。凡是昔日曾满足过昔日人们的需要的器物和行为方式，而不能满足当前人们的需要时，也就会被人们所抛弃，成为死历史了。

当然说“死了的历史”并不正确，因为文化中的活和死并不同于生物的生和死。文化中的要素不论是物质的或是精神的，在对人们发生“功能”时是活的，不再发生“功能”时还不能说“死”，因为在生物界死者不能复生，而在文化界或人文世界里，一件文物或一种制度的功能可以变化，从满足这种需要转而去满足另一种需要，而且一时失去功能的文物、制度也可以在另一时又起作用，重又复活。人文世界里自有其“逻辑”，不同于自然世界。关于这一点，我在这里不去发挥和展开讨论了。总之马老师用“活历史”这个概念是值得进一步思考的。我在上一次研讨会上讲对马老师文化论的体会时曾提“三维一刻”时间观，可以参阅。

我接着想联系到在去年暑期召开的那一次研讨会上李亦园教授发表的关于“大传统”与“小传统”的讲话。我受到的启发是他对文化的层次分析。他指出了大传统和小传统的区别，因为他在田野作业中看到了中国文化的结构里有着具有权威的一套经典性的以儒家为代表的人生观和宇宙观，另外还有一套在民间流行，表现在民俗信仰的人生观和宇宙观。前者称之为大传统，后者称之为小传统，即伯格（Berger）教授所说的“李氏假设”。

我很赞赏李教授的分析，认为对中国文化宏观研究或微观研究都应当应用这个文化层次的分析，因为这种文化里存在着经典的和民间的区别，的确可以说在研究中国文化时表现得特别清楚，也影响得特别深刻。我想在这篇重读《江村经济·序言》文章后面加上我对这个问题的一些个人的体会，或说不成熟的假设，因为这也和上面我提到的马老师的“活历史”有关。

我认为这个特点在中国很可能和历史上很早就发生了文字而且是用图形作为符号，因而发展成一套和语言脱钩的文字体系有关。这个体系是怎样发生和发展的，是个历史问题，留给历史学家去讲更为适合。我着眼的是由于这个体系所发生的社会和文化后果。

这个体系对中国文化和社会的影响很大很深，我只举出其中一些特别引起我注意的方面。首先是由于它和语言脱了钩，冲破了地方性和民族性的限制。这个特点的意义只要和其它以语音为基础的文字体系相比较一下，就很容易看得清楚。我们普通所谓“方块字”在解放前后曾受到过很猛烈的冲击，提出所谓“拉丁化”或“世界语”的文字改革方案。尽管这种改革有权威性的支持，但是群众对此并没有积极的响应，结果只成为一种“注音”性质的符号，作为学习“方块字”发音的辅助工具。热心于文字和语音结合的人们没有注意到“方块字”在中国几千年文化中所起的积极作用，那就是阻挡了以语音差别为基础，由方言发展不同语言而形成分割为不同民族的历史过程。最清楚的例子是多语言和多民族的欧洲，到现在还不容易合成一体，在东亚大陆上我认为正因为产生了这个和语音脱钩的文字体系，汉族才能保存地方方言而逐渐统一成一个民族，而且掌握这“方块字”作为信息媒介的汉族才能起到不断吸收和融合其它民族的作用以成为当今世界上人口最多的民族，同时还起着形成多元一体的中华民族的核心作用。

“方块字”在中国文化上所起的积极作用是不应当忽视的，但也不能不看到它消极的一面，那就是和语音脱钩之后要学习这种文字是比学习文语合一的文字要困难得多。学会全部“方块字”需要相当长的时间，比学会拼音的字要多好几倍。而且如果不常使用这些“方块字”，就会所谓“返盲”。这已成为当前“扫盲”运动中的一个严重问题。识字的困难限制了文字的普及性。在一个以小农为基础的大国里，在这样长的历史过程，能掌握这个信息媒介的人数在开展扫盲运动和义务教育之前总是在全民中占很小的比例，这就引起一个很基本和很严重的社会现象，那就是文字被少数人所独占。直到目前，为了要消灭这种独占性还得付出很大的努力。

这些识字的人在中国历史上常有专称，“士”可能是最早的名称。从有文字以来直到我的幼年，20世纪初年，这种掌握文字的人在社会上还是占有比一般不识字的人民高一等的地位。读书门第是高出普通人一级，这一级的人在20世纪年代里被称作“知识分子”，在“文革”时期里被称作“臭老九”。这些称号都反映了他们在社会上具有一定的特殊地位。

我在30年代抗战时期在西南后方进行农村调查时曾注意到这种在社会上具有特殊地位的知识分子，曾想作专题研究，但这个愿望并没有完成。以我记忆所及，我曾把这种人看成是城乡之间的桥梁。这种人就是历来被称作士绅的人物，他们一般和基层农民是有区别的，但存在着血缘关系，许多是农民出身或和农民保持着亲属关系，而另一方面又大多走出农村，住入乡镇和城市，成为具有政治权力的统治阶级的一部分或和统治阶级相互沟通，特别是科举时期各级政府的领导人大多出于这种人。这种人长期以来被称为“士大夫”，士是指读书人，大夫是指当一官半职的人。在乡镇和城市里他们是头面人物，尽管没有官职，但是有社会名望，被称为缙绅先生。我曾根据初步的见解写成过一些文章，后来被译为英文，用*China's Gentry*的书名出版，在这本书里我曾表述过中国士绅在城乡间的桥梁作用。

这桥梁作用如果和“李氏假设”联系起来就找到了大传统的载体和大小传统之间的联系人物，或是把他们看作一个社会阶层。这些以掌握“方块字”的技能，把上下双方的文化嫁接调适在一起。我有一个假设，就是在这些士大夫手上，广大民间的基层思想和愿望整理和提高出了一个头绪，使它们能和过去在民间受到尊重的经验和教训，结合历史上各代掌握有权力的统治阶级所需要的维持其地位和扩大权势的需要，编制成一套行为和思想规范。其实就是在民间的实际习俗中通过选择使其能得到历代帝王的支持，用文字表达出来成为影响社会的经典。我这种想法是把小传统作为民间广大群众从生活的实践和愿望中形成的传统文化，它的范围可以很广，其中有一部分可以和统治者的需要相抵触的，在士大夫看来是不雅驯的，就提不到大传统中去，留在民间的乡风民俗之中。在我看来，大传统之所以能表现一部分中国文化的特点，正在于它是以小传统为底子的。它又不同于小传统，因为经过了一道选择和加工的过程。选择和加工过程就是司马迁所说的“其文不雅驯，荐绅先生难言之”。雅驯与否是选择的标准，也就是这些文人们看不入眼的风俗民情。孔子对鬼力乱神一字不提，因为他觉得这些民间信仰不雅驯，看不入眼。这些掌握着文字的人就通过“难言之”把这些不雅驯的东西排除在以文字为符号的信息系统之外，就是拔除在大传统之外；但并没有在民间把这些东西消灭掉，仍在民间用口头语言口口相传，这就成了“小传统”，还可以传给后来人。大传统在民间还是发生作用的，因为它仗着这可以超越时间的文字构成的消息系统，从识字的人传给识字的人。这些人又凭他能接触到历代传下来的经验保存了人们生活中有用的知识，利用这些传统知识能帮助别人适应生活环境，成为“人师”，取得社会的信誉名望和特殊地位，大传统也依靠他们影响着民间大众。

在小传统里还可以分出“地上”和“地下”两层。在民间的生活中有种种思想信仰和活动，士大夫是看不入眼的，认为不雅驯，而没有被采

用，未成为大传统。这部分依旧在民间活动，凡是到民间去观察的人还能看得到，而且在民间是公开的，不受限制的，这些就是我所说地上的小传统。但有一部分是犯了统治阶级的禁例，不能公开活动，但是在民间的思想信仰里还是保留着，只在大人先生们不屑看或视而不见。这些我认为可以包括在地下的小传统里。

另外还有一部分由于受到社会上权势的镇压，不得公开露面，只能改头换面，设法在民间的私生活中存在下去，久而久之甚至已打入了人们的潜意识里，即本人也不自觉这种思想信仰的意义，只作为一种无意义的习惯盘踞在人们的意识里，这种东西不去发掘是不易暴露它的本来面目的，我觉得可以称之为潜文化。在被视为邪教等等名目下就有这种潜文化存在，而且当其发挥作用时，也常常以曲折和隐蔽的方式有力地暴发出来，所以更难捉摸和正视。

我这样的假设又暴露了《江村经济》这一类微型社会调查的又一种限制，可说这是文化的层次上的限制。农民的人文世界一般是属于民间的范围，这个范围里有多种层次的文化。它有已接受了的大传统，而同时保持着原有小传统的本身，有些是暴露在“地上”的，有些是隐蔽在“地下”的，甚至有些已打进了潜意识的潜文化。作为大传统载体的士绅在近代已有很多离乡入镇，而其社会活动和影响还在农村里发生作用。当前的情况又有很大的变动，士绅阶层可说已经解体，在农村里他的作用已由基层干部所取代，而基层干部的性质和过去的士绅阶层又有差别，这个演变现在我还没有追踪调查，说不出来。由于文化差别形成的社会层次的原则我觉得在文盲没有扫尽、现代知识没有普及之前还不会有大的变化。因之如果以农村社区为范围进行微观研究，这方面的情况就难于作深入具体的观察了。如果要了解农村的社会结构，这个文化层次的问题单靠微型研究方法看来还是不够的，因之我把它列入微型社会学受到限制的一个方面。

十一

以上三节是想指出我认为“微型社会学”在空间、时间和文化层次上所受到的限制。我再回头一看，我发现我所指出的限制实在是出于我对自己所研究的要求超过了微观的范围。我一直想闯出微观的限制走出农村，逐步扩大我的研究范围和层次，因为它已不能满足我的要求。如果我像利奇教授一样安心于他对社会人类学的要求，自然可以安身立命于微型社区的观察了。

利奇教授代表了30年代英国人类学者的流行观点。他们认为社会人类学的目的是在理解或发现不同人群组合社会以谋取生存及发展的基本原则，组成社会的基本结构和结构中各部分有机配合的规范，即想从各地、各时、各类的个别人群中去找集体生活的共同原理。如果以此目的来要求自己的研究工作，我想从任何一个正常活动的社区都可以作为取得这些原理的研究对象，因为它既然是个充满生机的社区，必然具备其所以能生存和发展的必需的条件和必需的结构以及各部分必需的配合。我们把任何一个标本仔细地予以观察和分析，都可以得出其所以能

生存和发展的原理的。对一个单身进行田野作业的社会人类学者来说，为了观察得更精细和深入，要求他能接触到社区里的一个个人，观察他们的行为、感情、思想和希望，所选择的研究对象就贵在全而不在大了。我想这应当是强调个人进行田野作业的“微观社会学”的理论出发点。正如弗思教授（1951年）所说微观社会学是“the microcosm to illumine the macrocosm, the particular to illustrate the general”，“以微明宏，以个别例证一般”。这句话引起后来社会人类学的疑问的就在“以微能否明宏，以个别能否例证一般？”

如果研究者的目的不是在发现一般的文化和社会结构原理，而是在认识一个具体国家、一个具体地方或一个具体村子，即一个具体社区的情况，那就不同了。这些研究者就需要运用一般原理工具去理解和说明一个或大或小的具体社区里人们的生存情况和发展的前景。前者也许可说是纯科学的研究，后者可说是应用科学的研究，我回头看我自己可能就属于后者。这一点，马老师在《江村经济》的序言里实际上已经点明。介绍我时首先是他说我是“中国的一个年轻的爱国者”，他同情我当时关心自己祖国“进退维谷”的处境，更同意我以我这个受过社会人类学训练的人来进行为解答中国怎样适应新处境的问题。从这一点出发我提出要科学地认识中国社会文化的志向，为此我走上了这一条坎坷的人生道路，一直坚持到暮年。实际上，真正了解我学人类学的目的、进入农村调查工作的，在当时——甚至一直到现在在同行中除了马老师之外，为数不多。我在西方的同行中长期成为一个被遗忘的人。我有一次在国际学术会议上自称是被视为在这个学术领域的一匹乱闯的野马。野马也者是指别人不知道这匹马东奔西驰目的何在。其实这匹四处奔驰的马并不野，目的早已在60年前由马老师代我说明白的了。

作为一个应用社会人类学者并不轻视纯学理的研究。如果不明白社会人类学的原理如何谈得上应用这门知识来为人民谋利益呢？如何谈得上来促进社会的发展呢？关于这一点我在《江村经济》的前言里已讲得很清楚，马老师在序言里引用了我的一段话来说明应用科学和纯粹科学的关系。

“如果要组织有效果的行动并达到预期的目的，必须对社会制度的功能进行细致的分析，而且要同它意欲满足的需要结合起来分析，也要同它们的运转所依赖的其他制度联系起来分析，以达到对情况恰当的阐述。这就是社会科学学者的工作。所以社会科学应该在指导文化变迁中起重要的作用。”

他接着在下页里说：“他书中所表露的很多箴言和原则，也是我过去在相当一段时间里所主张和宣扬的，但可惜我自己却没有机会去实践它。”在这里他表白了内心的慨叹。我自以为能明白他慨叹的由来。可惜的是他生逢那个时代，他所出生的民族还没有摆脱被统治的地位，他对此连纸上谈兵的时代都没有。他接着说：“我们中间绝大多数向前看的人类学者，对我们自己的工作感到不耐烦，我们厌烦它的好古、猎奇和不切实际，虽则这也许是表面上的，实际上并不如此。”

这是马老师写这篇序言来推荐这本我自认为还远没有成熟的果实的

实在原因。他看到这书字后行外的意向，指向人类应当用知识来促进世人的幸福和美好社会的实现。这触及了马老师心中早已认识到的社会人类学的应用价值和它的使命。

我的“愧赧对旧作”也就是因为我并没有完成老师在这篇序言里表达的深厚的期待和明确的指向。我享受到的天年超过了我的老师，但是尽管生逢盛世，但在临近谢幕之前，所能回报于世的还只有这么一点说不上什么成就的一堆不成熟的残意浅见。可以告慰于自己的也许只是我这一生并没有忘记老师的教益和亲友的抚育，能在这条学以致用道路，一直走到现在这垂暮之年。我更高兴的是60年前所记下的我姐姐费达生所开创的“工业下乡”的实验，现在已经开花结果，并在祖国的工业现代化的事业里作出了重大的贡献。我想还是用我在《江村经济》中文版发布会上即席写下的诗句最后两句作为本文的结语：“阖卷寻旧梦，江村蚕事忙。”愿江村的乡亲们，继续不断从劳动中创造自己的光辉前途。

1918年11月7日，梁漱溟的父亲梁济正准备出门，遇到漱溟，二人谈起关于欧战的一则新闻。

“世界会好吗？”梁济问道。

漱溟回答：“我相信世界是一天一天往好里去的。”

“能好就好啊！”梁济说罢就离开了家。

三天之后，梁济投净业湖自尽。

On Nov. 7, 1918, Liang Shuming's father, Liang Ji, encountered his son on his way out. The two spoke of a news report on the war in Europe.

"Has man a future?" asked Liang Ji.

"I believe that the world is going to be better by the day." Shuming responded.

"I hope that will be so," said Liang Ji, and left the house.

Three days later, Liang Ji drowned himself in Jingye Lake.

“博雅双语名家名作”出版说明

1840年鸦片战争以降，在深重的民族危机面前，中华民族精英“放眼世界”，向世界寻求古老中国走向现代、走向世界的灵丹妙药，涌现出一大批中国主题的经典著述。我们今天阅读这些中文著述的时候，仍然深为字里行间所蕴藏的缜密的考据、深刻的学理、世界的视野和济世的情怀所感动，但往往会忽略：这些著述最初是用英文写就，我们耳熟能详的中文文本是英文文本的译本，这些著述原初的英文文本在海外学术界和文化界也享有着崇高的声誉。

比如，林语堂的《吾国与吾民》（*My Country and My People*）以幽默风趣的笔调和睿智流畅的语言，将中国人的道德精神、生活情趣和中国社会文化的方方面面娓娓道来，在美国引起巨大反响——林语堂也以其中国主题系列作品赢得世界文坛的尊重，并获得诺贝尔文学奖的提名；再比如，梁思成在抗战的烽火中以英文写就《图像中国建筑史》文稿，经其挚友费慰梅女士（费正清夫人）等人的奔走和努力，英文版《图像中国建筑史》（*A Pictorial History of Chinese Architecture*）于1984年由麻省理工学院出版社出版，该出版社也因此获得美国出版联合会颁发的“专业暨学术书籍金奖”；又比如，1939年，费孝通在伦敦政治经济学院的博士论文以*Peasant Life in China—A Field Study of Country Life in the Yangtze Valley*为名在英国劳特利奇书局（Routledge）出版，后以《江村经济》作为中译本书名——《江村经济》使得靠桑蚕为生的“开弦弓村”获得了世界性的声誉，成为国际社会学界研究中国农村的首选之地。

此外，一些中国主题的经典人文社科作品经海外汉学家和中国学者的如椽译笔，在英语世界也深受读者喜爱。比如，艾恺将他1980年用中文访问梁漱溟的《这个世界会好吗——梁漱溟晚年口述》一书译成英文（*Has Man a Future? —Dialogues with the Last Confucian*），备受海内外读者关注；此类作品还有徐中约英译的梁启超著作《清代学术概论》、狄百瑞英译的黄宗羲著作《明夷待访录》，等等。

有鉴于此，外研社人文社科出版分社推出“博雅双语名家名作”系列。

博雅，乃是该系列的出版立意。博雅教育（Liberal Education）早在古希腊时代就得以提倡，旨在培养具有广博知识和优雅气质的人，提高人文素质，培养健康人格，中国儒家六艺“礼、乐、射、御、书、数”亦有此功用。

双语，乃是该系列的出版形式。英汉双语对照的形式，既同时满足了英语学习者和汉语学习者通过阅读中国主题博雅读物提高英语和汉语能力的需求，又以中英双语思维、构架和写作的形式予后世学人以启迪

——维特根斯坦有云：“语言的边界，乃是世界的边界”，诚哉斯言。

名家，乃是该系列的作者群体。涵盖文学、史学、哲学、政治学、经济学、考古学、人类学、建筑学等领域，皆海内外名家一时之选。

名作，乃是该系列入选标准。系列中的各部作品都是经过时间的积淀、市场的检验和读者的鉴别而呈现的经典，正如卡尔维诺对“经典”的定义：经典并非你正在读的书，而是你正在重读的书。

胡适在《新思潮的意义》（1919年12月1日，《新青年》第7卷第1号）一文中提出了“研究问题、输入学理、整理国故、再造文明”的范式。秉着“记载人类文明、沟通世界文化”的出版理念，我们推出“博雅双语名家名作”系列，既希望能够在中国人创作的和以中国为主题的博雅英文文献领域“整理国故”，亦希望在和平发展、改革开放的新时代为“再造文明”、为“向世界说明中国”聊尽绵薄之力。

目录

- Preface
- 序
- I'm not a scholar; I'm a thinker.
- 第一章 我不是学问家，而是一个思想家
 - Confucianism and Buddhism are my basis.
 - 壹 我的思想的根本就是儒家跟佛家
 - Buddhism
 - 贰 佛家
 - The Buddhist attitude toward life
 - 佛家对生命的一个看法
 - Hinayana is leaving the secular world.
 - 小乘佛教主要是出世
 - Mahayana—why I am both a Buddhist and a Confucian
 - 大乘佛教——我为什么既是一个佛教徒，又是一个儒教徒
 - Discipline, meditation, wisdom & the stories of "Stick" and "Shout" in Chan School
 - “戒、定、慧”与禅宗故事中的“棒喝”
 - The supreme liberation is becoming Buddha.
 - 最高的解放就是成佛
 - Confucian
 - 叁 儒家
 - Confucius' knowledge is a knowledge of life and existence.
 - 孔子的学问是生命、生活之学
 - I can be considered as belonging to the Lu-Wang school.
 - 我算是陆王派
 - Wang Yangming's "familiarity with one's disposition"
 - 王阳明的“明心见性”
 - Confucianism and Buddhism: the enlightened person has no problem.
 - 肆 佛家与儒家：高明的人通达无碍
 - Difference between Confucianism and Buddhism
 - 佛跟孔子的异同
 - Intellectual inclination toward Buddhism & life along the Confucian path

- 我在思想上倾向佛家，生活上走儒家的路
- I am not qualified as a person of learning; I'm a thinker.
- 我不够一个学问家，而是一个思想家
- Questions of reality and life have occupied my mind.
- 第二章 现实问题和人生问题占据着我的头脑
 - From Revolutionary Alliance to Peking University
 - 壹 从同盟会到北大
 - From joining Revolutionary Alliance to teaching at Peking University
 - 从参加同盟会到任教北大
 - Work with Chen Duxiu and Li Dazhao
 - 与陈独秀、李大钊共事
 - Bring Xiong Shili to Peking University
 - 介绍熊十力到北大任教
 - Gu Hongming of an analytical mind but quite tendentious
 - 辜鸿铭有见识，但思想主张很偏
 - My intercourse with the four professors of the Institute of Chinese Studies, Tsinghua University
 - 我与清华国学院四大导师
 - Rural reconstruction
 - 貳 我与乡村建设
 - My running school in Shandong
 - 我在山东办学的经历
 - When I was Yan Xishan's advisor
 - 我做阎锡山顾问的时候
 - Han Fujun and Rural Reconstruction Institute
 - 韩复榘与乡村建设研究院
 - My views on rural reconstruction
 - 我的乡村建设主张
 - My second son is Tao Xingzhi's student.
 - 我的二儿子是陶行知的弟子
 - Involvement in national affairs
 - 叁 奔走国事
 - Feng Yuxiang's men both loved and feared him.
 - 冯玉祥让士兵又爱又怕
 - My student Xu Minghong and the Fujian People's Government
 - 我的学生徐名鸿与福建人民政府
 - Li Zongren's War Zone Party Policy Committee
 - 我与李宗仁的“战地党政委员会”
 - My contact with Chiang Kai-shek
 - 我与蒋介石的来往

- My impression of Hu Zongnan and Chen Cheng
- 我对胡宗南和陈诚的印象
- Chiang Kai-shek's greatest contribution
- 蒋介石最大的贡献
- Zhou Enlai is a paragon.
- 周恩来是一个完人
- My intercourse with Mao Zedong: different ideas of China's future
- 与毛泽东相交：对中国前途的认识
- I am different from the others engaged in political activities.
- 我和其他政治活动家的不同
- Days after the year 1949
- 肆 1949年以后的岁月
 - It would be better to preserve my middleman status.
 - 我想保留一个中间人的地位
 - Zhang Dongsun, a professor of philosophy
 - 哲学教授张东荪
 - I was too arrogant, too bigheaded in September of 1953.
 - 1953年9月，自己心太盛、气太高
 - Perseverance in the turbulent days
 - 动乱岁月里的坚守
 - The commander of forces can be carried off; the will of a common man cannot be taken.
 - 三军可夺帅也，匹夫不可夺志
- Two greatest things in my life
- 伍 我一生最重要的大事
- My views of other people, the world and myself
- 第三章 我对他人、世界和自身的看法
 - Historical figures
 - 壹 当年人事
 - Yan Yangchu has no head for philosophy concerning rural reconstruction.

Preface

I am honored to be able to write a preface to this volume.

First I want to explain how this dialogue between Mr. Liang Shuming and me came about.

I became interested in Mr. Liang's life and career as a graduate student at Harvard University, and took it as the subject of my Ph.D. dissertation. I gathered materials in Taiwan and Hong Kong, as well as sought out and interviewed many of his old friends and acquaintances. Because of the Sino-American political situation at the time, I never had an opportunity to go to Chinese Mainland and meet personally the subject of my research, Mr. Liang.

In the first part of 1973 I had my first opportunity to go to Chinese Mainland. For an American to be able to go to Chinese Mainland at that time was still extremely unusual. Why was I able to make the trip? After President Nixon visited China, several Chinese delegations visited the United States in succession, and I served as their interpreter, and so became a channel of communication between the two countries. So in 1973, my wife and I had this rare opportunity to visit Chinese Mainland. At the time, the first request I made of the Chinese was that I hoped I could meet with Mr. Liang. But because it was the time of the Cultural Revolution, and a very sensitive time, my wishes to pay my respects to Mr. Liang were not answered, so I could only return regretfully to America.

In 1979, at the same time as my study of Liang Shuming *The Last Confucian* was published, the Chinese political situation underwent a tremendous change. This current of reform and openness also changed Mr. Liang's life. He had originally been living with his wife in a small room, but then he was moved by his unit, the People's Political Consultative Conference, into Building Number 22, called the "Ministers' Mansion," where many celebrities such as the writer Ding Ling also lived. Having more comfortable quarters, Mr. Liang felt that it was more appropriate for receiving visitors, and immediately thought of ways of contacting me.

One day I suddenly received a phone call from a stranger; it was from an octogenarian named Shi who had been Mr. Liang's student in the 1920s at Peking University. He had just come from Beijing and was delivering a verbal message to me at Mr. Liang's request. It was

that Mr. Liang already knew of the publication of *The Last Confucian*, and hoped that he could meet me. A few months passed, and after class one day, a Chinese student suddenly came to see me. She had just come recently from Beijing to join her father in the United States. She gave me Mr. Liang's address, and told me that she had been a neighbor of "Uncle Liang," and that he very much hoped to be able to see me, and to see the work on him that I had published.

序

我非常荣幸能为这本小书作序。

我想先说说我与梁漱溟先生两人对谈的因缘。

我在哈佛读书的时候，对梁先生的生平志业产生兴趣，以他作为博士论文的主题，在台湾与香港收集相关资料，寻访他的故友旧交。碍于当时中美政治局势，我始终无法前往中国大陆，亲见我研究的对象梁先生。

1973年初，我头一次有机会前往中国大陆。在当时，一个美国人能到中国大陆去，仍是极不寻常的异例。为什么我能成行呢？这是因为在尼克松总统访华后，几个中国代表团在1972年陆续来美，而我充当中文翻译，起了沟通两国的桥梁作用，所以在1973年时，我与内人才有这个难得的机会可以造访中国大陆。当时，我向中方提出的第一个请求，便是希望可以同梁先生见面，但由于正值“文革”，时机敏感，我并没有如愿以偿地拜见到梁先生，只能抱憾返美。

1979年，在我的梁漱溟研究《最后的儒家》出版成书的同时，中国的政治局势起了巨大的变化。这波改革开放的潮流也改变了梁先生的生活。原本与夫人蜗居在狭小房间的梁先生，被政协安置到有“部长楼”之称的22号楼，与文化名流如丁玲等对门而居。有了舒适的房舍，梁先生认为比较适宜见客，便即刻想办法与我联系。

某日我突然接到一通陌生的来电，电话那头是一位八旬高龄的石老先生。他是梁先生20世纪20年代在北大的学生，刚从北京来美，受梁先生所托，捎来口讯，说是梁老已经知道《最后的儒家》出版了，希望可以与见面。又过了几个月，一天课后，有个中国学生突然来见我。她不久前才从北京来美与父亲团聚。她拿着梁先生的联络地址，告诉我她旧日的邻居“梁伯伯”十分希望可以见到我，看到我所出版的关于他的著作。

I immediately sent him a copy of the book. Before long I received an amicable reply from Mr. Liang, agreeing to my definitely going to Beijing to visit him the next year.

In 1980, the first day I arrived in Beijing, I immediately contacted Mr. Liang. He told me how he had moved to Building Number 22. The next morning, I went to Mr. Liang's residence to visit him formally. All of Mr. Liang's family members, who took my visit very seriously, were also there. Mr. Liang introduced me to his family. I then presented him with some Harvard University souvenirs. I also gave him works of his father's. After all of those years and experiencing diverse setbacks, I had finally got to meet Mr. Liang. Sitting face to face, with only a

small table between us, we began our chats. In the two weeks that followed, I went to the Liang's home every morning to ask questions of Mr. Liang. I put in order the recordings of our dialogues, part of which later was included in Mr. Liang's published collected works.

In our talks, through Mr. Liang I came to understand more fully the trait of traditional Chinese intellectuals. This is most worthy of mentioning.

During the two weeks of intensive conversation, in the first few days Mr. Liang spoke to me a great deal about Buddhism, which perplexed me, and so I asked, "Didn't you abandon Buddhist thought a long time ago?" He answered that he didn't really abandon it. We talked about the title of my book *The Last Confucian*, which fixed him as a Confucian. He said that he could accept the title. Yet sometimes he would express to me that Marxist-Leninist science was very good. When we spoke about traditional Chinese culture, he also praised Daoism. Once, because he had organized the Democratic League, he met with George Marshall. He evaluated Marshall very highly, and thought that he was a good person because he was a pious Christian.

At the time, I didn't quite understand. How could a person be both a Buddhist and a Confucian, and also identify with Marxist-Leninist thought and approve of Christianity? Later I finally grasped it. This ability to blend mutually contradictory thought is a special characteristic of typical traditional Chinese intellectuals.

我即刻将拙著寄给他，不久便获得梁先生友善的回应，约定好次年一定到北京去拜访他。

1980年我到北京第一天，马上便去寻找梁先生，他告诉了我他是如何搬到22号楼来的。第二天早上，我到梁家正式拜见，梁先生所有的亲人都出现在那里，对于我的来访相当郑重其事。梁先生将我介绍给他的家人，我则送予他哈佛大学的纪念品以及一幅他父亲的遗作。经过种种波折，在这多年之后，我终于得以与梁先生仅仅隔着一方小几，相对而坐，开始对谈。之后的两周，我天天一早便到梁家拜访，请教梁先生。我将对话的内容录音整理，后来收进梁先生的全集。回顾两人对谈因缘，真是感慨万千。

在我们的对谈中，我透过梁先生理解到中国传统知识分子的一种特质。这是最值得一提的部分。

在我们密集谈话的两周里，头两三天梁先生多与我说关于佛家的想法，让我很感疑惑，便问：“您不是早在多年前便公开放弃佛家思想了吗？”他说他算放弃也算没放弃，谈到拙作的标题《最后的儒家》将他定位为一位儒者，他表示他可以接受。然而有时他也向我表示马列主义的科学很好；当谈到中国传统文化，他亦赞美道教。有次提到他因组织民盟而见到马歇尔，他对马歇尔的评价很高，认为他是个好人，因为他是

一个虔诚的基督徒。

那时我相当不解，一个人如何可以既是佛家又是儒家？既认同马列思想又赞许基督教？后来终于想通了，这种可以融合多种相互矛盾的思想，正是典型的中国传统知识分子的特质。

Although, during the Spring and Autumn and Warring States Periods, many schools of thought contended and debated with one another, the scholars of the time did not recognize themselves to be a specific school. For example, when we now discuss Mencius and Xunzi, we recognize them as Confucian, even though one said that human nature was good, and the other that human nature was evil. They were followers of Confucius, but at that time, even Confucius did not necessarily recognize himself to be "Confucian." The academic classifications we are used to today—Sima Qian (in "Preface to the Histories of Sima Qian") and his father Sima Tan (in "A Summary of the Six Schools")—actually first classified the various pre-Qin thinkers and invented the system that we use today.

I think that Chinese culture is actually an eclectic blend of many kinds of thought that seem to be incompatible, yet at the same time is a culture that likes to classify things. It's easily seen that actually most Chinese intellectuals amalgamated various kinds of thought into one eclectic body. For example, although the Cheng brothers (Cheng Hao and Cheng Yi), Zhu Xi, Lu Xiangshan and Wang Yangming are all Neo-Confucians who focus on the nature of the mind, there are differences among them. There are Buddhist elements in their thought. Although the late Qing Dynasty intellectuals such as Liang Qichao and Zhang Taiyan were at the two opposite extremes politically and on the New Text/Old Text controversy, they both amalgamated Buddhism, Western thought and Confucianism into their individual thought.

So this perhaps explains why I, having been trained in modern academic standards and categories, thought that it was impossible for someone to be simultaneously a believer in Marxism-Leninism and Confucianism. As far as Mr. Liang was concerned, though, this was not in the least a problem. Looked at in this way, Mr. Liang was still quite a traditional Chinese intellectual.

In my opinion, the various pre-Qin philosophers were each on different paths, but they all assumed the same cosmology, that the universe was an organic whole, with each element in that whole interconnected. So, in such a cosmology, there are no absolute dichotomies and contradictions, only relative ones. This worldview was the underlying bedrock of the thought of all Chinese intellectuals, and so various different elements of thought could coexist in an individual's thought without the currents conflicting.

春秋战国百家争鸣时，虽有许多辩论，但百家学者并不认为自己是特定的一家，比方说现在我们讨论孟子与荀子，认为他们虽然一言性善，一言性恶，但都是儒家，是孔子的信徒，然而在当时，即便是孔子也未必认为自己是儒家。我们今日习以为常的学术分类，其实是司马迁在《太史公自序》中论及其父司马谈的《论六家要旨》，为诸子百家分门别派而发明出来的体系。

我认为中国文化本就是融合许多看似不相容的思想于一体、却同时又喜欢分门别类的文化。只需留心便会发现，其实大部分的中国知识分子都是融合各类思想于一身。比方程朱陆王，同为新儒家，虽然讲义理心性，歧异很大，但他们的思想中都含有许多佛家的成分。晚清的知识分子，如梁启超、章太炎，固然在政治立场与今古文经学上分踞两极，但同样都将佛家、西方思想及儒家融入他们个人的学思中。

这解释了为什么对于受现代学术规范训练的我而言，一个人不可能同时是儒家，又是马列信徒；但对梁先生来说，这完全不是问题。从这点看来，梁先生仍是一个相当传统的中国知识分子。

依我浅见，先秦诸子虽然路线不同，但他们都共享一个宇宙观，认为宇宙是一体而有机的，天地间的每个成分跟其他的成分相互关联，所以在这样的宇宙观里，没有绝对的矛盾，只有相对的矛盾。这种宇宙观，经历数千年，仍深植在中国知识分子思想的底层，是以各种不同的思想成分，可以共存在一个人的思想里，运行不悖。

The greater part of the content of our talks was Mr. Liang's responding to my questions about historical figures in the early twentieth century. Instead of asking him about his contacts and associations in the past, why didn't I just quietly listen to Mr. Liang expostulate his thinking? I study history, and naturally want to preserve much of the historical materials. As far as I know, Mr. Liang was the last person who had personally participated in those several decades of violent cultural change and who was still healthy and clear-headed, and who, moreover knew and had contact with so many important intellectuals. His memories were of great value, so I went well beyond my role of interviewer in guiding the conversation in hopes that these unique experiences of his could be recorded for posterity.

This special case of the biographer finally meeting the biographee only after publication of the biography is unprecedented in modern Chinese history. After having had these talks with Mr. Liang, I added a final chapter to *The Last Confucian* to supplement and revise the original, especially the section on his suffering during the Cultural Revolution. Because I had not been able to contact him before the book was finished, and because there was no other relevant documentation available, I did not know the details, and so couldn't include them in the book. Only after we talked did I know the real

situation and added it in this last chapter. On the whole, I did not revise the structure or content of the book after meeting Mr. Liang. After our talks I discovered Mr. Liang's "unity of inner feelings and outer action." His writings had honestly reflected his impressions. He never disguised his true feelings and thoughts in order to be in tune with the times or the situation, so the Mr. Liang that I had seen through his writings and the real-life Mr. Liang with whom I talked were identical. So although I was fated not to meet him before the book was completed, I was still able, through his writings, to know Mr. Liang's real personality and ways of thinking.

Speaking as an historian, I think that a hundred years from now, Mr. Liang will still occupy an important position in history, not only because of the uniqueness of his thought, but because of his truthful character—his unvarying consistency between thought and deed. Compared to many other 20th century Confucians, he is closest to the traditional in that he put his ideas into actual practice in real life, rather than just talk about Confucianism within the academy. Mr. Liang's life embodied the ideals of Confucianism and of Chinese culture. In this respect, he will always have a singular position in history.

Guy S. Alitto

梁先生与我谈话的内容，有一大部分是我向他请教20世纪初的人事。为何我不静静听梁先生抒发他的想法，而要询问他许多过去的交往呢？我是历史研究者，自然会希望多多保存历史资料，而梁先生是我所知最后一个健在且头脑清明的人，曾经亲身经历、参与过这几十年中国文化剧变，并且和许多重要知识分子相知相交过。他的回忆是宝贵的，所以我才僭越地主导谈话，希望可以将这些独一无二的经验记录下来。

像我这样，等到传记完成出书之后，作者才终于见到传主，在中国近代史学界可能是前所未有的特例。与梁先生谈话之后，我在《最后的儒家》一书最后加上一章，增补修订了原书的一些未竟之处，特别是他在“文革”期间受苦一节，由于我未能在书成前与他见面，也没有相关记录流通，所以不知悉细节，也无法载入书中，后来与他谈话后才知道实情，补充在这最后一章里。大体来说，我并没有在亲见梁先生之后，修改拙作的结构与内容。与他谈话之后，我发现梁先生表里如一，他的文章诚实地反映出他的观感，未曾因为要顺应时局而掩饰真心，所以我透过文字所见到的梁先生，与我后来实际上对谈的梁先生是一致的。是以我虽无缘在书成前见到他，但透过他的文章，我仍然深刻地认识到梁先生的真实的性格与想法。

从一个历史研究者的角度看来，我认为就算再过100年，梁先生仍会在历史上占有重要的地位，不单单是因为他独特的思想，也因为他表里如一的人格。与许多20世纪的儒家信徒相比较起来，他更逼近传统的儒者——确实地在生活中实践他的思想，而非仅仅在学院中高谈。梁先

生以自己的生命去体现对儒家和中国文化的理想，就这点而言，他永远都是独一无二的。

艾 恺

I'm not a scholar; I'm a thinker.

I am completely unqualified to be a man of learning.

I do admit that I'm someone who has his own ideas, who acts according to his own ideas and puts them into practice.

I am someone of independent thought.

I have consistency between my thoughts and my actions.

第一章 我不是学问家，而是一个思想家

我完全不够一个学问家。

我承认自己是一个有思想的人，

并且是本着自己思想而去实行、实践的人，

独立思考，表里如一。

Confucianism and Buddhism are my basis.

Liang: I mean, in talking with you, I hope that you will understand the sources of my thought. The basis of my thought is Confucianism and Buddhism. This is the most important thing. That is more important than understanding my past. I hope you can know more about Confucianism and Buddhism. I want to tell you all about my Confucianism and Buddhism. I mean, I will put the emphasis in our conversations on this, rather than on my personal affairs or my opinions. Because Confucianism and Buddhism are my basis, if you can understand the basis, that would be best of all, the most important thing. Not only do I hope this for you but also I hope that Europeans and Americans can better understand these two schools of thought: Confucianism and Buddhism.

Alitto: Mr. Liang, has your interest in Buddhism and Buddhist studies been rekindled, or increased, as you have grown older? At the time of the May Fourth Movement, you publicly abandoned Buddhism and converted to Confucianism.

Liang: That is not relevant. You may say I abandoned Buddhism, but I really didn't abandon it. Originally I did want to leave the secular world and become a monk. What I abandoned was my plan for leaving the secular world and becoming a monk. But in my thought, on the philosophical level, I did not abandon Buddhism.

Alitto: Oh, I now understand a bit better. Actually, I also wrote about the same thing in the book [*The Last Confucian: Liang Shu-ming and the Chinese Dilemma of Modernity, called The Last Confucian for short hereafter*], that is, you hadn't completely abandoned Buddhism, but you felt that the problems of the time didn't need Buddhism as much as Confucianism. So because of this, you began to study Confucianism.

Liang: Let me explain myself. When I was young, around sixteen or seventeen, I wanted to become a monk. I didn't give up this ambition until I reached the age of twenty-nine. If I wanted to become a monk, I could not get married. But a person is not only composed of a brain. He is more than just thought. He cannot leave his corporal body. If I had really followed my ambition early on and had gone to a monastery, there probably would have been no problem, and [my life] would probably have been most congenial, and I would have lived out my life quietly.

壹 我的思想的根本就是儒家跟佛家

梁：我的意思啊，我们彼此谈话，我还是希望你了解我的思想的根本，我的思想的根本就是儒家跟佛家。我的意思就是，如果能够对我的根本的思想——就是对佛家跟儒家多了解，比什么都好，比了解我的过去的一些事情都重要。我希望于你的，就是多了解儒家，多了解佛家，我愿意把我所懂得的儒家跟佛家说给你听。我的意思是把我们的谈话重点放在这个地方，而不是重在我个人的事情。因为佛家的跟儒家的是我的根本，所以如果了解这个根本，是最好，最要紧。不但是我期望于你，并且我是期望欧美人能够多了解这两家，一个儒家，一个佛家。

艾：梁先生，您现在年纪很大了，就是说，对佛教、佛学的兴趣有没有好像恢复了或者增加了？就是说，这个五四时代，您就好像是放弃了佛学而转入儒学。

梁：那个都不大相干，说放弃，也没有放弃，不过是，原来想出家做和尚，把这个“出家做和尚”放弃了，在思想上还是那样。

艾：啊，现在明白一点。其实我书里也是这么写的（指《最后的儒家——梁漱溟与中国现代化的两难》，以下简称为《最后的儒家》），就是说您不是完全放弃，不过觉得目前的问题不太需要佛学，比较需要儒学。因为这个关系，您就开始研究儒家。

梁：我说明我自己啊，我是年纪很小，比如说十六七岁就想出家为僧。那么这个志愿到了29岁才放弃这个念头，不出家了。出家当和尚不能娶妻子，可是一个人呢，他不单是一个有头脑、有思想的，他还脱离不开身体。假定啊，如果真是从自己的当初的那个志愿，很早就出家到庙里去了，大概也没有什么问题，也可能很相安，可能没有什么问题。

But before I could leave the secular world and enter a monastery, I was drawn into Peking University to teach philosophy by Mr. Cai Yuanpei. Because of this, my life underwent a change. What change was this? I didn't go off to a monastery, but instead I scurried off into the world of learning and the company of intellectuals. It is difficult to avoid having a spirit of competition. This desire to excel over others arises from the corporeal. If I had been as I first wanted, very early leaving secular life for a monastery, that could have been peaceful and stable, walking a calm path. But when I got to the university and into the company of a lot of intellectuals, debates developed easily, and created a desire to excel over others. This desire to excel over others arises from the corporeal. The problem of sex easily arises from the corporeal. A monk does not need to get married; he is able to live in a monastery and can completely forget [sex], and can completely want

no part of taking a wife. But when I got to the university, and was together with intellectuals, often I had this desire to excel over others. This was a corporeal problem. Once it arose, I also wanted to marry.

不过没有很早地出家，就被蔡元培先生拉去，在北京大学要我讲哲学。走上这样一步，就起了变化。走上这一步就是什么样子呢？就是不是去到庙里当和尚，而跑到知识界，跟知识分子在一起。同知识分子在一起，他难免就有知识分子对知识分子这种好胜，就是彼此较量，这个好胜的心是从身体来的。如果是像当初想的，很早出家到庙里去，那个可以也很相安，很平稳，走一种很冷静的路子吧。可是一到大学里头，同许多知识分子在一起，彼此容易有辩论，就引起了好胜之心。这个好胜之心是身体的，是身体的他就容易有那个两性的问题。和尚是不要娶妻的，他在庙里头能够住下去，可以完全忘掉，可以完全不想娶妻。可（我）到了大学，同知识分子在一起，常常有这种好胜之心，这个是身体问题，身体问题来了，这个时候也就想结婚了。

Buddhism

The Buddhist attitude toward life

Liang: A person is not just of this one life. A person's real substance is transmitted from the distant past down through time. He has a very long and distant past. So his so-called "fate" is none other than his past and his background. A man's life and destiny is decided by his past.

Alitto: Is this related to Buddhism?

Liang: Yes. Buddhism is... "Life, divided into endless instants, is at best similar and continuous; the meaning of life is neither interrupted nor persistent." It is linked, part of a continuous process. The me of today is like the me of the past, but isn't identical. Strictly speaking, the me of a previous period and the me of the present are different entities. So a person, from the time he is a small child growing up to old age—like me, I'm over 80 years old—is changing every instant, different every instant. As for this difference, simply speaking, in one aspect, the body is different; the brain is different; the influence from outside has long been different. So all is different, but within the differences is some similarity. So we call it "similar and continuous." In the phrase "neither interrupted nor persistent," "nor persistent" means "not perpetual as before," or you could say "not permanent." So "neither interrupted nor persistent" does not mean permanent, but it is still uninterrupted. This is to say that the present me is not the me of just now, they are not the same thing, but there is no interruption either—it still continues on. That life is "similar and continuous" not only means that there is similarity and continuity between the me of one year old and the me of two years old, and the me of three years old; it also means that after death this similarity and continuity is not broken. This is the Buddhist attitude toward life.

There are three realms (*trailokya*) talked about in the Buddhist scriptures. This is the Buddhist attitude toward life. The first is called "the realm of sensuous desire" (*kāmadhātu*)—the primal wants for food, drink and sex. This is all desire. The second is called "the realm of form" (*rūpadhātu*). The third realm is called "the formless realm of pure spirit" (*arūpadhātu*). The Buddhist scriptures have it this way, but it seems that this is not a theory created by the Buddhist scriptures. Rather, it seems that this is a common belief in India; it is commonly

held that there are these three realms. The primal desires exist only in the realm of sensuous desire. It does not exist in the realm of form. In the realm of form there is still gender difference, but no food or drink, no intercourse between male and female. In the formless realm of pure spirit, there is nothing at all. The Buddhist scriptures contain such a theory.

贰 佛家

佛家对生命的一个看法

梁：人不是就是这一生，人是从很远的流传下来的，他的过去很长、很远。所谓定力，不是别的，就是他的过去、他的背景，他总是要受过去的背景的决定。

艾：那这是跟佛教有关系的观念啊？

梁：对。佛教它叫做“相似相续，非断非常”。“相似相续”——它是连续的，相似就是了，今天的我和昨天的我很相似，已经不同了，只是相似。严格地讲，前一个时间的我跟现在时间的我已经不同了，一个人从一个小孩子长大，像我八十多岁，时时刻刻在变化，时时刻刻在不同。这个不同一方面简单地讲，他自己身体就不同了嘛，头脑不同了，外面给他的影响也早已不同了，所以都是在不同之中，但不同之中也有一定的相似，所以叫“相似相续”。“非断非常”——“非常”，就是不是永恒如故，中国人本来是“常”跟“恒”连着的，也可以说“恒常”，也可以说“常恒”。“非断非常”，不是永恒的，可又不断，“非常”就是现在的我跟刚才的我不是一回事了，可是也没有断，仍然还是相续的。“相似相续”不单是说我一岁的时候跟我两岁的时候还是相似相续、三岁的时候相似相续，不单是如此，是说死后也没有完。这个是佛家的对生命的一个看法。

佛典里头有三界——“界”就是“世界”的“界”——第一个叫欲界，欲就是有欲望，想要饮食男女，这个都是欲望；第二个是色界——“颜色”的“色”；第三个是无色界。佛典里这样说，好像不是佛典创立的说法，而是印度好像普遍有这个信仰，普遍地说有这个三界。饮食男女，在欲界才有，到了色界没有了，色界还有男女，没有饮食，没有男女的相交，到了无色界那就是什么都没有。佛典里头有这个说法。

Hinayana is leaving the secular world.

Liang: We were just talking about my desire, when I was young, to become a monk, so I can be considered a Buddhist in certain respects. But a Buddhist must be viewed from two aspects and, you could say, must be discussed in two parts. Primitive Buddhism, which we can call Hinayana, emphasized leaving the secular world. What does "leaving the secular world" mean? "To leave the secular world" means to leave "Production and Annihilation" (or Birth and Death; *utpàdanirodha*). What do we mean by the "world" (the finite,

impermanent world)? That is, the endless cycle of birth and death. In Buddhist terminology this is called the "Wheel of Transmigration" (*samsara*), meaning that this life is all similar and continuous.

The Hinayana school laid down three conditions. The first condition is all phenomena (*sarva dharma*) are impermanent (*anitya*). That is, there are no permanent, constant things. Everything is in constant flux. The second point is that all dharmas are non-self; they have no ego. All phenomena and all dharmas are different. The first point is—"Whatever is phenomenal is impermanent." All are flowing, in flux. That is, the cycle of life is like flowing water, in continuous flux. So, they say, "Whatever is phenomenal is impermanent." The second is that no dharma has an ego. There are two kinds of dharma. One is effective or phenomenal dharma (*Samskrta Dharma*). The other is dharma not subject to causation, condition or dependence (*Asamskrta Dharma*). The first is the dharma of birth and death (*utpādanirodha*). The second is the eternal, supramundane dharma, "immortal—neither dying nor being reborn" (*anirodhānupāda*). Some people ask, "Can the finite impermanent world have something permanent and eternal in it?" The Buddhist answer is that if there are the birth/death cycle there would be something that neither is born nor dies. Birth-Death and No-Birth No-Death are a single thing, not two separate entities. That is to say, the dharma of birth and death and the dharma of the eternal are reducible to each other.

小乘佛教主要是出世

梁：……我刚才提到过了，从小的时候就想出家当和尚，所以我说是一个佛教徒。佛教徒得从两面看，也可以说从两层上来看。佛教，原始佛教普通管它叫小乘教，小乘教主要是出世。什么叫做出世呢？出世就是要出生灭，（出）世间。怎么样叫世间呢？就是生生灭灭，生灭不已。那么在佛家，它就说是轮回。轮回，它是说生命是“相似相续”。

这个小乘自己规定下来三个条件，一个条件就是“诸行无常”——“常恒”的“常”——没有常恒的东西，都是在变化流行中，这是头一个。第二点是“诸法无我”。头一句话是“诸行无常”，第二句话是“诸法无我”。“诸法”跟“诸行”不一样了，头一句是“诸行”，第二句换作“诸法”。因为“诸行”是流行，就是说生灭，生灭不已。生灭不已好像是水流一样，流行变化。第一点是讲流行变化，所以叫“诸行无常”。第二句话是“诸法无我”。“诸法无我”说有两种法，所以加一个“诸”，“诸法”不是一种法。“诸法”是哪两种呢？一种叫做“有为法”，一种叫做“无为法”。“有为法”就是生灭法，“无为法”就是不生不灭。那么有人问：这个世间还有不生不灭的吗？佛家回答：有生灭，就有不生不灭。生灭、不生不灭是一回事，不是两回事。这是说“有为法”和“无为法”是一而二、二而一。

The first condition is all phenomena (*sarva dharma*) are impermanent (*anitya*). The second point is that all dharmas are non-self. No matter which of the two is concerned, there is no ego. Man is one of "all living beings" (*sattva*). From the lowest organism—the most primitive amoeba—to man, all develop from having "egos." All must eat. All must take from the environment. All organisms, from the most primitive right up to man (as the highest), all share something. What is it? They all seek satisfaction from the external, from the environment. In the Buddhist view, this is a mistake, a loss of their basic nature. What is the basic nature? That is "satisfied and content with their own nature, with no dissatisfactions." This is Buddha. Don't regard Buddha as a god or a ruler. It's not like that. So what is Buddha? Buddha is the thing-in-itself of the universe. The nomenon of the universe can be said to have all inside. All things are inside. The phenomena are all inclusive. Since everything is inside, it has nothing. Nothingness. According to Buddhist doctrines, there are two aspects. One is embracing all phenomena in the cosmos; but all the same it is ultimate nothingness. These are two aspects of the same thing. The Buddha is to leave the world. The mundane world is an endless cycle of birth and death, and this, together with the eternal, perpetual aspect of the world, although seemingly two entities, in reality is the same thing. Didn't I just mention the Hinayana Primitive Buddhist doctrine, the doctrine that "all phenomena are impermanent" and that "nothing has an ego"? The third doctrine is Nirvana—calm and quiet, free from temptation and distress. This is Hinayana. The three Hinayana principles are the only complete Buddhadharma (the law preached by the Buddha).

Mahayana—why I am both a Buddhist and a Confucian

Liang: The Mahayana school, building on the foundation of the Hinayana, had a great reversal, a major revision. The Hinayana is the Way of the Arhat (the perfect man of Hinayana). The Mahayana is the Way of Bodhisattva. The Mahayana does not escape from the mundane world. The Mahayana doctrine are these two principles: "non-abandonment of sentient beings" and "non-residence in Nirvana." What does this call for? The doctrine is that the Buddha will return to the mundane world. The Hinayana wants to avoid the trouble of endless cycle of birth and death. The Mahayana has already transcended the endless cycle of birth and death, and so could enter the eternal realm. But that seems, to quote a Confucian saying, "to attend to one's own virtue in solitude—to protect oneself, but alone."

The Bodhisattva and the Arhat are different. The Arhat solves the problem for himself, and strives for purity and salvation for himself. The Bodhisattva does not abandon the rest of living things. The Bodhisattva wants to return to the mundane world and already has the possibility of not being born nor dying. But the Bodhisattva still wants to return to the world. Why? Because of non-abandonment of living things... That is to say, the Hinayana rule is to go beyond this world; the Mahayana, given a choice, still returns to this world. This is the Mahayana Way.

第一条是“诸行无常”，第二条是“诸法无我”。无论“有为法”或者“无为法”，都没有“我”。众生——人也是众生，从那个最低等的生物——原始生物阿米巴，都是从有“我”来的，它都要吃东西，都要向外取。一切生物，从原始生物起一直到人——人是最高啦，都有一个相同的一点，哪一点相同呢？就是向外取足——足是满足，向外边来满足自己。向外取足，都是错误，在佛家看都是错误，都是丧失了本性。本性是什么呢？本性是自性圆满，无所不足。这个自性圆满，无所不足，就是“佛”。这个“佛”，不要把它看作是一种什么神啊，或者是什么上帝啊、主宰啊，不是那回事。“佛”是什么呢？“佛”是宇宙本体，这个宇宙本体也可以说是什么都在了，万事万物都在在了，五颜六色很复杂的都在在了，可是都在在了，它也就是什么都没有了。按佛家的道理说，就是这两面，一面是森罗万象，一面是空无所有，这个两面是一回事。“佛”就是出世，世间就是生灭，所以出世间，就是不生不灭，而生灭跟不生不灭好像是两面，好像是两个东西，不是，是一回事。原始佛教第一是“诸行无常”，第二是“诸法无我”，第三呢，它叫“涅槃寂静”。这个是小乘，小乘具备这三点，才是佛法，缺一样不是佛法。

大乘佛教——我为什么既是一个佛教徒，又是一个儒教徒

梁：大乘佛法、大乘佛教是在小乘的基础上，基础就是刚才说的那三句话，在小乘的基础上来一个大翻案。小乘是罗汉道，大乘是菩萨道。大乘道是在小乘道的基础上来个大翻案，就是它不出世，它的话是这么两句话，叫做“不舍众生，不住涅槃”。“不舍众生，不住涅槃”，它要怎样呢？它要回到世间来，它不舍开众生。小乘好像是躲避开生死的麻烦，大乘呢，它也已经超出生死了，可以到到了不生不灭。但是呢，引用一句儒家的话——“独善其身”，菩萨跟罗汉不同，罗汉好像自己解决了问题，求得清静，菩萨是不舍众生，他要回到世间来。他已经具备了不生不死的那个可能了，但是，他还要回到世间来，为什么？因为他不舍众生。……这个就是说，小乘以出世为规矩，大乘则出而不出，不出而出，仍回到世间来，大乘是这个样子。

So, in my own case, I admit to being a follower of Buddhism; I would not deny being a follower of Confucius either. Why? Why don't

I deny it? Because this Way of the Mahayana Bodhisattva—I want to follow the Way of the Bodhisattva—is "not to abandon sentient beings" and "not to reside in Nirvana." So I want to go into the world. Because of this, all through my life, for example, everyone knows that I worked in rural reconstruction, or rural movement, and that I worked in politics as a mediator between the two parties (that is, national affairs), especially when Japan invaded China, so would this be considered "leaving the mundane world" or not? This [activity] does not in the slightest go against "leaving the mundane world." Because this is what? It is the Way of the Bodhisattva.^[1] This is not Hinayana. Hinayana wants to go into the mountains, to some monastery and not emerge. Mahayana is "non-abandonment of sentient beings" and "non-residence in Nirvana." You can say that I am a Confucian, a follower of Confucius, and you can say that I am a follower of Siddhartha, because there is no conflict or contradiction [between the two].

Alitto: No conflict between the two. This is a relatively new way of putting it. For example, during the Tang Dynasty, or before then when Buddhism had just reached China, there was conflict between the two. So you are saying...

Liang: Insufficient understanding. The enlightened person has no problem. So, it seems that the Song Confucians had rejected Buddhism and Daoism. I think that it was a question of insufficient understanding. For the wise, enlightened person, there is no obstruction to understand; he sees everything clearly. If there is obstruction, it is that you create an obstruction for yourself. But as a matter of fact, it is not necessary. The enlightened person transcends this. Quite a few of the Song Dynasty Confucians like Master Zhu (Zhu Xi) rejected Buddhism and Daoism.

那么就说到我自己，我自己承认我是个佛教徒，如果说我是一个儒教徒我也不否认。为什么呢？为什么也不否认呢？就是因为这个大乘菩萨。我是要行菩萨道，行菩萨道嘛，就“不舍众生，不住涅槃”，所以我就是要到世间来。因此我的一生，譬如大家都知道我搞乡村建设、乡村运动，我在政治上也奔走，奔走于两大党之间，就是为国家的事情，特别是在日本人侵略中国的时候，所以这个算是出世不算是出世呢？这个与出世一点不违背，因为这是什么呢，这是菩萨道，这不是小乘佛法，小乘佛法就要到山里头去了，到庙里头去了，不出来了，大乘佛法就是“不舍众生，不住涅槃”。说我是儒家、是孔子之徒也可以，说我是释迦之徒也可以，因为这个没有冲突，没有相反。

艾：没有冲突，这个说法是比较新的。比如唐朝的时候，唐朝以前佛教刚到中国的时候，是有冲突啊，那您说.....

梁：不够通达，高明的人通达无碍。所以像是宋儒吧，就有点排佛，排斥道家，在我看就是不够通达。通达的人呢，无碍，没有障碍，

什么事情都看得很通。有碍，是你自己在那里给自己设了妨碍，原来是可以不必的，高明人他就超出来了。宋儒像朱子他们，朱熹他们，有不少儒者都排佛呀，排道家呀。

Discipline, meditation, wisdom & the stories of "Stick" and "Shout" in Chan School

Alitto: Yesterday you said that you were a Buddhist all along.^[2]

Liang: Because very early when I was quite young, a teenager, I wanted to become a monk.

Alitto: Thereupon to the present you have preserved your original...

Liang: It's still that way, but now I don't have to become a monk. In fact, I still want to. If I would be allowed to go live in a mountain monastery, I would be quite happy.

Alitto: Yes. Do you still meditate or do Buddhist cultivation...?

Liang: The basic way involves three words (Liang writes out the words for Alitto to see): discipline (*sila*), meditation (*dhyāna*) and wisdom (*prajñā*). These are disciplines that must be maintained. There are many rules of discipline. For example, one cannot marry. If you have already married, you must leave home and become a monk. Killing is forbidden, eating meat is forbidden, and so on. There are many prohibitions. Only after observing these prohibitions can you achieve meditation (referring to the trance state that we just mentioned). So only after you have observed the prohibitions can you achieve Samadhi. Only through this can you achieve wisdom. Buddhism does not hold what we commonly regard as intelligence and wisdom to be "wisdom." Buddhism regards that kind of intelligence as merely a kind cleverness and perceptiveness, not genuine wisdom, not the Great Wisdom. Great Wisdom comes only through Samadhi, and through it one has a breakthrough in consciousness.

Of course, everyone knows that in the past there were thirteen different schools of Buddhism in China; an important and well-developed one was Chan.^[3] In Chan Buddhism there is a saying that expresses its special feature or characteristic. What was the Chan school's special feature? It's "not relying upon language for explanation." So, language and writing are not needed; it is not based upon language and writing. The Chan school was quite well-

developed. There was a book called *Jingde Records of the Transmission of the Lamp*. Later there were many more *Sequels to Records of the Transmission of the Lamp*. Altogether there were five books combined to constitute the *Five Lamps Combined*. All tell Chan school stories. Laymen can't understand these stories.

“戒、定、慧”与禅宗故事中的“棒喝”

艾：您昨天说，您一直都是佛教徒。

梁：因为我很早、很年青的时候，十几岁的时候，就想出家。

艾：于是到现在您还是保存原来的……

梁：还是那样，不过现在是不必出家了。其实还是想出家，假如说是让我去住到一个山上庙里头去，那我很高兴。

艾：是。那梁先生还打坐啊，修佛的……

梁：本来按佛家它有三个字，叫做“戒、定、慧”，这三个字——“戒、定、慧”，就是一定要守戒律。戒律有好几条，比如说是不能娶妻，如果娶了妻之后也要离开家，出家为僧嘛。还有不杀生、不吃肉等等。戒有好几条，从“戒”才能生“定”，“定”就是刚才说的入定。一定要守戒才能够入定。由“定”才能够生“慧”，“慧”是智慧。普通我们的这种聪明智慧，在佛家不认为是智慧，这个算是一种智巧，不是真正的智慧，不是大智。大智一定要从“定”才有，从“定”才能够破悟。

当然在佛家，大家都知道，在中国过去曾经有十三宗，宗派有十三宗，很重要的、很发达的是禅宗。禅宗有那个话，讲出禅宗的特色、特点。禅宗的特点是什么呢？叫做“不立语言文字”——立是“建立”的“立”——不立语言文字，言语、文字都不要，不建立在语言文字上。禅宗在中国很发达，有一个书叫做《景德传灯录》，后来比这个《景德传灯录》还多，《续传灯录》，一共陆续出有五本，合起来叫《五灯会元》，都是讲禅宗的故事。在那里头的故事，外行人不懂。

For example, a famous successful Chan master is called "Most Virtuous" (*Bhadanta*). So one Chan Buddhist went to see the "Most Virtuous." As soon as he saw him, the Most Virtuous struck him with a stick, and he understood. The man understood. Other people don't understand this matter. This is a Chan story. This is called the "Stick." There is another called the "Shout." A pilgrim went to the Chan Most Virtuous for instruction. He didn't say a word, but gave a great shout. The pilgrim also understood. These kinds of stories are in the *Records of the Transmission of the Lamp*.... The Chan school does not rely upon language or writing, and two sides can influence each other. An old successful monk who has achieved enlightenment can have influence on a newly arrived person, and make him able to achieve

enlightenment, but he does not use language. An enlightenment of language is still on the conscious level. Only [an enlightenment] that is life-changing in a fundamental way can be considered true enlightenment.

The supreme liberation is becoming Buddha.

Liang: The learning of the ancient India was not really something you could talk about, or something the brain could comprehend, or something that resides in consciousness. The basic nature of their learning was to fundamentally transform one's life. It is not a kind of idle talk for the mouth and brain. They have something called "yoga," in Chinese called *yujia*. Each school's yoga, although on the surface similar, is different. What is the similarity? It is to achieve liberation or release from the life of this mundane world. It causes one to undergo a basic transformation so that one is no longer an ordinary person. This is called *zhengguo*—the fruits or rewards of each stage of attainment. Each school has its own *zhengguo*. Each is similar in form, but different in actual content.

So, as for my own view, as a Buddhist, I would say that Buddhism, in terms of the fruits or attainments, has never gone astray, and has always reached the supreme liberation. What is the supreme liberation? Becoming Buddha. So, Buddhist books and sutras are different from the writings in which we ordinarily record our thoughts, our consciousness. They have hard content, practical things, i.e., transformation of one's life. A human is no longer human. There are various stages, the highest being transformation into Buddha, Buddhahood. From the bottom to the top there are ten stages. Each of the ten stages is called a *di*.^[4] So, of Buddhist scriptures and sutras, there is one very famous and very important: the *Yogācārabhūmi*, a work of more than 100 volumes. The message is, to reach Buddhahood, you must practice yoga. Someone who practices yoga is called a *yujishi*. Each stage, one after another, advances upward. The eighth stage is a Bodhisattva. The tenth stage is Buddhahood.

比如有名的、禅宗很成功的人，叫禅宗大德——“道德”的“德”，另外一个禅宗的，去见那个禅宗的大德，他一来见这个大德，大德就打他一棒，他就明白了，那个来的人就明白了，旁人看不懂怎么回事，这是禅宗的故事，这个叫“棒”。还有“喝”，就是来一个人见这个大德求法，他什么话也不说，大喝一声，那个人也就明白了，如此之类，都是在那个《传灯录》上传说的故事。……禅宗是不立语言文字，彼此可以互相影响。一个老和尚，已经成功的，已经悟道的，他对一个新来的人，可以对他有一种影响，让他也能够开悟，但是他不用语言开悟。语言的开悟，它还在意识之中，而真的开悟，是让你生命起变化，你的生命根本

起变化，这才算。

最高的解放就是成佛

梁：古印度人的学问，不是在口头或是头脑、在人的意识上，不是这样。它的学问的根本，就是要人的生命根本起变化。它不是一种在头脑、口头的一种空谈。这个他们叫做yoga，中文翻作“瑜伽”。印度各宗派有各宗派的“瑜伽”，相似而不同。不同，可是还是有同的地方，因为相似嘛。就是什么呢？就是他们所说的，要从世俗的生命里头得到解放、解脱，让人根本起变化，不再是一个普通的人，这个他们叫做“证果”——证是证了，果是结果。所以印度各宗都有各宗的证果，很相似而不同。

比如照我说吧，我站在佛家的立场，我认为佛家在证果上，是没有走入偏差，是一直达到最高的解放。最高的解放是什么呢？就是成佛。所以佛家的书、佛典，跟普通我们由自己的思想意识写出来，不一样，它有很实在的东西，实在的东西就是实在的生命变化。那个人不再是人了，那个人已经最高，就是成佛了。这个从低层到最高层，它分为10层，这个一层它叫一地——就是“土地”的“地”，十地就是10个阶层。佛经有“论”——“议论”的“论”，有一部很著名的、很要紧的书，就叫做《瑜伽师地论》，这个书有100卷之多，它就是讲要成佛，要做这个功夫，做瑜伽的功夫。做瑜伽的人，就称瑜伽师，瑜伽师从低到高，一层一层的，地位不同，所以叫《瑜伽师地论》，总共十地。到了八地——一共十地——就算是菩萨，八地菩萨，十地也就是成了佛。

Yesterday we talked about the three things: discipline (*sīla*), meditation (*dhyāna*), wisdom (*prajñā*). You must first observe the disciplines, for only then is it possible to enter into meditation. Only by doing this can you achieve wisdom. These are only three things. Usually they say there are six *pāramitās* [almsgiving, patience, zealous progress, discipline, meditation, wisdom]. That is, aside from discipline, meditation and wisdom, there are three others. One is *dāna* (almsgiving), which means you can give everything away, not retaining anything. One is called *vīrya* (zealous progress). The sixth is *prajñā* (wisdom, *banruo*). [Mr. Liang was speaking of the six *pāramitās*, and left out "patience" (*kṣānti*) in the listing: almsgiving, patience, zealous progress, discipline, meditation and wisdom; he repeated wisdom (*hui*), that is, *banruo*.] One must practice the six *pāramitās*. Afterwards, your life is transformed. So, the important essential significance of all of this is transformation, or elevation of one's life. Complete transformation is, level by level, attained at the eighth stage,^[5] which is the eighth stage of the *Yogācārabhūmi*, and at the eighth stage one can become a Bodhisattva. Attaining the tenth stage, one can become Buddha.^[6]

What I've been talking about above can be summarized into this: the important thing in Buddhism is to transform one's own life, or elevate one's own life. These are not empty theories.^[7]

昨天不是说过一下，那个“戒、定、慧”。一定要持戒、守戒，然后才能够入定，由定才能够生慧，这个是三样。通常是说六波罗密，六波罗密就是在这个三样之外，又有三样。这个又有三样里头，有一样叫布施，布施就是什么都可以给人，就是无保留。布施是一样，还有一样叫做精进，第六是般若，这个合起来就是六波罗密（梁先生在这里讲六波罗密，将布施、忍辱、精进、戒、定、慧中的“忍辱”遗漏，而将慧，即“般若”，讲重复了）。一定要修六波罗密，然后你的生命才能起变化，以至于达到一种根本变化。根本变化到了第八层——它一层一层，就是《瑜伽师地论》的八地——可以成菩萨了，十地就成佛了。

以上的话，归结起来就是这样一個意思，就是说佛家要紧的是在自己的生命起变化，或者叫生命的提高吧，不是空理论。

Confucian

Confucius' knowledge is a knowledge of life and existence.

Alitto: Will you say a few words about what you have learned and what you have never learned in your life?

Liang: All learning is not simply a copying from others. Learning is a very creative activity, all in one's own subjective area. But, there are others who are different. Some create little, and learn much from others. China has a proverb: "To draw the gourd exactly according to its appearance." Some people just learn by copying, with little creativeness. I am the opposite. I have always studied and learned with creativeness. Although all creation involves learning, it is still different. Some people create a lot while learning. I myself am like that. I take some material from the outside, but when in my hands, I apply it in creating. I am a person of great creative nature.

Take Chinese traditional learning and culture as an example. My foundations are very weak. I already mentioned that I never learned the classics well. But the quintessence of the classics has helped me very much. I can still appreciate and comprehend it. For example, the greatest Chinese scholar, Confucius. I feel that I really understand Confucius, better than Zhu Xi in the Song Dynasty did.

I often say this to people as an example. Confucius says of himself, "At fifteen, I set my heart upon learning; at thirty, I established myself; at forty, I no longer had doubts; at fifty, I knew the decrees of Heaven; at sixty, I heard truth with docile ear; at seventy, I could follow the dictates of my own heart, without overstepping the boundaries of right." Zhu Xi explains every stage. One word difficult to explain is the "ershun" (docile ear). Zhu Xi explains this as meaning "As soon as the words of the sage enter the ear, the mind/heart understands." I don't agree with this, I think that the meaning for each one of these stages is difficult to understand, and that the meanings should not be guessed at wildly. "At fifteen, I set my heart upon learning" seems easier to understand. "At thirty, I established myself." What does "establish" mean? "At forty, I no longer had doubts." Doubts? Doubts about what? "At fifty, I knew the decrees of Heaven." What are the "decrees of Heaven"? What does "docile ear" mean?

叁 儒家

孔子的学问是生命、生活之学

艾：请您谈一谈，在您的一生之中，您所学到的是什么和从未学到的又是什么？

梁：一切的学习，实际上不单是一种因袭，不单是向人家学。一切的学习都有创造，都有自己的一面，不完全是学人家。不过也不相同，有的人就是自己创造少，学得多。有一句中国俗话叫“依样画葫芦”——照着样子画葫芦，有不少是这样的人。不过就我自己说，我不是这样的人，我是创造性多过学习。虽然一切的创造里头都有学习，不过是一个比较的不同，有的人是学旁人的东西，但是在学的里边创造很多。我自己呢也就是这样的，好像我从外边所得的都是一些个资料，资料到我手里头，我把它运用、创造。我是一个比较创造性大的人。

就中国的学问说吧，中国的学问、中国的文化，论底子我是很差的。我已经说过了，我没念古书，可是中国的古书里头好的、精髓的，帮助我很多，我还是能够领会。比如像中国最大的学问家——孔子，我觉得我对孔子的了解、懂得，比那个宋朝的朱子——朱熹懂的要多一些。

我常常给人家这样讲，我举一个例，孔子不是自己说自己：“吾十有五而志于学，三十而立，四十而不惑，五十而知天命，六十而耳顺，七十而从心所欲，不逾矩。”在朱子就每个阶段他都讲了，比如那个很不好讲的，就是“耳顺”——一个“耳”，一个“顺”——什么叫“耳顺”呢？他就讲了，他用了一句话：“声入心通”——声音进去了，心通了。我不赞成。我认为，不但是“耳顺”我们不好懂，实际上每一个阶段我们都不好懂，不要乱猜，不要猜想。“十有五而志于学”，好像还好懂一点。“三十而立”，那个“立”是立什么呢？“四十不惑”，“不惑”又是对什么不惑？“五十而知天命”，那么什么叫天命呢？“耳顺”，什么叫耳顺？

I think that when Confucius was forty he didn't know what kind of progress—what stage—he would have reached at fifty. He hadn't achieved it yet. So if even he didn't know, how would we be able to know? When you don't know, don't say, don't talk. So I don't agree with people like Zhu Xi. He had to express an opinion. I don't agree with this explanation. We don't dare explain randomly or guess wildly. If you don't know, then say you don't know. We should admit what we don't know. So, on the one hand, we should admit that we don't know. On the other hand, what we do know is what it isn't. That is, we can eliminate possibilities. We know that Confucius wasn't talking about

the natural world, or about social science, or politics or economics. We know that he wasn't talking about all these other matters. He was speaking of his own life, his own existence, not anything external. His kind of knowledge was a knowledge of life and existence, not other kinds of knowledge.

Wasn't his favorite disciple Yan Hui (Yan Yuan)? ... In the *Book of Changes*, there is one section that discusses Yan Hui: "He knows immediately after he made a mistake that he had made one. After he knows, he won't repeat it." So, it is somewhat similar to "not repeating the same mistake." Confucius always spoke from the perspective of the continuous changes and transformation of life. So, when someone asked who loved learning, he praised Yan Hui. Now what was Yan Hui's strong point? Just these two things [not taking anger out on others and not repeating the same mistake], which we cannot truly know. That we can't truly know, however, is only one aspect. Another aspect is that he didn't talk about odd things, didn't speak of natural phenomena or social science.^[8] He concentrated on one's own life. So, no matter student or teacher, their efforts were directed toward their own lives. Of those who passed Confucianism along, I recognize the elder Cheng, Cheng Hao, of the Song and Wang Yangming of the Ming Dynasty.

I can be considered as belonging to the Lu-Wang school.

Alitto: In 1922, when you published *Eastern and Western Cultures and Their Philosophies*, you also said that some of Wang Yangming's followers, Wang Gen (Wang Xinzhai) and the others, also understood the true way of Confucius. So, you still haven't changed your mind? Your statement now and that [in the book of 60 years ago] are about the same.

我以为，孔子四十的时候，他也还不知道他五十岁的进步，他还没有那个进步，他那个时候也还不知道。他不知道，我们旁人怎么知道？旁人不知道，不知道你就不要说，不要讲，所以像朱子那样讲，我不同意。所以说，这一些话我们是不敢乱讲、乱猜，知道就是知道，不知道就是不知道，我们应当承认自己不知道。承认不知道是一面，还有一面我们知道，知道什么呢？知道他没有说旁的东西，他没有说到对自然界的知识，也没有说到社会科学，也没有说到政治、经济，他都没有说。他所说的就是他自己的生命，就是他自己的生命、生活在说话，没有说到外头去，因为他本人的学问是这个样子的一种学问：是生命、生活之学，不是旁的学问。

所以他最好的徒弟，不是颜渊吗？颜回吗？.....古书的《易经》

——《周易》，里边就讲到颜子，它说：“颜氏之子其殆庶几乎？有不善未尝不知，知之未尝复行（也）。”他一点不对、错误、不善，他马上就知道了，知道后不再行、不再做，所以“不贰过”是这个样子，他始终是从生命的流行变化来说的。所以人家问孔子谁好学，他就称赞颜子——称赞颜渊、颜回，颜回的长处是什么？就是那两点（不迁怒，不贰过）。那两点我们不能深知，不深知是一面，另外一面是什么呢？他又没有说到旁处去，没有讲到自然现象，没有讲到社会问题，他就是讲自己的生命、生活，所以老师也罢，学生也罢，他们的用功、致力，都是在这个地方。能够传中国的孔门之学，我是承认在宋朝，就是那个大程子——程颢，在明朝就是王阳明，他们是传了这个学问。

我算是陆王派

艾：那您民国十一年（1922年）出版了《东西文化及其哲学》的时候，也说王阳明的一些门弟子，王艮——王心斋，也是懂孔子之道的。您还没有改变您的主意啊，当年这个结论跟现在差不多啊。

Liang: In this respect, my opinions are about the same as before. But in the book of 60 years ago, when explaining Confucius' thought, I used the terms "intuition" and "instinct." In both cases, I didn't use them very well.^[9]

Alitto: Yes, but you can still be considered a member of the Wang Yangming school?

Liang: Yes, right. Don't they divide all thinkers into the Lu-Wang [Lu Jiuyuan and Wang Yangming] and the Cheng-Zhu schools? So, I can be considered as belonging to the Lu-Wang school. "Lu" is a Song Dynasty thinker; Wang a Ming Dynasty one. In the Song Dynasty, there were Zhu Xi and the Cheng brothers who I just mentioned. Now, the elder and the younger are different. (The younger brother: Cheng Yichuan; the elder brother: Cheng Hao.) I recognize that Cheng Hao was the correct, or enlightened one. But Zhu Xi didn't understand him. Doesn't Zhu Xi have a book called the *Reflections on Things at Hand*? In that book, he didn't quote Cheng Hao.... It is not that he said Cheng Hao was wrong or no good. Rather, he said that Cheng Hao's thought was too profound, too brilliant! This judgment resulted from Cheng Hao's thought not being suited to his own temperament or disposition. But I think that in the Song, it is Cheng Hao who was the true Confucian, and in the Ming, Wang Yangming. But the thinker I like most of all is the one following Wang Yangming, Wang Xinzhai. Wang was a man from the lower classes, a salt worker. A lot of his followers were workers and peasants, ordinary people. They were not necessarily the highest ranked academic scholars, who were all overly bookish. People from the lower classes were not so learned, and some

were illiterate, but they could comprehend and understand their own vital forces, their own lives, and this is what is needed. This sort of approach is in accord with Confucius himself and with the true Confucian school. So, because of this, I have always liked Wang Xinzhai very much, and in my book, *Eastern and Western Cultures and Their Philosophies*, I praised him.^[10]

Wang Yangming's "familiarity with one's disposition"

Liang: But compared to Wang Yangming I am far, far inferior. I can use a term sometimes used in Buddhism—"to attain thorough and complete understanding" (Liang writes the two characters "*chewu*"). "*Che*" means thorough and complete. "*Chewu*" is when our life-being undergoes a great transformation. This kind of understanding is not of the usual "Aha, now I understand!" kind. Master Yangming had achieved this kind of enlightenment, and I have not.

梁：在这一点上差不多。不过我现在看当初的书，60年前的书，解释孔子的时候，用那个“直觉”，用那个“本能”，不妥当。

艾：是，不过您还算是属于王阳明的门派。

梁：对。不是他们都分程朱派、陆王派(陆九渊、王阳明)吗？我算是陆王派，陆王呢，陆是宋朝了，王是明朝了。在宋朝，刚才提到程朱，大程子，跟二程——程伊川不一样。大程子就是程颢了，程颢我认为是好的、对的、高明的，可是朱子对他不了解。朱子不是有一部著作叫做《近思录》——“远近”的“近”，在这个《近思录》他不引大程子，他对大程子倒不是……虽然他不是说大程子不对、不好，他是说大程子太高明了，他那样一个看法。其实就是，朱子对大程子有点好像不合脾胃，不合他的味道。可是我认为，在宋儒还是大程子，明儒是王阳明。我更喜欢王阳明底下的王心斋——王艮。王艮，在社会里头他是一个下层的人，他是一个工人，他是搞盐的盐场的工人，并且他的门下，王心斋这一派，有许多都是农工，很普通的人，不一定是上级讲学问的人。上层的讲学问的人，容易偏于书本，下层的人呢，他读书不多，或者甚至没有什么文化，可是他的生命、生活他能够自己体会，这个就行了，这个就合于儒家了，合于孔子，所以我喜欢王心斋，《东西文化及其哲学》末了讲到称赞王心斋。

王阳明的“明心见性”

梁：不过比起王阳明来啊，（我）还差得远，还差得远。可以用佛家有时候用的名词“彻悟”，彻就是彻底，彻悟是我们人的生命的一个大变化，不是个普通的事情，不是普通的“噢，我明白了”，不是这样。在彻悟上，阳明先生他有他的彻悟，我不够。

There were many important figures among Master Yangming's disciples. He gave them all advice and comments. Of course, because people's natural endowments were unequal—there was a difference in degree of natural intelligence—some were on this end [of the spectrum] and some on that end. Some of his followers achieved more than others. So, a lot of his students were famous and extraordinary. Someone named Qian [Dehong], who was one of his students, later became very famous. He compiled Master Yangming's chronological biography. Originally, he was not a follower of his, and then later studied with him. Mr. Qian would listen to Master Yangming's teachings, and at the same time he would very humbly listen to what his senior fellow students had to say. Mr. Qian was extremely sincere and modest, always looking to progress in his understanding. But he always felt that he was inadequate. He himself said that he had got non-awakening. The so-called non-awakening to the truth meant that he could make neither heads nor tails out of it. He didn't achieve enlightenment. He could not enter the gate. Later, he went into a monastery to study meditation with a monk, "to practice solitude and quieting." Then he cloistered himself, having no contact with the outside world and in the monastery practiced solitude and silence. When he had achieved a profound state of quietude, suddenly [what he experienced] was like seeing the sun from the midst of darkness. This was his "attaining thorough and complete understanding." So he hurriedly ran to ask his teacher Master Yangming about his experience of thorough and complete understanding. Master Yangming nodded his head. He said to Mr. Qian, "Yes, right, [you have attained enlightenment]. Don't tell anyone else about this. Don't help others [to do this]. In instructing others, don't tell them to practice solitude and quietude in this way. This would not necessarily be a good thing for them. Use my own words, that is, 'extend or apply innate knowledge of the good into practice.' Don't tell other people to go practice meditation. Tell them to extend or apply their innate knowledge of the good into practice. That will cause no harm. If they go meditate, possible this will cause harm, it might not be the right thing for them to do." That is to say, this kind of learning of Master Yangming's had to be able to effect a "complete understanding" toward human life and life being. Finally it must... But it must not be forced. You just do it this way, extending or applying their innate knowledge of the good into practice."

阳明先生的门下有好几个重要的人，都是受到阳明先生的指教了。可由于每一个人的天资不相同，天资有高有低，有偏于这边的，有偏于那边的，所以阳明先生的门下著名的、了不起的有好几个人。有一个姓钱的（疑为钱德洪），他也是阳明先生的门下，后来很出名的，阳明先生的年谱就是他来编订的。他以前没有跟着阳明先生求学，后来跟着阳

明先生求学。他就一面呢跟着阳明先生，听阳明先生的教诲，一面嘛他跟许多师兄、前辈请教，很诚心诚意地去求。但是总觉得不行，他自己说啊，没悟道。所谓没悟他就是摸不着头脑，进不去门。后来呢，他就啊，跑到和尚庙里头去静坐。“习静”，关起门来，跟人不接触，在和尚庙里头“习静”。那么，悟于深的静的时候啊，他就恍然，如同从那个黑暗中看见天日一样，这个就是说他彻悟了。他彻悟了就赶快跑来问老师。阳明点头，他说对了，对了，对了，但是告诉他——告诉钱平江（疑为钱德洪），你不要告诉人，你不要帮助旁人，你指点旁人，不要说是这样子去“习静”。虽然你得利于“习静”。但是你这样子指点旁人，不一定好，你还是用我的话——用阳明先生的话了，你还是用这个话，“致良知”，不要告诉人去“习静”。你告诉人家，指点人去“致良知”啊，不出毛病，你告诉人去“习静”啊、去静坐啊，可能出毛病，可能不对。这个就是说啊，阳明先生的这种学问，必须能够有一个——对人生、对生命——有一个彻悟才行，最后一定……，不过不要勉强，你就是这样子好了，“致良知”。

This extension of innate knowledge of the good calls for putting forth effort in society. Even though Qian went into a monastery to isolate himself, practiced the skill of meditation and in this way achieved complete enlightenment, Yangming still said: When you are helping and instructing another, do not tell him to follow this path of yours. It might easily result in problems. You still have him "extend his innate knowledge of the good into practice" and apply his efforts to society. Do not have him isolate himself from society, avoid complex environments, and go into a monastery. That kind of way of hard work cannot help the average person. Do not advise the average person to go this path. What path should he go? That of applying his efforts to society. So, I very much admire Master Yangming. This way of his is completely right. He was completely right in keeping the interests of the average man in mind. This way, although a profound enlightenment would not be easy, a gradually attained enlightenment was possible. The way of putting it for the average man is to apply efforts to society, and to apply innate knowledge of the good into practice in society. There is a phrase in the *Doctrine of the Mean* which goes "to raise the way to its greatest height and brilliancy, so as to pursue the course of the Mean."

Alitto: You used that phrase in your book *Eastern and Western Cultures and Their Philosophies*.

Liang: I want to continue this statement. I will tell a story of Master Wang Yangming. This story fully shows Master Yangming's philosophy, not intellectual knowledge, but his skill. What skill? His attaining of thorough and complete understanding. Master Yangming achieved, as the old saying goes, "familiarity with one's disposition." This is an uncommon achievement. To truly understand one's own real

nature is quite uncommon. Didn't I say that I saw that as though through a mist at a great distance? This is a long way from "truly understanding one's own real nature." But Master Yangming did achieve this. Master Yangming's life-being was on a far, far higher level than ours.

There are some other matters [that demonstrate this]. The Ming emperor in his time was a disaster, confused and muddle-headed. He was also surrounded by eunuchs. Master Yangming had already captured the rebel [Zhu] Chenhao in Jiangxi. But the emperor told Wang Yangming to release him because he wanted to capture the rebel himself! This emperor was a real joke, very muddle-headed. All of those advising him were eunuchs and slaves. But the emperor believed and trusted the palace eunuchs, he was surrounded by them, and he did laughable things, such as releasing the already captured Chenhao so that he could come capture him himself. This was just nonsense, a joke. He himself led a great imperial expedition, with a lot of eunuchs and troops.

“致良知”呢是随世用功，尽管这个钱他是到庙里头去避开人，自己去“习静”，这么样得到彻悟的。可阳明先生说，你帮助人、指点旁人的时候，不要用你这个路子告诉他，这个路子容易出毛病，你还是让他“致良知”，让他随世用功，就是不要躲开众人、躲开复杂的环境，跑到庙里去。那种用功的方法，不能够帮助普通人，对普通人你不要让他走这个路。要走什么路子呢？就是随世用功。所以我非常之佩服阳明先生，他这个完全对，为普通人设想，他这个完全对。这个样子也慢慢地能够深入，这个虽然不容易深入，可是也能够慢慢地深入，对为普通人说法，就是随世用功，随世“致良知”，引用《中庸》上的老话，就是“极高明而道中庸”。

艾：是，“极高明而道中庸”，《东西文化及其哲学》里您是用过这个话。

梁：我想接着这个话啊，我讲一个王阳明先生的故事。这个故事里头啊，完全见出来王阳明的学问。这个学问不是知识，是见出来他的功夫。什么功夫呢？他的彻悟啊。用一句老话，有这么一句老话，阳明先生是做到了这个了，“明心见性”。那很不寻常，明心见性很不寻常。我不是说，我是在一种好像天上下雾，在雾中远远看到？那就是离这个还远，离明心见性还远。可是阳明先生他是做到这个了，就是阳明先生他的这个人、他的这个生命已经远远高过我们。

还有一些事情，当时是明朝了，皇帝是很糟糕的皇帝，很糊涂的皇帝，皇帝又被左右的太监所包围。这个阳明先生已经擒了（朱）宸濠，宸濠要反对皇帝，在江西擒了宸濠。皇帝就说把宸濠放了，我自己来擒。这个皇帝是个笑话了，糊涂了。就是因为皇帝旁边帮助皇帝出主意的都是些个太监，都是些个奴隶了。那么这个皇帝还是相信太监，太监包围他，要做那个很可笑的事情，就是要擒了宸濠再放，他自己来

擒。他自己要御驾亲征，带着很多太监、很多军队来了。

Of course, this expedition was a large and stately affair, and so topped Wang Yangming. Wang also led troops and was a very high official. But when the emperor arrived, he outshone Wang. At the time this event took place in the public square, there were many military officers who had followed the emperor there; they staged an archery contest to see who was the best shot. They thought that Wang Yangming was an effete intellectual, someone with only bookish knowledge, and wouldn't be much of an archer. They regarded him with some contempt. So, the target was set up and the archery contest commenced. Contrary to expectations, Wang's first shot was a dead-center bull's eye! OK, a cheer rang out from the surrounding spectators. Wang took his second shot. Another bull's eye! The crowd acclaimed him. He took a third shot, with the same result. The military men watching the contest all cheered. Wang withered those eunuchs who had held him in contempt. They dared not harm him because he had won the people's hearts. Everyone had eyes and had seen he did have ability, and was not a common scholar-official. This turned the tables. If this hadn't happened, the emperor might have done something else foolish.

Now in this story, why was Master Yangming able to hit three bull's eyes in a row? It was ascribable to this: He was completely enlightened! He had achieved perfect enlightenment about life-existence. He was a sage. He was a sage, completely different from an ordinary mortal; he was not an ordinary human. That is, [he was] an extraordinary person. So his hitting three bull's eyes in a row was not by mere luck; it was a fundamental question that far exceeded mere chance. It was his comprehension of the truth, his attaining perfect self-understanding. He was far, far above ordinary people. He was no longer a common person. He was really something. Master Yangming had attained sagehood, and was no longer an ordinary man, not a so-called mortal man, or a common man. Now if one says that I have some strong points, some area in which I am a cut above other intellectuals, then it is only that I am able to glimpse a little of this, however unclearly. In conclusion, my level of accomplishment is only this. To be immodest, my level is higher than that of an average person, for the average person hasn't even gotten a glimpse. But on the other hand, my level is not high enough, not as high as that of Wang Yangming.

当然来了嘛，皇帝来了嘛，当然很威严、很大啊。这个盖过了王阳明，王阳明带着军队，王阳明也算是很高的大臣，但是皇帝来了，盖住他了。这个时候有这么一件事情，就是在广场里头啊，随着皇帝来的有许多武将了，武将会射箭啊，那么，要比一比谁射得好。他们以为王阳

明是一个书生、文人，恐怕射箭不行吧。他轻视王守仁，那么好，就树靶子在那儿，比较射箭。居然比较射箭的时候，阳明一箭射去，正中那个中心点。好！周围观看的军民呢大声喝彩。再射第二遍，又是正中，啊，又喝彩，欢呼。第三箭还是正中。这三箭一射，周围看的军人都欢呼，把这个来的太监、看不起阳明的都镇住了，不敢动他。因为他得民心，大家有目，看他真有本事，不是普通的文人。这样一下，才把这个局面转回来了，要不然那个皇帝还要乱搞。

我说这个故事啊，阳明为什么能够三箭都射中啊，因为这个啊，他得力于这个地方。他是彻悟，他对生命，他达到了彻悟，他是圣人了，完全不是普通的凡人，那是很了不起的人。所以他把三箭都射中啊，不是机遇，是远高于机遇的一个根本问题。他是悟道，他是明心见性。阳明先生是进入圣人的地位了，不再是个普通人，不再是一个所谓凡人、凡夫。我呢，如果说我有什么长处，有什么比普通的其他读书人好像高一着的地方，如果说有，那就是因为我能够望见到一点，好像是看不太清楚，但是也可以望到一点。结束一句话，我的程度是如此，我的程度，不客气地说，比普通人高，因为普通人连这个也没有，另外一方面呢不够高，没有达到这个地步。

Alitto: Aside from Wang Yangming, who else achieved this "familiarity with one's disposition"?

Liang: Speaking of ancient Chinese learning, in the past, for example during the Qing Dynasty, there were three schools of classical learning. One school was called the school of Han Learning. This school's focus was on texts, on philological evidence. They were interested in verifying the old texts or institutions. This was called textual research.

There was another school called the school of Belles Lettres, e.g., the Tongcheng school, whose focus was also on books, emphasizing reading the old books. But in reality they were most interested in writing style, in writing in the ancient style of the Tang and Song Dynasties' masters Han Tuizhi (Han Yu) and Liu Zongyuan. So this school just wouldn't work either.

I've already mentioned two schools. The third school was that of Song and Ming Learning—Neo-Confucianism. This scholarship proceeded upon this path [that I have been speaking about, pursuit of enlightenment and sagehood]. But in the two or three hundred years of the Qing Dynasty, the school produced no really outstanding men. Before the Qing, during the Yuan Dynasty, there had appeared no really able men in this school either. It was during the Song that the school produced great men, such as Lu Xiangshan [Lu Jiuyuan, with his literary name Xiangshan]. Later people liked to use the term "Lu-Wang" and this too was a school. Wang refers to Wang Yangming. In this school there were two exceptional men whose accomplishments

were, relatively speaking, profound. In the Song, there was Yang Jian (Yang Cihu). The other, in the Ming, was Luo Rufang (Luo Jinxi). These were two Confucians of scholarly accomplishment and virtue. I very much admire these two men. The average Confucians, even though they talked Confucianism and revered Confucius, were all outsiders [to true Confucianism].

艾：那谁达到这个地步，除王阳明以外呢，谁达到“明心见性”？

梁：讲这个中国古学问的有……就过去说，比如就清朝说，清朝的时候，讲学问有三派。一派呢就被称为汉学家，这一派的汉学家他的重点、他的学问是书本考订，考订古时候流传下来的文字或者制度，证明过去是怎么回事，这个叫做考订考据学，考据学这是一派。

还有一派呢叫辞章之学，像桐城派，桐城派也讲学问，特别讲究读古书，但是实际上呢它是一种辞章派，作古文，作韩柳文——韩退之、柳宗元，这是一派，这一派也不行。

第三派，它是讲宋明学。讲宋明学的呢，就是要往这个路上走，它采取的方向是这个方向，不过在清朝二三百 years 里头，在这方面没有出什么人才。在过去，在清朝以前，元朝在这方面也没有出什么人才。元朝以前，宋朝在这方面出了人才，那就是陆象山（陆九渊，号象山）。后来呢，喜欢说“陆王”，陆王是一个派吧，王就是王阳明。陆王派里头有两个特殊的人，比较算是成功的人。在宋朝，名字叫杨简——杨慈湖；在明朝，叫罗汝芳，号叫近溪。这是两个深造有得的儒者，就我说，我最佩服这两个人。其他的一般人，尽管他讲儒书、孔子，尊奉孔子，实际上是门外汉。

Confucianism and Buddhism: the enlightened person has no problem.

Difference between Confucianism and Buddhism

Liang: I really want to talk about Confucianism and Buddhism again. Didn't you say that I was the "last Confucian"? I want to say a word more about the similarities and differences between Buddhism and Confucianism. Possibly I have already expressed these opinions before. Confucius and Confucians always speak from the standpoint of humanity, of humans or of humanism. Confucius, no matter what he is talking about, is still in the sphere of the human. But Buddhism transcends humanity. Its central focus is not on the human himself, but rather on an area that transcends the human. So, these two kinds of thought are very different. Yet, there is one area in which they are similar, and that is "egoless self-sacrifice for the salvation of the world." That is, they both seek to forget the self and save the suffering. In Buddhist terms, this object of salvation is "sentient beings." The suffering of sentient beings is the suffering of the Buddhist. In China, let's take Confucians and Mozi as an example. Now, Mozi also sought to do the same. He spent his entire life trying to save people, rushing around for others. So, on the surface, there is no difference between the Mohists, Buddhists and Confucians. The major difference between the Confucian enterprise of salvation and the Buddhist lay in the concept of "self" or "ego." The school that analyzed this problem of self most completely was the Buddhist Consciousness-Only (*Yogācāra*) school.

It talks about the eight consciousnesses. The first six are the senses: seeing, hearing, smelling, tasting, tactile feeling, and also mind. These first six are for coping with the external world; they are all tools, or instruments. They are all directed toward the external. Using these six tools is life, is living beings, e.g., a living person, a living human. This is called "*dīqiyuandiba*" (the seventh and eighth consciousnesses control the six others). The seventh mind is called the "manas consciousness"; the eighth is called the "storehouse consciousness." These two consciousnesses apply, use and control the first six. This is called "*dīqiyuandiba*." That is, it holds to a self (clinging to the self called "*wozhi*"—*ātma-grāha*—clinging to the idea of a self). There are two kinds of things clinging to the notion of the

reality of the ego. One is called "*fenbie wozhi*" (the clinging to this notion of the reality of the ego as a result of intellectual reasoning). The other is called "*jusheng wozhi*" (the inborn instinctive cleaving to the idea of the self). This refers to the natural, intuitive assumption of the reality of the self, prior to intellectual reasoning. This inborn instinctive cleaving to the idea of the self is extremely deep, very concealed. The clinging to this notion as a result of intellectual reasoning is shallow. The deepest and strongest of the clinging to the reality of the self (*wozhi*, *ātma-grāha*) is our very life, the root of life. In ordinary activity, in life, the clinging to this notion as a result of intellectual reasoning is also active. But when we are sleeping—the deepest dreamless sleep with the cerebrum being as though completely inactive, very very deep sleep—at that time, the clinging to the notion of the reality of the self as a result of intellectual reasoning does not appear. But the inborn instinctive cleaving to the idea of the self does not weaken in the slightest; in deep sleep it's still this way. Perhaps I've been injured, fallen from a height and it appears as if I were dead. I'm not dead, but just about. At that time the clinging to this notion as a result of intellectual reasoning disappears. But the inborn instinctive cleaving to the idea of the self is still present. So this instinctual grip on the self is very profound, concealed and not obvious, but it has great strength. Now I would like to talk about the differences between Confucianism and Buddhism.

肆 佛家与儒家：高明的人通达无碍

佛跟孔子的异同

梁：我愿意把佛跟孔子我再说一下，因为你不是说我是"last Confucian"吗？我想把佛跟孔子的异同说一下。也许我们已经都说过一下，孔子、儒家他总是站在人的立场说话，他说来说去还是归结到人身上。可是佛家，他是超过人说话，他说来说去，归结点也不归结到人身上，归结到超过人的那个地方，所以好像他们是很不同。不过还有同的一面，就是“无我”——没有我——“而救世”，佛家话就是众生，众生的痛苦就是他的痛苦。就中国说吧，儒墨——墨子也是这样子，都是在他生存的这个时候，他总是一生都在为大家奔走。所以表面上没有很大分别，但是我底下就要说一下孔子跟佛的分别。这个分别就是在“我”的问题上，关于“我”的问题，把它讲得最清楚的，分析得最清楚的，是唯识家。

佛学的唯识家，是讲八识。八识，前六识——眼、耳、鼻、舌、身，这是五个，加上一个“意”，这个就是前六——前六都是应付外面的，都是工具，都是对外的。运用这个前六识的，是生命，是活的，比如说人吧，活的人啦，这个在唯识家讲，叫做“第七缘第八”。第七就是“末那识”，第八是“阿赖耶识”，运用这前六识的工具而为之主的，就是这个“第七缘第八”。怎么叫做“第七缘第八呢”？就是这个时候执着一个“有我”，它叫做“我执”。两种执，“我执”，一种叫“分别我执”、“分别执”；一种叫“俱生执”、“俱生我执”。“俱生我执”就是与生俱来的，就是不等到分别就有。“俱生我执”很深、很隐——“隐藏”的“隐”，“分别我执”就浅。最深的也就是最有力量的“我执”啊，是我们生命、生活的根本。通常在活动中、生活中，都有一个“分别我执”在那儿活动。可是假定我们睡眠——最好的、最深沉的睡眠，一点梦都没有，大脑完全好像没有活动，睡得很深很深了——那个时候，“分别我执”就不显露了，可是“俱生我执”那还是一点也没有减弱，睡得沉的时候是这样。或者我受伤了，从高处摔下来受伤了，好像死了，虽然没有死，跟死差不多了，那个样子的时候也是“分别我执”没有了，可是“俱生我执”依然还在。所以“俱生我执”是很深的、很隐藏的、不大显露的，可是非常有力量。底下我就要说儒家跟佛家的分别了。

Buddhism wants to refute false tenets, it wants to refute the notion of the reality of the self. I remember once I wrote down on a piece of paper six characters "*qihuo zaoye shouku*." Buddhism looks at all like this. "*Qihuo*"—"the arising of illusions," that is, confusion, bewilderment, insufficient acuity. Where is the illusion? What are you referring to when you say illusion? It refers to this holding on to the

notion of the existence of the ego. Buddhism wants to thoroughly destroy illusions. It also says that it wants to "destroy the two illusions." Why "two illusions"? On the one hand there is the "illusions of the reality of the self" (*wozhi*), and on the other, the opposite, "illusions of the reality of things, or phenomena" (*fazhi*). "*Fa*" refers to things. Buddhism wants to destroy these two illusions. Destroying the two illusions is also called "excising the two graspings."

What are those "two graspings (*upādāna*)"? They are "*nengqu*" (ability to grasp) and "*suoqu*" (that which is grasped)—two sides of the same thing. No "ability," no "object." Both are together, meaning that there is no grasping or grasped. What is this? This is Buddha. This is one integrated whole, one integrated whole that contains no binaries. Buddhism holds that differentiation or distinction is a mistake, and wants to restore one integrated whole, to re-establish one integrated whole. The cosmos is a blended, indiscrete single body. This is Buddha. Ordinary people think that Buddha is a deity. That is wrong.

佛家是要破执，破“我执”，我记得我在一张纸上写过一次，写过六个字——“起惑造业受苦”，佛家看都是这样。起惑——惑是迷惑了，糊涂了，不够明白了。惑在哪儿呢？你说的惑是指什么说呢？就是指这个，指“我执”，惑就是指“我执”说。佛家是要彻底地破执，彻底。他又说破“二执”，为什么用“二执”呢？就是一方面有“我执”，还有一面跟“我执”对面的“法执”——“法”就是一切的事物。“我执”是一面，对面还有“法执”，佛家就是要破这二执。破二执有时候又叫“断二取”。

那么“二取”是什么呢？——“能取”跟“所取”。能取、所取就是一个这边，一个那边，佛家的意思，是断二取，没有“能”，没有“所”，能、所是归在一块的，意思是没有取的。这是什么？这个就是佛，这个就是一体了，一体就没有二了。佛家的意思就是说，分别就是错误，就是要恢复到一体，复原到一体，宇宙浑然一体，这个就是佛。普通人以为佛是神啊是什么，那不对。

We'll continue further with the differences and similarities of Buddhism and Confucianism. Confucianism—Confucius did not destroy the inborn instinctive cleaving to the idea of the self; if that were destroyed, then there would be no activity. Life is situated in the inborn instinctive cleaving to the idea of the self. Only with this illusion of the existence of the self are there all activities coming from the natural instincts of humans. In all of these activities the "inborn illusion of self" prevails.

So since Confucianism does not depart from human life, it is unlike Hinayana Buddhism's desire for the calm and quiet of Nirvana and desire to leave home and be a monk. Confucianism by no means wants that. Confucianism wants activities in the human world. Confucianism wants completely real human beings like us. It does not

want to be a deity. It wants the same as we are, wearing clothes, eating food, "drinking, eating and sex." But we are not completely the same. There is one aspect that is completely the same as us—the primal wants, life, rest, sleep. Where is the difference [with what Confucianism wants]? He doesn't want this [clinging to this notion as a result of intellectual reasoning]. Confucianism is with "an all-encompassing, empty and impartial mind" in the process of satisfying primal wants. The eight characters—*kuorandagong*, *wulaishunying* (with an all-encompassing, empty and impartial mind, taking things as they come)^[11]—these eight characters are Confucian. Although the Confucian satisfies the primal instincts and all the activities are just like ours, in life the Confucian has only the inborn instinctive cleaving to the idea of the self, not the notion of the reality of the self as a result of intellectual reasoning.

Why doesn't it have the latter? It's an all-encompassing, empty and impartial mind, and taking things as they come. For example, my loved one dies, and I cry. This is with an all-encompassing, empty and impartial mind, taking things as they come. The weather is good, and I'm delighted and happy. This is taking things as they come. At this time there is no clinging to the notion of the reality of the self as a result of intellectual reasoning, but it never departs from the inborn instinctive cleaving to the idea of the self. Only because there is this latter "me" do I cry or laugh. That there is no obstructing of laughter or tears is also an all-encompassing, empty and impartial mind. This is Confucianism. But Buddhism isn't like this; it transcends this. For example, if my body is hacked with a knife, I will be in pain. Even if it was Confucius, he couldn't but feel pain. But if you plunge a knife into Buddha, it makes no difference, he doesn't suffer. Confucius suffers. The Buddha transcends this. They are not the same.

再说儒佛的异同。照我的说法，儒家啊，孔子不破“俱生执”，破了“俱生执”就没有活动了，生命就坐落在“俱生我执”上，有“俱生我执”才有饮食男女的一切活动，这些活动都有“俱生我执”在那里为主了。

那么儒家既然不离开人生，他不像佛家小乘佛法要涅槃寂静，要出世，儒家并不要那个样子，儒家就是要在人世间活动。儒家就是要像我们这样一个完全真的人，他不要做神，他就是跟我们一样，穿衣吃饭，饮食男女，他就是这样。跟我们还不同了——跟我们有完全相同的一面，饮食男女、生活、休息、睡觉，这是同的一面——不同在哪里呢？他不要这个（“分别我执”）。“廓然大公”，他就是穿衣吃饭的时候他还是“廓然大公”。八个字，“廓然大公，物来顺应”，这八个字是儒家。尽管他穿衣吃饭，一切活动与我们一样，可是他活动中只是“俱生我执”在那里活动，没有“分别我执”。

为什么没有“分别我执”？他“廓然大公，物来顺应”。比如我一个亲

爱的人死了，我哭，这个还是廓然大公，还是物来顺应。天气很好，我很高兴、愉快，这就是物来顺应。这个时候都没有我，都没有这个“分别我”，可是离不开“俱生我”。因为有这个我，才哭啊、才笑啊，有哭有笑没有妨碍，还是廓然大公，这个是儒家。可是佛家不如此，他超过这个了。比如说，拿一个刀砍了我的身体，我痛，即使孔子他也不会不痛的。但是你如果拿刀去扎佛，没有关系，他没有什么痛苦。孔子有痛苦，佛超过这个，不一样。

Intellectual inclination toward Buddhism & life along the Confucian path

Alitto: In these [past] sixty-some years of life, you have both followed Confucianism, and had a Buddhist side...

Liang: I only love, like, and admire Buddhism, but that's as far as it goes. I only like, admire, and am inclined toward Buddhism, but I'm an ordinary person.

Alitto: I understand. From *Eastern and Western Cultures and Their Philosophies*, it seems that like a lot of Chinese historical figures, you went from Buddhism to Confucianism. Like a lot of Neo-Confucians, such as Wang Yangming... In any case there are a lot of people like this. You openly declared "I was a Buddhist previously, and now I am going to Confucianism," then...

Liang: I'd add a word here. I led a life as an individual, but intellectually I was inclined toward Buddhism. My intellectual inclination was toward Buddhism, but I still led an individual life. An individual life should be following the Confucian path, but I still wanted to lead a good life but didn't succeed entirely. If I would explain further how it was insufficient, it was in the areas of destroying the notion of the reality of the ego and having an all-encompassing, empty and impartial mind. I had hoped that I would be able to be that way, but it was not enough.

Alitto: You just mentioned that you were insufficient in those areas—that is the standard attitude, especially of Neo-Confucians. That is, whatever I do, it will never be good enough, not thorough enough. In the U.S. recently, there has been a discussion of this question: Did the Song and Ming Neo-Confucians have a philosophy of life similar to that of the Western Puritans? The conclusion of many is that there are many similarities—forever progressing toward goodness, forever perfecting, continuously practicing self-cultivation. This is the same as the Puritans. You just said that this is the standard attitude of Neo-Confucians. What I can't make out, however, is in the end how to divide the Buddhist and Confucian intellectual parts. In

the past sixty years, intellectually, you have been more inclined toward Buddhism, meaning that you didn't become a monk, and that your life was Confucian. Some scholars say that Neo-Confucianism from the Song and Ming on has some elements of Buddhism.

我在思想上倾向佛家，生活上走儒家的路

艾：您60年来的生活，有佛教的一面跟儒家的一面……

梁：我仅仅是爱这个佛教、喜欢佛教、佩服佛教，可是仅仅如此而已，仅仅喜欢佛教、佩服佛教、倾向于佛教，可我还是一个平常的人。

艾：我明白了。您在《东西文化及其哲学》里，也是好像跟中国历史上好多人物一样，由佛转儒，好多人——像理学家……王阳明啊，反正很多了——好多人都是这样。您公开地宣布，我以前是佛教徒，现在呢我就转入儒家了，那么……

梁：我再补一句。我是在生活上做一个人的生活，我思想上还是倾向佛家。思想上倾向佛家，人还是做一个人的生活。做一个人的生活应当是走儒家的路，可是我是一个想要做好而不够的一个人。如果再说明怎么样不够，那就是我在“破执”上、在“廓然大公，物来顺应”上不够。我希望我能够这样，但是不够。

艾：您刚才说的自己那方面不够，就是最标准的尤其是理学的儒家的态度了，就是永远自己做得不够好、不够彻底。最近美国有一些人在讨论这个问题：中国的宋明理学家，有没有像西方的清教徒这一类的人生观？很多人的结论就是有很多类似的地方——永远向善，永远要改善、求善，继续不断地修养，这是你们跟清教徒一样的，您刚才说了，也是很标准的理学的儒家的态度。我弄不清楚的是，到底您怎么分佛的意思那层和儒的意思那层。您60年来思想比较倾向于佛，意思就是没有做和尚啊，生活还是儒家的。有学者说，宋明以来的理学有几分佛教的成分在里面。

Liang: I think that others look at it that way; others, it appears, are criticizing them for being too close to Chan Buddhism, and asceticism. I think these views are not correct.

Alitto: Yes, your own view is that these views are not correct. Your works contain this opinion. A lot of foreign scholars of Chinese thought don't mean this in a critical way, but are analyzing the difference between Han Confucianism and Song Confucianism. From the Song on, [they find that] Neo-Confucians have some Buddhist elements.

Liang: In general, people are likely to say that they seem to have been influenced by Buddhism, even to the extent of saying that certain Confucians... For example, there is a famous Confucian of the Song

Dynasty Yang Cihu (Yang Jian). Most people say that he was Chan. Actually this was not so. They also say that Wang Yangming himself appears to be close to Chan; or Wang Yangming's student Wang Longxi. Wang Longxi is also quite famous. They say that they appear to have absorbed some of Chan Buddhism, or are followers of Chan Buddhism. This is not completely accurate. Also, some of the Song and Ming scholars were also anti-Buddhist, and held that to be infected even a little was intolerable. There are also those who pull Chan Buddhism and Confucianism together.

Alitto: In your opinion, your situation of being intellectually inclined toward Buddhism and in life striving toward the Confucian ideal is relatively similar to which thinker in Chinese history?

Liang: I hope to do this better, to strive upward. I want to be like Wang Yangming.

Alitto: Are you saying you would follow both Wang Yangming and Buddhism? I mean...

Liang: Actually I understand a bit of Buddhist principles. In my thought and consciousness I understand some Buddhism, but in my real life I hope to follow Wang Yangming's example.

I am not qualified as a person of learning; I'm a thinker.

Liang: ...I am not qualified as a person of learning. Why? The intellectual foundation of an authentic scholar of China's traditional learning is a mastery of the written language and literature. I haven't paid much attention to the written language which is the foundation of ancient books. I have not read China's ancient books. When I was small, I didn't read the Chinese classics. Therefore, I really lack a background in traditional Chinese scholarship. On the other side, in modern science, I don't qualify either, because my foreign languages skills are lacking. When I say science, I refer to the natural sciences. When I was in middle school, I studied a bit of science, but it was very superficial. So my foreign learning falls short, too. So speaking from these two areas, I am completely unqualified to be a man of learning.

梁：我认为是旁人这样看，旁人认为好像是批评他们近禅、禁欲，我认为这种看法，没有对。

艾：是，您自己的看法是没有对，您著作里有这种意见，很多研究中国思想的外国人也没有什么批评的意思，就是分析汉跟宋儒家的分别，宋以后理学家有几分佛教在里面。

梁：他们一般都是容易说是好像是受佛教影响，乃至说某一个儒者，比如说宋朝有一个有名的儒者，叫杨慈湖——杨简，一般人都说他是禅，其实不是。把王阳明看作也是好像说他近禅，或是王阳明的门下有个王龙溪——王龙溪很有名的，都说他们好像是吸收了禅家的，或者是跟禅家、跟佛家好像混同起来，被人这样批评，这些个话都是不完全正确。另外，宋明学者又有一种排佛的，排斥佛教，认为沾染一点禅宗就是要不得的，也有这样的。也有把儒、佛家跟禅宗拉得很近的，也有。

艾：依您自己看，您这个情形，就是思想倾向佛家，而生活向儒家的理想而努力，这种情形比较接近于中国历史上的哪一位思想家？

梁：我希望把它做好一点，勉力向上，那我愿意学的还是王阳明。

艾：您自己觉得王阳明、佛家两个都有？我的意思就是说……

梁：实际上是我懂一点佛家的道理，在我的思想意识上懂一些个佛家，可是我的实际的生活，我是希望跟着王阳明走。

我不够一个学问家，而是一个思想家

梁：……我不够一个学问家，为什么？因为讲中国的老学问啊，得从中国的文字学入手，才能够有中国老学问的根底。可是中国的文字学我完全没有用功，所以对于作为古书根底的文字学，我没有用过心。那么，对于中国古书也没有读过，小时候没有读中国的经书，所以讲到学问的话，我的中国学问很差、很缺少。那么再一方面呢，就是近代的科学——外国学问，我的外文又不行，也不能够，所以科学也就不行了。科学主要的还是自然科学，那么在自然科学上，我在中学的时候学过一点，学得很粗浅。所以外国学问也不行。这两面说下来，就是说我不够一个学问家。

My area of strength is that I like to think. Therefore, if someone calls me a thinker, I won't decline [the designation]. A thinker and a scholar are different. The scholar knows a lot of things; he has absorbed a lot; in knowing more and seeing more, naturally there is some element of creativity; without creativity, one can't absorb anything. But a thinker is different from a scholar in that, although he also knows some things, his power of creativeness is greater than his power of absorption. Of course if he doesn't master a great amount of knowledge, he can't be a thinker. I do admit that I'm someone who has his own ideas, who acts according to his own ideas and puts them into practice. I am someone of independent thought. I have consistency between my thoughts and my actions. So, I admit that I am a thinker, not a scholar. My thought also has a source of inspiration, and that is Buddhism. So that is what I want to say about myself. I'm not a scholar, but a thinker, and my greatest intellectual inspiration has

come from Buddhism.^[12]

那么我所见长的一面，就是好用思想，所以如果说我是一个思想家，我倒不推辞、不谦让。思想家跟学问家不同，学问家他知道的东西多，他吸收的东西多，那么在吸收、多知道、多看里边当然也有创造，没有创造不能去吸收。可是在一个思想家来说，他不同于学问家的，就是虽然他也要多知道些东西——不知道古今中外的一些个知识，他也没法成为思想家——但是呢，他的创造多于吸收，跟学问家不同。那么，我承认自己是一个有思想的人，并且是本着自己思想而去实行、实践的人，独立思考，表里如一。我就是这么一个人。那么我的这个思想呢，也受到启发，启发我的是佛教、是佛学。我想说的话，就是这么一段，（我是）思想家，不是学问家，在思想上给我很好的启发的是佛学。

[1] Here Liang says outright what I suggested in my first article on him, that he saw himself as acting in a messianic role of Bodhisattva. Like many of the first generation of radical reformers—Kang Youwei, Liang Qichao, Tan Sitong and, to some degree, Zhang Taiyan, all of whom had a deep and abiding interest in Buddhism—he saw his activist role in society and politics as Bodhisattva-like.

[2] Throughout these interviews, Mr. Liang maintained that he is simultaneously a Buddhist, Confucian, Daoist, Marxist, Vitalist (à la Bergson), and who also has a great respect for Christianity. In my view, this is part of a long tradition of eclecticism in Chinese thought, one of the first more important examples being the Han Dynasty "National Doctrine" (国教), which was Dong Zhongshu's eclectic mixture of Confucian teachings, Legalist teachings, Daoism, and cosmologies derived from the Book of Changes and folk religion. At the end of the Han, the earliest folk religious text we have, the Taipingjing (《太平经》) is similarly eclectic in composition, even including Moist (墨子) elements. In my view, this is a traditional attitude of Chinese intellectuals, even into the twentieth century. Liang's friend, Li Dazhao, for instance, was simultaneously a French-style Vitalist and a nationalist while he was embracing Communist internationalism. Often Westerners do not understand this attitude, and take it to be self-contradictory.

[3] In the West, "Chan" (禅) is almost universally known in the Japanese reading of the word "Zen," because the Japanese version made the biggest impact in Western popular culture, especially in the 1950s.

[4] Daśabhūmi —the "ten stages" in the fifty-two sections of the development of a Bodhisattva into a Buddha. The first of these is worldly wisdom, which has not been "fertilized" by Truth, and so is called the "dry" wisdom stage (干慧地). Each of the ten stages is connected with each of the ten "pāramitās," which Mr. Liang proceeds to discuss next.

[5] Pratyeka-Buddhahood (辟支佛), by which only the "dead ashes" of the past is left. At this stage, one understands the twelve nidānas, or chain of causation, and so attains complete wisdom.

[6] 佛地。The point at which the Bodhisattva has arrived at highest enlightenment and is just about to become a Buddha.

[7] Throughout his life and in all that he said and wrote, Mr. Liang stressed practice (praxis) and practicality (effectiveness). This central strand of his thought is obvious even in his discussion of Buddhism, which most people have nothing to do with either. Mr. Liang's personality, as exemplified by his actions throughout his life to the very end, was itself a manifestation of these points of emphasis. He himself used the Chinese phrase "表里如一" (unity of inner feelings and outer action) to describe himself later in this day's interview. That is, he would translate any idea he had into action in the real world. His personal actions were always like this (as shown by the episode of his conduct during the "Criticize Lin Biao and Criticize Confucius" Campaign discussed below), and his public actions, such as the way in which the entire Rural Reconstruction Movement was designed specifically to express his cultural philosophy.

[8] The Analects 7.21: The master did not speak of extraordinary things, feats of strength, disorder, and spiritual beings. (《论语述而篇第七》，二十一章：子不语怪、力、乱、神。)

[9] I asked Mr. Liang this question several times during these interviews as well as those

conducted later in 1984. The only mistake he admitted to, in his vast production of writings over many decades, is this confusion of "intuition" and "instinct."

[10] In many respects, Mr. Liang's Rural Reconstruction Movement was a twentieth century version of the Taizhou school, of which Wang Xinzhai (Wang Gen) was the leader. Liang hoped that through education, the masses would all become enthusiastic in seeking Sagehood. This was precisely what Wang Gen and the Taizhou school was all about. Wang Yangming, after all, was a high-ranking official. His student Wang Gen was a commoner who, like Liang, had a sense of mission to lead a social movement, not a political one. And like Wang Gen, Liang again and again refused to serve as an official.

[11] This is Cheng Hao's (程颢) phrase that appears in his "Letter on Fixing One's Nature" (《定性书》). It appears in the writings of other important Neo-Confucians, such as Zhu Xi and Wang Yangming. The original passage is: A general rule of the cosmos is that its mind permeates all things, even though it itself has no mind. It is a rule of the Sage that his emotions are in accord with all things in the universe, even though he himself has no emotions. Therefore, the Superior Man has an all-encompassing, empty and impartial mind, taking things as they come. (夫天地之常，以其心普万物而无心；圣人之常，以其情顺万物而无情。故君子之学，莫若廓然而大公，物来而顺应。) I have used the more colloquial English phrase "take things as they come" rather than the more accurate but stilted possibilities of "react appropriately to the various phenomena as they present themselves," or "harmoniously react to things as they come." Mr. Liang thought highly of the phrase, and used it often. He also assessed Cheng Hao as the only Song Dynasty thinker who really understood Confucianism.

[12] Throughout his life, Mr. Liang refused to accept the designation "scholar." Ironically, the word "scholar" (学者) appears in almost everything published about him in Chinese. I think that he did this, not out of modesty. On the other hand, the title "thinker" he always readily accepted (along with "Confucian," "Buddhist," "Marxist," and so on). In English, of course, there is no comparison between the two designations. Only one scholar or academic in perhaps hundreds of thousands would merit the title "thinker." To me, though, even the term "thinker" does not begin to do him justice. Perhaps alone in the twentieth century, he had two exceedingly rare qualities. He was both a genuine thinker and a man of action, and his actions were always determined by what he thought.

Questions of reality and life have occupied my mind.

There are two questions that have occupied my mind.

One question is the practical problem of China.

There is another problem of human life: its afflictions and uncertainties,

the misunderstandings of life, and doubts about it.

One makes me involve myself in social and national affairs;
and the other makes me want to leave.

第二章 现实问题和人生问题占据着我的头脑

有两个问题占据了我的头脑。

一个呢，现实问题，现实中国的问题。

还有一个问题是人生问题，

对人生的怀疑、烦闷。

一个就让我为社会、为国事奔走，

一个又让离开。

From Revolutionary Alliance to Peking University

From joining Revolutionary Alliance to teaching at Peking University

Liang: ...Wang [Jingwei] was released by Yuan Shikai to be a mediator between the Northern and Southern Revolutionaries. Wang organized a Beijing-Tianjin branch of the Revolutionary Alliance (the Tongmenghui). The Revolutionary Alliance was founded by Sun Yat-sen. Its official name was the Chinese Revolutionary Alliance. This new branch was considered its northern branch.

When I was still in middle school, I had already secretly joined a revolutionary organization, which was part of the Beijing-Tianjin branch of the Revolutionary Alliance that I just mentioned, led by Wang Jingwei. At that time I was also a news reporter. The newspaper office was in Tianjin. Later it was moved to Beijing. For a time I led the life of a news reporter. Moreover, I was a field reporter who went out to cover the news on the spot. There was such a period. After the Republican Revolution, I went to Nanjing once. Later I doubled back. After Nanjing, I went to Wuxi, and from Wuxi doubled back. At that time my plan had been to go to Guangxi to sign up for the examination and go abroad to study, but I didn't succeed in going.

...At that time, we were all together in the Revolutionary Alliance because the revolutionary army had arisen, and the Qing court abdicated governmental power. Some of us originally were fooling around with bombs and pistols, but then we began to run a newspaper. We ran *The Republic*. The head of *The Republic* was Zhen Yuanxi. This man also ran a Chinese language newspaper in the U.S. At the time I was a field reporter, not someone who sat in the newspaper office writing essays, but was outside all the time. At that time, *The Republic's* office was in Tianjin, and my home was in Beijing, so I commuted back and forth between the two cities, covering stories.

Alitto: Did you get to know Huang Yuansheng at this time?

Liang: I got to know him after this.

Alitto: Later? He was assassinated in the U.S. in 1915.^[1] So was

the first time you met Cai Yuanpei when you were a reporter...

Liang: I met Cai Yuanpei once during this period, but he didn't remember me. Afterwards, in 1917, when he became president of Peking University, I really got to know him. I had sent him my essay "On Tracing the Origin and Solving Doubts" for comments. He said that when he was passing through Shanghai, he had read it and found it very good. He said that he was now going to Peking University, and asked me to come on board.^[2] I said that I really wasn't qualified to teach Indian thought. At the time, scholars of Europe and Japan did not include Buddhism as one of the six schools of Indian philosophy. Strictly speaking, I really didn't know much about Japanese or European scholarship on Indian philosophy. I only liked Buddhism, that's all. When Cai invited me, something else had come up, and being occupied with it, I couldn't accept Mr. Cai's invitation to teach at Peking University.

壹 从同盟会到北大

从参加同盟会到任教北大

梁：……汪精卫出来了，被袁世凯请出来了，让他做调和人，他就组织了一个……“京津同盟会”——同盟会就是孙先生所创建的中国革命同盟会，这个就算是中国革命同盟会的北方支部。

我是在中学读书的时候，已经就秘密地参加了革命组织，这个革命组织就是属于刚才说的汪精卫领导的京津同盟会。这个时候我还做新闻记者，那时候报馆设在天津，后来搬到北京来了。我有一段新闻记者的生活，并且那个记者是外勤记者，外勤记者就是访查新闻的，做过那么一段。我也曾经在辛亥革命后，去南京一次，可是后来又折回来了。去南京之后我就去了无锡，从无锡又折回来，那次本来意思是想到广西去投考、去出洋留学的，没有去成。

……那个时候，京津同盟会跟我、我们都在一道的，因为清廷退位了，革命军起来了，清廷就让出政权来了，退位了。我们一些原来是搞手枪炸弹的吧，改了，就办报，办《民国报》。《民国报》的社长甄元熙，这个人还在美国，在美国办中文报纸。我就算是一个外勤，不是坐在报社内写文章的，而是在外边。当时《民国报》报社在天津，我的家住北京，我就往来于北京、天津之间，做采访工作。

艾：那是这个时候您认识黄远生吗？

梁：黄远生认识在这个之后。

艾：以后啊？他是1915年在美国被刺杀了。那蔡元培先生也是……第一次见面的时候是您在做记者的……

梁：那时我做记者的时候见过他，可是他不记得我，等于没有什么关系。到了后来，到了民国六年（1917年），他来北京就任北大校长的时候，那个时候才认识。因为那个时候我拿《究元决疑论》向他请教，他就说：我路过上海，看到了，很好；我现在到北大，也请你帮忙。当时我说：我还会讲印度哲学。因为在欧洲或者日本，谈到印度哲学，都是谈到六派哲学，而六派里头不包含佛学。认真讲，欧洲人讲的、日本人讲的印度哲学，我不太清楚，我不过喜欢佛学就是了。同时，我那个时候正好旁的事情很忙，不能够答应蔡先生到北大。

What was I busy with at the time? By that time Yuan Shikai had already died and the North and South were reunited. The major force that overthrew Yuan was in the Southwest. In Guangxi, the important figures were Cai E and Lu Rongting. In Guizhou, it was Liu Xianshi. Among the forces overthrowing Yuan inside the government was

Liang Qichao (Rengong). In the North, when Yuan was dying he had asked Duan Qirui to come into politics. Duan was, among the Beiyang militarists, a very honest, decent, fine person. Duan resolutely and firmly opposed Yuan Shikai's becoming emperor from the first. So a group of Yuan's supporters wanted to assassinate him. He was at the time Minister of the Army. He resigned and went to live in the Western Hills of Beijing. They still wanted to assassinate him. The upshot was that he was never killed. Yuan's plan for becoming emperor failed. In order to maintain the power of the Beiyang clique, he had to ask Duan to return to Beijing. Because Yuan was intent upon becoming emperor, he had already abolished the State Council and had set up a Political Bureau within the Presidential Palace. At the time he knew that he was dying, that he was done for, and he asked Duan to abolish this organ, restore the State Council and assume the post of Premier. Because Duan was honest and upright, and because he had opposed Yuan's plans to be emperor, the Southwestern forces still recognized Duan. In any case the Southwestern forces didn't have sufficient military forces to attack Beijing, so they came to terms.

An older relative of mine entered the government as a representative of the Southwest. This was Zhang Yaozeng, who drafted me to be his confidential secretary. There were secret telegrams and letters between him and the anti-Yuan forces of the Southwest—Guangxi, Yunnan and Sichuan; I managed these affairs for him. So when Mr. Cai asked me to come to Peking University to teach, I could not go. I asked a friend of mine to substitute for me. The next year the political situation changed, and Duan left. Zhang also fell from power. Only at this time was I able to go to Peking University.

那个时候什么事情很忙呢？那个时候，袁世凯死了以后，南北统一，推倒袁世凯的势力是在西南——广西，主要是蔡锷、陆荣廷、贵州刘显世。倒袁势力内部有梁启超——梁任公。这个时候北方就是袁世凯死了，袁世凯死的时候，他才把段祺瑞请出来。段这个人在北洋军人里头是一个很正派的、很好的人，自从袁有意要做皇帝，他就反对，坚决反对。另外一些包围、帮助袁世凯做皇帝的人要刺杀他，要刺段祺瑞，段祺瑞自己本来是陆军总长，自己辞职不干，住在北京的西山，他们还要刺杀他，也没有刺死。袁世凯做皇帝做不成，只好维持北洋军人的势力，请段出来，从西山上把段请回北京。并且这个时候，由于袁世凯想做皇帝，他已经把国务院撤销了，不要国务院，他在总统府内设了一个叫做政事堂（的机构）。这个时候他要死了，他晓得是不行了，要请段出来，撤销政事堂，恢复国务院，段是国务总理。这样子因为段的人很正派，也是反对袁世凯做皇帝的，西南对段还是承认的，并且西南也没有兵力可以打到北京来，所以就妥协，妥协就组织一个南北统一的政府。

我的一个亲戚（张耀曾），也是一个长辈，就代表西南入阁、进政

府。张耀曾就拉我做机要秘书，他跟西南方面的广西、云南、四川倒袁的势力往来有秘密的电报、函电，我就替他主管这个事情。所以蔡先生要我到北大，我就不能去，我就请了一个朋友替我。转过年来，第二年，政局变了，段也走了，张耀曾也下台，这个时候才帮助他。

Work with Chen Duxiu and Li Dazhao

Alitto: What do you think of Chen Duxiu?

Liang: Chen Duxiu was really a formidable person.

Alitto: You met him only after you went to Peking University, or...

Liang: I ran into him right before I went to Peking University. There was someone who was known by everyone, Li Dazhao. He had some guests over to his house for dinner. He invited Chen and also invited me. That was the first time I met Chen. At that time, Chen had just come from Shanghai to Beijing. He had intended to persuade people to buy shares from him for an "East Asia Library" publishing house he was creating. Each share was 50 silver dollars, and two shares were 100 dollars. He hoped that his old friends would persuade everyone to buy shares in order to finance this publishing house of his. He came to Beijing for this purpose. Right at that time Cai Yuanpei had returned from abroad and assumed the presidency of Peking University. He needed a corps of teachers, obviously. He couldn't teach everything himself. He was an old friend of Chen Duxiu's, so he told Chen, "Alright, since you have come to Beijing, forget about this publishing house project. Don't mess with publishing houses. You come help me out?" So, in this way, the three of us—Chen Duxiu, Li Dazhao and myself—entered Peking University at the same time.

Alitto: My impression is that your relationship with Chen Duxiu wasn't as good as yours with Li Dazhao.

Liang: Right. My relationship with Li started slightly earlier than with Chen. When I ran into Chen, it was at a banquet at Li's. But we three entered Peking University at the same time.

Alitto: With Chen Duxiu, you...

Liang: Chen left a very strong impression on me. Chen was someone who could really make breakthroughs, a man of great power.

Alitto: What do you think of the role he played in history?

与陈独秀、李大钊共事

艾：您觉得陈独秀怎么样啊？

梁：了不起啊，这个人了不起。

艾：您是到北大以后才认识他的，还是……

梁：刚好在进北大之前就碰见他。就是有一个人人都知道的人——是李大钊。李大钊有一次请客人吃饭，请的有陈独秀，请的也有我，第一次见面是这样子。那次呢，陈独秀来是从上海到北京，他的意思是到北京来劝人募股，他搞一个叫做“亚东图书馆”这么一个出版社，要大家入股凑钱。50块钱一股，100块钱就是两股，希望找一个熟的朋友劝大家入股，凑成他要办的亚东图书馆，他是这样来的。刚好这个时候蔡元培先生从国外回来，接任北大校长，他得需要一个班子，他一个人不行啊。他跟陈独秀本来是老朋友，他就说：“好啦，你到北京了，不要搞什么图书馆了，不要搞什么出版社了，你就来帮我吧。”这个时候陈独秀、李大钊连我，我们三个人同时进北大。

艾：我的印象是，您跟陈独秀的关系没有和李大钊的关系那么好。

梁：对，跟李的关系比陈稍早一步，跟陈碰见，还是在李的宴会上，可是进北京大学是陈、李、我同时的。

艾：跟陈独秀，您……

梁：我对他很有印象。那个人是一个能够打开局面的人、很有力量的人。

艾：在历史上您觉得他扮演的角色是怎么样呢？

Liang: He started the Communist Party.

Alitto: Right! Very important?

Liang: Very important.

Alitto: He and Li Dazhao, naturally they together founded the Communist Party.

Liang: The friendship between the two was very good, but their personalities were different.

Alitto: So, Li was relatively...

Liang: On the surface Li was a very gentle person. Everyone who had personal contact with him liked him. In fact, though, he was a very radical person in his heart.

Alitto: His personal relations with others were comparatively good.

Liang: Better than Chen Duxiu did in his relationships. Most people's attitude toward Chen Duxiu was to respect him but give him a wide berth. Everyone was afraid because he was often very rude in

his speech with others. At meetings of the university, he was the dean of the College of Arts. There was a College of Sciences, which was headed by Mr. Xia Yuanli. These two were of the same rank, one in the Arts and one in the Sciences. During meetings Chen would be very rude toward Mr. Xia and embarrass him. So...

Alitto: Li Dazhao wasn't that kind of person. Which of these two people do you feel yourself...

Liang: Of course my relationship with Li Dazhao was better.

Alitto: Was the most important reason that Li was gentle, or...

Liang: Yes, Li was gentle.

Alitto: In thought, was Li's close to your own? So [your good relationship with him] had to do with thought, or with the way he conducted himself?

Liang: It was very strange. What was strange? Both Chen Duxiu and Li Dazhao were members of the Chinese Communist Party, but Li never said anything to me about joining it. I don't know why. We were good friends but he never tried to get me into the Party.

Alitto: What about Chen Duxiu? I remember he had talked about this with you. In *The Chinese People's Final Awakening* [referring to *The Final Awakening of the Chinese People's Self-Salvation Movement*] you mentioned Chen Duxiu's criticism of your conception of the rural reconstruction, calling it some petite bourgeois fantasy. At that time Chen Duxiu wanted you to join the Party. You didn't...he also didn't...

梁：他是共产党的发起人。

艾：是啊，很重要的？

梁：很重要。

艾：他跟李大钊，当然也是一起组织成立共产党。

梁：他们两个人的朋友关系非常好，但两个人的性格不同。

艾：那李呢是比较.....

梁：李呢，表面上是非常温和的一个人，表面上很温和，同大家一接触，人人都对他有好感，实际上骨子头里他也是很激烈的。

艾：他个人跟别的人的关系搞得比较好。

梁：比陈独秀搞得好。大家对陈独秀都有点敬而远之，怕他，因为他对人常常当面就不客气。在学校里开会议，他算是文学院院长，开头叫文科学长，另外还有一个理科学长，搞物理的夏先生——夏元，两个人地位是相同的，一个是文科，一个是理科，在会议席上他有时候对夏先生就很不客气，让人下不来台，所以.....

艾：李大钊不会这样。您觉得这两个人，哪一位和您自己.....

梁：我当然还是跟李的关系好。

艾：那主要原因是李温和，还是.....

梁：唉，李温和。

艾：那李的思想有没有比较接近您自己的？是不是跟思想有关系，或者说是为人的关系？

梁：很奇怪。很奇怪是什么呢？陈独秀、李大钊都是搞共产党，可是李先生没有说过一句话拉我入党，不知道为什么。朋友关系很好，可是从没有介绍我也参加共产党吧，他没有。

艾：那陈独秀呢？我记得是有，跟您讲过，《中国人民最后觉悟》（应为《中国民族自救运动之最后觉悟》）这本书，提到陈独秀批评您乡村建设的观念，说是小资产阶级的什么幻想，那个时候陈独秀是要您参加党，您没有.....他也没有.....

Liang: No, he also didn't ask me to join the Party.

Bring Xiong Shili to Peking University

Alitto: Did Mr. Xiong also teach at Peking University?

Liang: He taught there.

Alitto: You met him at that time or after he had arrived at Peking University? Or before then?

Liang: I knew him before that. In fact, it was I who brought him to Peking University. Mr. Xiong and I were together for forty years.

Alitto: So when you were in Shandong, he went too?

Liang: He was with me in Shandong for a period. He didn't follow me from beginning to the end. In 1924, I went to Shandong to start a school. We went together. When I returned to Beijing from Shandong, we again were living together. In that period when I went to Guangdong, he went to West Lake in Hangzhou. Those two years we were separated. Later, when the War of Resistance started, I withdrew to Sichuan, and we were again together.

Alitto: As far as his publications go, can he be considered close to your own thought philosophically...

Liang: Xiong Shili was worthy of being called Confucian. From start to finish, his thought was Confucian. Other people mistakenly call him Buddhist, mistakenly term his theories Buddhist. Actually, this is not so. In China there was a Buddhist group. It was in Nanjing,

and was called the Institute of Buddhist Studies. (Alitto: It was Ouyang Jingwu?) Yes, the institute was run by Ouyang Jingwu. I knew Xiong very well, and I advised him to go to this institute to study.

How we became friends was kind of funny. At that time Mr. Xiong was teaching Chinese language at the Nankai Middle School. He had written articles for Liang Qichao's journal called *The Justice*. These articles were written from a Confucian position vilifying Buddhism, saying that Buddhism was no good, that it made people lose their moorings spiritually and philosophically... In my article I criticized him. I said that in "this place" (referring to China) "a common fellow" (an ordinary Chinese) was "striving for survival," such and such. I said that his words were nonsense, that he was wrong. The article was published and he read it. In 1920, he wrote me a postcard from Nankai Middle School to Peking University. His postcard said, "You reprimanded me quite deservedly. I'm now on summer vacation and am coming to Beijing. I want to meet you." And so it was in this way we began our relationship. So he arrived in Beijing that summer. His personality had its cheerful side. When he was talking in high spirits, he would laugh heartily, and would gesticulate wildly, waving his hands and stomping his feet very exuberantly. He criticized Buddhism from a Confucian perspective, but I was myself a Buddhist, so I told him that he didn't understand Buddhism, that the Buddhist doctrine was extremely profound. He said he was going to explore Buddhism. I said, "All right, I'll introduce you to Ouyang Jingwu and his Institute of Buddhist Studies." So there he went through my introduction, and for three years, from 1920 through 1922, he studied there.

梁：没有，他也没有让我参加党。

介绍熊十力到北大任教

艾：熊先生也是在北大教过书？

梁：教过书。

艾：您是那个时候认识他的，还是他到了北大以后呢？还是以前认识的？

梁：早认识了，他到北大还是我介绍的。熊先生同我在一起有40年了。

艾：那您在山东的时候，他也去了？

梁：在山东他同我在一起有一段时间，没有始终跟着我，民国十三年（1924年），我到山东去办学，我们同去的。从山东回到北京，又是在一块儿同住。有一段我去广东的时候，他去杭州西湖，有那么两年分

开、分手。后来抗战起来，退到四川，又在一起。

艾：以他的著作来说呢，算不算接近您自己的思想，哲学方面的.....

梁：他可以称得起是一个儒家，他始终是一个儒家思想。旁人误会他是个佛家，旁人以为他是一个讲佛学的，其实不是。在国内有一个佛学的团体吧、机关吧，就是在南京，叫支那内学院。（艾：是欧阳竟无？）是欧阳竟无。我跟熊先生认识在前，我介绍他去内（学）院。

我们发生朋友关系，说起来好像很可笑。那个时候熊先生他是在南开中学教书，教国文，教中文，他曾经在梁任公办的刊物叫《庸言》上写了些稿子，那些稿子站在儒家的立场诋毁佛家，他说佛家不好，佛家让人“流荡失守”。我的这篇文章里头就批评到他，我说“此土”——“此土”就是说中国了，“此土凡夫”，是个凡夫、凡人，“求生存”，怎么怎么样，他这个话是胡说，说的不对。文章发表了，他也看到了。民国九年的时候，1920（年），他在南开中学教书，他写一个明信片给我，寄到北京大学转给我，明信片上说：你骂我骂得很好，我现在放暑假了，我要到北京去，我们要见面。这样子开头相交的。他暑假就来到北京。他这个人有他那个敞亮的一面，他说话说得高兴的时候，他会哈哈大笑，可以手舞足蹈，很畅快的样子。他这个时候站在儒家的立场批评佛家，可是我是个佛家。我说你对佛家不明白，佛家的道理是非常地深的、高深的。他说我要去探求佛家，我说好，我可以介绍你到欧阳那个地方。所以，经我介绍，他就参加了欧阳的支那内学院。民国九年（1920年）、民国十年（1921年）、民国十一年（1922年），有三个年头，他都在那里。

Now, I was at Peking University teaching; at first I was teaching Indian Philosophy and later added Consciousness-Only Buddhism. Consciousness-Only is an extremely specialized type of learning, technically very difficult. It originated with Xuan Zang of the Tang Dynasty. A follower of his, Kui Ji, also contributed to it. This type of doctrine is actually very scientific, with a lot of "names and phenomenal appearances." That is why it is sometimes called the "appearances school" (dharma-character school). It has a lot of technical terms that make extremely fine distinctions. These terms cannot be used arbitrarily, or casually. In using these terms one must be precise. The entire body of doctrine is highly structured and systematic, very scientific-like.

At the beginning, I taught Indian philosophy at Peking University, then I also taught Confucianism, Buddhism and Consciousness-Only Buddhism. When I was teaching Consciousness-Only Buddhism, I quoted a lot of Western scientists in order to explain it. The Consciousness-Only doctrine speaks of eight *parijñāna* (kinds of cognition or consciousness). The first five are the senses (seeing, hearing, smelling, tasting, tactile feeling). The sixth is *mano-vijñāna*,

the intellect. The six ones enable us to cope with our external environment. The seventh is called *klistamanas* [the discriminating sense] and the eighth, the *ālāyavijñāna* [the "storehouse consciousness" from which come all "seeds" of consciousness]. These last two come from egoism and the ego. Not only do we humans have the ego, but all [other] animals do. All of us satisfy our desires from the external environment. So, with all animals we distinguish between the self and the "other," the internal and the external.

这个时候我在北京大学教书，起初教的是印度哲学，后来增加了讲佛家的唯识哲学。唯识这个东西，在佛家里头是很专门的东西，传统做这种学问的是唐朝的玄奘，玄奘的徒弟叫窥基。这个学问内容讲得很科学，它说名相，被称为相宗。它的名词都不能够随便讲的，都是需要很明确、确实，它全盘的学问很有组织、很像科学，唯识论啊、唯识法相。

我在北京大学起先讲印度哲学，后来也讲儒家，也讲佛家，讲唯识。开始我讲，引用许多西洋科学家的话来讲佛家，讲唯识。唯识是讲八识，头五识是眼耳鼻舌身，第六意识——眼耳鼻舌身意。前六识是意识外面的，应付环境的，根本上有个第七识和第八识。我们人呢，不单是人，一切动物，一切动物它都有“我”。昨天我说了，一切动物都是向外取，满足自己，所以它都是分成一个外边、一个内边，一个物、一个我。

I was writing and lecturing on the Consciousness-Only school, and published two books on it. When I tried to continue writing, however, I felt that I was not really competent to deal with Consciousness-Only, and was not at all sure if I was correct. So I thought, well, the people at the Nanjing Institute of Buddhist Studies are true experts in this field. They can really penetrate and grasp the doctrines of Xuan Zang, Kui Ji and their school, so why don't I ask one of them to come teach this subject at Peking University? I had a discussion with President Cai Yuanpei about it, explaining that I was not really qualified to teach this subject, had no confidence and so on, and that I wanted to get one of the scholars from the Buddhist Institute at Nanjing to do it. President Cai agreed to provide the position, so I went to Nanjing. Of course, Ouyang Jingwu himself could not be moved from the Nanjing Institute, so I thought that I would invite one of his disciples, a man named Lü [Lü Zheng]. Lü was an excellent scholar who knew Tibetan and Sanskrit, a man of great erudition. But Lü was Ouyang's right-hand man and so he would not let Lü leave.

At that time, Mr. Xiong was already starting his third year at the institute. This was the winter of 1922, and it was I who, after all, was responsible for his being there in the first place, and he was an old friend. So, when I couldn't get the man I wanted, I invited Mr. Xiong

to come instead. I invited him to teach Consciousness-Only Buddhism at Peking University. Ah! How could I have known that he would do the opposite of what I had hoped! I didn't have any confidence in my own understanding, and was afraid that I was teaching a confused jumble, distorting what Xuan Zang introduced from India. My original aim was to get an expert on Consciousness-Only to come teach instead of me, as I thought that this would be a more suitable arrangement. Who would have thought that after Mr. Xiong arrived, in fact he would do precisely the opposite of what I had hoped? He wanted to create an entirely new pattern of things, to start a whole new entity. He entitled his lectures on Consciousness-Only the "New Consciousness-Only." For fear that I might distort or lose the original message of the ancients, I asked Mr. Xiong to come teach Consciousness-Only for me, and he simply took his own interpretations very subjectively to be the substance of Consciousness-Only! But since he had already arrived at Peking University as a professor, there was no way I could then ask him to leave. So I was stuck.

我慢慢地写文章讲唯识学，出了第一册、第二册，继续写的时候自己也很不自信，这个讲法对不对？我就想南京内学院他们是内行，他们是能够本着玄奘啊、窥基啊、法相宗的学问，我就请他们。我跟蔡校长蔡元培先生说，这门功课我讲不了了，我不敢自信了，恐怕讲得不好、不对，我要去内学院请人来讲。蔡校长同意了，我就去请。一请呢，当然欧阳大师是请不动了，我就想请欧阳大师的大弟子，姓吕的（吕）来讲。吕的学问也是好得很，他可以通藏文、通梵文，学问好得很。欧阳大师不放，他的左右手，不放。

这个时候，熊先生在内（学）院已经到了第三个年头了，本来是我介绍去的，我的熟朋友，请不动旁人，我就请熊先生。我说“你来吧”，请他到北京大学讲唯识。哪里晓得跟我的所想的相反。怎样相反呢？我是不敢自信，恐怕我讲的是自己乱讲的，不合当初玄奘从印度学来的那个学问——唯识学。我的意思请个内行人来讲妥当，哪晓得熊先生请来以后大反我所预想，他要开辟新局面，他讲的唯识标明是“新唯识论”。我是唯恐失掉古人的意思，他就是主观地按自己的意思来讲古人的学问。可是这时候已经请他来了，他担任这个课了，尽管不合我的意思，我也没有办法变更了。

Gu Hongming of an analytical mind but quite
tendentious

Alitto: Did you know Gu Hongming?

Liang: I ran into him.

Alitto: In Beijing?

Liang: At Peking University. Didn't I tell you that I withdrew from Hunan? When the troops pulled out, I came out with them, and wrote a small pamphlet—"If We do not Take Action, What about the People?" At that time I went to Peking University. I ran into Mr. Gu in the Teachers' Lounge—there was a lounge for the teachers to use before going to the classroom to teach their classes. He was very tall, and wore the old style dress, the dress worn during the Qing Dynasty—a long robe, a riding jacket. The robe was blue and the riding jacket was maroon. He wore a small cap with a red bump on it. He wore a queue. Didn't the Qing people wear queues? He was very tall. Didn't I write the pamphlet, "If We do not Take Action, What about the People?" I had put several copies of it on the table in the Teachers' Lounge for people to see. He picked one up, nodded his head, and said, "A person of high aspirations and determination." He was much older than I, probably by fifty or sixty years. At the time I was only 24.

Alitto: I knew his granddaughter in Taiwan.^[3] She's already gone to the U.S. I met her when I was studying Chinese. Too bad that her family's papers are gone. What did you think of him? I feel that he was strange. He advocated bound feet and wearing queues. He really was completely conservative.

Liang: In China a man had a wife and several concubines.

Alitto: Right, he also advocated...

Liang: If people expressed opposition or disagreement, he would tell a joke. He said that a teapot could have four cups, but you could not have a cup with four teapots. This man was quite eccentric. He did his utmost to raise up China, and belittle foreign countries. He said such a remark: You foreigners, Europeans, previously you were unable to separate yourselves from the church. Religion taught you morality and restrained you. Later when religion no longer was such a powerful force, national armies kept you under control and dominated. China was not like this. China's common people themselves like peace and quiet.

辜鸿铭有见识，但思想主张很偏

艾：您跟辜鸿铭认识吗？

梁：碰见过。

艾：是在北京吗？

梁：北大。我不是说我从湖南撤退？他撤兵的时候我也随着出来了，写了本小册子《吾曹不出如苍生何》。那个时候我去北大，在教员休息室——就是说在上课堂教课之前，有个教员休息的地方——在教员休息室碰见辜先生。身体很高，穿旧的服装，清朝人的服装，穿长袍，穿马褂，蓝袍子，枣红的马褂，带小帽，小帽上有一个红疙瘩，有辫子，清朝人不是留辫子嘛，身体很高。我不是写了《吾曹不出如苍生何》那个小册子？我就在教员休息室的台上我也放了几本，随便给大家看。他也捡起来看，点点头，说一句话：“有心人。”他岁数比我大很多，恐怕要大五六十岁，那时我只有24（岁）。

艾：对。他的孙女，我认识她，在台湾，她现在已经在美国了，学中文的时候我认识她的。可惜她家的文件啊这类东西已经都没有了。你对他怎么看，感觉他好奇怪啊，他主张小脚、主张什么辫子，他真是保守到家了。

梁：中国人有一个正太太，还有好几个妾。

艾：对，他也主张.....

梁：人家表示反对，不同意，他就说一个笑话，他说一个茶壶可以有四个茶杯，你不能一个茶杯有四个茶壶。他这个人呢，是一个很古怪的人。他极力抬高中国、贬低外国。他说这样一句话：你们外国，欧洲人，以前离不开教会，宗教教训你们、管束你们。后来呢，宗教没有那么大势力了，国家的军队镇压、统治。中国不是这样，中国就是他自己喜欢和平、安静的老百姓。

Alitto: Your books,[such as] Eastern and Western Cultures and Their Philosophies, also expressed this idea.

Liang: Russell of England very much admired China.

Alitto: Yes. As for the saying of Gu Hongming just mentioned, if the church didn't control Westerners, they were controlled by the state—it was always a force external to person. The case was different in China. After Confucius, it was ethics for ethics' sake, pure ethics—not gods or laws. This is a very big difference between China and the West.

Liang: Aren't China's common people very disorganized? Disorganization and peace are linked. The more peaceful the more disorganized, the more disorganized the more peaceful. Each goes through life in a disorganized and peaceful manner, unless in certain periods—China underwent a cycle of order and a cycle of disorder. In a period of order, perhaps after a hundred years or whatever, there must be disorder. The disorder is followed by order. What is order? It is everyone settling down, in disorganization and peace. This is different from foreign countries.

Alitto: Did you have any other opinions on Gu Hongming?

Liang: This man did have an analytical mind, but he was also one biased old-timer. His thought and positions were quite tendentious and one-sided.

My intercourse with the four professors of the Institute of Chinese Studies, Tsinghua University

Liang: I already spoke of my relationship with Mr. Liang Rengong. My relationship with Mr. Liang was not that long. He was in the North. Later I went to Guangdong, to Li Jishen's. When I was in Guangdong, I was 36. Liang Rengong was exactly 20 years older than I. While I was in Guangdong, he died in Beijing in 1929. Most of my contact with him was in Beijing. He was in charge of the Institute of Chinese Studies of Tsinghua University. At the time, the institute had four professors. Liang Rengong was one. Another was Wang Jing'an (Wang Guowei), another was Chen Yinke. The fourth was Zhao Yuanren. Zhao Yuanren is still alive in the United States.... He possessed an extremely rich knowledge. I heard that he had this kind of ability: he usually spoke madarin as we did. But if he went to a new place, for example, Fujian or Guangdong, within a day or two, he was able to speak that place's dialect.... From the rhyme and enunciation, he understood the speech after having been there a day or two, so he could speak local speech. People told me it was that way.

艾：您的几本书，（如）《东西文化及其哲学》，也有这种意思。

梁：英国的罗素他对中国很欣赏。

艾：是。辜鸿铭刚才提到的那句话，西方人不是给教会控制着就是给国家控制着，总是人外的一种力量，跟中国人不同了。中国孔子以后，为了伦理而伦理，纯粹的一种伦理，不是什么神啊，也不是什么法律，这是中西之间很大的不同的地方。

梁：中国的老百姓不是很散漫的（吗）？散漫跟和平相连，越和平越散漫，越散漫越和平，散散漫漫、和平地各自过日子。除非到某一个时期，中国都说一治一乱，一个治的时代，或者有100年或者多少年就要乱一次，乱了又治。什么叫做治呢？治就是大家都各自安身了，散漫和平。跟外国不同。

艾：对辜鸿铭有没有别的意见.....

梁：这个人就是一个有见识、但是又是很偏的一个老前辈吧，思想主张很偏。

我与清华国学院四大导师

梁：再说的就是我也提到过的，跟梁任公的关系。跟梁先生的关系，时间不是太长，他在北方，后来我去了广东，在李济深那个地方。我36岁，梁任公刚好长我20岁，我在广东的时候，他就在北京死了，故去了，民国十八年（1929年）故去的。跟他往来比较多的时候是在北京，他主持清华大学的国学研究院。当时清华大学国学研究院有四个导师，梁任公先生是一个，还有一个有名的叫王静安先生——王国维，再一个姓陈的，叫陈寅恪，第四个呢是赵元任，赵元任现在还在，在美国。……他的知识很丰富。听说他有这样一个本事，一般地他跟我们一样讲北京普通话，但是如果他到一个新鲜的地方，比如到了福建、到了广东，就那么一天、两天，他就能讲那个地方的方言。……从音韵上、从运用口齿上，住上一两天，他就晓得怎么样子，所以他能讲当地的话。人家告诉我是这样。

At that time I also lived at Tsinghua, staying at someone else's place. I wasn't working at Tsinghua. But Mr. Liang Rengong was managing the Institute of Chinese Studies, and engaged me to give lectures for a short period, about a month. I lectured on a temporary basis. At that time I had relatively more contact with him. I also met and had contact with Mr. Wang Jing'an at that time. I heard about Mr. Wang Guowei's suicide by drowning at the Summer Palace just a few hours after it happened. I even went off to the Summer Palace to see what the situation was. I also knew Chen Yinke and had some contact with him. He also was someone of rich and broad learning. I did not much seek his instruction. As for Mr. Zhao, I didn't speak with him. Among historical personages, I had a period of closeness with Liang Qichao.

我那个时候也住在清华，算是借住，我没有在清华工作。不过梁任公先生主持那个国学研究院，他也请我在国学研究院作过一个短期的讲演，短期讲学，大概就是讲一个月，临时给他讲。那个时候我同他比较有往来。那个时候我同王静安先生——王国维认识、往来。王国维先生在颐和园投水，我就在几个小时后我就听说了，我还跑去到颐和园去看。我跟陈寅恪也认识，有过接触，他也是学问很丰富、很多，我没有怎么样向他请教。至于赵先生，没有谈过话。过去的人物里头算是我跟梁任公先生——梁启超曾经有一段很亲近。

Rural reconstruction

My running school in Shandong

Liang: There was some one else with whom I was very close. I don't know if you heard of this person—a Shandongese named Wang Hongyi.

Alitto: Yes, that's in the book [*The Last Confucian*]. There are about ten pages about your intellectual relationship with him. I have read his writings. Did you get to know him at that time? At first he was in Shandong running a school. Later, when the May Fourth Movement began, he came to Beijing and sought out Hu Shi. (Liang: Sought out Hu Shi and Mr. Cai [Yuanpei].) You got to know him at this time?

Liang: Yeah. Because he was someone of influence in Shandong. He was from Caozhou in Shandong. There was a middle school in Caozhou called the Sixth Middle School under Provincial Administration, which he had founded. Later he was very close to someone named Jin Yunpeng, who had been Chairman of Shandong Provincial Government and the Premier [of China]. He had great influence in Shandong educational circles, and in 1921, he supported and welcomed me to go to Shandong to lecture during the summer, to give lectures on *Eastern and Western Cultures and Their Philosophies*. Later he, together with Jin Yunpeng, wanted to organize a Shandong Great Company. The company's funds were from mining and railroads—the Boshan Coal Mines and the Qingdao-Jinan Railroad that the Japanese had returned; they wanted to use a part of these funds to found a university. What university? One called Qufu University, in Confucius' hometown. They were busy with this and wanted me to come run the university. I said that it wouldn't work. I said that I was thirty-some years old. At that time I was just thirty. How could managing a university be that easy? How could so young a person [as I, who had] just [entered] the academic world... This wouldn't work.

Alitto: When you left Peking University, you went to Shandong... (Liang: I did.) I don't quite have this straight. I supposed that you and those who founded the university had different opinions, with the result that you didn't go.

Liang: They wanted me to manage Qufu University. I said: I can't

regard such an enterprise as something that could be done casually. If you want to hand over its management to me, we should have done the work for the preparatory stage. There are two kinds of preparatory tasks. One is the preparation for the future instructors. The other is the preparation for the university students. They said, "Alright, you go manage it." [I then] went to run a senior high school. On the one hand, a senior high school, and on the other...an academy, the Revive China Academy.

贰 我与乡村建设

我在山东办学的经历

梁：有一个人跟我朋友关系很好，不知道你听说过这个人没有？一个山东人，叫王鸿一。

艾：是，这个书里也有（《最后的儒家》），关于他跟您的思想有关系的，差不多10页。他的著作我拜读过，我都看过。您是那个时候认识的？他是先在山东办了个学校，后来五四运动开始，他到北京来，跟胡适请教，（梁：向胡适、蔡先生求教。）您是那个时候认识他吧？

梁：嗯。因为他是在山东地方上很有势力的一个人，他是山东曹州人。曹州有一个中学，叫省立第六中学，第六中学他办起来的，他同那个做过山东省政府主席的、后来做国务总理的叫靳云鹏，跟靳云鹏很熟、很相好。他在山东教育界很有势力，他主张要欢迎我去暑期讲演，讲《东西文化及其哲学》，在民国十年（1921年）。后来他还要同靳云鹏，他们想要组织一个鲁大公司，鲁大公司的款，是日本退回来的博山煤矿、胶济铁路——把铁路矿山的收入取一部分办一个大学。办一个什么大学呢？办一个叫做曲阜大学（的学校），孔子的家乡，办一个曲阜大学。他们搞这个活动，要我来办。我说不行啊，我说我就30多岁，那个时候刚刚30岁，不行。办一个大学哪里那么容易的事情，哪里这么（个）年轻人，刚刚在学术界……这个不行。

艾：您离开北大的时候，您就是去山东……（梁：去了。）这个我弄不清楚了。我猜的是，结果您还是与创立大学的人意见不同，结果不去。

梁：他们要我办曲阜大学，我说不能就这么样子把它看成可以随便办起来的事情，你们要交给我办，我们应当做一段预备阶段的工作。预备阶段的工作作两种预备，一个是预备将来主持这个大学的教员，一个是这个大学的学生，就这个预备。他们说好，你就去办，去办就是办高级中学，一方面办一个高级中学，一方面办一个……书院，重华书院。

Alitto: The Revive China Academy is also in Caozhou?

Liang: Caozhou. These two institutions were together in the same place, the same city. The students were not only going to be drawn from Shandong. Although the school was in Caozhou, Shandong, students would be recruited in Beijing. I had previously issued a document called "Brief Review of Our Opinions on Education," which was how we were going to run the school. It mentioned a slogan, "to Be Friends with You [the student]." [This was] not like the situation in which the teachers talked about some stuff in school and the students

received some knowledge, which looked like an instructor selling knowledge. We didn't want it like that. We wanted to be friends with the youth and leading the youth together on the road of life. We recruited students in Beijing. Because this document was issued, a lot of people saw it, and because we recruited students in Beijing, not in Shandong, the recruited students, the later ones, carefully counted, included people from thirteen provinces and cities, some as far away as Suiyuan, Shanxi, Shaanxi, Yunnan, Guangdong, Sichuan, Zhejiang, etc.—students from thirteen provinces and cities. Because we recruited them in Beijing, we brought them to Shandong. But, it was a pity that I myself stayed there just for half a year. I brought several friends there to be instructors who worked there a year.

...At the time there were two cliques of warlords, the Zhili clique and the Anhui clique. There were contradictions between them. When there were contradictions, military activities would influence things.^[4] My school couldn't continue. So I withdrew. The group of instructors that I brought there had lectured for a full year and they also withdrew. Because, as I just said, we wanted to be friends with the youth, many students had emotional attachments and very close relationships with us. So, some students withdrew with us. Everyone lived together in Beijing. At that time, Mr. Xiong Shili was together with me. When I went to Caozhou, he went with me, and left there together with me. Also, there was a period, about one or two years, not a brief period. So, I wasn't doing anything, and I had some students [with me]. One was Li Jishen, one was Chen Mingshu. Every month they would send several hundred silver dollars to support us. After they supported us for these two years, they sent a letter saying that we should not closet ourselves in Beijing talking scholarship, because at that time the National Revolution was in Guangzhou [and] the revolutionary waves were strong—they told us not to talk scholarship behind closed doors, to go participate in the revolution together. I also felt that this national revolution was a new lease on life for China. [I felt that] they weren't the old style warlords. The era of the old warlords had passed. They seemed to be a newly arisen force. At that time Mr. Sun [Yat-sen] was influenced by Russia, and allied with Russia and the Communists, with his "Three Great Policies." I also wanted to go take a look around. Before I went myself, I first had three friends go, and then later I would go. When I went I only wanted to observe the situation, and didn't dare involve myself in [the movement]. But because Li Jishen was an old friend...he didn't tell me beforehand and had the Nanjing National Government announce that I was a member of the Guangdong Provincial Government Committee. I wasn't willing [to serve]. This I said before.

艾：重华书院还在曹州吗？

梁：曹州。这两个机关在一起，在同一个地方，同一个城市。学生呢，不是单吸收山东的学生，虽然学校办在山东曹州这个地方，可是招生在北京招生。因为我事先发布一个文件，叫《办学意见述略》，讲我预备怎么办学。提出一个口号，就是要跟青年做朋友，不是像学校里头老师讲一些东西，学生就是来接受一些知识，好像是一个贩卖知识的教员，不要这样；要跟青年在人生道路上做朋友，领导着青年大家共同在人生道路上走。发表了这样一个《办学意见述略》，在北京招生。因为这个文件发表出去，很多人看到了，招生又不是在山东，在北京招生，所以招的学生、后来的学生，细心地数起来，包含13个省市的人，有绥远的、山西、陕西的、云南的、广东的、四川的、浙江的……13个省市的学生。因为在北京招到的，都带去到山东。不过可惜呢，就我自己说，我就是在那边停留了半年，我带去几个朋友，就是教职员，在那里搞了一年。

……当时的军阀里头算是直系派——直系，还有皖系——就是安徽的，所以他们都有矛盾啊，有矛盾了，军事活动就影响了，我那个学校办不下去，所以我就退出来了。我带去的一班人满了一学年之后，也退出来了。因为刚才说过，我们是要跟青年做朋友，所以许多学生跟我们感情、关系很密切，所以有些学生都随着我们都撤退出来。就在北京嘛，大家在一起住。这个时候熊十力先生也跟我一块儿住，我去曹州，他也跟着我一块儿去，一同退回来。第二个就是有这么两年，时期并不很短，那么我什么事情不做，还有一些学生（跟着我）。……一个是李济深，一个是陈铭枢，每个月给我们几百块钱维持。维持了这么一两年，他们就来信，说你们不要在北京关着门在那儿谈学问——因为这个时候广州正是国民革命，革命的潮流正在很盛——你们不要关着门谈学问了，你们来，我们一道参加革命。我也感觉到他们广东的这种国民革命好像是中国的一个生机——不是旧军阀，旧军阀那个时代过去了，他们好像是一个新的力量起来了。那个时候正是孙先生受俄国的影响，联俄联共，三大政策。我也想去看看。去看之前，我先让三个朋友去。然后自己也去。去的时候我只是想看，不敢自己投入到里边去。可是因为李济深是个老朋友，他没有先跟我说，他就让南京国民政府发表我（为）广东省政府委员，我不肯就，过去说过一下。

When I was Yan Xishan's advisor

Alitto: According to some materials, there was a "Village Government Group." Before you joined, there were already some... which consisted of Wang Hongyi, Wang Yike, and Liang Zhonghua. Were there others?

Liang: There were others who belonged to this group. In Henan they started the Henan Village Government Academy and in Beijing they started the *Village Government Monthly*. Both the magazine and

the academy used the name "Village Government." The inside story is that money was still needed for the publication of the *Village Government Monthly*. Where did this money come from? From Yan Xishan.

Alitto: Oh! So Yan Xishan was connected to this Village Government Group?

Liang: It was all [through] Wang Hongyi. Wang Hongyi was like an honored guest of theirs. Feng Yuxiang was a big warlord. And so was Yan Xishan. Wang was an honored guest of these warlords. They both respected him, and would speak with him. He was their advisor. Later I, too, was engaged by Yan Xishan as an advisor. Wang Hongyi was also the person who introduced me to Yan.

我做阎锡山顾问的时候

艾：有些资料说有个“村治派”，您参加以前已经有一些……就是王鸿一、王怡柯、梁仲华，还有一些别人啊？

梁：还有一些别人。因为河南的，在河南就成立了村治学院，北京呢成立了《村治月刊》社，出版刊物，一本杂志，都是用村治的名字。这个背后呢，《村治月刊》社出版东西是需要钱的，这个钱谁出的呢？阎锡山。

艾：噢，那阎锡山和村治派怎么有关系？

梁：都是那个王鸿一。王鸿一好像是一种座上客。冯玉祥是一个大军阀，阎锡山是一个大军阀，他是大军阀的座上客，他们都很尊敬他，他可以向他们说话，是他们的顾问。后来不是我也被请为阎锡山的顾问？也都是王鸿一介绍的。

Before the enlarged meeting, I received a letter of appointment as a high level advisor from Yan Xishan through Wang Hongyi. Each month he would send me 500 silver dollars as a fee for advising him. At that time, I spoke to Yan: Since he gave me such a lavish fee for being an advisor, I wanted to contribute my opinion. I told him that now China's present problem was none other than you several big leaders. China's problem was whether or not there would be civil war again—previously there had been civil war. Civil war benefited no one. It would benefit none of you powerful figures, or the common people, and it would sap the vitality of the nation. Rather than having another civil war, it would be better to sacrifice oneself, to fall from power. This was the suggestion I gave him. He should respect the older generation in the Guomindang—the four senior statesmen—Wu Zhihui, Cai Yuanpei, Zhang Jingjiang and Li Shizeng. He should respect them, establish a privy council, and allow them to perform a

supervisory function. Each of the big warlords should disarm, and absolutely should not have another civil war. This was my contributory opinion. Later Wang Jingwei and Chen Gongbo went to Taiyuan. He never listened to my council again; instead he organized an enlarged meeting to oppose Chiang. I immediately resigned my position as advisor. Later then, the Great Plains War started.

Alitto: How was Yan Xishan as a person?

Liang: He had his strengths. He was extraordinary. From the Revolution of 1911 overthrowing the Qing Dynasty, he arose to seize the govern-mental power in Shanxi, and held on to it for several decades. In no other province can you find a second person that controlled a provincial government continuously for several decades. There was no one else. That he had abilities and strengths is out of question, but he was still selfish. He was always grasping at power. He wanted his subordinates to adopt a kind of religious ceremony, to take a vow to the spirits that they would be loyal to him, and never betray him. People took this oath, which said what punishment Heaven would befall them if they were not loyal to the vow. He went in for this sort of game.

So I say that he was selfish, he had no [greater] ability. It was limited to this. No more. His moral character, personality and ability stopped with this, and didn't go higher. So as soon as Wang Jingwei and Chen Gongbo arrived there, he cast my advice aside, set up an enlarged meeting to oppose Chiang, and so in this way there was the Great Plains War, with Yan and Feng [Yuxiang] on the one side, and Chiang on the other. They lost the Henan War. How did they lose? Zhang Xueliang of the Northeast was bribed by Chiang, and entered at their rear. Naturally they lost. He was selfish and unclever.

扩大会议之前，通过王鸿一，我接受阎锡山一个高级顾问的聘书，每个月送我500块钱，顾问的工资。当时我就对阎谈了，他这样厚礼顾问，我要贡献我的意见。我说现在中国当前的问题，不在别人，就在你们几个巨头。中国问题就是，是不是还要再打内战，过去打了内战，今后是不是还要打内战。打内战是谁也没有好处，你们巨头之间谁也没有好处，老百姓、国家元气更受伤，再也不要打内战，宁可牺牲自己，我下台，不打内战。那么我给他建议，要尊重国民党内部的老前辈，就是吴稚晖、蔡元培、张静江、李石曾四大元老，尊重他们，成立一个枢密院，让他们来发挥一种监督作用。各军阀巨头要裁军，绝对不要内战。我贡献的意见是如此，可是后来汪精卫、陈公博来了，到了太原，他就没有再听我的话，他就搞起了扩大会议，对蒋，那么我就马上辞了这个顾问。以后就中原大战打起来了。

艾：阎锡山他怎么样，为人怎么样啊？

梁：人有他的长处了，很了不起了。他从辛亥革命推翻清廷的时候，起来掌握了山西的政权，一直掌握了几十年，在全国各省找不到第二个人掌握一省政权始终掌握几十年的，再没有别人。他有他的本事、有他的长处是没有疑问的，但是还是有私心。他就是说老想掌握大权，他要部下啊，好像是采取宗教的仪式，对着神灵发誓，发誓我要忠于阎先生，决不背叛；我发了这个誓，以后我要是不能忠于这个誓，天怎么样地降罚给我——他就搞这一套。

所以要不我说他那个自私啊，也就是他没有本事吧，他的品格、人格、本领也就止于如此，没有更高的。所以汪精卫、陈公博一到他那里，我劝他的话他都扔到一边，搞扩大会议，要对蒋，这样就有中原大战。阎、冯（玉祥）是一边，蒋是一边，在河南大战。河南大战失败了，怎么失败的呢？东北的张学良受蒋的贿赂，张学良从后边来了，当然他们就失败了。他是有私心，不高明。

Han Fujun and Rural Reconstruction Institute

Liang: Chiang Kai-shek wanted to get three [bodies of] people out of the way—the Guangxi clique, Feng Yuxiang, and Yan Xishan. At that time [when Han Fujun was governor of Henan Province] Feng was under great pressure from Chiang. Feng didn't want to fight Chiang, so he withdrew his troops westward. He gave up Shandong and Henan. Originally he had occupied both Henan and Shandong. He gave them both up. He withdrew northwestward through Tongguan.

After going through Tongguan, he held a military conference. At this meeting Han spoke against the withdrawal westward, because with so many troops—around 200,000—they would not be able to survive in such poor areas as Shaanxi and Gansu. Moreover, because of the poverty of the region, our [the troops'] presence would also be a burden for the people in the region. At this point, Feng became angry and said, "What do you know? Don't say anything more! Get out of here! Leave the conference room! Go outside the door and kneel as punishment!" Feng always handled his subordinates in this high-handed manner, treating them as if they were his children. So Han had to go outside the door—still in the adjoining room—and kneel. After the conference had been adjourned, when Feng was leaving, he passed by the still kneeling Han, gave him a box on the ear, and told him, "Get up!" Then Feng left.

Now at this point Han was the commander of the general headquarters and also the governor of a province. He had a lot of subordinates of his own. So he just could not take this kind of treatment. So he got up and, with his most trusted officers and their troops, left off the westward march, and instead returned through

Tongguan to Henan. As soon as Chiang Kai-shek heard that Han had broken away from Feng, he was overjoyed. He had wanted to separate them. He immediately offered Han the chairmanship of the Shandong Provincial Government. Han was Chairman of the Shandong Government for ten years.

In 1929 I hadn't had any intention to stay in the North, but as it turned out, I did [stay]. It was because the political situation in Guangdong Province changed. Chiang placed Li Jishen under arrest, and so I didn't want to return to Guangdong. Right around that time, a friend of mine established the Henan Village Government Academy. Peng Yuting was the president, with Liang Zhonghua serving as vice president. They welcomed my going to work in the school, and so I became the academic dean. At that time, they had just started the school, and so all the substantive issues—content, curriculum, teaching methods and so on—had not yet been decided upon. I was able to make these determinations, and also to write many of the rules and regulations, and methods. Then Han, following Chiang's orders, was transferred to Shandong. At that time, Liu Zhi was one of the big generals in Chiang's army, and he arrived in Kaifeng, Henan. The vice president of the Henan Village Academy, Liang Zhonghua, closed the academy. He was no longer able to run it. He set out for Jinan and reported to Han. Han answered that it didn't matter (that the academy shut down). He then invited us to bring the school to Shandong. The original body of people involved in the Henan Academy had not yet dispersed, so we all went to Shandong. We consulted together and decided not to use the name Village Government Academy anymore. So the name of the school was the Rural Reconstruction Institute. And so that is how we ended up in Zouping, Shandong.

韩复榘与乡村建设研究院

梁：蒋要解决三个人，第一是解决桂系，第二解决冯，第三解决阎锡山。这个时候，冯呢受蒋的压迫，冯不想跟蒋打，冯就是把自己军队向西撤，放弃山东、河南，本来山东他也占了，河南他也占了，山东、河南他都放弃，从潼关往西北走。

进了潼关之后，开军事会议，在会议席上，韩（复榘）就说话了，发言就是说，我们不应该向西撤，我们军队这么多人，好像20万人吧，往西撤，陕西、甘肃这个地方是苦地方，不像山东那样。我们到那里，到这个苦地方，这么多军队啊，于军队也不好，于地方也不好，地方也受苦。冯就发怒，说：“你懂什么？你不要说话！”跟他说：“你出去！”——从这个会议室出去，到外面一个屋子，到门外面，外面还是一个屋子，“罚跪！”——跪下。冯对他自己的部下，他向来就是有一个威严，好像是对自己的孩子一样。韩就只好在门口外头——还是个屋

子，跪着了。这个会议开完了，冯散会，冯出去的时候，打韩一个耳光，说：“起来吧！”就走了。

韩呢，他已经又是总指挥，又是什么主席，他自己有很多部下嘛，他就受不了。他起来之后，他就把他比较能够最亲信的将领、最亲信的部队，就带出来了。他就不往西去，回河南，从潼关又回来了。这个时候呢，蒋介石知道了这个韩从冯脱离，他非常高兴，他是要分化，他马上发表韩的山东主席，韩就到山东了。韩到山东，做山东主席正好10年，韩的势力发展在山东。

我本来在民国十八年（1929年），没有想到留在北方，可是结果留在北方了，因为广东局面变了，李济深被扣了，我不想回广东了。刚好河南朋友，就办起来河南村治学院，院长就是彭禹廷，副院长是梁仲华，他们就欢迎我参加这个工作，我就担任教务长。这个时候他们刚刚开始，一切的内容，怎么一个办法，都还没定，都是我给他出主意，定了许多的章则、办法。刚才不是说韩奉蒋的命令就调到山东了吗？这个时候是蒋的军队有一个大将，叫刘峙，刘峙驻开封，到了河南。刚才说的，原来村治学院的副院长，姓梁——梁仲华，就结束了河南的事情，河南的村治学院不能办了。他就跑到济南去向韩报告，韩说：“不要紧，我请你们都在山东好了。”所以，我们就到了山东。本来村治学院的一批人，很多人都还没有散，那么就转移到山东去了。转移到山东去，大家商量不用那个“村治学院”，不用那个名称，用这个名称，是“乡村建设研究院”。这样子，我们就在山东邹平……

Alitto: It would seem that Han Fujun felt that local self-government and rural reconstruction were important.

Liang: He trusted and believed in us.

Alitto: How did your own relationship with Han Fujun develop?

Liang: It was for this reason. At first, in Henan, when the academy was still in the planning stages, Peng Yuting came to bring me from Beijing to Henan. We went first to Zhengzhou, and from there to Kaifeng. The provincial government was in Kaifeng at that time. We had just got off the train in Kaifeng and were in the hotel when Han Fujun arrived to visit me. He was extremely modest and unassuming. He said to me, "I have heard you lecture in Nanyuan in Beijing." So this meeting was in Henan.

Didn't I just say that he had already been transferred to Shandong? So, when we went to Shandong, I had known him, and had become well acquainted with him long before. Well-acquainted, so we chose Zouping County. This county was not far from Jinan, and it wasn't too far from the railroad either. We chose this place as our experimental district. In this district, the institute was divided into three major sections: a research department, a training department, and an experimental department.

艾：就是说这个韩复榘，他是好像觉得乡村建设、这个村治啊工作是要紧的，对不对？

梁：他很信任我们。

艾：那么您个人跟他的关系……

梁：也就是这样一个关系。开头在河南的时候，还是要开办村治学院，村治学院在筹备期间的时候，那个院长是彭禹廷，彭嘛就从北京迎接我到河南，到郑州，从郑州再去开封，当时省政府还在开封。我刚刚下了火车，在开封下火车，住在旅馆里的时候，韩就来看我，很谦虚。他告诉我，他说：“我听过你的讲，在北京南苑的时候。”这是在河南。

刚才不是说他已经调山东了吗？所以到山东已经算是早已认识了，早已相熟了。相熟嘛就是我们选择了邹平这个县，这个县刚好离胶济铁路不远，离济南也不算很远，离铁路线不太远，离济南也不算很远，我们就选择这个地方做一个实验区。在这个实验区，研究院就主要是三个部分：一个部分是研究部，一个部分叫训练部，一个部分叫实验区。

Alitto: Yes. There is a lot of material on all of this. What was Han's attitude toward this? What do you think his motive was for supporting you? He was...

Liang: His intentions were the best. He gave us completely free rein. He let us work independently, and completely gave over to us the County of Zouping. The institute was located in the county, and the county was under the control of the institute. We nominated the county magistrate, and then the provincial government would appoint him and announce the fact. Later, we reorganized the county government. All of the measures we adopted were of an experimental nature, just to see what methods and measures would be best. For example, originally there were four bureaus outside the county government. There were an educational bureau, a reconstruction bureau, a finance bureau, and a security bureau. We amalgamated these four bureaus into the county government itself, and these various matters were managed centrally in the county administration. This is an example of the sorts of experiments we carried out.

In the end, Han unintentionally offended Chiang, and so he had Han shot. How did he offend Chiang? When the Xi'an Incident occurred, and Chiang was detained, the CCP sent Zhou Enlai down to Xi'an to consult on what should be done with Chiang. At this time, the various warlords all sent representatives to consult with each other on what action to take. He [Han] sent a cable to Xi'an that proposed that the question of how to punish Chiang should be settled by a conference in which all parties would consult with each other. Now, this proposal was not to Chiang's advantage, but when this cable was sent Chiang had already been released. When Chiang saw the cable,

he said, "I have always been good to you. How could you do something like this?" And so he began to hate Han after this. Han had sent his cable too late; Chiang had already been released. So, later Chiang had Han shot.

Alitto: I had understood that Chiang had Han shot because when the Japanese invaded Shandong, Han did not resist with full force.

艾：是，这些倒是有很多资料啊。就是说韩复榘自己的态度怎么样呢？您看他维持着你们的动机在哪里呀？他是……

梁：他的意思是很好的。他很放手给我们，让我们工作，他就把这个邹平县交给我们。这个研究院设在这个县里头，而县呢属于研究院。县长由我们提名，省政府来任命、发表。后来我们就对县政府改组，一些事情都采取一个试验的性质，看看怎么样好，怎么样办法好。比如说，原来县政府之外是四个局，什么教育局、建设局，什么公安局、财政局，我们就把这些局都不要，统统归并到县政府里头，在县政府里头合署办公，合在一起办公，如此之类。

韩在无意中得罪了蒋，所以蒋把他枪毙了。怎么样得罪蒋呢？就是西安事变，不是蒋被扣吗？蒋被扣的时候，陕北的中共方面，周恩来到了西安了，蒋被扣起来，好像要商量对蒋怎么样。这个时候，各省的军阀互相派代表商量——得到蒋被扣的消息了——商量怎么样子……韩答复一个电报到西安，他就提议说，怎么样处分蒋，我们大家开会商量。这样一个主张并不利于蒋——共同商量对蒋如何嘛。可是这个电报出去之后，蒋已经出来了，蒋看见这个电报：“我一向对你很好嘛，你怎么还要这样子？”所以他心里头恨这个韩。韩这个电报去晚了，韩去电报，蒋已经出来了，所以后来是韩被蒋枪毙的。

艾：不过我也听说、了解，韩被蒋枪毙是因为日本侵略到山东，韩没有抗日。

Liang: Han was a selfish person. He was not able to resist the Japanese completely because he wanted to preserve his own forces, and so he withdrew from Shandong. He was going to move to the west of the railroad.

My views on rural reconstruction

Alitto: When you were working in Henan as well as in Shandong, Sun Zerang was there as well?

Liang: Right. I was working at the Rural Reconstruction Institute in Shandong. The president was Liang Zhonghua. The vice president was Sun Zerang. I was head of the Research Division, but later Liang Zhonghua resigned, and I took over as institute president. Sun Zerang was vice president. Later because we opened a second experimental

district in Heze, there was a branch institute there, and Sun Zerang went there to take charge of things. But later he died; he died in Sichuan.

Alitto: What kind of man was he? What was his background?

Liang: He had entered an agricultural technical school, but he was a courageous and able man. He was Wang Hongyi's student, Shandongese, from Caozhou. He first served as the [Rural Reconstruction] Institute's vice president, and later went to his home area. He went to Heze in Caozhou to set up a branch institute. He was first the county magistrate, and later after an administrative district was established, he became Administrative District Commissioner, administering over ten counties. After the War of Resistance started, he withdrew from Shandong with some armed forces, armed militia, about two thousand men. First they went to Wuhan, then from Wuhan to Hunan, and from Hunan into Sichuan. When in Hunan and Sichuan, the government wanted him to be an Administrative District Commissioner. A commissioner could administer over ten counties. There was an administrative district in Hunan, so he was a commissioner first in Hunan, and later in Sichuan. This man had talent and nerve.

Alitto: Were his views on rural reconstruction different from yours?

Liang: Very different. The kind of rural reconstruction I wanted was for the long term, with far-reaching significance. The devices of the village schools and township schools were designed with quite profound purpose in mind.^[5] But he was not this way. He focused on the [short-term] necessities of the time. What was the immediate need of the time? Because of the Japanese aggression against China, he concentrated hard on training militia and preparing to resist Japan.^[6] He focused on this.

梁：韩有一种自私的心，他没有能够在山东这个地方尽力地抗日。他自己保存实力，保存他自己的实力，撤出山东，他预备到铁路西边去。

我的乡村建设主张

艾：您在河南、也在山东工作的时候，有一位孙则让。

梁：对。我在山东不是搞乡村建设研究院？乡村建设研究院院长是梁仲华，副院长是孙则让，我是研究部主任，不过后来梁仲华辞职了，我就接任院长。孙则让先是副院长，后来因为在菏泽开辟了第二个实验区，有乡村建设一个分院，孙则让就到那儿主持那个事情。但是他后来

死了，死在四川。

艾：他是什么样的人呢？什么来历？

梁：他进过一个农业专门学校，但是很有胆子，很有才干。他是王鸿一的学生，山东人，曹州人。他先做我们的副院长，后来就到他本地，他是菏泽那儿的人，曹州人，到那个地方设分院，先做县长，后来又成立专区，他做专员，管十多个县。抗日战争起来，他带着许多的武装势力、武装壮丁，差不多有2000人，从山东撤退，先到武汉，从武汉到湖南、到四川。到湖南、四川的时候，当时的政府要他做专员——专员是可以管十多个县的，有一个专区——先在湖南做专员，后来在四川做专员。这个人很有才，很有胆子。

艾：他对乡村建设的看法和您的有没有特别？

梁：很有不同。我想要搞的乡村建设，我把它的意义是从一个很深远的方面来看。我所要办的村学、乡学，那里边的一些办法、设计有相当用意很深的地方。可是他不是这样，他就是着眼于当时的需要，当时的需要是什么呢？就是日本人要侵略中国，所以他着意训练壮丁，准备抗日，他着眼这个。

Alitto: The book also has this aspect. Heze and Zouping were two different styles of rural reconstruction. Heze style was Sun's. It was like that.

Liang: It was like that.

Alitto: How would you compare your Rural Reconstruction Movement with the present movement? In greater detail.

Liang: As far as I am concerned, what I wanted to do with rural reconstruction was to bring some organization and mobilization to the scattered, disorganized countryside and its traditional "familialism," by which each person cared only for his own family, and completely ignored any wider community. So, as far as the Rural Reconstruction Movement's aim of organizing the peasantry into groups, I think that this has indeed been accomplished. Previously, China lacked two things: first, organizations in suprafamilial organizational forms and second, modern science and technology. As far as the latter was concerned, the question was how to introduce science and technology into Chinese agriculture effectively and how to industrialize agriculture. So, now this task can be accomplished, too. So, the two original goals I had for the Rural Reconstruction Movement—group organization and science and technology have been or will be accomplished.^[7]

My second son is Tao Xingzhi's student.

Alitto: You knew Mr. Tao Xingzhi for a long time. You met him in 1928 or 1929? After you toured the Xiaozhuang Normal School, you wrote many articles that referenced this place, such as "My Northern Journey...."

Liang: "A Record of What I Saw [on My Northern Journey]." My second son can be considered his student.

Alitto: Where?

Liang: In Sichuan. When he was eight or nine years old, he was Mr. Tao's student. Mr. Tao was very good indeed, really terrific. He was a very good person. He had studied in the U.S. Previously these were called students who had studied abroad, and they wore Western clothes and leather shoes. He also had worn them, but discarded them and wore instead peasant clothes and straw shoes. He founded the Xiaozhuang Normal School. He led a class of students to some empty space outside of Nanjing, where they built the buildings themselves. Really something. This man was great, really good. I never saw anyone like him among those who had studied abroad.

艾：书里也有，菏泽式和邹平（式）是两种式样的乡村建设，菏泽式就是孙的。是有这件事。

梁：是那样的事。

艾：那您觉得，比如乡村建设运动，您自己也是发起了这个运动，有没有跟现在的情况类似的地方？具体一些。

梁：就我自己说，我想要做到的——我曾经说过一下了——就是让散漫的农民——各自顾身家、顾我一身一家的农民——能够组织起来，能够组成团体，现在组织起来了。团体组织是一面，是中国所缺乏的，要赶紧往这方面走。还有一方面就是，中国的科学技术上是太缺乏了、太落后了，那么怎么样子把科学技术能够引进到中国来，引进到农业上，引进到农业工业化，这个事情现在也能做了。一个团体组织，一个科学技术，这个两面，从前我搞乡村运动的、我想要做的事情，现在都往这个方向走了。

我的二儿子是陶行知的弟子

艾：陶行知先生您也认识了很久了，1928、1929年就认识他了吧？参观了晓庄乡村师范，您写了很多关于那个地方的文章，《北游.....》.....

梁：《所见记略》（《北游所见记略》）。我的第二个儿子算是他的学生。

艾：是在什么地方？

梁：在四川。还在他八九岁的时候，他是陶先生的学生。陶先生这个人好得很啊，了不起，人太好了。他本来是留美的，中国从前的叫做留洋学生，都是穿西装、穿革履。他也穿西装也穿革履，都脱了，穿中国农民的衣裳、穿草鞋，创办晓庄师范。在南京城外空地，他领着一班学生，自己盖房子，了不起。那个人太好了，太好了，在留洋学生中没有看见那样的人。

Alitto: Aside from that tour of Xiaozhuang Normal School, what other contact did you have with him...

Liang: When the Japanese came, we withdrew to Sichuan. What work was he doing? Mr. Tao had taken in a group of homeless refugee orphans of both sexes from Wuhan and from along the railway. After he took them in, he brought them to Sichuan, where he trained and educated them. At that time I also sent my second son to him,^[8] so he can be considered Mr. Tao's student. That man was wonderful!^[9]

Alitto: From the viewpoint of the present, how would you appraise his historical role? How would you describe it?

Liang: He should be considered an educator. I want to say something about his death. How did he die? The Nationalist Party government in Nanjing thought that he was a Communist Party member and treated him as such.

Alitto: When was that?

Liang: The peace talks were held in Nanjing between the two parties before he died. The Nationalist secret agents on Chiang's side put him on the blacklist of people who must be killed. The secret agents were to assassinate him. After this list came to light, he himself was a bit frightened. He died in Shanghai. He didn't die of illness. It seems that he collapsed while on the toilet. We were all in Nanjing [at the negotiations]. Zhou Enlai took a special trip to Shanghai to see him off after he had died. When he was in Wuhan, he had taken in a great many homeless refugee children. At that time he set up an orphans' school [Yucai School] on the upper reaches of the Jialing River in Chongqing, slightly upriver from Beibei. The name of the place was Caojiezi. I sent my second son there to be his student.

Alitto: He shared a lot of similarities with you. He also liked Wang Yangming and his philosophy. He also admired Dewey. He also laid stress on rural education...

艾：您除了那次参观晓庄师范以外，跟他有什么.....

梁：日本人来了，我们都退到四川去了。退到四川去了，他做什么工作呢？陶先生他把逃难的——在武汉、在铁道旁边有些个没家可归的孩子，男孩子、女孩子，他都收了。收了之后带到四川去，他培养

他们、教他们。我那个时候把我第二个儿子也送去给他，所以他算是陶先生的学生。那人太好了！

艾：您从现在的眼光来看他、评价他历史上的角色，您会怎么说？

梁：应当算是一个教育家。我要说一下他死，他怎么死的呢？就是国民党南京政府，认为他是共产党，把他看作共产党。

艾：这是什么时候？

梁：就是他死之前，就是在南京搞和谈的时候，两党和谈的时候。在国民党蒋方特务黑名单一定要杀的人里头，把他的名字列在内，特务去刺杀他。这个名单透露出来之后，他自己很有点害怕。死在上海，不是病死，好像是在大便的时候，坐在上面就虚脱了。我们都在南京，周恩来还特别到上海去送，看他一下，他故去了。他在武汉收了许多逃难的、无家可归的孩子，那个时候，他办了一个儿童学校（名为“育才学校”），在四川重庆嘉陵江的上游，北碚往上一点儿，地名叫草街子，我就把我第二个儿子送去给他做学生。

艾：他跟您有很多相同的地方。他也是喜欢王阳明、王阳明的哲学，他也很欣赏杜威，他也是比较注重乡村的教学……

Involvement in national affairs

Feng Yuxiang's men both loved and feared him.

Liang: Wang Hongyi introduced me to Feng Yuxiang, in 1924.

Alitto: In 1924, Feng Yuxiang was in Beijing.

Liang: Feng's title was Inspector of the Army. There were about 50,000 men in his troops. He himself held the rank of Divisional Commander. A division was made up of two brigades. There were three more independent brigades, so five brigades altogether. There weren't 50,000 men. Probably around 35,000 men. They were stationed at Nanyuan in Beijing. It was at that time through Wang Hongyi's introduction that I first met Feng Yuxiang.

Alitto: Because Wang Hongyi was in Beijing at that time?

Liang: Yes, in Beijing. He invited me on behalf of Feng to visit Feng at his quarters in Nanyuan, and to give lectures to his troops. That was in the first lunar month of 1924. So I met Feng at Nanyuan. I gave five lectures.

Alitto: To what troops were all the lectures given?

Liang: To his troops.

Alitto: Did you lecture to all of his troops at once?

Liang: No. They were divided into separate groups. He had five brigades, right? I gave one lecture to each of his brigades, only to the officers and noncoms. So, one day I lectured to brigade A and the next to brigade B. The content of each lecture was similar though not necessarily. The content could be different. Feng also attended these lectures. Everyone called Feng the "Christian General." He was a believer in Christianity. The YMCA was part of the Christian church. So he operated a YMCA in his army. The person who ran this YMCA of his was named Yu Xinqing. Didn't Feng later get married? The person he married was Li Dequan. Ms. Li was a member of the church. She was a teacher in a church-run school in Tongzhou.

Alitto: What kind of things did you and Feng Yuxiang talk about when you met?

叁 奔走国事

冯玉祥让士兵又爱又怕

梁：我跟冯玉祥的认识，还是王鸿一介绍的，就是民国十三年（1924年）。

艾：民国十三年，冯玉祥在北京。

梁：冯玉祥官的名叫做陆军检阅使。他的部队大概有5万人，他自己也是兼一个师长，一个师有两个旅，另外还有3个独立旅，一共5个旅。一共5个旅……没有5万人，大概有35,000人的样子，地点驻在北京的南苑。我跟冯玉祥的开头见面，就是王鸿一介绍的。

艾：因为王鸿一在北京吗？

梁：在北京，王鸿一介绍，就是王鸿一代表冯玉祥，说冯玉祥请我去到南苑——他驻军的地方，给他军队讲演，这样子我开头去的。这个时间是民国十三年，旧历正月，这个时候我到南苑跟冯玉祥才见面。讲了5次。

艾：都是给什么军队啊？

梁：就是他的军队。

艾：是所有的军队，还是给一部分？

梁：分开，分开。他不是有5个旅吗？给一个旅的官兵讲一次——没有兵，兵的人太多了，他叫官佐。每一个旅有它的官佐，今天给这个旅的官佐讲，明天给那个官佐讲。讲5次，内容可以相同，也可以不相同，听讲的人是换的，每一次讲的时候冯陪着听讲。冯嘛是人家称他为“基督将军”，他是信教，基督教里头有青年会，他也在他的军队里头办青年会，替他办青年会的叫余心清。后来不是冯玉祥结婚了？结婚的那个叫做李德全，那个就是一个教会里头的人，是在通州教会学校里的一个女教员，叫李德全。

艾：那您跟冯玉祥见面的时候，谈到什么样的事情啊？

Liang: I didn't talk much with him personally, even though Wang Hongyi introduced Feng to me. In Feng's army there was a special custom. Didn't he run a YMCA organization in the army? He had a custom of inviting people to give lectures. For example, the famous military scholar Jiang Fangzhen. Feng invited Jiang Fangzhen to come give lectures. Feng also issued a small book to his officers. There were sayings in this small book—maxims and quotations from people, usually of two or three sentences, five sentences at most. Not long. He

would write that somebody had said such and such. For example, "Zeng Guofan has said such and such" or "Zhuge Liang has said such and such." He even had Jiang Fangzhen quoted in this small booklet. So, this booklet was issued to his officers and noncoms. Feng did an excellent job in supervising and educating his troops. So his men both loved and feared him very much. Even with the number of troops that he had he would often, when in the ranks, address people by name. Of course, he couldn't remember every single soldier's name, but he did remember quite a few. So his men both loved and feared him.

Alitto: Feng Yuxiang also had a great interest in rural work, didn't he?

Liang: Right, right.

Alitto: Wasn't he friends with Tao Xingzhi?

Liang: He toured Tao's project at Xiaozhuang.

Alitto: Whether or not it was Feng Yuxiang and Han Fujun who were the sponsors for the Henan Village Government Academy, or...

Liang: It was founded during the time when Feng controlled Henan, but not on Feng's initiative. It was started by Henanese—such as Wang Yike, Liang Zhonghua, Peng Yuting, and so on. These Henanese presented this proposal [to found such a school] to Feng Yuxiang and Feng accepted it. But Feng did not give them any money for the school.

Alitto: You just said that making an evaluation of him was difficult. Is there any other meaning, about him or his political...

Liang: He was a military man. Politically he didn't have any clever opinions or positions. He wasn't that smart. He and Chiang Kai-shek... Chiang liked to be on good terms with people. To get on good terms, the old Chinese way was to become sworn brothers. He was older than Chiang, so Chiang called him elder brother. Chiang was into this routine. He had no way of handling Chiang. He wasn't that smart, but he was a better man than Chiang.

梁：跟他个人没怎么多谈，就算是王鸿一先生介绍。冯的军队有一个习惯，不是他办青年会吗？他有习惯请人讲演。比如那个中国有名的军事学家蒋方震，他就先请蒋方震讲。冯玉祥给他的军官发个小本子，小本子上有一些好像是语录，就是人家讲的话，两句、三句，或者稍微多一点也就是五句，不多。他就写个某某人曰，比如“曾国藩曰”，从前诸葛亮，（就写）“诸葛亮曰”，他也蒋方震蒋先生列为“蒋方震曰”。他有这么一本小本子，他给他的官佐看。冯玉祥对所谓带兵、管兵、教育兵他很有办法，他的兵非常地爱戴他，也非常地怕他。他那么多兵啊，他有时候在许多兵里头：“你，出来，你不是谁谁吗？”——他能叫

出来那个兵的名字。当然他也是不能全记得了，所以他的兵都又怕他又爱他。

艾：好像他对乡村工作也很感兴趣，对不对？

梁：对，对。

艾：他跟陶行知算是朋友吧？

梁：他到陶先生的那个晓庄师范去参观。

艾：王怡柯的村治学院呢，不是冯玉祥、韩复榘好像做村治学院的靠山哪，或者……

梁：他是那样，他是在冯玉祥统治河南的时候，成立的这个村治学院，但是村治学院的成立，不是冯玉祥主动的。是河南本省人，比如王怡柯是河南人，彭禹廷是河南人，梁仲华也是河南人，本省人建议给冯，冯采纳，才同意，又不需要冯出钱，这么样成立的。

艾：关于他为人，甚至他政治上的……

梁：他就是一个军人。在政治方面他没有什么高明的见解主张，头脑还是不够。所以他跟蒋介石——蒋喜欢跟人所谓要好，要好嘛，中国的老办法结为兄弟——那么他比蒋岁数大，蒋就叫他大哥，蒋就是这一套。他对蒋毫无办法，他的头脑不够，他人比蒋人好。

My student Xu Minghong and the Fujian People's Government

Alitto: You had a student named Xu Minghong? (Liang: Yes.) Can you talk in comparative detail about him, or your evaluation of him? Mr. Wang Shaosheng of Hong Kong had written a draft of his biography, but the draft has not been published yet. Only after he let me read it did I know any details about him [Xu], but you know much more than Mr. Wang.

Liang: I possibly know more than he. I still have letters from Xu Minghong. I have a student, perhaps my closest one, Huang Genyong. Huang was from Guangdong. Xu was also from Guangdong. It was Huang who introduced Xu and me. [There were three people—] one was Xu Minghong, one was Huang Genyong and another was Wang Pingshu. The three went south to Guangdong through my introduction, and later they participated in the National Revolutionary Army. During the National Revolutionary Army's Northern Expedition, the three went with the Army to Wuhan. In Wuhan the three had differences. Xu Minghong joined the Communist Party, and was in Wuhan. Wang Pingshu liked the Communist Party's thought, philosophy and theories, especially historical materialism. But Huang

didn't join the Communist Party, and didn't exactly like its theories. So the three were different. To put it simply, later in Fujian, Li Jishen and Chen Mingshu started a People's Government.^[10] At this time, Xu Minghong had a relatively important position in the People's Government. Huang Genyong also went there. Xu Minghong represented the Fujian People's Government in their dealings with the Communist Party in Jiangxi.

Alitto: I mentioned this in the book [*The Last Confucian*]. Later he was killed.

Liang: He was assassinated. In Shantou, Xu's hometown, he was killed by Chen Jitang. After the Fujian affair failed, Xu fled back home from Fujian, and died a martyr's death there.

Alitto: What contribution do you think he has made to the Chinese revolution?

Liang: He died for the revolution, died a martyr's death. But I had expressed my disapproval of the Fujian affair. How did I express disapproval? I had held back Huang Genyong from going [to Fujian]. I had said to him, "Don't go. Originally Li Jishen and Chiang Kai-shek were both veteran Nationalist Party members. They both followed Mr. Sun Yat-sen. You can oppose Chiang, but do not yourself oppose him from a position outside the Nationalist Party. You should tell him, 'You have betrayed the Nationalist Party that Sun Yat-sen originally created. I am a Nationalist Party member. You have betrayed the Nationalist Party.' Now if you leave the Nationalist Party, and position yourself outside the Party, you then cede legitimacy to Chiang Kai-shek. This would be a mistake." Later, right through to the death of Li Jishen, he [Huang] was still the director of the Beijing Revolutionary Nationalist Party, and avowed himself to be a Nationalist Party member. Why did he go outside of the Nationalist Party?

我的学生徐名鸿与福建人民政府

艾：您有过一个学生，徐名鸿？（梁：对。）可不可以比较详细地讲他的事啊，或者您对他的评价？香港的王韶生先生就是写的他的传，可是稿子没有出版，他给我看了，我才知道他比较详细的情形，不过您知道的比王先生多得多了。

梁：可能多一些。我现在手里还有徐名鸿写来的信，他亲笔的信。我有一个跟随我最亲密的学生叫黄良庸，黄良庸是广东人，徐名鸿也是广东人，徐名鸿与我的关系还是黄介绍的。徐这个人，也是经我介绍吧，一个徐名鸿、一个黄良庸、一个王平叔，三个人去南方广东，后来他们参加国民革命军。国民革命军北伐的时候，这三个人都随北伐军到

了武汉，到武汉的时候三个人就不相同，怎么不相同呢？徐名鸿就参加了共产党，到武汉去了。王平叔对共产党的思想、哲学、理论还欣赏，特别是关于唯物史观。可是黄呢，没有参加共产党，也说不上是欣赏共产党的理论，三个人就不相同了。简单地讲嘛，后来李济深、陈铭枢在福建搞起了人民政府，这个时候徐名鸿在人民政府里算是个比较重要的人。黄艮庸也去了。徐名鸿还代表福建的人民政府去跟江西的共产党接洽。

艾：这个我也在书里提到了（《最后的儒家》）。以后也是被杀的。

梁：被刺。他是被广东方面的陈济棠杀的，在汕头，就是徐的家乡。福建的事情失败了，他从福建逃回家乡，那个时候牺牲的。

艾：您觉得他有什么贡献，对中国革命？

梁：他为革命而死，为革命而牺牲了。不过我对福建的事情我曾经表示不赞成，怎么表示不赞成？曾经拦阻黄艮庸，我说你不要去。本来李济深跟蒋介石都是老国民党，都是追随孙中山先生的。你可以反对蒋，但是你不要自己站在国民党外头反对他，你应当是说：你违背了孙先生当初创造的国民党，我是国民党，你是背叛了国民党。现在你离开国民党，自己站在国民党外边，反而把正统让给蒋介石，这个是错误的。往后呢，一直到李济深死，他还是作为北京的民革委员会的主任，还是承认自己是国民党，为什么要跑到国民党外面来？

I had heard that originally Xu Minghong was supposed to represent [the People's Government of Fujian] in contacting the Jiangxi Communist Party, but the Communist Party rejected him. If Chairman Mao had taken a position at the time, he would have approved of the alliance. At the time, Chen Shaoyu and Qin Bangxian were in charge [of the Communist Party]. They had seized Chairman Mao's power. They couldn't hold out in Shanghai, so they ran off to Jinggangshan. They said that the Fujian group were petty bourgeois, and were not sufficiently revolutionary, so they did not help Fujian. In fact, the correct strategy for the Communist Party was to ally itself with Fujian and tackle Chiang together. Well, in allowing Chiang to wipe out the Fujian People's Government, the Communist strategy was wrong.

Li Zongren's War Zone Party Policy Committee

Alitto: How did you get to know Li Zongren? Where was it?

Liang: Both Li and Bai Chongxi were natives of Guilin. I can also be considered a native of Guilin. When they ruled Guangxi Province, they used a policy called the "Three Selves Policy." That is, self-government, self-defense, and self-sufficiency. They followed these

three guidelines.

Alitto: Was it their original policy, or through your...

Liang: It was their idea.

Alitto: These ideas are quite similar to those of Peng Yuting's group in Zhenping.

Liang: They were similar, but they didn't interact, or influence each other. In Guangxi, they were not happy with Chiang Kai-shek's rule, so they were semi-independent. They also took on board some intellectuals and thinkers and worked together. When they brought out this "Three Selves Policy," they invited me to return to Guangxi [Liang's formal native place] to lecture. I think that was about 1935. That was the first time I returned to Guangxi. Li and Bai were both Guilin men. Bai was a Moslem. That was the first time I went back to Guilin. I was closer to Li than to Bai. When the war started, Li was the Fifth War Area Commander, stationed in Xuzhou. Later he invited me to visit him in Xuzhou.

那次的失败，我听说，他们本来要徐名鸿去跟江西的共产党联系，可是被共产党拒绝。当时如果是毛主席作主张的时候，他是会赞成联合的。当时是陈绍禹、秦邦宪他们作主，他们夺了毛主席的权，他们在上海站不住了，跑到井冈山去。他们就说福建这一派是小资产阶级，不够革命，所以没有帮助福建。其实如果共产党跟福建联系，共同对付蒋，策略上才是对的；那么让蒋消灭了福建，共产党策略上不对。

我与李宗仁的“战地党政委员会”

艾：李宗仁，您是怎么认识他的？原来是在什么地方？

梁：李宗仁同白崇禧，这两个人都是广西的桂林人，我也算是桂林人。所以在他们统治广西的时候，他们提倡所谓“三自政策”，“三自”好像是自治，地方自治；自卫，自己保卫；自给，“给”就是经济上自给自足。搞这个“三自政策”。

艾：是原来的政策，还是您.....

梁：不，当然是他们的。

艾：就是跟镇平那一带的.....彭禹廷也有个“三自政策”。

梁：相似吧，相类似，不过不是互相影响的。他们在广西这个地方，他们不高兴蒋介石的统治，他是一个半独立性，他也收一些个文人或者有思想的人，一同搞，那么就有“三自”的提出来。这个时候呢，他就希望我回广西，去看、去讲演，那么我回去讲演来着，这个时候好像是1935（年）吧，民国二十四（年），好像是那样。那是我第一次回广西。李、白都是桂林人，白呢是回族，回教的。我第一次回去。后来

嘛，就是跟李相熟得多一点，抗日战争起来，李就算是第五战区司令长官，驻徐州，最后他请我去徐州。

Alitto: Yes, I have that in my book. He wanted to consult with you on how to mobilize the masses for the war effort.

Liang: Right. I stayed in Xuzhou for more than a month. I lived on a farm in the northern part of Xuzhou. But I went to Li's headquarters every day to have lunch with him, and to talk with him afterwards. I did this every day for about a month.

Alitto: Did you talk about plans, or...

Liang: We didn't talk about anything in particular. At the time there was an organization called the War Zone Party Policy Committee. I was considered a member of that committee. Every war zone had such a committee. The committee members were appointed by the central government. I was a member of the Party Policy Committee for the Fifth War Zone, and was stationed in Xuzhou, and so stayed there over a month. Afterwards, we withdrew to Wuhan. In Xuzhou, there was one convenient thing—my students, my cadre from Shandong could come see me, and I could then give them instructions on what to do. I wrote about this in that little book I gave you.

Alitto: Yes, there was something about that in it. So your relationship with Li Zongren was very close at that time.

Liang: Yes, quite close.

Alitto: Li Zongren... When the CCP had already got to the Yangtze River, Chiang Kai-shek resigned, and Li Zongren became president. According to some material that I have seen, he wanted to invite you to be...

Liang: He wanted me to become active, to campaign for peace.

Alitto: And you refused?

Liang: Yes.

艾：这个我书里有的，他跟您商量怎么动员群众啊.....

梁：对。在徐州我停留了有一个月，我住啊，是住在徐州北郊一个农场里头，可是午饭呢，到李宗仁那个总司令部去吃饭，在他那儿坐，随便谈。天天如此，有一个月的样子。

艾：那您讲计划呢，还是讲什么？

梁：没有讲什么。当时算是有个机关吧，叫做“战地党政委员会”，我算是战地党政委员会的委员。战地党政委员会呢，是每一个战区都有一个战地党政委员会，委员呢是中央任命的。我是作为第五战区战地党政委员会的委员，住在徐州，住了有一个月，后来就从那儿回武汉。在

那儿对我有一个方便，就是山东的我的学生、我的干部，可以到徐州来见我，我可以指示他们怎么样办。那个小册子上后边有。

艾：是，关于这一点是有的。就是您和李宗仁从那个时候关系比较密切啊。

梁：很熟啊，很熟。

艾：李宗仁这个……，共产党已经打到长江的时候，蒋介石辞职了，而李宗仁做总统的时候，依我看到一些资料啊，他想要请您做……

梁：要我出来，要我出来奔走和平。

艾：您拒绝了他的请求？

梁：嗯。

My contact with Chiang Kai-shek

Alitto: You also had a lot of contact with him [Chiang Kai-shek], especially during the War of Resistance, and after it. You hadn't met him prior to the war, had you?

Liang: No, because I never participated in government... I always worked in society.

Alitto: I know that in the 1930s, before the war, you didn't seem to have a good impression of Chiang Kai-shek. I seem to recall that in your book *The Last Awakening of the Chinese People's Selfsalvation Movement*, you compare Chiang with Yuan Shikai, saying that they were about the same, simply very successful warlords. I also remember that during the peace negotiations after the war you didn't seem to like him very much, and blamed the continuation of the civil war on him. Did you make any other comments about him?

Liang: If we are going to talk about Chiang Kai-shek and me, we must start from an earlier period. I was in Shandong doing rural reconstruction at the time that Chiang was in Wuhan in what he called his Bandit Extermination General Headquarters. The "bandits" referred to the Communist Party. As he was stationing troops in Wuhan, he reorganized the Wuhan Provincial Government. He wasn't very satisfied with the original administration, [so he] had Zhu Jingnong appointed as the Superintendent of Education for Hubei. Zhu had studied in the U.S., and had specialized in education. But Zhu was the president of Cheeloo (Qilu) University in Jinan, Shandong. A church ran this university. He had to resign his position as president and then take up the position as Superintendent of Education. So, he went from Wuhan back to Jinan. Chiang asked him if he knew Liang Shuming. Zhu answered that he did know me. Chiang said, "When you

go back to Jinan, ask him to come to Wuhan to meet me." Zhu returned to Jinan and resigned his university presidency. He saw me in Jinan, and relayed Chiang's invitation to me. I told him, "OK, I have the message." But I didn't go. I couldn't bring myself to go just because he had sent someone with this one sentence. This was the first contact that I had with Chiang.

I had contact with him next in Nanjing, when the Second Interior Affairs Conference was held to discuss the internal affairs of the whole nation. The Ministry of Interior Affairs convened this conference. The Minister was a Guangxi native, Huang Shaohong. He was eager to adopt innovative and new programs and policies. He wanted to use measures superior to and also inclusive of rural reconstruction, which he called county government reconstruction. This would include the county level and the countryside below the county. At this conference he presented his plans. So he invited me and my colleagues working in Shandong, as well as Yan Yangchu, to attend as specialists this conference in Nanjing to help his program of county government reconstruction. So, because of this matter I traveled to Nanjing.

我与蒋介石的来往

艾：政治家蒋介石，您和他也有很多来往，尤其是在抗战的时候、抗战以后啊。抗战以前，就没有见过面吧？

梁：因为我始终是不参加政治，我始终在社会方面做事情。

艾：我知道在30年代，抗战以前，您对蒋介石也没有什么好的印象了。我记得您那个《中国民族自救运动之最后觉悟》书里面说，蒋介石是跟袁世凯差不多了，是军阀，就是比较成功的军阀了。也知道抗战以后，和谈、谈判的那个时候，也印象很不好，觉得就是因为他内战。另外呢，有没有什么别的.....

梁：谈到我跟蒋，我要从头说起了。还比较早的时候，我在山东做我的乡村建设工作。刚好啊，蒋本人住在武汉，他叫做“剿匪总司令部”——“匪”嘛就是共产党。因为他自己驻军在武汉，他就把武汉省政府改组，原来的省政府他认为不大满意，他就改组。改组嘛，他就用一个姓朱的，叫做朱经农，也是留美的，学教育的。他就改组湖北省政府，湖北省政府里头有教育厅了，他就用这个朱经农做湖北教育厅厅长。可是朱呢，原来是在山东济南做齐鲁大学的校长，齐鲁大学是个教会办的学校，所以他需要辞齐鲁大学校长，来接任湖北教育厅长，所以他就从武汉回济南。回济南的时候，蒋就对朱经农说：“你认不认识那个梁某某人呢？”朱说：“认识呀。”他说：“你替我说一句话，希望梁到武汉来跟我见面。”那么这个朱经农他回去，到济南交卸齐鲁大学校长，在济南看到我，他就把蒋的话传达给我。我说：“好，我知道了。”但是我不去，我不能够因为他派人传这么一句话，我就自己去呀，我不去。这是头一

次。

后来，刚好在南京开第二届内政会议，讨论全国的内政，这个是归南京的内政部召集的。这个时候内政会议的部长是广西人，叫黄绍竑。那么他很想办一件新的，采取新的方针、新的政策，他就要搞在乡村建设之上的、而又包含乡村建设的，他叫做县政建设——一个县，县以下是乡村了，所以是县政建设，县政建设是包含乡村建设的。所以他开这个内政会议要提出这个方案来，就把我们搞乡村建设的人——也包含了我，包含了我们山东的朋友，还包含了晏阳初——都找到南京来，作为一种专家，参加他那个内政会议，来把县政建设的计划搞好。这个时候我到了南京了，为这个事情到了南京了。

At that time, the mayor of Nanjing city was an old friend of mine. This man [Shi Ying], was a veteran, an old friend of Sun Yat-sen's. He was old, quite a bit older than I. When only 19 years old, he won the *Juren* degree, and after that studied chemistry in England. Mr. Cai Yuanpei engaged him as a professor of chemistry at Peking University. He had helped Sun Yat-sen while abroad, an old friend of Sun's. At the time he was mayor of Nanjing city, and also a friend of mine, since we had both been teaching at Peking University. Mr. Shi came to see me at the Central Hotel [where I was staying]. He said, "Chiang Kai-shek had wanted to meet you and you didn't come. Now that you are already here in Nanjing, you must see him." I answered that I would see him. Mr. Shi was mayor, so later he called Chiang's secretary to arrange a time, the evening of a certain day. Mr. Shi came in his car to pick me up for the appointment at Chiang's official residence. This was the first time I met Chiang Kai-shek.

Even from the very outset, at this first meeting, I didn't like him. Why? He was insincere and false. He had heard, he said, that I was very famous and had wanted to meet me. He wanted me to come see him, but I had been unwilling. This time Mr. Shi had made the arrangements and brought me to see him, and so on. How was he insincere and false? He held a pen in his hand—a fountain pen, and also a little notebook. When we were talking—naturally we were just talking at random—I do not remember how I happened to bring it up, that at the time the Jiangbei area—northern part of Jiangsu and part of Anhui—had suffered a great flood, and the damage was quite heavy. A friend of mine was doing relief work in the area. I just don't remember how it came up but I did mention this man's name and his work in disaster relief. As soon as he heard this, Chiang said, "Very good. What is the name of your friend?" He handed his pen and his notebook to me and said, "Write his name down." Of course I wrote my friend's name. It looked very insincere to me, a show off, as we say, "being modest and respectful before a scholar" [lowering oneself before the scholars]. It had the appearance of modesty and respect, of

paying great attention to what I said. Sitting there and acting as though he didn't hear the name clearly—so you "write his name down." Actually, his secretary was sitting there in any case, he also wrote down the name. He didn't have to have it written down for him. So, in general, this first meeting with Chiang left me with a very bad impression, and gave me the feeling that he was insincere and false.

到了南京呢，这个时候的南京市的市长是我一个老朋友。这个人（指石瑛）是老资格，他跟孙中山是朋友，岁数很大，比我们都大，他是一个在清朝已经中了清朝的举人的，念那个老书啊，中了举人的。中了举人呢，年纪还很轻，他只有19岁，他又到英国去留学，到英国去留学，学化学；学化学回来之后，蔡元培蔡先生请他在北京大学做教授，做理科化学教授。他在国外很帮助孙中山，跟孙中山是一辈的老朋友。这个时候做南京市的市长，跟我也是朋友，我们在北京大学在一起。他到中央饭店、旅馆来看我，他说：你既然到了南京了，以前蒋介石想跟你见面你不去，那你到了南京了，你不可以不跟他见面了。我说好，那么这个样子他作为市长跟蒋的秘书、副官通电话，约好了时间，某一天的晚上，事先是坐着汽车接我一同到“委员长官邸”，去跟蒋见面。这个时候是我第一次跟蒋见面。

可一见面我印象就不好。怎么样不好呢？就是他虚假。他不是以前因为我的有名，要和我见面，要我去我又不去？这次嘛，石先生陪着我来看他了，约好了见面了，他怎么样子虚假呢？他就手里拿一个笔，也是自来水笔，手里拿个本子，谈话的时候——当然随便谈了，我不知道我怎么样子提起来，那个时候啊江北——江苏北部，包括安徽——有水灾，灾情很重，我一个朋友就在那儿做救灾工作，不知道怎样提到这个事情。提到这个事情，我就提到负责救灾工作的那个人的名字了，他就说：“哦？很好，你这个朋友叫什么名字啊？”他把那个本子、笔递给我：“你写下来。”我当然给他写下来了。他这个人就看出来有一种虚假，虚假就是“谦恭下士”，很谦恭的样子：你的话我很注意，你说那个人名，你写给我看。自己拿着本子、自己拿着笔，好像听不清楚，你再写一下。其实他另外有个秘书啊，坐得稍微远一点，也记了，不一定他再记。大体上说这次是头一次见面，头一次见面就是我感觉他虚假。

After this, of course, I met him many times. At the time of this first meeting, the Japanese hadn't invaded China yet. Later, the War of Resistance began. In the North it was the Marco Polo Bridge Incident of July 7 and in the South the August 13 Incident, which forced Chiang to resist Japan. He had no choice. It was with the Xi'an Incident that he decided to abandon the civil war and resist the Japanese. The national government felt the need for the support of society as a whole. The government itself could not resist Japan all alone. So it established a Political Consultative Conference within the Supreme National Defense Conference and invited persons from non-official circles who could represent society, people of some prestige, to be members of this body. I was also appointed to this body.

The first time I met Premier Zhou Enlai was at these meetings of this body. At this time, there was in principle a cooperative union between the CCP and the Nationalist Party for resistance against Japan. Actually, it was the CCP that was advocating for resistance against Japan with no more civil war at the beginning. But the Chinese Communists did not by any means participate in the national government, so how did the two parties join hands to resist Japan? It was in this consultative conference and the Supreme National Defense Conference. At this time the name list of the conference had Mao's name on it, but Mao never attended. Zhou attended. So, the first time I met Mr. Zhou was there at those meetings.

Who else participated in the meetings? Huang Yanpei, who was famous in the Shanghai region. Shen Junru, who had just been released from detention, was also there. Shen was a member of the National Salvation Society, which advocated for an end to civil war and resistance to Japan. He had been arrested and kept in prison in Suzhou, for Chiang had felt that "you were all going with the Communists." But at this time, the two parties had started to cooperate, so the "Seven Gentlemen," Shen included, were released, and they participated in the Political Consultative Conference. Hu Shi also participated, and so did Zhang Boling of Nankai University, the great military scholar Jiang Fangzhen and the famous Peking University scholar Fu Sinian, and so on. They also found people familiar with diplomacy, for linking up internationally with allies against Japanese. So, because of this, they asked Yan Huiqing and Shi Zhaoji to participate too. They also asked several Nationalist Party veterans who had long been alienated from the Nanjing government, such as Ma Junwu, a Guangxi native. All were asked to participate in the Political Consultative Conference under the Supreme National Defense Conference.

以后就见面机会很多，因为这个时候日本人还没有来中国、侵略中国，后来不是抗日了？抗日一起来，北方就是“卢沟桥七七事变”，南方是“八一三”，这个时候蒋被逼迫着不得不抗战了。不是有个“西安事变”？他决定放弃内战，抗日。那么“八一三”打起来了，国民政府感觉到需要广大社会支持政府，不能单单是政府抗日啊，需要广大社会的支持啊，所以就在“国防最高会议”之内成立一个“参议会”，请社会方面的人，能够代表社会的、在社会上有资望的，来做参议会的参议员，那么我就被聘当参议。

这个时候可以说一句话，就是我跟周恩来第一次见面就在这个地方，因为这个时候算是国共合作、一同抗日。本来是中共要求抗日嘛，不要打内战，共同抗日，可是中共方面并没有参加国民政府，怎么样子两党能够携手抗战？就是在这个参议会，在国防最高会议里头参与抗日的东西。这个时候名单上发表的有毛泽东，而毛没有来，周来，所以我

跟周公第一次见面是在这个地方见的面。

那么参议会里头找来的还有些个什么人呢？有黄炎培，在上海一带很有名的；有刚刚放出来的沈钧儒，沈钧儒是救国会了，救国会就是主张赶紧抗日、不要打内战的，本来他都是把沈钧儒扣在苏州监狱里边，他认为你们是跟共产党跑的，可是这个时候两党合作都要抗日了，所以把沈钧儒（等）“七君子”都放出来，放出来也参加这个参议会；还有社会有名的人——胡适、天津南开大学的张伯苓，还有一个有名的军事学家叫蒋方震，还有北大学生里头很出名的傅斯年，如此之类。他还找一些通习外交的人，这个时候抗日根据国际（形势）要采取联系，所以他就把颜惠庆、还有一个施肇基都请来。国民党的老辈，久已跟南京政府很疏远了，可是国民党的老辈，像是那个马君武，广西人，都请来，这个就叫做“国防最高会议参议会”。

At this time, my contact with Chiang increased somewhat from this conference on. Chiang was busy with directing military operations, however, and so Wang Jingwei was chairman of the conference. We held all of our meetings at night, because the Japanese planes were bombing. Wang presided over meetings, as Chiang was very busy with military affairs. At the end of a meeting, Chiang dispatched a secretary of his to see me, and said that Chairman Chiang [as Chair of the Military Affairs Committee] invited me to go to his official residence the next morning at a certain time to talk, e.g., 8 o'clock. I agreed to see him, of course. The secretary approached me right as I was coming out of the meeting hall together with Jiang Fangzhen, so Jiang Fangzhen knew that I would be seeing Chiang the next morning. So he said to me, "When you see Chiang tomorrow, tell him that I want to go to Shandong to inspect matters related to defense." I agreed. So, when I was meeting with Chiang, I told him this on behalf of Mr. Jiang Fangzhen. Chiang agreed, and asked me to go together with Jiang Baili [Jiang Fangzhen's sobriquet] to Shandong.

My impression of Hu Zongnan and Chen Cheng

Liang: It was pretty good that I would go to Shandong with Jiang Baili. [Later] Jiang Baili told me that there was someone who wanted to meet me, and asked me if I was willing to see him. I asked him who it was. He answered that it was one of Chiang's generals, Hu Zongnan. I answered that I was willing to meet with anyone, no matter whom, especially at this critical moment for the War of Resistance. The greater the degree of solidarity, the greater the chance of success in resisting Japan. He said, "Alright, tomorrow we will pass through Xuzhou (Hu Zongnan was stationed in Xuzhou). We'll go together to have a talk with Hu." The next day, we went by railroad through

Xuzhou. Hu Zongnan, his chief of staff, and his secretary general were all waiting at the station for us. We went to Hu's headquarters and talked the whole night. The next day the same train, at the same time, passed through Xuzhou and we boarded and went on to Shandong. Later in Xi'an, I had some further contact with Hu. He was a politically ambitious man. He didn't want to be just a military man so he wanted to make friends with us.

这个时候是我跟蒋接触稍微多一点的时候，从这儿来的。我现在就是在这个会议上，蒋嘛因为他要指挥军事了，军事上忙得很，所以这个会是汪做主席。我们开会都是在夜间开会，为什么呢？因为日本的飞机都来轰炸了。因为汪主持这个会，蒋自己忙军事，很忙，就在我们开会的时候，蒋派一个人，派一个他的秘书吧，来在我们散会的时候看我，说蒋委员长请梁先生明天早晨几点钟，比如8点钟，到官邸见面。那么我当然答应了。这个时候我刚好从会里跟蒋方震一起出来，蒋方震当然就知道我明天要见蒋了，蒋方震就对我说，明天你去跟蒋见面的时候，你替我说，我愿意去山东，去山东看一看山东的防务、国防。我说好，所以等到我跟蒋见面的时候，我就替蒋方震说了这个话。他说很好，就请你——就请我啊，你陪着蒋百里先生（蒋方震字百里）去山东视察。

我对胡宗南和陈诚的印象

梁：那么很好了，我就要陪着蒋百里先生去山东了，蒋百里先生就问我，说有一个人呢，想同你见面，你可以不可以见他啊？我说是谁啊？他说是蒋介石的一个大将，叫胡宗南。我说是什么人都可以见，特别这个时候要共同抗日嘛，那么大家越能够联合、越能够团结越好嘛。他说那么样子，我明天从南京坐火车路过徐州——胡宗南正驻在徐州，我们在徐州下车，同他见面谈一谈。后来果然我们一同坐火车路过徐州的时候，胡宗南带着他的参谋长，带着旁的什么秘书长，很多人，在车站等候，接我们。我跟蒋百里就一同到他的司令部，住一夜，谈话。然后第二天，火车在同一个钟点再过来的时候，我们上车去山东。后来我跟胡宗南还有一些接触，后来在陕西西安有些接触。胡宗南他是一个在政治上有野心的人，他并不是想单做一个军人，所以他愿意同我们交朋友。

I also had contact with the subordinate that Chiang Kai-shek trusted most, Chen Cheng. This was at the time of the retreat back to defend Wuhan. Chen Cheng was living at Wuhan University. Wuhan University was located in Luojiashan. Chen lived there. He asked me to his house for dinner and to talk. He was one of the most powerful of Chiang Kai-shek's subordinates. A car was sent to pick us up. So we got in and went to his house at Luojiashan within Wuhan University campus—the university had been closed. He was not in. But after a few minutes of sitting there waiting, he came in. He talked, but talked about his own topic continually—criticizing, maligning and berating

the Minister of the Interior, Huang Shaohong. He said that Huang was a big dummy. He kept talking continually and didn't let me get a word in edgewise. He just kept on, in a very disorganized manner, very angrily. Later one of his staff came in to report that it was time for dinner. So he invited us to go in to dinner. Now, during the time he was eating, of course, he couldn't talk much, but he was by no means quiet. After he finished eating, he continued his non-stop diatribe, giving me no chance at all to say anything.

I took the opportunity when he was speaking relatively slowly to say something because I wanted to say something about the condition of my people. We had brought out some men and rifles from Shandong, over 800 men and more than 800 rifles. We also had tens of thousands of silver dollars in cash. As the administrative commissioner and the county magistrate, we brought out the cash and the armed militia. So I told him that we wanted to go back to Shandong. The militia wanted to fight its way back home. Finally, after much effort, I brought up the matter by cutting off his tirade. So, after this experience with him I felt that he wasn't a man of great ability; he was too shallow and superficial. This is an example of the contact I had with people on Chiang's side. Later on, in Taiwan, Chen Cheng was "vice president" and so on.

跟蒋的部下、蒋的很信任的人，比如陈诚，陈诚也同我有往来，那是退守武汉的时候了。退守武汉的时候，陈诚他住在武汉大学里头，武汉大学那个地名叫珞珈山，他自己住在珞珈山武汉大学里边，他请我到 he 家里头吃饭、谈话，他算是蒋下面很有力量的一个人。车来接我们，我当然就坐车去了。到他住的地方珞珈山武汉大学里边——学校是停了，他没回来，可是坐了有刚刚几分钟他就回来了。回来了他就谈话了，他老是谈话，老是说他的话，老是骂人、批评人，特别批评那个内政部长黄绍竑，他说那是个草包，这个样子。几乎没有空让我说话，我插不上话去，因为他老说、老说，话说得很乱，气很盛。后来伺候的人来报告，说是要开晚饭了，请进去吃饭，吃饭的时候嘛，不能多说话了，他也还不闲着，吃完饭后还是说话，我想跟他说的话，几乎没有空说。

当然我还是勉强趁着这个机会，他话稍微慢一点了，我马上说一句话跟他，因为我是介绍我这方面的人的情况，我们从山东带出来一批人，并且都是带着枪的，武装的，八百多人，有八百多条枪，还带着十几万块钱——因为我们在山东做专员、做县长有现款、有壮丁，都带出来了。后来嘛跟他说，说我们要回去，我们从山东出来的人要打回老家去，为了跟他说这个事情。仅仅是末了当他话稍微停下来时，我才能把我的话跟他说。这样看起来，这个人不是十分有能力的人，太浅，太粗浅。这也是蒋方的人我接触的一个例子。后来不是到台湾他还是做“副总统”吗？

Chiang Kai-shek's greatest contribution

Liang: When General George Marshall came to China to help make peace between the two parties, I had a lot of contact with him. He came to see me at my house once. That was when I was living at Lanjiazhuang in Nanjing. That was where the headquarters of the Democratic League was located. I couldn't speak English, so a friend of mine, Ye Duiyi, interpreted for me. I felt that General Marshall was a truly good person. He was a devoutly religious man. Chiang Kai-shek was really bothered by him. Didn't Chiang go hide himself off at Lushan? At the time, the weather was not really all that hot. Of course, Lushan was a cool place, but he didn't go off there to escape the heat. He wanted to hide from Marshall. This put General Marshall in a bad position. He repeatedly went to Lushan. He went up to Lushan nine times.

Alitto: Speaking of Chiang Kai-shek hiding out, in your opinion, after the War of Resistance was concluded, it seemed he... In terms of this kind of behavior he exhibited in those days, it would seem that it was very stupid. He brought trouble upon himself and so in the end exited the stage pitifully. In your opinion, why did Chiang act so stupidly? Did he just underestimate the strength of the Communists or was he just stupid?

Liang: Well, he was not stupid, all right. However, if it was stupidity, it was just because he was so selfish.

Alitto: Selfish? The basic problem was that he was selfish?

Liang: He didn't trust people. His word never...

Alitto: Meant anything?

Liang: Right! He acted this way thinking himself to be very clever. But what he did was to make himself utterly isolated.

Alitto: So, in your view, if after the War of Resistance had concluded, he had been earnestly reasonable with the Communist Party and with the Third Parties, then possibly he would have been able to organize a coalition government. Was it just because he wanted to maintain his dictatorial powers that he refused to be reasonable? (Liang: Right.) Because he thought that he had more troops, had good weapons, (Liang: He had U.S. backing.) he had an air force, the CCP didn't have an air force—no matter what, the Nationalist was much stronger than the CCP. (Liang: Many conditions were stronger.) So because of this, he then refused. (Liang: He looked down upon the CCP.) He looked down on the CCP. For example in 1938, the CCP was obviously quite strong, especially in North China

and the Northeast. Why didn't he see that the situation was not good, and so make concessions or at least be relatively earnest in the peace talks?

蒋介石最大的贡献

梁：马歇尔元帅不是来中国吗？极力要促成中国国内的和平。我跟马帅有多次见面，他还到我住的地方来过一次，我住南京兰家庄的时候，民盟的总部，来过一次。我不会讲英语了，都由一个朋友——姓叶的叶笃义，替我做翻译。我对于马帅，我觉得他这个人是很好的。他是一个信仰宗教信得很真的人。他很为蒋介石所苦——蒋介石他躲到庐山上，天气并不一定很热，庐山固然凉快，可是他不是为凉快去庐山，他是躲人，他要躲马帅。那么这个样子马帅就辛苦了，他一趟上庐山，再一趟上庐山，他九上庐山。

艾：说到蒋介石躲人啊，依您看呢，他是抗战结束以后啊，他好像……现在看他当年这个行为，好像很笨啊，是自己找自己的麻烦而终于下场也很惨。依您看呢，是因为他估计共产党的力量估计得太低的关系呢，还是因为他人就是很笨呢？

梁：笨是不笨，如果说笨呢，他就是太自私。

艾：自私？基本的问题是他自私？

梁：他不信任人，从来说话……

艾：都不算话。

梁：对啊。他自己以为这样最得计，其实是弄得众叛亲离。

艾：那您看他，就是说抗战结束以后，假如他比较认真地和共产党、和第三方面的人比较讲理，那说不定会组成一个联合政府。那么会不会就是因为他要保存他这个独裁的权力啊，而结果可以说是拒绝讲理？因为他想：我这个军队多啊，武装也好啊，（梁：有美国做后盾。）空军是有的，他们没有空军，无论怎么样，我们比他们强得多。（梁：很多的条件都强啊。）就是因为这个，他就拒绝，（梁：轻视共产党。）轻视共产党，比如到了民国二十七年（1938年），共产党尤其在华北、在东北很明显地是力量不小。他为什么不看情况不妙而让步，或者起码比较认真地和谈呢？

Liang: His attitude towards the peace talks was to take any small advantage. So, one time Premier Zhou came to him with a proposal that was a concession on the CCP's part, and thought that this would satisfy him. But Chiang came back and said that there was still a problem, and this problem called for a further concession from the CCP. So he kept pressing them continually. The CCP knew quite well that it did not have as much power as Chiang did, and knew that it didn't have international recognition as the government of China as

Chiang did, or have American help. So, the situation was like, as the saying in ancient Chinese goes, "troops full of righteous indignation will certainly prevail; troops full of pride will certainly be defeated." It was the CCP's troops that had been continually pressed and filled with righteous indignation.

Alitto: During the peace negotiations you must have had some opportunities to speak sincerely to Chiang, and try to persuade him to be more serious and conscientious with the peace talks.

Liang: I had great difficulty in getting to see him. Not only did I have difficulty, even the Nationalist Party leaders had difficulty in seeing him. It was a big headache for General Marshall. He hated Chiang. Didn't he serve as Secretary of State after returning to the U.S.? At that time, he wanted no part of helping Chiang Kai-shek.

Alitto: A lot of Americans who had lived in China for a long time felt that way. For example, there was John Stuart Service. He was in Chongqing. He also read my book manuscript and urged me to publish it without revision. He wrote a few words in it, saying that this book wasn't bad, and so on. Another example was John Patton Davies. I don't remember his Chinese name. Still another was my teacher John Fairbank. They all said that Chiang was wrong, and that the Chiang regime was corrupt. A lot of Americans feared a Communist success, especially feared the Soviet Union; they thought that the CCP was nothing but a tool of the Soviet Union.

梁：他在和谈上他采取的方针、策略，就是他多占一分便宜就多占一分便宜。有一次，周恩来代表共产党让步了，让步了以为可以满足他了，他说还有一个问题，在这个问题上又让步了，还有一点，如此，就是这样。他就是老是逼人，共产党也自己知道自己没有他那样大的力量了，没有像他还有国际的……，国际承认他是中国，美国的帮助啊，所以中国这个老话，老话讲军事上啊，“哀兵必胜，骄兵必败”，你骄傲，刚好就是共产党是哀兵，受逼迫的。

艾：那这个谈判过程中，您也许有机会很诚恳地劝蒋介石，要他认真一点吧？

梁：我们很难见到他呀。不但我们很难见到他，就是国民党的政府负责的人，见他都不容易。马帅很头疼，很恨他，回到美国之后不是担任国务卿吗？那个时候，他完全不想帮助蒋介石。

艾：有很多住中国住得久的人，例如谢伟思，他是在重庆，他也看了我这个，就是因为他看了这个稿子，他劝我就不要再改啊，立刻出版，在这里写了几个字，就说这本书不错什么的。谢伟思是一位，还有戴维斯，中文名字我不记得，姓戴维斯，连费正清啊，他们都说蒋介石是错的，而且政府是腐败的，没有用处。美国很怕共产党，尤其怕的是苏联，以为中国共产党就是苏联的这个走狗啊，或者它的猫手、猫爪。

Do you think that Chiang Kai-shek made any contribution at all to China and the Chinese Revolution? We have regarded his performance, especially after the War of Resistance, as terrible. As for his overall career, is there any contribution to China?

Liang: His greatest contribution was to make the CCP successful. If he had been a bit more trustworthy, if his character were somewhat better, the CCP would have been unable to beat him. His greatest contribution was to have created the CCP success.

Zhou Enlai is a paragon.

Alitto: You were also familiar with Zhou Enlai.

Liang: I knew him very well.

Alitto: What dealings or contact did you have with him?

Liang: It was in politics. First it was in Chongqing. Because North and East China had fallen; we all lived in Chongqing. At that time, I had dealings with him, very close dealings. Later Japan was defeated, and all of us went to Nanjing. The Chinese Communist Party office was at Meiyuanxincun. Our Democratic League office was at Lanjiazhuang. At this time we were coordinating peace talks between the two [major] parties....

Alitto: Do you have other evaluations or views of Premier Zhou?

Liang: When the two major parties were conducting peace talks, General Marshall from the U.S. very much wanted to make the two major parties have peace talks. I was the general secretary of the Democratic League. I was also engaged in this work, and wanted to pursue domestic peace and establish a new China. At the time Mr. Zhou was first in Chongqing and later in Nanjing, so we were very close, and I had the most dealings with him. Finally there was a transitional government organized, with 40 members: 20 Nationalist Party members, and the remaining 20 positions divided up among the parties outside the Nationalist Party. That book I just mentioned discusses this question. What did it discuss? That the Nationalist Party allowed the Communist Party and the Democratic League 13 positions. Whether it should be 13 or 14 was still debated.

您觉得蒋介石对中国、对中国革命有没有什么贡献呢？我们已经谈到了他，尤其在抗战以后啊，实在不行，不过就是说他的整个的事业了，会不会对中国有什么贡献？

梁：他最大的贡献哪，最大的贡献是给机会让共产党.....他造成了共产党的成功。如果他这个人还有一点信用，人格还好一点，共产党打

不过他啊。所以他最大的贡献，就是造成共产党的成功。

周恩来是一个完人

艾：周恩来您也……

梁：很熟了。

艾：您和他有过什么来往、接触？

梁：就是在政治上嘛。先是在重庆了，因为中国华北、华东都沦陷了，我们大家都在重庆，那个时候来往了，来往得很密。后来日本失败了，大家都去到南京了，中共的办事处在梅园新村，我们民盟在兰家庄，这个时候两党会谈我们彼此是配合的……

艾：您对周恩来总理有什么别的评价、看法？

梁：在两大党会谈的时候，美国来的是马歇尔元帅，他是很想促成两党的和谈的。我是作为民盟的秘书长，我也是做这个工作，想求得国内的和平、建设新中国，所以那个时候周公先在重庆、后在南京，我们是最密切的，往来最多的。最后要组织一个过渡的政府，国民政府委员40名，国民党占20名，剩下的20名国民党以外的大家分，我刚才提到的那个书里（梁漱溟借给艾恺的某本书）讲到这个问题，讲到什么呢？讲到国民党许给共产党跟民盟13名，是13名嘛还是14名嘛，还在那里争论……

The Chinese Democratic League was not one group, it was an alliance, and so he made this gesture. The Nationalist Party's *Central Daily News* and some Shanghai newspapers ridiculed the Democratic League as the tail of the Communist Party, as going along with the Communist Party. I made a statement to the press that the Communist Party was following the Democratic League's lead, and not the vice versa. What did I mean by that? I meant that the Communist Party was a revolutionary party. It was an armed party that wanted to seize all of China. We had urged them to renounce armed force and cooperate with the Nationalist Party in creating a new China. We had urged it to renounce armed force. It had agreed to do so, and so it agreed with me to follow the path of the Democratic League, and it was by no means a case of me following the Communist Party. This was discussed in that little book. But one thing was quite clear: at the time the Democratic League was cooperating with the Communist Party. The Nationalist Party totally regarded us as doing so.

Alitto: Leaving aside Premier Zhou's political aspects, what kind of man was he?

Liang: I was very close to Premier Zhou. I am confident that I understood him. In ancient Chinese, the best person was called a

"paragon," and I totally regarded Mr. Zhou as a paragon. There was nothing you could find fault with, no matter whether in his public or private morals. For example, he and Deng Yingchao had no children. Madame Deng seemed to have said that he could take another woman, but he didn't want to do so. In this area of marital relations, which was a private matter, he was very clean. In his work, he helped Chairman Mao in dealing with both internal matters of China and with the international area. One could say that before and especially after the founding of the state, if Premier Zhou was not handling things internal and foreign, well, Mao alone could not have handled it and would have failed; he relied on Zhou for both. Zhou worked like blazes. Everyone knows that he sometimes did not eat; he had no time to eat, so he was given something in the car and had a few bites, and immediately took off. He would work into the night. He received many foreigners, straight into the night, and slept very little, and didn't care much about food. One could say that he gave himself completely to his nation.

中国民盟不是个单一的团体，是个联合的，所以它作出这个样的一个表示。这样一个表示呢，国民党的《中央日报》，还有上海的报纸就嘲笑民盟，说民盟是共产党的尾巴，跟着共产党跑的。我就有一个声明，对新闻记者的谈话，我说是共产党随着民盟走的，而不是我们随着共产党走。怎么样子说这个话呢？因为共产党……是革命党，它是有武装的，它要夺取整个的中国的，我们是劝它放弃武力，跟国民党在建设新中国上可以合作。是我们劝它放弃武力的，它同意了，所以是它同意了我的话，走民盟的这个路子，并不是我跟着共产党走，那个本子上都讲了这个话。但是一个很清楚的事情就是，当时民盟跟共产党是合作的，国民党完全是这样来看待我们的。

艾：周总理政治方面以外，是个什么样的人啊？

梁：我同周总理算是很熟悉了，我自信我很了解他。中国古话说最好的人叫做“完人”，完全，我看周公是一个完人，无论是在公德方面、私德方面，都没有可以挑剔的。比如他同邓颖超没有孩子，邓好像说是你可以结合另外一个女人，他就不要。在这种男女夫妇的关系上——这算是一个私人的事情，他很干净。在工作方面他帮助毛主席，无论是国内应付各方面、国际上应付各方面，全是他啊，没有周那不行的。新中国，可以说从建国前夕，特别是建国后，没有周总理应付内、应付外，那毛一个人办不了，成不了事情，都是靠周啊。周是拼命的，最辛苦了。大家都知道，他常常是没有法子吃饭，没有空吃饭，跑到汽车上人家给他送来饭，吃几口，马上就开走了。夜里头都办公啊。许多外国人，他会客，一直到深夜啊，睡眠很少，吃东西也很不讲究，勉强强，可以说是把自己一切全贡献给国家了。

If China hadn't had Zhou these several decades, it would not have succeeded. Zhou best understood Mao's wishes. My critique of him is

that he was by nature a second fiddle. He asked Mao for instructions practically constantly and for everything. Mao would hint at something and he would immediately understand. Mao didn't have to say much. But he [Zhou] himself had very few specific opinions. He went along with Mao completely. One could say that he was Mao's best assistant. He was number two, never the first in command. An old Chinese saying is "a sage ruler and a worthy prime minister." He was the virtuous prime minister. When Zhou died, people from all sides, even the common people... There was no one who didn't miss him, admire him and grieve for him. Even when Mao died, it wasn't like this. Of the three [Mao, Zhou and Zhu], Zhou died first. Many people honored his memory in front of Tian'anmen.

My intercourse with Mao Zedong: different ideas of China's future

Liang: You know, I went to Yan'an in 1938, six months after the Marco Polo Bridge Incident and the outbreak of the war. Our dialogue began then. We both had a great desire to talk together, and both of us were very interested in each other's ideas. Why did I go to Yan'an almost immediately after the war broke out? That was because after the Japanese came, the entire country collapsed. For example, right after the Marco Polo Bridge Incident, in the South in Shanghai, on August 13, a battle started. But we didn't have any capacities of resistance. Shanghai fell, and we pulled back to Nanjing. Nanjing fell and we pulled back to Wuhan. In the North, Beijing and Tianjin fell. All of Shandong fell. People were running in all directions to get away from the Japanese. It was a complete collapse, as though no one was in charge. It was obvious that Chiang's government had no way, no capacity to do anything about the situation. I was extremely disappointed in the performance of the Nanjing government.

Alitto: Oh, because in those several months, the Japanese occupied a lot of places, and the Nanjing government had no way of stopping it, you went to Yan'an then....

Liang: When we reached Wuhan, where the national government had retreated to, I got Chiang's approval to go take a look at Yan'an. Before I visited Yan'an, I was extremely downcast and pessimistic. What to do perplexed me. Everyone was fleeing. The Nanjing government was totally incompetent. What to do? So, I thought I'd go see if the Communist Party had any way of dealing with the situation. So, with this mind, I went to see Mao, and found that Mao was not the least bit pessimistic. He told me, "China must undergo this great

disaster. But the Japanese should not be joyful too soon. I expect they will be defeated." At the time I went to see him, he was in the midst of writing "On Protracted War," so he told me in effect the contents of his essay. He said that the Japanese had overrated their own strength. They were dreaming vainly of swallowing up China. A vain dream, a joke. China was a big country, too big, and Japan was just too small. Moreover, it wasn't just a Sino-Japanese question. The world powers would not stand idly by and watch Japan annex China. "An unjust cause draws meager support. A just cause draws myriad support." Later the world powers all stood against Japan.

中国过去的几十年没有周是不行的，国际上、国内都是靠周。周呢，最能懂得毛的意思，我对他的评价：他是天生的第二把手。他是几乎随时、任何一件事情他都请示毛，毛一点，他就明白了，不要多说。可是他自己很少自己的明确的主张，他完全跟着毛走，可说是毛的最好最好的助手了。他是第二把手，不是第一。中国古话有……“圣君贤相”，他是个贤相。他故去了，各方面的人啊，乃至老百姓，没有人不想他的，没有人不佩服他的、追念他的。毛故去都没有这个情况。他们三个人周是最先故去的，在天安门前头多少人纪念他啊。

与毛泽东相交：对中国前途的认识

梁：卢沟桥事变6个月我就去了延安，很早。从那个时候起，从那个开头吧，好像彼此都很愿意谈话，彼此交谈都很有兴趣。我记得我第一次到延安，卢沟桥事件刚刚6个月，我为什么那么早去延安呢？就是因为日本人来了之后，全国有一种崩溃之象，北方就是卢沟桥七七事变，南方上海是“八一三”打起来。就是都不行了，上海退南京，南京退武汉，北京、天津都沦陷了，山东也沦陷了。全国人都是在逃难，你逃难，我逃难，大家各自逃难，崩溃，好像无主了。蒋的政府眼看没有什么能力，没有什么办法。我对他很失望，对南京政府很失望。

艾：噢，就因为这几个月，日本人占领那么多地方，南京政府没有办法，您就到延安去……

梁：退到武汉的时候，我取得蒋的同意，我说我要到延安去看看。到延安去看的时候，我心里是很悲观的，不知道怎么办，大家都在逃难，南京政府毫无能力，怎么好啊？怎么办呢？我就想看看共产党是不是有办法，我就这样去。一去，看到他完全不悲观，我是悲观地去的，他告诉我：没有问题，中国非有这样一天不可，非有这样一个大灾难不可，不过日本人他不要高兴太早。……这个时候，他正在写《论持久战》，把《论持久战》的话讲给我听，他说日本人是不自量，他想吞并中国，那是妄想、笑话。中国是大国，太大了，它太小了。也不是中日两国，世界列强不能看着日本人来侵吞中国。“失道寡助，得道多助”，后来列强都反对它。

...We of course had to discuss Old China, our view of it and our

theories about it, and it was in this area that our opinions differed. The most important disagreement was on the question of class. He maintained that China had always had class struggle, and I said that in Old China, from the Qin-Han period on—we were unclear of the society before then, so I wouldn't address it especially in the last 600 years since the Ming-Qing period, although there naturally were differences between rich and poor, there was circulation and communication between high and low (there was economic, social and political mobility). These distinctions were not like classes in the West, which were fixed and fully formed. In China, society and social groups were loose, unorganized and fluid. Because of this mobility, society was fluid and unorganized, and so the struggles were not all that intense or sharp. It was not a situation of two opposing classes—aristocrats versus serfs, as in the Western Middle Ages, or capitalists versus workers in capitalist society. China didn't have any such thing. Chinese like harmony and compromise. Yes, there was struggle, but it was not habitual, nor did it have any great dynamic force.

Mao could not completely deny this. We debated for a long time. Finally he said, "Mr. Liang, you are overly emphasizing the peculiar, distinctive nature of Chinese society, but Chinese society is still a human society, and so still has its qualities which it shares with all human societies." I answered, "I completely agree with you. I completely agree with you that Chinese society has qualities in common with other human societies, but I insist that its peculiar or distinctive features are more important. For example, let's say we are speaking of a person. You say, I 'know' that person. Only if you can say what the special characteristic of that person is, what is distinctive about him, can you then say you 'know' him. If you speak about the person only from the aspect of his characteristics that he has in common with others—that he is a male, middle-aged, and so on, it won't do. You must speak of his special features as an individual, and only then can you really know him." So, I told Chairman Mao, "Your approach is not as good as mine. I grasp the special, distinctive features of Chinese society and so really know her better than you." Well, because of this kind of disagreement, we reached an impasse, and our discussions were concluded.^[11]

……他对老中国的看法跟我的看法不一致。主要的一个问题是什么问题呢？就是阶级问题。他是阶级斗争，我就说中国的老社会，秦汉以后的社会，特别是从明代、清代600年以来的社会——早的社会我们不太清楚、不大敢说——明清以来的这个社会，在我看，贫富贵贱当然有，可是贫富贵贱可以上下流转相通，它不是像外国那样的一个阶级——很固定，很成型，没有固定成型，而是上下流转相通。中国社会散漫，流转相通呢，它就散漫。散漫就斗争不激烈，不像两大阶级，一个

贵族，一个农民或农奴——中世纪的，或者后来的资本主义社会——资本家跟工人两大阶级，中国缺乏那个东西。中国人喜欢调和，斗争还是有，不过不大习惯斗争，斗争的两面，强大的也没有。

我说这个话，他也不能完全否认。辩论很久了，他最后就说了：梁先生，你过分强调中国社会的特殊性，但是中国社会还是一个人类的社会，还有它的一般性嘛。我说对，你说的话，我完全同意。不过，正因为我完全同意你说中国有它的一般性，也有它的特殊性这样子，可是我要强调特殊性要紧。比如说，一个人，你说你认识这个人，你要说这个人的特色是怎么样一个人，那么算是认识了这个人。不能从“一般的”去说，说这个人是一个人，或者这个人是个男人，这个人是个中年人，这都不行，你得说出这个人的特点，你才算是认识了这个人。因此，我说你这个不如我，我是抓住中国社会的特色的一面。谈话就结束了，说不下去了，一般性跟特殊性的比较是这样。

I am different from the others engaged in political activities.

Alitto: Could you give your views on the relationship between the Democratic League, the smaller political parties, and the process of national construction?

Liang: I think that I am, and was, somewhat different from the others [non-Communist Party and non-Nationalist Party intellectuals who engaged in political activities]. Almost all the others vainly hoped for the establishment of British-style rule by political parties. That is, in the national assembly, there would be two large parties; when one was in power, the other would supervise the governance. If the party in power made any mistakes, or did something that was objectionable to the party out of power, the latter would then take power. So the two parties would take turns being in power. This is the situation in England, and to an extent, in the U.S.A. So the others all dreamed of establishing this kind of government. I said that this kind of government did not meet the needs of China, because economically, industrially in particular, China was so different from the Western countries. China was not an industrialized, developed country, so this kind of government would not work. China's most urgent task was to develop economically as quickly as possible. In order to accomplish this, China needed a truly national, central political authority to adopt a fixed, definite guiding principle, a fixed course of action. This fixing of a definite course of action would be through a national governmental power or regime, and should maintain stability for several decades. Only in this way would China be able to develop economically and catch up with the foreign countries. So, I felt and

feel that this alternating of political parties in power simply would not work because the national course of action would change whenever the other political party out of power came into power. So, today one policy, tomorrow another. That just won't work.

我和其他政治活动家的不同

艾：请您就民主同盟或者以前别的小的政党和国家建设之间的关系，或者重要性，作个评论。

梁：我跟其他跟我以外的、搞政治活动的人有一点不同，就是他们几乎都是梦想英国式的政党政治：在议会里头主要是两个大党，这个党上台，那个党在底下，监督着这个政府；或者上台的那个，有什么做错的，或者不得人心的，下台，它就上去了，两党轮流执政，这就是英国的情况。我以外的人他们都是梦想这个东西。英国，美国也是两党。我就是说，这个不合中国的需要，因为中国在物质文明上、在经济建设上，主要说是在工业上，同国外比较，差得太远了，太落后了。这样一个太落后的中国，那非赶紧、赶快、急起直追，把这个缺欠把它补上去不成。要补上这个事情，必须是有一个全国性的政权，采取一定的方针路线，依靠这个全国性的政权，确定一个方针路线，几十年的稳定的局面贯彻去搞、去建设，才能够把那个补回来。不能够你上来，我下去，你上来，我下去，这样子就不行啊！这样今天是这样方针计划，明天又那样子，那不行。

I maintained this view consistently. The others all disagreed with me, as they all had in mind an Anglo-American style of a two-party political system. Later, the situation in China, astonishingly enough, ended up precisely the way that I thought it would.^[12] The Nationalist Party was driven out, and the Chinese Mainland was united. The CCP took power and did accomplish some things in these years. It's too bad that during those decades of control, there were several periods of political and social turmoil. But now, it looks as though these periods of turmoil are over and will not recur, so that from now on China can stride forward rapidly. So, as I said, I am very optimistic about the future. This is my view, and this is my hope.

...For example, during the War of Resistance against Japan, I went rushing around between the two major parties to avoid civil war. Well, I did it. My plan was successful. I founded the Democratic League. Other people thought that I wanted to found a party, but that was not my intention. My own feeling was that China didn't need any new political party, like America or England. So, although I founded the Democratic League, my purpose was for this organization to represent society in general, in between the two major parties, and to make the two parties compromise with each other and to further the

war against Japan and the building of the nation. Finally, when I felt that the organization was no longer needed, I withdrew. So, the Democratic League and the China Democratic National Construction Association still exist, and I don't belong to them.

所以我一个人总是梦想这个样子，可是旁人，就是说我以外的其他的党派，他们都不是这个意思，他们都是想学英、美，学两大党。可是后来嘛，局面居然落到我所想的，把国民党赶出去了，大陆上统一了，统一了，共产党掌握政权，一直掌握几十年，刚好做了不少事。可惜这里头还有些动乱，可惜在这个过去的30年里，还有些个动乱，可惜。可是看现在这个样子，动乱过去了，今后可以迈大步前进，所以我很乐观。这是我的一个看法，我的希望。

.....比如我本来抗战起来之后，就奔走于两大党之间，事情都做了，也还都算是顺利。发起民主同盟，旁人以为我是想搞一个党派，我的意思不是，我的意思是中国不需要什么党派，不像英国、美国那样。所以我虽然发起同盟，主要是在两大党之间代表广大社会来牵扯着它们，不要它们两个打架、斗争，而推动或者抗战、或者建国。随后我觉得不需要了，我就退出了。现在民盟、民建都还有，我没有参加。

Days after the year 1949

It would be better to preserve my middleman status.

Liang: Many years later, Mao was in Beijing creating the new nation. I arrived in Beijing in early 1950.^[13] The first time we saw each other again—in March—we started up right where we left off, arguing the same question. Why did we meet in March? Because in February, he and Premier Zhou were in Moscow, and he returned in March. When we did meet in March, the first thing he said to me was, "Now you will take a position in the government, right?" I wasn't able to make up my mind, and only after I thought deeply for a while did I answer, "Is it so bad to keep me on the outside of the government?" Now, I had my hidden purpose in this reply, but he became angry at it. In offering me a government post, he wanted to get a bit friendlier with me, but I didn't want to get any closer to him. At that time, I really didn't want to attach myself too closely because I misunderstood the whole situation. How did I misunderstand it? It was that I didn't know that the overall situation in China was going to stabilize. I wouldn't permit myself to be that optimistic. In the past, China had been fighting civil wars continuously. How many decades we have had endless civil wars!

...Although the Nationalists were defeated, couldn't they return and fight again? Now, I had always been in the middle between the two major parties, and was like a very fair-minded representative of society as a whole. So, I was able to talk to both sides. That is, I could talk to the Chiang Kai-shek side and could also talk to the Communists, so it seemed that it would be better to preserve my middleman status. It was because of these kinds of situations I answered the way I did when he wanted me to take a government position. It made him quite unhappy. He wanted to get closer to me and I didn't want to get close to him! On the one hand, he was a little bit unhappy; on the other hand, he just wanted me not to keep such a distance from him. So, after that he often sent his car to bring me over for a talk. When he had time from his duties, he sent for me. We never had a real topic, but just chatted at random, and sometimes we dined together.

Just whatever we felt like talking about, we talked about. But there were two things that often came up. The first, I wanted to

understand more about the methods of the Chinese Communist Party. Just what did they do in their work, what sort of way did they do it? After they got control of the political power of the entire nation, how would they act, what methods would they employ? The other thing is, in the light of this desire, I wanted to go around the country and view their operations from the grass-roots level, so I could ascertain exactly how we [our rural reconstruction ideas] differed, and see if I could offer advice, or could talk to him on these matters. It was right then that Mao himself suggested such an inspection trip. He said that since I had worked before in rural reconstruction, both in Henan and Shandong, and had known about the situation in the rural areas, I could go to some rural areas to see what kind of changes there had been since Liberation. So, I said, "Okay." It so happened that his own wishes coincided with my own.

肆 1949年以后的岁月

我想保留一个中间人的地位

梁：后来，他（毛泽东）在北京建国。1950年我到北京，一开头还是讲这个话。在北京见面是1950年的3月份，为什么是3月份呢？因为1950年的1、2月他同周总理在莫斯科，3月他才回来，他回来我才同他见面。1950年的时候，先头他问我一句，他说：“你现在可以参加政府吧？”我有点沉吟，思索了一下才回答。我说：“把我留在政府外边，不好吗？”这话在我有我的用意，可是在他听起来他不高兴，他想拉我拉近一点，可我不想靠近。我当时不想靠近，还是把事情看得错误，怎么错误呢？我不知道中国的大局就能够统一、稳定下来，我不知道，我不敢这样乐观，因为过去中国内战老打不完，多少年老打不完。

……国民党虽然失败了，它会不会回来呀？我一向是在两大党之间，好像是一个很公正的、代表社会的一个人，各方面都可以说话，跟蒋方我也能说话，共产党方我也能说话，我想还是保留一个中间人的地位好一点。所以我这样一个念头，他让我参加政府，我就说留在外边不好吗？这样的话，他听了不很高兴，我不肯跟他靠近嘛。不跟他靠近，但是他倒是有一点——一方面是不很高兴吧，一方面还是有点拉着我，希望不要隔得太远。以后他常常接我到中南海他住的地方去谈话，有空他就……没什么问题，就随便地谈谈，坐下来吃饭。

……几乎可以说是想说什么就说什么吧。不过有两个情形可以说一下，一个就是我很想了解共产党的一些做法，他们掌握了全国政权以后，要怎么样做，怎么样干，我想了解。另外一方面呢，根据这个，我是需要出去看。我想从这个事实上，摸清楚彼此的不同，看我能够进言、能够对他说什么话。刚好这个时候他也提出来，他说从前你是做乡村工作，你在河南也做过，在山东也做过，你看到一些地方的乡村情况，你现在可以出去看看，我们解放之后有什么变化。我说好，我就接受他的，这个意思也是我的意思。

Zhang Dongsun, a professor of philosophy

Alitto: What about Zhang Dongsun? Do you have any... During the War of Resistance, you worked with him in the Democratic League. Did you know him previously, or...

Liang: I knew him much earlier. He liked to talk philosophy. The man was famous in the academic world. He and Zhang Junmai—the two Zhangs—were close both philosophically and politically. Zhang

Junmai was kind and simple-hearted. But Zhang Dongsun was artful, even to the extent of being slippery. In the end, he came very close to bringing on a disaster, just short of bringing on something terrible [upon himself]. Why did we say so? Chairman Mao of the CCP fixed Beijing as the national capital, and at the start the government was called the Central People's Government. The Central People's Government had a sixty-person committee. He and Long Yun from Yunnan were the last two members of the committee. Because Mao's troops were entering Beijing, he [Zhang] was in Beijing, rushing about arranging matters to [have the troops] peacefully enter Beijing. At the time the Nationalist Party force in Beijing was Fu Zuoyi's, which was holding Beijing. The CCP wanted to enter Beijing, and there were negotiations between the two armies to avoid damaging Beijing. Several people were mediating in between. Zhang was also one of those. So after the CCP army entered Beijing, the CCP respected him, and he and Long Yun were the last two of the sixty members [to be appointed].

哲学教授张东荪

艾：那么张东荪先生，您对他有……，抗战的时候您跟他一起（在）民主同盟，以前您是认识呢，还是……

梁：很早就认识。他喜欢谈哲学，这个人本来在学术界也很有名誉的，他同张君勱两个人，二张啊，他们在一起，在哲学上、在政治上，他们两个始终在一起。张君勱这个人很忠厚老实，可是张东荪呢，很巧，乃至油滑，最后几乎闯祸，几乎不得了。为什么几乎不得了？就是在共产党毛主席定都北京了，开初的政府叫中央人民政府，中央人民政府有60个委员，他同那个龙云——云南的那个龙云，（是）60名委员里最后两名委员。因为毛主席军队入京，他在北京的时候，为了和平入北京奔走——那时北京的国民党的势力是傅作义，傅作义的军队守北京，共产党要进北京——在两军之间奔走和平，不要破坏北京。好几个人在奔走，他也是奔走的一个人。所以进了北京之后嘛，共产党对他也很尊重，中央人民政府60个委员，他和云南的龙云在60个人里头是居末的两个。

But he had a weakness, a fault which I just mentioned—slipperiness; he was not kind and simple-hearted. At that time he was at Yenching University, where there were a lot of Americans. He was a professor at Yenching University. He thought that the U.S. was extremely powerful, and didn't dare make a judgment on whether the CCP could unite the entire country, stabilize it and move on steadily down the road. Right then, there was a certain person who could be considered bad, a swindler. This con-man was thirty-something years of age. During the Japanese rule of Beijing, he had been in jail with

Zhang Dongsun. The Japanese had arrested him, and so the cheat became friendly with Zhang in prison. Later after the CCP entered Beijing, this cheat had contact with him, and sometimes would go to Yenching University to see him. Zhang Dongsun thought that the U.S. was extremely rich, strong, and powerful. Whether the CCP could rule China with stability was not certain, it seemed [at the time]. The cheat bragged to Zhang Dongsun that he had connections with the U.S. State Council, and Zhang believed him. So Zhang Dongsun gave some documents that he had acquired through participating in the People's Government for him to read. This man sent them off to the U.S. Later Beijing Mayor Peng Zhen caught this man; he asked him if he had any fellow conspirators. He mentioned Zhang Dongsun.

It was at this time that I was having regular contact with Chairman Mao. He often sent a car to bring me to the Zhongnanhai to talk. Chairman Mao spoke to me of the Zhang Dongsun incident. He said, "Peng Zhen said that he was to arrest him. I said to Peng Zhen that this scholar was not capable of rebellion, and so it wasn't worth taking him seriously, but he cannot meet with us again. At present we should only warn him, punish him and have him write a self-criticism." I heard that Chairman Mao didn't pass on his first self-criticism; it wouldn't do, was insufficient; and he had him write another. The second self-criticism still didn't pass. The third one—I seem to remember that I also read that one—Chairman Mao approved.

When Zhang's "problem" was discovered, he was terrified. Zhang's wife knew me, and before I went to meet Chairman Mao, his wife came to ask for my help as a favor, hoping to find out how serious this incident was. I said OK, and also spoke to Mao about it. Mao's answer was like this: Peng Zhen reported to me such and so forth; Peng Zhen had arrested a swindler, and so on. I told Peng Zhen: Don't arrest him; there is no need to arrest Zhang Dongsun; an effete intellectual doesn't have the capacity to rebel; don't mind him; but we cannot forgive him a second time. Chairman Mao told me this personally. I also told this to Zhang Dongsun's wife. I also saw Zhang Dongsun, who was panic-stricken. His crime was "having illicit relations with a foreign country." At that time, there was hostility between China and the U.S. He was mentally disturbed and panic-stricken. He almost couldn't sleep. It seems that I read his third self-criticism essay. Chairman Mao also read it, and approved it. His self-criticism was profound. It could pass and he was not punished. He was given, moreover, a stipend of one hundred yuan a month, but he was kept under house arrest of a sort. He could not have any contact with anyone outside, so that afterwards I could no longer see him.^[14]

不过他这个人呢，就是有缺点吧，有毛病吧，刚才我说了油滑，不

是那么很忠诚老实。他那时在燕京大学，燕京大学有很多美国人，他是燕京大学的教授，他是很觉得美国是一个非常有力量的（的国家），看共产党是不是能够统一全国，稳定、安定下去，不敢判断。刚好有一个，也算是坏人吧，一个骗子，这个骗子大概是三十多岁，在日本人统治北京的时候，刚好跟张东荪在一个监狱里头，日本人把他扣起来了，骗子在监狱里跟他熟了。以后共产党军队进入北京了，这个骗子还跟他有往来，还是有时候去燕京大学去看他。张东荪呢，觉得美国是最富强的、有力量的，共产党的统治中国是不是能稳定下去呢？好像不一定吧。而那个骗子对东荪说，他同美国国务院都有联系，他自己夸张说。张东荪就信了这个骗子的话，信了这个骗子的话啊，他就把一些个参加人民政府会议的文件，他都给这个人看，这个人都给运走了，给送到美国。这个人后来在北京，被北京市长彭真抓住了，抓住了就问他你还有什么同谋的人，他就把张东荪说出来了。

这个时候刚好还是我跟毛主席有往来的时候，他常常派车子接我到中南海去谈。毛主席就对我讲起来张东荪的事情。他说：彭真说要把他抓起来，我对彭真说，这种文人秀才造不起反来，不值得重视，但是呢，他也再不能够跟我们坐在一起开会了。现在应该警告他，要惩罚他，要他自己检讨，自己写文章检讨。我听说，第一次写了检讨，毛主席看了不通过，不行，不够，再一次。再写还是没有通过。到第三次检讨，一次、二次我没有看，第三次好像我还看过了一下，第三次嘛，毛主席批准了。

当他的问题发觉的时候，他是很恐慌的。他的夫人，张东荪的夫人认识我，在我跟毛主席见面之前呢，他夫人还来托我，说是你看到毛主席的时候替我探探口气，究竟这个问题严重到什么程度。我也就说了，我也去跟毛说了，毛答复的话就是，就是说那个话：彭真来向我报告，说是如此如此，彭真抓住那个骗子了，如此如此，我告诉彭真，不用抓他，张东荪不需要抓，文人秀才造不起反来，不用管他，但是我们也不能饶恕他——这是毛主席亲口对我说的话。我又把这个话回答张东荪的夫人。我也看到张东荪，张东荪惊恐得很，他的罪名是“里通外国”，那时中美之间是互相仇视的。他恐慌得很，差不多精神发病了，简直不能睡眠了，精神错乱了。到了第三次他自己批评检讨的文章好像我还看到了，毛主席也看到了，通过，他自己批评检讨得还算深刻，还可以通过，不治他的罪，并且还要给他的生活费，每月100元。不过，等于软禁这样子，他不能同外人往来，所以以后我也没看到他。

Alitto: Do you have any impressions of his philosophical writings?

Liang: A thoughtful man of ideas. I think I myself have quoted him.

Alitto: Do you think he could be considered modern China's...

Liang: A thoughtful person, but as a man, he was not kind and simple-hearted; he was a finagler who was looking for personal

advantage. This man was not as good as Zhang Junmai. The two Zhangs were extremely close, but Zhang Junmai was loyal, considerate and honest, not like Zhang Dongsun who was a slippery character.

I was too arrogant, too bigheaded in September of 1953.

Alitto: I think that your life hasn't been completely smooth sailing. There have certainly been heart-breaking events. Do you want to talk about them? It might serve to encourage and stimulate later scholars who find themselves in difficult straits. You have encountered a lot of setbacks, right?

Liang: I think that it seems I haven't actually had any heart-breaking events. I only feel that there are things that I haven't done well, things that I've failed or made mistakes about. For example, speaking of mistakes, that event in September of 1953 was my own mistake. I was too arrogant, too bigheaded, and so refused to go along with His Honor Mao. After that event I thought that I shouldn't have acted that way. I should have respected him more, and should not have fallen out with him.

艾：您对他的哲学著作有没有印象呢？

梁：他还算是有思想、有见解。好像我还有引用他的地方，好像有。

艾：您觉得他还算是个中国现代的……

梁：有思想的人。人呢，就是不够忠诚老实，有些取巧，想个人占便宜的这种思想。这个他不如张君劢。

1953年9月，自己心太盛、气太高

艾：我认为您的一生并不是全是一帆风顺的，其中一定有一些令人伤心的事，您愿不愿意谈一谈呢？可以对处身于困难的后学，产生一些鼓舞、激励的作用。您遭遇到不少挫折，对不对？

梁：我觉得，我倒好像没有什么伤心的事情。我只是倒觉得自己有没有做好的事情、失败的事情，或者错误。比如说，说到错误吧，那个就是1953年9月，那个就是自己的一个错误，就是自己气太盛、气太高，所以就跟毛公就抵住了。那个事情后来我自己想，不应当那样的，应当我多尊重他一些，不应当跟他闹翻。

Alitto: So at that time did you feel sad?

Liang: I didn't feel sad. I just felt that I had made a mistake, that I had been in the wrong, but that can't be considered feeling sad. If I have been sad in my life, it was at the death of my first wife. I was a bit grieved. Because I felt that she really was so good, and so her dying was a saddening event. Right when I was 40-some years old. Previously the Chinese ancients had a saying, "It is a great misfortune to lose a spouse in middle age." That is, if it were a bit earlier, not in middle age, for example at thirty... Is it considered a great misfortune to lose a spouse at thirty? Naturally it is considered still a great misfortune, but it is easier to forget when younger. After a while, the sadness passes, and is forgotten. The great misfortune of losing a spouse in middle age is also different from in old age when both spouses are going to die soon and it seems it's not that bad. Right in middle age, right when the feelings of the two spouses are deepest, their emotions are intense. This time is different from youth and old age. So, if I've had a saddening event, it was [the death of] my first wife, who was also the mother of my two sons.

Perseverance in the turbulent days

Alitto: Aside from this incident, were there others, or say, some other incidents of persecution or of damage to you during the Cultural Revolution?

Liang: I remember on August 24, 1966, Red Guard militants came to our house. They said that they had come to rebel, and there was some damage, and they injured my wife.

Alitto: Did they know who you were?

Liang: You could say that they knew, and yet they didn't know that much about me. They were junior high school students, and their school was just north of my house. It was just about half a kilometer or slightly more away. It was quite convenient for them to go from the school to the house. They were junior high students, and so had very little knowledge. You could say they didn't know anything about me. At the time, I wanted to write to Chairman Mao asking for help. I wasn't sure whether the letter might reach him, or whether it could elicit sympathy from him even if he got the letter. I did write letters, one to Mao and one to Zhou [Enlai], but there was no word from either.

艾：那您那个时候是不是感到伤心呢？

梁：没有伤心，我就感觉到自己错了，我不好，不算是伤心。如果有伤心的话，那就是我前头的太太，我的内人，她的死，我有一点伤

心，因为我觉得她实在是很好，所以她死呢，是一个很伤心的事情。刚好是一个四十多岁的时候，从前中国古人有这么一句话：“中年丧偶大不幸。”就是说假定早一点，不是中年，比如说在三十岁、三十多岁的时候丧偶，算不算大不幸呢？当然也算大不幸，不过比较年轻的时候容易忘，过些日子就把伤心过去了、忘了；中年丧偶大不幸呢，跟老年不同，老年大家彼此都快死了，好像也不大怎么样；中年刚好，刚好彼此两个人关系很深、感情很深，这个时候跟青年不同，跟老年也不同。所以，假定说我有伤心的事情，就是我前头的内人，也就是我现在的两个儿子的母亲。

动乱岁月里的坚守

艾：有没有别的，或者说是“文革”时候的一些迫害，或者一些对您不利的事情？

梁：我记得1966年8月24（日），红卫兵小将来了，他们说他们来造反，就有了一些个破坏，还打伤我的内人。

艾：那他们知不知道您是谁啊？

梁：也可以说知道，也可以说不是很知道。说知道，是因为学生是初中学生，而这个初中呢，就在我住家的北边，大概也就是一里路或者是一里多路，从他们学校到我这儿来很方便。再一个，他们是初中的学生，知识很少，可以说是对我不甚知道。当时我自己想写信向毛主席求救，信恐怕也许达不到，也许达到了而他没有什么反响，不清楚。我信是写了的，一个信写给毛，一个信写给周，可是结果都没有消息。

Alitto: Another question. When they burst in, what did they say? How were they going to rebel?

Liang: A group of kids—young teenage boys and girls burst through the door. At the time I lived in the northern main room of the house. I said, "You coming to inspect, right?" They said, "No, we have come to rebel." I didn't want to say anything. I just let them do what they wanted. So, they destroyed a lot of things. They dragged a glass case outside and smashed it. They confiscated trunks. They carted away some things. Openly done robbery. They took apart our bedding, as well as our mosquito netting. They were of low morals. They burnt things to a great pile of ashes. It took more than a day to carry the ashes away.

Alitto: Did they beat your wife when they first came, or did they beat her later?

Liang: In the middle of the several days.

Alitto: Did they explain the reason when they were beating her?

Liang: They didn't give any reasons. They also had her kneel in

punishment, right when the sun was the hottest; they had her kneel in the sun.

Alitto: Didn't they say why they beat your wife but not you?

Liang: They didn't explain this either.

Alitto: Did they criticize your past actions or your past publications?

Liang: No, neither.

Alitto: They just made trouble, just like that.

Liang: Yeah.

Alitto: Aside from your books and furniture, did they destroy anything like paintings or calligraphy?

Liang: Some of mine; there were some of my father's things, my grandfather's things, and my great-grandfather's things. Because [these things] provoked them [the Red Guards]. For example, China has always prized painting and calligraphy, the kind of painting and calligraphy that you can hang up. Moreover, they occupied my place for twenty days, perhaps twenty-one days.

艾：还有一个，他们冲进来的时候，他们是怎么说的呢？什么样的造反法呢？

梁：一群年纪轻的、十几岁的男孩子、女孩子，破门而入，我当时住在北上房，他们就进来了。我说：你们来是不是检查吧？他们说不，我们来造反。我就没有话要讲了，听他们要怎么样就怎么样吧，所以就破坏了很多东西，玻璃柜拖到外面都砸烂了，箱子扣出来，有些东西用车子拉走了。……抢东西，公开的。把你睡的床铺、蚊帐都给你拆开，……道德低下。烧，烧的灰一大堆，要把灰拿出去，一天都弄不完。

艾：那个时候他们刚来的时候就打了您的夫人，还是以后打的？

梁：就在中间。

艾：打她的时候说什么原因吗？

梁：不说什么原因。还有罚跪，就是太阳很热的时候，在太阳底下跪。

艾：他们有没有说为什么打您的夫人而不打您？

梁：这个没有说。

艾：他们有没有批评您过去的行动或者过去的著作呢？

梁：都没有。

艾：他们就是闹？

梁：嗯。

艾：那您的损失包括书籍、家具，没有别的什么字画之类的？

梁：我自己的、我父亲的、祖父的、曾祖的，有一些东西。因为都招他了。比如中国历来就讲究书画，可以挂起来的那种书画，那种东西。他们并且盘踞我的地方达20天之久，21天好像。

Alitto: When they left, did they explain the reasons?

Liang: No.

Alitto: Not then either? Then they didn't talk to you during the entire process?

Liang: They were busy. Very busy. They made the northern hall where I lived their base area.

Alitto: A base area?

Liang: That was because at that time we had a telephone installed. They used that telephone; they could have communication with their own school through the phone. They also went to the neighboring families to rebel, manhandling them, and driving those people back to their hometowns. Anyway, whoever wasn't of Beijing was sent away. My niece and her husband were Cantonese, and they were sent back to Guangdong. The trains were packed with people who were being sent back under escort to their hometowns. This was one matter. Another matter was to have young students go run around everywhere—young students didn't need tickets to ride the train. For example, there was a Mr. Chen Weizhi whom I just mentioned. At the time he was a junior high student and took advantage of this opportunity to go at will to Xinjiang—a very far place—and in the south he went to Yunnan, Guangxi and Guangdong.

Alitto: Right. I just remembered. In 1974 and 1975, when I was studying at University [of California, Berkeley], there were two brothers surnamed Pan. Before Liberation, their parents were in the United States. [My friend] and his brother stayed in Beijing. He was a junior high school student at that time, and traveled around everywhere.

Liang: Yes, they were running around everywhere, as they pleased.

Alitto: Did any of your friends come to see you at that time?

Liang: No one visited anyone else, because they were afraid of getting into trouble, so if possible no one left home. People didn't even go to buy food and drink. (Alitto: How could that work?) If possible they ate whatever was left in their own kitchens. People didn't go out

to shop for more than ten days, much less to visit friends and relatives.

Alitto: Did any of your relatives and Red Guards have...?

Liang: You have already seen, I have an elder son, and a second son. They didn't live with me. They came to see me, but they could do nothing at all. Moreover, the Red Guards said, "Don't you come around here!" Usually they left. Friends and relatives did not visit each other. They couldn't even fend for themselves. That was a very rare, strange situation.

艾：他们走的时候，有没有说出原因来？

梁：没有。

艾：也没有？那他们岂不是整个过程中都没有跟你们讲话？

梁：他们很忙，很忙。他们拿我住的北房做一个根据地了。

艾：做根据地？

梁：因为那个时候我家里装了电话，他们用那个电话，他跟自己的学校可以用电话联系。他到附近人家，也是去造反、欺负人，把那些人赶回乡。不是北京的都送走，我的侄女、女婿都是广东人，就把他们送广东。火车装满了人，都是全押送回乡，这是一种情况。还有一种情况，就是让青年学生到处去……，青年学生上火车不用买票，各处跑。比如说我刚才提到的那个陈维志，当时是个初中学生，他就借那个机会，就跑到新疆，很远，南边还到了云南，到了广西、广东，随便跑，完全随便跑。

艾：对，我想起来了，在1974、1975年，我在读大学的时候，有一对兄弟，姓潘的，解放前他的父母就在美国了。他和他的哥哥留在北京，他也是初中的学生，他什么地方都跑过了。

梁：是，都到处跑，随便跑。

艾：那个时候有没有老朋友来看您？

梁：彼此不来往，谁跟谁都不来往，怕惹事，尽可能地不出门，像是出门买菜、买饮食啊，都不出去。（艾：那怎么办？）尽可能地自己厨房里头还剩下什么东西都吃，十几天地都不出门，不出去，更不往来，朋友、亲戚不往来。

艾：那您自己有没有亲戚和红卫兵小将的……

梁：你已经看见过的，我一个大儿子，一个二儿子，他们也都没住在一起。他们来看我，完全没有办法，并且红卫兵说你们不要来，平常也就走了。亲戚、朋友都不相往来了，各自都是自顾不暇。那是很少有的、很奇怪的那么一种。

Alitto: When this situation developed, what were you thinking?

Liang: When I became the object of these assaults, I was a bit unhappy at first. After a while, I took it easy and began to write again. At that time, I had no reference books, as my books had all been destroyed, but I relied on things in my mind to write. That manuscript of mine is still here—I wrote "A Comparative Study of Buddhism and Confucianism," discussing their commonalities and differences.

Alitto: So you were able to remain cool as a cucumber.

Liang: Actually, it was nothing at all.

The commander of forces can be carried off; the will of a common man cannot be taken.

Liang: Under the leadership of Chairman Mao, everyone must study. In my small study group of about ten-odd or twenty-some people, as in all these small groups, you can talk freely, you can express criticisms randomly. Whatever is on your mind, you can express it to everyone. They have a slogan "an Exchange of Views." That is, you express your views, and we'll express our views. You can criticize me and I will criticize you. So then, you have debates, you "cross swords." Now the other members of the group criticized me, for example, during the "Criticize Lin Biao and Criticize Confucius" Campaign in 1973, everyone in the group was criticizing Confucius. I said, "Probably for the Communist Party leadership it is necessary politically to criticize Confucius. I'm not too clear on this. But Chairman Mao has said that different opinions can be retained. Okay, I have reservations about criticizing Confucius." At first, I expressed that I would retain my opinions on Confucius. However, I also wouldn't say anything negative in the anti-Confucius campaign. I would simply remain silent. But the members of my study group often intentionally taunted or tempted me into expressing some opinion, so as to criticize me. So I expressed my opinion and ended up being attacked on all sides. Once, in the midst of being attacked by everyone in the group, I said, "Okay, I'll quietly listen to everyone's criticisms and won't say anything more." I think that happened in 1974 or 1975.

[15]

艾：那当时这样的情况发生的时候，您心里在想什么呢？

梁：我开头就是受到这种冲击心里有点不愉快，可是很少的几天我就过去了，就没有什么不愉快了。过去了我就开始写东西、写文章。这时候没有参考书，书都毁了，但是我就凭我脑子里有的东西写，我现在那个稿子还有，写的是《儒佛异同论》，儒家、佛家异同论。

艾：那您真是沉得住气啊。

梁：其实是很没有什么。

三军可夺帅也，匹夫不可夺志

梁：比如在毛主席的领导，让大家都要学习，学习就有学习小组，大概十几个人啦、二三十个人啦，大家可以随便谈啦，彼此听听，有什么心里话，要大家说出来。他们的一个口号叫做“思想见面”，你把你的思想拿出来，我把我的思想拿出来，彼此见面。那么，各自拿出来了，也就彼此有些批评，见面了，我也可以批评你，你也可以批评我。这个时候也是有争论的、有交锋的，那么我也就是曾受过旁人的批评。毛主席他有一次批林批孔，那是1973年，在小组会上大家都批孔，我就说在领导党、党的方面要批孔，也许在政治上有它的必要，需要批孔，我不大清楚；不过呢，毛主席也说过，有不同意见可以保留，那么好，我保留。我第一次表示我保留，保留不同意见，但是我也绝不说反面的话——不要批孔，我也不说这个话，我就是要沉默，我不说就是。可是尽管如此，一同学习的人，他常常还有意地引逗你，引逗你让你说话，你说出来，就好批评你。……最怕的是引起围攻，很多人围攻，有过这样的事情。围攻，那么我就说：“好，我静听大家的批评吧，我不说话了。”在过去，在1974年、1975年，都有批孔。

After Liberation, Chairman Mao wanted everyone to study and reform themselves in small study groups. Weren't there some democratic political parties, like the Democratic League and the Revolutionary Committee of the KMT? There were also the China Association for Promoting Democracy, the Jiusan Society, the All-China Federation of Industry and Commerce, the China Democratic National Construction Association, and also some members without party affiliations, who were combined together and called the "group directly under the People's Political Consultative Conference." It was in this study group that I said those words. Although I started the Democratic League, later I left it and was without any party affiliations. So, the story I just told was with the small study group without party affiliation. Now the five groups I just mentioned got together in some joint sessions to criticize me.

Alitto: So were these joint sessions in 1973, 1974 or...

Liang: These sessions were held through 1974 and 1975. Of course the group of all democratic personages was much larger, five small groups involving over one hundred members. So, there was a speaker's platform, and I remember over ten people spoke, one after another, criticizing me. I remained silent, refusing to express an opinion, even when they tried forcing me to. To remain silence was not good either,...anyway I did not say a word till the meetings were over. After the enlarged meetings at which I was criticized, my own

small group of non-party affiliated personages asked me, "What did you think of the criticisms leveled at you at the enlarged sessions?" I answered with a quotation from *The Analects* of Confucius, "The commander of the forces of a large state may be carried off, but the will of even a common man cannot be taken from him."^[16] After I said this, I didn't say another word.

Alitto: So this kind of attitude is good for your health.

Liang: Yes. I am always steady and stable, with inner equilibrium. So, at the time when I said this, I used eight Chinese characters: *dulisikao*, *biaoliruyi*—independent thought; unity of inner feelings and outer action. I am not someone who goes along with the crowd. Whatever I think, I say. My interior self and exterior self are identical. I don't hide anything. Generally, everyone is good to me.

自从解放后，毛主席提倡大家要学习。不是有一些个民主党派？像是民盟、民革——民革就是从前的国民党，还有一个民进——“进步”的“进”，还有九三学社，还有工商联、民主建国会——民建，还有不在这些里的无党无派，也把它合起来，叫做“政协直属组”，直属于政协。刚才我说的话就是在直属组，我虽然是发起成立民盟的人，可是后来我离开了，所以我后来都一直算是无党无派，刚才说的就是我在无党无派小组会上的那个事情。他们要围攻我，所以呢，五个组，就是说九三学社是一组，民革是一组，民盟一组……一共五个组，开一个联组会，在联组会上批判我。

艾：联组会它是1973、1974年的时候，还是……

梁：1974那个时候，在1974年、1975年都有。联组会就人多，五个组成百了。有人就上台去发表言论批判我，先后大概有十多个人批判我，我就静听，不发言。不发言也不好，……不发言这个会也就过去了。批判我的会过去了，可是我自己本组那个小组会上，他们还有人问我说：“在联组上大家批判你，你听得怎么样呀？”我就回答，我说古书上——其实就是《论语》上——《论语》上有一句话：“三军可夺帅也，匹夫不可夺志（也）。”我就是引了这个话，答复了大家，我不说别的话了。

艾：原来讲的是跟您身体特别好的关系，就是……

梁：就是从那引起来说的话。自己很稳定。我当时也说了这么一句话，表明我自己是怎么一回事，八个字，中文是八个字，头四个字是“独立思考”，“表里如一”——表面跟里头一样的。“独立思考”就是不是人云亦云，人家说什么跟着说，不是那么样。“表里如一”，我心里有什么就说什么，表面跟里头是一样的，不隐瞒。一般地说，大家都还对我还好。

Two greatest things in my life

Alitto: By reading about that time of your life in books and essays you wrote, I got the impression that it was only after the Republican Revolution that you wanted to leave home and become a monk.

Liang: I have often said that there are two questions that have occupied my mind. One question is the practical problem of China. China was in a kind of national crisis, and the social problems were very serious. This practical problem stimulated me and occupied my mind. There is another problem. I just mentioned a practical problem. There is another problem that transcends practicality, which is the problem of human life. What should be done with its afflictions and uncertainties, the misunderstandings of life, and doubts about it? Isn't this what I just mentioned about wanting to leave home and become a monk? These two problems are not the same. One makes me involve myself in social and national affairs for society and the country; and the other makes me want to leave society.

Alitto: Early in your life, you worked at a great number of different projects. After you participated in the revolution, you were a journalist, and after that, a Buddhist lay devotee, and you taught at a university. Which of these occupations, as far as your later life is concerned, had the greatest influence?

Liang: Although I had been a journalist, and an instructor, in fact the more important occupation of all was my work in social movements and politics. Didn't I have a relationship with Mao Zedong and Chiang Kai-shek, and the two parties? When George Marshall was in China, I had a lot of contact with him. He very much wanted to have the two parties find a compromise and peace.^[17] I also worked on this, so worked quite a bit in political movements and social activities; working in rural reconstruction is a social movement. Political and social activities probably occupied a great part of my life. As for teaching, I had done this at Peking University. Later I also had a lot of students. Well, I was a journalist when I was young, and later I went to Hong Kong to run *Guangmingbao*, and so again was a journalist. The thing I very seldom did was to be an official. I had a very good friend, Li Jishen. When I was 36 years old, I went to Guangdong Province to see him. I went to live in the countryside about 30 kilometers outside of Guangzhou.^[18] He didn't get my agreement, but he issued the news to the National Government in

Nanjing that I was a member of the Guangdong Provincial Government Committee. I did not take up the office and indicated that I wouldn't do so. So, you could say that I have never been an official. In my entire life, I've never been an official, but I have done social and political activities. [\[19\]](#)

伍 我一生最重要的大事

艾：看您所写的几本书，或者是文章，关于您那个时候的生活，给我留下的印象是辛亥革命以后您才真正地想出家。

梁：我常说自己，有两个问题占据了我的头脑。两个问题，一个呢，现实问题，现实中国的问题，因为中国赶上一种国家的危难，社会的问题很严重。这个现实的问题刺激我，这个问题占据我的脑筋。可还有另外一个问题，刚才说的是个现实问题，还有一个问题是一个超过现实的、也是人生问题，对人生的怀疑、烦闷——对人生不明白，怀疑它，有烦闷，该当怎么样啊？这不是刚才说想出家吗？这是两个问题，两个问题不一样，一个就让我为社会、为国事奔走，一个又让离开。

艾：您早年曾经从事过好几个不同的工作，您参加了革命以后做记者，以后做居士——佛教的居士啊，在大学教过书。您觉得哪一种工作对您后来的生涯影响最大？

梁：我的生活，固然做过记者了，教过书了，做过教员了，可是实际上比较重要的是做社会运动、参与政治。我不是跟毛主席、跟蒋介石两大党我都有关系吗？马歇尔在中国的时候，我跟他接触很多。他是极力想给两党找出一个妥协和平来。我也是搞这个东西，所以我实在搞了不少政治活动、社会活动，搞乡村建设是社会活动，社会活动、政治活动恐怕是占我一生很大部分。教书嘛，我曾经有过这个事情，北大教过书，后来也带着很多学生。那么，做新闻记者，开头年纪轻的时候做过，后来我到香港办《光明报》，又做新闻记者。那么比较少的，很少很少的，就是做官。我一个很好的朋友，就是李济深，我36岁的时候，我到广东去看他。我去离广州60里的一个乡下去闲住的时候，他没有得我同意，就要南京国民政府发表我为广东省政府委员，我没有就，发表了我不干。所以我说没有做官，一生之中啊，没有做过官，可是做过政治运动、社会运动。

Alitto: That is, aside from having been the county magistrate of Zouping.

Liang: Right, you saw that! We were administrating Zouping County, which was under the Rural Reconstruction Institute, and for a period of about two months, we couldn't find someone for the post of county magistrate, so I myself held this office part-time.

Alitto: Right, so it could be said that you have been an official.

Liang: Yes.

Alitto: Looking back on your life, what do you think was the most important thing in it?

Liang: The biggest was working in society and in social movements. Rural reconstruction was a social movement; this kind of social movement had considerable influence. For three years straight we held an annual nationwide rural work symposium. Rural work was an important task at which I labored in the past. Another was the task of uniting the parties to resist Japan. Because I had gone once to the guerilla area, and had seen there the troops of the two parties fighting with one another, I became fearful that this would lead to civil war, so I first organized the "Comrades' Association for United and National Construction," and later the "Democratic League." Others mistakenly thought that I wanted to organize my own political group. Actually this was wrong. I did not hold that, aside from the two major parties, China needed a third group. I never meant that. The Democratic League was not a third political group, so what was it? It was to promote the two major parties to unite in resisting Japan, and cooperate in constructing the nation. As long as there was unity in resisting Japan, it would be fine; as long as the nation would be cooperatively constructed, it would be fine. I did not want to create some kind of political group, so now the Democratic League still exists, but I am not a member. In the first phase [of my life] I devoted myself to social movements; in the second phase, to national affairs.
[20]

艾：除了在邹平的时候，有一阵子您当过县长的。

梁：对，这个你还看到了。因为邹平县归我们管，属于乡村建设研究院，有那么一个时期，大概两个月，那个县长刚好找不到人，那我就自己去兼这个县长，兼任两个月。

艾：是，所以可以说是您做过官。

梁：可以。

艾：回想、回顾您过去的生活，您以为您生活中最重要的大事是什么？

梁：大事一个就是为社会奔走，做社会运动。乡村建设是一种社会运动，这种社会运动起了相当的影响。我们曾经连续三年，每一年都开一次全国性的乡村工作讨论会。乡村工作是我过去主要的奔走的一样。再一个就是为国内的党派的团结抗日。因为我去了游击区一次，在游击区看见两党的军队自己打，我就很怕引起内战，引起内战就妨碍了抗日，抗日期间不可以有内战啊，所以我就先搞“统一建国同志会”，后来搞“民主同盟”。旁人就误以为我是想搞一个自己的党派，其实不对。我不认为中国需要两大党之外，还要一个第三个党派，我没有这个意思。民主同盟不是第三个党派，是什么呢？是想推动两大党团结抗敌、合作建国。能够团结抗敌就好了，能够合作建国就好了。自己不想成一个什么党派，所以现在还有民主同盟了，可是我不参加。第一段是搞社会运动，第二段是奔走国事。

Alitto: In your private life, what was the important event? You just mentioned the two important things for society, for the nation, for the people. What was important in your personal life?

Liang: My writing of books, especially the largest and the most important one, called *The Human Mind/Heart and Human Life* (*Renxin yu Rensheng*). I asked a friend of mine who has good English, "How should the name of my most recent book *Renxin yu Rensheng* be translated into English?" He said that this term *renxin* is not one word in English, but rather there were two words that had some relationship to it. One was "Mind," and the other "Heart." That would be "Mind and Heart and Life."

Alitto: Yes. I also think it's not suitable, although directly translated into English is like this. The word *xin* has two meanings, but it is still a bit not... (Liang: Strained?) It isn't pleasing to the ear. How about this: if you want, I would be happy to translate the book into English, no problem.

Liang: I think that this is the most important thing in my life; having written this book is the most important thing.

艾：您私人生活的重要的大事？您说的是为社会、为国家、为人民服务的两个大事，那您私人生活没有重要的大事吗？

梁：那就是我的写书了。我写的书，特别是最大的一本书、最重要的一本书叫做《人心与人生》。我曾经请教英文好的朋友，我说我这本重要的书《人心与人生》，要翻成英文说，这个名字怎么翻呢？他说“人心”这个字，英文不是一个字，有两个字跟这个有关系，一个是mind，还有一个是heart，所以要是给你翻译一个英文名字，那就是"Mind and Heart and Life"。

艾：是。我也觉得不怎么妥当，虽然是直接翻成英文是这个样子，不错，“心”有两种意思，不过还是有点不.....（梁：勉强？）不顺耳。这样吧，假如您愿意，我也很高兴把您的那本书翻成英文，没问题的，我想。

梁：我想我一生，这个是最重要的事情，写成这本书是我的最重要的事情。

[1] I think that previously it had been widely speculated that Yuan Shikai's agents had assassinated him. In fact, the affair turns out to be a farcical tragedy. As Huang had indeed written an ambiguous article backing Yuan Shikai's imperial plans, he was somehow considered by Sun Yat-sen's Revolutionary Party to be on Yuan's side. So, Huang fled to San Francisco to escape from Yuan's wrath, and was shot to death by the Revolutionary Party assassin because he was considered Yuan's backer. The order, carried out on Christmas night, came down from Sun himself.

[2] Astonishing as it seems today, it was solely on the basis of this essay that Cai appointed Liang as professor at Peking University. Liang, of course, had never even attended the university, much less had specialized academic training in Indian thought.

[3] One of Gu Hongming's granddaughters taught at the International Chinese Language

Program in Taipei (国际华语研究所, colloquially known as the Stanford Center), and I got to know her very well. Later she went to California to teach Chinese, where she remained. I had asked her if there were any family records, papers or artifacts left from Mr. Gu, but she said that it had all been lost. He was born, raised and educated outside of China. The great irony is that, although he held a position for a time in Zhang Zhidong's (张之洞) staff, he had mastered several European languages before learning Chinese. His important writings were in English. Mr. Gu was unique among Chinese intellectuals in the twentieth century in that he was far more thoroughly and completely culturally conservative than any other. W. Somerset Maugham's sketch of Gu ("The Philosopher") forms the center of his book *On a Chinese Screen* (1922).

[4] Liang was referring, very vaguely, to the original Anhui clique general Zheng Shiqi (郑士奇) who had been appointed by the Zhili clique in 1923 to rule Shandong. In 1925, as a result of the Second Zhili-Fengtian War in late 1924, the Fengtian clique general Zhang Zongchang (张宗昌) became the ruler of Shandong. Curiously, Liang does not mention the Fengtian clique in this statement, even though it was the victory of Fengtian over Zhili that was responsible for the changed political situation in Shandong and for the end of Liang's school there. The Anhui clique was not involved, as it was the Zhili clique that had appointed Zheng Shiqi.

[5] The goal of these schools cum government agencies was nothing less than the complete transformation of the nature of government, a very profound goal indeed. The institutions of local school and local government were to meld into one, with the local government administrators relating to the populace in a teacher-student relationship. In Chinese society, education always carried with it a certain moral content. So, the local school teachers were to serve as quasi-clergy as well. The ideal was the "schoolification of society" (社会学校化). What could be more profound a goal for local government than that!

[6] The Heze area was "wilder" than Zouping, with more bandits and crimes. Sun's first task (which he made his primary task) was to establish law and order, and so he concentrated his efforts on training militia.

[7] Mr. Liang's major goals in rural reconstruction were indeed to "organize" the countryside and diffuse modern technology there. Practically every political figure during the Republic did indeed complain that China was, as Sun Yat-sen put it, "a sheet of loose sand." Sun, and many others, complained that Chinese society was suffering not from a lack of "liberty," but from a surfeit of it. Everyone, then, hoped to transform the sand into cement, but the question was how. In the late Qing, moreover, a completely new concept appeared—mobilization. It appeared simultaneously with the idea of a modern nation to which its citizens owe loyalty. Therefore, underneath the organization question was the perceived need for mobilization. All figures were also interested in diffusing modern technologies throughout rural society. Liang's Rural Reconstruction Movement, however, had one other goal that these other leaders and movements did not include and, by their nature, could not include. It was a cultural revival that was to preserve Chinese cultural values—epitomized in his term "reason" (理性). Liang emphasized the idea that rural reconstruction must not be a political movement, but rather a grass-roots cultural movement. He had concluded by the late 1920s that governmental power was inherently like "an iron hook," and society was like a bean curd. No matter what good intentions the iron hook might possess, as soon as it goes to "help" the bean curd, it destroys it. "As soon as you take power, you are separated from society... No matter if even a sage took power, it would not work." *Theory of Rural Reconstruction* (《乡村建设理论》), 1937, p. 319. He never mentioned this special goal of rural reconstruction during these interviews.

[8] Liang Peishu (梁培恕).

[9] Intellectually, Liang seemed to have been on the same wave length as Tao. Tao's famous reversing of the order of the characters of his name (from Zhixing to Xingzhi) is the meaning necessary here. It was quite in line with Liang's own emphasis on practice and "life-changing" knowledge. Aside from Liang's own rural work style having commonalities with Tao's, Liang also admired his self-sacrificing personal character. Of course, they also shared an antipathy to Chiang Kai-shek.

[10] This is in reference to the Fujian Incident (闽变) of November 1933. As they were his close friends, Liang states that Chen Mingshu and Li Jishen founded this government (actually a revolt against the Nanjing National Government). Other leaders in the 19th Route army, such as Cai Tingkai (蔡廷锴) and Jiang Guangnai (蒋光鼐) were also involved. The major motivation of the revolt was antipathy toward Chiang Kai-shek, especially toward his policy

of appeasement toward Japan. The promised aid from the Jiangxi Soviet was not forthcoming and this led to the collapse of the enterprise, which began in January of 1934. Xu Minghong played a crucial role in this incident.

[11] I was completely amazed at Mr. Liang's capacity to summarize these meetings with Mao with such accuracy. This description and analysis was exactly the same as he had recorded just a few months after the event. I myself had observed that he must have made his point very well, because shortly after this, Mao began stressing "the special, distinctive features of Chinese society," history, and culture.

[12] This is indeed true. Liang had always argued that until the customs, habits and attitudes of the masses changed, constitutional government would be a mere superficial copy of a foreign institution that would definitely fail. "China has not Reached a Stage where It can Have a Successful Constitution." (《中国此刻尚不到有宪法成功的时候》) Jan. 4, 1934, Dagongbao (《大公报》). He continued this argument after the war as well. It is not a little ironic that Liang, who created and, for a time, led the only truly liberal democratic political force in that period in China, the last incarnation being the Democratic League (民主同盟), had little faith that liberal democracy could work in China.

[13] At Mao's request (order?) Liang returned to Beijing from Beibei, Sichuan, in January, 1950.

[14] These two events were separated by several years. Zhang was Fu Zuoyi's secret representative in the surrender negotiations in 1948. He wasn't accused of "having illicit relations with a foreign country" until 1951. He was arrested in January of 1968 (relatively late), sent to the famed Qincheng (秦城) prison for high level political prisoners, where he died in 1973.

[15] It was almost certainly 1974, as the campaign started in the latter part of 1973. Criticism of Confucius was, of course, meant to be criticism of Premier Zhou Enlai, and so the Confucian hero, the Duke of Zhou, was added to the list, a clear pun on the surname Zhou.

[16] Newspaper reports outside of China included Liang's quotation of this Confucian Analects.

[17] Despite Liang's founding of the non-Nationalist non-Communist democratic political group during the war, and despite his leading it precisely during its most significant period, 1947, he is mentioned less than Zhang Junmai or even Luo Longji in the Western language historical scholarship of the period. Obviously, these latter figures promoted themselves more into the limelight than Liang did. It is also often forgotten how active Liang was as the intermediary not only between the two major Chinese political parties, but also between them and George Marshall. For his part, Marshall greatly admired Liang and the group of liberal democratic intellectuals he led. Indeed, in Marshall's mind, the ideal solution to the conflict between the Nationalists and the Communists was to have Liang's group, which he described as "a fine group of men," emerge as an important political force that might lead China to democracy.

[18] Mr. Liang's point here is that he was out of communication with Li Jishen in Guangzhou. This would explain why Mr. Li didn't contact him before reporting to the Nanjing National Government that Mr. Liang was a part of the Guangdong Provincial Government.

[19] Never having held an official post was something of which Mr. Liang was extremely proud. He mentioned it several times in his writing, and mentioned it to me during these interviews and those a few years later.

[20] Actually, Liang had devoted himself to national affairs, at least part-time, for his entire adult life. His first employment in 1917 was a critically important post in a national ministry. The next year he published a quasi-political pamphlet, "If We do not Take Action, What will Happen to the People?" (吾曹不出，如苍生何?) Even during the 1920s and 1930s, Liang continued to have contact with political power-holders, and sought to influence their conduct and national affairs. During the war and after, of course, he devoted himself to political tasks, stopping only after he retired as leader of the Democratic League in late 1946.

My views of other people, the world and myself

I'm possibly an ordinary person who is a bit different from other ordinary people.

That is, it's as though I have seen something from afar.

What do I get to see? I catch a glimpse from afar of Wang Yangming, and Confucius.

Viewing them at a great distance—

my level [of understanding] is only to such a degree.

第三章 我对他人、世界和自身的看法

我可能比其他的普通人不同的一点的，
就是我好像望见了，远远地看到了，
看到了什么呢？看到了王阳明，
看到了孔子。
我的程度只是这么一个程度。

Historical figures

Yan Yangchu has no head for philosophy concerning rural reconstruction.

Alitto: As for Yan Yangchu... (Liang: I had a lot of contact with him.) Do you have any comments on him?

Liang: He was a very nice person. I heard he's in the Philippines now.

Alitto: What was the greatest difference between Yan's and your views of rural reconstruction and its practice?

Liang: Yan lacked a theoretical grasp. He had no head for philosophy. He was originally working in a mass literacy movement. This literacy movement was related to his religion. Religious people very often engage in some philanthropic work and help poverty-stricken people.^[1] During the First World War, French manpower was in short supply because of the war, so they needed laborers. They hired a lot of Chinese peasants as laborers for their factories. Of course, it was a good deal for the peasants, as they could earn more than they could back in China. But they were illiterate, far from home and so could not write letters to the families. So in this way Yan Yangchu started to teach the Chinese laborers to read, so that they could communicate with their families back in China.

Afterwards, the situation changed. The French didn't need foreign labor any more, and the Chinese workers returned to China. So did Yan. But he still wanted to continue to do literacy work. At first he worked in Beijing. Someone told him, "If you want your literacy movement to help poor people, the most important sector of poor people are the peasants. The bulk of the people in China are peasants. Most peasants are illiterate. Rather than do as you are doing you should go to the countryside." Only in this way did he go to Ding County. His original term was "Poor People's Education." Later he called it the "Four Great Educations." He said that Chinese peasants had four urgent faults—poverty, ignorance, physical weakness and selfishness, and his Four Great Educations were targeted at these four shortcomings. His work was like that.

Alitto: What is your evaluation of his work and his thought?

壹 当年人事

晏阳初对乡村问题缺乏哲学的头脑

艾：晏阳初，我不知道您对他有没有……（梁：很熟悉。）您对他有什么评论、评价？

梁：他人很好，听说现在在菲律宾。

艾：您看，把您自己对乡村问题的看法和晏阳初对乡村的看法比一比，最大的区别在哪里啊？

梁：晏阳初在头脑、思想方面，缺乏哲学的头脑。他原来是一个“识字运动”家，他这个“识字运动”跟他的宗教有关系。宗教家总是要做慈善工作，帮助穷苦人，所以他最初是在第一次欧战，第一次欧战法国人就去打仗了，就到中国来招募华工去工厂做工，那么中国农民当然很高兴去做工，可以有好收入，比在农村生活好。可中国农民不识字，远隔了——跟家庭，家庭里也常常要通信给他，他也想通信给自己家里，可是不会写字。这样子晏阳初就是帮助工人写字、认识字，好可以看信，好可以写信。开头就是对法国华工做识字运动，这样子开头的。

事情后来变了，法国不大需要做工作，他就回中国。回中国他还是想做识字运动，起初到了北京，可是有人告诉他：你要做识字运动，帮助穷苦人，那么主要的还是农民，人数最多的是农民，不识字的也是农民，你与其到北京不如下乡。他这样子才去了定县。在定县他就把他的——他原来号称“平民教育”——他就把“平民教育”说作“四大教育”，他说中国农民有四个毛病——“贫愚弱私”，针对“贫愚弱私”搞“四大教育”。他是这个样子。

艾：您自己来评价他的工作或者他的思想，您觉得怎么样？

Liang: I think he had no head for philosophy. His theory about "poverty, ignorance, physical weakness and selfishness" was not a very brilliant or clever idea. For example, this "poverty"—at the time, the problem of China was not poverty. Why not poverty? Wasn't China very poor? I thought that the problem was not just "poverty" but "increasing poverty." When a child was born, it was not a problem of having nothing. If there was a chance for development and creativeness, he would be able to do well. So, the problem was not just poverty but a tendency toward greater and greater poverty. In Chinese society of that time the problem was one of sinking ever downward, sliding down a slope. So the important task was to reverse this tendency and get Chinese society going upward again. But Yan did not understand this. It was insights like this that he lacked.

Alitto: So he could be considered as having too superficial a view of the situation?

Liang: Exactly, superficial.

Hu Shi has very shallow views of things.

Alitto: He [Yan] and Hu Shi had quite a few views in common.

Liang: Yes, that's right. Hu Shi also had very shallow views of things.

Alitto: I mention Hu Shi quite a lot in my book for comparison and criticise him on this point. Do you think that the similarities between the views of these two men had anything to do with their education in the U.S.?

Liang: Not necessarily. I just thought of something. During our last interview wasn't I unable to remember someone's name, someone who also had been educated in the United States? I now remember that his name was Jin Yuelin. He had studied political science in the U.S., but what he loved was logic. They ran into each other at a Peking Union board meeting. Hu had just published an article. Hu asked Mr. Jin, "I have an article. Did you see it?" Jin replied, "I saw it. Very good, very good." Hu was very happy. Jin continued, "Too bad that you left out one sentence." "What was that?" [Hu asked.] "When it comes to philosophy, I'm a layman," [was Jin's response.] Because Hu Shi had been unenlightened to say, "What is philosophy? Philosophy is just bad science," meaning immature, indifferent science.

梁：我觉得他缺乏哲学头脑，“贫愚弱私”这个看法不高明。比如说“贫愚弱私”的“贫”，当时的中国的问题，不是“贫”的问题。那么是什么问题？怎么会不是贫的问题，农民很贫了？我认为真实的问题是“贫而越来越贫”的问题。人一生下来——一个小孩子生下来，什么也没有啊，没有不要紧，创造、发展就行了。所以不是“贫”的问题，而是“贫而越来越贫”的问题，就是说中国的社会在那个时候是向下沉沦的问题，向下沉沦，走下坡路，一定要把中国广大社会从走下坡路扭转为走上坡路才行。可是晏先生他缺乏这种看法。

艾：那他算不算看得太浅？

梁：就是，看得浅。

胡适的头脑是粗浅的

艾：他和胡适关于乡村问题、关于中国的问题，有很多类似的地方。

梁：对，胡适也是浅。

艾：书里面常常提到胡适，比较批评他的就是这一点。是不是就是这样，晏阳初、胡适原来都是留美的，会不会跟他们留美有关系？

梁：那不一定。我刚才想起来，上一次我说的，我忘记了人名了，后来我想起来了，叫做金岳霖。他是留美的，本来是去学政治的，但是他喜欢逻辑。在协和医院开会，胡适刚好发表一篇文章，他们两个碰上了，胡就问金先生说：“我有一篇文章，你看见了吗？”金说：“看见了，很好很好。”胡很高兴。他（金）说：“可惜啊，少说一句话。”“什么话啊？”“我是哲学的外行。”就是这个故事。因为胡那个话是很不高明了。他说：“什么叫哲学？哲学就是坏的科学。”就是一种不成熟的科学，不高明的科学。

Alitto: I also wanted to ask something. You also think that John Dewey's thought is of some value, and Hu Shi's thought was not his own creation, he just followed Dewey. Now, you and Hu Shi's opinions differed. Both of you, it would seem, have toward Dewey...

Liang: He can be considered Dewey's student. Dewey came to China...

Alitto: That is to say, although you two differ in many areas in thought, you still have toward Dewey...

Liang: Of course, Dewey has great value. He seemed to call it "popularly based education." His mind was by no means shallow; it was quite dynamic and thorough. His books were rather profound. Even simple people can read his books. Brilliant, profound people can perceive Dewey's excellent and valuable qualities. Hu Shi was unable to understand Dewey. Everyone's mind is different, and Hu Shi's mind was shallow.

Kang Youwei's works of the early period have their value.

Liang: ...But I disliked Kang Youwei, very much. Wasn't he working on some kind of Confucian Church? But that problem was relatively small. The most important problem was that he was hypocritical and deceitful in many matters. For example, he used to predate his writings. That is, he would put a much earlier date on them before he actually wrote them. Why? This was dishonest.

Alitto: Right. I had thought that possibly you opposed some parts of his *The Great Commonwealth*?

Liang: Didn't he write *The Great Commonwealth*? I still have it on my shelf. I think that his Great Commonwealth ideal is by no means

profound or advanced and not worth all the lavish praise. Well, it's fine to think of the very distant future, what society will be like, and fine to write it down, but it should be recognized that the worth of such an enterprise is certainly not great. Science should be emphasized, and not simply spout fantasies and pipe dreams. Of course, fantasies can be articulated, but they have no great value. The only kind of thinking that has real value is seeking the truth from the facts, and come down out of the clouds.

Alitto: You mentioned in your book *Eastern and Western Cultures and Their Philosophies* that you opposed this ideal thought.

艾：我也想问，您也觉得杜威的思想是很有价值的，胡适的思想好像没有自己创造的，都是跟着杜威，您和胡适意见不同，您两位都是对杜威好像有.....

梁：他算是杜威的学生，杜威到中国.....

艾：就是说你们两位，虽然思想上有很多不同的地方，但是您还是对杜威这个.....

梁：当然，杜威有他的价值，他好像是叫做“民本教育”。他的思想并不浅薄，很活，他的头脑活动得很，活动，能够深入。他的书就是相当深的，粗浅的人也能看，看了也好。高明的人、深刻的人能够看出来杜威的长处、优点，可是胡适没有能够。一个人与一个人的头脑不相同，胡适的头脑是粗浅的。

康有为的价值是在他比较早的时候

梁：.....我很不喜欢康。他不是要搞什么孔教会？不过这个问题还小，最大的问题是他这个人虚假，很多事他作假。比如他写文章，有倒填年月的事情，后来写的东西，他把它作为多少年以前写的东西。这何必来呢？不老实。

艾：对，对。我以为可能您对他的《大同书》会有反对的地方吧，有不同意的地方吧？

梁：他不是有本《大同书》吗？我书架上还有。我觉得这种“大同”的理想，并不高深，不值得去那么样子吹捧。设想远的未来的社会怎么样子怎么样的，可以设想，可以去作一些个想象，也可以把它写出来、说出来，不过应当认为价值不大。应当重视科学，不要作些什么幻想。幻想也可以说嘛，不过不会有很大价值，实事求是的这种研究才是有价值的。

艾：大同这种理想啊，在《东西文化及其哲学》您也还反对，觉得大同是.....

Liang: I didn't really oppose it. In some of the classical books, especially the "Liyun" chapter of the *Classic of Rites*, there are some

statements like "Thus men did not love their parents only, nor treat as children only their own sons" and "a public and common spirit governed all under the sky." That is the form human society will develop into sometime in the future. I meant that people should not always place all of their hopes on the future and, in the process, minimize and ignore the present. This kind of psychology makes people unable to go all out concentrating on the present.

Alitto: You previously said that you very much dislike Kang Youwei. Can you give your reasons in some detail?

Liang: Kang Youwei always cheated people. When he first started out, he was really extraordinary. He promoted and led the reform movement. That, too, was really something. At the time this must be considered great wisdom and foresight. Of course we respected and revered him for it. But later in his life he always cheated people. He lied continually, but at the same time he was as proud as a peacock, with an overweening opinion of himself. This sort of thing is just intolerable. We should say something here: "Everyone ought to be modest." Seeing someone acting the way that Kang Youwei did, self-important and arrogant, always assuming that he was superior to everybody else, one knows that he was fundamentally no good.

Alitto: So in the realm of thought there was no...

Liang: His thought had its elements of creativeness. One of his books was *A Study of the False Classics of the Xin Period*. And there was that other book...^[2] Both of these works are extremely famous. But experts know that the things in these two books were stolen from another man, a Sichuanese named Liao Ping. Quite a bit of Kang Youwei's thought, his opinions, and especially his analysis of the classics, were plagiarized from Liao Ping. Others have all said this. He stole Liao Ping's stuff and published it under his own name.

Kang Youwei's works also have their value, those of the early period. But the older he got, the worse he got. I heard that in the later period he forged and plagiarized things. There were other affairs that I know about... For example, there were two cases. In the south side of the city of Xi'an in Shaanxi there was a monastery. I seem to remember it being called the Monastery of the Sleeping Dragon. There was an old edition of a Buddhist sutra, extremely valuable. Kang appropriated it for himself. At that time, transportation was very inconvenient. There was no railroad, only mule and horse carts. He loaded the valuable edition of the Buddhist Canon—many volumes, extremely heavy—into a cart, intending to take it away. He had already gone out of the East Gate of Xi'an and was on the highway when Xi'an natives who had discovered the theft overtook him. They

took the sutra from him and returned it to its place in the temple. How do I know about this incident? When I was nineteen or so, I went to Xi'an, and as I liked to visit that temple, I got to learn about it.

梁：不算是反对。因为中国的古书里头，特别是《礼记》里头《礼运》那篇，它都讲到了，“人不独亲其亲，不独子其子”，“天下为公”，那个是人类社会发展的前途、未来，会走到那一步的。我的意思就是说，人呢不要老怀抱着一个希望未来，好像把一切希望都寄托在未来，反而把当前的事情啊，看轻了，忽略了，不能够好好地当下用心。

艾：您以前说很讨厌康有为，那可不可以比较详细地说原因在哪里呢？

梁：康有为他后来总是欺骗人，开头是很了不起嘛，倡导维新，他是维新运动的领袖，那很了不起，很了不起。在当时呢，可以算得先知先行，那我们当然佩服、恭敬他。不过后来他老骗人，他尽说假话啊，一方面尽说假话，一方面自高自大，简直可以说要不得。我们应当说一句话，人人都应当谦虚；自高自大，总把自己摆在众人之上，这个根本上就看出这个人不行啊。

艾：那在思想方面有没有……

梁：思想方面他有创新，他有著作，他有一本书叫做《新学伪经考》，还有一部什么书，两部书都是很出名。可是内行人、懂得的人，知道他这两部书从旁人那儿偷来的。有一个四川人廖平，康有为的许多思想见解和特别是对古书的看法吧，他都是从这里来的，从廖平来的，旁人都是这么说，他是窃取了廖平的东西发表。

康有为他有他的价值，不过他的价值是在他比较早的时候，比较年轻的时候，他越到后来他越是不行了，后来他有造假的事情，还有我所知道的……比如我知道两件事。一件事，是在陕西西安，城南有一个庙，好像叫卧龙寺，那个庙里头有古代版本的佛经，很有价值，他就把它据为己有。那个时候啊，交通不便，没有铁路，是骡马车。他就把卧龙寺那个好版本的藏经——数量很多，并且很重——装在骡马车上要弄走，已经出了西安的东门，已经走在大路上，西安本地人发觉了，追上去，不答应，把书弄回来，有这么一次事情。这事我为什么能知道呢？因为我19岁、20岁的时候，我到了西安，我喜欢到那个庙里头去，知道这件事情。

There was another incident. In the early years of the Republic, there was a national assemblyman who was a big capitalist. In the late Qing, there was a kind of national bank called the Great Qing Bank. After the Qing court abdication, in the Republic of China, the bank's name was changed to the Bank of China. There was a director and a deputy director. The deputy director's name was Yu Fancheng. I was very friendly with Yu, and it was he who reported to me his encounters. Yu Fancheng was the deputy director of the Bank of China. Later he left the Bank of China, but he became a "private"

banker capitalist. When a person wanted to borrow a relatively large amount of money from the bank, he must first put up collateral to guarantee the loan. What was used for collateral? Some valuable object that was universally recognized as having great value, such as a famous great painting. Only after the old painting was deposited in the bank as collateral would the bank lend him the money, for instance 2000 silver dollars.

Kang Youwei knew that there was a certain famous painting securing a loan in the bank, and asked Mr. Yu to take it out so that he could view it. Of course, as Kang was such a celebrity, Yu took the painting out and hung it up for viewing. Kang praised it non-stop, sighing and exclaiming how excellent it was and so on. Then he asked Mr. Yu Fancheng if he could take it home to enjoy it carefully. Because Kang was such a well-known person, Mr. Yu felt that if he made such a request, he had no choice but to agree to let him take the painting home. He thought that perhaps Kang would enjoy it for two or three days and then bring it back. After three days, he went to Kang and asked for the painting back but Kang didn't give it back. After several more days he again went to Kang and asked for the painting, but he still refused to give it to him, saying that he wanted to appreciate it for some more time. How many days had passed! This wouldn't do. Yu Fancheng thought to himself, "You want to take possession of it yourself?" So he went to Kang Youwei's house with a lot of people, and forcefully took the painting back. Yu himself told me about this incident.

再一件事情。有一个民国初年的国会议员，是一个资本家。在清朝末了有一个国家银行叫“大清银行”，后来清朝退位了，就称为中华民国了，就改为“中国银行”。中国银行的第一个主事人叫做总裁，还有一个副总裁，姓余，叫余凡澄（音同）。余凡澄跟我相熟，余凡澄把他遇见的事情告诉我。余凡澄他是中国银行的副总裁，后来他离开中国银行了，但是他是一个私家银行的资本家。有人来向银行借钱、借款，或者借比较多一点的钱，就要抵押，才能保证银行借钱。拿什么来抵押呢？用一幅很贵重的、有名的画，人人公认这个价值很大，古代的画，古画就作抵押品在银行里头，银行就贷给他比如说是2000块钱。

康有为就知道了这个有名的画在这个银行里头，他就去找到余凡澄，他说：“听说这个画在你们这个行里头，你拿出来我们看一看，可不可以？”那么当然他康有为是个大名人啦，这个余先生就从行里头把那个画拿出来，挂在那儿看，这个康有为非常地赞扬：“啊呀，这个画多么好啊”，在那儿叹息，在那儿看。末了，他说：“可不可以我拿回家去，我慢慢再多看看呢？”这个余凡澄因为他是大名人嘛，一定要这样要求嘛，只好答应他，让他拿走了。他拿走的时候，他也不说在家里头仔细看看，多看两天、三天这样子就送回来了。过了两三天去要，他不给，再过几天去要，还不给：“我还要多看一看。”好多天啊！这个不行了，

这个余凡澄就想：“怎么你想霸占这个东西啦？”那么就带了很多很多人强迫地到康有为的家里头把这个东西取回来了。这个余告诉我的。

So I knew about these two incidents, one in Xi'an, and one in Shanghai. In his later life his behavior was bad, especially [in the case of] his disciple, a student named Chen Huanzhang, who established a "Confucian Church." He needed money (donations) to build a church on Xidan Street [in Beijing]. He set certain regulations. If you contributed five thousand silver dollars, you were so forth and so on, and if you contributed ten thousand, you were so forth and so on, so as to wheedle contributions out of people. That sort of thing was just awful! This was the worst kind of sordid vulgarity and ignoble philistinism that was utterly devoid of noble, lofty thought! So this was what Kang's student Chen Huanzhang was like.

A few words on representatives of Neo-Confucianism

Alitto: Aside from you, who else in the modern period is a representative Confucian personage?

Liang: I can't say, but I will address a few words to the issue. There's someone named Feng Youlan. When I was teaching at Peking University, he was a student in my class. He studied in America. While in America, he often sent letters to me, corresponding with me. After he returned from America he became a university professor, a very famous one. He authored three books, especially [well-known] is the one titled History of Chinese Philosophy. This man—each person has his own disposition and individual personalities are different—he appears to be a Confucian and to have developed and elaborated upon traditional Chinese thought. It appears that way, but in reality, he behaves more like a follower of Laozi and Zhuangzi. The Laozi school is not like the Confucian in that a follower does not have a commitment to one's own integrity and to honesty. He isn't that way. He is more like what, like cynical and frivolous. He is not like [a Confucian] who loyally follows and acts according to the principles he believes in, who does not bend with the prevailing wind. No, he is more cynical and frivolous.

Alitto: Actually we Westerners who study China generally acknowledged this.

Liang: Later, didn't that Jiang Qing think highly of him and go to Peking University to see him? He even gave some poems to Jiang Qing. Later Jiang Qing was defeated, so his reputation withered. He is still alive, still at Peking University, but he doesn't have any work responsibilities. All he has now is a good salary, that is, a professor's

salary. His health has not been good either. He has cataracts, and someone supports him when walking.

我知道的这么两件事，一个在西安，一个在上海。他后来他品行很不好。特别是他有一个弟子，一个门人、学生，叫陈焕章，办“孔教会”，在北京西单修房子，需要款，叫“劝募款”，定一个条例，如果捐5万块钱就怎么样，捐10万块钱怎么样，诱人捐款。这个简直要不得，完全是一种名利的俗心，俗得不得了，一点高尚的意思都没有。这是他的学生，康有为的学生陈焕章。

点评“新儒家”代表人物

艾：除了您自己以外，在现代最具有代表性的儒家人物是谁？

梁：我说不上来。说不上来我还要说几句话。有一个人叫冯友兰，我在北京大学教书的时候，他是我班上的学生，他是留美，在美国。他留美的时候还常常从美国写信给我。从美国回来就做大学教授，很出名，写了三本书，特别是他有一部《中国哲学史》。这个人呢——一个人有一个人的性情，个性不同了——他好像是儒家，好像是发挥中国传统思想，可其实呢，他的为人是老庄的吧。老子一派，就是不像那个儒家，好像忠于自己，一定要很正直，他不是那样，他是有点……有点玩世不恭，他不是那么本着自己的相信的道理、很忠实、不随风转舵，不，他有点像玩世不恭。

艾：其实这一点我们西方研究中国的人都是公认的。

梁：后来不是那个江青很赏识他，到北京大学去看他？他还把诗词送给江青，后来江青失败了，所以他的名气也就不好了。这个人还在，还在北京大学，不过不担任什么事情，只有一个好的待遇，教授的待遇。人也不行了，眼睛有白内障，走路也旁人扶着。

Alitto: No one is representative [of Confucianism]?

Liang: No. There is another philosopher. He cannot really be considered as representing Confucianism. Someone named He Lin. He is better [than Feng], not so willful and wanton. He teaches mostly German philosophy, Hegel. There is another philosopher named Shen Youding. They all play an important role in the Institute of Philosophy at the Chinese Academy of Sciences. There is another philosopher in Beijing; he studied in the U.S., his name...it's on the tip of my tongue.

Alitto: Do you think that the Hong Kong Confucian thinkers like Mou Zongsan and Tang Junyi have made a contribution to the elucidation and development of modern Confucianism?

Liang: They have made a contribution.

Alitto: Have you read their publications?

Liang: I have here six volumes by Tang Junyi. I haven't read Mou's.

Alitto: What about Tang Junyi?

Liang: He's good. I think that what he has to say about Confucianism is all accurate. Mou is a Shandongese, Tang a Sichuanese. I have been sent Tang's works. I have six big volumes of his. Right now I have only two volumes left of the six. Someone took four away. It's a pity that Tang has already passed away. Mou is still alive.

Alitto: Yes, Mou is still alive. Are they considered Xiong Shili's students?

Liang: Mou is. It seems that Tang has no connection with Xiong. Mou has been on intimate terms with Xiong. He addressed him as teacher. It seems Tang did not.

Contemporaries who influenced me

Alitto: Have any others influenced you?

Liang: If you are referring to my contemporaries, such as my friends and teachers, there are two people. One was a Fujianese. Mr. Lin, someone I very much admired. In thought and in his actions as a man, I revered and admired him, and he was also someone who influenced me greatly.

艾：没有一个具有代表性的？

梁：没有。还有一个哲学家，他也不一定是代表儒家，有个叫贺麟的，贺麟比较好，比较不是那样随便，不过他是讲德国哲学，讲授黑格尔的。还有一个哲学家，叫沈有鼎，姓沈，沈有鼎。这都是中国科学院哲学研究所的重要角色。还有一个也是在北京的哲学家，留美的，叫什么名字……口里头说不出来，心里头有。

艾：您觉得牟宗三、唐君毅，在香港的儒家思想家对现代的孔孟之道的发展和阐明有没有贡献？

梁：有贡献。

艾：他们的著作，您看过没有？

梁：我这里有的就是还是唐君毅的，有六本，没有看见牟的。

艾：唐君毅的怎么样呢？

梁：他还好，对儒家所见还正确。牟宗三是山东人，唐君毅是四川人。唐君毅的一些著作他们都送给我，有六大本。现在没在这里，可能还有两本，有四本让旁人拿去了。可惜唐已经故去了，牟还在。

艾：是，牟还在。他们算是熊十力的学生吧？

梁：牟算是，唐好像跟熊没有什么关系。牟是亲近过熊先生，他称熊先生为老师，好像唐没有。

同代中对我有影响的人

艾：也有别人影响过您的生活或者是思想吧？

梁：如果不说古人，说跟我同时代的人，说我的朋友、老师，那是有两个人。一个是福建人林先生，林先生是我很佩服的，在思想上，乃至为人都是我很恭敬、很佩服，也是对我有影响的一个人。

Alitto: Who is this Mr. Lin?

Liang: Perhaps some people don't pay him much attention, but in fact he was someone of much worth. His name was Lin Zhijun, and his sobriquet was Zaiping.^[3]

Alitto: I didn't pay attention to him either. How is it that you knew him? Was he your teacher or your friend?

Liang: First I'll say something about Mr. Lin. He was of extraordinarily noble character. It seems that people didn't pay much attention to him, that he was not all that famous. In fact, he was the person who Liang Qichao most admired. When Mr. Liang was about to die, he sent a great box of his writings—manuscripts (some finished, some not), poems, essays (some dealing with politics, some with academic matters)—a great big box, with the injunction to his children—to give the box to Mr. Lin, wanting Mr. Lin to examine them and decide which were wanted and which were not necessary to keep, and to decide on his collected works after his death. So this book of Mr. Liang Rengong (Qichao) published after death—generally these are called "collected works," sometimes titled "complete works"—was titled "collected works" for publication. When he was still alive, many bookstores published many of his works for him, so the *Works of the Ice Drinkers Studio* is extensive. [Before he died] he gave the great box filled with his published works, his unpublished works, and unfinished manuscripts to Mr. Lin, to have Mr. Lin examine and approve them. The final result was the *Collected Works from the Ice Drinkers Studio*. I mention this to prove Mr. Lin's erudition, and even more to prove his moral character. His moral character was excellent, the highest.

There is another matter I want to mention. Mr. Liang Rengong was very active in politics. He had a political party that he led. The name of this political party changed through time. He wanted to have Mr. Lin join his political party, and for a time Mr. Lin did participate,

but after a short time, he withdrew. Even though Mr. Lin was a very good friend of Mr. Liang, he would not engage in this business of his with him. Why? Because in seeing Mr. Liang in politics, he saw that Mr. Liang was politically ambitious and that he wanted to do a lot politically. But Mr. Lin had no such ambition. Mr. Lin found fault with Liang Rengong, disliked Liang's moral disorder. Mr. Lin truly refused to be corrupted by bad influences. You could say that he was as clean as a whistle in all aspects—politically, socially, or whatever—throughout his life. So it was because of his character that Liang Rengong admired and respected him so, and that he left his affairs in Lin's hands after his death—to examine and finalize his writings, to decide which to keep and publish. So, from this incident you can see Mr. Lin's great worth. His merit was truly tremendous. He was 14 years older than I. I'm now 88. If he were still living, he would be over a hundred now. I truly admire him. I can't be considered his student, but I should call myself his later generation. He was very good to me and looked after me. I often introduced my friends to him, for example, Wu Guanqi and Xiong Shili. They both met him through me, because I was so close to him. Mr. Lin used to call Xiong Shili "Old Xiong." They all developed deep friendships. Later, Mr. Xiong would always give his manuscripts to Mr. Lin for inspection.

艾：这位林先生是谁啊？

梁：也许有些人不大注意他，可是实际上这个人是很有价值的。他名字叫林志钧，号叫宰平（应是字宰平），他是福建人。

艾：我也没有注意他了。怎么认识他的？算是您的一位老师啊，或者朋友啊，或者……

梁：我就先说一说这个林先生。林先生这个人，人品最高了。他好像是人不大留意，好像不大出名似的，其实呢，他最为梁启超所佩服。（梁启超）临死，把自己一大箱著作、手稿，有写完的，有没有写完的，有诗，有文，有论政治的，有论学术的，一大箱，嘱咐自己的儿女交给林先生，要林先生审定，哪个要的，哪个不必要的，死后出我的文集都由林先生决定。所以梁任公先生的……死后出来的这部书——普通叫“文集”，有时候说完全的“全集”，梁任公先生的著作用“文集”的名义出版的，在我在的时候，很多书店给他出了，所以《饮冰室文集》是好多好多了。可是他把所有的东西，以及没有出版的东西，乃至未写完的东西，一大箱都交给林先生，由林先生审定，最后出了《饮冰室合集》。我说这个话，证明林先生的学问，更证明林先生的人品，他人品最高了。

还要说一件事，梁任公在政治上很活动的了，他有他领导的政党，政党的名称也前后有些变化，他要拉林先生到他的党里头，林先生也一度参加，但是时间很短，他就脱离了，尽管跟梁任公还是很好的朋友。他说你这个搞法啊，我不行，我不跟你一块搞。为什么这样子呢？为什

么他不跟梁任公一块搞？梁任公是在政治上有野心的，他要大有所作为的，可是这一点林先生没有，林先生就嫌梁任公、讨厌梁任公有点乱七八糟。林先生是这样一个人，洁身自好，他一生干净极了，在政治上、在社会上他是这样一个人。所以梁任公佩服他、敬重他，把身后的事情交给林先生：我这个著作都请你来审定，哪个要的、哪个不要的，你定了之后出版。从这个地方可以看出来林先生的价值，这个价值了不起。他大我14岁，我现在88，所以他如果还活着，那就超过100了。我很佩服他，我很佩服林先生。我不能算是他的学生，但是我应当是对他自称后学。他对我也很好、很爱护，我的朋友我常常介绍给他，比如伍先生，他也跟林先生好，刚才我说的熊先生，都是因为我的关系与林先生相好——林先生管熊先生叫“老熊”，他们感情都很好。熊先生后来有什么著作都要请林先生看。这是说林先生。

Alitto: How did you get to know him?

Liang: They were all of the older generation. Mr. Lin was 14 years older than I, Liang Qichao 20 years, and Mr. Cai Yuanpei 30 years. I was really fortunate. The older generation of scholars all thought highly of me very early on. They didn't wait for me to seek them out; they sought me out, protected and took care of me before I had really done anything. Mr. Lin was also like that. So it was with Liang Qichao, and also with Cai Yuanpei. They patronized me and appreciated my abilities, and looked out for me while I was still very young. I wasn't even 30, just 28 years old when Mr. Liang Qichao came to see me at my home. He was such a celebrity, and I wasn't at all famous. At that time, the older generation of scholars were modest and humble, and looked out for young people of promise, and wanted to help them. Their desires were admirable. Mr. Lin, Mr. Liang and Mr. Cai were all like this. If Mr. Cai hadn't thought highly of me, I would never have been able to teach at Peking University. I was very young.

Alitto: Did Mr. Lin also seek you out?

Liang: Yes, I'll tell you of my experience. When I was 24 years old, I took an unimportant position in the central government of the time. It was as a secretary in the Ministry of Justice. Right before I took the position, my article "On Tracing the Origins and Solving Doubts" came out. In the Ministry there was a man named Yu [Shaosong] whose rank was slightly higher than mine. I can't think of his name right now. He was a friend of Mr. Lin's. Mr. Lin read my article "On Tracing the Origins and Solving Doubts," and so asked Mr. Yu to introduce us. (He had heard that I was working there.) He told me that he wanted to get to know me. So, that person who was my friend, who was working in the Ministry of Justice with me, introduced us and we became friends. Didn't I say just now that when

I was 28, Mr. Liang Qichao came to see me and introduced himself? That time, Mr. Lin came with him. Mr. Liang also brought his son, Liang Sicheng, the architect. There was another person of some repute with them, Mr. Jiang Fangzhen. The four of them—Liang Qichao, Jiang Fangzhen, Lin Zaiping and Liang Sicheng—came in the same car to my home to see me; at that time I was 28 years old.

艾：林先生您是怎么认识他的？

梁：这个是好几位前辈，林先生是我的前辈，大我14岁，梁任公先生也是我的前辈，大我20岁，蔡元培先生大我30岁。我很幸运，这些个前辈、老先生他们很早看重我，没有等我去求他们，他们就对我表示一种爱护。都是这样，林先生也是如此，梁任公先生也是如此，蔡元培先生也如此，我都是受他们的知遇、爱护。年纪很小的时候，我还不够30岁，28岁，梁任公先生就到我家来看我，他是个大有名的人，我还没有出名那个时候。他们老前辈虚心，爱护有前途的青年，帮助青年，他们的意思好得很。林先生如此，梁先生如此，蔡先生更是如此。没有蔡元培先生对我的赏识，我不能进北大，我还年纪轻得很。

艾：那林先生也是去找您了？

梁：对。就我的过去的经过说吧。我是在24岁的时候就参加当时的政府，做一个小事情，做司法部的秘书。后来，就我在司法部做秘书的时候，《究元决疑论》在那个之前发表了。在司法部跟秘书在官位上差不多、稍高一点的，那个人叫什么名字来的？那个名字叫余什么……，我一时说不上来那个名字了（应为时任司法部参事的余绍宋）。那个人跟林先生相熟，林先生就对那个人说——因为林先生看见我那个《究元决疑论》了——说请你介绍，请那个朋友，那个朋友在司法部跟我一块，你跟梁表示，我想跟他做朋友。这样经那个人介绍，跟林先生就成了朋友。刚才我不是说我28岁那年，梁任公到我家看我吗？就是林先生同他来的。同他来的时候梁先生还带着他的儿子，他儿子叫梁思成，是建筑学家，还有一位有名的人，叫蒋方震。那一次，他们——梁任公、蒋方震、林宰平跟梁思成，他们四个人坐一辆汽车来我家看我的，那个时候我28岁。

Next is Mr. Wu Guanqi. Mr. Wu was also a person of great merit. If someone were to ask me, which person whom you personally have seen in your entire life you most admire, my answer would be him. He was a good friend of Mr. Lin's, but different from him. Mr. Lin was an erudite, learned man. He very much liked to write poetry. But this Mr. Wu did not. He was a down-to-earth and practical-minded man. Didn't I just say that the most important thing I've done in my scholarly life was my book, *The Human Heart/Mind and Human Life*? I have felt that I have a very heavy, great responsibility, that is, to propagate Mr. Wu's own learning and his character to the world. Mr. Wu was an unadulterated Confucian, a practical-minded, pragmatic Confucian. He manifested this throughout his life...

I'll give you an example. When I was 36 years old, I had two friends, one surnamed Wang and the other Huang. We three friends went to see Mr. Wu. At that time, Mr. Wu had a very heavy responsibility. The Nationalist Party had a Nationalist Revolutionary Army, which had a general headquarters. Its commander-in-chief was Chiang Kai-shek. The Chief of Staff was Li Jishen. Chiang Kai-shek, as commander-in-chief, set out on the Northern Expedition. Li Jishen, as Chief of Staff, remained in Guangdong. Mr. Wu and Mr. Li were very good friends. Mr. Li regarded Mr. Wu as his teacher. So, when Li had the responsibility of administering the rear area, he appointed Mr. Wu to be the Director of the Office of the Chief of Staff. The three of us went to Guangdong. I was 36 years old at the time. We went to see Li Jishen, and also went to see Mr. Wu in Wu's office. Noontime came, and he invited us for lunch. After lunch, he said, "Make yourselves at home. Talk together freely. I have to rest a bit. I'll nap for fifteen minutes." He sat down on a chair, closed his eyes and fell asleep. After he had slept for fifteen minutes, he woke up. I admired this greatly and was greatly astonished. Why? It was right at that time that I was suffering from insomnia. So when I wanted to sleep I could not. When I didn't want to sleep... He said he would sleep and he fell asleep right away. He said he would wake, and fifteen minutes later he woke up. My Goodness! I was truly astonished, and admired it! This is indicative of how he was serenely inner-directed. He actually was able to keep the body and the spirit united, really able to be inner-directed, quite an achievement.

其次再说一下伍先生（伍观淇，字庸伯。可参阅《伍庸伯先生传略》一文，见《梁漱溟全集》卷四）。伍先生的价值很高。假如有人问我：你一生所亲自见到的、最佩服的人是谁？那我就回答是这个（人）。他跟林先生相好，可是跟林先生不相同。林先生学问很丰富，他很喜欢作诗词，可是这个伍先生不作，他是一个脚踏实地做人的一个人。我不是说，假定说在学术方面我最重要的就是写《人生与人心》（应为《人心与人生》）吗？可是我自己认为我有一个很重大的责任，很重大的责任是什么呢？就是替伍先生，把他的学问、为人，我要介绍给世界、给后人。伍先生这个人，就我来看，我认为是一个纯正的儒家，脚踏实地的儒家。这个纯正的、脚踏实地的儒家表现在什么地方？表现在他的生活，在生活上能够“自主自如”。

比如我，特别是我从前的时候，我很早的时候，举个例吧，我36岁的时候，我同两个朋友，一个姓王，一个姓黄，我们三个人去看伍先生。这时候伍先生正在负一个很重要的责任，负一个什么责任呢？国民党啊，叫做国民革命军，国民革命军有总司令部，总司令是蒋介石，总参谋长是李济深，蒋作为总司令就出师北伐，从广东出来军队要北伐，李济深就作为总参谋长留守广东。伍先生跟李济深他们是很好的朋友，差不多李济深都把他当老师。这个时候，他担任留守后方的职务的时

候，他就请伍先生给他做总参议办公厅主任，负一个很重要的责任。我同两个朋友，……我们三个人，那时候我36岁，去广东，主要是看李济深，也是看伍先生。伍先生正在那负责做总参议办公厅主任，我们三个人就到他办公的地方同他谈话。到了中午了，他留我们吃饭，吃完饭，他就对我们三个人说：你们随便坐，随便谈话，我要休息，我睡15分钟。他就坐在一个椅子上，闭起眼睛来就睡着了，睡了15分钟就醒了。我非常地佩服，非常地惊讶，为什么呢？因为这个时候我经常闹失眠，失眠的人想睡睡不着，不想睡的时候又……他说睡就睡了，说醒，15分钟说醒就醒。哎呀，我真是惊讶、佩服！这就是表明他生活自主自如。他是真正能够把他的身体、精神很统一，很能够自主，很能够自如，这个是很了不起。

Alitto: I admire people like that too. Speaking of influence, how did Messrs. Wu and Lin influence your life, or your thought?

Liang: I admired Mr. Lin very much. However, he did not influence me as much as Mr. Wu did. If I was to emulate someone, I would emulate him.^[4]

Alitto: That is, the influence is... Mr. Wu was your model. Is that what you mean?

Liang: Right. I should add a word about Mr. Wu. He was an authentic military man. At the end of the Qing, he already had been engaged in training the new style armies that were modeled on foreign armies. He was training the New Armies, and commanded troops. Later he participated in the 1911 Revolution, and even after that, he went to Infantry University and graduated from it. After graduation, he remained at Infantry University as an instructor. He was originally a student there, but because he made excellent grades, he later was an instructor there. He diligently put into practice the two old sayings... (Mr. Liang writes them down for Alitto. According to Liang's "A Brief Biography of Mr. Wu Yongbo,"^[5] these two old sayings should be "Be true to your words; in your conduct be sincere and respectful."^[6]) This was the kind of man he was. After he graduated, at that time he went to be a section head in the Third Bureau of the Chief of Staff Headquarters. Responding to Yuan Shikai's attempt to become emperor, all of the Beijing officialdom—from high officials down to their underlings—was pandering to Yuan Shikai, sending memorials and petitions urging him to become emperor, expressing their support. Officials high and low in every government office had to sign. Wasn't he the section head in the Third Bureau of the Chief of Staff Headquarters? They wanted him to sign, but he was unwilling to. He said, "When I put my name to something, I must be certain that it is right. I am presently thinking over whether I should sign, and have not made a decision, and have not affirmed that I

should sign. So, I cannot sign." Everyone said, "All else signed, but you don't sign; isn't this matter dangerous or bad?" That can't be helped.^[7] Later it turned out fine.

艾：我也很佩服这种人。那说到影响，林先生跟伍先生这两位是怎样影响您的生活，或者影响您的思想的？

梁：林先生是我很佩服的了，尽管我很佩服，可是给我的影响不如伍先生。如果说我愿意学，那我愿意学伍先生。

艾：那就是说影响是，伍先生当过您的榜样，是这个意思吧？

梁：对。我补充一句话，这个伍先生是一个地道的军人。清朝末年开始模仿外国练新式军队，他是练新军里头的人。练新军带兵，然后参加辛亥革命，然后又到陆军大学，在陆军大学毕业，毕业之后留在陆军大学做教官，他原来是学生，因为成绩好做教官。他力行两句中国的古话（梁先生写给艾）（据《伍庸伯先生传略》，这两句古话应是“言忠信，行笃敬”）。他在陆军大学毕业了，他就到那个时候的参谋本部第三局做一个科长。赶上袁世凯要做皇帝，北京各官府，从长官到下属，都迎合袁世凯，上书“劝进”，劝袁世凯做皇帝，表示拥护，各衙门大大小小的官吏都要签名。他这个时候不是做参谋本部第三局的科长吗？要他签名，不肯签名，他说：“我一定要认为我签的是对的，我才能签名。我现在考虑我应不应该签名，我还没有决定，还没有点头认为这是应该签的，所以我不能签名。”大家说人人都签名，你不签名，这个事情怕危险吧？不好吧？那也没有办法，他就是这样。后来也没有事。

The War of Resistance to Japan started up; the Japanese were invading China. Mr. Wu commanded guerillas, about 2000 men, in Guangdong. He was a guerilla commander dealing with the enemy. From the time that the Japanese first occupied Guangdong, to the time when the Japanese withdrew from China, Mr. Wu went through eight solid years as a guerilla commander. But his area of activity was not the entire province, but rather only a four-county area.

There's an incident that happened during this period that I should mention. He was always able to predict the enemy's actions. Once he was leading a part of his troops—the 2000 men were split up, not [all] with him. He had not more than a few hundred, something like 300 men, so there were 300 men with him, and the 2000 were distributed in several places. There was an intelligence officer sent out to spy out a certain area. That intelligence agent returned to report, saying that there was a body of the enemy, possibly 300 men—about the same number of troops that he [Wu] had with him—coming north from the south, coming to their location. Possibly they were coming to attack? Mr. Wu thought for a moment, and said that the enemy was not tracking them to attack and that he reckoned that the enemy's target was such and such a place. Everyone half believed him, thought his

reckonings [might be] correct, but weren't completely sure. He then said to everyone, "You keep watch. I want to rest," because he was not too strong [physically]. In the countryside outside the county town there was a high platform which was a stage for opera performances for the lunar New Year. He had a chair, said that he was going to rest, and so he rested. At this time everyone on the one hand was afraid that the enemy was coming, because the spy had reported that over 200 of them were coming in this direction, and on the other had believed the commander's words—that the enemy was not pursuing them but had another target, but no one dared make predictions about this matter. Probably the commander was just resting, and didn't necessarily fall asleep. Someone went onto the stage to look at him and he had fallen asleep after all, and was sleeping very soundly. That is to say, he was able to "pick it up, and put it down." Ordinary people cannot pick it up or put it down. He was truly serenely self-directed. This kind of learning is not book learning, and isn't the kind of learning that is casually chattered about. This is Confucius' life learning.

抗日战争起来了，日本人侵略中国，伍先生带着游击队，大约两千多人，在广东，做游击司令，跟敌人周旋。从广东被日本人占领，一直到日本人失败、退出中国，他始终担任游击司令，在广东。不过，他这个游击司令是一个范围的，叫第几区的司令，那个区是管四个县，不是全省的，有四个县是他的范围，一直抗战8年，他就担任8年的游击司令。

他在当游击司令的时候，还有这样的故事：他料想敌人呢，“料敌如神”。有一次他带一部分军队——有2000人，2000人是分开的，没有都跟在他身边，他身边不过几百人，比如300人的样子，身边带着300人，2000人分布在几个地方、几个点上，还有谍报的人——出去侦探的。到了某一个地方，那个谍报的人来报告，说是现在有一部分敌人，可能比如说是300人，跟他自己身边的人数差不多，从南往北来了，就要到我们这个地方，可能就是来打我们吧？伍先生想一想，他说不是，他不是来跟踪我们、打我们，我推想他的目的地是在哪个地方。大家也就半信半疑，也以为他料想得对，也不敢完全把握。他就对大家说：你们警戒着，我要休息休息。因为他身体不是太强。乡间啊，在县城外边有一个高的台子，是预备过春节过年演戏的戏台，他就有一个椅子，他说我要休息一下，他就休息了。大家这个时候，一方面是害怕敌人来，因为谍报说两百多人往这个方向来，一方面也相信司令员的话，他不是来追我们，他是另外有目的。不过这个事情，谁也不敢断定，恐怕司令在上面休息，也不过休息休息吧，未必睡着。有人到戏台上去看他，居然睡着了，睡得很熟。就是说，他提得起，放得下，普通人提不起，放不下。他是真正能够在他的生命上自主自如。这个学问不是书本上的学问，不是随便讲一讲、说一说的学问，这就是孔子的生活之学。

Don't I often mention what Confucius had said, "At fifteen, I set

my heart upon learning." What kind of learning was that "learning"? After that he said, "At thirty, I established myself." We don't know either what this "establishment" is, and how he established himself. Age by age he was speaking about life and being, and didn't speak about anything outside it. The disciple he valued and loved the most was Yanzi (Yan Hui). What was Yanzi's strength? One was that he did not take his anger out on others, and that he did not repeat the same mistake. How does one not take anger out on others? How does one not repeat the same mistake? It's not to be guessed at wildly. But we see clearly that he didn't speak about anything else except for his life and being. So Mr. Wu's learning and skill is authentically and thoroughly Confucian. He walked the Confucian road most correctly. I've never seen another person like this. He did not talk philosophy.

The ones I admire most

Alitto: Who is the Chinese you most admire, either in the past or at present?

Liang: Very early, when I was young I admired Zhang Shizhao. His sobriquet was Xingyan. His nom de plume was "Qiutong" ("Autumn Tong tree"). When I was still young, in middle school, between 14 and 19 years old—during this time I read Mr. Zhang Xingyan's articles. I didn't know the [real] name of this person. I just saw his nom de plume Qiutong.

我不是常常讲，孔子所谓“十有五而志于学”，那个学是什么学呢？底下他说“三十而立”，三十而立我们也不知道是什么，怎么一个立法啊？一层一层地都是在说他的生命、生活，没有说到外头去。他所最欣赏、最心爱的徒弟是颜子，颜子的长处是什么呢？一个是“不迁怒”，一个“不贰过”。怎么样“不迁怒”，怎么样“不贰过”，我们也不好乱猜，不过看得很清楚，他没有说旁的，他说的是他自己的生命、生活。所以伍先生的学问功夫是真正的、彻底的儒家，他把儒家的路子走得最正确，我没有看见第二个人这样。他不谈哲学。

我所佩服的人

艾：您最佩服的中国人，无论是过去的或者是现在的中国人是谁啊？

梁：我很早、就是我年轻的时候很佩服的，是章士钊，他号叫章行严先生（应是字行严）。他写文章的笔名有时候写“秋桐”——“秋天”的“秋”，“梧桐”的“桐”。我年纪小的时候，我在中学读书，14岁到19岁毕业了，十四五六七八，这个时候我就看见章行严先生——章士钊了——他的文章，不知道他这个人的名字，姓名不知道，就是看见他的笔

名叫秋桐。

One form that his articles took was as European dispatches. He wrote articles at Europe for newspapers. I read them with great interest. I especially liked his discussions of political systems. Because at that time China had started to copy Western political institutions, there was the issue of a national parliament, so there was much discussion over whether to adopt a bicameral or unicameral assembly. Other matters that he wrote on were the English system of a cabinet responsible to the parliament, a party cabinet. I was extremely interested in these essays. At that time in my life, I was fanatical about government reform in China and most admired the English-style government. So, just then he was writing on those things and discussing them—such as in learning from foreign countries, whether China should adopt a bicameral system or a unicameral system. I liked to read these essays of his very much, although I didn't know who the writer was. I was in my teens, in middle school in Beijing, and after reading his articles in newspapers, I admired this person and his writings very much.

Later, I started reading the *Minlibao* of Shanghai. Most of its articles were also on politics. He wrote for it too—called himself Xingyan. I said to myself, "This Xingyan must be the Qiutong I have read before." I still didn't know his real name, but I judged them to be the same person. Later, Liang Qichao established a publication *Guofengbao* in Japan. It also mostly featured articles on politics and government. Once, there was an article on translation of Western scholarship or academic things into Chinese. Yan Fu [Yan Jidao] had in the past also discussed this problem of translation. He had three criteria: fidelity or faithfulness, ability to convey, and elegance. Yan was very particular about it. So in translating foreign writings, he would adhere to these three criteria and always translated them into literary Chinese, very elegant. He did not use colloquial style. This is the problem of translation. So, in the *Guofengbao*, I read an article on the translation problem. It was signed Mingzhi. The topic was very different from his other writings on politics. It was not signed Qiutong, or Xingyan, but a new pen name, Mingzhi. However, I believed the three must have been one and the same. Later it proved to be accurate.

他写的文章，一种是欧洲通讯，他人在欧洲，写给报纸，把欧洲情况，叫做欧洲通讯、留欧通讯，我看得很有趣味。特别是呢，他有些个论政治制度的文章，因为那个时候中国要学外国，政治上学外国，那么就有开国会的问题，有议院。议院有一个问题，就是还是两院制呢，还是一院制？议院跟政府的关系，像英国，政府是对国会负责，对众议院负责，责任内阁，政党内阁。他写文章讨论这个问题，我非常有兴趣。

因为那个时候我们都是热中国的政治改造，最欣赏的、最觉得好的是英国式的政治，他刚好是介绍这个东西，讨论这个东西，中国要学外国，就是学两院制呢，还是一院制就可以了呢？有没有必要两院呢？他这些个文章我都爱读，可是我不知道他是谁，只留个笔名。这是在我年纪轻的时候，年纪只有十几岁的时候，而且在北京中学读书的时候，看报纸、看文章看到这个，我就欣赏这个人，欣赏这个人的议论、文章。

后来呢，就看见上海有一个叫《民立报》，《民立报》发表的文章也多半是论政的居多，这个文章笔名就写“行严”。我还是不知道他到底姓什么，可是我看见行严的文章，就想这个人的文章恐怕跟秋桐是一个人的，真的姓名我还不知道，我判断他恐怕是一个人的。后来呢，在日本，梁启超——梁任公出了一个刊物叫《国风报》。《国风报》上偶然登了一篇文章——《国风报》多半都是论政的——偶然登了一篇文章，是讲把西文、西洋学问的名词翻译成中文，翻译、译名的问题，怎么样的译名算是译得好。因为过去严复——严几道先生他就讨论过译名的问题，他有三个标准：一个是要信；还有一个达，表达出来；第三个还要雅，文雅。严先生论翻译讲究这个，他翻译外国东西要遵守这三个标准，所以他翻译出来外国的东西，都是文言的，都是很文雅的，没有白话。这个问题就叫做译名问题、翻译名词的问题。在《国风报》上看见有一篇文章，是讨论译名、讨论翻译问题，署名叫“名质”——“人名”的“名”，“物质”的“质”，讨论的问题不是论政，跟我看到的文章不相合。这个名质用的人名、笔名，既不是秋桐，也不是行严，而是用一个很新鲜的“名质”两个字，但是我一看，这三个名字实在是一个人的，我的判断是这样，后来证明果然是一个人的。

At that time he was in Japan publishing a journal called *The Tiger* (*Jiayin*). It was at that time that I corresponded with him and only after that did I know his name was Zhang Shizhao. Later he came to Beijing. I liked being with him very much, and admired him. After that, however, I was greatly disappointed. Why? The revered Mr. Zhang, older than I by quite a bit, was a very talented and able person, so his desires were also powerful. So his personal life was corrupt. He smoked opium, gambled, visited prostitutes, and had concubines, altogether three. I was most disappointed. But although I was disgusted with his personal character, up to the time he was 90, I still associated with him.

Alitto: He passed away in Hong Kong in 1973.

Liang: Right, at age 93.

Alitto: Look, this isn't bad. Although his life was this way, he still lived to 93. It seems it didn't have any influence on his health!

Liang: Yes, it would seem that way.

Alitto: Others whom you admired were...

Liang: This was someone who I admired when I was young.

There's another Zhang, that is, Zhang Binglin (Zhang Taiyan). I think his scholarship was good. I think that he was still a layman [in Buddhism], that he knew very little about [true Buddhism]. Wasn't he an important revolutionary figure in his youth? At that time, he was critical of Confucius. Later he changed, and then revered Confucius in his old age.

Alitto: Before the 1911 Revolution he was an advocate of the "National Essence." He didn't want Confucius, but wanted to retain Mozi and Xunzi. What aspect of him did you most admire?

Liang: His erudition was very profound, and his personality was independent, original. He never went along with everybody else in his opinions. He was of strong character.

Alitto: Anyone else? You have spoken of... (Liang: Two Zhangs.) Later in the 1930s, 1940s and 1950s, was there any change in the people you admired?

Liang: Speaking of famous people of the time, didn't famous figures in China include Kang Youwei and Liang Qichao? I much disliked Kang Youwei, but admired Liang Qichao very much. It also so happened that I was close friends with Liang Qichao, had a lot of contact with him. This was quite extraordinary: as he was of the older generation, he made an overture to me first, when I was still very young, a beginning student. I very much admired this in him. He was twenty years older than I. This was very modest, self-effacing on his part. I was first acquainted with him through his writings in his *New Citizen Journal*, which I liked very much. Later, we got to know each other. In 1920, as I said, he came to see me at my home. He was of the older generation, and he was famous. I was not yet famous at the time. I admired him in my heart. Why did he come to see me? At that time, he was interested in Buddhism. Someone told him that I was teaching Buddhism, so he came to see me. In the area of Buddhism, he was quite modest; even though I was of the younger generation, he was quite deferential. Alas, I lost all of the many letters he wrote me; they were not preserved [referring to them being destroyed during the Cultural Revolution].

这个时候，他在日本出版一个刊物，叫做《甲寅》，这个时候我给他通信，从书信上有来往，我才清楚他的名字是章士钊。后来到北京，我就很喜欢跟他亲近，很佩服他。可是佩服他之后，我又失望，怎么失望呢？因为这位章老先生，他比我岁数大了很多，他是一个很有才的人，多才，多才嘛他就多欲，欲望多，所以他的生活很腐烂——吃鸦片，赌博，赌钱，嫖妓女，娶姨太，娶妾，一个、两个、三个，我很失望，我很不喜欢。虽然很不喜欢，我还是一直到他90岁的时候我还跟他往来。

艾：在香港1973年逝世的。

梁：对了，93岁。

艾：您看这个也不错，虽然生活上这个样子，一样活到93岁，好像没有影响他的身体。

梁：好像是那样。

艾：别人呢，您佩服的就是……

梁：这是我年轻的时候很佩服的。再一个我佩服的也是姓章，就是章炳麟——章太炎先生。我觉得他的学问好。……我认为他是外行，隔膜的，他比较年轻的时候也算是革命的重要人物，他那个时候是有点批评孔子、反驳孔子，可后来又变了，晚年他又佩服孔子。

艾：辛亥革命以前，国粹的道理，孔子不要，墨子、荀子还是要，那您对章太炎最佩服的是哪一方面的？

梁：学问很深造，人品也个性很强，不是一个很随便的人。

艾：有没有别人了？您讲的……（梁：两个章。）后来您到了30年代、40年代、50年代，您佩服的人有没有变？

梁：如果说那个时候，在中国的名人里头不是有康、梁吗？我是不喜欢康。我佩服梁任公，喜欢梁任公，刚好跟梁任公也有来往、亲近，并且这个亲近呢是……我嘛比他是后辈啦，小学生啊，他来我家先看我，很虚心，这点我很佩服他。他大我20岁，他从办《新民丛报》那个时候，我就爱读他的文章，后来就跟他认识了。像刚才所说的，民国九年（1920年），他居然一个老前辈，很有名望的，先到我家里来看我，我那时候还没有名，我心里头很佩服他。那么他为什么来看我呢？原来他这个时候注意佛学，人家告诉他，说我讲佛学，所以他来看我。在佛学方面他很虚心，尽管我们是后辈，他很虚心。可惜他给我很多信，我都损失了，没有保留。（指在“文革”中被毁。）

Alitto: So you had some contact with him until...

Liang: Until the spring of 1929, when he died. In 1929, I returned to Beijing from Guangdong; he had already died by the time I arrived. When I was in Guangdong, we still corresponded.

...I forgot to mention this person I greatly admire. (Liang writes the name.)

Alitto: Yes, Ma Yifu. I know of him.

Liang: Talking about the old Chinese learning, he was extremely well read, especially in the old Chinese books. He had seen much, a person of great understanding. He seemed to have great understanding of all Eastern learning—Confucianism, Daoism and Buddhism. Mr. Ma could be regarded as someone I very much admired.^[8]

Alitto: What was your relationship with him?

Liang: [Our relationship was] only that I admired him, and asked for his advice. He had always lived in Hangzhou. I also went to Hangzhou to see him and ask for his advice, more than once. When the War of Resistance to Japan began, he also withdrew to the southwest, to Sichuan. His friend asked him to teach, and founded a Revival Academy. At the Revival Academy he accepted students and taught and at the same time carved words on a woodblock for printing. Chinese people liked to use woodblock to carve and print books. He carved several books of Confucian works that he held to be important. These included collected works of Luo Rufang (Luo Jinxi), and of Yang Cihu (Yang Jian). This old gentleman's knowledge was abundant. He knew and understood quite a lot, especially in the old scholarship of China. He has died.

艾：您跟他有往来一直到……

梁：一直到后来，到后来民国十八年春（1929年）他故去了。民国十八年我从广东往北方回来，到的时候他已经故去了，在广东的时候，他还跟我通信。

……我就想起来一个人，我忘记说了，这个人是一个我很佩服的。
（梁先生给艾写姓名。）

艾：是，马一浮，他我是知道的。

梁：讲中国的老学问，读书非常地多，特别是中国的老书，他见得多，并且熟悉，很通达，并且他对东方的学术，儒家啦、道家啦、佛家啦，他好像都很通。马先生可以说是我很佩服的一个人。

艾：您和他有什么关系呢？

梁：我仅仅是佩服他，向他请教。他一直住杭州，我也去到杭州去见他，向他领教，不止一次。抗日战争起来了，他也是撤退到西南，到四川，他的朋友请他讲学，成立一个叫做“复性书院”（的学校）。他在复性书院里头一方面收学生，他讲；一方面就是刻书。中国喜欢用木板刻书，他刻了几种他认为是儒家的要紧的书，其中包括我刚才提到的罗汝芳——罗近溪的书，罗近溪的文集，杨慈湖——杨简的文集。这个老先生学问很丰富，知道的东西太多了，懂的东西太多了，特别中国的老学问。他故去了。

...Didn't you ask me whom I most admired among the ancients? I just thought of Zhuge Liang. Zhuge Liang was of noble moral character! There are sayings about him, "Be direct and open." He really was that way, very good! He told his subordinates, "Constantly criticize my faults" —if you see any faults or mistakes you must regularly point them out. He was modest, circumspect and fair. That kind of character is very good. I should say that of all the ancients, I

admire him the most. I made a gift for you, a piece of calligraphy with words of Zhuge Liang's.

Alitto: Did you admire him since you were a child, or...

Liang: I have always admired him. The first time I went into Sichuan, to Chengdu, where there was a shrine to him, I went there and performed the bows. I said, "In my heart I have always wanted to pay obeisance to you. Now having come to your shrine, I must kowtow and pay obeisance to you." The temple had a registry book. I wrote the date that I had come and knelt down to pay respects.

Alitto: His native place was in western Henan.

Liang: Right, he was born there. Didn't he take charge of Sichuan's... The shrine had a written sign "Temple to Zhuge, Marquis of Wu." The shrine was primarily to him, but Liu Bei's tomb was in the back of it. But everyone calls it the Marquis of Wu Shrine, not including Liu Bei. That is, everyone reveres, loves and respects Zhuge Liang. Sichuanese all commemorate him. They like to wear white turbans. Why white? They say that they are "wearing mourning for Zhuge." When the Chinese have a funeral, they wear mourning. After Zhuge died, many of the people in the area wanted to sacrifice to him. Liu Bei's successor emperor Liu Chan didn't like the idea, but it wouldn't work. If you didn't erect a shrine to Zhuge, the people's shrines to him would be even more numerous, so the government built a proper shrine.

Alitto: Another separate question: Who is the foreigner whom you most admire? That is to say, among those you have heard about, or have read about, who do you most admire?

.....你不是问过我：古人佩服谁？我就想起来诸葛亮。诸葛亮品格高啊。（关于）他有两句话：“开诚心，布公道”，他真是那样，好得很哪！他对部下说“勤攻吾过”——你看我哪里不对的、有错处，你要勤着指出来。谦虚、谨慎、公道，那个品格，好得很。应当说，对古人的佩服，我佩服他。我写了一张字，要送给你的，就是写了他的话，写了诸葛亮的话。

艾：您是从小就很佩服他，还是.....

梁：一直很佩服他。我第一次入川的时候，到成都的时候，成都有他的庙，到他庙里头我就下拜，我说我心里总想拜你，现在到了你的庙里头，我一定要磕头，拜。庙里头有个本子，我就写上某年某月某日我来了，我拜了，我下拜。

艾：他的故乡还是豫西那个地区.....

梁：对，他在那里出生的。他不是主持四川的.....？那个庙写着“诸葛武侯祠”，庙是以他为主，可是刘备的坟墓就在庙后边，可是现在庙大

家都叫武侯祠，把刘备没有算上。就是大家都恭敬、爱戴诸葛亮。四川人都纪念他，四川人头上喜欢缠一个白布，为什么缠白布？他们说“戴诸葛孝”，中国人有丧事要戴孝。诸葛死了之后，乡间都要祭祀他。后主刘禅不喜欢，可是不行，你不给诸葛立庙，民间的庙更多，还是由政府来搞一个好的庙。

艾：另外一个问题，您最佩服的外国人是谁？就是说您听说有、或是书本里认识的外国人，您觉得最佩服的外国人是谁啊？

Liang: Well, at least about philosophical thinkers, the person I like the most and revere most is Henri Bergson.

Alitto: So, to the present it's still him. I remember that when you were writing *Eastern and Western Cultures and Their Philosophies*, you said this. You said that the first time you read Bergson's writings, you felt that it was a matter of great joy in your life. So you still feel that as far as foreign thinkers are concerned...

Liang: Of course I also admire the profundity of Germany's Kant.

Alitto: What about foreigners in the area of politics?

Liang: I'm not really so clear on who the great people are in politics or in military matters. In general, those great people who are often mentioned, like Napoleon.... Well, I just go along with everyone else, and don't have any particular opinion of my own.

I'm afraid the greatest Chinese is Mao Zedong.

Alitto: If I ask who you think the greatest Chinese is, would your answer be different? Is there a difference between who you admire and who you think great?

Liang: There is a difference.

Alitto: So, who do you feel is the greatest Chinese, no matter whether a historical figure or someone still alive?

Liang: I feel that it's not in the too distant past, nor the present. I'm afraid that it is Mao Zedong. He was really formidable. He is a world-class great historical figure. When he became old, however, he was no good. He made a lot of mistakes in his dotage.

Alitto: What was Mao Zedong's greatest achievement?

Liang: It was that he created the Communist Party. If there were no Chinese Communist Party, there would be no New China. This is absolute, 100% fact. But in his later years, he became muddle-headed, and made a lot of mistakes. Now, Zhou Enlai on the other hand did not fail in his later years. Zhou Enlai was what we used to call a

paragon. You cannot find any failures, or any mistakes in him; they are practically absent. He was truly a paragon. But, as it happens, he was innately a second fiddle. He was born to be Mao Zedong's assistant. As a man, however, he was the best, the very best. (Alitto: I actually also think that you are right in this statement.) Everyone honors Zhou Enlai's memory. On the other hand, some people were and are dissatisfied with Mao, or with certain things he did.

梁：我在哲学思想上最喜欢的，也算是崇拜吧，是法国的柏格森。

艾：到现在还是。我记得您当年写《东西文化及其哲学》的时候，您也这么说，您说第一次阅读柏格森的著作，觉得是一生中非常愉快的事。所以您还是觉得外国思想家来说……

梁：当然，德国的康德，我也很佩服他的思想上的深刻。

艾：那么政治界的外国人，您有没有觉得伟大的？

梁：我就不大清楚了，政治家、军事家，我不大清楚。一般地，常常说出来的伟人，像拿破仑啊，一般地大家所说的，那么我也就随着大家吧，自己没有特别的看法。

最伟大的中国人物恐怕还是毛泽东

艾：假如问您觉得最伟大的中国人是谁，回答会不会有不同？佩服与觉得伟大有分别吗？

梁：有分别。

艾：您觉得最伟大的中国人物——无论历史上的人物还是在人世的，是谁？

梁：我觉得也不是太过去，也不是现在的，恐怕还是毛泽东。毛泽东实在了不起，恐怕历史上都少有，在世界上恐怕都是世界性的伟大人物，不过他晚年就不行了，晚年就糊涂了，有很多的错误。

艾：那毛泽东最伟大的成就是什么？

梁：创造了共产党，没有共产党没有新中国，这个是百分之百的事实。不过他这个人到晚年就糊涂了，有很多做错的事情。这个错的事情、失败的事情，在周恩来没有。周恩来是中国从前叫做“完人”——完全的人，你指不出来他的不好的、做错的事情，几乎没有，非常地完全他这个人。不过，很巧地，他是天生的第二把手，天生地给毛泽东做助手的这么一个人。论人可是最好了，周恩来人最好了，最好。（艾：我也倒是觉得您这个说得很对。）人人都纪念周，可是对毛，有人就不满意，某一件事情不满意。

Alitto: Comparing Mao with other figures in Chinese history, which figure in Chinese history does Mao most resemble? In a hundred years from now, when studying China of this age, with what

figure in Chinese history will future historians compare his historical role to?

Liang: Most people see him as a Han Gaozu or as a Tang Taizong in the Chinese history of the past several thousand years, but Mao himself thought that these dynastic founding emperors were run of the mill, nothing special.

艾：毛主席同中国历史上的人物来比，您觉得他比较像历史上的什么人物？再过100年，100年以后的历史学家研究这个时代的中国历史，他们会不会把毛的角色和过去的什么人的角色来作一个比较？

梁：中国过去几千年的历史，一般的说法都说汉高、唐太——汉高祖、唐太宗，一般大概都是说这样子。可是毛看这些人，不那样，好像他看得平常。

My views of the world

I approve Colloquial Literature Movement and I'm not conservative.

Alitto: ...Colloquial language vs. literary language can be said to have been a debate in bygone days. You never advocated the use of the literary language, right?

Liang: Right. I think that the Colloquial Literature Movement launched by Hu Shi and Chen Duxiu in Beijing greatly liberated intellectual and academic circles. Liberation was good. So if we stuck with convention again using the literary language to communicate thought and knowledge, that would be too passive. So liberation was good. The Colloquial Literature Movement developed. No matter in what field of learning, everyone used the colloquial language. Now it is called "prose written in the vernacular," that is, a colloquial style of the written language used in all fields of academic learning. I very much approve. This is progress. This is a kind of liberation.

There were two figures who opposed the Colloquial Literature Movement. One was Lin Shu (Lin Qinnan). The other was Zhang Shizhao (Zhang Xingyan). They didn't approve of colloquial literature. Their reasons were that there were some profound scholarship and thought that couldn't be communicated in the colloquial language. This is not totally wrong. So how could this problem be solved? The solution is for literary men to write in the colloquial, but to quote the old books in literary Chinese, and then add explanation in the colloquial language. That way, the profound knowledge in the old books could still be communicated in a simple, straightforward way.

Alitto: But the average young person cannot understand literary Chinese now. (Liang: Right.) A large part of China's cultural heritage is literary and historical works. One could say that, aside from the colloquial novels, the modern generation of young people are estranged from all literary works before May Fourth; a language barrier separates them. What should be done about this?

Liang: There is probably no solution to this problem. The only thing to do is to just let literary Chinese become a kind of special knowledge, necessary for some scholarship. It becomes a specialty, with a small number of people specializing in it. Most people don't

necessarily need to use it; it can only be this way.

貳 我对世界的看法

我赞成白话文运动·我不保守

艾：……白话、文言文可以说是当年的辩论啊，您一直都没有主张用文言吧？

梁：对。我觉得，胡适、陈独秀在北京发动一种白话文的运动，是给知识界、学术界一个大解放。解放是好的，所以如果还是拘守再用文言文表达思想、表达学问，那个太被动了，所以解放好。开展白话文运动，无论任何的学问都用白话文，现在就叫做语体文——“言语”的“语”，像是跟说话一样，用语体文来发表学问，这个我是非常赞成的，这个是一种进步，是一种解放。

有两个人反对白话文。一个就是林纾——林琴南，一个就是章士钊——章行严，嘿嘿，都不赞成白话文。他们的理由呀，就是说有一些学问深的地方、思想深的地方，白话文表达不出来。这话也有一点道理，那么就怎么解决这个问题呢？就是我们写东西、发表东西还是白话文，要引用古书、文言文也可以引用，再用白话文来解释一下，还是可以介绍这种很简要的古书的文言文，还是应当介绍。

艾：不过，一般的年轻人现在根本看不懂文言了。（梁：对。）那么中国的文化遗产的一大部分，就是以前的文学呀、史学什么的，一些著作啦，可以说是五四以前，除了这些白话小说以外的，所有的文学作品都跟现代的青年人之间有隔阂，有个语言隔阂，那这个怎么办啊？

梁：这个恐怕没有什么好办法。只能够搞某种学问，这种某一种学问是要看古书的，是要借这个文言文的，那就是成为一种专业，少数人专搞那个东西，多数人就不一定这样搞了，只好如此。

...This tidal current, the colloquial language couldn't be stopped. This current met the requirements of the majority of people, especially the requirements of the young.

Alitto: To return to the second question, which is that good scholarship can be considered conservative. (Liang: Right.) The term "conservative" is extremely difficult to define. What, after all, can be considered conservative? In this book [of mine], I also discussed this question. My important question is: do you willingly accept or oppose the designation "conservative" that some Chinese and foreigners have applied to you?

Liang: Of course I'm not conservative.^[9] From what I just said a

moment ago, you can see that I'm not conservative.

Comments on the May Fourth Movement

Alitto: What is your view of the May Fourth Movement?

Liang: We have already talked about Chen Duxiu, Hu Shi and the Colloquial Literature Movement. Naturally, the influence of the May Fourth Movement on the following periods was tremendous. It created new historical currents, a whole new way of thought, and new ways of life. No longer were things confined to the old Chinese philosophy of life. Confucius began to be the object of criticism. Wasn't there a slogan "Overthrow Confucius and Sons"? This was unavoidable, because although Confucius wasn't really a religious leader, succeeding generations of emperors had regarded him as a religious leader. So there were Confucian temples, and all the literati worshipped him. And so Confucius, who was not originally a religious figure, became [regarded as] one. They made him up to look like a religious figure. Especially in the later times, there was a term—"rules of propriety and status." It was important to abide by the rules of propriety. It was important to have a hierarchical order according to social position and age. There were a great many rules. These rules and regulations helped the ruling classes maintain themselves. The ruling classes made use of these rules of propriety and status. After much time had passed, at the time of the May Fourth Movement, a general repugnance arose against these old behavioral codes that helped the ruling class, and Confucius was involved. In actuality, the problems and responsibilities of society did not rest with Confucius. Society at large needed a code of behavior, and the ruling classes needed such codes even more. They [ruling classes] relied on these codes to support their rule. After much time had passed, the codes became ossified and rigid. People developed antipathy toward these ossified things. During the May Fourth era, when there was repugnance toward the ossified rules of propriety and status, Confucius was blamed for them.

.....他还是挡不住这个潮流，挡不住白话文、语体文。还是这个潮流迎合了多数人的要求，特别是年轻人的要求。

艾：那您刚提到的第二个问题，就是说学问好还可以算是保守，（梁：对。）那“保守”这个词在有些时代很难下个定义，到底什么算是保守啊？那我书里前面呢，也是讨论过这个问题。我主要的就是说，您对一些中国人、一些外国人，把保守主义者或者保守加在梁老师头上了，那您是甘心地承认呢，还是反对呀？

梁：我当然是.....，我不保守，从刚才的话里头可以看出来我不保

守。

对五四运动的评价

艾：梁老师对五四运动、五四时代的评价是什么？

梁：我们已经谈到了陈独秀、胡适、白话文运动。五四运动当然是很影响到后来的，它开出来一个新的潮流、新的思想、新的人生，不再拘守老中国对人生的那个看法，对孔子开始怀疑、批判。不是有“打倒孔家店”的口号吗？这是不可免的。因为孔子虽然不是宗教，可是历代的皇帝都把他好像当作宗教一样，所以有孔庙，所谓念书人都要拜孔子，本来不是宗教的孔子，都把他装扮成孔教。特别是后来，有一个名词叫“礼教”，礼教就是很重要守礼啦，很有尊卑长幼啦，有很多规矩啦。这种规矩嘛，很能够帮助统治阶级，统治阶级就很利用礼教。那么日子久了之后嘛，就是到五四运动的时候，当然就对日子太久了的、帮助统治阶级的礼教有反感、反对和破除，那么这样子就把孔子牵涉进去了。其实，问题、责任不在孔子。是为了广大的社会，广大的社会它需要一种礼教，统治阶级更为需要，借着这个它便于统治，日子久了，它就很僵化、僵硬。人们对僵化的东西都有反感，到了五四运动的时候，就是对僵化的这个礼教反感的时候，就归罪于孔子。

Alitto: During the May Fourth era, many people blindly worshipped everything Western and wanted wholesale Westernization. Now to look at the last year or two, there was also a bit... Especially among the younger generation...it smacks of this [wholesale Westernization].^[10] What do you think of this?

Liang: This is a kind of natural tendency, right? Things have developed naturally into the situation today. There's nothing to be surprised about. There is no need for rebuke. Actually, you could say that the foundations [of Chinese culture] cannot be shaken.^[11]

Why I opposed the Buddhism of the time

Alitto: You yourself opposed the idea of a "Confucian religion"?

Liang: Right! Confucianism is not a religion.

Alitto: Also in your book *Eastern and Western Cultures and Their Philosophies*, you opposed Buddhism of the time, saying, first, those people who were propagating Buddhism at the time were not good people, and second, what our China needed at present was not Buddhism. In the book you also brought up a point—that since the problems of the first and second paths had not yet been solved, Buddhism was out of the question. Yet you yourself throughout were a Buddhist. Your problems of the first and second paths had not yet

been solved either. Isn't this a contradiction?

Liang: It was not only me as an individual. As far as I myself was concerned, I was inclined toward Buddhism, and wanted to study Buddhism. This was OK. If someone else as a private individual was this way, I would also approve. I probably, moreover, could help him. But as far as broader society and China's requirements were concerned, this thing was not needed.

艾：五四时代也有很多人是盲目地崇拜西洋的一切，要全盘西化。那您看现在最近一两年，也有一点，尤其是年轻一代的也有一点这个味道了。您对这种现象有没有意见呢？

梁：这个也是一个自然之势吧。事情发展到今天，自然如此。这个不足怪，也不必责备。实际上，可以说是动摇不了根本。

我为什么反对当年的佛教

艾：您自己很反对“孔教”这个观念的？

梁：对，孔子不是宗教。

艾：在写《东西文化及其哲学》那本书的时候，您很反对当时的佛教。说现在搞佛教的人第一不是好人的，第二我们中国现在所需要的也不是佛教的。书里提到一点，第一条路和第二条路的问题还没有解决的时候，还谈不到什么佛教。不过您自己啊，还一直是佛教徒，您第一条路、第二条路的问题也还没有解决，这有没有矛盾啊？

梁：不但是我一个人，就我自己说，我倾向佛教，想学佛，可以；假如另外一个人，他作为一个人，他这个这样子，我也赞成，我并且也许还可以帮助他；可是就着广大的社会、就着当时的中国的需要说，不需要这个东西。

Alitto: Oh, this notion is that the individual and the whole of society were not the same.

Liang: They weren't the same. I would add one more point. At the time this kind of view was a bit extreme and one-sided. Why was it one-sided? It emphasized only the escapist religion side of Buddhism. Actually, it's not necessary to emphasize that aspect which negates and denies human life in order to propagate Buddhism. One can emphasize another aspect in developing it, and that is "compassion and mercy." In Buddhism there is a four-character phrase: "compassion, mercy and joyful giving." "Joyful" sometimes refers to "rejoicing in the welfare of others." "Giving" refers to the state of renunciation of everything, the opposite of covetousness. "Joyful giving" is to help people with their good desire, or good behavior. So, Buddhism can be developed from this compassion and joyful giving

aspect. You don't have to "leave the world" to be Buddhist. This way is fine too.

At the time, I was looking at Buddhism too inflexibly. That is to say, if China at that time had internal disorders and civil war, and each person closeted themselves in their houses to chant sutras all day, the chaos would become even worse. [My meaning at the time was] don't be negative, don't renounce the world. Rather, bring "compassion, mercy and joyful giving" into play. [I wanted everybody to] go out and do something. To use Chairman Mao Zedong's terminology, I wanted everyone to "struggle." Struggle was necessary in order to turn the situation around and prevent the warlords from acting foolishly. The more everyone let things take their course and did nothing—that is, closing their doors—the worse the chaos would become. So, that was my meaning at the time.

Alitto: You proposed one of the Confucian virtues—resoluteness or firmness. Is this similar to the spirit of struggle?

Liang: Yes, they are similar in one way.

Chinese moral: the standards for right and wrong should not be sought in the external world.

Alitto: ...Take China as an example. Before the Opium War, of course, China had a lot of weaknesses, but at least there was a standard for morality. Later, as you yourself said, regarding the Republican era, you wrote that in the 1920s and 1930s, the intellectuals ("scholars") had no shame. Previously at least in traditional society, they would not dare to struggle openly and brazenly for their own selfish reasons. Now, the surface standards no longer exist. So, I say that the biggest difference from the previous situation is that moral standards are no longer pure and absolute. Rather, they are relative... [China's is not regarded] as the only moral standard in the world. Previously we felt that the difference between foreigners or Westerners and ourselves was that we could be considered comparatively human while they [foreigners] were not sufficiently "mature," and still hadn't become real humans. They had no morals, but we had morals. That is to say, humans had morals. In the Republican era, this already began to change. So, how can it be said that "the proper nature of the mind/heart" is what all human societies have in common?

艾：哦！这种观点是个人和整个社会不一样。

梁：不一样。并且还可以再说一点。当时这种所见不免有点偏，偏

什么呢？片面地看佛家是一种出世的宗教。其实呢，也可以不必这样看，就是，把佛教看成不必从出世宗教、否定人生那面去发扬它，而从另一面，就是慈悲。佛经里有这么四个字——“慈悲喜舍”，“喜”有时候叫做随喜，“舍”嘛就是舍弃了，跟贪取是反面的，随喜就是人家有一点好的心愿或者好的行为，就帮助他。所以从这个“慈悲喜舍”这面来发扬佛教，不必拘定要出世，那么样也很好。

我当时的意思就是看得呆板一点，就是说，如果中国那个时候正是内乱、内战，每一个人都要关起门来念佛，那个乱就更乱。不要消极，不要想出世，要发挥慈悲的意思，要出头，按现在的毛主席的话说，要斗争，要斗争才能够转移这个局面，不能够让那个军阀乱来。如果大家越是听天由命，越是关门，那更乱了，当时那个意思是那个意思。

艾：您用的一个字，是孔子的一个美德，就是“刚”。那“刚”跟斗争、斗强，您现在说是一样的意思？

梁：有相同的一面。

中国的道德：是非的标准不要向外找

艾：……拿中国来说吧，就是鸦片战争以前，当然有很多别的缺点，不过起码道德标准是有的。以后您自己也说，就是这个民国时代啊，您自己在书里也写过啊，20年代的、30年代的知识分子——“士”——是无耻的。他们起码以前在传统的社会里不敢公开地、张胆明目地为了自己的自私的理由而争执，现在呢，表面上的标准已经没有了。所以说跟以前最大的不同，就是说道德的标准已经不是纯粹的、绝对的，而是相对的，……不是全世界唯一的道德标准。以前我们觉得外国人、洋人他们和我们的不同就是，我们是比较算是人，他们还没有“熟”，还没有成为真正的人，他们没有道德，我们是有道德，那就是说人是有道德的。在民国已经就开始了这么一个变化了，所以，“本心”应该怎么说才能说是人类社会的共同之处？

Liang: I feel that the standards for right and wrong should not be sought in the external world. In *The Mencius*, he called it pursuing righteousness and benevolence and "walking the path of righteousness and benevolence."^[12] These two are different. The pursuing of righteousness and benevolence refers to what the ordinary social conventions and mores hold as benevolence and righteousness, and what is good. Observing social conventions is pursuing righteousness and benevolence. Mencius held that that was not worth doing. He did not want people to pursue righteousness and benevolence. He wanted people to walk the path of righteousness and benevolence, that is, to go back to one's self, to return to one's own proper nature of the mind/heart. The more you seek it in the external world, the more bewildered and dazzled you become. Don't look to the external world, look to yourself, ask it of yourself. In *The Mencius*, in particular, he

said, "the calm air of the morning," and "the restorative influence of the night is not sufficient to preserve the proper nature of the mind/heart."^[13] A Chinese proverb says, "Examine one's conscience in the stillness of night." When, in the stillness of night, in the middle of the night you wake up, you examine your conscience in the quiet. That is, you yourself ask questions of yourself. At this time it's clear [what's right and wrong].

Alitto: Ask oneself. The problem is that each person's answer to the questions asked of oneself is the same or different. Or does the proper nature of the mind/heart have a common...

Liang: That is to say, when in the stillness of night you awaken, you are not subject to external influences. So examine one's conscience in the stillness of night, asking yourself: Is this right? At this time, in Chinese it's called the "recovery of conscience." Chinese farmers have a saying...these two sentences are marvelous: "If you don't owe taxes, you do not fear officials."

梁：我觉得，是非的标准不要向外找。《孟子》上头有个话，他叫做“行仁义”和“由仁义行”，这两样不同。所谓“行仁义”嘛就是一般的社会习俗上认为那样是仁义、是好，按照着那样子去做就是“行仁义”。孟子认为那不足取，不要“行仁义”，要“由仁义行”，就是还是回到自己身上来，返回到自己本心，越向外找越迷乱、越眼花缭乱，不要向外看，要自己问自己。特别是，在《孟子》他也说，“平旦之气”，“夜气不足以存”。中国人的俗话常这么说，叫“清夜扪心”，你清夜、半夜里头醒来的时候，清静，“扪心”就是自己问问自己，这个时候清楚。

艾：问自己啊。问题是每一个人的自己回答的答复一样不一样，或者“本心”有没有共同的.....

梁：这个就是说，清夜醒来的时候，比较不受外边的影响，“清夜扪心”，问问自己，这样对不对啊？这个时候啊，按中国话说叫“良心发现”。中国农民有这样的话，这两句话很了不起：“不欠钱粮不怕官，不昧良心不怕天。”这个话我觉得很了不起。

If you have not ignored your conscience, you do not fear Heaven." I think this saying is great. If I haven't ignored my conscience and done anything bad, I do not fear Heaven. The first line, "If you don't owe taxes, you do not fear officials." Everyone must pay taxes. I've already paid my taxes, and so I don't fear officials at all. This kind of society existed only in the old society of China; there is no such society outside of China. So, this thing conscience, the more you look externally, the less it exists.

Chinese society is disorganized and liable to peace.

Alitto: I agree. In all of your works, you emphasize this point. No matter whether you use the term "benevolence" or "conscience," or "rationality," they are all one thing. So in this book [referring to *The Human Mind/Heart and Human Life*] you still have a similar thing. You call it "spirituality" or something like that. Actually the meaning is the same, right? Either the term you just used, conscience, or the term benevolence, or if you call it rationality, it's the same. As you just said that saying among the common folk existed only in Chinese society. It didn't exist in other societies. So, if benevolence, rationality, and conscience are things that humanity shares, why is it that historically they appear comparatively commonly in Chinese society?

Liang: This is because Chinese society is a loosely organized society.

Alitto: I understand that. You mean that originally Western society, because of religion, was used to group organization.

Liang: Western society organized groups. People in general lived in a group. Previously, during the Middle Ages, the group overly constrained and repressed the individual. In modern society, capitalist society, the individual awakened to resist the group's excessive intervention and repression. This is the kind of change from ancient times to modern times. But this transformation didn't take place in Chinese society. China's old society lacked group organizations. At most it was family and lineage. In the past the emperors and rulers' best method was not to interfere with the affairs of the common people, the so-called "Laissez Faire" and "governance by non-interference." The more the government allowed people, the more it let people live their own lives, the better.

我不昧良心，我没有做一点坏事，“不昧良心不怕天”；前头一句话“不欠钱粮不怕官”，每一个人嘛都要交钱粮，钱粮我已经交了，我官都不怕。这样一个社会啊，只有中国老社会有啊，外国没有这个社会。所以“良心”这个东西啊，你越向外看、向外去找越没有。

中国是散漫而容易和平的社会

艾：我同意。您著作无论是哪一本，都是注重这一点，无论您说“仁”——原来您说的是“仁”，或者“良心”，或者“理性”都是一个东西，那您这本书也是同样地说有这么一个东西，说是灵性或者怎么样，其实基本的意思是一样的，是不是？您刚才用的是“良心”这个词也好，或者用“仁”这个词也好，或者用“理性”这个词也好，您也刚说了，就是民间的那个说法了，只有中国社会有的，别的社会也没有的。那么假如“仁”、“理性”、“良心”，是人类共同具有的一种东西，为什么历史上中国的社会是比较会有的？

梁：这是因为中国的社会是一个松散的社会。

艾：这个我明白。您的意思就是西方社会本来因为宗教的关系有团体的习惯了。

梁：西洋的社会啊，它有集团，人呢一般是生活于集团中，那么过去的、中世纪的社会，是集团拘束了、压迫了个人多一些；那么近代的社会——到了资本主义的社会，转入近代社会，个人的觉醒反抗这个集团的过分的干涉压迫，有这样一个古今的变化，就是中古跟近代的变化。可是这个变化在中国的社会是没有的。中国的老社会它是缺乏集团的，它尽是家庭、家族，过去的皇帝、统治者他最好的道路是不干涉老百姓的事儿，所谓“端拱无为”、“无为而治”，你越是不干涉老百姓的事，越是随他去、随他自己去生活，越好。

In China for several thousand years, life was lived like this, a passive "live and let live" state, without any active governance. Society followed custom and convention, with the people living unorganized peaceful lives. Disorganization is more liable to lead to peace. Peace is more liable to lead to disorganization. To put it in another way, struggle is liable to lead to organization, and group organization is more likely to lead to struggle. So, old Chinese society lived disorganized and peaceful days, days that were passive and peaceful. So, the Chinese didn't know what a nation was. He only knew "Peace in All under Heaven." The "All under Heaven" had no boundaries. Nation had parameters. Relations between nations are adversarial, but there was no relationship with "All under Heaven." The Chinese always dreamed of "Peace in All under Heaven." They wanted to live a passive, peaceful life, and hoped that the imperial court and the government would not quite interfere with their affairs. These circumstances did not exist in Europe.

Chinese society began to differ from Western society.

Alitto: In modern European society these kinds of circumstances didn't exist, but in the Middle Ages, there was a Church—a Catholic Church. So although society had the habit of organization, the organizations were church organizations. But you can't say that it was struggles between organizations. Only in the 17th and 18th centuries were there nationalities, and only with nationalities came nations.

Liang: In a modern nation... Before, the aristocracy ruled the peasants [serfs]. The peasants were attached to the land. This is different from the Chinese peasantry of the past.

Alitto: Yes, these two societies were different. In general, I agree completely with the historical explanation you just articulated. I

agree. My question is, your theory has always had a contradiction. If there is something that humanity possesses in common, how could it be a special product of China? I know, you just explained this from the background of societal development. I have felt always that this is a contradiction. As mentioned in my book, I think that the contradiction is: In the 1920s and 1930s, you advocated the restoration of China's inherent "rationality" and "benevolence." Only by this restoration could the entire country be revived, be modernized and be able to absorb Western science and technology. Group organization could develop the things that China inherently possessed. Where is the contradiction? If we say the fundamental reason why China originally wasn't modernized, hadn't developed science and technology, and didn't have group organizations was because China had developed "rationality," how suddenly could this rationality, originally an obstacle to modernization, no longer be an obstacle, but become a...?

中国的过去的几千年，过日子就是这么样子过日子，消极地彼此相安，而没有一种积极的统治。它就是本着习俗，过着一种散漫的、和平的生活，散漫嘛就容易和平，和平嘛也就容易散漫，换句话说，斗争嘛就容易造成团体，而有了集团就更容易斗争。所以中国的这个老社会啊，它都是过一种散漫和平的日子，一种消极相安的日子。所以中国人他也不晓得什么叫“国家”，他只晓得“天下太平”。什么叫“天下”啊，天下是没有边的，“国”嘛就是有个范围的，国与国有对抗性，对天下没有啊。中国人啊，他总是梦想天下太平，他就是要过一种消极相安的日子，希望朝廷啊、官府啊不要多干涉我，不要多管我们的事，这个情况在欧洲是没有的。

中西社会分歧的开始

艾：可以说在欧洲的、现代的社会没有这种情况，可是中古时代啊，国外的地方都是一个教会——天主教，所以虽然组织的习惯，组织都是教堂的组织，可是也不能说是组织对组织的战斗。现在到了17、18世纪才开始有民族的情形，才有了国家。

梁：在近代国家，……之前，贵族对农民统治，农民常常是随着土地的，这个跟中国的过去的农民不同。

艾：是，这两个社会是有不同的。一般地来说，我完全同意您刚说的历史方面的解释，我都同意。我问的问题就是，您的说法一直有个矛盾：假如某一个东西是人类的共同有的，这个东西怎么会是中国的特产呢？我知道，您刚才从社会发展背景来解释，我一直觉得是个矛盾，我书里提到的、我所觉得的矛盾的地方是，您20年代、30年代提倡把中国固有的“理性”或者“仁”复兴起来，这样中国才能全国复兴，才能现代化，才能吸收西洋的科学技术；团体组织可以发展中国固有的东西。矛盾何在呢？假如原来中国没有现代化，科学技术不发达，没有团体组

织，基本的原因是因为中国先发展“理性”，为什么假如原来是现代化的障碍，为什么到了现在这个理性突然不是个障碍反而是个.....

Liang: It wasn't an obstacle. In the past, it wasn't an obstacle either.

Alitto: So in the past it wasn't an obstacle?

Liang: It was that the paths of societal development were different.

Alitto: Alright, then why were the paths different?

Liang: What do the different paths refer to? In remote antiquity a person's life could not be separated from the group. People formed groups. The more ancient it went, the smaller the scope of the group was. Each group had two aspects. One was consanguinity, and one was locality. In brief, beginning in remote antiquity, life was lived in a group. One aspect was family, and the other was a group that transcended family. In China's societal development, the particular emphasis was on the aspect of family. In foreign countries the emphasis was on the group. Initially, these were both group and family. One developed to emphasize this aspect, and the other to emphasize that aspect. Each had its own inclination. It's a religious issue when a group of people go astray and need to be pulled back. Religion helps people form group organizations, and Confucianism helps people emphasize lineages and families, and family ethics. The two are separated in this way.

Kin organizations emphasize the degree of consanguinity and the principle of seniority, paying attention to this concept. Moreover, this concept is extended into society at large. So in the emperor-subject relationship, the emperor is called the "Father-Emperor." The emperor refers to his subjects as "newborn babies" (*chizi*)—this term "*chi*" is the color red—because newborn babies have red skin. So, being influenced by Confucianism, these emotions of familial affection are extended into society. The emperor is "father," the teacher is also "father." Students of the same teacher are "brothers of the same master." Good friends are the equivalent of brothers. Affection was thought highly of. Affection transcends vital interests.

梁：它没有障碍，它过去也没有障碍。

艾：过去也没有障碍？

梁：它是社会发展走的路子不同。

艾：好，不过为什么路子不同呢？

梁：所谓路不同是指什么说呢？在远古，人的生活都是离不开人群

的，都是成群的。这个群的范围越古的时候越小。每一个群都有两面，一面是血缘的关系、血统的关系，还有一面是地域的关系。总而言之，开始远古的时候生活是集体的，一方面是家庭，一方面也是超乎家庭的集团。中国的社会发展、演进是侧重家庭这一面，外国是偏重在集团一面。最初的这些它又是集团、又是家族，这个偏到这面走了，那个偏到那面走了，那么各有所偏了。让这个各有所偏的帮助那个各走一偏的路子的，就是宗教问题。宗教帮助人走集团的一面，儒家的东西帮助人走家族、家庭、家庭伦理这一面，这样就分开了。

在家庭、家族上它就讲一个“亲疏长幼”，注意“亲疏长幼”这个观念，并且把这个观念从家庭向社会上去推广。所以管君臣的君叫“君父”，为“君”的对于自己的百姓称为“赤子”——“赤”就是红颜色——就是小孩子。所以受了儒家的影响啊，它总是把这个家庭的这种亲爱之情推广到社会上去。君是“父”，老师也是“父”，同一个老师的，我们是“师兄弟”，好朋友也是等于兄弟一样，它特别是重情谊，情谊嘛，它就超过了利害关系。

Alitto: I still want to ask why this division occurred in remote antiquity. In the final analysis, what was the cause?

Liang: I don't know. There were respective inclinations [in the two societies] to develop this or that aspect. Why was it? There were conditions that supported in this or that direction. The conditions [in the two societies] were different.

Alitto: This seems to be different from the way you put it in *The Essence of Chinese Culture*. In that book, you wrote that it was the Confucian viewpoint. That is, China originally did have a religion. China was originally a clan society, in the Shang Dynasty. After the Zhou, Confucianism destroyed it. The scholars awoke. In accordance with Confucian thought, it substituted pure ethics for religion. The old religion could be said to no longer exist. Of course, among the common folk there were still relatively superstitious religions, but [formal] religion no longer existed. From what I understood, it was only at this time in the religious realm that the two societies had their respective inclinations... You now locate this phenomenon earlier in time, but you still don't know the reason.

Liang: That is to say, each society developed on its own path, and each had its respective inclination.

Alitto: What's the reason? You said that certain conditions were a reason. What were these conditions?

Liang: We can't say at present. But there were in any case reasons that can be looked into and studied. Our knowledge is limited.

Alitto: Did not you discuss this question in your several books? That is, the question of Chinese and Western societies developing in

different directions.

Liang: Probably I did.

Intellect, rationality and spirituality

Liang: If we want to describe and explain the mind/heart, first we must explain its subjective initiative or its self-conscious autonomy, its consciousness. They are equally the same. This is a property of humanity, its most important property.

艾：我还要说，为什么在最远的古代，原来的这个分别，归根结底的原因是什么？

梁：不知道。它就是一个偏成这面走了，一个是偏成那面走了，它原来最初是集团，集团包含着两面，一个偏这面走了，一个是偏那面走了，那么，为什么各有所偏呢？应当是，帮助向这方面发展的，有些个条件，帮助向那方面发展的，有些个它的条件，彼此的条件不同。

艾：那好像跟《中国文化要义》里您的说法有点不同了。《中国文化要义》（中）您说，还是儒家的观点，就是说到宗教的问题，中国原来的这个宗教，中国原来的宗族社会，就是说商朝那个社会，到了周朝后面是给儒家算打破了，“士”醒了。按儒家的意思呢，来把纯粹的伦理代替宗教，那宗教可以说没有了。当然民间有一些比较迷信的宗教，不过，宗教没有了。依我所了解，这时候宗教的问题才各有偏……那您现在说还有一个更在前面、说不出来的原因，还不知道。

梁：就是说啊，各走一路，各有所偏。

艾：原因呢？您说条件，那条件是什么？

梁：我们现在说不上来，但是总还是有，可以研究，可以去探讨。因为我们距离知识还是很有限，知识上有限。

艾：您几本书里有没有讨论这个问题啊？就是中西社会的不同方向的发展的问题。

梁：恐怕有吧。

理性、理智与灵性

梁：我们要描述要说明这个人心，先要说它的主动性。主动性又可以称作自觉，自己觉悟，自觉能动性。主动性就完全等于自觉能动性。这是人类的特征，顶重要的特征。

Alitto: Does this concept of autonomy or self-activeness have something to do with the will?

Liang: Of course the will is included within it. It has subjective

initiative, flexibility, and lastly, the ability to plan. So, in order to explain the ability to plan, I had to use all this verbiage.

Alitto: In your book *The Essence of Chinese Culture*, you made a basic distinction between intellect and rationality. Now [in this book] you have expanded into three elements: subjective initiative, flexibility, and the ability to plan. The first two probably are subsumed under rationality. The ability to plan is probably part of intellect. Is there this distinction? Probably the ability to plan is in reference to relatively abstract calculations for the future...

Liang: You just now used two terms, rationality and intellect. How would you distinguish between the two?

Alitto: I would still use the same distinction you made in your book *The Essence of Chinese Culture*. For example, when a man does a mathematical problem, the part of his mind that does the calculating is his intellect. The technique is intellect. And the part of him that wants to get the right answer or not—the moral aspect—is rationality.

Liang: Yes, that's about right.

Alitto: So I thought that you would have developed the concept you used before and asked this question. Now [in this new book] you have divided it into three basic aspects: subjective initiative, flexibility, and the ability to plan, the last of which is the most complex. I also know that in this book it seems you use quite a bit of material on the most recent scientific research. In this section in which you analyze the mind/heart, you also make use of the most recent science, and psychology too. Which psychological school do you think is the most correct?

Liang: In foreign psychology, for example, I remember one psychologist named McDougall, who liked to talk about instinct.

Alitto: That was someone quite popular when you were writing *Eastern and Western Cultures and Their Philosophies*. Later, he wasn't as popular.

Liang: He enumerated a great many kinds of instinct. The Englishman Russell wrote a book called, as I recall, *Construction...* [referring to *Russell's Principles of Social Reconstruction*], right? He divided humanity into three kinds, one was called the possessive impulse and another the creative impulse. But there is a third kind, called spirituality. I originally quoted this in *Eastern and Western Cultures and Their Philosophies*, but disagreed with his three-way division. I said...one was intellectual, one was instinct. Originally I saw it this way. I only understood later after the publication of "Trend toward Diversification"^[14] that his third entity called spirituality

actually referred to something; it wasn't just empty talk. I accepted his trichotomy, not the dichotomy [of intellect and instinct].

艾：是不是跟意志有关系啊？

梁：当然意志包含在内了。主动性、灵活性，最后是计划性。为了说明计划性，要用这么多话来说明。

艾：按照《中国文化要义》的说法，您分的还是理智跟理性的基本分别了。那么现在您好像进一步又分了三部分——主动、灵活、计划。那头两个也许是属于理性，计划性是属于理智，有没有这个分别啊？那么也许计划是指的比较抽象的，为了未来而计算的……

梁：刚才，你用了个理性、理智，你这两个怎么分？

艾：那还是您的《中国文化要义》里的分别。就是举一个具体的例子啊，就是一个人人在算一个数学的问题，那么算得正确不正确还算是理智啊，就是说计数方面是理智啊，不过道德方面，要不要算、正确不正确那是理性。

梁：对，差不多。

艾：所以我以为您又是按照当年写的这本书的关于基本观念而继续发展而问的这个问题。现在分了三个基本方面——主动、灵活、计划，而计划是最复杂的。我也知道您的这本书好像有不少的最近科学方面的研究资料。您在分析人心的这部分，也是在利用最近科学，那心理学也是一部分内容，那您觉得心理学哪一种派别是比较对？

梁：外国的心理学，比如有个喜欢谈本能的，叫麦克迪科。

艾：这是您当年写《东西文化及其哲学》的时候最流行的，以后就不流行了。

梁：他列举了好多样的本能。英国的罗素写过一本书，好像叫《创造……》（疑为罗素的《社会改造原理》）是不是？那本书是讲，他把人类分成三样，一样叫做占有冲动，还有一样叫做创造冲动，但是还有一个第三，它叫灵性。我起初在《东西文化及其哲学》里头，引了他的话。我不同意他的三分法，我说是……一个是理智，一个是本能。起初我是这样，后来在《多元化趋势》出版之后，我才明白，明白他的第三个叫灵性的这个，也是有所指，不是一句空话。我承认他的三分法，不是二分法。

I'll explain another point. Originally I also had this dichotomy. I didn't understand the spirituality. I felt that it wasn't necessary; I felt that an intellect and an instinct were sufficient. Why? Because I subsumed morality into instinct. Later I understood that this was not so, not correct. Why? Because instinct is also an instrument for life; it is a backup instrument. Now, intellect is also an instrument, a backup instrument. The entity of spirituality is higher than these two. So at that point I understood Russell's trichotomy and thought it correct.

Religion, for instance. You can't explain it as intellect or as instinct. Religion and morality are something higher than either instinct or intellect. That is what Russell called spirituality. Later I accepted Russell's statement.

Customs and truth

Alitto: Could you give a very brief summary of what your ideas are on this relationship between the mind and body?

Liang: The mind/heart transcends the body. From the standpoint of physical existence, your body and my body are separate and not in communication. When I eat, your hunger is not satisfied. But the mind/heart transcends the body. So the relationship between minds/hearts can be described with these eight characters: the first four are *haowuxiangyu* (mutual communication of likes and dislikes). [The other four characters are *tongyangxiangguan* (sufferings are interrelated).] What I like, what you like—likes and dislikes can be communicated. Likes and dislikes include moral judgment. So, I think that this kind of action or this kind of person is good. You also recognize it as good. So likes and dislikes can be communicated, meaning mutual understanding.

Alitto: "Mutual communication of likes and dislikes." Does this mean that there is an absolute, objective standard in people's psychology? Can it be stated that way? Telepathy between human minds/hearts? So, are you saying that no matter in what era and in what culture, humans' reactions to a certain phenomenon are the same? That is to say, this behavior is bad, that behavior is good. Right?

再说明白一点，原来我是二分法，我对他这个灵性不大懂，觉得也不必要，觉得二分法就够了，一个理智，一个本能就够了。为什么？因为我把道德归到本能里头去。后来我明白不是，不对。为什么不对呢？本能还是我们在生活中，为了生活，为了做生活我们的一种工具，是个备用的东西。那么理智也是一个工具，备用的工具，那个主体高于这两个。所以呀，那么我才明白罗素的三分法有道理。比如他说吧，宗教单用理智来说，说不了，用本能也说不了，宗教道德高于这个东西，那个东西是灵性。后来承认罗素的这个话。

习俗与真理：极高明而道中庸

艾：身体与心理之间的关系，可不可以扼要地讲一讲？

梁：心是超过身的。从身来说，你的身体跟我的身体不相通，我吃

饭，你不饱。可是从心来说，心高于身，心超过了身。所以心跟心的关系，它可以说八个字，头一个就是“好恶相喻”（另四个字应是“痛痒相关”），我喜欢什么，你喜欢什么，“好恶相喻”。这个“好恶”包含着是非心，我觉得这样的行为、这样的人是好人，你也承认是好人，好恶可以相喻，“相喻”就是彼此了解，“好恶相喻”。

艾：“好恶相喻”，您的意思是有个绝对的、人的心里有的一种客观的标准了，可以这么说吧？就是说“心心相印”，就是无论什么社会、什么文化的人，他们对某一现象会有同样的反应了？就是说这个行为不好，那个行为好，是不是？

Liang: People, as far as the fundamental definition goes...

Alitto: Which is the most fundamental?

Liang: There are differences in the social customs and habits of each society, and differences in time and place. In terms of space, that society and this society are far apart. There's also a difference in time. Societies in different ages are also different. Societies in different places and times differ; they have their own social customs and usages. An individual person is often influenced by the customs, habits and social usages of his society. And so because of this, the situation that "I am right and you are wrong" occurs. But there are certain fundamentals that are the same. Very basic ones. For example, every society dislikes and loathes lying, right? For a lot of things, due to their different social customs and habits, what this particular place or society recognizes as good is not so regarded in that place or society; or, today it is regarded as good, but the ancients held it to be bad.

Alitto: As you just said, there are temporal and spacial differences among all societies' social customs and habits. The goals of purposefulness will also be different. So doesn't that count as moral behavior being different?

Liang: Of course, they are different. There are different moralities in different eras and different societies. Each society has its own morality. Therefore, in reality this isn't true morality; they are just customs and usages.

Alitto: They are just customs and usages? What is the source of true morality?

Liang: True morality is conscious awareness and self-discipline. Usually, the majority of people in society follow others; they just follow the society's social customs and habits. Those whose vital force is great may not follow customs. He is capable of great conscious awareness and self-discipline. So he may choose to act in a certain way following his own self-conscious decision regardless of the opposition, and the ridicule and taunts of others. Revolutionaries are

able to do this. The ordinary person does not make revolution. Revolution is always foresighted.

梁：人从一个很基本的定义说……

艾：最基本的是哪一种？

梁：就是有些个它是由于各个地方的风俗习惯不同，也有的是古今不同，有地方的不同——那个社会跟这个社会，属于从空间上说，相离很远，这是一种不同。还有一种古今时代不同，它的社会也不同。不同时代的社会，不同地方的社会，都有它的风俗习惯。一个人常常为他自己所生存的社会习惯所影响，因此就搞得我说的对，你说的不对了。可是在某些个很基本的上头，还是相同的。很基本的，比方说吧，说假话，每一个社会都不喜欢，都讨厌，是吧？比如这样的。可以有許多事情，它还是由于社会风俗习惯不同，这个地方、这个社会认为好，那个地方就不认为好。或者今天以为好，古人认为不好。

艾：每一个社会的风俗习惯，您刚才说的，时间的分别、地方的分别都是有的。有所为的目的也会不同，那什么算是不道德的行为也不同了？

梁：那当然了，不同的，是古今的不同，地方空间的不同，各有各的道德。因为各有各的道德，实际上不是真道德，实际上是礼俗。

艾：实际上是礼俗啊？那么真道德的来源是什么？

梁：真道德啊，是自觉自律。通常社会上多数人是随着人走，随着社会的风俗习惯走。生命力很强的人，他可以不随俗，他能够自觉自律，不随俗，所以不管旁人的讥笑、反对，本着自己的自觉自律来行动。革命家能够这样，普通人不革命，革命都是先知先觉。

Alitto: This revolution is what Marx discusses as a revolution. The masses take action out of their own self-interest, out of their own material interests.

Liang: But revolutions don't happen often. Of course those revolutionary leaders who take the lead cannot separate from the masses, but they can transcend and lead the masses. They have foresight. Their creative power is great. The average person...

Alitto: There is still a fundamental problem. What in the end is the goal of society's evolution? What path does it follow? According to what principles does it develop? You say that revolutionaries are foresighted. Where does their understanding of their standards and goals come from?

Liang: We can't lay down a general rule because it is different at different time, places and environments.

Alitto: I mean, if there was an eternal unchanging truth...

Liang: No. There is no objectively existing eternal unchanging truth.

Alitto: But you stated that although each individual person's body is independent and unconnected, as [the example you gave previously] "when you eat, my hunger is not satisfied." You say that the mind is still...

Liang: Likes and dislikes mutually communicate.

Alitto: Why do they mutually communicate?

Liang: Mutual communication means that I understand you, and you understand me. This is called mutual communication.

Alitto: But why? Why does mutual communication exist? That is to say, human nature has aspects that are shared. Each individual person has...

Liang: It is what Mencius said: Human minds/hearts are the same.^[15]

Alitto: But humans have developed through evolution. Humans of today and humans of ten thousand years ago are different. Humans today will also be different from humans ten thousand years from now. But where is the common property [the basis of humanity]? Where does it come from?

Liang: The common property is that they are living things. All have life; if they have life, they all have likes and dislikes. The closer dislikes and likes are to the corporeal, the easier it is for them to be different. Take smoking as an example. You like to smoke and I do not. That is, those likes and dislikes that are close to the corporal (physiology) are easy to differ. An individual person...

艾：这个革命就是马克思的意思论革命，群众为了他们自己的利益而行动，为了他们物质上的利益才行动。

梁：可是革命不是常常有，先出头领导的革命领导人当然离开群众不行，可是他超出群众、领导群众。他是先知先觉，他的创造力大，一般人.....

艾：还有一个更基本的问题啊，您说到底人的社会演变有什么目的啊？按照什么途径、什么原则发展的？您说革命者是先知先觉，他的标准、目的的了解是哪儿来的？

梁：它是看不同的时代、不同的地方、不同的环境，我们不能笼统地说。

艾：我的意思就是说假如有一个永久不变的真理.....

梁：没有，永久不变的真理没有，客观存在的永久不变的真理没有。

艾：您刚才说的人跟人的身体当然有区别、不同，您吃饭，我不饱，心灵您说还是.....

梁：好恶相喻。

艾：为什么相喻？

梁：相喻就是 I 懂得你，你懂得我，这叫相喻。

艾：不过为什么？有什么原因相喻存在？就是说人性有共同的地方，大家每一个人都有.....

梁：就是孟子所说的人心有“同然”。

艾：不过人是演变而发展出来的，现在的人与一万年前的不同，现在的人又跟未来一万年后的人不同，可是共同的地方在哪里？共同地方的来源在哪里啊？

梁：共同的都是活的东西，都是生命，有生命就有所谓好恶。离身体越近的好恶很容易不同，如你喜欢抽烟，我不喜欢抽烟，就是离身体太近，离身体太近的好恶那很难相同。个人.....

Alitto: Which likes and dislikes are comparatively similar?

Liang: Those transcending the corporeal.^[16]

Alitto: Those in the mind?

Liang: Transcending the corporeal, transcending the corporeal. Just like the example of lying that I just mentioned. Lying is an example.

Alitto: Possibly there are societies in which lying is not considered wrong.

Liang: That is a question of social customs and habits. I admit that there is that kind of society, but that [acceptance of lying] is part of the social customs and habits of society. Social customs and habits are different from conscience. Social customs and habits make the humans of different ages and different places differ from one another. Social customs and habits are this way.

Alitto: For example, in the West, quite a few people feel that fundamentally conscience doesn't exist. Then what are humans? They are created by society. Human nature is society's creation. Especially in the Women's Liberation Movement, they feel that there is no basic difference between men and women. In fact, there is a distinction, but that is because men control society, with the result that females are

raised specifically to become what they are. Males are raised differently. But there is no distinction between consciences. This is one way of explaining the difference.

Liang: This is a difference between the innate and the acquired.

Alitto: They mean that there are no innate differences, aside from the differences of corpulence, height—naturally the genitals are different, the reproductive system is different—they say that aside from that there is no great difference. That is to say, there are no inherent qualities. I don't agree. You don't agree. But the reasons are that there is no [common universal] conscience. Sooner or later modern societies...will have no standard. The process of rationalization breaks down the basis upon which standards rest. What you have just articulated and what you held previously are about the same. But in the current situation of the Western society, and especially in the future situation, standards of morality—standards for good and bad—are disappearing. Starting from the 18th century Enlightenment to the present, our standards become fewer and fewer, more and more relativised; relativised moral standards are the equivalent of being absent.

艾：那哪一种好恶比较相同？

梁：超过身体的。

艾：心理的？

梁：超过身体的，超过身体的。说假话是一个例子。

艾：可能有一种社会是说假话不一定是坏事。

梁：那个是习俗不同。我承认有那样的社会，但是那个是归在习俗上，习俗跟本心不同。习俗容易让不同时代、不同地方的人彼此不一样，习俗是这样的。

艾：那比如在西方，不少的人觉得根本没有本心。就是人是什么？就是由社会创造出来的，人性是社会的创造品。尤其是妇女解放运动，她们觉得男女根本没有分别，事实上是有分别的，那是因为社会是由男的控制的，而结果女的从小就养成这个样子，男的养成另外一个样子，不过本心没有分别，有这么一个说法。

梁：就是一个是先天的，一个是后天的。

艾：他们的意思就是说先天的分别是没有的，除了长得胖、长得矮的、长得瘦这些分别以外——当然生殖器也不同，生殖系统不同——他们说这以外没有什么大的分别了。就是说没有本心，我也不同意，您也不同意。不过道理就是说，没有本心.....现代社会迟早.....就是没有标准了，理智化过程好像把所有的标准的基础啊，打破了、坏了。您说的道理跟您以前的基本的道理是一样的，不过现在西方的社会的情况，尤

其是将来的情况，道德的标准、好坏的标准越来越没有了。自从18世纪启蒙运动开始到现在，我们这个标准越来越少了，越来越相对化了，道德标准一相对化就等于没有了。

Liang: This is all peripheral, not fundamental. It still comes back to that statement by Mencius, that people's minds/hearts are the same. The sage knows beforehand the similitude of our minds/hearts.

Some sixty years ago, when I was only in my twenties, I published *Eastern and Western Cultures and Their Philosophies*. In that book, I explained Confucius according to my understanding of him at the time. Now, doesn't Confucius often speak about Perfect Virtue (*ren*)? What did I say in that book? I said that Confucian *ren* is a kind of extremely sensitive, acute intuition. Didn't Mencius like to use the terms "intuitive understanding of the good" (conscience), which was what we call "instinct." *Zhijue* in Chinese is called "intuition" in English. *Benneng* is called "instinct" in English. So in this way, I used these modern terms to explain Confucius' and Mencius' thought.

Now, I know I was wrong. These modern terms are close to the meanings I meant to convey; they are close, but they are not very direct equivalents. It was not really correct, nor completely incorrect, because Confucius' Perfect Virtue can be very deep and profound, so much so that it becomes abstruse. As in *The Analects*, the master said, "Is Perfect Virtue a thing remote? I wish for it, and then virtue is at hand." If you explain *ren* in too abstruse a fashion, it is too one-sided, too narrow. *Ren* does not necessarily have to be explained in profound, abstruse ways. *Ren* is both shallow and profound, both simple and complex. If you only understand its superficial, shallow, easy aspects, that is not real understanding. So my mistake in that book was to stress its simple, shallow aspects too much. Mencius is also that way. When you go to understand Mencius' intuitive understanding of the good, it can be understood both on a shallow level and on a profound level. For example, intuitive understanding of the good, that is, conscience—who doesn't have a conscience? Everyone does. Is this saying right or wrong? Can you put it this way? You can certainly put it this [simple] way. But, on the other hand, you can't understand it too simplistically, too shallowly either.

Why can't it be too simplistic, too shallow? Because we humans live within society, and cannot depart from society. It is likely that humans will follow the mores and usages of their society. If the mores of a society take [this] to be right, the individual considers it right. If the morals and mores of a society take it to be wrong, so does the individual human. It is easy for people to do this. But societies and their mores and morals are different. There are differences in both

time and space. East and West are different. The modern and the ancient are different. People tend to follow their social norms. So, what is considered wrong in one society is considered right in another. This is very common, unless it is an inherently extremely gifted person, or an extraordinarily wise person, who possibly won't follow conventions—he often would lead a revolution. Exceptionally gifted people are this way, and so it is hard to say if these words apply to them.

梁：这个都是末梢，不是根本。还是孟子那个话，孟子说，人心有同然，圣人是先得我心的同然。

在60年前，60年前的时候我才二十几岁，那个时候发表《东西文化及其哲学》，那里面我就对孔子有一些解说，按照我当时的理解、我所能懂得的，来说明孔子。为了说明孔子——孔子不是喜欢讲那个“仁”吗？——我当时那个书里头，我说：“孔子说的‘仁’是什么呢？是一种很敏锐的直觉。”孟子不是喜欢说“良知良能”？那个就是现在所说的本能。直觉嘛，英文就是intuition，本能就是instinct。我就是这样子来把孔孟之学，用现在的名词来介绍给人。

现在我知道错了。它只是近似，好像是那样，只是近似，不对，不很对，不真对。这个不真对，可也没有全错啊，也不能算全错。因为孔子所说的“仁”，它可以很深，可以很高深。孔子不是有那个话：“仁远乎哉？我欲仁，斯仁至矣。”所以你把“仁”说得太高深，也就偏了，不必一定说得很高深。一方面是可以这么说，可浅可深。如果你就是从浅的一方面来懂它，那是不够的。所以我在当初的书里头，就是太从浅的方面来说。孟子也是那样，孟子的“良知良能”，你去懂得它，你去了解它，也是可浅可深。比如说“良知良能”，就是良心，谁没有良心呢？都有良心。这样说对不对呢？可以不可以这样说？完全可以这样说。可是又转过来说呢，不能看得太简单，不能理解得太浅。

为什么不能太简单、不能太浅呢？因为我们这个人啊，人总是生活在社会里头，他离不开社会，所以他容易随着社会走，社会习俗上这个算对，他也就对，习俗上以为这个不好，他也就跟着走，人很容易这样。可是所跟着走的这个社会，东西南北，在这个国家，在那个国家，在这个洲，在那个洲，在西洋，在东洋，社会很多不同，古今也是很多不同，在空间上、时间上很多不同。人多半都是随着社会走，所以这个社会认为是不对的事，在那个社会认为是对的，这是常有的。除非天资很高的人，智慧很高，他可能不随俗，他常常是领头革命，天资高的人常常是这样，所以有些话就很难说了。

Alitto: Each society has its own customs and mores. Each society has its own value judgments. If we say that each society is different, then does humanity have a universal truth, a universal standard for value judgments?

Liang: The answer is yes and no. Let's first address its non-

existence. This life of ours must be lived in a society, so we must go along with the values of our respective societies. If you oppose society, you will not be accepted by society. So the values can be taken as "customs" or "etiquette." Probably on the one side of the issue, we can admit that each age, each place—that is to say, each society—has different customs, mores and morals. Probably it is natural to be in accord with different societies' values. The "rules of propriety" are for that time and place reasonable and true.

On the other hand, however, there is also a kind of truth, which is not the principle of a particular time and place, bound by customs and mores. Rather, it is an absolute truth. This truth does exist, but only very few enlightened brilliant people are conscious of it, or realize it. They can rise above and see further than the average people. On the one hand, there are few of these people. On the other hand, there is an old Chinese saying that "Something something...great height and brilliancy, so as to pursue the course of the Mean." This kind of person is himself very brilliant and wise, but he does not want to divorce himself from the society of his time. So the path he takes is still the middle path. I don't know if you are aware that I never studied the Four Books and Five Classics? (Alitto: Yes, I am.) So the quotation I just used is not complete. "Something something...great height and brilliancy, so as to pursue the course of the Mean." This is because I never memorized the Classics, and so I'm not all that familiar with them. [The original phrase is: To raise it to its greatest height and brilliancy, so as to pursue the course of the Mean.]

艾：每一个社会有每一个社会的习俗，有它的风俗习惯，也有每一个社会的价值判断。假如说每一个社会有不同，人类有没有一个普遍的真理，一个普遍的价值判断的标准？

梁：一方面说有，一方面说没有。先说没有吧。没有就是说人生就是得在社会里生活，你就得随俗，你一定反对社会，会不见容于社会，所以我们把这个俗或者叫“风俗”，或者叫“礼俗”。我们可以承认不同的时代，不同的地方，这就是说不同的社会吧，随着不同的社会走，也是理所当然。不同的时代、不同的地方的所谓“礼”，就是理。一方面可以这样说。

当然，还有一面，可以说是一种真理吧，不是世俗之理，而是真理。真理是有的，不过是只能在很少的高明人才意识得到，很少的高明人才能够超过众人，他看得高，看得远。这种高明人那是很少了，并且一方面是很少，还有一方面好像中国古话有一个叫“什么高明而道中庸”一句话，他自己是很高明，可是他不跟当时的社会……不愿意脱离社会，他走的路还是走中庸的路。这个地方我补一句，我不知道你知道不知道我是没有念过“四书五经”？（艾：知道。）所以刚才引的话，“什么高明而道中庸”，这句话所以我不完全，因为古书没有背过，不熟。

(原句为“极高明而道中庸”。)

Alitto: It's OK. I know. I haven't memorized ancient books but I know this sentence. These enlightened ones understand and are conscious of the truth. It's all one truth, right? It's one standard for all value judgments. That is to say, no matter where the enlightened ones are from, their conscious truth is the same.

Liang: We should say that there is only one absolute truth, but I usually say that there is a "material physical truth" and "a human truth." The reason used in natural sciences and social sciences, especially the former, is this material physical truth. This truth exists objectively, and does not follow man's will. It doesn't make any difference whether you like this truth or not, it still is ever there. The other kind of truth, "human truth," exists subjectively. When encountering this kind of truth, everyone nods his head, and says "Right" or "Yes." This truth (or reason) has some element of subjectivity. When encountering this kind of truth, people have a favorable impression of it, and are well disposed toward it. Let's say it is a matter of justice, for example. A person will say that he has "a sense of what is right." Justice resides in a sense of what is right. So in my final analysis, there are two truths—a physical truth and a human truth.

Master Zhu (Zhu Xi) of the Song Dynasty never made a distinction between these two truths. He had a paragraph, which I cannot recite. Anyway, he never separated these two kinds of truth or reason. I can give you another example, concerning biological evolution. That is, in natural selection, the weak are eaten by the strong. This is a phenomenon that has an objective existence, a truth or a reason of the natural world. But we humans all dislike and oppose it. We feel that...

Alitto: Do you mean that people, no matter when they live or what place they are from, all dislike it? This "we" is in reference to humankind, no matter where one is from?

Liang: In what stands to reason with humans, the phenomenon of the weak being oppressed, being bullied gives a feeling of unfairness to the onlooker, and the onlooker does not like it. This feeling of dislike is reason, a kind of human truth. The strong eating the weak has an objective existence and that objective existence is material physical truth.^[17]

艾：这没有关系，我知道，我也没有背过古书，我知道这句话。这些高明的人，所了解、所意识的真理，都是一个真理，对不对？都是一个价值判断的标准。就是说，无论是什么地方的高明的人、超众的人，所意识的真理是一致的。

梁：应当说真理只有一个，不过普通我总是说，有一种是“物理”，有一种是“情理”。这个科学——自然科学、社会科学，特别是自然科学，自然科学所发明、所讲出来的道理就叫“物理”。物理存在于客观，不随着人的意志，不能够说我喜欢它，我不喜欢它，那不成。无论你喜欢不喜欢它，它一定是那样的。可是另外有一种叫“情理”，情理是存于主观的，合于情理，人人都点头，人人都说对、是这样，情理是在主观这一面。合于情理，就好办，比如说是正义的事情，不是有人就说它是“正义感”吗？正义就存于正义感上。这我归结下来，一种叫“物理”，一种叫“情理”，不要把它混了。

从前宋朝朱子——朱熹，他就是没有分开这两个。他有一段话，我也背不上来了，朱子说的，他就没有把这两种理分开。我可以再举一个例子，讲那个生物进化，有自然淘汰，有一句话叫做“弱肉强食”，弱的肉被强的人吃了，弱肉强食是一个客观存在的现象，一个自然之理，可是我们都不喜欢它，对弱肉强食我们都反对，觉得……

艾：无论是什么时候的、什么地方的人，都不喜欢，是这个意思？“我们”的意思是人类，无论是什么地方的？

梁：按常情来说，对小的、弱的被欺负，站在旁边，都有一种不平，不喜欢那个样子。这个不喜欢是一个理，这个理有，这个理是个“情理”。那个弱肉强食客观存在，那是个“物理”。

Western culture, Chinese culture and Indian culture

Alitto: Does the essence of Chinese culture, its core substance, still exist?

Liang: There are still some remnants of Confucian culture. It is, of course, not possible to sweep away all traditional cultural lock, stock and barrel. Something still remains, in the area of family ethics.

Alitto: In your book *The Essence of Chinese Culture*, you mention a definition of the essence of Chinese culture; you defined it as what makes humans human. The early Chinese sages discovered what made humans human prematurely, before the minimal primal material demands of humans were met. Do you still think that what makes humans human is the most important in Chinese culture?

Liang: What, in my view, to my knowledge, is the difference between Chinese culture and Western culture, and Indian culture? It is that Chinese culture knows of human rationality.^[18] Chinese culture believes in the human; it does not believe in God, as with Western culture or in Allah as in Islamic culture. Chinese culture is built upon and trusts the human. The distinguishing characteristic of Confucianism is that it relies on, and is built upon humans, not some other being. This is what Mencius later pointed out—that "human

nature is good." Confucius himself said no such thing, but Mencius mentioned it specifically. So the distinguishing characteristic of Confucianism is that it believes in, and is confident in, humans. Humans can make mistakes, or sink into degeneracy. But how can you correct the human who makes mistakes? How can you keep him from moral degeneracy, from doing evil? What do you rely on to do this? Aside from the human himself, there is nothing else that is dependable. So I feel that the distinguishing feature of Confucianism is that it has faith in man.

In foreign countries, in Christianity, it is said that Adam ate some fruit. There is such wording? There is such a theory. This is in the West. In India there is something different still. India is very strange indeed. From ancient times [the tradition of] India was to deny human life, to negate it. It held that human life itself was a mistake. This was the common attitude and convention in ancient India. Were there any exceptions to this attitude? Yes. In Buddhist writing there is the saying "to act in accord with the world, its ways and customs, and with non-Buddhist doctrines." Act in Accord with the World was a non-Buddhist sect, and was held as a heretical, outside path. A lot of other religions, aside from Buddhism, also excluded it and considered it cult. This was the one and only affirmation of life in ancient Indian thought. Aside from this, all others held that human life was bafflement. The ancient traditions of India were quite different from everywhere else. This is very strange.

西方文化、中国文化与印度文化

艾：中国文化的要义、核心的实质，还存在吗？

梁：残余的还是有的，不能说一扫而光啊，还是有些个遗留。所留下的还就是那个家庭伦理那方面。

艾：《中国文化要义》那本书里，您提到了“中国文化要义”的定义，下了个定义就是“人之所以为人”，说中国的圣人很早以前，物质生活还没有达到可以满足一切起码的要求以前，中国的圣人就了解到“人之所以为人”了。那您还是这么想的，就是说中国文化的最重要的是“人之所以为人”？

梁：在我的看法、我的认识，就是这个中国文化不同于西洋，不同于印度，在什么地方呢？就在它认识了人的理性。它相信人，它不相信上帝，也不相信像回教什么真宰、真主。它信赖——依赖、依靠的意思——它信赖人，儒家的特色它是信赖人，不信赖旁的。这个就是后来孟子点出来的“人性善”，“人性善”这个话在孔子倒没有说，可是孟子点明了。这个儒家的一个特色，它是很信赖人。人嘛当然也可能错误，可能也有走入一种下流，可是，你怎么样子能够矫正它，让它不趋于下流、

不去为恶呢？你靠什么呢？除了靠人，没有别的可靠。我觉得儒家的特色在这个地方。

好像在国外，在基督教，好像是说亚当怎么吃了什么果子，有那个话？这是在西洋。在印度它也跟中国不相同。印度很奇怪，它是从很古的时候就否定人生，它认为人生就是错误，这个是在古印度普遍的风气。有没有例外呢？有一个例外，就是在佛书里头所称为“顺世外道”的——顺着来，“世界”的“世”，“顺世外道”——佛家认为是个外道，佛家以外很多旁的宗教，也都排斥它，也认为是外道，它是在古印度独一无二的肯定人生的。除它以外，都认为人生是一种迷惑，这是印度的古风，跟旁的地方很不同，这很奇怪。

Alitto: What is the greatest threat to Chinese culture, in the present situation?

Liang: I think that there is no threat. Even if some of the old customs, practices and usages are now destroyed, I think that the future is bright (for Chinese culture). Sixty years ago in the last chapter of my book *Eastern and Western Cultures and Their Philosophies*, I said that the future culture of the world would be a revived Chinese culture. I am explicitly not pessimistic about the future of Chinese culture.

Alitto: Mr. Liang, you still hold that the future world culture will be...

Liang: A revival of Chinese culture.

Alitto: Why did I ask? Because in *Eastern and Western Cultures and Their Philosophies*, you made this kind of prediction, but in your books written after that, you seldom mention this. You have just said that those old social customs and habits no longer exist. (Liang: They were undermined.) In that case, what in Chinese traditional culture must be preserved? What things?

Liang: Of course I want to answer this question. I want to explain why I'm so optimistic about the future of Chinese culture. Very early I made an analysis of human life, and concluded that it had three great problems.^[19] The first is the problem of humans versus the natural world. This is the first and foremost problem. Before humankind had created cultures and civilizations, humans suffered from floods, wild animals, earthquakes, and so on. So later Western culture developed. The development of Western culture can be encapsulated in two phrases: the conquest of nature and the utilization of nature. It adopts an attitude of conquest toward nature, an attitude of utilization. In this Western culture has always been very successful, right down to the present. Its successes continue to be higher and higher through time. It can now go into space and circle the earth; it can go to the

moon. In its conquest and utilization of nature, Western culture has achieved great victories. This is a characteristic of Western culture. It is a problem of man versus matter [nature]. As soon as man opened his eyes and looked around, what he saw was matter. He extended his hand and what he touched was matter, what he was standing on was matter. So, man versus matter was the first problem encountered by man, and Western culture solved this problem. Aren't the solutions to this problem highly developed?

艾：在现在的情况来看，对中国文化最大的威胁，您认为是什么？

梁：我看没有什么威胁。近来尽管有点对旧的风俗习惯有些个破坏，但是前途并不悲观。我不是在60年前有一本书《东西文化及其哲学》？那个书里头的末一章我就说：在世界未来，将是中国文化的复兴。所以我刚好不悲观。

艾：那，梁先生，您还是认为将来世界文化，还是.....

梁：中国文化复兴。

艾：我为什么问呢？因为您《东西文化及其哲学》这本书是有这种预测，可是后来写的书，很少提到未来的事，那未来的事嘛，您刚提到这些旧的风俗习惯已经没有了，（梁：被破坏了。）那么中国传统文化必须保留的，是哪一些？是什么？

梁：这个问题当然要答了。我要说明为什么我对未来那样乐观。就是我在过去，很早有一个分析，这个分析就说是人生有三大问题。第一个大问题就是人对大自然界的这个问题，这个是第一个问题，这个是最先的问题。人类还没有创造出来文化、文明的时候，非常地受大自然的洪水、猛兽、地震种种的压迫，所以后来有西洋文化的发达起来。西洋文化的发达，主要是两句话，就是“征服自然，利用自然”。对大自然界，它取一个征服的态度、利用的态度，并且很成功，一直到现在还是成功的时候，成功越来越高了，它可以跑到天空上去围着地球转，可以到月亮上去。它是在这个问题上，在征服自然、利用自然上取得了伟大的成功、胜利。这是西洋文化的特色。这个呢，我就说是人对物的问题。人一睁开眼睛看见的，那就是物，都是物，人伸手一摸的，都是物，脚踩的也是物，所以人对物的问题是第一个问题，头一个问题，而西洋文化就是在这个问题上的胜利。这个问题，到现在不是已经达到很高的程度了吗？

Following on this path, I think that it is quite natural that human society should advance into socialism; capitalism will evolve into socialism. The so-called capitalism is a society in which the individual is the basic unit. Capitalism can be encapsulated into eight characters: *gerenbenwei*, *ziwozhongxin* (Individual based Egocentrism, and Self Centeredness). These characterize European and American modern societies. It is obvious that these societies (all human societies) will undergo a transformation to socialism in the future. Socialism is

unavoidable. Capitalism will become a relic of the past. That is to say, the means of production and the materials of production definitely will be publicly owned. At present property is nominally individually owned. In fact, the economic production of a society is the whole society's production, not just the big capitalists'. Later society will become socialistic. This is inevitable. Society based on the individual as the unit will become based on society as the unit. When this has taken place, man comes to confront what I call the second problem, the problem of man versus man. That is, how to make it so that men can get along together, live in peace together. To do this, the relationship between man and man must be straightened out. That is, create a situation whereby I show consideration for you, and you show consideration for me. An old Chinese term describing this is "to give precedence to the other out of courtesy" (*lirang*), and "to govern a state with courtesy" (*lirangweiguo*). At that time, the problem of man versus man will become the primary one, while the problem of man versus nature will not have totally disappeared, but it will have receded to second place in importance.

...That is to say, science and industry will continue to advance, but the major problem will be the problem of man versus man. This is the way in the future. In the future, when this problem must be solved, that will be the time of Chinese culture, because Chinese culture is based on the family. The old term for this is "filial piety and fraternal duty": the father is benevolent and the child is filial. I only use four words: *xiao* (filial piety), *ti* (fraternal duty), *ci* (kindness), and *he* (peace-harmony). So, in my view, when human society reaches the stage of socialism, then probably all people will have to strive for filial piety, fraternal duty, kindness and peace-harmony, to strive for respect for age, for treating children and the young with kindness, for harmony and good relations between brothers, and so go create good relations generally throughout society. This is the problem that takes place within a socialist society. Again, I say, at this stage the problem of man versus nature still exists, but is in second place, not the most pressing problem. And so this stage I call the revival of Chinese culture.

再往前走，顺着这个路再往前走，我认为很自然地要走入社会主义，资本主义要转入社会主义。所谓资本主义就是个人本位的主义，可以说八个字：“个人本位，自我中心”，我自己，以自我为中心。“个人本位，自我中心”，这八个字就是说的近代的欧美社会。可是它底下走到后来，它要转变，要转变到社会主义，社会主义不可避免，资本主义要成为过去。这个就是说生产工具或者生产资料一定要归公，现在名义上是归个人、大资本家，而事实上社会的生产已经是社会性的生产，底下它要转入社会主义，这个是不可能的。那么，个人本位变为社会本位，

以社会为本位。到了社会本位，人生问题就转入了第二问题。刚才说第一个问题是人对自然的问题、人对物的问题，第二个问题就是人对人的问题，就是人对人怎么样子能够彼此相安、彼此处得很好。要把人与人的关系搞好，就得你照顾我、我照顾你，中国老话叫做“礼让”，“礼让为国”。总而言之吧，人跟人彼此相安相处，处得很好，在这个时候成为一个问题；人对自然的问题，退居第二位，不是没有了，不过退居第二位。

也就是说自然科学、工业还是要进步的，不过人对物的问题不是头一个问题了，它是退居到第二个问题。第一个问题是人与人怎么样子彼此相安、共处，这个是未来的，未来的事情要这个样子，这个样子就是到了“中国文化”，这个就是中国文化。中国文化原来是起于家庭，老话嘛就是孝悌，或者说是父慈子孝，或者说四个字，四个字是什么呢？它就是“孝悌慈和”。孝、悌、慈，还有一个字叫“和”——“和”就是和平、和好、很和气。我这么看，我这么推想，到了社会主义，恐怕就要大家都来讲究孝悌慈和，推讲敬老啦、抚幼啦、兄弟和好啦，把人与人之间的关系搞好，这是未来社会主义里头的问题。自然，人对自然的问题还是有，可是退居第二位了。这个我就谓之“中国文化复兴”。

I do want to say more about this now. After the revival of Chinese culture will come the revival of Indian culture. I estimate, just off the cuff, that this revival of Chinese culture will probably last a very long time. Probably humanity will be in this kind of atmosphere and circumstances—this kind of customs, conventions, and social practices—for a long time. But society will still change; it won't be forever this way. It will change and transform, in my view, into a revival of Indian culture.

What was ancient Indian culture like? What would it look like? I just inadvertently mentioned "acting in accord with the world, its ways and customs, and with non-buddhist doctrines." That is, that particular sect affirmed human life. Its influence was quite small. Broader ancient Indian society, however, denied life, saying that human life had no value, even to the extent that life was deluding and confusing. Human life takes place in delusion and confusion. This attitude was common in ancient India, aside from the one small sect that I mentioned before. There were many religions in India aside from Buddhism, which arose later. Buddhism was not the earliest school of thought in India. Yet Buddhism pushed these attitudes of negation to their natural conclusion most completely. So, in my view, in the far distant future of mankind, this attitude and atmosphere of ancient India will arise. People will feel that their own life has no value. In Buddhist terms, the person will want to seek release or deliverance or liberation from worldly cares (*mukti*). This is the ultimate liberation. So, the above is my own deduction, my own logic.

Alitto: Actually, this reckoning is similar to that expressed in *Eastern and Western Cultures and Their Philosophies*. I myself am persuaded by your theory. According to logical inference of developments in the future, it should be like this. But I still have a theory. I think that this process of modernization, or you could say the process of rationalization, is in conflict with, in contradiction with "what makes humans human"—be it the "human" in Indian culture or in Chinese culture. Does the present Four Modernizations Movement hold any harm for Chinese culture?

那么还要再多说一点，就是中国文化复兴之后，将是印度文化的复兴。中国文化复兴，我这么遐想吧，随便说吧，会要很长，时间恐怕很长，恐怕有……人类要在这种空气中、在这种习俗中、风俗中，可能时间很长。时间很长之后，它还是会变的，不会永远是一个样子，它会变，会转变，转变出来的，依我看就是印度古文化的复兴。

那么印度古文化是什么文化？什么样子呢？刚才无意中说了下，就是在古印度除了顺世外道它肯定人生——那一派势力很小，广大的印度古社会都是否定人生，说人生没有价值，它甚至于说人生是迷妄——“迷”就是糊涂，“妄”就是“狂妄”的“妄”，人生是在迷妄中。这些是古印度的普遍的风气，除了顺世外道之外，印度宗派很多，并且佛教还是后起，佛教在印度不是最早的，佛教否定人生算是最到家了吧。所以我的推想，人类很远的未来，古印度的这种风气就来了。人对于自己的生命、生活，感觉到没什么价值……还要按着佛家的意思解脱、解放。人嘛，就是常常地在求解放，这个就是最后的解放。这是我的这么一种推想，我的一种逻辑。

艾：其实您的这个推想，跟当年《东西文化及其哲学》那本书，所表示的差不多了。我自己还是信服您这个说法是对的，按逻辑推出将来的发展，是应该如此。不过我还有一个想法，我觉得现代化这个过程，或者说是理智化这个过程，跟“人之所以为人”，就是无论是印度文化或是中国文化的“人”，是有冲突的、有矛盾的。您觉得四个现代化这个计划对中国文化有无什么害处？

Liang: China exists in this present world, and cannot go against the current. It can only advance forward and develop material culture, which is necessary. But the important thing is that in the past, the development of Western material culture was based upon capitalism. Ever since the overwhelming power of the West reached China, China has had no opportunity to develop capitalism. So China had to take the socialist road. It could only seek individual welfare within the context of the welfare of the whole society. It could not allow the welfare of the individual to prevail over that of society. So the appearance and success of the Communist Party in China is very reasonable, and not peculiar or strange at all.

Alitto: In the future, Western culture and Western society will

evolve into [the way of] China. In the present phase of history, what should Western society learn from the East, from China?

Liang: A human being, immediately upon being born, is related to other humans. At the least, he is related to his parents, and siblings. As he grows up, he has friends, teachers and so on. These relationships are called *renlun* (human ethical relationships) in Chinese. Human beings always live in the interpersonal relationships. One cannot be detached from other people, so how to foster the relationships becomes a major question. And those relationships, as the Chinese old term goes, are called *renlun*.

The distinguishing feature of Chinese culture lies in this. Chinese culture puts importance on human relationships. It expands the familial relationships into broader society beyond the family. For example, a teacher is called "teacher-father" (*shifu*), a schoolmate is called a "school brother" (*shixiongdi*). In ways like this, a person always has the close, family-like, intimate feelings. Applying such relationships to society, it seems to bring distant people closer together, to bring outsiders inside. This is the distinguishing feature of China and Chinese culture. To put this feature into a few words, it is the opposite of the individual-centered, egocentric way. What is that, then? The essence of the matter is mutually to value and respect the other party.

梁：中国生活在现在的世界上，它不能够违反潮流，它只能往前走，把物质文明发达起来，那是需要的。不过要紧的就是，过去的西洋物质文明发达是靠资本主义发达起来的，中国是自从西洋强大的势力过来，中国已经没有走资本主义的路的余地了，不可能走资本主义，所以它不能不走社会主义的道路。只能在谋社会福利的里边，有了个人的福利，不能让个人的福利压倒社会福利，不可能。所以共产党在中国的出现并且成功，那是很合理的，不特别、不奇怪的。

艾：将来西方文化、西方的社会还是演变成中国，以现在历史阶段来说，西方社会应该向东方、应该向中国学习一些什么？

梁：人啊，一生下来就有与他相关系的人，至少他要有父母，或者还有兄弟，长大了之后到社会上还要有朋友、有老师、有什么，这个就叫做人伦，叫做伦理。人始终要在与人相关系中生活，人不能脱离人而生活，人不能离开人而生活。所以怎么把人与人的关系搞好，是个重要的问题，这个叫做伦理、人伦，中国古话叫人伦。

中国文化的特色在这个地方，中国文化的特色就是重视人与人的关系，它把家庭关系推广用到家庭以外去，比如说它管老师叫师父，管同学叫师兄弟，如此之类。它总是把家庭那种彼此亲密的味道，应用到社会上去，好像把那个离得远的人也要拉近，把外边的人归到里头来，这个就是中国的特色，中国文化的特色。这个特色一句话说，它跟那个“个

人本位，自我中心”相反。那么它是怎么样子呢？它是互以对方为重。

For example, since Confucius in *The Analects* liked to talk about filial piety and fraternal duty, we should ask what they are. They are respect for and obedience to the older generation on the part of the young. There is also the virtue of kindness, which means affection and kindness for the younger generation on the part of the older generation. So, to sum up in a word, these virtues are mutual respect. For example, a guest arrives. The host shows respect for the guest. In all things, the host thinks of and is considerate to the guest. The best seat is given to the guest. Tea is made for the guest. Now, a good guest will also turn this around, and respect his host. He will take the host into consideration in everything. And so, in Chinese society there exists the custom of *lirang*. What is this *lirang*? *Rang* is regarding the other person as important. *Li* is to respect the other. China, under Confucian influence, has always told people to respect others. Afterwards, when capitalism has passed away, and socialism has arrived, probably this *lirang* as a social convention will also arrive [on a worldwide scale]. With everyone living together, mutual respect is very important. So, that's why I say that the future of the world will be a revival of Chinese culture. I will say, in conclusion, that I have always felt that Marxism is quite good. It is superior to Utopian (Fantasy) Socialism. Owen of England, and Fourier. There were three men. Utopian Socialists. Their hearts were in the right place, but they didn't understand that the natural development of society and history would produce socialism. So Marxism is called Scientific Socialism, which means that objective development of history will be in that direction.

Development is always good.

Alitto: Can humans have a life without disputes and fighting? How do you think we can decrease disputes and fighting?

Liang: Disputes and fighting are facts of the biological world. Not only is humanity like this. In speaking of the struggle for survival, isn't there the saying that "the bigger fish eat the smaller fish"? Dog eats dog. So, this is an undeniable fact. Everyone in the biological world can be seen engaged in these kinds of mutual struggle, murder, and fights to the death. But humanity should be more elevated than animals, and in fact, it already is. This is one aspect of humanity. There is another aspect that in the situation of competition, struggle and mutual slaughter, there is already looking after one another, and helping the weak and small. The history of societal development marches forward, ever decreasing mutual estrangement and mutual

discrimination [between people]; minds broaden and become generous and tolerant; people look after others. I think that this probably develops through time; it becomes more and more developed through time. The overall trajectory of this development is this way.

比如说，中国人从孔子、从古书《论语》上，它老是爱讲“孝悌”，孝悌是什么？是说儿子或者幼辈，对父母、对长辈的尊重、顺从，这就叫孝悌。不是还有个“孝悌慈”吗？什么叫“慈”呢？慈就是父母那边慈爱子女，慈爱幼辈。一句话，归总一句话，就是“互以对方为重”，我以你为重，你以我为重。比如说客人来了，在主人这一面就以客人为重，什么事情都替客人设想，给客人好的位置坐，给客人倒茶喝；一个好的客人又转过来了，又是尊重主人，事事为主人设想。所以中国社会礼俗，刚才提到礼让，什么叫礼让呢？“让”就是看重别人，“礼”就是尊重旁人。中国在儒家一直就是叫人礼让，这个礼让也就是刚才我说的，到了未来，资本主义过去了，社会主义来了，恐怕这个礼让的风气会要来了。大家在一块生活，互相尊重是很必要的，所以我就说，世界的未来是中国文化的复兴。我再说一句话、结束的话，我是乐观的，我觉得那个马克思主义很好，它比那个空想的社会主义高明。欧文啊，英国的欧文、傅立叶，他们有三个人。空想的社会主义，他们的心是很好，不过他们没有想到，没有清楚社会的发展、历史的发展，自然会到那一步，自然会要到社会主义。马克思主义所以叫科学的社会主义，它是认为客观的发展就要走到那里。

发展总是好的

艾：人类是不是可以过没有争执、斗争的生活？您认为怎样才能减少争执、斗争？

梁：争执、斗争是事实，是生物界有的，不单是人类如此。生存竞争，不是有“大鱼吃小鱼”这话吗？弱肉强食，所以这个是一个不可否认的事实，生物界处处可以看出来这种彼此之间的斗争啊、残杀啊、你死我活。不过人类应当高于动物，事实上人类也已经高于这个东西，这是一面。还有一面，就是还是在这个里头，还是在竞争啊、斗争啊、彼此残杀里头，已经能够彼此照顾、帮助弱小，这一面也有，已经有。社会发展史越往前去，这种要减少——彼此的隔阂、歧视要减少，心胸要开阔，照顾旁人。这方面恐怕是要发展，应当是越来越发展，它的趋势是如此。

When humanity had no culture at all, it led a collective life, but the collectives were not large. Gradually the collective bodies increased in size. At first there were struggles between small collective bodies causing great estrangement and misunderstanding. The more things progressed, the more they evolved, the more they became civilized, the easier it became for people to have emotional communication with one another, and the easier it was for mutual

understanding to be enhanced. In the future, in socialism after capitalism, it will probably be even more this way. So in looking at mankind's future, we should be optimistic. What question were we discussing just now?

Alitto: I just asked you if there was any [possibility] of a conflict-free, struggle-free life, and what had to happen before it was possible to decrease disputes and struggles.

Liang: I think that this matter is one of natural development. People's demands are like this; the natural course of development is in this direction. The natural future [course] is in this direction. In the immediate present, wars still can't be avoided, but this is only the present. In the distant future, capitalist society will certainly become a thing of the past. After capitalism comes socialism; it should be socialism. The sight of capitalist society is fixed on production and pursuit of production, but after the transformation into socialist society, production will be always advancing, so people's sight will be fixed on life; it will be fixed on how to live life and on how to have peaceful coexistence; the way to do that is through small collectives. The situation of struggle between small collectives will change. The scope of the collective will be expanded, and simultaneously there won't be that kind of hostility and estrangement between collectives. It seems there was a saying, "one world, one man"—one world, maybe not, but everyone will be in peaceful coexistence. The future definitely will be this way. Because no one would dare use lethal weapons, everyone will coexist peacefully. Gradually, the prejudices, distinctions and hostilities between races and continents will recede. People will not dare to have destructive wars.

当人类还没有什么文化的时候，都是集体生活，可是集体不大，慢慢地集体要扩大。起初小集体与小集体彼此斗争，彼此很大的隔阂，不了解。越进步、越进化，越文明，人彼此情感上容易相通，容易增进彼此的了解。将来在资本主义之后出现了社会主义，恐怕更是这样。所以往人类的前途看，应当是乐观的。刚才是我们想谈一个什么问题来的？

艾：刚才我问的是没有争执、没有斗争的生活，您认为怎样才能减少争执和斗争？

梁：我认为这个事情是一个自然的发展，人有这方面的要求，自然的发展也是往这个方向去，自然前途就是往这方面走。就眼前说，战争还是不可避免，然而这是眼前。远的未来，资本主义社会一定要成为过去，资本主义之后的社会呢，就是社会主义，应当是社会主义。资本主义社会人的眼光注意在生产上，追求生产，可是转为社会主义社会之后，生产还是要随时进步，可是人的注意，在怎么样生活，注意生活，注意彼此相安共处。也可以说小集团、集团与集团的斗争，那个情况要变，集团的范围也要放大，同时集团与集团之间也不是那样子仇视、隔

谑，恐怕也要变了，过去了。好像有那么一句话，叫"one world, one man"，一个世界，或者没有，大家和平共处，未来一定是那样，因为杀人的武器，大家都不敢用了，大家彼此还是相安共处吧。慢慢地，地球上，不同的种族之间、不同的洲土之间，那种成见、分别、仇视，都退后了，不敢有毁灭性的战争了。

...There are many tragic things. We don't want to look at them, but they will still happen. But I myself say, I think that human history is uninterruptedly developing. It naturally will go ahead and develop, and not stop. Since it will develop naturally with nothing that can obstruct it, at the same time development is good. In development unavoidably there will be destruction; unavoidably there is some great destruction. On one hand, it's unavoidable; on the other, we seek to avoid it. We at least try hard to reduce and to narrow the unavoidable. This is still something that we should strive for. But one need not be pessimistic toward the future. Since things are going to develop in this way anyway, what use is being pessimistic? Things will develop. Development is always good. I think that development is always good.

Alitto: Such statement as "Development is always good" really is the opposite of conservatism. Your "Development is always good" is precisely the diametrical opposite of many conservative points of view.

Liang: Isn't there a term "optimist"?

Alitto: Yes, optimist.

Liang: It seems that I am an optimist.

Crisis of modernization is not very severe.

Alitto: ...Another definition is more abstract, that is the process of rationalization.^[20] That is, all social organizations and processes take efficiency as their standard of value. As the process of modernization proceeds, morality is less and less capable of functioning and serving as a norm because the only norm is efficiency. [All other values are based upon it.] This is also one of the definitions of modernization. There is another definition of modernization that has to do with economic growth and the GNP. But this is more difficult to discuss, because it is in the realm of economics. As I previously discussed with you, I feel my own viewpoint and standpoint are more pessimistic than yours. I myself think that modernization is a process whereby human nature is gradually lost.

.....不少的惨事，我们所不愿意看见的事情，它还是要来，还是要

有。不过就我自己说，我是认为人类历史都是在不断发展，它自然地要发展，不会停步的。既然它自然会发展，停不住、拦不住，同时呢，发展就是好，在发展中不可避免地有破坏，不可避免地有些重大的破坏。不可避免是一面，我们求着避免又是一面，总还是要求着避免的，不可避免我们至少力求减少吧、缩小吧，这还是应当努力的。但是不必悲观，对前途不必悲观，既然事实发展要如此，你悲观有什么用呢？事实要发展，发展总是好的，我认为发展总是好的。

艾：“发展总是好的”，这样的话，您真是跟保守主义者相反。您（说）“发展总是好的”，跟保守的很多观点正好恰恰相反。

梁：不是有个名词叫“乐天派”？

艾：是啊，乐天派。

梁：我好像是一个乐天派。

现代化的危机不会很大

艾：……另外一个定义是比较抽象的，就是理智化的程度，就是一个社会里一切的组织或各种事物、过程，都是以效率为价值判断的准绳。那么现代化的过程中，道德已经越来越不起作用，越来越不是一个准则，因为唯一的准则就是效率。那也是现代化的一种定义。还有一种，是跟经济成长有关系，就是和国民生产总值和有关的，不过，这个是比较难讨论的，因为这是经济学方面的。我以前跟您讨论过的，我自己觉得，我的观点、立场比您的悲观一点，我自己认为现代化就是一个逐渐失去人性的一种过程。

Liang: What is modernization?

Alitto: It is a process that makes humanity lose its human nature.

Liang: Oh my!

Alitto: Yesterday and the day before we did speak about this. First, because morality is relativised, the morality of any society, no matter what society, is different from those of other societies; there is no absolute morality. No absolute morality is the equivalent of no morality, because morality has been relativised. During these past three hundred years in the West, moral norms have been disappearing. The only norm is efficiency. Or, as far as an individual life is concerned, the demands that emanate from corporeal needs: these are the demands that are common to all societies. The only shared universal aspects are those that emanate from their corporeal needs. On the other hand, shared moral standards are disappearing.

Of course, the historical background of Chinese society is different. Throughout history, the Chinese governmental and moral authorities have often been integrated, Buddhism included... The most

recent European, American and Japanese societies can also prove this. They will continue to pay a price for modernization. This price is part of a human's nature. No advancement comes without a price. All of the conveniences of material life, the capacities for high efficiency, control, and the conquest of nature also bring with them some disadvantages. In general terms, it is moral loss. Let's take the family as an example. The concept of family in the West has become weaker and weaker, more and more... If kin relations are one kind of moral relationship, then this kind of relationship has become weaker and weaker through time.

The only relationship left is that of the society's fundamental unit, the individual—the individual and the state, the individual and government. This kind of process is not limited to Europe and America. You can also see it in Japan. Many parts of Japan's original culture have already died out, or soon will... For example, traditional Japanese theatre is called "Neng" (Noh). It still exists, but it exists because the state protects it. *Neng* has become "museumified"; it is no longer alive. So, although there are many things that still seem to live, they have already been made into "museum pieces."^[21] Now, the Chinese developmental path is different because of its unique position in history as a culture that has continuously existed for over four thousand years. This is something that exists only in China. My pessimistic view is that China will follow other countries. In the course of time, there will come a time when it too will pay the price for modernization. What is your reaction to what I have said?

梁：现代化是什么？

艾：现代化是一种使人类失去他们本性的过程。

梁：哎哟！

艾：我们昨天、前天谈到一些道理，第一，道德因为都是相对化的，所有无论什么社会的道德啊，都与别的社会不同，没有绝对的道德了。那没有绝对的道德嘛，那是等于没有道德了，因为是相对化了。所以这300年来在西洋啊，这个道德的准则，越来越没有的，唯一的准则、唯一的效率。或者以个人的生活来说呢，身体所发出来的要求，那是我们人类无论什么社会共有的要求，别的道德方面的，不是共同有的标准，那就越来越没有了。

当然中国的社会历史背景不同，中国政教常常是合一的，佛教包括……。看最近欧美、日本的社会也可以证明这个道理。他们讲现代化的目的还要继续付出代价，这个代价就是人的本性的一部分。没有一个利不带一个弊，所有现代化的物质生活的方便、高效率，控制、征服自然的能力，也带来一些弊，笼统地说是道德上的损失。具体地来说吧，拿家庭来说，西洋的家庭组织啊，好像观念越来越淡啊，越来越……，

假如说亲情关系是道德关系的一种，那这种关系就越来越淡了。

而唯一的关系就是社会的基本单位是个人，个人跟国家、个人跟政府。那这种过程呢，不限于在欧美，连在日本也看得出来。日本的固有的文化的许多部分也是已经被淘汰了，甚至于快要……比如，日本传统的戏叫做“能”，有还是有，还存在，不过那是因为国家要保护它，是博物馆里面的一个东西，不是活的。所以虽然许多东西表面上还存在，不过已经是放在博物馆里面看的。那中国发展的路程好像不同，因为它历史上独特的地方，是历史这么悠久，文化一直四千多年，那是只有中国有这种情况啊。我悲观的就是，中国跟着别的国家走，久而久之，总有一天时候要付出现代化的代价。不知道您对我这些话有什么反应？

Liang: As you know, I'm comparatively optimistic. I feel that the changes will not be great. If you say there will be change, or destruction, then the change and destruction started long before. It started since the end of the Qing Dynasty, even more so in Beijing after Chairman Mao's founding of the nation. I'll give an example. Before, it was Old China. It liked and maintained the extended family. If the grandfather was still alive, the grandchildren could not start their own households. If one did, everyone would sneer at them. They would be lacking in decorum if they acted that way. But now everything is fragmented. Now it's changed into the nuclear family. There is no more extended family. Everyone sets up their own households and lives by himself or herself. Before, dividing into separate households included dividing the property. Now the importance of property in New China has reduced greatly. No one has great family property. But everyone can have a salary, especially women who previously willingly stayed at home. Now female comrades are able to participate in society and are able to come out and work, and have their own income. This is a very great change.

Alitto: If one projects this process into the future, then there may be no family, even to the extent that, as I talked about yesterday, the child will not be born of parents, but be born in a factory-like setting using technology. Of course it is not possible now to reach that point, but by logical inference, even if an individual... To put it another way, at present Europe and America—I think, I'm not too clear about the Soviet Union and Eastern Europe—are post-modern societies. The only rules that people respect are the legal ones. We are now in a society that pays attention to law and individual rights. People act solely in their individual self interest, the result of which is that the entire society is fractured. There is no ethical bond between people.

My own opinion—and the one in the book—is that the rural reconstruction plan, which was used even by Mao during the War of Resistance in Yan'an, was aimed partly at preserving morality, and

partly at modernization. The situation could be seen as "having one's cake and eating it too"—one keeps the advantages while discarding the disadvantages. Those bad parts would be avoided. The disastrous results that came about by modernization in other societies were to be avoided. The advantages, the good parts were to be retained. That is to say, I myself feel that there is a contradiction involved. One cannot have one's cake and eat it too [getting the good results while avoiding the bad results]. In my view, your plan in the old days, and Mao's own, could be said to have tried to have the cake and eat it too. It tried to avoid the disastrous results of European and American modernization while retaining its advantages. Do you feel that this is possible at present, to have one's cake and eat it too?

梁：如你所知道的，我是比较乐观。我觉得变化不会很大。如果说是变化，或者说是破坏，早已开始破坏了，早已变化了，从清朝末年已经变化了。在毛主席建国以后的北京，都更加变化。举一个例说，从前都是老中国，喜欢大家庭，保持大家庭，如果祖父在，儿孙都不能分家各自过。如果各自过，那是很遭到大家讥笑的，这样子好像很缺乏礼仪吧。可是现在统统分了，现在都变成小家庭了，没有大家庭了，都是各自过日子，都是分家。从前呢，分家包含分财产，现在新的中国财产的重要性降得很低很低了，谁也没有很大的家财，可是谁也都能够有工资。特别是妇女从前自愿在家庭里头，现在女同志也能够参加社会，能够出来做工，自己有收入，这个变化就很大。

艾：那么这个过程推论到未来，那就不会有家庭了，甚至于昨天讲的这孩子也不是父母生的，是用一种技术在工厂样子的一个地方生的。到那个地步，那当然现在还不可能了，按照逻辑来推论啊，即使个人……换一个说法，现在在欧美，我想苏联、东欧我也还不大清楚，就是现代化以后的社会，人唯一的尊敬的规则，就是法律的规则。现在是讲法律的社会，讲个人权利，那人就是专门为了个人的自私的利益而行动，讲到结果整个一个社会分裂了，没有人跟人之间的一种伦理。

我自己的看法，我这本书里也是这么写，您乡村建设的计划，连毛主席原来抗战的时候、延安的那个时代所用的计划吧，以后还有……就是说也有保存道德的那部分，也有现代化。就是说两者同时，就是“利”要，而“弊”要避免掉，坏的要避免，别的地方的现代化的恶果要避免的，利益还是好处呢，还是要。就是说，我自己觉得这个矛盾啊，不能两者兼得。您的看法，您当年的计划，毛主席自己的，也可以说是两者兼得了，要避免欧美现代化的恶果，而要欧美现代化的好处。现在呢，您觉得还可能吧，还可以两者兼得，就是避免坏处而得到好处啊？

Liang: I think it is relatively possible. Assuming that China can be said to have national character and national spirit, the Chinese will still be the Chinese. Even though modernization has already produced great change or great destruction, China will still retain the spirit and flavor of the Chinese people.

Alitto: If we suppose that there is only one standard—efficiency, and all societies are organized for efficiency, no matter which society, e.g., American society, each society in different countries will become increasingly similar. This will happen because efficiency is an objective standard while spirit is a subjective standard. The Tokyo of one hundred years ago and the New York of one hundred years ago were very different. Today's Tokyo and today's New York are quite similar. So, your feeling that Chinese can preserve their original spirit is optimistic.

Liang: As I just said, if a great many Chinese customs and usages and etiquette have been destroyed, they were destroyed long before. Comparing the end of the Qing Dynasty with the early years of the Republic, there had already been a great change. Now there is even more change, and even more destruction. But no matter what destruction, the Chinese are still Chinese. China still has Chinese flavors, Chinese customs and Chinese habits.

Alitto: How can these customs, habits and flavors be preserved?

Liang: Let's put it this way. That they can't be preserved is because from very early on they couldn't be preserved; this is not a phenomenon of the present. But if you mention preservation, what has been preserved has been preserved straight through to the present.

Alitto: So, don't you think that modernization causes people's good nature to disappear, that is, it makes relations between people obdurate and cold? Don't you think that people's desires run wild and morality becomes bankrupt because of the processes that modernization brings with it?

梁：我想，相对地说是可能的。中国假定能够说有民族性、民族精神，中国人还是中国人，尽管说，他已经变化很大，或者是破坏很大，但是还是有他中国人的精神、中国人的气味。

艾：假如说，只有一个标准——效率，所有的社会的一切都是为效率而组织的，那么无论什么社会，美国的社会，每一个国家的社会，会越来越一样。因为这个是客观的标准啊，精神是主观的东西，气概是主观的。100年前的东京，跟100年前的纽约很不同，现在的东京和现在的纽约很相同，那您觉得中国人还是能保存原来有的精神，那是乐观的。

梁：刚才我说过的话，如果说是有许多中国的礼俗、风俗已经破坏，那是早已经破坏了，拿民国初年跟清末比，已经都变化了，现在更变化了，更破坏了。可是尽管破坏，中国人还是中国人，他还有一种中国人的气味吧，中国人的风俗习惯。

艾：这个风俗习惯、气味啊，怎么能保存呢？

梁：这样子说，讲不能保存是早已不保存了，并不是今天。可是讲

到保存的时候，一直到今天也还是在保存中。

艾：那您不认为现代化会使人的善良性逐渐地消失了，就是使人与人的关系冷酷无情起来了？也不觉得人的欲望横流，道德破产了，就是现代化也不一定会带来这一过程？

Liang: As I just said, if it brings on [such costs], it's not just today. It's been bringing these for a long time now. But no matter how much inevitable damage, there is still something not damaged. Even if these things will change in the future, these changes cannot necessarily be called destructive.

Alitto: The mechanization of human life, naturally aside from its conveniences, such as the mechanization of agriculture and technology, has caused people to become half machine, to live in an unbalanced manner. Can this be considered a crisis of modernization?

Liang: A crisis.

Alitto: Oh, you admit this?

Liang: Of course I admit this.

Alitto: So what is the best way of avoiding it? What way is there to avoid these disastrous results?

Liang: Perhaps the state will pay attention to it in education. This education does not necessarily mean formal schooling. Of course schools are included in the education I mentioned. For instance, in primary school, teaching students to be polite, how to help people, how to take care of one another...

Alitto: You feel that the power of education is great?

Liang: Of course, especially primary school education. Education is very useful.

Alitto: Suppose there was a person who, from the time he was small, felt that his life, his everything was for his own sake, not for the group (no matter what kind of group), but for his individual benefit, how would you persuade him to [act] for the benefit of the group...

Liang: Persuasion is not the way.

Alitto: Then what method should we use?

Liang: Persuasion is no good. The way lies in inculcating [good habits and civilized behavior].

My opinion of Women's Liberation Movement

Alitto: What opinion do you have of the Women's Liberation Movement in the West?

梁：刚才我已经说过了，如果是带来，已经不是今天的事情了，带来很久了。可是尽管受到一定破坏，但是还是有没有破坏的地方。就是这些点将来有变动，也不一定就叫做破坏。

艾：那人类的生活的机械化——就是说当然方便的地方以外，农业机械化，技术机械化——我说的是人好像变成半个机械或者活得畸形的样子，这个算不算现代化的一个危险？

梁：危机。

艾：哦，您还承认？

梁：当然我承认。

艾：那么最好的避免办法是什么？避免这个恶果的办法是什么？

梁：或者是国家从教育方面来注意。而所谓教育不一定是学校教育，当然学校也包含在我说的教育里头。比如在小学校里头，对小学校生，要他们怎么样子有礼貌啦，怎么样子帮助人啦，怎么样子互相爱护啦.....

艾：您觉得教育的力量还是很大的？

梁：那当然。特别在小学里头，教育是很有用。

艾：那假如有一人，从小就觉得我的生活、我的一切就是为了我自己，不是为了团体，无论什么团体，就是以我个人的利益，您怎么说服他为了团体而.....

梁：办法不在说服.....

艾：那用什么办法？

梁：办法不是在说服，办法还是在养成。

对妇女解放运动的见解

艾：您对西方的妇女解放运动有没有高见啊？

Liang: I had a foreign friend. His [Chinese] name was Wei Xiqin (Wei Zhong) [Alfred Westharp]. He spoke insightfully on men and women being different. Naturally, this is to say that Heaven gave women the duty, or you could say, the mission, the important one, to bear children. In a woman's life it is the period in the middle when she can bear children. She can't [bear children] too early or too late, when old. When it is too early, a woman is not yet very womanlike. When too old, she is also not very womanlike. In any case, it is in that period in the middle of her life that she is a real woman. In this phase,

Heaven has given her the responsibility, the mission, to bear children. This mission lies in the body, not in the brain. A man's mission lies in the brain. So to perform work according to nature is correct. Going against nature and forcing things is not good. So Westharp's argument was that doing scholarship, or even going so far as to be a politician or a military expert, was not suitable [for women]. But possibly being an artist was still suitable. This was his opinion. I agree with him.

It seems that there had been a famous German philosopher—his name was [in Chinese] Shubenhua [Schopenhauer]. He said: What are females? What are women? Women are big children, that is, they are children but they aren't very small children. Big Children. Women are likely to form a group. For example, at a big meeting, the women would get together to talk with one another. The men naturally also gather together into groups, but many will be by themselves. Go to a large meeting and you would see this situation. Women sit together in a group, and speak with one another very happily. In Beijing speech, unlike the men who are able to "keep cool," [women] are a bit flighty. This is all to say that male and female dispositions are different. The importance of this is as I just said, it seems that naturally Heaven gave males the mission to create—no matter academic or political creation, even the creation of military command in combat—it's all creation. This kind of creation should fall to men. Do not look to have this kind of creation fall to women. Because a woman has her assignment; she has her Heaven-given mission. I actually agree with these remarks of Westharp's.^[22]

Alitto: Have you changed your notions from what you and Westharp said on the question in the 1920s?

梁：我有一个外国朋友，他自己叫做卫中——卫西琴，他很深刻地讲男女的不同。自然，也就说是天吧，天给妇女的一个任务或者说是使命，是生孩子，主要的，在妇女的一生中，就是中间的阶段——能够生育的那个阶段，太早了不算，太晚了、老了也不算。太早的时候还不是一个很像女人的女人，太老了也不像一个很像女人的女人，正是中间那一段她是一个真正的女人，这个阶段天给她的责任、任务，是生孩子。她的任务在身体上，不是在头脑，男子的任务是在头脑，所以按照自然的也就是天然的来办、来做事情，才是对的，不按照天然的，勉强地，不大好。所以他——卫西琴，论调是说关于做学问，乃至至于或者做政治家、做军事家，（女人）都不合适，不过也可能做艺术家还可以，这是他的见解。我很同意他的见解。

好像是从前有一个有名的哲学家，德国人，叫叔本华，他说过，女子是什么呢？妇女是什么呢？妇女是一个大孩子，是个小孩，可是不是年纪很小的，是个大孩子。妇女跟妇女容易到一块儿，比如一个大的会场，妇女跟妇女就凑在一堆，大家交谈，男人自然也有成堆的，可是有

很多是散开的。你到一个大的会场上一看，有这种情况。妇女坐在一起成一个堆，讲话，讲得很高兴，有一个情况，按北京话吧，不像男人那样能够沉住气，有点浮动。这都是说妇女跟男人性格不一样，重要的是像刚才说的话，好像自然。天给男人的任务是创造，无论是学术上的创造或是政治上的创造，乃至军事上指挥作战的创造，都是创造，这种创造都是应当归于男人的。不要把这种创造指望于妇女，因为妇女她有她的任务，她有她的使命，天给她的使命。卫西琴这个话我倒觉得很同意、很承认。

艾：20年代，您跟卫先生讲过这个问题，到现在您的观念都没有改变吗？

Liang: As far as my views on the differentiation between men and women are concerned, they are still the same.

Alitto: I don't know, but possibly you don't know about Women's Liberation Movement, especially in the U.S. Europe has it too. The movement demands equal rights for men and women; in the U.S., females even have special treatment. In seeking employment, females should have special treatment. Some have discussed women are already following military careers—but we are presently debating the question whether they should be in combat. Even some of the more radical women's liberationists say that females should not have dealings with males, should not marry them, should not have sexual relations with them; only women together with women are right. It sounds quite strange, especially to a Chinese. First, have you heard about the U.S. Women's Liberation Movement? Second, what is your reaction to or opinion of it?

Liang: I actually agree with the opinions of my foreign friend Westharp that I just mentioned. That friend had also said, "Foreign, especially Western, women are man-like. Chinese men are woman-like."

Alitto: Do you think that this is correct?

Liang: This is a fact. It is this way factually. Is it correct? I think that there is some truth in it. Foreign women are a bit man-like. Moreover, it seems that they are not only already man-like, but in addition, they strive to be men.

My views of U.S. and U.S.S.R.

Alitto: I have two more questions. Are the present socialist countries based on society in actuality? The violence practiced in socialist countries—Eastern Europe, Cuba, the U.S.S.R., or Cambodia. In Cambodia, for example, millions were killed. Is this an example of

mutual respect?

Liang: Of course not. In Russia, it did not evolve naturally because Russia did not have that much of a capitalist stage. Under the Czars there was not that much development of capitalism. Then, suddenly, there was socialism. They did not develop as a capitalist society to the natural terminus, and then move to socialism.^[23]

梁：对男女分别的看法，还是那样。

艾：我不知道，可能您不清楚美国，尤其是美国，欧洲也有，妇女解放啊，要求男女平权，甚至于现在在美国，女子无论是什么事情都有优待，找事，女子有优待。有人在讨论女子已经从军了，不过我们正在辩论的是，是不是应该做战士？……甚至于一些妇女解放运动比较激烈的，说我们女子根本不要与男子来往，不要跟他们结婚，不要跟他们有性方面的关系，我们女子跟女子在一起才对。听起来，尤其是中国人，很奇怪啊。第一，您有没有听说美国妇女解放运动情况？第二呢您对此有什么反应、意见？

梁：我倒是同意刚才那个外国朋友卫西琴的见解。那个朋友就说过这样的话，他说：外国人特别是西洋人，外国的女人像男人，中国的男人像女人。

艾：那您以为这个有道理吗？

梁：这是说事实，事实上这样。对不对呢？我觉得说得有几分对。外国的女人呢，有点像男人，并且她好像还要不单已经像男人，而且还要争取做男人。

我对美苏的看法

艾：我还是有两个问题：现在的社会主义国家社会会不会是社会本位的？事实上是如此吗？东欧的社会主义国家、苏联、古巴、越南、柬埔寨这些社会主义的国家，尤其是柬埔寨啊，杀人如麻，那怎么能说是彼此尊敬呢？

梁：当然不是。苏联，在俄国这个地方，出现共产党，出现共产主义，不是按照社会自然发展出来的，因为苏联没有经过多少资本主义那条路，没走多少，它在沙皇底下没有多少资本主义，一下就变了。所以，它不是把资本主义走到头，然后转入社会主义，不是那样的。

Alitto: Yes, I know what you mean. Then this is true also of Eastern Europe, of Vietnam, Cuba and Cambodia?

Liang: So in Russia it went from a Czarist dictatorship to a Communist Party dictatorship. If Russia had been allowed to develop under Lenin's leadership, it would have developed later.^[24] Unfortunately, Lenin died too early. So it's the old tradition still in the Czarist rule. That tradition still had great power. So after Lenin died,

there was a major turning point. Now, especially with Brezhnev...the situation is abnormal. They are still traveling in the same course as the Czars, despotism. The ordinary Russian does not enjoy the freedom and democracy of the Western Europeans, and Russia does not enjoy a really advanced industry, which would have resulted in an affluent society and a high standard of living. So Russian youth look at Western Europe with envy.

So the U.S.S.R., from Khrushchev to Brezhnev, cannot be considered a socialist country.^[25] The U.S.S.R. is, in my view, a kind of abnormality, an anomaly, which conforms to the history of Russia. Later on, as it develops, it will possibly, in my own view, reverse itself. That is to say, I think that the party will not be able to maintain their despotism very long. It will undergo a transformation. This kind of rule cannot last for long. When an opportunity arrives, it will change.^[26] It won't be like China now. China later will not undergo great changes.

Alitto: Another question. As far as the history of advanced industrial countries by far is concerned, Marx has made misjudgement. He originally predicted that the proletariat would grow more and more numerous, and the capitalists would be fewer and fewer, with the final result that revolution would break out. But in contemporary Japan, Germany, the U.S., Canada and such places, this phenomenon has not occurred; instead there have appeared certain types of what might be called classes that previously no one had thought about. In industry, white-collar workers are more and more numerous; work in the service industry has increased. A capitalist is not as clear-cut and explicit an entity as Marx had said. So, since he was wrong, it is not certain how history in the 21st century will develop.

艾：是。我明白您的意思。东欧的国家、古巴、柬埔寨、越南这些地方也是一样？

梁：在俄国，它还是从沙皇的那种专制转成共产党的专制。共产党专制如果在列宁底下领导，大概会要很好。可是列宁死得很早，所以它那个旧的传统、旧的习惯，还是从沙皇下来的那个东西，那个东西很有力量。列宁死后的斯大林的，特别是现在的勃列日涅夫的，这个情况不是一个正常的情况，还是顺着沙皇的那个老路下来的，顺着那个老路下来的一种专制。而一般的俄国人，他们没有像西欧的国家，享受过自由啊、民主啊，也没有享受过工业很发达，社会很富，人民很有享受。所以现在的青年人，他看到西欧人享受，他很羡慕。

现在的苏联，从赫鲁晓夫到勃列日涅夫，它算不上什么社会主义，在我看起来是一种变态，而这种变态是合于它的历史的，合于俄国的历史的。这种变态往下走，不会这样子稳，我看它是一个变态的，不是一

个正常的，所以底下它可能要翻案。我认为这么看，可能要翻案。像是勃列日涅夫他们这种党的专制，恐怕底下不是可以维持很长久的，会要起变化，这种的统治，我想也许它要维持不住了，如果有机会到来的时候，它要变化，它不会很好地维持下去，没有力量维持下去，它要变化。我这么看。不会像中国这样子，中国底下没有大变化。

艾：第二个问题，到现在为止的历史，工业先进国家的历史来说，马克思原来预测无产阶级越来越多，资本家越来越少，结果就爆发了革命。可是现在的日本、德国、美国、加拿大这些地方，也没有这种现象，来了一些以前没想到的好几种可以说是阶级，工业方面的白领工人越来越多，服务事业上的工作越来越多，资本家也没有马克思讲的那么清楚、那么干脆、那么明确。所以呀，他既然错了，21世纪历史的发展将来说不定.....

Liang: He did not expect in his reckoning, his viewpoint and the present situation were not in agreement, not of the sort that he predicted. For the present situation, their interpretation is "the economic substructure, the superstructure." I think that the superstructure in the U.S. is very powerful. This is because the superstructure is not just a question of power alone. It includes culture and learning, which are all tied up with wealth and power. So, it would not be easy to overturn such a superstructure.

China's future and the future of the world

Alitto: Do you have any predictions about China's future?

Liang: That depends upon the future of the world in general. It is not just a question of China itself. For example, if there was another world war, China would be affected. And another world war is just a matter of time.^[27]

Alitto: If this comes to pass, then we humans are finished. Nuclear weapons—if the U.S.S.R. and the U.S. did go to war—even the very soil of the earth would be affected. Even the survival of the next generations would become problematic. Your words are very pessimistic.

Liang: I have only a very shallow, half-formed opinion on the question, but my view is that an eventual war between the U.S.S.R. and the U.S.A. is practically inevitable. But I have another conjecture—that a world war would not last long, but as soon as it broke out, both the U.S.S.R. and the U.S.A. would then have internal problems.

Alitto: If nuclear weapons are used, even social organizations will go. I understand what you mean. I'm saying that if the cities are all blasted flat, all the people killed, radiation would also affect people in

the countryside. Of course, one could say that problems would arise in society, and probably at that point, basically there would be no society, while scattered numbers of people would still survive. Probably on this point Chinese and American views differ. Chairman Mao said that the Atomic Bomb was nothing much, a paper tiger or something, but most Americans feel that once you have this kind of thing, everything is finished.

Liang: Well, my opinion is that the internal problems of both the U.S.A. and the U.S.S.R. would explode as soon as war broke out. I could use a quote from Chairman Mao, who also had a view on the possibility of world war. He said, "Probably war would lead to revolution, or probably a revolution would avert a war." He said this. If the U.S.S.R. had an internal revolution, America too had a revolution, and then there would be no great war. Perhaps the rise of revolution can avert a war, without the two major powers fighting. Or, perhaps a war would bring about revolution. The war would not have to last long to lead to an internal revolution. He had such kind of statement and I think possibly so. Precisely at the time that the world is on the point of a great change, China quite possibly will not have to suffer from another war. When the two superpowers are having their internal revolutions, China will be able to keep stable and steady.

梁：他没有料到他的估计、他的看法跟现在不合，不像他所料想的那个样。现在的情况，他们的讲法有所谓“经济基础、上层建筑”，现在我看，像美国的上层建筑，很有力量。现在的上层建筑不单是一个掌权的问题，它也是学术文化，学术文化跟有钱、跟有权都连起来了，好像是不容易推翻的。

中国的前途、世界的前途

艾：根据中国未来前途的展望，您有何见解？

梁：这是关系到整个世界，它不是中国本身的问题了，中国的前途是看整个世界，譬如说，要有世界大战起来，那么中国是一个情况。世界大战，恐怕迟早要.....

艾：假如真的是这样，那么我们人类就完蛋了。原子弹啊，如果真是苏联、美国打起来了，连土壤也会受影响，将来好几代都还有生存的问题，您说这个话很悲观的。

梁：我说我粗浅的见解吧。我是这样看，恐怕美苏之间的战争啊、世界性的大战啊很难免。可是我另外一个猜测，这个世界大战不会出场，我想一爆发战争，苏联那边，美国一边，都会内部爆发问题。

艾：假如是用核子武器，那人类的社会组织也没有了。我了解您的意思，我的意思是说假如城市都已经炸平了，炸得没有人了，乡下的人

也受到放射性污染了，当然也可以说是社会发生问题了，恐怕那个时候根本没有社会了，零散的一些人还是存在的。恐怕这一点我们美国人看法与中国人看法不同，毛主席说过这个原子弹也不怎么样，纸老虎啊什么的，但一般美国人觉得，一有这种东西，什么都完了。

梁：是那样的。我的意思是这么样，如果一爆发战争，还没有等到多久，各自，就是苏联一边，美国一边，各自内部问题就爆发出来。我可以引用毛泽东的话，他对这个问题他也有一个看法，他曾经说过的话，他是这样说的，他说“也许是战争引起来革命，也许革命避免战争”，他说过这个话。如果俄国内部起了革命，美国也起了革命，反而没有大的战争了，他的话是这样说的——或者是革命起来避免了战争，没有两个大强国打了；也许是战争引发革命，一打，还没有打多久，刚一打内部就出问题了——他有这个话，我觉得好像也就是这样，可能是这样。中国刚好在这个世界起变化的时候，中国可能没有吃什么战争的大亏，倒是在世界上两个大强国都出问题之后，中国还能够稳定。

My expectations for the youth: do what each one can do in this time of hope

Alitto: Can you give the next generation of Chinese youth some inspiration on how to have a more hopeful future, or...

Liang: Toward the youth of China, it is not the same as speaking about outside—I do know about the situation in China. I want to say probably two things. One is directed toward the Chinese domestic situation, including the political situation. Right now is a time of stability and progress, an era of many possibilities, opportunities to make progress, more so than in previous times. It's now been thirty, thirty-one years [since the founding of the nation]. The situation is better than before. Some people envy the U.S. or envy Europe, and they appear to be dissatisfied with the situation within China. I feel that this is a bit blind; it is blind envy of the foreign. This is not right and not good. Of course, to go abroad to take a look, or to study, is good, but this must be done with a well worked out plan in mind that China under the leadership of the Communist Party must proceed toward socialism. This direction is correct. The term now—"the Four Modernizations"—is still for the purpose of having China walk this path and achieve modernization in these four areas, but it cannot ever leave the socialist path of modernization. It is especially important to know that this is a time of better opportunities than before. The political situation is now stable. Hua Guofeng—Chairman Hua is very stable, and Deng Xiaoping is very open-minded—I heard there may be government reorganization this

对青年的希望：在这个有希望的时候要各尽所能

艾：您能不能给下一代中国青年一些启示，启示他们如何才能获得一个更有希望的将来或是.....

梁：我对国内的青年，我虽然不像对外边一样，我可以知道一些情况，我可以说我想说的话。大概是两样的话：一样的话是就国内大局情况说，包含了政治上的情况，现在正是在一个很平稳而求进步的时候，很有可能、很有机会求进步的时候，比往常都好。现在算是30年、31年了，比过去都比较好。所以有些人都是羡慕美国，或者是羡慕欧洲，好像是不满足中国国内的情况，这个我觉得是有点盲目性，盲目地羡慕外边、盲目地想学外边。这不对、不好。当然出国去看一看，去学习也好，不过要胸中有主，要知道中国在共产党领导下，要往社会主义里头去，这个大方向是对的。现在的名词，叫“四个现代化”，还是为了中国走社会主义这个大道路而要四个现代化，不能离开走社会主义道路的现代化。特别是要知道，现在是一个比过去更好机会的时候。现在政局稳定，华国锋、华主席他人很平稳，很稳定。一方面呢，像邓小平他又很开明，不久的这个8月份听说要宣布政府

August. So right now is a time of hope. So, in this time of hope, marching down this correct path, working with what each person can do, what is convenient for them to do, by the sweat of their brow—this should be the path of modern Chinese youth.

A piece of advice to scholars

Alitto: This question is similar to the one I just asked. Would you give any advice to those scholars in the Chinese cultural domain?

Liang: As far as the present world of thought, the present academic world goes—I do not refer to the various specialized sciences. I know very little about the various specialized sciences; none are my own field. I don't have a specialty. But I do have an opinion, that in China at present, the more famous, the more prominent [scholars] are all mathematicians. Several mathematicians have been invited to go abroad. Mathematics is different from the empirical sciences. Empirical science requires experiments, laboratories, observation and empirical practice. Mathematics can be done behind closed doors. Currently there is a kind of fad, that prominent [scholars] are all mathematicians. If they [academics] move too far in this direction, and not in the other direction, it won't be good. This is a shortcoming. How can we have the general atmosphere not tend in this direction, toward this kind of abstract science? This kind of science, I think, is called "abstract." There's another kind of science called "concrete." It seems that attention

should be paid to concrete science. (Alitto: That is, utilitarian science.) Applied science. It [academic work] should not be overly devoted to the abstract. Attention should be placed on reality. But I also feel that there has always been a certain inclination in China, i.e., that of talking about the practical often with insufficient attention paid to impractical, basic scholarship. I think that the point of emphasis should be moved from the practical to the basic. What I can say is this.

改组，听说是这样。所以现在正好是一个有希望的时候，那么，在这个有希望的时候，在这个走一个正确的道路上，来各自就自己所能的、所方便的，来尽一份力量，应当是现代的中国青年的道路。

对思想界的劝告

艾：这个问题跟我刚问的有点类似，您愿不愿意给现在中国文化领域中的一些学者一些什么劝告？

梁：现在就思想界来说、就学术界来说，我的意思就是说，不是各自的专门的科学——各自专门的科学我是知道得很少，没有哪一个是我的专门，我没有一种专长。不过我有一点意见，就是中国现在好像比较出名的，很露头角的都是几个数学家，几个数学家都被请到外国去讲学。数学这个东西是一个跟其他的实验的科学不同，实验的科学是一定要实验，一定要实验室，一定要出来考察，要做许多的实践，数学是关起门来也能做。现在有一种风气，就是出头露角的都是数学家，如果太偏于这面了，而那一方面不够，好像是不好、缺欠。怎么样风气不要偏到这面来，不要偏到讲抽象的这种科学，这种科学好像是叫抽象的，abstract，还有一种科学好像叫concrete，好像是应当注意那边，（艾：就是运用科学。）应用的，应用科学。应当是不要太讲抽象的，应该是注意实际的。可是我又觉得中国从来有一个偏处，偏处就是爱讲实用，对不实用的、根本的学问常常是不够注意，应当是……还是重点要从应用转回到根本上。我可以说的话就是这样。

What kind of person I am

My hobbies

Alitto: Mr. Liang, do you have any hobbies? Your students all said that you had no hobbies, that you did scholarship or other work from morning to night. I don't know if this was true, or whether...

Liang: I'll tell a little story. I have a friend who had studied in the U.S., specializing in mass education, also called adult education. This person's name was Yu Qingtang,^[28] a lady. She was together with friends chatting, and she asked me jokingly what my hobby was. I answered, "I don't know what hobby I have. Eating? I am not that fond of eating. Having fun? I'm not too fond of having fun. Opera? I can take it or leave it. If you ask what in the end I am most fond of, naturally I am fond of using my brain, fond of thinking." "Gosh," Madame Yu said, "that is really frightening."

Alitto: You just mentioned opera, referring to Beijing Opera?

Liang: Beijing Opera.

Alitto: Because you grew up in Beijing, you can appreciate Beijing Opera. But these past thirty years, after Liberation, did you go listen to opera?

Liang: Before, when I was small, I had a certain proclivity, one not too good. One could say that it was a mistake, a fault—that is, I labored at being unconventional and novel. As for the opera, my father, mother, and elder brother—I was second in birth order, I had an elder brother—they were all fond of opera. After finishing dinner in the summertime, they would go outside taking the cool breezes, and they would talk about opera—which opera was best, who sang best, just chatting like that. Just because they were quite fond of this thing, I wanted to be the maverick. I did not talk [opera] names. So if, say, an opera was quite good—if they went, I would not go. I was always fond of deviating from the general rule.

Now that I think of it, when I was in middle school, everyone would have to draw a topic for his or her essay composition; the teacher could [evaluate] your writing style [from it]. Ordinary people, when drawing a paper theme, would develop that theme a bit, and so write a paper on it. I, however, was straining to be original and unconventional. In mentioning some ancient historical figure or some

event, most would praise the figure. I intentionally would express my dissatisfaction with him, that is, to be a maverick. One of our teachers, a very old man, saw my essay and called it an essay "reversing a previous judgment." People all said this way, but I insisted that way. He was most unhappy. His comments were extremely critical, saying that "As you are always in opposition to common tastes, you are doomed to fail." Another Chinese language teacher was different. His comment used lines from a poem of Du Fu's, "Fight to the death to find words that startle."^[29] This is a line from a poem of Du Fu's, which explains how I was in my youth, consciously trying to be different. I had this fault.^[30]

叁 我是一个怎样的人

我的嗜好

艾：梁先生您有没有嗜好啊？您的学生都说：啊，梁先生什么嗜好都没有啊，一天到晚不是搞学问就是搞别的工作。我也不知道是真的吗，还是……

梁：我可以說一个，算是一个小故事吧。有一位朋友，是一个在美国留学的，专学民众教育，也叫成人教育，这位是叫俞庆棠先生，是一位妇女。她是在一些朋友的聚会上提出来，随便谈话、说笑话，问我什么是我的嗜好。我说我不知道我有什么嗜好。我说：爱吃嘛，也没什么爱吃；爱玩嘛，也没有怎么样爱玩；爱看戏嘛，我也可以看也可以……。如果说问我到底爱什么？我说我当然是爱用头脑、爱思想。哎呀，俞先生说这个太可怕了。

艾：您刚才提到戏，说的是京戏？

梁：京戏。

艾：您因为在北京长大的，您还能欣赏京戏。但这30年来，解放以来，也去听戏吗？

梁：我从前小的时候，我有一个偏处，有一个不大好，可以说是一个错误、一个毛病吧，标新立异。就是说听戏啊，我的父亲、母亲、哥哥——我是行二，我有个大哥——他们都爱听京戏，夏天吃完晚饭，在外边乘凉、谈话，都是谈哪个戏唱得好，谁唱得好，随便谈。他们因为都爱好这个东西，我就标新立异，名号我不谈。所以本来京戏也很好的，可是他们去，我不去。总是喜欢偏。

我想起来了，我在中学读书，大家要经常抽题目，让你作文章，看看你文笔好不好。普通人都是抽一个题目，在这个题目上发挥一点，写吧，作一个论文吧。我就喜欢标新立异，提到一个古代的什么人物，或者某一件事情，一般都是称赞这个人，我故意表示我不满意他，就是标新立异。我们的教员老师，有个老的先生，看见我这个文章，叫做“翻案文章”。人家这样说，你偏那样，很不高兴，批语就批得很坏，说你“好恶拂人之性，灾必及于自身”——你将会有灾祸，一位老先生这样批。可另外一位国文教员又不同了，他批语批的说“语不惊人死不休”，“语不惊人死不休”是杜甫的诗——都说明我年纪轻的时候，故意跟人家不一样，有这个毛病。

I like that kind of opera that they say is "a martial opera sung literarily." It's a martial opera, but the plot and action is still singing, so there is not much fighting. So, a martial opera, but one whose

emphasis is on literary singing. I like this kind of opera.

Alitto: Is there any opera that you particularly like?

Liang: Yes. There is an opera with painted-face characters. The major painted-face characters perform warrior roles. One of these characters is called Huang Tianba. I especially like that opera.

Alitto: Before I didn't know that you especially liked the Huang Tianba opera. Aside from opera, of which all Beijing people are fond, are there any other pastimes?

Liang: Of course, there are some novels that I like to read, such as *Dream of Red Chambers*. There's also one called *The Travels of Lao Can*.

Alitto: Do you have a favorite author?

Liang: That should be... There is one novel that is interesting no matter how many times one reads it—*Dream of Red Chambers*, which is profound. You always feel it is of interest. Other novels, well, you read them once, and that's it. So, it's *Dream of Red Chambers*...^[31]

Alitto: So, [these are books] "that one never tires of reading." What books have you read after Liberation? I know what you had read before Liberation, but do not know what you have read after it.

Liang: After Liberation, I have read no books especially worth mentioning. Other people ask me that, and I blurt out no answer. After you asked me, I have to slowly think about it. I remember one book I have read that I liked very much. There is a Japanese, whom I very much admire [Heshang Zhao, Kawakami Hajime]. Later he was a Marxist, and wanted to put it [Marxism] into practice. He was a Communist Party member. But doesn't Marxism say "Religion is opium"? He agreed with Marxism but he didn't agree with this. He said, "Science has scientific truth, religion has religious truth." Moreover, he said that he himself had religious experience.

我喜欢的那种戏，就是他们说的“武戏文唱”，是武戏，可是情节、活动乃是唱出来，并不是打的多，是武戏，可是武戏而着重文唱的，我喜欢这种戏。

艾：那您有没有什么特别心爱的戏啊？

梁：有。有个戏，就是演北京叫花面的，大花脸，演武生，武生就是黄天霸，我喜欢看那个戏。

艾：以前我并不知道您特别喜欢黄天霸的戏。除了听戏以外——北京人都喜欢听戏，小说啊这类的消遣您有没有啊？

梁：当然有，有些个小说书看过，比如像《红楼梦》啊，看过。还

有一部叫《老残游记》。

艾：您最喜爱的作家是谁？

梁：那应当是……这一部书意味很深长，什么时候都感觉有意味，那还是《红楼梦》。旁的小说看一遍，知道了就行了。《红楼梦》就是……

艾：百读不厌。解放以来您看过的是什么样的书啊？解放以前您著作里提到的书这些我知道了，解放以后的我还不清楚您读的。

梁：解放以后的书，没有什么特别值得提的书。别人一问，我能够马上就脱口而出的没有，你问了之后我还要慢慢想，想不出来。噢，我记得有一本书我很喜欢。一个日本人（河上肇），这个人我是很佩服他，这个人是个马克思主义者，后来他是马克思主义者，并且他要实践，他共产党。可是马克思主义不是说“宗教是鸦片烟”？对马克思这个话他也点头，但是他又不同意。他是说，科学有科学的真理，宗教有宗教的真理，并且他自己说，他自己有宗教的经验。

People probably say that my type of experience was Chan Buddhist; I don't know if it was Chan or not. He wrote a book *Autobiography of Kawakami Hajime*.^[32] In Chinese it made two thick volumes. I very much liked it. Moreover, I copied down his experience—his words—in my notebook. He was special. The religious experience he spoke of was not casual, empty talk. He spoke of a true transformation of his own life. When he spoke about this, there was a sentence of this sort: "When I had this experience, it seemed that I had been cast out, to take a look, and I myself took a look. When I had this experience, my body underwent a transformation; I pinched my own flesh with my hand, and it didn't hurt. Moreover, it was like a layer of my skin peeled off." So, this was not only a conscious transformation, a transformation in thought, but it was also a transformation that happened in the concrete. He himself said, "Science has scientific truth; religion has religious truth." So, on the one hand I agree with Marx's statement that religion is people's opium, but on the other, I feel that Marx never had a genuine religious experience.

How I keep in good health

Liang: Well, my health and age could have something to do with my vegetarian diet; I eat no flesh or animals.

Alitto: And you don't drink or smoke?

Liang: Right. I can drink a little grape wine, but that hardly counts; it's very mild with low alcoholic content.^[33] I've been a vegetarian for 69 years. I also eat small quantities. I also have some

exercise [regimens] which I learned from others. I'm talking about myself now, not those methods of others. In days of this weather, I wake up at five a.m., and get up. While still in bed I exercise.

人家也许说我这种经验是禅宗，我不知道是不是禅宗。他有《河上肇自传》，自传中文有两厚本，我很喜欢看，我并且把他的有些经验、他的话，抄下来，抄在我的本子上。他很特别，他说的宗教经验，不是一句随便的空话，他是说自己的生命起一个真的变化。他说到这个地方的时候，有这样的一句话，他说有这个经验的时候，好像我抛出去，看了一下，自己看了一下，有过这个经验。在有这个经验的时候，我的身体起了变化，自己的肉啊，用手掐它，不疼，并且好像肉体上的皮肤，有了这个经验之后脱了一层皮。所以这不单是一种意识上、思想上的变化，而是很实际的起的变化。他自己说，科学有科学的真理，宗教有宗教的真理，所以马克思说宗教是人的鸦片烟，这个话我一方面同意，一方面我觉得马克思缺乏真正的宗教经验。

我如何养生

梁：这个可能跟素食有关系，不吃肉类，什么肉类都不吃，动物都不吃。

艾：也不喝酒，也不抽烟？

梁：对，能喝一点葡萄酒，不算什么酒，酒性很淡薄。素食已经69年了，这是一点。再一点就是食量少。再一点就是有一些锻炼身体的（方法），就我自己说——我也是跟别人学的，我现在不说人家的，说自己。我每天早晨起床，比如说现在的这种天气，早晨5点钟就醒了，起来了，在床上起来做功夫。

Alitto: What are they like?

Liang: There are many that I do. The most important are like this: the most important is a rubbing of the kidneys with the hands, and then rub the eyes, rub them again, and massage the eyes again. Three times like that, not too much. This kind of exercise is passed on. There are a great variety of exercises. What I just mentioned is just some of many. Rubbing the kidneys is one kind of exercise. Then another important one is rubbing the arch of the foot.

I should explain that there are two major, famous traditions in Chinese learning, two traditions that have been passed down from ancient times. One is the Daoist, the school of Zhuangzi and Laozi. One is the Confucian, the school of Confucius. These two traditions are dissimilar, and are both passed down from antiquity. The Chinese medical tradition is derived from Daoism. It is different from the Western, not only in the medicines it uses. The essential difference is theoretical principle, because the Chinese tradition never developed

skills in dissection and anatomy. Well, in far antiquity it did. The *Shiji* talks about Bian Que and Cang Gong. Bian Que sometimes opened up the abdomen, took out the intestines to wash them, and later sewed it up. The ancient books have accounts of this thing. Later, the Chinese didn't dare cut open the body. They relied only on you taking some medicine.

The classical Chinese medical books include *Yellow Emperor's Classic of Internal Medicine* and the *Difficult Classic*. The author of the latter—whoever it was—likes to discuss the Energy Channels of the body.^[34] That is, the blood circulation through the veins and arteries. But this discussion is not like that in dissection and anatomical study of the West. It is from the Daoist tradition. Daoism wants the cerebrum to rest. The function of the cerebrum is primarily to cope with the external, the environment. It wants the cerebrum to rest. When the cerebrum is at rest, humans also have an autonomic nervous system. This system is also under the cerebrum, but when the cerebrum rests, it can operate, and function even better. This is because when the cerebrum rests, it can avoid the interference of the cerebrum.

For example, our digestive systems and circulatory systems all belong to the autonomic nervous system. If, when we eat, we are worried about something, or anxious, that eating will not be good; it will influence the digestive process. If you force yourself to eat when worried or nervous, it will influence the digestive process. If you force yourself to eat when angry, you get into trouble. If there is no such external stimuli, if you let nature take its course, and the autonomous nervous system very naturally carries out its activities, then digestion is good.

艾：什么样的？

梁：功夫要做很多，有这几样主要的吧：主要的一样就是搓腰肾，搓一搓，揉眼睛；然后再搓一搓，再揉眼睛；再搓一搓，再揉眼睛，这么三次，还不太多。传授这种锻炼身体的，有好多不同的。这不过是好多样中的一样。搓腰肾是一样事情，再一样事情比较重要的是搓脚心、脚掌，要搓一下。

我说一下，中国重要的、著名的学问是两大派，两大派都是从很古的时候传下来的，一个就是道家——老子、庄子这一派，一派是儒家——孔子这派。这两派不大相同，都是传自远古，很古。中国的中医就是从道家来的。中医不单是用药跟西医不同，主要是它的学理就不同，因为它没有多做解剖身体的功夫。在远古的有，在《史记》里讲扁鹊、仓公，他（应指扁鹊）有时候要开肚子，把肠子拿出来洗，然后缝上，这个事情在古书里头有，后来中医就没有这个了，不敢给开肚子了，就是给你吃点中药。

可是中医的书就是这个《黄帝内经》，还有一种叫《难经》，《内经》之外还有一种《难经》，这种经书内容最喜欢讲人身上的经络，就是讲血脉的流通的。可是它这一方面讲经络、血脉流通，它不是像西方说解剖那样，它是道家，道家要让大脑休息下来——人的大脑主要是应付外面的、应付环境的，它让大脑休息下来。大脑休息下来，人有一种植物性神经系统，这种植物性的神经系统，它也隶属于大脑，可是大脑休息的时候，它就更好活动，因为大脑休息的时候，它就可以避免大脑的干扰。

比如我们吃饭这种消化系统、血液循环系统，都是属于植物性神经系统，如果我们吃饭的时候，心里头还在那儿发愁、忧虑，那个饭吃不好，影响消化，或者你正在发怒，勉强吃饭，都不好。就是没有这种外来的刺激，顺其自然地让植物性神经系统很自然地进行它的活动，那就是好。

In my view, usually "*qigong*" (the technique of using one's inner strength, such as control of muscle and breathing) requires that the cerebrum rest to allow the autonomic nervous system to function freely, and to utilize the body's own inherent function. Utilizing this inherent function can repair any breakdowns or illness that the body might have. So, in my view, *qigong* operates like this. But I, too, have studied *qigong*. Because I like to think, to ponder, I often have insomnia. Insomnia causes great suffering. So, over twenty years ago, it's now 1980, so it was about 1956, there was a place on the seashore called Beidaihe. It was an excellent spot for relaxation and excursions. Now a *qigong* sanatorium had been established there. I had insomnia, and so went to that *qigong* sanatorium, and stayed there for some time in summer.

There were three kinds of skills used at this sanitarium, each different from the others. Naturally, as soon as you entered you began with meditation. The environment they provided for this was quite good. Each person had a small room. The room was not so big, and was provided for you to rest in and sleep in. The room was designed so as to never have any strong light rays enter. But you were completely free to go out for a walk whenever you felt like it, and to return whenever you wanted. From when you started, for all 24 hours of the day, you were not permitted to see anyone else, to have any contact with others, or to read books or newspapers. You may sit any time you wanted, but only in the prescribed correct posture. You could also lie down—either on your right or left side; that was up to you. The important thing was to allow your cerebrum to rest, to settle down. As soon as you settled down, acting according to instructions, it naturally took effect, and you naturally proceeded down the *qigong* path.

Didn't I just mention that there were three kinds of skills at this sanitarium? For many people who went there, recuperating was quite effective. It was most efficacious and successful for stomach ailments. For example, for ulcers or for gastropptosis. If you practiced *qigong* under their guidance, stomach ulcers would be cured. X-rays showed the ulcer scarred over. Gastropptosis would also be healed. So, this was making use of the vigor of the body itself. No medicines were taken. So those many sick people who went there to recuperate were healed.

通常啊，由我的看法，这个气功，在我看都是要大脑休息，给人的身体的植物性的神经，让它活动，利用人身体本有的一种机能，利用这种本有的机能可以把人身上有些毛病，可以把它修理好。依我看呢，气功就是这样。不过我呢，我也曾经去学过气功。我是因为喜欢用思想，所以我就有失眠的病，失眠很痛苦。所以离现在有二十多年了，现在是1980年，大概在1956年，有一个地方地名叫北戴河，海边上，是一个很好的休息游览的地方，那个地方曾经成立了一个“气功疗养院”。我有失眠的病，我就到那个气功疗养院，住在那个地方疗养，在夏天的时候。

疗养院好像有三种功夫，三种功夫有点分别，不大一样，当然入手就是要静坐。他们布置的环境也很好，每一个人过去都有一间小屋，这个屋子不是太大，给你在里边休息吧，睡啊。这个屋子避免强的光线，不过你喜欢出来散步，完全可以随你意思出去散步，你想回来就回来。一居（音同），包含一昼夜24小时，不要见人，不要跟旁人接触，也不要看书、看报。你坐着也可以，不过坐着也有正确的姿势，你愿意躺下来也可以，偏着左侧躺也可以，偏着右侧躺也可以，完全随你。要紧的呢，就是让大脑休息，要静下来。你一静下来，按照他的指点，你就会自然起作用，自然就走上气功的道路了。

刚才我不是说了一下，它好像有三种功夫，很多人到那里去疗养都很有效。最有成效的、有成功的是胃病，比如说有一种胃下垂，还有一种叫做胃溃疡，按照它的指导做气功，胃溃疡就好了。可以透视，溃疡结疤了，胃下垂也好了。它就是借助人身体本有的生命的力量，不要吃药，所以有些个病人到那儿去疗养就都好了。

Now, I went because of my insomnia, and for this, it was also effective. This cure of course was also based upon resting the cerebrum, not using the brain. But I didn't get the way as instructed by the *qigong* sanitarium. It seemed that [my] way was not like that; possibly [my way] was Buddhist. Incidentally, I want to say...I am not sure...I suppose that these *qigong* practices came from a school of ancient Daoism, and although I did practice according to their conditions—having the cerebrum rest, settling down, being tranquil, but the state I achieved was the state without thought, that is, the zone in which there was no conscious thought. I think the phenomenon and practice are like the Buddhist meditation skill that I

spoke of before. Isn't it what we used to call "an old monk enters a trance" (very calm and without worldly passions)? One can be completely without any ratiocination. It's very good. When one has had this experience, it feels so great, so [when] going to do it again, one has expectations, waiting for it to come, hoping for it. Then it won't work. If you expect and hope for it to come, it won't come. You have to let go. You mustn't think "that was so wonderful yesterday; I still want it to happen again today"; it won't work. You have to set it aside, set it aside, set it aside. Only if you don't look forward to it will it happen. If you want it to come, it won't. I achieved this, I think it's very good; it seems it's a trance, it's Buddhist, different from their *qigong*. Later I returned to Beijing, and went to live in a temple in the Western Hills for two months.

...I didn't continue the exercise. This is one aspect. Another aspect is that my life has always been quite flat, mild flavored, with no excitement, which seems to have benefited my life. It's as though I don't have any great demands on life. I don't have any great joys or pleasures derived from the satisfaction of some desire. At the same time, I have no unhappiness, no anger or frustration from unsatisfied desires or demands. I simply don't really have any great desire.

Why I have an interest in Traditional Chinese Medicine

Alitto: As for medicine, you mentioned in *Eastern and Western Cultures and Their Philosophies*, upon an analysis of Chinese and Western medicines, that these two entities symbolize a difference between Eastern and Western cultures. Later you continued to study medicine? Even at present do you still...

Liang: One could say that I am mindful of it, mindful of medicine.

Alitto: Yes, this is because you are really interested in it. Why do you have this interest? I know that long ago you had this interest. Why did you, after all?

可我去呢，我是睡眠的问题，也很见好。这个见好呢，当然也还是靠大脑静下来了，不用大脑了。可是我没有像气功疗养院所指点给我的，好像路子不是那样，可能像是佛家的。我附带说一句话，我不敢.....我猜想吧，我的看法，他们这个气功是中国古时道家那一派的，而我呢，虽然按照它的条件去做功夫，要大脑休息下来，要清净，可是我就达到了一种境地，这种境地呢，就是一念不起，一个念头也不起，好像是佛家的定功。这个是不是一种从前说的“老僧入定”，可以一念不起，很好.....有过这个经验之后，觉得很好啊，所以再去的时候，就

有点期待心，等着它来，盼着它来，不行了。你期待它、盼着它，它不来了。就是，你还是要放下，你不要说是“昨天的那个过得很美，我今天还愿意再来一回”，不行，你还是得放下，放下，放下，不要有一个期待心，那么才会出现。我所得的这个，我认为很好的这个，好像是“入定”吧，是佛家的，跟他们的气功不很一样。我后来回到北京，到西山上庙里头去住过两个月。

.....我没有继续深入、继续去做这个功夫，这是一方面。再一方面，好像在自己生活上有好处的，就是无论什么事情，我总是很平淡。我很平淡呢，就是好像没有多大要求，也不用满足要求而高兴啊、喜欢啊，因为不满足而生气、不高兴啊，两面都没有，两面都是放得很平，平平淡淡，平平淡淡。

我为什么对中医感兴趣

艾：就是医学，您在《东西文化及其哲学》也是提到了，中医、西医啊做了一个分析，可以说是象征着东方文化和西方文化的一个分别了，那您以后也是继续研究医学吗？就是到现在还是在.....

梁：可以说是很留心，很留心对医学。

艾：是，那是因为您对这个很感兴趣。为什么感兴趣呢？我知道很早以前，您感兴趣，就是到底为什么？

Liang: Because life is the object of this study. This is especially true of Chinese medicine. Transmitted down from ancient times, the most important method of treatment is not herbal medicine, but acupuncture and moxibustion. Even earlier back, the latter was termed "stone probe" (*zhenbian*). This character *bian* has a stone radical. The ancients used very acute rock for the purpose of treating sickness. At that time there were no metal needles, so very hard stones were used on your body, somewhere you didn't know...

This represents Chinese culture, Chinese learning, and Daoist thought. The Chinese medical tradition derives from the Daoist tradition. What was the Daoist tradition like? I often say that Westerners are outward looking, looking at the externals, while the Chinese focus on life itself, and turn their vision inward to the life experience itself. Turning inward onto their own bodies, the Chinese knew about energy channels. Chinese doctors call blood vessels energy channels. These are channels for vital forces and blood. In traditional Chinese parlance, these were called the vital forces and blood circulation. They are circulated along the energy channels.

How were the Daoists able to determine the circulatory system? The reason is Daoist thought. I'll explain. This is because the Daoists focus their discipline precisely upon this circulatory system. In a man's

life, the blood/vital force is in the midst of circulation, an unceasing continuous circulation, but we don't know how it circulates and flows. We are not conscious of it. We use our brains and thoughts to deal with the external, to look after the external. Daoism does the opposite; it turns the direction of observation from outward to inward, and makes one a bit self-conscious of the unconscious. There was an element of autonomy in the Daoist effort. They not only wanted to understand the unconscious, but also to influence it, to alter it.

The Daoists wanted to change the circulation of the vital force and blood from something unconscious to something conscious, to change it from something out of one's control to something within one's control. Once one was able to control and influence the unconscious, one could become an immortal. An immortal was different from an ordinary human being like us. He can do things that we cannot do. When the temperature is hot, an ordinary person perspires. When the temperature is too cold, an ordinary person becomes numb. But an immortal would not. In ancient times, very early, this kind of skill or discipline existed. In *The Zhuangzi*, it was already there. He was able to achieve longevity. He had a very powerful control of the life force, of life.

梁：它是以生命为研究对象，特别是中国的医学，从很古的时候传下来的，主要不是用药，是用针灸，更早的时候它叫针砭，更早的时候。那个“砭”呢，它是石字旁，石头啊，石字旁，一个“乏”字。很早的时候中国古人治病啊，他就是用那个尖的石头，那时还没有针，拿很坚硬的石头来，在你的不知道什么地方给你……

这个是代表中国文化，代表中国学问，代表道教。中国的医学是出于道教。那么道家是怎样呢？就是我常常说：西洋人呢总是向外看，这个中国人呢，是回到自己生命上。回到自己身体上。回到自己身体上他就知道经络，中医叫做经络、经脉，经络、经脉在人身上。中国笼统的话说，气血，气跟血，气血循环流转，经络或者经脉就是气血循环的路了，道路了。

这个怎么能够认出来，特别怎么能够很清楚地懂得这个经络呢？是道教。底下就可以讲明一下，说明一下，就是这个气血在人身上的流通，因为道家做的功夫就是在气血流通上。我们一个人生活，气血本来都是在流通中，是不停止地流通，不停地流通，可是我们不知道它怎么流通，不自觉，因为我们的头脑、心思都用到外边，照顾到外面。道家呢，相反，它把那个向外的、总是在观察外边的，它回来，转回头来，把不自觉的变成自觉，有一分的自觉，它就有一分的自主性，它自己一方面知道了，一方面就能够左右变动它。

道家就是这个，对自己的身体的气血的流行啊，从不自觉变到自觉、不自主变到自主，……这个能够自主啊，能够自主之后，就是成仙了。仙人嘛，就跟我们普通人不同了，我们做不到的事情，他就能做

到。比如我们普通人平时，平时我们要出汗，天太冷了之后，冻了，太冻了，冻僵了，他们都没有，没有这个问题。大概很早，在中国古代就有这种功夫吧。《庄子》这本书里……他可以长寿，在他的生命生活上，有很高的自主的能力。

I am not a sage.

Alitto: The third question is more difficult to answer. I have been reading the written materials. Concerning my views of your beliefs and your personality, it is the same as with a lot of other historical personages. That is, a person who Westerners would say is sacred. In English it is "holy." No matter whether Buddhist or Confucian, in this concept of a sage there are areas of similarity. That is, someone going into a realm that transcends everything, and giving the folks the knowledge of that transcendent realm. (Liang: Right.) I say that in your innermost soul, not necessarily on the conscious level, possibly on the unconscious level, you felt that as a sage you would save humanity. I do not mean by any means that you have consciously anywhere said, "I am a sage." But this interpretation I came to is not made casually, but only after having read your works for a long time. Do you have any reaction to this?

Liang: To which question?

Alitto: The sage question. Can you be considered a sage?

Liang: From what I understand and what I think in my mind, a sage is not an ordinary person. The words and actions of a sage and those of others do not appear to be that different, but in reality the sage, his life-being and personality go far beyond ordinary people. His life-being is different. His life-being completely tops that of an ordinary person. Before, in ancient times, it was Confucius; later I should recognize Wang Yangming. His life-being was thoroughly and completely higher than ours.

Alitto: You share many things with Wang Yangming. Like you, he first delved deeply into Buddhism, and then later left it. He also was, like you, a man of action who carried his ideas into practice in the real world. He wasn't a closeted scholar who just wrote and taught. So I think that you and he have a lot in common.

Liang: But Wang Yangming's life-being—his life was not that of an ordinary mortal's. He had already reached that stage whereby he was not an ordinary person. But I am still just an ordinary person.

Alitto: So you feel that you are still just an ordinary person?

Liang: An ordinary person. I'm possibly an ordinary person who is a bit different from other ordinary people. That is, it's as though I have seen something from afar. What do I get to see? I catch a glimpse from afar of Wang Yangming, and Confucius. Besides, I cannot see very clearly; it's as though I'm looking through a mist, and from a great distance in the mist I see what Confucius is all about, what Wang Yangming is all about. Viewing them at a great distance—my level [of understanding] is only to such a degree as this.

我不是个圣人

艾：那第三个问题是比较难说的，我自己是看书面的资料，我自己关于您的信仰、您的性格的看法就是跟对历史上很多别的人物一样，就是一种好像西方人说是神圣的一个人，英文是说holy。那么，您无论是佛学或是儒学，圣人这个观念呀，有一些类似的地方，就是说要到一个超脱一切的一个领域，到那个领域以后还是会到民间、人间，给他们解释那个超脱一切的领域的知识。（梁：对，对。）我说您灵魂深处——也不一定是有意识的那一层——可能是无意识的那一层，是在觉得您是来救人类，就是圣人了。我的意思也并不是说，您是有意识地处处都说“我是圣人”，我不是这个意思了。不过我的这个说法呢，我想了很久，看了您的著作，看了很久，才想出来的，也不是随便的。您对这个问题的反应有没有反应？

梁：哪个问题？

艾：就是说圣人，您算一个圣人吗？

梁：我所懂得的、我心里所想得的，圣人不是平常人。圣人他说话行事可以说跟其他人不大两样，可是实际上他那个人、他那个生命、他那个人格，已经完全超过普通人了。生命不同了，生命完全高过普通人。在从前，古时候就是孔子，后来我应当承认王阳明，他对生命已经透彻，完全高过我们。

艾：您自己和王阳明也有很多类似的地方。他也是好像先深入佛学，以后出来。他也是一个活动者，在社会上实行、实践，也不是专门写东西、讲学问的。所以我自己觉得您和他有很多类似的地方。

梁：可是就阳明的生命说，他不是普通人了，已经不是普通人了。可是我现在还是一个普通人。

艾：您觉得您还是一个普通人吗？

梁：普通人。我可能比其他的普通人不同的一点的，就是我好像望见了，远远地看到了，看到了什么呢？看到了王阳明，看到了孔子。我是望到，远远地望到，并且还不能很清楚地看见，好像天有雾，在雾中远远地看见了孔子是怎么回事、王阳明是怎么回事，远远地看见。我的程度只是这么一个程度。

Alitto: But suppose Wang Yangming was right in front of us, and we asked him "Your honor Shouren, are you a sage?" He wouldn't...

Liang: He would not admit to it.

My own understanding of the cosmos

Alitto: This question involves philosophy. In this ever-changing world, what is eternal truth?^[35] That is, is a universal, eternal truth possible? Do you think that an intellectual should...

Liang: In general, a particular body of knowledge explores and pursues truth. That body of knowledge seeks to become universal, to be fundamental [to human understanding]. I think that any scientific discipline pursues the profound. The more it pursues the profound, the more it will pass into the realm of philosophy. So, paying attention to philosophy is helpful in doing science. This is an idea of mine.

Alitto: That is to say, each society has its own ideology. Each era has its own ideology. Even science is an ideology produced in a particular era. Some say that it cannot transcend, that even science cannot transcend its temporality or its locality. Is an eternal truth possible?

Liang: I'm afraid that this is a relative term. I can't understand Einstein sufficiently well, because the basis of his scholarship is in the natural sciences, in mathematics and in mechanics. But his worldview, his Theory of Relativity touches upon philosophy; it slips into the realm of philosophy. I very much like his Theory of Relativity and feel that it corroborates my own understanding of the cosmos. To be more specific, it is commonly thought that space is horizontal, while time is vertical. But I think this is just a vulgar view, and does not get to the cosmological truth.

The horizontal is space, and the vertical is time. It's really not this way. Space and time are joined together. Moreover, there is space within time. The cosmos is in flux, infinitely varying, and is endless. Anyone who has any understanding of human life would feel that the cosmos is infinitely in constant flux, that one is in the mist of this flux, and that one cannot be separated from it. From heaven above to the earth below, all things in nature are one—in the old Chinese phrase, "the myriad things of nature are one body." This one thing is in flux; it varies infinitely. That is to say, time and space cannot be separated. Space is part of time. Space and time are not two entities.

艾：不过假设王阳明就在我们面前，我们问他：“守仁公，您是不是一个圣人？”那他也不会……

梁：他也不会承认。

我的宇宙观

艾：这个问题牵扯到哲学。在这个多变的世界上，什么才是永恒的真理？就是获得一些普遍的、永恒真理是可能的吗？您认为作为一个知识分子应该……

梁：大概一种学问往深里去探讨、去追究，它都要走入普遍性，走入根本。我以为任何一门科学，往深里追求，越追求，越追求，它就会到哲学里头去，所以留心一下哲学，是对搞科学有帮助的。我有这么一个意思。

艾：就是说，每一个社会有每一个社会的意识形态，每一个时代有每一个时代的意识形态，连科学也是在一个时代里发生的一种意识形态。有的人说，不能超越，连科学也不能超脱它的时代性、地方性。永恒的真理到底可能吗？

梁：恐怕是一个相对比较的话吧。我不大能够懂这个爱因斯坦的学问，因为他的学问基础是在自然科学——在数学、在力学。可是他的宇宙观，他讲相对论也就谈到了哲学了，跑到了哲学里头去了。他那个相对论我倒是很喜欢，觉得我所对宇宙的了解，可以从他那里找到一种印证。更具体地说，说得明白一点，对宇宙的认识或看法，普通总是觉得横的是空间，纵的是上下古今，普通都是这样分开来说。可是我觉得这是一个世俗之见，没有得到宇宙的真理。

横的是空间，纵的一个是时间——不是这样的，时空是合起来的，而且是空在时之内，空间在时间内。宇宙就是一个变化流行，一点也不能停住，凡是对人生、对生命真有体会，他就会感觉到宇宙是一个变化流行，自己也是在变化流行之中，自己跟这个变化流行不可分。天地上下，天地万物——按中国老话说，天地万物一体，是一回事。这个一回事呢，它是一个变化流行的，也就是刚才说的不要把空间跟时间分开，空间是在时间之内，空间、时间不是两回事。

Aren't there a lot of sayings from Confucius in *The Analects*? In one section: "The master was on the river bank"—Confucius was on a riverbank—and he said, "It passes on just like this, never ceasing day or night!"^[36] It was referring to the flow of the water. He saw the water flowing and said, "It passes on just like this, never ceasing day or night!" Unceasing flowing like this day and night. This was a sigh. This sigh was not in reference to the water flowing before him, but rather it referred to the entirety of the cosmos, the entirety of human life, the entirety of human history. This statement has profound significance, but people are fully occupied with the affairs of the

moment, busy with the affairs of life. They have no time; they are too busy, they are busy the entire day dealing with their environments and thus lack a deep understanding [of this which I have just outlined].

My meaning, my informal interpretation is: I feel that Einstein, through the discipline of physics, gained an insight, an understanding of the broader cosmos. He did not separate time and space; he held that they were the same thing and that there was space in time. The entirety of the cosmos is in flux like this; we ourselves are also in flux. [37] We don't want to take too narrow or too close a view of the world. We should take the broad view of things. Taking the broad view enables us to be broad-minded, and see that anxiety about things is of no use; the broad view tells us not to always get confused amidst the gamut of human emotions. The ancients had this saying, "Head upwards looking beyond the farthest heavens, taking the broad view..." I forget what follows. Yesterday didn't I write the eight characters: *kuorandagong*, *wulaishunying* (with an all-encompassing, empty and impartial mind, taking things as they come)? I feel that we should be that way, not be tossed and confused by the gamut of emotions, but transcend these; we should also not hold on to the illusions [of existence of self and the world].

My views on death

Alitto: Mr. Liang, you are very old and wise. Do you have any views on death?

《论语》那个书不是记载着孔子的很多话吗？《论语》上有那么一章：“子在川上”——孔子在河边上，说“逝者如斯夫，不舍昼夜”——逝就是水流，他看见水流，“逝者如斯夫，不舍昼夜”，昼夜不停地这么样流，这样一个叹息。这个叹息不是就是说他眼前看见的水，而是说整个的宇宙，整个人生，整个人类历史。这个话意义很深，可是人都忙于眼前的事情，忙于生活上的事情，没有时间啊，太忙啦，终日忙着应付，应付环境，缺乏深的体会。

我的意思、我的随便的一个看法吧，我觉得爱因斯坦他从物理，他对广大的宇宙还是有所悟、有所了解，他不把时空分开，空、时是一回事，空在时中。整个宇宙的变化是如此，我们自己一个人也是在变化中，不要看得太短，不要看得太近，要放眼来看，放眼来看心胸就可以开大，什么事情不用着急，不要常常颠倒在喜怒哀乐之中。好像古人有那么一句话，叫做“昂首天外，放眼.....”，什么东西我忘记了。昨天不是我写了八个字：“廓然大公，物来顺应”，我觉得是要那个样子，不要颠倒于喜怒哀乐之中，超过这些，不要执着。

我怎么看待死亡

艾：梁先生是年纪很大了，而且具有智慧的人，您现在对人的死亡有没有见解？

Liang: I have already said, death does not mean complete extinction. It is not what most people think, that death is the end of everything. Didn't I use the eight-character phrase: *xiangsixiangxu, feiduanfeichang*?—Life, divided into endless instants, is at best similar and continuous; the meaning of life is neither interrupted nor persistent. Life is basically like this. The ego or me of today is similar to the ego or me of yesterday. The me of right now and the me of one minute ago are also similar. And that's all there is to it. They are not the same. But there is no break, no discontinuity. It's not permanent. It's not the same thing. All humans are like this; all sentient beings are like this. So, this is my view of death.

Alitto: People nevertheless always fear death. People always fear...

Liang: They don't want to die. Actually there is no need for fear. There is no need to hope for immortality.

Alitto: No hope for immortality?

Liang: No hope for long life. It is best to follow the natural course. Let nature take its course. That is having "an all-encompassing, empty and impartial mind."

Looking back on my life: the plainer, the better

Alitto: When I came here in 1973, I didn't have the opportunity to see you. I did go look at Jishuitan. The last sentence of my book is, "Under these circumstances, what would be his thoughts?" That is to say, you are of great age, your friends from the old days have passed away, but you still retain your self-respect, and you have grandchildren. If you took a walk by Jishuitan, what would you think of?... What reflections do you have looking back on your whole life?

Liang: I wouldn't have any. Let me tell you this. You understand me. I am a Buddhist. Buddhists view everything very flatly. There are no important problems, nothing is of consequence. In my case, I have always made my mood as flat and plain as possible; the plainer, the better. My life was also like this. For example, I drink plain water, not tea. I feel that tea is a bit of a stimulant and so I feel that it is better not to drink tea. Just plain boiled water is fine. My diet is light. I don't

eat meat and things that people regard as delicious; moreover, I eat very little. I pay no attention to taste and flavor. A state in which all aspects of life are dull and flat is best for me. So, if you ask me what reflections I have, I have nothing.

梁：我曾经说过，死亡不会断灭，不像有些人就以为死了就完了，没有这个事情。我不是说了八个字：“相似相续，非断非常”？生命本来就是今天的我跟昨天的我相似就是了，前一分钟的我跟后一分钟的我相似就是了，早已不是一回事，这就叫“相似相续”，连续下来，不会断——非断，非常——常是恒常，不是一回事，早已不是一回事。人都是如此，生命都是如此，那我也还是如此。

艾：人总是怕死嘛，人总是怕……

梁：不愿意死。其实不需要怕，不需要希望长生。

艾：也不需要希望长生？

梁：不需要希望长生，任其自然，因为任其自然才是“廓然大公”。

回顾一生：越平淡越好

艾：1973年我来的时候，没有机会看见您，积水潭我是去看了——在我那本书中最后一句话就是：“在这种情形之下，梁先生会在想什么？”就是说您年纪很大了，当您的朋友都去世了，可是您还有以前的自尊心，有孙子，您假如是在积水潭那边散散步，会想到什么？……回想过去的一切，您会有什么感想啊？

梁：也没有什么。我要说的一句话，你了解我，我是一个佛教徒，佛教徒他把什么事情都看得很轻，没有什么重大的问题，什么都没有什么。再说到我自己，我总是把我的心情放得平平淡淡，越平淡越好。我的生活也就是如此。比如我喝白水，不大喝茶。我觉得茶，它有点兴奋性，我觉得不要喝茶好，给我白开水的好。我吃饮食，我要吃清淡的，一切肉类，人家认为好吃的东西我都不吃，并且我吃得还很少，不注意滋味、口味。生活里无论哪一个方面，都是平平淡淡最好。所以你问我有什么感想，我没有什么。

[1] This is one of many remarks that Liang made to me about Christianity. He tended to think highly of it because pious Christians tended to be honest, decent people who were altruistic.

[2] Referring to Confucius as a Reformer (《孔子改制考》), 1898.

[3] Lin Zaiping was a colleague of Liang's at Peking University with whom, along with Xiong Shili, he often engaged in philosophical discussion. Xiong also seems to have been influenced by Lin. Liang's assessment of Lin, as was often the case when he assessed historical figures, focused more on personal character than on intellectual prowess. Foreign historians have ignored Lin, so not much is known about him abroad.

[4] Liang always seemed to be seeking total control over the self, and he admired anyone who seemed to have achieved it. Both of these men, Lin and Wu, were able to fall asleep at will. As sleep was always one aspect of his life over which he never had control, he was exceedingly impressed by those who had this "talent." Probably because Mr. Liang's mind was always hyperactive, he had difficulty with sleep throughout his life, beginning at a young age. As I reminded him a few minutes after this, he had been greatly impressed by a Hypnotism

performance he saw in 1912. He took the performance as further evidence of the power of the mind over the body. It obviously made a powerful impression, as he recalled it decades later and mentioned it in his writings.

[5] Alone among the various people Liang admired, Mr. Wu Yongbo (Wu Guanqi) seems to be the only one who apparently left no mark on history and historical scholarship. I suspect that the biography Mr. Liang wrote for him is the only thing published about him.

[6] The Analects 15.6 (《论语·卫灵公篇第十五》，六章)。

[7] Once again, it appears that every one of Liang's early friends, acquaintances, family, family friends—as well as everyone he admired—were anti-Yuan Shikai. He mentions this kind of opposition to Yuan again and again as a manifestation of integrity and nobility. At the time of Yuan's attempt to reestablish the monarchy (with himself as the monarch), Liang was just twenty years old, in Beijing, and had just become an active member of society. After the Republican Revolution itself, the Monarchist Movement was the first major political crisis he encountered. It seemed to have left a lasting impression.

[8] Ma Yifu (1883-1967) was educated in Europe, America, and Japan, and in fact authored works on the history of European literature. He was known primarily, however, as a master of Chinese, especially Confucian philosophy. Mr. Ma was also a noted seal and woodblock carver. As Mr. Ma was a cloistered academic, one assumes that it was his scholarship, not his social or political activities, that Liang admired so much.

[9] Before I published my biography of Liang, *The Last Confucian*, most foreign scholars who had even heard of him, considered him to be the very epitome of a "conservative" in all senses of the word.

[10] It was at the time of the interviews that all things Western acquired a certain panache among the young, who highly prizes things like American jeans. (Ironically, almost all "American jeans" are now made in China, along with most other "American" products.) There was, for instance, a fad of wearing Hong Kong-made sunglasses with the brand sticker still on the lenses to prove they were an "authentic" foreign product.

[11] From Eastern and Western Cultures and Their Philosophies onward, Liang's attitude toward preservation of Chinese culture was different from most other cultural conservatives in that he did not argue or try to persuade others of Chinese culture's merits. Throughout his life, he seemed to have an unflappable self-confidence that, even though some of the outer accoutrements of traditional culture might be lost, there was no possibility that the core would disappear. He always stressed that the future world culture that would be a form of Chinese culture was going to come about, not because the world's people were going to be "persuaded" of the superiority of Chinese culture, but because the "objective realities" in the evolving world would bring about an emergence of it by a process not dissimilar to biological evolution. Depending upon how one interprets The Analects 9.5 (《论语·子罕篇第九》，五章), there might or might not be an irony in this. Liang had made allusion to this passage after he had escaped from the Japanese in Hong Kong at the end of 1941. In this passage, there is no question that Confucius expresses a cool self-confidence in the continuity of Chinese culture, and yet he (Confucius) might have a crucial role in this continuity: When Confucius was in jeopardy in Kuang, he said: "Since King Wen of the Zhou is now dead, doesn't the mission of culture fall upon me? If Heaven were going to destroy this culture, a mortal like myself would not have been allowed to know about [this culture]. So, if Heaven is not going to destroy this culture, what can these Kuang men do to it?" (子畏于匡，曰：“文王既没，文不在兹乎？天之将丧斯文也，后死者不得与于斯文也；天之未丧斯文也，匡人其如予何？”) When the Japanese invaded Hong Kong on December 25, 1941, Liang was there running the public organ of the predecessor to the Democratic League, the newspaper *Guangmingbao* (《光明报》).

[12] The Mencius, Lilou II, 19. (《孟子·离娄章句下》，十九章). The original sentence: Mencius said, "That whereby man differs from the lower animals is but small. The mass of people cast it away, while superior men preserve it. Shun clearly understood the multitude of things, and closely observed the relations of humanity. He walked along the path of benevolence and righteousness; he did not need to pursue benevolence and righteousness." 孟子曰：“人之所以异于禽兽者几希，庶民去之，君子存之。舜明于庶物，察于人伦，由仁义行，非行仁义也。”

[13] Referring to The Mencius, Gaozi I, 8 (《孟子·告子章句上》，八章)。

[14] From the context, it is clear that "Trend toward Diversification," or "The Pluralism Trend," or "Trend toward Pluralism" (多元化趋势) is the name of a publication by Russell, because "published" follows the reference. I, however, could find no publications by Russell with a title that resembles this. Perhaps Mr. Liang read a Chinese translation with such a title,

or misremembered the title, but I do not know to which publication this title refers.

[15] This is a reference to The Mencius: "Men's mouths agree in having the same relishes; their ears agree in enjoying the same sounds; their eyes agree in recognizing the same beauty—shall their minds alone be without that which they similarly approve? What is it then of which they similarly approve? It is, I say, the principles of our nature, and the determinations of righteousness. The sages only apprehended beforehand that of which my mind approves along with other men. Therefore the principles of our nature and the determinations of righteousness are agreeable to my mind, just as the flesh of grass and grain-fed animals is agreeable to my mouth." (口之于味也，有同耆焉；耳之于声也，有同听焉；目之于色也，有同美焉。至于心，独无所同然乎？心之所同然者何也？谓理也，义也。圣人先得我心之所同然耳。故理义之悦我心，犹刍豢之悦我口。) In the end, Liang's insistence of the existence of a universal morality comes back to this argument by Mencius. As I noted above, it is not dissimilar to his first pronouncement on the subject in Eastern and Western Cultures and Their Philosophies, in which he claims a universal moral sense rooted in human biology (à la Kropotkin).

[16] Of course, the opposite argument might be made as well: The closer to the corporeal, the less chance of individuation. Animals' corporeally based likes and dislikes are far more similar to each other than humans' likes and dislikes are to each other. Likes and dislikes more deeply rooted in physiology (simple pleasure and pain) can be argued to be more similar. Liang argues that those common properties that are rooted in the corporeal provide for more individuation. He says that likes and dislikes arising from intellect, ratiocination and calculation are more likely to be similar. Of course, if he is locating the source of universal morality in human biology (as he did much earlier in Eastern and Western Cultures and Their Philosophies), this argument makes some sense. It was why the Anarchist Kropotkin appealed to him so much, and why in the same book he equated instinct with intuition.

[17] This is one of the many times I tried to have Mr. Liang speak to the question of universal values and the source of morality. In each case, he proceeds from Mencius' argument that values are inherent in human biology.

[18] In English, of course, "reason" or "rationality" does not connote anything like what Liang is suggesting. As I note later, some culturally conservative Western intellectuals referred to this "moral sense" that Liang speaks of by other terms. For example, Cardinal Henry Newman, a prominent nineteenth century thinker, used the term "illative sense." It means what Liang's "rationality" (理性) means. One such Western intellectual did indeed use the English term "rationality" exactly the way Liang did. That was Samuel Taylor Coleridge.

[19] What follows is a summary of Liang's argument in Eastern and Western Cultures and Their Philosophies. He does not alter the original argument at all, but insists still that human societies by their very nature will evolve a kind of Chinese culture. He said the same thing about the inevitability of socialism for all human societies, so in his mind, there is a parallel between the two entities—Chinese culture and socialism.

[20] I refer here, in a very general way, to Max Weber's use of the term "rationalization" or "intellectualization" (exactly as in the Chinese 理智化). In Weber's theory, intellectualization produced modern scientific and technological knowledge; in his book Eastern and Western Cultures and Their Philosophies, Liang states precisely this same theory. That is, one of the two strongly developed aspects of Western civilization is "intellect" (理智), while Chinese civilization developed "intuition." Western intellect produces modern science and technology. Along with intellectualization/rationalization, Weber's vision of the process of modernization was centered on "calculation." (Modern capitalism and bureaucracy are based on the assumption that all things can be mastered by calculation, i.e., the intellect.) Weber's implied definition of modernization, at least in my reading, was that it entailed a process whereby all social and economic institutions and processes were made more efficient for the overall end of world mastery. Value-oriented organizations and processes transform into goal-oriented institutions and actions. Thus, the supreme value becomes efficiency, that is, "means." I agree with certain postmodern critics of modernization who see this process as the heart of the modern problem. Lyotard, for example, terms efficiency (maximum output for minimum input) "performativity," and ascribes to it much of the evil in human life. All this efficiency and calculability in political, social, and economic spheres was not possible without a change of values in ethics, religion, psychology, and culture. The ethos of efficiency (rationality) penetrates into every aspect of life. Each area of human activity has different values and ultimate ends, the overall result being that there are a plurality of values and of

metanarratives that all seek to answer the same perennial human questions that religion and ethical systems once focused on. The ultimate irony (among many ironies) of the process is that the "means" become universal, while "ends" are fragmented and relativised. This situation itself, then, destroys all ultimate ends and goals. It might be described as the "slow death of God." The only universal values are those biologically based, having to do with survival. Needless to say, I myself do not subscribe to the "Eurocentric" and teleological elements in Weber's theory, which sees Western civilization's unique achievement as modern rationality, a rationality that was destined to spread around the world. Some of his disciples, such as Talcot Parsons, later developed the teleological aspect of his theory to an absurd degree. Weber himself insisted that he was merely describing a situation he observed. He is "guilty," however, of extreme Eurocentrism, in that he saw the process of rationalization/modernization as a unique Western product that would eventually be imported by every society on earth. I myself view the process itself as one that is universally human, not necessarily tied to the geographic area where it first occurred. One hundred years ago, however, it was indeed universally held, most certainly by almost all Chinese intellectuals, to have come about because of certain features of Western civilization, and which endowed Europe with its huge capacity for ruthless world mastery.

[21] That is, for reasons of national pride, certain aspects of the culture are preserved, even though those aspects are no longer part of the mainstream of daily society. Another phenomenon related to this is the commercialization of culture. The Noh drama of Japan is something that almost no one can appreciate, but the Japanese state protected it from the market forces that would have destroyed it. In Europe, a major object of museumification is Christianity, in that the people and governments take great pride in the magnificent churches, and also profit from the tourism these structures attract, but the churches no longer have a central place in the daily life of the people as they once did.

[22] Such a statement does very much separate Liang from mainstream contemporary thought in China and abroad. Foreign academics would take this opinion of women are concerned to be the very epitome of male chauvinism.

[23] By this logic, of course, socialism in China was even more so. In the two decades before World War I, Russia was industrializing very rapidly. Not so in the case of the two decades before 1949 in China. This has now been changed by China's thirty years of rapid economic development and "Socialism with Chinese Characteristics."

[24] This is not the opinion of the majority of historians of modern Russia.

[25] I must say that Liang's picture of the Soviet Union probably came partly from his second son, who was a researcher at the Soviet Union Research Institute attached to the Party Central Committee. The implications of some of these statements, such as this one, are alarming. If, for instance, the U.S.S.R. cannot be considered a socialist country, "from Khrushchev to Brezhnev," then, the Stalinist U.S.S.R. was a socialist country.

[26] Liang was remarkably perceptive, in that this is precisely what happened a few years after he predicted it.

[27] I was struck at how much Liang's views on such matters had been affected by general popular views, and, as such, shockingly naive. He admitted as much. Naturally he knew nothing of international affairs that had not presented by the Chinese media.

[28] Yu Qingtang (1897-1949) was a Columbia University, Teacher's College Ph.D. who had a successful career in academia, and for a time was also involved in the penal system in Jiangsu. She worked in social education, women's education and adult education. Professor Yu also published on rural education, which is probably why she and Mr. Liang were friends. She was the director of the Social Education Bureau in the Department of Education in 1949, but died that year.

[29] This is the second of the first two lines of the poem "A Short Poem Written at the Moment When a Rising River Looked like a Rolling Ocean" (《江上值水如海势聊短述》), which go "I was stubborn by nature and addicted to perfect lines, fought to the death to find words that startle." (为人性僻耽佳句，语不惊人死不休。) Indeed, this would be an accurate assessment of Liang, one which he himself makes. He was "stubborn by nature" by his own admission.

[30] It is this "fault" of Liang's that was partly responsible for his stubborn adherence on his own views, no matter what the cost.

[31] It would appear that Mr. Liang did read some of the various classic colloquial language novels, including those at the end of the Qing Dynasty, but he certainly didn't read much

fiction. For the most part, he maintained the orthodox Confucian attitude toward works of fiction—that such things were not quite worthy of the attention of a proper gentleman. Mr. Liang seldom saw films or plays, and seemed to have little patience with them. Mr. Hu Yinghan told me of an incident that took place in the Zouping County town in the 1930s. An acting troupe performed a contemporary drama. Such an event was exceedingly rare in rural Zouping so apparently most of the rural reconstruction institute students attended. Mr. Liang, however, left early in the play.

[32] Kawakami Hajime (1879-1946) was an early member of the Japanese Communist Party, and Marxist scholar. His autobiography (Jijoden 《自叙传》) was published after his death in 1946. In it, he refers often to Confucius and Chinese Confucian texts, which is perhaps why Liang sought out the book. Although he was a pioneer Marxist scholar in Japan, he still proclaimed throughout the book that his major life priority was spirituality. He had, moreover, an exceedingly eclectic concept of spirituality. It is easy to see why Liang was attracted to him.

[33] When he invited me out to a vegetarian restaurant the week after this, Mr. Liang did respond to my toasts in beer with taking a few sips himself. As he said, one eats to satisfy oneself, but one drinks to satisfy others. This is perfectly consistent with his interpretation of the spirit of Chinese culture, which stresses respect for the "other" in a relationship.

[34] Mr. Liang had something of a hobby in medicine, as did his father, Liang Ji, who often brewed the medicine for members of the family.

[35] This is, of course, the central epistemological question of modern times. I asked this question in several forms throughout these interviews, trying to get Mr. Liang to articulate his view on the question. He answered in several ways, but none sufficient to satisfy me. By 1980, postmodernism began to make itself felt in American academia, and by 1990 it was dominating it. The answer to this question from postmodern or postmodern-like "theory" is relatively direct: "No." As Jean Baudrillard (1929-2007) put it, "The secret of theory is, indeed, that truth doesn't exist."

[36] The Analects 9.17 (《论语·子罕篇第九》, 十七章).

[37] Liang had very early seen Einstein as reinforcing ancient truths. In Eastern and Western Cultures and Their Philosophies, he claimed that the Theory of Relativity confirmed scientifically the Consciousness-Only Buddhist view of a world in which fundamental reality is manifest in the changing phenomena of successive events acting according to the Law of Cause and Effect (因果). Master Taixu (太虚大师) argued the same thing after Liang did. They were not alone among May Fourth era Chinese intellectuals in claiming that Einstein had proved scientifically their own cosmologies.

编后记

《这个世界会好吗？——梁漱溟晚年口述》（双语精选本）以北京“一耽学堂图书室”整理的录音资料和*Has Man a Future? —Dialogues with the Last Confucian*（外语教学与研究出版社，2010年3月）为底本，精选最能体现梁漱溟先生思想与经历的谈话内容，将原来按时间顺序整理的访谈文本按主题与逻辑顺序重新调整结构，划分为梁漱溟的“思想”、“历史经历与社会交往”以及“品评当年人事”三大部分，并选书中精彩语句作为小标题。编者核实并订正了书中绝大部分人名、地名、事件，为表区分，整理者与编者添加的说明文字用楷体标注。

梁漱溟先生长子梁培宽先生与“一耽学堂图书室”在整理录音、帮助核实文本内容、提供图片资料等方面花费了大量时间与精力，在此特表诚挚谢意！

“博雅双语名家名作”出版说明

1840年鸦片战争以降，在深重的民族危机面前，中华民族精英“放眼世界”，向世界寻求古老中国走向现代、走向世界的灵丹妙药，涌现出一大批中国主题的经典著述。我们今天阅读这些中文著述的时候，仍然深为字里行间所蕴藏的缜密的考据、深刻的学理、世界的视野和济世的情怀所感动，但往往会忽略：这些著述最初是用英文写就，我们耳熟能详的中文文本是原始英文文本的译本，而这些英文文本在海外学术界和文化界享有着崇高的声誉。

比如，林语堂的《吾国与吾民》（*My Country and My People*）以幽默风趣的笔调和睿智流畅的语言，将中国人的道德精神、生活情趣和中国社会文化的方方面面娓娓道来，在美国引起巨大反响——林语堂也以其中国主题系列作品赢得世界文坛的尊重，并获得诺贝尔文学奖的提名；再比如，梁思成在抗战的烽火中以英文写就 *A Pictorial History of Chinese Architecture* 文稿，经其挚友费慰梅女士（Wilma C. Fairbank）等人的奔走和努力，于1984年由麻省理工学院出版社（MIT Press）出版，获得美国出版联合会颁发的“专业暨学术书籍金奖”；又比如，1939年，费孝通在伦敦政治经济学院的博士论文以 *Peasant Life in China – A Field Study of Country Life in the Yangtze Valley* 为名，在英国劳特利奇书局（Routledge）出版，后以《江村经济》作为中译本书名——《江村经济》使得靠桑蚕为生的“开弦弓村”获得了世界性的声誉，成为国际社会学界研究中国农村的首选之地。

此外，一些中国主题的经典人文社科作品经海外汉学家和中国学者的如椽译笔，在英语世界也深受读者喜爱。比如，艾恺（Guy S. Alitto）将他1980年用中文访问梁漱溟的《这个世界会好吗——梁漱溟晚年口述》一书译成英文 *Has Man a Future? – Dialogues with the Last Confucian*，备受海内外读者关注；此类作品还有徐中约英译的梁启超著作《清代学术概论》（*Intellectual Trends in the Ch'ing Period*）、狄百瑞（W. T. de Bary）英译的黄宗羲著作《明夷待访录》（*Waiting for the Dawn: A Plan for the Prince: Huang Tsung-Hsi's Ming-I-Tai-Fang Lu*），等

等。

有鉴于此，外研社人文社科出版分社推出“博雅双语名家名作”系列。

博雅，乃是该系列的出版立意。博雅教育（Liberal Education）早在古希腊时代就得以提倡，旨在培养具有广博知识和优雅气质的人，提高人文素质，培养健康人格。中国儒家六艺“礼、乐、射、御、书、数”亦有此旨归。

双语，乃是该系列的出版形式。英汉双语对照的形式，既同时满足了英语学习者和汉语学习者通过阅读中国主题博雅读物提高英语和汉语能力的需求，又以中英双语思维、构架和写作的形式予后世学人以启迪——维特根斯坦有云：“语言的边界，乃是世界的边界”，诚哉斯言。

名家，乃是该系列的作者群体，涵盖文学、史学、哲学、政治学、经济学、考古学、人类学、建筑学等领域，皆海内外名家一时之选。

名作，乃是该系列入选标准。系列中的各部作品都是经过时间的积淀、市场的检验和读者的鉴别而呈现的经典，正如卡尔维诺对“经典”的定义：经典并非你正在读的书，而是你正在重读的书。

胡适在《新思潮的意义》（1919年12月1日，《新青年》第7卷第1号）一文中提出了“研究问题、输入学理、整理国故、再造文明”的范式。秉着“记载人类文明、沟通世界文化”的出版理念，我们推出“博雅双语名家名作”系列，既希望能够在中国人创作的和以中国为主题的博雅英文文献领域“整理国故”，亦希望在和平发展、改革开放的新时代为“再造文明”、“向世界说明中国”略尽绵薄之力。

中文自序

收集在《中国经济改革发展之路》这本论文选中的文章，是我在1980年到1998年之间发表的论文中的一部分。它们反映了我在这段时间内所思考的有关中国经济发展的问题。

例如，《论教育在经济增长中的作用》一文，发表于1980年。这时正值中国实行改革开放不久，拨乱反正，百废待兴。我感到20世纪60年代后期起，长达10年的“文化大革命”期间中国的教育事业不但没有任何发展，反而遭到十分严重的破坏，教育出现了大倒退，其原因之一在于从领导人到一般群众都轻视教育，轻视人才的培养。因此，必须把发展教育和重视人才视为当时最重要的工作。这篇文章就是在这样的背景下写成的。我指出，不重视教育，中国不仅会失去现在，更会失去未来。

《经济改革的基本思路》一文发表于1986年。中国的经济改革从1979年算起，至此已经进行了大约7年多。农村的家庭承包制已在全国范围内推广，农产品供给大量增加，人民生活已初步改善。这时面临的主要问题是如何在城市经济中推进改革。在这篇文章中，我提出了必须把国有企业改革放在首要地位，即必须把政企不分、产权不清晰的国有企业通过股份制改造为自负盈亏和自主经营的多元投资主体的企业。我认为这是中国经济改革取得成功的保证，也是今后中国经济顺利发展的制度前提。

接着，在1987年我发表了《社会主义所有制体系的探索》一文。这是一篇讨论今后长时期内中国经济发展的多元所有制格局的文章。在这篇文章中，我提出，中国今后的所有制体系将是一种二元经济体系：一方面是少数大型的企业集团，它们是多投资主体投资形成的；另一方面是大量中小企业、个体工商户和承包制农户，它们中以个人投资或合作社投资为主。这种二元经济体系对中国经济发展中的经济增长、技术进步、缓解就业压力和提高居民收入等问题都会起到良好的作用。

《贫困地区经济与环境的协调发展》一文发表于1991年。这时，我兼任了国务院环境保护委员会的顾问，从事环境经济方面的研究。在调

查中，我越来越感觉到发展贫困地区经济和保护环境、治理环境之间有非常密切的关系；如果单纯扶贫而不致力于贫困地区经济和环境协调发展，将事倍功半，不能使那里的人民真正脱贫致富。一年之后，中国政府成立了中国环境发展国际合作委员会，我被聘为中方委员兼环境经济专家工作组组长，继续这一领域内的研究和政策咨询工作。

1993年，中国出现了投资过热现象，从而引发了严重的通货膨胀，怎样应对这一问题，成为中国经济学界当时普遍关注的问题。我发表了《非均衡条件下经济增长与波动的若干理论问题》一文，阐述了我对政府调控政策的观点。在这篇论文中，我提出了非均衡条件两条警戒线的分析思路。由于中国经济是非均衡的，因此无论是失业率还是通货膨胀率都大于零应该被认为是必然的，不可能把警戒线定在零失业率或零通货膨胀率的水平上。究竟多高的失业率或多高的通货膨胀率可以作为警戒线，可以根据具体情况再定。而且，应当设立两条警戒线，我把它们分别称作第一警戒线和第二警戒线。这样，根据零失业率线或零通货膨胀率线、第一警戒线和第二警戒线，整个经济运行空间被划分为四块：

1. 经济运行于零失业率线或零通货膨胀率线以下，是不正常的，这时或者形成劳动力不足，或者形成通货紧缩，这些都需要政府采取相应的宏观调控措施。

2. 零失业率线或零通货膨胀率线以上而没有突破第一警戒线的经济运行，是正常的。这时不需要进行政府的宏观调控。

3. 第一警戒线以上而没有突破第二警戒线的经济运行，属于轻度的非正常经济运行。这时需要采取适度的宏观调控措施。

4. 经济运行于第二警戒线以上，这属于严重的非正常经济运行，不仅需要政府加强宏观经济调控，甚至在必要时可以采取非常规的调节手段。

1997年，东南亚金融危机已经开始，中国经济也受到一定影响。在这一背景下，我发表了《论财政政策与货币政策的配合使用》一文。这篇论文的基本论点是：无论是应对当时发生的东南亚金融危机，还是作为中国国内的经济政策，都应当学会如何配合使用财政政策与货币政策。“双紧”（指紧的财政政策和紧的货币政策）和“双松”（指松的财政政策和松的货币政策）都只是特殊情况下才能使用的宏观调控。一般情况下，财政政策和货币政策需要“松紧搭配”：即货币政策抽紧时，财政政策不妨宽松些；而财政政策抽紧时，货币政策不妨宽松些。这样才能

获得较好的成效。

《论效率的双重基础》一文发表于1998年。写作这篇文章的背景是：随着市场化的进展，中国国内普遍对效率有了足够的重视，然而对于效率的基础却认识得不够清楚。本文指出，效率有两个基础：一是效率的物质技术基础，一是效率的道德基础。设备、厂房、原材料、职工的技术水平，都包括在效率的物质技术基础内。人们的信念、信心、文化和道德水平，则包括在效率的道德基础内。历史表明，仅仅有效率的物质技术基础，只能产生常规效率。那么，超常规的效率来自何处？来自道德基础。由此可以看出人们的信念、信心、文化和道德水平的重要性。针对中国的经济发展而言，当前的一项迫切任务是充实效率的道德基础，让人们的信念、信心、文化和道德水平在经济发展中发挥更大的作用。

以上所提到的，只是这本论文集集中所收集的一部分文章的内容摘要。我相信读者在读完这本《中国经济改革发展之路》之后，将会了解我在20世纪80年代至90年代内有关中国经济发展的基本观点。

本书英文版的出版，得到郝平教授、凌原教授、蔡洪滨教授、周黎安教授的大力帮助。没有他们的帮助，本书不可能这么快就同读者见面。外研社社长于春迟、外研社总编辑蔡剑峰以及外研社人文社科分社吴浩、彭琳、任小玫、仲志兰等同志认真负责的精神，令我十分感动。在此双语版出版之际，我一并向他们致以衷心的感谢。

厉以宁

2010年10月16日

于北京大学光华管理学院

Foreword

The success of China's reform and development in the last thirty-two years has attracted global attention. The major steps which have led to China's success exhibit many Chinese characteristics. Of these the most striking is the ownership reform in the state and other nonprivate sectors. The theoretical and policy preparations for ownership reform took more than ten years. From being heterodox in the mid-1980s they had become mainstream thinking by the mid-1990s.

Professor Li Yining was arguably the most eminent figure in this process. His most influential public speech on ownership reform entitled, "Basic thoughts on economic restructuring" (Essay No. 3 in this selection), was delivered on April 25, 1986 in Peking University. His famous remark, "Economic restructuring may break down if price reform fails. The success of economic restructuring, however, hinges not on price reform, but on ownership reform, which entails revamping the corporate system," soon appeared in the headlines of a number of leading reformist newspapers and later on became a new proverb in the discourse of Chinese reforms.

In the mid-1980s, "market socialism," which was initially promoted by Oscar Lange and Abba Lerner, was the guiding principle of economic reform in China and Eastern European socialist countries. This principle advocated that the introduction of autonomy to state-owned enterprises (SOEs) would induce SOEs to behave like profit-maximizing firms. Once SOEs became sufficiently autonomous, comprehensive price reforms (i.e., price liberalization) would lead to the final success of the economic reform.^[1] In line with this mainstream paradigm, Chinese leaders also endorsed the "big bang" approach and implemented a "one-shot" comprehensive price reform

in the late 1980s, which, unfortunately, led to more problems than it solved.

At the other end of the spectrum of the reform debates, criticisms of the theory of market socialism and its reform practices in Eastern Europe since 1968, led by Professor János Kornai, became increasingly influential in the 1980s. Kornai's book *Economics of Shortage* became a bestseller in economics and Kornai himself an iconic figure among young intellectuals in China. His insightful analysis of state ownership and bureaucratic coordination led many young economists to believe that without ultimate private ownership, the expansion of enterprise autonomy and self-management under impersonalized state ownership would not be a medicine that would be effective in curing the soft budget constraint (SBC) syndrome. The SBC syndrome would continue to dull the price responsiveness of enterprises and thereby constrain the effects of price signals. Kornai himself later also concluded that unless state property was sold to private owners at a real market price, an attempt to reduce the percentage of state ownership gradually, i.e., to 95, 90, 85 percent and so on would not be able to make a difference.^[2]

In sharp contrast to the above strands of thought, Professor Li had a keen observation of the *de facto* diverse property rights structure existing in SOEs in China. He argued that it was feasible and desirable to adopt the shareholding system in SOEs by quantifying interests among different public owners and then converting such quantified interests into shareholdings. With such a shareholding system in place, an individual public agency would have a measurable stake in the fortunes of a firm from which the agency would draw cash flow and control rights. As a result public agencies could more easily consolidate their material interests and assemble more consistent business strategies when facing market competition. They would find it in their best material interest to increase the value of the firm rather than to extend bureaucratic control over it. Furthermore, mixed ownership for a company as a result of joint investment by public, collective, and private partners and diverse forms of ownership in the

economy would stimulate competition and induce further property rights reform (also see Essay No. 4 in this selection, first published in 1987).^[3]

In the context of China in the mid-1980s, when the official ideology still viewed socialist state ownership as 100 percent ownership by the state on behalf of the whole people, it was analytically valuable, practically significant, and politically brave and skillful to highlight the *de facto* plural property rights structure of existing state ownership and then to link this structure to the feasibility and desirability of ownership reform.

Within academic circles in the West, Granick (1990) appears to have been the first person to analyze this plural structure.^[4] Highlighting that Chinese SOEs were in fact agents with multiple principals exercising control over them, he asserted that these multiple principals acquired property rights through past investment in SOEs or traditional associations with individual SOEs. He cited a 1966 slogan "whoever builds and manages the enterprise has the use of its output." This slogan was regarded as epitomizing property rights relationships of the 1970s, i.e., instead of control rights being derived from ownership, *de facto* control rights now define ownership. In other words, this practical property rights arrangement is opposed to the usual textbook teaching in which the right to management is an attribute of ownership.

Rooted in the Chinese reality, the analytical work of Professor Li reveals that the conventional wisdom on state ownership in both the West and East is descriptively narrow. The claim that private investors should own the firm, despite its importance, is not the unique logical prerequisite of free markets and free enterprise. Diverse ownership and governance forms can emerge and evolve that are compatible with the evolutionary development of free market and free enterprise. The Chinese like to create a nickname for someone famous for a particular legacy and, not surprisingly, Professor Li is now known throughout China, as "Li Shareholding."

Another area to which Professor Li has made an important

contribution is comparative economic history and the history of economic thought (cf., Essay No. 11 in this selection, published in 1993).^[5] Integrating such comparative studies with his deep understanding of economic practices in China, he proposed an innovative augment on disequilibrium theory. As presented in Essays No. 5 (published in 1988) and No. 12 (published in 1993) of this selection,^[6] he distinguishes two types of disequilibrium based on whether the majority of firms in the economy are viable profit-makers or not. The first type corresponds to the one dealt with in the existing disequilibrium theory, which features excessive demand or supply due to market friction, stickiness of prices and wages, and demand or supply constraints, rather than nonviability of firms. The second type is characterized not only by an underdeveloped market but also enterprises under various forms of bureaucratic control. He argues that China's economy has belonged to the second category throughout its transition process. To make the transition from the second type of disequilibrium to the first, the top priority is the reform of enterprise system with the aim of producing viable and profit-oriented enterprises.^[7] This line of thinking provides a further support to his famous remark – "ownership restructuring holds key to the reform."

In addition to constructing this second analytical foundation for his ownership reform theory, Professor Li's work on the Chinese economy in disequilibrium also emphasizes the fundamental importance of achieving and maintaining healthy economic growth and social development in China under the conditions of the second type of disequilibrium. The majority of his essays in this selection discuss various coordination issues across economic reform, growth and development, and the urgency of finding solutions to immediate practical policy dilemmas. The central normative guideline has been that the reform and transition are means to serve economic growth and social development and, furthermore, that economic growth and social development are means to serve the well-being and happiness of ordinary citizens in society.

In dealing with the immediate policy dilemma, Professor Li has

incorporated the methodology of "dialectical thought and synthetic analysis" of traditional Chinese medicine, which emphasizes holistic connections among many facets of human anatomy and physiology and examines the effect of the social and natural environment on the interrelations and conditioning of *yin* and *yang*. He pays particular attention to both the "treatment effect" and "side effect" of each policy pill, as well as its short-run and long-run effects. For instance, the first essay of this selection was published in June 1980 when the high urban unemployment rate was at the top of policy agenda. With a thorough and comprehensive analysis of the historical and structural roots of the high unemployment rate, Professor Li suggested that in the short and medium run, the solution would be to actively develop labor-intensive manufacturing industries and labor-intensive export processing to take advantage of China's abundant low-skilled labor force. However, in the long run, China has to develop human capital intensive manufacturing and services industries and actively promote human capital intensive exports so as to convert the persistent population pressure into an emerging comparative advantage. Therefore, it was strategically important to significantly increase investment in education in the 1980s so that China would no longer suffer high unemployment rates in the next two to three decades and become well prepared for the inevitable era of human capital intensive production and exports. Clearly, this vision is still valid today.

The publication of this *Economic Reform and Development the Chinese Way* enriches the literature in English that examines the past, present and future prospects of China's reforms, transition, and development. Although all the essays in this selection are well-known in China, they provide carefully examined alternative perspectives which scholars and students in the West may not be familiar with. I am honored to write the foreword for this excellent selection and commend it enthusiastically to scholars, policy makers, business professionals, as well as to more general readers, who are interested in the dynamics of China's transition and the growing importance of China in the world.

[7] An important parallel research on the viability issue of SOEs in China (and other transitional economies) has been conducted by Professor Justin Yifu Lin. Lin

employs the analytical perspective of comparative advantage and argues that the firms in heavy industries prioritized by the government in transitional centrally planned economies are not viable in open, competitive markets because their activities are inconsistent with the economy's comparative advantage. This viability problem is another root of the soft budget constraint (SBC) syndrome. If the viability problem is not solved, the SBC syndrome will not be eliminated even though the socialist government is overthrown and all firms are privatized. See, Lin, Justin Y. (2003), "Development strategy, viability and economic convergence," *Economic Development and Cultural Change*, Vol. 53, pp. 277-308; Lin, Justin Y. (2005), "Viability, economic transition and reflection on neoclassical economics," *Kyklos*, Vol. 58, No. 2, pp. 239-264.

论教育在经济增长中的作用 (1980)

两年前，我在《技术教育和资本主义工业化：西欧和美国技术力量形成问题研究》一文（1978年北京大学“五四”科学讨论会上的报告，发表于《社会科学战线》1978年第4期）中，曾从经济史的角度对教育同经济增长的关系作过一些分析。在那篇文章里，我所着重考察的是：教育是培养一国技术力量的主要途径；后进国家提高经济增长率以及在经济上赶上和超过先进国家的原因之一就是重视教育、重视人才的培养。关于教育在经济增长中的作用，在该文中归纳为以下五点：

“第一，它向社会提供一支能在科学上有发现、发明，在生产技术上有创新、变革的科学研究和设计队伍。如果没有这样一支队伍，在科学技术上至多只能步别国的后尘，很难取得重大的突破。

第二，它向社会提供一支能掌握和运用先进生产方法的技术队伍。如果没有这样一支队伍，即使有了先进的生产工具和生产方法，它们也不可能充分发挥作用。

第三，它向社会提供一支适应于工业化水平的生产和技术管理人员的队伍。如果没有这样一支队伍，就会造成生产过程中人力、物力、财力的巨大浪费，就不能发挥先进生产技术的优越性。

第四，它提高全社会的科学文化水平，为新产品的推广使用、为先进科学技术知识的普及和提高准备条件，同时也为今后技术力量的成长提供广阔的基础，为源源不断的高质量的科研人员、工程技术人员、管理人员和熟练工人的供给提供保证。

第五，它使社会积累起来的科学知识和生产经验得以保存和传播，这种传播可以不受国界的限制，也不受时间的限制。累积起来的科学知识和生产经验作为人类共同财富，通过教育从一个民族传播给另一个民族，从这一代传播给下一代。”

本文以两年前发表的那篇文章为基础，继续考察教育同经济增长的

关系。但这两篇文章的着重点有所不同。前一篇文章分析教育在促进一国经济增长和提高经济增长率方面的重要作用，本文分析教育在保证一国经济稳定、持续增长，以及有效地解决经济增长过程中发生的或可能发生的各种问题方面的重要作用。换言之，前一篇文章考察的范围在于经济增长本身，本文考察的范围在于稳定、持续经济增长过程中的社会就业、国际收支、收入分配、财政平衡等问题。此外，前一篇文章是从西欧和美国经济史的角度进行考察的，本文则以当前我国社会主义经济作为考察的对象。

本文分为四部分，分别考察教育与社会就业、国际收支、收入分配、财政平衡之间的关系，说明教育在保证经济稳定、持续增长中的作用。

一、我国当前社会就业问题的“结构性”。这种“结构性”就业问题要依靠发展教育和调整教育结构来解决

从理论上说，任何一个国家的经济增长既可以通过增加劳动力数量来实现，也可以不通过增加劳动力数量，而通过增加对机器设备的投资，并相应地提高劳动者的技术水平和熟练程度来实现。在经济增长过程中，由于物质生产部门采用节约劳动的新技术设备的结果，有可能减少对劳动力数量的需要。因此，在一定的人口增长率条件下，经济增长本身并不能保证充分就业。物质生产部门在增加生产量的过程中究竟能够吸收多少人就业，不仅取决于这些部门的增长速度，而且取决于这些部门采取什么样的经济增长途径。如果一国主要不是依靠增加劳动力数量，而是依靠新技术设备的采用和劳动力文化技术水平的提高来实现经济增长的话，物质生产部门本身能吸收的劳动力将是有限的。

另一方面，一国经济增长过程也是一国经济结构变化的过程。在物质生产领域内，必然有些部门或行业衰落下去，甚至被淘汰，另一些部门或行业则不断兴起、发展。物质生产领域与非物质生产领域在国民经济中的比重也会发生变化，非物质生产领域的一些部门的发展及其在国民经济中所占比重的增大，是经济增长的不可避免的趋势。在衰落和被淘汰的部门就业的劳动者，随着国民经济结构的变化，需要另谋职业，转移工作部门。在新兴的物质生产部门中，尤其是在日益发展的非物质生产部门中，劳动力则往往是不足的。因此，一国经济增长过程之所以能够增加就业，从长期趋势来看，主要依靠新兴物质生产部门的发展和

各种非物质生产部门的发展。

一国经济结构的变化不仅包括部门结构的变化，而且包括地区结构的变化。国内原来经济较不发达的地区在经济增长过程中可能以较快的速度增长，而原来经济比较发达的地区经济增长速度则可能减缓，或者以相对较慢的速度增长。这样，经济增长率较慢的地区，或者经济增长率虽高但主要依靠增加技术设备投资来实现经济增长的地区，劳动力将会过多，这些人也必须另找就业岗位。而经济增长率较高的地区，特别是原来劳动力不足的地区，则有可能吸收就业者。

从上述这些情况来分析，可以清楚地看到，一国经济增长过程中所遇到的社会就业问题，主要是“结构性”就业问题。这就是说，社会就业问题能否顺利地得到解决，要看劳动力的结构（不同技术水平的劳动力、不同工种的劳动力、不同地区的劳动力在劳动力总数中的构成）与经济增长速度是否适应，与经济结构的变化是否适应，要看劳动力本身在技术方面是否符合经济增长的要求。在劳动力结构与经济增长速度、经济结构变化不适应的情况下，在劳动者的技术水平不符合经济增长要求的情况下，经济增长过程中失业与职位空缺的并存将是不可避免的。

失业与职位空缺并存，就是说，一方面是“人找事”，另一方面是“事找人”。经济增长过程中为什么会有失业？这是因为在经济增长主要靠提高劳动生产率来实现，而人口增长率又比较高时，新达到就业年龄的劳动力很可能找不到工作。即使不考虑新达到就业年龄的劳动力，那么增长率相对缓慢或停滞的部门和地区也会游离出一批劳动力。特别是对发展中国家来说，情况更为显著，因为在这样的国家中，农业一直在国民经济中占有重要地位，而农业中原来的劳动生产率一直是较低的。工业化过程中，从农业中游离出来的大量劳动力在社会上找不到可以容纳他们的工作岗位。因此，失业（包括隐蔽失业）是不可能避免的。

为什么同时又出现职位空缺？这主要是因为新兴的物质生产部门以及非物质生产领域内某些需要熟练劳动力的部门在劳动力结构与经济增长速度、经济结构不适应的情况下，找不到所需要的劳动者，例如技术工人、工程技术人员、科学研究人员、管理人员等。即使是原有的物质生产部门，如果它们的经济增长主要依靠采用新技术装备来实现，那么该部门内原来就业的劳动者也很可能不适合要求。因此这些部门也是缺少劳动力的。此外，职位空缺还可能出现于新发展的地区，因为这些地区本身无法提供所需要的劳动力。这种情况在发展中国家也是很突出的，因为这些国家中，由于历史的原因，适应于工业化要求的熟练劳动

力尤其缺乏。

一般说来，国民经济中的失业人数与职位空缺额不可能恰好相符。二者之间的比率随一国经济增长率、经济结构变化情况和劳动力结构调整情况而异。但即使失业人数与职位空缺额基本上相符，它们也不可能彼此抵消，因为在现代生产技术条件下，不同技术水平和工种的劳动力往往不可能替代。所以从长期趋势来看，一国经济增长过程中，失业与职位空缺并存的现象不是暂时性的，而很可能是持久性的，即旧的失业人员就业了，职位空缺现象消失了，但新的失业人员又出现了，新的职位空缺现象又产生了。失业（包括隐蔽失业）是人力资源的浪费，职位空缺是物质资源的浪费，失业与职位空缺的并存不仅不利于经济增长，而且将阻碍新技术的采用和推广，阻碍经济结构的必要调整，使一国经济停留在长期低效率的状态。特别是失业的长期化还会成为社会不稳定的一个重要因素。

总之，经济增长过程中的社会就业问题，很大程度上可以归结为经济增长过程中失业与职位空缺之间的矛盾无法得到解决。这就是社会就业的“结构性”。

我国的社会就业问题是复杂的。当前我们面临的社会就业问题，既有属于上述一般经济增长过程中带有普遍性的问题，又有作为发展中国家在经济发展过程中遇到的共同问题，还有我国所特有的问题。这三种问题是交织在一起的。属于一般经济增长过程中的问题，主要指先进机器使用和技术装备率提高后，物质生产部门中对劳动力的需求相对减少、对非熟练劳动力的需求甚至绝对减少。属于发展中国家经济发展中的共同问题，主要指在从农业社会转向工业社会的过程中，从农业中必然游离出大量非熟练劳动力，需要有就业岗位容纳他们。属于我国特有的问题，除了劳动管理体制不够完善以外，主要指十年动乱给国民经济造成了严重破坏，比例失调，使得劳动就业门路十分狭窄。加上50年代末、60年代初人口增长过快，以致二十岁左右的青年人如今大批走上或即将走上工作岗位，如果就业问题不能妥善解决，对社会和经济增长都是非常不利的。但与此同时，我国当前也存在熟练劳动力供给不足、在职人员劳动生产率偏低的问题。一方面许多待业青年没有工作岗位，另一方面不少工作岗位找不到适合的工作人员。劳动力总资源等于劳动力数量与劳动者平均技术熟练水平（劳动力质量的主要标志）的乘积。就这个意义上说，目前我国的劳动力总资源并不是十分丰富的，因为劳动力数量虽多，劳动者的平均技术熟练水平却比较低。

要使当前我国的社会就业问题得到妥善解决，归根到底有待于在经济增长过程中不断地创造出新的工作岗位。如果无法增加新的工作岗位，那么即使人口增长率很低，只要采用了新技术，对劳动力的需要仍会减少。但怎样才能增加新工作岗位呢？这里涉及社会主义制度下多种经济成分并存、社会主义公有制多种形式并存的问题，也涉及经济管理体制、技术创新类型、国民经济各部门比例关系以及经济增长速度等问题。这些方面的问题不是本文所要探讨的内容。本文所要讨论的是：假定通过所有制形式、体制、比例关系等方面的调整 and 改革，假定国民经济有较大幅度的增长，确实创造出相当多的新工作岗位，我国的社会就业问题能否得到解决呢？如果考虑到我国社会就业问题的“结构性”，那么可以断言，在教育事业没有相应的发展、教育结构未作相应的调整的条件下，劳动力结构与经济结构之间不相适应的情况是不会消除的。“人找事”和“事找人”的矛盾将会长期存在。教育对于解决就业问题的重要作用，正在于它有助于解决这一矛盾。

发展教育事业和增加对教育事业的支出，可以使劳动力的结构适合于经济增长对不同技术水平和不同工种的劳动力的需要。在这里，重要的问题是使教育的结构同经济增长速度、经济结构的变化相适应，根据长期经济增长的需要来调整各种类型学校的设置、各种专业的设置，以及作出各种不同学习期限的安排。从长期考察，不外乎以下两种可能性。一种可能性是：从长期看，待业人数和未来新达到就业年龄的人数之和可能小于预计的职位空缺额，那么调整的重点将放在进一步提高教育水平、提高劳动力质量上，使每一个受过教育或训练的劳动力能发挥更大的作用，从而提高劳动生产率，进一步推动新技术的采用和推广。这样，既可以适应经济增长的需要，又可以减少职位的空缺额。另一种可能性是：从长期看，待业人数和未来新达到就业年龄的人数之和可能大于预计的职位空缺额，那么调整时应当是提高与普及并重，既为国民经济培养有较高水平的专家，又使大量待业者有一技之长，便于找到合适的工作。这时，除了有必要进一步调整经济结构，以便增加职位空缺额以外，特别应注意发展中等技术和职业教育，给待业者以就业训练。还可以适当地延长在校学生的学习期限，一方面减少准备加入就业者行列的人数，另一方面提高他们的文化技术水平，以适应今后经济增长的需要。换句话说，与其让青年人在无技术、少知识的情况下待业，不如让他们多学习些知识与技能。

在上述两种可能性中，从我国具体情况来看，可以认为在相当长的

时间内后一种可能性更大，所以我国教育事业的发展和调整不能只着眼于提高，而忽略教育在解决“结构性”社会就业问题上的作用。

在这里，还应当注意到，教育结构调整不是一劳永逸的。一方面，经济增长本身要求教育部门输送大批有一定技术文化水平的、适应经济增长需要的劳动者，否则经济增长很难稳定地、持续地进行下去；另一方面，随着经济的增长，部门结构和地区结构总是处在不断变动之中，技术构成状况也会不断发生变化，这就要求教育结构相应地与之配合。一定的国民经济发展水平是与一定的教育结构相适应的，前者变动了，后者必须随之变动。这也是我国在制定长期人力资源规划时应当考虑的一个方面。

以上是就“结构性”社会就业问题进行分析。我国当前的社会就业问题主要是“结构性”的，但并非仅仅是“结构性”的。应当承认，我国目前还存在着“个人职业选择性”的社会就业问题。在这种情况下，某些工作岗位空闲着，需要劳动者，但劳动者不是由于缺乏必要的文化和技术，而是出于个人对职业的选择，宁肯待业，而不愿去工作。这种类型的就业问题产生的原因是多方面的。但教育对于这一类就业问题的解决也能起到一定的作用，因为教育的任务不仅是传授文化技术知识。政治思想教育、革命人生观教育，对于我国的青年学生说来，也始终是不可缺少的。

二、对教育的投资是发展知识密集型经济的前提。逐步增加知识密集型经济的产品出口是我国经济增长过程中改善国际收支状况的战略性措施

关于发展中国家现代化过程中的技术创新类型，我已经在《论资本密集型经济和劳动密集型经济在发展中国家现代化过程中的作用》（载《世界经济》，1979年第6期）一文中发表过我的一些看法。由于那篇文章的中心思想在于说明“发展中国家首先发展资本密集型经济的做法是难以奏效的”，因此可以不涉及熟练劳动与非熟练劳动的区分，不涉及劳动密集型经济的发展趋势。而本文的中心思想在于说明对教育的投资如何有利于经济增长的稳定和持续，因此有必要对技术创新类型问题再作进一步的考察，即考察知识密集型经济在经济增长过程中的作用。

从理论上说，一国为了实现经济增长，必须增加积累，筹集可供投资使用的资金。在国内资金供给不足的条件下，可以根据国际资本市场的情况，按照适当的信贷条件，吸收国外资金。利用国外资金有助于克服短期内外汇不足和资金不足的困难，有助于引进国外先进技术，但从长期来考察，必然面临着还本付息问题。如果一国不可能扩大自己的出口或其他来源的外汇收入，那么经济增长过程中将会发生国际收支逆差增大的现象，从而经济的持续增长将遇到很大困难。

假定一国在工业化之前或工业化开始阶段是一个劳动力数量较多、工资水平相对较低的国家，它的传统出口品是劳动密集型经济的产品，这些产品在国际市场上有一定的竞争能力。出口这些产品可以使该国取得一定的外汇收入，以弥补进口技术和其他商品的需要，改善国际收支情况。但是，在该国的工业化进行到一定阶段之后，它在劳动密集型经济的产品出口方面的有利条件将会逐渐丧失，不利条件将会逐渐增多。这是因为：

第一，随着经济增长，国民收入将会逐年增长，平均每人的国民收入也会逐年增长，工人的实际工资也会有所提高。这样一来，该国的平均工资水平与其他工业发达国家的平均工资水平之间的差距有可能缩小，从而该国以前所拥有的依靠低工资水平而进入国际市场的有利性将会减少。特别应当注意的是，工业化是世界各国共同的趋势，在该国工业化进行到一定阶段之后，另一些原来未开始工业化的后进国家也会相继开始工业化，后者也力图扩大出口，吸收国外先进技术。这些更晚开始工业化的国家很可能也是劳动力数量很多、工资水平甚至还要低一些的国家。它们的出口品也可能是劳动密集型经济的产品。这些产品在国际市场上也许具有更大的竞争能力，因为它们是由工资水平相对更低的劳动力生产出来的。这样，如果该国在经济增长、国民收入增长、工人的实际工资有所提高之后继续以出口劳动密集型经济的产品为主，它将在国际市场上将会遇到新的有力的竞争对手。这种情况对它显然是不利的。

第二，在劳动密集型经济的产品中，有相当大的一部分是初级产品。一国在进行工业化的过程中，随着经济的增长，国内对初级产品的需求可能逐步扩大（例如对矿产品的需求或对农副产品的需求，都将因新工业部门的建立、城市的发展、交通运输的发展、居民物质文化生活水平的提高而扩大）。于是，继续大量出口初级产品的做法要受到国内经济增长和国内对初级产品需求扩大的限制。如果出现了这种情况，这

对于该国的国际收支状况的影响将是不利的。

第三，一国劳动密集型经济的生产量虽然可以随着该国国民经济的增长而增长，但其增长率一般是较小的。劳动密集型经济的产品供给的扩大不仅要受到自然资源的限制，而且还要受到生产技术方面的限制。这是因为：在劳动密集型经济的产品生产成本中，活劳动部分所占比重较大，物化劳动部门所占比重较小，劳动密集型经济的劳动生产率的提高也就相对地缓慢些。假定一国在经济增长过程中需要不断引进国外先进技术，并且在吸引外资一定时间之后需要还本付息，那么出口额必须相应地扩大。假定该国一直主要依靠出口劳动密集型经济的产品来取得外汇收入，那么由于这些产品生产量的增长率较小，而供给的扩大又受到限制，该国将不可能采取扩大出口劳动密集型经济的产品的方式来保持国际收支的平衡。如果它想使出口额增大，保持国际收支平衡的话，那么只有从以下三种可供选择的增加出口的方式中任择其一：或者增加非劳动密集型经济的产品出口，以弥补劳动密集型经济的产品供给的较缓慢增长；或者压缩国内对劳动密集型经济的产品需求，抑制这种需求的增长率，以保证继续有足够的劳动密集型经济的产品用于出口；或者对劳动密集型经济进行生产技术改造，提高其劳动生产率，以便增加劳动密集型经济的产品生产量，使这些产品的供给增大。在这三种增加出口的方式中，如果按第一种方式去做，它本身就意味着依靠劳动密集型经济的产品出口这一传统做法的改变；如果按第二种方式去做，则要求以压缩国内的需求、限制国内的增长率作为前提，即牺牲国内需求和增长，以扩大出口；如果按第三种方式去做，那么劳动密集型经济中的劳动密集程度将会下降，依靠劳动密集型经济的优势将会逐渐消失。这也就说明，一国在工业化进行到一定阶段之后，要想继续保持以出口劳动密集型经济的产品为主，不仅是困难的，而且也是不符合经济增长规律的。

还应当指出的是，即使一国在工业化进行到一定阶段之后仍然享有出口劳动密集型经济的产品有利性（比如，该国的工资水平仍然较低；在国际市场上暂时还未遇到有力的竞争对手；该国国内对初级产品的需求的增长还没有达到影响初级产品出口的程度；该国劳动密集型经济的产品生产量增长率较高，从而这些产品的出口额未受影响，等等），但由于在国际市场上，非劳动密集型经济的产品与劳动密集型经济的产品的不等价交换是由国际经济中的历史和制度条件所造成的，并且，这种现象不可能在短期内改变，所以，靠劳动密集型经济的产品出

口去换取非劳动密集型经济的产品进口，在交换方面是不利的。既然如此，那么一国在工业化进行到一定阶段之后，为什么一定要坚持以劳动密集型经济的产品作为自己的主要出口品呢？为什么不设法以贸易条件对自己比较有利的非劳动密集型经济的产品出口来代替劳动密集型经济的产品出口呢？

这一点清楚地表明：无论从哪一个角度来看，以劳动密集型经济的产品出口为主的做法虽然在一国刚开始工业化时期是必要的，但在工业化进行到一定阶段之后，这种情况应当有所改变。以劳动密集型经济的产品作为主要出口品的做法，不宜于作为一国长期不变的方针。

这样就产生了一个问题：既然一国在工业化进行到一定阶段之后很难继续以劳动密集型经济的产品出口为主，而且也不适宜以这些产品出口为主，那么该国应当如何解决经济增长过程中的国际收支逆差问题？假定该国非贸易项目的国际收入为既定的，它应当如何增加自己的出口，以应付进口增加以及清偿外债（还本付息）的需要？

它可以发展本国的资本密集型经济，出口资本密集型经济的产品，或用本国的资本密集型经济的产品替代进口的同类产品。这当然是一种可行的办法，但这也不是容易实现的。在国际经济中，某些先进的工业国家通过长期的经营和历史上已经形成的有利的贸易条件，再加上它们拥有充足的资本，从而在资本密集型经济的产品出口方面享有一定的优势。要同这些国家的资本密集型经济的产品相竞争，并在竞争中占上风，不是一件容易的事。

因此，对于稍后开始工业化的发展中国家来说，在工业化进行到一定阶段后应当大力发展并扩大出口的，应当是另一种类型的产品——知识密集型经济的产品。

所谓知识密集型经济，是从劳动力质量和技术创新的角度着眼的技术创新类型、产业部门与产品的一种分类方法。如前所述，一国劳动力资源的多少不仅表现为劳动力数量的多少，而且表现为劳动力质量的高低。在把国民经济按资本密集型和劳动密集型分类时，并未把劳动力质量因素包括在内。这里所说的资本密集型和劳动密集型，只是就生产中自然单位的劳动投入量与生产资料投入量之间的比例而言，而在计算自然单位的劳动投入量时，把每一个人（或每一工时）看成是等量的劳动的投入，在计算生产资料投入量时，也只是计算其价值额，而未把生产资料所体现的技术先进性同运用这些生产资料的劳动者的科学技术水平

联系起来考察。但是，如果从劳动力质量的角度来分析，生产中所投入的劳动很自然地分为熟练劳动的投入和非熟练劳动的投入，生产中所投入的生产资料也很自然地分为体现技术先进性并由熟练劳动者运用的生产资料的投入和未体现技术先进性并由一般劳动者运用的生产资料的投入。于是就出现对于经济的另一种分类，即国民经济可以区分为熟练劳动密集型的与非熟练劳动密集型的两类，在熟练劳动密集型经济中，不仅所投入的劳动是熟练的劳动，而且所投入的生产资料是体现了技术先进性并由熟练劳动者所运用的。产品也可以相应地分为熟练劳动密集型经济的产品和非熟练劳动密集型经济的产品。所谓知识密集型，就是指熟练劳动密集型而言。

一个劳动力数量较多的国家，如果它不断提高本国劳动者的科学技术和熟练程度，使之具有高度的劳动生产率，使之能在生产技术方面不断地有所创新，能以熟练的劳动者和体现了技术先进性的生产资料进行生产，那么它所生产出来的产品就不是一般意义上的劳动密集型经济的产品，而是熟练劳动密集型或知识密集型经济的产品。这种产品中，凝聚了该国的劳动者（包括工人、技术人员、科学研究人员）所拥有的最新科学技术知识和已达到的先进技术水平，反映了该国在生产技术方面的最新成就，反映了该国所达到的高度劳动生产率。如果该国以这些产品出口来换取非熟练劳动密集型经济的产品，而不是用一般意义上的劳动密集型经济的产品来换取资本密集型经济的产品，那么即使国内的实际工资水平随着经济增长而上升，它仍然能够在国际市场的竞争中保持优势，而且还能够不断开辟新的市场，扩大销路。此外，由于它改变了以往那种出口一般意义上的劳动密集型经济的产品做法，从而也就避免了在现存国际贸易结构中的不利于劳动密集型经济产品的交换条件，避免了不等价交换制度所带来的经济上的损失。

技术创新是无止境的。劳动生产率的提高不会停止在某一个界限之内。一个发展中国家在实现现代化的过程中，只要能使熟练劳动密集型经济不断得到发展，那么它在经济增长和改善国际收支状况这两个方面都将有广阔的前景。

这样就可以清楚地看出对教育的投资在协调经济增长与国际收支方面的重要作用了。没有连续的、追加的对教育的投资，就不可能普遍地、大幅度地提高劳动者的技术水平和熟练程度，就不可能培养出高质量的本国科学研究人员，就不可能使生产技术不断创新。因此，对教育的投资是发展熟练劳动密集型即知识密集型经济的前提，也是在经济增

长过程中扩大出口、改善国际收支状况的前提。

总之，增加对教育的投资是经济增长过程中改善国际收支状况的战略措施。我国是发展中的社会主义国家。什么是当前我国在国际贸易中的优势？这就是在若干劳动密集型经济的产品出口方面，我们相对地居于有利的地位。我们应当充分利用这一有利条件，发展这一优势。但这不宜于成为长期的对外贸易方针，而且我国目前享有的这一优势很可能随着经济的增长而逐渐减弱。从战略上考虑，我们应当加强每一种出口商品的熟练劳动密集程度，加强出口部门的熟练劳动密集程度。今后，如果我国输出的农产品不再是一般的劳动密集型农产品，而是体现了先进科学技术水平的农产品，即反映最新科研成果的、改良了品种的、高质量的农产品，如果我国输出的工业品不再是一般的劳动密集型加工制成品，而是体现了我国的技术创新特色、反映最新科研成果的、高质量的加工制成品，如果我们不再是出口矿砂、煤炭、原油等矿产品，而是出口利用这些矿产品作为原料进行加工、并反映我国科学技术新成就的各种优质产品，那么我国在国际市场上将能长期保持优势。我国的工业和农业越是成为具有高度劳动生产率的部门，我国在国际竞争中越能居于有利地位。如果做到了这一点，那么实际上我们拥有的就不只是劳动力数量上的优势，而且是劳动力质量上的优势。我们将以输出体现于产品和劳务上的“知识”而在国际市场上立于不败之地。

三、我国当前经济增长过程中的一个重要任务是提高广大职工的收入水平和提高经济效率。这个任务在一定程度上也可以通过对教育的投资来实现

这里所要讨论的是收入分配和经济效率之间的关系。在资本主义经济中，所谓“平等”和效率的交替有其特定的含义，因为在生产资料资本主义所有制条件下，“平等”是建立在承认资本主义雇佣劳动制度的基础之上的，效率则是资本主义竞争的产物。只要存在资本主义雇佣劳动制度，从根本上说就不可能出现真正的平等。关于这一点，不准备在本文中分析。但在我国社会主义经济中，收入分配与经济效益之间的关系倒是值得研究的重要问题。

对人的关心和培养是社会主义生产的目的。发展生产，是为了提高人民的物质和文化生活水平，使劳动者充分发挥自己的才能。但要发展

生产，就必须讲究效率，必须调动职工的积极性。从理论上说，如果认真贯彻按劳分配而又正确实行社会福利的措施，那么对生产的发展和效率的提高是有利的。对于劳动者来说，这也是保证在生产发展前提下提高收入水平的途径。然而在我国，职工平均收入水平偏低和收入分配中的平均主义的影响不可低估。收入分配中的平均主义严重阻碍经济增长，挫伤人们的积极性，从而使本来偏低的职工收入更难以提高。长时期内已经形成的平均主义的、职工平均收入偏低的收入分配格局，不是很容易改变的。要扭转这种格局，需做很大的努力。

为了更好地说明这个问题，并进而说明教育在调整收入分配和经济效率之间关系方面可能起到的作用，有必要从收入分配的理论谈起。

一般经济增长过程中，可能有两种不同的收入分配方式。一种收入分配方式是，在经济增长过程中，完全根据劳动者的劳动数量和质量给予报酬。另一种收入分配方式是，在经济增长过程中，国家对收入分配采取一定的调节措施，更多地照顾低收入者，并对高收入者的收入加以某种限制或扣除。主张前一种收入分配方式的人认为，经济增长过程中的这种收入分配方式是合理的，因为这是完全按照劳动者提供的劳动数量和质量给予报酬，每个劳动者所得到的收入的多少意味着社会对每个人提供的劳动或作出的贡献的评价。据说惟有这样，才能鼓励勤劳者，惩罚懒惰者，才能促使每个人尽量发挥自己的力量和才智，为经济增长多作贡献。主张后一种收入分配方式的人认为：完全按照劳动者提供的劳动数量和质量给予报酬并不是一种合理的收入分配，因为一个劳动者提供的劳动数量和质量多少并不仅仅取决于个人工作的勤劳与否。

由于人与人之间有天赋的差别，智力与体力各不相等；各人的家庭条件和受教育的机会不同，从而获得收入的能力也不相等；特别是每个人都在一定的社会环境中工作，工作中所使用的生产资料状况不是自己所能决定的，有人有条件使用有较高生产率的设备，有人则不具备这种客观条件。因此，一个人可能已经竭尽了自己的最大力量，但他所提供的劳动数量和质量却不如一个并未使用最大力量，但天赋、家庭条件和工作环境比较有利的人。这就使得完全按照劳动者提供的劳动数量和质量来给予报酬的做法具有一定的局限性，使得社会上总有一部分人的收入与他们个人工作的努力程度相比是偏低的，并使得社会上还有一部分人的收入与他们个人工作的努力程度相比是偏高的。国家采取适当的收入分配调节措施，给收入低的人某些照顾，对收入高的人的收入进行某种限制，这才是合理的。

经济增长过程中的这两种收入分配方式的主张者还从收入分配对经济增长的效应来说明实行该种收入分配方法的必要性。前一种收入分配方式的主张者认为，如果完全根据劳动者提供的劳动数量和质量给予报酬，这将调动每一个劳动者工作的积极性、主动性，并将促使每一个劳动者不断提高自己的技术水平和熟练程度，其结果将会推动国民经济的增长。反之，如果不按照劳动者提供的劳动数量和质量来给予报酬，或者人为地拉平这种报酬，那就会挫伤劳动者工作的积极性，降低效率。后一种收入分配方式的主张者则认为，如果完全根据劳动者提供的劳动数量和质量给予报酬，社会成员的收入差距有可能扩大，收入差距的扩大将在一部分社会成员的心理上引起反响，某些低收入者会产生沮丧和失望的情绪，不利于调动他们的积极性，不利于经济增长。

一般经济增长过程中的这两种收入分配方式的争论对于资本主义经济而言，并没有实际的意义，因为资本主义社会中既不可能真正按照劳动者提供的劳动数量和质量给予报酬，而其国家政权的阶级实质又决定了它不可能真正按照合理的方式来调节各阶级的收入。社会主义制度的优越性，照理说应当为合理的收入分配创造出先决条件，并且能够通过合理分配收入来最大限度地促进经济增长。然而在我国，社会主义制度在这方面的优越性并未得到充分发挥。当前我国收入分配中的平均主义和职工平均收入水平偏低的形成原因是多方面的。多年来，由于社会主义生产目的不明确，为生产而生产的情形严重，加之，在越“平均”越好的思想支配下，已经造成了这样的局面：既不能合理分配收入，又不能调动职工积极性，结果是经济增长缓慢，劳动生产率低下，职工实际收入不能提高，同时，收入分配中的问题还影响安定团结。这种情况已到了非改变不可的地步。怎样改变呢？我认为，现在要讨论我国经济增长过程中收入分配与经济效益之间关系的协调，必须从客观上已经形成的收入分配格局出发，从长时期来社会上普遍存在的平均主义和职工现阶段平均收入水平出发。历史不能倒转。我们不可能设想一个“假如现在是1949年，我们应该如何如何”的模式。这种模式的探讨固然重要，但不能解决现实中的迫切问题。这是因为，在工资和福利方面存在着“非灵活性”：既定的工资标准，提高容易下降难；既定的福利标准，增加容易减少难。

因此，在我国目前情况下，如果在收入分配上不贯彻按劳动数量和质量给予报酬，不提高平均收入水平，听任平均主义为害，这是不行的。同时，国家如果操之过急，不从承认收入分配和福利措施的现状出

发，过分强调完全以劳动数量和质量为标准给予报酬，也是不行的。平均主义的消除，需要有一个较长的过程，但消除它们是势在必行之事。考虑到我国收入分配格局形成的历史条件以及收入分配现状，在发展生产的过程中逐渐提高职工收入是迫切的任务。在收入分配方面，当前，平均主义和职工平均收入水平偏低是主要矛盾所在，从而低效率问题成为经济增长的主要障碍。所以，我们应当把逐步减少平均主义和贯彻按劳分配放在首位，在提高广大职工的实际收入水平的前提下，尽可能按劳动的数量和质量给予报酬。若干年后，职工的收入水平肯定要比目前有较大的提高，但也有可能在平均收入普遍提高的基础上，某些人的收入上升得更快，从而收入分配的差距有扩大的趋势。假定收入分配差距的扩大引起了社会上一部分人的不安，那么到那时再通过国家的适当调节（如提高累进制的个人所得税税率，征收遗产税）使收入分配差距缩小，也还为时不晚。我认为，我们需要预见到这一可能出现的趋势，但不必过早地采取收入限制措施。这个问题将来是可以解决的。

经济增长过程中收入分配与经济效率的协调，不仅与长期形成的收入分配格局、过去和目前的工资和福利制度等有关，而且还涉及意识形态领域内的若干问题。比如说，劳动者的政治思想状况、社会的风尚和评价标准、人们对“平等”和“幸福”的理解，都是意识形态领域内的重要问题，它们都能在某种程度上影响收入分配与经济效率之间的协调，影响在一定收入分配格局下人们的工作热情、主动性和效率。因此，要在我国经济增长过程中既提高广大职工的收入水平，而又不至于挫伤人们的工作积极性，不至于降低效率，必须重视意识形态领域内的措施。

第二，劳动力缺乏流动性是不利于提高经济效率和增加收入的一个原因。我国当前劳动力缺乏流动性问题是一个相当复杂的问题。本文不准备讨论劳动力缺乏流动性的原因。这里所要考察的是：假定通过体制等方面的改革和调整，我国的劳动力流动状况有所改进了，那么就劳动力的流动而言，还存在一个重要的问题没有解决，即由于一部分人缺乏专业知识和技能，工作适应能力很差，在经济结构变动和技术不断进步的条件下，不能适应客观的需要而改变工作岗位。特别是，在经济增长过程中，即使农业生产率提高了，并且假定其他部门需要劳动力，但由于农业中大量劳动者工作适应能力差，仍然不能为其他部门所吸收。大批劳动力被继续束缚在农业中而未能得到充分利用，对社会来说是一笔相当大的效率损失。值得注意的是，在这种情况下，低效率、缺乏职业上的适应性同低收入水平三者是联系在一起的。要解决这个问题，同样

需要依靠教育事业的发展，即通过教育，使这些低收入者能在需要的时候变更个人的工作岗位，取得较多的收入，同时使他们的力量和才智在新的工作岗位上充分发挥出来，以减少社会的效率损失。

那么，教育事业在协调经济增长过程中收入分配与经济效益之间的关系方面能起到何种作用呢？对教育的投资是否能促进上述任务的解决呢？毫无疑问，教育能使受教育者在意识形态方面受到某种影响，从而有助于使他们形成正确的人生观、产生社会责任感、建立新的评价标准。这种影响显然是不能忽视的。关于这一点，通常并没有什么争议，关键在于政治思想教育的内容和教育的方法。我在这里准备探讨的则是经济学方面的问题。我认为以下这四个问题是值得重视的：

第一，由于教育能使受教育者提高文化技术水平，从而提高未来取得收入的能力，所以要提高低收入职工的收入水平，有效措施之一就是使他们受到一定的专业教育和训练。这是因为，如果认真贯彻按劳分配，那么有专业知识和技术水平较高的人的工资收入与缺乏专业知识和技术水平较低的人的工资收入的差额，在其他条件相同的情况下，应当被看成是受一定的教育给个人所带来的收益。多受教育能增加个人取得收入的能力这一点，既适用于正规教育，也适用于业余教育。比如说，通过一定的考试制度，只要达到某一级水平的，就应当承认其学历，给予与其学历相称的报酬。另一方面，从全国范围来考察，发展教育将能提高我国的劳动力质量，使受教育者的工作效率有所提高。特别是在现代科学技术条件下，经济增长中迫切需要高质量的劳动力，质量较低的劳动力人数再多也不能替代他们。如果不发展教育，不使低收入职工受到专业训练，低收入职工的收入总是少的，他们的劳动质量也总是低的，对经济增长是不利的。这就清楚地说明发展教育事业既有利于缩小社会收入分配差距，又能普遍提高效率、促进经济增长，从而提高职工平均收入水平。

第三，就一般情况而言，低收入职工的收入水平不仅影响他们之中的这一代人，而且将影响他们的下一代。这种情况在我国社会主义条件下也仍然存在。从理论上说，社会主义社会是一个没有职业世袭制、职业歧视和排他性的社会，但由于低收入职工收入少、家庭缺少学习的条件，他们的子女受教育的机会一般比较少，接受较高等教育的机会可能更少，于是他们的子女改变职业的机会也相对地少一些，并且相对地较少有可能到有较高收入的工作岗位去就业。这主要是经济原因所造成的。我认为应当承认这一点。如果把低收入家庭与有较高收入的家庭拿

来比较，假定第一代人的收入已经形成了差距，那么到了第二代，除了少数家庭有可能改变原来的收入状况而外，一般的情况则是收入差距的继续保持，甚至可能扩大。这是因为，就我国的实际状况而言，在四十多岁、五十多岁的一代人中，文化程度较低的职工家庭的子女较多，这些家庭的主妇参加工作的较少，从而家庭按人口平均的收入较低。这样，这些家庭将会遇到一个“受教育少—收入少……”的恶性循环。当然，用行政措施也许可以增加低收入家庭子女的受教育机会，例如规定各种不同文化程度的人的子女升入高等学校的比率。但这种做法只会带来相反的效果，因为在高等教育不发达、而封建主义影响还不可忽视的环境中，这种做法只会成为某些人谋取私利的手段，它对社会造成的恶果将会更大，使国民经济的效率损失、人才损失更加严重。因此，要打破低收入家庭所遇到的低收入和受教育少之间的恶性循环，而又不至于影响经济效率和挫伤一切有才能的人的学习积极性，应当从大力发展教育事业、扩大高等教育和职业教育着手，在整个教育事业发展的基础上提高低收入家庭子女的升学率，增加他们未来取得较多收入的能力，同时不致排斥一切有才能的人有深造和发挥才能的机会，不使社会的经济效率受到损失。

第四，从整个国民经济的观点来考察，低收入者的收入水平的提高不可能只依赖于低收入者本人或家庭的努力。如果我国经济仍像史无前例的十年那样动荡和遭受破坏，如果整个经济的增长速度十分缓慢，那么无论个人怎样努力增加自己的收入或提高本人和子女未来取得较多收入的能力，仍无助于改变低收入者收入低下这一社会现象。因此，经济增长过程中收入分配问题的有效解决途径，归根结底仍在于国民经济的发展和国民生产总值的增长，在于技术的不断创新、劳动生产率的不断提高。教育在协调经济增长过程中收入分配和经济效率之间关系方面的主要作用正在于此。因为正如前面一再提到的，劳动力质量的提高是我国今后经济增长的重要条件，而任何技术创新和劳动生产率的提高都可以看成是对教育的投资的累积性的成果。

还应当说明的是，虽然我在文中有时也用了“收入较高”的个人或家庭这样的字眼，但这仅仅是就国内收入分配格局而言的，它仅仅是在国内范围内具有相对的意义。如前所述，我国广大职工和干部的收入水平偏低。假定说各国间平均收入绝对数字的比较没有什么实际意义的话，那么无论如何，消费结构的比较（尤其是食物支出在家庭收入中所占比例的比较）、每小时工资购买力比较（尤其是每小时工资收入与耐用消

费品的交换比率的比较)还是很可以说明问题的。因此,在我国经济增长过程中,除了要注意提高低收入家庭的收入水平而外,还应当提高全体职工、干部、劳动者的收入水平,使每个家庭的消费结构、每小时收入与耐用消费品的交换比率发生变化。这显然是一个艰巨的任务,必须采取多方面的措施才能逐步实现。在这些措施之中,发展教育事业、增加对教育的投资将是具有重要意义的措施之一,因为只有在劳动力质量较高、劳动生产率增长速度较快的前提下,才能使人们的收入普遍提高、使消费品的生产成本和价格下降,才能改变每个家庭的消费结构,才能使人们每小时的收入交换到更多的消费品。并且,所有这些变化都是联系在一起、互相促进的。家庭消费结构普遍发生变化,职工收入普遍增加,就能使社会增加更多的工作岗位,使就业问题较易于解决。

四、在我国经济发展的现阶段,较大幅度增加教育经费固然与维持财政平衡有矛盾;但从长期看,对教育的投资将有助于在经济增长过程中增加财政收入

要发展教育事业,就需要增加教育经费。增加的教育经费来自何处?很自然地会遇到一个尖锐的问题:这样一来,将会加重国家的财政负担。所以,人们经常说,发展教育事业、增加教育经费与维持财政平衡有矛盾。

在我国经济发展的现阶段,财政拨款对于发展我国的教育事业当然是重要的,但这是不是筹集教育经费的惟一途径呢?当然不是。我认为,正如在解决我国当前就业问题、广开就业门路时,不能只着眼于国家的直接投资,而忽视社会集资一样,在对待我国当前教育事业的发展、广开就学门路时,也不能只着眼于财政拨款,而忽视社会集资。但在这里,我们先把教育经费的筹集问题撇在一边,暂不讨论。我们可以暂时假定财政拨款是当前发展我国教育事业的惟一的经费来源。

如果确是如此,那么对于教育经费增加会造成财政赤字的顾虑,不是没有经济理论根据的。假定财政收入为既定,或财政收入增长率较小,而为了发展教育,用于各种投资支出和教师工资支付的款项增长率较大,那么财政赤字将不可避免。财政赤字引起货币流通量增大,其结果将引起物价上涨。再者,如果财政收入为既定,而国防、行政等开支已经压缩到不能再压缩的地步,那么对教育拨款的增加将会直接减少对

物质生产部门的投资，结果可能引起物质生产部门的收益下降（或收益增长率减少）和成本增大（或成本下降率变慢）。这样，物质生产部门企业收益的下降或较慢增长对国家财政收入的影响是不利的，从而也会不利于维持财政平衡，最终将引起物价上涨。

然而从较长期来考虑，我们还可以看到另一种可能性。增加教育投资不仅有利于经济增长，而且有利于在经济增长过程中维持财政的平衡。在其他条件不变的前提下，就一个企业范围而言，劳动生产率的提高超过工资成本的提高，依靠劳动生产率增长而实现的商品生产量的扩大和原材料消耗的降低，是企业收益增加的源泉。就整个国民经济而言，劳动生产率的提高以及由此实现的企业收益的增加，是增加财政收入，从而有利于维持物价稳定的可靠途径。

只要从这个角度来进行分析，增加教育投资的作用就很清楚了，因为如前所述，劳动生产率的提高可以看成是教育事业的发展的结果。

关于这一点，可以从以下三个方面来作进一步的考虑。

第一，对教育的投资就其性质而言，应当被看成是一种生产性投资。对教育的投资同对物质生产部门的投资（如投资兴建一座工厂，添置一套设备）一样，其结果都将使国民收入增加。二者的区别主要在于，对物质生产部门的投资体现于物质产品数量的增加和质量的提高，对教育的投资体现于现有劳动者文化技术水平的提高，或达到一定规格和标准的劳动者人数的增加。前一种投资易于被察觉，后一种投资则很容易被忽视，以至于长期以来对教育的拨款被当成是非生产性的支出。因此，如果继续按照传统的看法，看不到教育对国民经济发展的促进作用，那么就会认为教育经费的增加是不利于财政平衡的。反之，如果把对教育的支出（人力投资）看成是生产性投资，看成是通过劳动者文化技术水平的提高，从而通过劳动生产率提高而促成经济增长的一种投资，那么，从长期看，教育经费的增加将有利于维持财政平衡。

第二，教育作为一种生产性投资，它的周期较长，甚至比某些基础结构（运输、动力系统等）的建设周期还要长一些。当然，在经济生活中，有时也可以看到对教育的投资能较快地收到经济效果，例如开办某种技术工人短训班等等。但一般说来，培养有一定文化技术水平的劳动者，特别是培养达到一定规格、标准的专业人员，所需要的时间较长。这种情况很容易引起一种误解，即认为发展教育是“远水解不了近渴”。其实，如果具有战略的眼光，把教育作为一种能持久地带来收益的生产

性投资，以及连续性地看待教育在经济增长中的作用，即不仅看到年复一年地对教育事业的拨款，而且更要看到过了一段时间之后，具有较高文化技术水平的劳动者人数年复一年地增多，我国的科学技术队伍年复一年地扩大，那么就会从根本上改变上述看法。正如对基础结构的投资一样，对教育投资的收获期较长，未来对国民经济的好处也是较大的。

第三，教育作为一项生产性投资，它的受益者是全社会。对教育投资的社会收益是指它给整个国民经济带来好处。因此，如果不从全社会和整个国民经济的角度来考察，而只着眼于某个局部地区、部门或生产单位，那就很容易忽略对教育投资的经济效果。当然，在某些场合，也可以察觉到对教育的投资给某个局部地区、部门或生产单位带来的好处，例如在本地区开办某种类型的学校，或为本部门或本生产单位培训某种技工，等等。但这是次要的。对教育投资的全社会收益要比它给个别地区、部门或生产单位带来的直接利益大得多。这一方面反映于受过一定训练和教育的劳动者通过工作岗位的变换和工作地区的转移，将分布于国民经济各个部门和各个地区，另一方面，更重要地反映于全民族科学文化水平的提高和新的发明创造的涌现。任何发明创造都是长期对教育的投资的累积的成果，它属于整个社会。社会因这些发明创造而提高了劳动生产率，推进了经济增长，改善了一般劳动者的生活条件和劳动条件，扩大了就业机会，增加了平均每人的国民收入等等。这些都是社会的收益。总之，只要把着眼点从个别地区、部门和生产单位的收益转到全社会的收益，那就不会仅仅根据本地区、部门、生产部门用于教育方面的支出来判断这种投资的实际经济效果，也就不会用局部的教育投资收益大小来判断对教育投资的有利性了。由此可见，虽然在经济增长过程中因增加教育经费而有可能暂时扩大政府的财政支出或减少个别地区的收入，但从长期看，从整体看，对教育的投资是提高劳动生产率的重要途径，是促进一国国民收入和财政收入有保证地、持久地增长的有效方式。

发展教育从长期来说有利于维持财政平衡这一点，可能不会遭到人们的非议了。那么，我们究竟应当怎样看待短期内增加教育经费与维持财政平衡之间的矛盾呢？现在让我们回到本节开始部分进行分析时所作的两个假定上。

第一个假定是：财政拨款是当前发展我国教育事业的惟一的经费来源。实际上，不必把财政拨款当成教育经费的惟一来源，社会集资的潜力很大，这主要以政策的制定和贯彻为转移。只要我们实行容许社会办

学、群众办学，甚至个人办学的政策，就可以在教育方面大大节省国家的开支。社会办学、群众办学、集体所有制单位办学，是行之有效的好办法，这方面不乏典型的经验。至于个人办学，这有什么不好？有专长的医师、艺术家、会计师、翻译家等等，个人或联合带一些徒弟，传授知识和技能，对国家有利，对青年人也有利。个人办职业学校、文化补习学校，甚至专科学校，靠收学费来维持，替社会培养人才，不需要财政拨款，不也是利国利民的好事吗？与其让青年人闲着，上不了学，不如让他们进各类学校去学习。此外，勤工俭学、半工半读的途径也很多。那种强调“正规化”、“一个模式”的做法，结果如何呢？要么阻碍教育的发展，要么只好伸手向财政部门要经费，增加国家财政负担。

另一个假定是：假定财政收入为既定的，假定国防、行政等开支已经压缩到不能再压缩的地步，那么对教育拨款的增加将会减少对物质生产部门的投资，结果可能引起物质生产部门收益下降，不利于国家未来的财政收入。其实问题并不是如此简单。我们知道，对物质生产部门的投资只是总产值增长的一个条件，总产值增长的另一个条件是投资的经济效果的大小。如果能够提高物质生产部门投资的经济效果，让资金能周转得更快，让每一元投资能带来更大的产值，那么投资额不是不可以缩小的。长期以来，我们过分看重总产值增长的前一个条件，忽视后一个条件，似乎投资越多越好，积累率越高越好，投资经济效果却可以不计，结果浪费惊人。这方面的教训是很深刻的。为什么我们不能在既定的财政收入前提下，在加速资金周转、提高对物质生产部门的投资效果方面多做些文章呢？加速技术人员、管理人员的培养，恰恰是提高物质生产部门投资经济效果的有效途径。因此，只要我们设法提高投资的经济效果，那么在财政收入既定的条件下，为了发展教育而减少一些对物质生产部门的投资，既不至于影响总产值的增长，又不至于影响企业收益和国家未来的财政收入。

结束语

以上分别考察了对教育的投资在解决我国经济增长过程中的社会就业、国际收支、收入分配、长期财政平衡等方面所能够起到的积极作用。如果要使我国的经济稳定地、持续地增长，有计划地解决经济增长过程中出现的“结构性”就业问题和国际贸易中的优势减弱问题，协调收入分配和经济效益之间的关系，那就不能不加速发展教育事业，增加对

教育的投资。从世界各国经济增长的历史可以看到，某段时间内的经济增长并不是难以实现的，难以实现的是经济稳定地、持续地增长，以及在经济增长过程中使社会经济各个方面保持协调。

在资本主义制度下，由于资本主义基本矛盾和阶级对抗关系的存在和激化，失业、通货膨胀、国际收支逆差、收入分配失调与经济增长之间的矛盾纠缠在一起。因此，即使加速发展教育事业，增加对教育的投资，至多也只能暂时缓和一下矛盾，而无法使上述这些问题真正得到解决。在那里，教育在经济增长过程中能够起到的协调社会经济各个方面的作用是有限的。但即使如此，60年代以来西方资本主义国家的经济学家仍一再强调教育在经济增长中的作用，建议本国政府把人力投资政策和人力资源计划作为实现长期经济增长的重要措施之一。

社会主义制度是优越的。我国当前在经济方面出现的这些或那些问题，不是来自社会主义制度本身。在消灭生产资料资本主义私有制和贯彻“各尽所能，按劳分配”的基础上，我国经济增长过程中社会经济各方面的协调应当要比资本主义制度下容易得多。教育在这些方面所能起到的作用也肯定会比资本主义制度下大得多。但过去这些年，为什么实际上教育并未发挥这么大的作用呢？这是一个值得深思的问题。我想，除了长时期极“左”路线的干扰、林彪和“四人帮”的破坏以外，对社会主义经济建设缺少战略上的考虑，眼光过于短浅，对教育在长期经济增长中的作用认识不足，也是一个因素。在某些对教育的性质和作用缺乏认识的同志看来，教育是软任务，能挤一点就挤一点，能拖一拖就拖一拖。这种看法当然是错误的。因此，正如两年前我在写《技术教育和资本主义工业化》一文时的想法一样，我写这篇文章的目的仍是为了向国家的决策部门呼吁：必须重视教育，在动员社会集资广开就学门路的同时，较大幅度地增加国家对教育的投资，加速发展我国的教育事业。

（原载《北京大学学报（哲学社会科学版）》，1980年第6期）

The role of education in economic growth (1980)

In my speech "Technology education and capitalist industrialization: a study of the rise of technological power in Western Europe and America,"^[1] I dwelled on the relationship between education and economic growth in light of economic history. What I was driving at was that education is a major recourse for nations to groom technological personnel, and that only by putting a premium on education and the cultivation of talents can less developed nations boost their economic growth rates and catch up with and surpass the developed countries. As I put it in that speech, the role of education in economic growth has five aspects:

"First, education provides society with a supply of researchers and designers who can venture into the unknown, innovating in science, renovating and transforming productive technology. Without such contingents, the best a nation can do is to tag along after other nations, but in that way you cannot score major breakthroughs in science and technology.

"Second, education provides society with engineers and technicians who can master and apply advanced means of production. Without such technocrats, even if a nation has acquired sophisticated tools of production, it cannot put them to best use.

"Third, education brings forth production and technology managers well adapted to society's level of industrialization. Without teams of such managers, the production process can be prone to colossal waste in human, material and financial resources, making it impossible to benefit from the superiority of advanced productive technology.

"Fourth, education enhances society's scientific and cultural

attainment, and sets the stage for promoting new products and disseminating and upgrading knowledge in science and technology. At the same time, education also lays the groundwork for the future growth of a nation's technological prowess, and guarantees the supply of a constant stream of high-caliber researchers, engineers and managers, and skilled workers.

"Fifth, education enables society to preserve and disseminate its accumulation of scientific knowledge and productive experience free from barriers of time and space and national boundaries. It is through education that such accumulated knowledge and experience are spread from one nation to another and from one generation to another as humanity's shared assets."

I would like to go on with my observation of the relationship between education and economic growth on the basis of the speech I made and published two years ago. However, this paper has a different focus. While in my previous speech I looked into the major role education plays in expanding the economy and raising its growth rate, this paper underlines education's important role in ensuring economic stability and sustained growth, and in providing effective solutions to problems that have occurred or may occur in the process of economic growth. In other words, my previous speech was about economic growth *per se*, whereas this paper is a study of employment, balance of international payments, income distribution, financial balance and other issues occurring in the process of stabilizing and sustaining economic growth. Furthermore, while my previous speech proceeded from the perspective of the economic history of Western Europe and America, this paper takes China's socialist economy as its focus and background.

This paper is delivered in four sections dealing respectively with education's relationship with employment, balance of international payments, income distribution, and fiscal balance, so as to illustrate education's role in guaranteeing economic stability and sustained growth.

I. The "structural" nature of the employment problem can be solved by developing and restructuring education

Theoretically speaking, any nation can grow its economy either by expanding its workforce or by investing more in machines and equipment and improving workers' technical knowhow and skills. The adoption of labor-saving technology and equipment may help cut down the material production sector's demand for workers in the course of economic growth. Consequently, given a constant population growth rate, economic growth itself cannot ensure full employment. The number of jobs to be created through output increase is determined not only by the rate of production expansion, but also by which approaches are adopted for such expansion. If a country develops its economy not by hiring more workers but by adopting new technology and equipment and improving workers' cultural and technical proficiency, then the ability of its material production sector to absorb the workforce will be limited.

On the other hand, economic growth also entails a process of change in a nation's economic structure. The inexorable law of material production is that some old manufacturing industries decline or are phased out while new ones rise and grow. The ratio between material and nonmaterial production in the national economy is changing as well. It is an irrevocable trend in economic growth for some nonmaterial production industries to grow in strength along with their shares in the national economy. With the national economic structure changing constantly, those working in languishing or failed industries need to find new jobs elsewhere. The rising industries in material production, and particularly the burgeoning industries in nonmaterial production, often run short of workforce. Thus in the long term, the emergence and growth of new industries in both material and nonmaterial production are major reasons why a nation can increase employment amidst economic growth.

The changing economic structure of a nation implies changes in

both industrial and geo-economic structures. In China, underdeveloped regions may achieve a relatively higher economic growth rate, whereas developed regions may slow down, or grow at a relatively lower pace. Regions that either suffer a low growth rate or maintain a high growth rate mainly by spending more on technology and equipment will produce a glut of factory layoffs that will have to seek employment elsewhere, whereas regions with a high growth rate, those with a labor shortage in particular, are likely to accept the job-hunters.

These situations prove clearly that the employment problem confronting a country in the process of economic growth is mainly "structural." That is to say, the success or failure in tackling this problem hinges on whether the workforce structure – the makeup of workers of different trades, industries and locations in a region's total number of workers – is commensurate with local economic growth rates and economic structural changes, and whether the workforce itself can meet the technical needs of local economic growth. When the structure of a workforce does not match the local economic growth rate and the changing local economic structure, and when workers' technical proficiency level falls short of the needs of economic growth, unemployment will unavoidably exist alongside a surplus of unfilled job vacancies.

This paradoxical coexistence of unemployment and superfluous vacancies means that while people are looking frantically for jobs, many jobs are left unfilled. How is it that people lose jobs while the economy keeps growing? The answer is that if economic growth is achieved for the most part by raising labor productivity, while the population growth rate remains relatively high, those coming of employment age are likely to fail to land suitable jobs. Even if these people are a nonfactor, industries and regions with slow or stagnant growth lay off workers. This is particularly true of developing countries, where agriculture – known for its low labor productivity – often dominates the national economy. In the industrialization process, large numbers of villagers who have just quit farming may

find it hard to land jobs. Unemployment – concealed unemployment^[2] included – thus becomes unavoidable.

Why, then, are there vacancies that remain unoccupied? This is because, when the workforce structure does not tally with the prevailing economic growth rate and economic structure, the rising industries in both material and nonmaterial production cannot find what they want badly: skilled workers and competent engineers, technicians, researchers, and managers. The same labor shortage can also occur in established industries in material production that maintain growth by relying heavily on new technology and equipment, so much so that even workers on their payrolls cannot measure up to what such new technology and equipment require of them. Seemingly unwanted jobs may also occur in newly developed places where required workers are in short supply. This is an outstanding problem with developing countries, where, for historical reasons, skilled workers that can keep pace with industrialization are scarce.

Generally speaking, the number of the jobless can never match the number of jobs awaiting them in a national economy. The ratio between the two numbers differs with the changes and readjustments in a nation's economic growth rate and economic and workforce structure. However, even if the two numbers match each other, they cannot offset each other, because workers of different proficiency levels and fields of work are not interchangeable under modern production and technological conditions. In the long run, the coexistence of unemployment and unfilled job vacancies in a nation's economic growth is not temporary, but, most probably, perpetual. That is to say, job vacancies may disappear when long-time job-seekers have found their jobs, but will occur again when new layoffs arrive on the scene. Unemployment, concealed unemployment included, is a waste of human resources, while job vacancies left unfilled are a waste of material resources – for them to exist at the same time is not only detrimental to economic growth, but also holds back the adoption and popularization of new technology and

economic restructuring. The result is that the economy remains mired in low efficiency. Chronic joblessness can also be a major destabilizing factor for society.

In a nutshell, employment problems in a growing economy are attributable to the failure in reconciling the conflict between unemployment and unfilled job vacancies. Such is the "structural" nature of employment.

The employment problems confronting China are complicated. Some are universal to all economies, some are common to developing nations in economic development, but others are peculiarly China's own. These three categories of employment problems are intertwined. The universal ones stem from the fact that the increasing use of sophisticated machines and technological equipment has whittled down producers' need for workers, unskilled workers in particular. Those common to developing nations arise from the new job needs of large numbers of unskilled laborers that have just quit farming at the time of an agrarian society's transition to industrialization. The employment problems peculiarly of China's own are partly to be blamed on incompetent labor administration, but most of them are attributed to the lopsided economic development resulting from the ten-year chaos of the Cultural Revolution that considerably narrowed down people's job options. These problems were aggravated by the excessive population growth in the late 1950s and the early 1960s. Today, those born in those years are coming of age or will soon become eligible for jobs. If the employment problems for these people cannot be properly handled, both society and the economy will be in jeopardy. The situation is also complicated by a dire shortage of skilled workers and the low labor productivity of those in their jobs. The dilemma facing China today is that while many job-seeking youths are having trouble finding jobs, factories, too, find it hard to fill jobs with qualified workers. A nation's aggregate volume of labor resources are derived by multiplying the total number of workers with their average level of technical competency – the chief indicator of labor quality. In that sense, China's aggregate volume of labor

resources is by no means abundant because its workers' average skill proficiency is low despite their sheer numbers.

The solution to our nation's employment problems, in the final analysis, is to create a constant supply of new jobs to keep pace with economic growth. If we cannot create new jobs, the need for labor will shrink with the adoption of new technology, even if population growth is kept at a low level. How to create new jobs? This involves the diverse economic sectors and forms of public ownership under the socialist system, as well as such factors as economic administration, various types of technical innovation, and the ratios between sectors and economic growth rate. These issues, however, are beyond the scope of this study. The topic at hand is this: Supposing substantial numbers of new jobs are created by readjusting and revamping the ownership structure, the economic system and the ratios between economic sectors, and by riding the nation's robust economic growth, can the nation come to grips with its employment problems? Given the "structural" nature of employment in our country, we can assert categorically that the disparity between the structure of the workforce and that of the national economy will never be eradicated without corresponding development in education and without restructuring the education system. The dilemma between "people hunting for jobs" and "jobs seeking takers," too, will remain for a long time to come. The important role of education in tackling employment problems rests precisely on its ability to deliver the nation from that dilemma.

Developing education and spending more on it can help dovetail the workforce structure with a growing economy's need for workers at different technical levels and in different fields of work. To achieve that end, we have got to adapt our educational structure to the changing economic growth rate and structure, and act on the long-term need of economic growth to readjust the categories of schools and the setup of academic programs, and to variegate the schooling terms. Long years of observation reveal two options in this regard. In the first option, when existing and prospective job-seekers are not outnumbered by anticipated unfilled job vacancies, the main thrust of

our effort can be directed at further improving education and raising workforce quality, so that every worker that has been educated or trained can qualify for more demanding jobs, thereby enhancing labor productivity and further promoting the adoption of new technology. In this way, not only can the needs of economic growth be met, but the number of unfilled job vacancies can be curtailed as well. In the other option, when the total number of existing and prospective job-hunters outgrows the anticipated number of unfilled job vacancies, we can lay equal stress on improving and universalizing education, so that more high-caliber professionals can be cultivated for the national economy while legions of job-waiters are tooled with one kind of skill or another to qualify for suitable jobs. To achieve this end, apart from further restructuring the economy to increase job vacancies, attention should also be paid to developing secondary technical and vocational education so as to put more job-seekers through training. The school term for students can be lengthened so as to curtail the number of prospective job hunters and better prepare students culturally and technically for future economic growth needs. In other words, we would rather let our youngsters learn more knowledge and skill than keep them waiting for jobs when they are ill prepared in both skill and knowledge.

As things stand today, it is believed the second option is more workable for China for a long time to come. Thus, in education development and reform, we cannot go single-mindedly after improvement to the neglect of the role of education in tackling the "structural" employment problem.

We should also remember that education reform cannot be accomplished overnight. For one thing, economic growth itself demands that our schools supply large numbers of well-educated and skilled workers who measure up to its needs. Failing this, stable and sustainable economic growth will be out of the question. For another, the economy's ever-changing sectoral, regional and technological structures call for the adaptation of the education system. A certain level of national economic development is always consistent with a

certain structure of education, with the latter changing in sync with the former. This fact should be considered when mapping out long-term national human resource plans.

So much for my analysis of the "structural" employment issue. The employment problems facing China today are "structural" in the main, but they do not stop merely at being "structural." "Individual occupation selectivity" is another social employment issue for present-day China. When job openings are available, people can still choose to stay jobless. They do not lack the needed education and skill, but they make this choice out of occupational considerations. The causes of this employment problem are manifold, but education can still play a role in tackling it. This is because the mission of educators is not limited to teaching cultural knowledge and technical expertise. Character building and education in revolutionary values are essential to students in this country.

II. Investment in education as a prerequisite for developing a knowledge-intensive economy; the gradual increase of knowledge-intensive exports as a strategic measure to improve China's balance of international payments amidst economic growth

As to the patterns of technological innovation for developing nations in the modernization process, I have voiced my opinions in my article "On the roles of capital-intensive and labor-intensive economies in the modernization process of developing nations" (*World Economy*, issue No. 6, 1979). Because what I wanted to drive at in that article was that developing countries are not going anywhere if they choose to develop a capital-intensive economy more than anything else, I made no mention of the differences between skilled and unskilled labor and of the developmental trends of a labor-intensive economy. In this study, however, to explain why investment in education is a boon to stable and sustained economic growth, I find it necessary to look further into the patterns of technological innovation, or, to be

specific, the role a knowledge-intensive economy can play in economic growth.

Theoretically speaking, a nation out to seek economic growth must boost its financial savings and raise funds for investment purposes. If the supply of funds is in shortage at home, something can be done to procure foreign funds under appropriate credit conditions and in light of the situation of the world capital market. The plus side of the use of foreign capital is that it helps overcome immediate foreign exchange and capital shortfalls and brings in advanced technology from other lands. However, in the long run, the commitment to repaying both principal and interest will eventually become a problem for the borrower. If the nation cannot increase its foreign exchange revenue from exports or other sources, balance of payments deficit may become a major hindrance to sustaining its economic growth.

Let us imagine a nation that is before or at the beginning of industrialization and has an abundant workforce, whose wages are low, and whose traditional exports of labor-intensive products have a competitive edge on the world market. Such a nation can use its foreign exchange earnings from exports to meet its domestic demand for technology and commodity imports and improve its balance of international payments. However, when industrialization reaches a certain stage, labor-intensive exports will gradually lose their edge and put the nation at a disadvantage for the following reasons:

First, a growing economy inevitably boosts national income gradually. While per capita national income rises on a yearly basis, worker wages go up as well. As a result, the gap in average wage between the nation and the developed industrial nations is likely to narrow down, thus diminishing the benefits of the "entry ticket" the nation can get from its low wages to the world market. What merits particular attention here is that industrialization is a common trend for all nations. When industrialization arrives at a certain stage in the said nation, other less developed nations will follow suit and strive to expand exports and absorb advanced foreign technology. These

"latecomers" are most probably in the possession of abundant workforce and even lower wages, and their exports of labor-intensive products are more competitive on the world market because they are made by workers with even lower pay. If the said nation goes on to depend on labor-intensive products for exports after it has increased workers' wages on the basis of economic growth and increased national income, it is bound to come across newer and tougher competitors on the world market, a situation that is obviously not in its favor.

Second, a considerable part of the products of a labor-intensive economy are primary ones. Economic growth is likely to boost the demand for primary products in nations pursuing industrialization. For instance, the demand for mineral products or farm and sideline produce tends to swell with the rise of new industries, urban development, development in communications and transport, and improvement in people's material and cultural lives. So the effort to sustain massive exports of primary products can be inhibited by economic growth and growing domestic demand for such products. If that happens, the nation's balance of international payments will be adversely affected.

Third, even though the output of labor-intensive products can grow in pace with a nation's economy, such a growth rate is generally low. Moreover, the effort to expand their supply is restrained by natural resources and productive technology. This is because living labor accounts for the lion's share of production costs, whereas materialized labor makes up a smaller portion of it. As a result, the growth of labor productivity is relatively slow. Supposing a nation in economic growth needs to import advanced technology constantly and repay the principal with interest on procured foreign capital, it must expand exports to meet that need. If that nation counts mainly on labor-intensive exports in return for foreign exchange earnings, it may not maintain its balance of international payments by expanding such exports because of their low growth rate and serious supply restraint. If the nation wants to expand its exports and maintain its balance of

international payments, it can only have one of the three options. Option One: to export more non-labor-intensive products to pick up the slack in the slow growing supply of labor-intensive products. Option Two: to slash domestic demand for labor-intensive products and curtail its growth rate to guarantee exports. Option Three: to transform production technology for labor-intensive products and increase their labor productivity, so as to increase output and expand supply. Option One calls for changing the nation's traditional dependence on labor-intensive products for export revenue. Option Two is predicated on cutting home demand and restraining domestic growth rate, that is, to expand exports at the expense of domestic demand and economic growth. Option Three will bring down labor intensity in the nation's labor-intensive economy and gradually deprive it of its competitive edge. No matter what option is chosen, it is not only difficult but also against the law of economic growth for a nation to keep counting on labor-intensive products for export revenue when industrialization reaches a certain stage of development.

It should also be noted that even if a nation can still benefit from labor-intensive exports at a certain stage of industrialization (when, for example, its wages are low enough, there are still no tough competitors on the international market scene, domestic demand for primary products has not grown strong enough to affect exports, or its labor-intensive economy is still robust enough to stabilize such exports), it gets a raw deal if it goes on selling labor-intensive products in return for non-labor-intensive imports. This is because the history and system of the world economy have determined that trade between non-labor-intensive and labor-intensive products on the international market is an unequal exchange of value, a situation that is not going to change anytime soon. This being the case, why should nations stick to labor-intensive products as the major source of export revenue after they have gone through a certain stage of industrialization? Why can't they replace labor-intensive products with non-labor-intensive ones that can definitely stand them in good stead in world trade?

As shown previously, observed from whatever perspectives, heavy dependence on labor-intensive exports should definitely be relinquished when industrialization reaches a certain stage even though it is a necessity at the beginning. On no account should the practice of letting labor-intensive products take up the lion's share of exports become a long-term state policy.

This poses a problem: Since it is both difficult and inappropriate for a nation to allow labor-intensive products to go on dominating its exports at a certain stage of industrialization, what is to be done with its balance of payments deficit in the course of economic growth? Supposing that nation's international revenue from nontrade items is fixed, what should it do to increase exports so that it can boost imports and repay the principal and interest of foreign debts?

The way out rests in developing a capital-intensive economy, exporting capital-intensive products, or replacing home-made capital-intensive products with similar imports. Feasible though these options are, they are by no means simple. Some developed industrial nations in the world economy today have turned international trade to their advantage through long years of painstaking maneuvering. This, plus the abundant capital in their hands, is of good service to them in exporting capital-intensive products. It is no mean task to compete with the capital-intensive products from these countries, let alone gain the upper hand in such a competition.

For this reason, developing nations that are latecomers to industrialization should spare no effort to develop and export something else after they arrive at a certain stage of industrialization, and that is the products of a knowledge-intensive economy.

The knowledge-intensive economy, observed from the perspective of labor quality and technological innovation, is actually a way of categorizing innovations, industries and products. As illustrated in the foregoing, the strength of a country's labor resources manifests itself in both the number and quality of laborers. Labor quality is not factored in when categorizing national economies into capital-intensive and labor-intensive types. Rather, economies are differentiated in this

regard merely in terms of the ratio between labor and capital goods inputs in production by natural physical units. By contrast, in calculating the labor input by natural physical units, every person (or work hour) represents an equal amount of labor input; in calculating the input of capital goods, only their values are taken into account – the degree of sophistication of technology embodied in the capital goods and the technical proficiency of the workers using such goods are not factored in. However, an analysis in light of labor quality shows, firstly, labor input is naturally divided into skilled and unskilled labor input, and secondly, the input of capital goods is also naturally divided into those that, on one hand, embody technological sophistication and are applied by skilled labor, and on the other hand, do not embody the sophistication of technology used and are operated by unskilled labor. Thus national economies can also be categorized into skilled-labor-intensive ones and unskilled-labor-intensive ones. In a skilled-labor-intensive economy, labor is skilled, and the input of capital goods embodies mature technology in the hands of skilled labor. By the same token, products can also be classified as either skilled-labor-intensive or unskilled-labor-intensive. Knowledge-intensive products are exactly skilled-labor-intensive products.

If a nation rich in workforce can not only keep upgrading workers' scientific and technical proficiency, imbue them with high labor productivity and enable them to innovate production technology, but can also employ skilled workers and use capital goods that embody the sophistication of technology in production, then its products will not customarily be labor-intensive but skilled-labor-intensive or knowledge-intensive. Such products are a crystallization of the latest science-and-technology achievements mastered by that nation's labor – workers, technicians, scientists and researchers included – and the advanced technical levels they have attained. They also epitomize the latest progress in production technology and the high labor productivity the nation has achieved. If that nation can export this kind of product in return for unskilled-labor-intensive imports, rather than sell labor-intensive products in exchange for capital-intensive products, it can still be competitive on the world

market even though its wages are rising with economic growth, and it can also open up one market after another to promote sales. Furthermore, because the nation has stopped exporting labor-intensive products, it can steer clear of the extant terms of exchange in international trade that are detrimental to labor-intensive products, thereby forestalling economic losses that might be incurred by the system of unequal exchange.

Technological innovation knows no bounds; nor will improvement of labor productivity stop at a certain level. A developing nation striving for modernization enjoys broad prospects in both economic growth and balance of international payments so long as it sets its skilled-labor-intensive economy on a track of ceaseless development.

Thus the important role of educational investment becomes apparent in coordinating economic growth and the balance of international payments. Without steady follow-up investment in education, we can never achieve universal and remarkable development in the workforce's technical and work proficiency, bring forth high-caliber scientists and researchers, and revamp productive technology without letup. For this reason, investment in education is the prerequisite for developing a skilled-labor-intensive or knowledge-intensive economy, and for expanding export and balancing international payments amidst economic growth.

To sum up, increasing investment in education is a strategic measure for improving the balance of international payments in the course of economic growth. Ours is a socialist nation. Where is our comparative strength in international trade? It lies in none other than the export of certain labor-intensive products. We have to make the most of this strength, and develop it unremittingly. However, we should never make it a long-term state policy for foreign trade, to say nothing of the inevitability that this strength of ours will most probably dwindle gradually with national economic growth. From a strategic point of view, we must heighten the skilled-labor intensity of every export commodity and the skilled-labor intensity of every

exporting company. Our nation will stay competitive on the world market for a long time to come if our exports of farm products are no longer customarily labor-intensive, but improved strains and quality products that epitomize advanced science and technology and the latest research and development achievements; if our exports of industrial goods are no longer run-of-the-mill products of the labor-intensive processing industry, but quality goods that reflect the distinctively innovated Chinese technology and nascent research results; and if what we sell to the world market are no longer ores, coal, crude oil or other mineral products but a good variety of quality products that are fashioned out of mineral raw materials and that mirror China's new achievements in science and technology. Then the more productive our industrial and agricultural departments are, the more competitive our country will be on the world market. All these things, when done in due course, will put our nation's workforce at an advantage not only quantitatively but also qualitatively. With our "knowledge" crystallized in produce and labor service, we will remain invincible in the world market.

III. To increase wages and improve economic efficiency is the nation's cardinal mission that can be attained – to a certain extent – through investing in education

The topic of this section is the relationship between income distribution and economic efficiency. In a capitalist economy, the trade-off between "equality" and efficiency has special connotations. Under capitalist ownership of capital goods, "equality" is based on recognizing the capitalist hired-labor system, whereas efficiency is an outcome of capitalist competition. Fundamentally speaking, there will never be true equality so long as the capitalist hired-labor system remains, but this is irrelevant to the theme of this study. Nevertheless, the relationship between income distribution and economic efficiency is a major issue that merits attention.

To care for people and cultivate them is the purpose of socialist production. To develop production is to improve people's material and cultural wellbeing, and bring forth workers' talent. However, to develop production, we have got to be particular about efficiency and motivate our workers. Theoretically speaking, the principle of distributing to each according to one's work, if carried out to the letter along with sound social welfare measures, is conducive to the development of production and enhancement of efficiency, as well as a guarantee for workers' pay raise provided development in production is ensured. However, workers' average income in this nation is low, and the influence of egalitarianism on income distribution very much alive. Both facts hamper economic growth, sap people's enthusiasm, and render workers' pay rise all the more difficult. The egalitarian pattern of income distribution that has kept wages at a low level for a long time cannot be eradicated without painstaking efforts.

To illustrate this issue, and to explain the role education can play in readjusting the relationship between income distribution and economic efficiency, it is necessary to begin this study with the income distribution theory.

Generally speaking, in economic growth there may be two income distribution patterns. One is to pay workers entirely according to the quantity and quality of work done. Under the other pattern, the state takes steps to regulate people's income by making allowances for low-income earners and limiting or deducting from the income of those highly paid. Proponents of the first pattern argue that paying people entirely according to the quantity and quality of work done represents a fair and square evaluation of the labor or service provided by every member of society, and that this is the only way to duly reward those who work hard and sanction those who malingering or dillydally, and to motivate people to work to the best of their ability and talent. Supporters of the second pattern hold that to reward people entirely according to the quantity and quality of work done is unfair because such quantity and quality are not entirely determined by whether

people work hard or not.

They argue that people differ in the ability to earn a living because there are broad differences in talent, intellectual attainment, physical strength, family background and education, and especially because people cannot choose the social and work environment and the capital goods they are supposed to use in production. For example, because some happen to be using highly productive machines while the others are not, someone may have worked hard, but the quantity and quality of work he does compare unfavorably with what is done by someone else who does not exert himself but has better talent and family background and works in a better environment. These factors embody the limits of the practice of rewarding people entirely according to the quantity and quality of work done, and are responsible for the fact that some people work harder than others but make less money while others do not work as hard but earn more. It thus stands to reason for the state to adopt regulating measures to give allowance to low-income people and limit the incomes of highly paid people.

Supporters of either income distribution pattern try to make their cases also by citing income distribution's beneficial effect on economic growth. Supporters of the first pattern believe that paying people entirely according to the quantity and quality of work done can inspire every worker to take the initiative into his hands and improve his expertise and skill, thereby promoting national economic growth. According to them, people's enthusiasm will be dampened, and their work efficiency reduced, if they are not paid according to the quantity and quality of work done, or if their incomes are evened up arbitrarily. Supporters of the second pattern believe that the first pattern tends to widen the income gap between members of society, thereby adversely affecting the mindset of some people, so that low-income people may become so frustrated and disappointed as to stifle their initiative, and hurt the national economy in turn.

The controversy surrounding these two income distribution patterns, however, makes little sense for capitalist economies. A

capitalist society cannot possibly pay workers according to the quantity and quality of work done, and its class nature determines that it cannot regulate the income of members of various classes in reasonable ways. The superior socialist system makes fair income distribution possible, as it can maximize economic growth by dispensing income on a rational footing. The superiority of socialism, however, is yet to be brought to full fruition in China. Egalitarianism in income distribution and low average worker income are established facts in this country for a variety of reasons. Ambiguity in production goals compels people to produce for production's sake year in, year out. The belief that the more egalitarian it is, the better income distribution becomes makes it impossible to distribute income reasonably and motivate workers with it. As a result, the economy grows at a snail's pace, labor productivity remains penuriously low, and workers' disposable incomes cannot be increased, so much so that social stability and unity are affected. The situation has reached a point where something has to be done about it. But what exactly is to be done? In my opinion, when we discuss how to regulate the relationship between income distribution and economic efficiency, we must proceed from our nation's established income distribution pattern, from the egalitarianism that has been prevalent across the land for years, and from the current average income of workers. History cannot be reversed. It won't do to conjure up an income distribution pattern based on the assumption of "what we would have done if we were living in the pre-liberation year of 1949." Important though it is for us to explore such a pattern, it cannot solve real-world problems because the established wage standards make it easy to raise wages and hard to reduce them, and because the established welfare benchmarks make it easy to raise welfare and hard to reduce it.

Given the status quo in our nation, we are not getting anywhere if we stop paying people according to the quantity and quality of work done and increasing people's average income, and allow egalitarianism to go unchecked. It will not work, either, if our government acts impetuously, turns a blind eye to the real practices of income distribution and the welfare steps that have been taken, and

carries to extremes the practice of paying people strictly according to the quantity and quality of work done. Considering the historical circumstances under which the current income distribution practice has come about, I believe the order of the day should be to gradually increase workers' pay in the process of developing production. Egalitarianism and low average worker income are the main causes behind low work efficiency; and low work efficiency is a major hindrance to economic growth. Our mission at hand is to root out egalitarianism and carry out the principle of distributing to each according to his work. That is to say, under the precondition of raising workers' actual income, we must do what we can to pay them in light of the quantity and quality of work done. If we keep doing this, workers' income is bound to grow considerably within a few years. However, a universal rise of average worker's pay may also result in the income of some people rising more quickly than others, thereby widening the income gap. If the growing income gap disgruntles some people, it will not be too late for the government to remedy the situation with regulatory steps, such as increasing the private income tax rate and levying an inheritance tax within the framework of a progressive tax system. In my opinion, we have got to foresee this potential trend and refrain from taking premature countermeasures. The problem will be taken care of sooner or later.

Coordination between income distribution and economic efficiency amidst economic growth involves not only the long-standing distribution pattern and the past and present wage and welfare systems, but also a number of ideological issues. For instance, such important ideological issues as workers' political awareness, social mores and values, and people's understanding of what "equality" and "happiness" really mean can affect, one way or another, people's enthusiasm, initiative and efficiency at work, and the balance between income distribution and economic efficiency. We must be careful about the countermeasures we are going to take against these ideological issues if we are to increase workers' pay without crippling their enthusiasm for work or hurting economic efficiency.

What, then, is the role of education in coordinating the relationship between income distribution and economic efficiency? Can education investment speed up the accomplishment of the abovementioned tasks? There is no doubt that education has a certain ideological impact on those being educated, thereby helping them foster a sound outlook on life, a sense of social responsibility and other values that should not be overlooked. It is also indisputable that this impact is not an issue. What is at issue is the content of such education and the approaches to it. In this study, however, I want to draw attention to the following four pertinent economic issues:

First, as education can improve people's money-making ability by raising their cultural and technical levels, an effective way to help low-income workers make more money is to put them through certain professional education or training. If the principle of distributing to each according to his work is followed in real earnest, a worker schooled in professional knowledge and technical expertise can earn more than those who lack such knowledge and expertise. Thus he is a beneficiary of the education he has received. Regular and spare-time education can both help individuals increase their private income. Therefore, those who have passed a certain level of academic or technical examinations should be issued a diploma or certificate and paid accordingly in the workplace. Developing education can upgrade the quality of the entire nation's workforce and boost the work efficiency of those who have been educated. This is particularly the case in this age of modern science and technology, where a growing economy badly needs quality workers who can never be replaced no matter how many low-quality workers there are. Low-income people will be stuck in the low income brackets, and their work quality will remain low if they do not receive professional training. It is thus clear that developing education helps bridge income disparity, increases efficiency, boosts the economy and increases workers' average income.

Second, the lack of labor mobility is detrimental to the effort to enhance economic efficiency and increase income. However, labor mobility is a complex issue that is beyond this study. What I want to

say right now is this: Supposing the workforce in our nation has become somewhat more mobile through institutional and other reforms and readjustments, this leaves another important problem to be addressed, that is, there are people who, for lack of professional knowledge and skills, are not able to adapt themselves to the changing economic structure and ever-improving technology by changing their jobs. In the course of economic growth, large numbers of villagers quit farming as a result of raised productivity in agriculture, but their poor adaptability to new careers makes it hard for them to be absorbed by other sectors in need of workforce. Thus large numbers of them have stuck in agriculture, where their labor cannot be fully utilized. Social efficiency suffers as a result. What merits particular attention is that, under these circumstances, low efficiency, lack of vocational adaptability, and low income are interrelated, and can also be addressed by relying on education development. Only through education can low-income people change their jobs when and where necessary, and get higher pay; only when their abilities and talents are brought into play in their new jobs can society reduce its loss in efficiency.

Third, generally speaking, low income not only affects its earners but also carries over to their younger generation. This is true everywhere, and socialist China is no exception. A socialist society is theoretically free from hereditary tenures, workplace discrimination and cliquishness, but owing to low incomes and the lack of adequate education facilities at home, children from low-income families have few schooling opportunities and even fewer opportunities to go to college. When they start work, they have fewer chances to get new jobs, let alone jobs with high pay. I think we should admit that their problem is caused by economic factors. A comparison of low-income families with high-income families shows that if income disparity has become a reality in the first generation, by the time of the second generation, a few low-income families may quit poverty, but most of them will remain poor or become even poorer. This is because, judging from the Chinese reality, among the generation of people in their forties and fifties, families with poor education generally have

more children than others. In these families, few housewives hold jobs, a factor which keeps their per-family income at a low level. Low income leads to low level of education, and low level of education leads to low income, and the vicious cycle goes on and on. It goes without saying that the government may take steps to provide children of low-income families with more educational opportunities. But this way of doing things can backfire, because in an environment where higher education is underdeveloped while the remnant influence of feudalism lingers, government steps can degenerate into some people's tools for selfish gains. When that happens, there will be serious consequences: The efficiency of the national economy will be eroded, and a drain of precious human resources will occur. To break the vicious cycle suffered by low-income families without affecting economic efficiency and dashing talented people's hope for education, we must develop education. We must expand higher education and vocational education dramatically to increase the rate of school enrolment of low-income families' children and prepare them for high-income jobs in the future. At the same time, we should never do anything that might erode society's economic efficiency or deprive gifted people of the opportunity to continue their education and bring their talent into full play.

Fourth, with the whole picture of the national economy in mind, low-income people or families cannot be asked to improve their income level on their own. If our economy were still under the kind of turmoil and sabotage that we saw during the decade-long Cultural Revolution, or if it grows very slowly, little could be done to address the low-income levels as a social problem, no matter how hard these people worked to raise their incomes or improve their and their children's future money-making ability. The effective solution to income distribution problems in the course of economic growth comes down to national economic development, GDP growth, consistent technological innovation, and ever-increasing labor productivity. This is precisely where the role of education comes into play in regulating the relationship between income distribution and economic efficiency amidst economic growth. As I have stressed earlier, improving labor

quality is a major guarantee for economic growth, while any achievements in innovating technology and raising labor productivity can be regarded as the accumulated results of investment in education.

Incidentally, I use the term "high-income" in this study as a reference to a certain group of individuals or families in the context of China's income distribution situation. It is relevant only to what happens in China, where the income levels of both workers and government functionaries are on the low side. This renders any comparison of China with the absolute statistics on average international income meaningless. Instead, it makes a lot more sense to compare the consumer-goods structure (the percentage of food expenses in a family's income in particular) and the hourly wage's purchasing power (the exchange ratio between hourly wage and durable consumption goods in particular). For this reason, while riding economic growth to raise the income level of low-income families, we should also work to improve the income of all workers and government employees, so that every family can see changes in their consumption composition and the exchange ratio between hourly income and durables. Of course this arduous task cannot be accomplished without a whole package of government steps. To develop education and increase funding for it is one such significant step. This is because only with a quality workforce and robustly growing labor productivity is it possible for everyone to make enough money and for production costs to drop enough to bring down the prices of consumer goods, change every family's consumption structure, and raise everyone's hourly income higher enough to afford more consumer goods. These changes are interconnected and mutually promoting. Universal changes in family consumption structure and universal increases in worker wages can yield more jobs and make it easier to solve employment problems.

IV. Despite the conflict of rising educational funding with fiscal balance at the present stage of economic

development, investing in education helps boost fiscal revenue amidst economic growth

Developing education calls for more funding. Where shall the money come from? The mere mention of this question arouses concern about an added burden on state treasury. That is why people are saying the need to develop education and increase the funding for it is in conflict with the effort to maintain fiscal balance.

At the present stage of China's economic development, government funding is crucial to education development. But is government the only source of funding for education? Of course not. To solve employment problems and create more jobs, we cannot count on direct government investment alone and turn a blind eye to nongovernmental fund-raising efforts. By the same token, we cannot set our eyes only on state coffers and relinquish social fund-raising efforts if we are to develop education and put more people through school. In this study, however, let us forget about raising funds for education from nongovernmental channels and suppose that government funding is the only financial resource for education in this country.

In that case, there is no lack of theoretical support for the concern that increasing educational funding will result in fiscal deficits. Supposing the financial revenue is fixed or its growth rate is rather low while the growth rate of educational investment and spending on teachers' salaries are high, then financial deficits become unavoidable. Deficits increase money supply, which in turn causes prices to rise. Furthermore, if fiscal revenue is fixed while expenditure for national defense, administration and other purposes is curtailed to a maximum, increasing educational funding is likely to cut directly into investment in material production. This may reduce the economic returns from material production (or its profit growth rate), and inflate production costs (or bring down the cost reduction rate). In both scenarios, fiscal revenue and balance will be adversely affected, which may eventually trigger price increases.

However, we may see another possibility if we look a bit farther. Increasing educational investment is beneficial to both economic growth and the effort to maintain fiscal balance in the course of economic growth. Other things being equal, the source of increasing net revenues for an enterprise lies in its success in managing labor productivity to outgrow wage costs, expanding commodity production and reducing consumption of raw materials induced by improved labor productivity. As far as the entire national economy is concerned, increasing labor productivity to boost enterprise revenues is a reliable way to raise fiscal revenues and stabilize prices.

In this light, the role of boosting educational investment speaks for itself. This is because, as I have said previously, increases in labor productivity can be regarded as an outcome of educational development.

This point of view can be further elaborated in three ways.

Firstly, insofar as its nature is concerned, education investment should be seen as a productive investment. Like investment in material production (such as building a factory or adding machinery and equipment), educational investment can also help increase the GDP. The difference between the two kinds of investment is that while investment in material production embodies itself in increasing the quantity and quality of material products, investment in education is reflected in workers' improved cultural and technical proficiency or in increasing the number of laborers who measure up to certain industrial or job requirements. The results of the former investment are plain for all to see, whereas the outcome of the latter can be easily overlooked, so much so that educational expenditure has for a long time been regarded as nonproductive. If the role of education in promoting national economic development is still perceived in that old light, the inevitable conclusion is that adding educational funding can only upset fiscal balance. If, on the contrary, spending on education – an investment in human capital – is deemed conducive to heightening the cultural and technical proficiency of the workforce, thereby raising labor productivity and speeding up economic growth,

then it is ultimately beneficial to fiscal balance.

Secondly, spending on education as a productive investment is characterized by a cycle that is longer than the construction cycle of the infrastructure, such as transportation and power supply. Of course there is no lack of cases in which educational spending brings quick economic returns, such as certain short-term training programs for technical workers. Generally speaking, however, it takes time to groom workers to a certain proficiency level in culture and technology, and it takes a much longer time to bring forth professionals of a certain caliber. Such facts give rise to the misunderstanding that education is like "distant water that cannot slake immediate thirst." As a matter of fact, that misunderstanding can be averted if people take a strategic point of view and regard education as a productive investment capable of yielding lasting economic returns, and if they can see the continuous role education can play in economic growth. To put it another way, if you are frustrated to see money being spent on education year in, year out, then you must be patient enough to wait until the number of laborers of a high cultural and technical caliber starts growing with each passing year. Just as education spending has about the same long harvesting cycle as infrastructure investment, so it can bring the same significant benefits to the national economy.

Thirdly, as a productive investment, education benefits society with its salubrious effect on the national economy as a whole. That effect can be easily neglected if we lose sight of the whole picture of society and the national economy, or if our vision is limited to a certain region, industry or firm. Of course, the direct effect of education investment can be felt in an individual region, industry or firm, especially in the case of certain types of local school or a factory's training school for technicians. This, however, is less important. Social gains from educational investment are a lot greater. Such gains are reflected, for one thing, in the fact that, by changing jobs or locations, educated workers will spread to all economic sectors and regions, and for another, in the improved scientific and cultural

attainments of the entire population and the emergence of a rich crop of new inventions and innovations. Every invention or innovation is the fruit of long-accumulated investment in education, and, therefore, belongs to the entire society. With these inventions and creations, society is able to raise labor productivity, promote economic growth, improve workers' living standards and work conditions, create more jobs, and increase per capita national income. All these are the benefits society can reap from education. In all, if we shift our point of departure from a single region, industry or firm to take in the panorama of society, our judgment of the actual economic returns of education will not be limited to what a region, industry or firm has spent on education, nor shall our evaluation of the beneficial effect of education investment be restrained by the size of a partial investment. Clearly, even though increasing education spending in the course of economic growth may temporarily expand fiscal expenditure or curtail the income of some localities, from a long term point of view and by taking the overall situation into account, such spending is paramount to raising labor productivity, and effective in sustaining growth in national income and fiscal revenue.

Now that the benefits of developing education to the maintenance of fiscal balance in the long run are established, how should we look at the conflict between short-run increases in education spending and the need for fiscal balance? Let us return to the two hypotheses I have set at the beginning of this section.

Hypothesis One: Fiscal appropriation is, at present, the only source of funding for education. As a matter of fact, it is unnecessary to regard fiscal appropriation as the only source of funding for education, because nongovernmental fund-raising efforts hold great potential in this regard. How such potential should be tapped depends on the making and enforcement of government policy. We can save a huge amount of government spending on education as long as our policy allows nongovernment entities or individuals to run schools. Schools can be run effectively by involving nongovernment entities or collectives, and there is no lack of success in this field. I see nothing

wrong with individuals running schools. Accomplished doctors, artists, accountants, translators and so on, are doing our nation and our youngsters a service by taking apprentices and teaching them knowledge or skills individually or by teamwork. These individuals are doing a lot of good to both the country and people when they run private vocational, technical or continuous education schools by tuition and cultivate talents for society without asking the government for a single penny. We would rather see young people in school than have them stay idle. As well as schools, an abundance of work-study programs are available for these people. To insist on running schools according to certain "rules" or "stereotypes" can do nothing but hold back development in education and put unwarranted burdens on the state treasury.

Hypothesis Two: Supposing fiscal revenue is fixed and defense and administrative expenditures have been pared down to a minimum, more spending on education can mean less investment in material production and result in fewer economic returns, to the jeopardy of fiscal revenue. Reality, however, has never been that simple. As we all know, investment in material production is just one condition for boosting aggregate production. There is at least another condition, and that is the economic returns from investment. If we can increase economic returns from investment in material production, speed up funds' turnover rate, and maximize the economic returns for every dollar spent, then we will see no reason why such investment cannot be downscaled. The former condition has been overestimated for a long time while the latter condition is overlooked, as if the more the investment is made, the higher the accumulation rate will become, with no consideration given to the economic returns of such investment. Astonishing waste is the inevitable result, and there is no lack of bitter lessons in this regard. Given a fixed fiscal revenue, why can't we do more to raise the turnover rate of funds and improve the efficiency of investment in material production? To speed up the training of technicians and managers is an effective way to enhance the economic returns of investment in material production. As long as we can find ways to raise the economic returns of such investment, it

will not hurt the aggregate output, companies' economic returns, or government revenue to develop education with money saved from it under a fixed fiscal revenue.

V. Conclusion

In this study I have looked into the positive role education investment can play in tackling problems in employment, international payments, income distribution, and long-term fiscal balance in the course of China's economic growth. We have no alternative but to speed up educational development by spending more money on it, if we are to ensure stable and sustained economic growth, tackle the nation's "structural" employment issue and weaknesses in international trade, and coordinate the relationship between income distribution and economic efficiency. The economic history of other nations indicates that it is easy to achieve temporary economic growth, but difficult to gain stable and sustained economic growth on the basis of coordinated development in all fields of socioeconomic development.

In the West, class antagonism and other fundamental conflicts inherent in capitalism are worsening; and unemployment, inflation, international payment deficits and unequal income distribution are entangled with the need for economic growth in an insoluble mess. Even if these capitalist nations can increase investment in education, the best they can accomplish is to ease the situation temporarily – there is no way they can find real solutions to their problems. Despite that fact, since the 1960s Western economists have been emphasizing the role of education in economic growth and urging their governments to take human capital investment policy and human resource planning as important measures to ensure long-term economic growth.

Socialism is a superior system. Problems of one kind or another do occur in our economy, but these problems are not inherent in the socialist system. On the basis of eliminating private ownership of capital goods under capitalism and carrying out the distribution policy

of "from each according to his ability, to each according to his work," it should be a great deal easier for our nation to coordinate diverse social and economic interests in the course of economic growth. Education definitely has a bigger role to play in this regard than under the capitalist system. How is it, then, that education has not played such a role in the past? This question merits careful thinking. In my opinion, apart from long years of interference from ultra-leftist ideology and the sabotage of the Lin Biao Clique and the Gang of Four, it also has a lot to do with our short-sightedness, our failure to consider socialist economic development from the viewpoint of national development strategy, and our lack of understanding of the role of education in long-term economic growth. To those who cannot see the nature and role of education in perspective, education is a "soft" task that can be laid aside or delayed at will. Something is amiss, however, with that line of thinking. Therefore, I wrote this article with the same intention as when I wrote my thesis "Technical education and capitalist industrialization: a study of the rise of technological power in Western Europe and America" two years ago. That is, to send this message to our government policymakers: You have got to put a premium on education! When you mobilize society to raise money and open up schooling opportunities for our workforce, please make sure you will increase fiscal spending on education by a wide margin and thereby accelerate the development of education in our nation.

论社会主义有效投资与合理投资 (1982)

什么是有效投资？可以简单地把它归结为能够迅速形成生产能力，增加社会总产品的供给，促进经济增长的投资。什么是合理投资？可以简单地把它归结为既能促进经济增长，又能维持物价基本稳定，提供较多就业机会，提高劳动者实际收入水平的投资。投资是否有效，以它是否增加社会总产品供给为准，其有效程度则以社会总产品增长率来衡量；投资是否合理，以它是否兼顾经济增长、物价基本稳定、提供较多的就业机会、提高劳动者实际收入水平这四项目标来确定。投资的合理程度，则以它在实现这四项目标方面所取得的实际结果作为评价的尺度。有效投资可能是合理投资，但也有可能不是合理投资。社会主义投资仅仅成为有效投资还不够，应当使它们成为合理投资，而且应使其合理程度尽可能增大。

一、投资是经济增长的第一推动力量

经济活动是一个动态的过程。前一期的生产、分配、交换和消费，制约着后一期的生产、分配、交换和消费。要使后一期的生产、分配、交换和消费在更大的规模上进行，前一期的国民收入中必须有一定的数额作为投资。投资的多少，影响着经济规模的变动程度。因此，在投资效果为既定时，一定的经济增长率总是以一定的投资率（即投资在国民收入中的比例）为前提的。

在任何经济增长中，投资都表现为第一推动力量。第一推动力量是指使停滞的经济得以增长的最初的推动力。如果没有这种最初的推动力，经济就不能摆脱停滞的状态。

在经济活动过程中，由于人口的增长、居民需要的变化、外部竞争条件的变化以及其他情况的变化，供给与需求之间，即生产和消费之间可能出现不协调，各个经济部门和各个经济区域之间也可能出现不协

调。这种不协调状态的加剧，将导致经济增长率下降，甚至导致零增长或负增长。为了改变这种不协调状态，保证经济增长的持续性，投资是不可缺少的。在这里，投资仍然表现为第一推动力量，它能促进经济结构的调整，使供给与需求相适应，使经济中各种比例关系相适应。

在经济活动过程中，由于生产技术的停滞、原有的生产设备或工艺的陈旧落后、对生产设备和原材料的利用不当，或由于生产中出现某些薄弱环节而未能及时予以改进，将会引起劳动生产率下降和亏损。这种情况如果迟迟未能改变，不仅经济无法增长，而且还会影响财政收入，因为企业的亏损必定导致财政收入的减少。要扭转劳动生产率下降和企业亏损的局面，除了从经营管理方面采取适当的措施以外，增加投资也是必要的。在这里，投资作为第一推动力量，将导致技术的创新、劳动生产率的提高、企业的赢利和财政收入的增加。

在所有这些场合，投资之所以成为第一推动力量，是因为投资的意义不在于投资本身所造成的需求，而在于投资在经济活动中所引起的一系列连锁反应。投资本身造成的需求毕竟是有限的，投资在经济活动中所引起的一系列连锁反应在国民经济中的作用要大得多。

增加投资能够增加收入，增加了的收入又能使投资增加，如此反复影响，就形成投资带动投资，收入带动收入的累积性过程。经济增长正是这样进行的；技术创新、劳动生产率增长正是这样实现的；企业的赢利、财政收入的增加也正是这样得到保证的。反之，没有最初的投资，也就不可能有后续的投资；没有最初的投资所带来的收入，也就不可能有此后的源源而来的收入。

因此，轻视或忽视投资作为第一推动力量的巨大作用，显然是不正确的。

当然，上述这一切是以经营管理状况既定为前提。经济中常常存在这样的情形：经营管理方面的不善使得劳动生产率处于较低的水平，并引起经济增长率低下和企业亏损，因此，可以不必增加投资，只要改善经营管理，就能使状况有所改变。

上述这一切也是以劳动者主动性、积极性既定为前提。经济中也常常存在这样的情形：劳动者缺乏主动性、积极性，或劳动者主动性、积极性未被调动和未能充分发挥，使得劳动生产率处于较低的水平，并引起经济增长率低下和企业亏损。因此，也可以不必增加投资，只要采取适当的措施，调动和充分发挥劳动者的主动性、积极性，就能使状况有

所改变。

二、有效投资和无效投资

投资的有效性在于它能促进经济增长，但并非任何投资都能起到促进经济增长的作用。投资可能是无效的。无效投资是指投资所引起的是零增长或负增长。

投资的有效性和无效性都有双重含义，即微观经济的含义和宏观经济的含义。就微观经济的含义而言，如果某项投资能使该投资单位的生产增长（即该投资单位的净产值增大），它就是有效的，否则就是无效的；就宏观经济的含义而言，如果某项投资能使国民经济增长（即国民收入增多），它就是有效的，否则就是无效的。由于任何投资从开始投资到生产增长和国民收入增加，总有一个过程，所以要考虑时间因素，即从开始投资到生产增长和国民收入增加之间的时间间隔的大小。各部门的具体情况不同，这种时间间隔的大小也不一样。但无论时间间隔大小，投资的有效性和无效性都是同经济增长（正增长、零增长或负增长）联系在一起的。

假定不考虑时间间隔的大小，那么，只有那些根本不能形成生产能力的、不能增加社会总产品的投资，才是无效投资。任何最终能形成生产能力和增加社会总产品的投资，都应被称为有效投资。这样，无效投资可能为数甚少，因为大多数投资，多多少少能在一定的时间间隔之后形成生产能力，使社会总产品有所增加，从而在经济增长中有某种程度的贡献。

如果仅仅从这样的角度来区分投资的有效性和无效性，那是远远不够的。必须考虑时间因素，即从开始投资到生产增长和国民收入增加之间的时间间隔的大小。本文在一开始就已规定了有效投资的定义，有效投资指能够迅速形成生产能力的投资。这就是说，迟迟未能形成生产能力的投资，不能称为有效投资。

这里需要讨论的是：为什么要在有效投资的定义中，加上“迅速”二字？如何理解“迅速”二字？如何根据对“迅速”的理解来区分投资的有效性和无效性？我们知道，任何投资都是在一定时期内对现有资金的占有，而投资所占有的现有资金是国民经济中新创造出来的价值的一部分。这笔现有资金在物质生产领域内可能有不同的用途，如果使用得

当，它们能使社会总产品增加，使经济增长。因此，它们意味着一定数量的“可能的”或“潜在的”社会总产品增量，意味着一定程度的“可能的”或“潜在的”经济增长率。如果把这笔现有资金用来进行某种能够迅速形成生产能力的投资，那么，“可能的”或“潜在的”社会总产品增量可以转化为现实的社会总产品增量。如果这笔现有资金闲置不用，即不用于任何投资，那么就得不到这种现实的社会总产品增量。把迅速形成生产能力的投资同闲置不用的资金相比，后者显然表示一种损失，即社会总产品的损失、经济增长率的损失。

现在，假定利用这笔资金来进行某种迟迟未能形成生产能力的投资，以至于它们要比通常情形下形成生产能力所需要的时间多出一段相当长的时间。在这一段多出的时间内，所占用的资金意味着它们并未发挥作用，也就是未能被用于增加社会总产品和促进经济增长，这就等于社会总产品的损失、经济增长率的损失。如果说这笔投资在经过很长的时间之后才形成生产能力，那么在它形成生产能力之前比通常情形下所多占的时间内，它应当被看成是无效投资。而且，甚至在它已经形成生产能力，并且已经开始提供社会总产品时，它还需要把前一阶段作为无效投资给国民经济造成的损失弥补起来。只有当这些损失被补偿后，这笔投资才能名副其实地被称作有效投资。

这就是在分析投资的有效性时，有必要对形成生产能力所需要的时间长短加以考察的理由。

那么，应当怎样理解“迅速形成生产能力”这一表述中的“迅速”二字呢？由于各个部门、各个具体投资项目的情况不同，所以只能用特定部门、特定投资项目形成生产能力的平均时间作为标准。凡是在平均时间以下的，都可以理解为“迅速”形成生产能力。越低于平均时间，则越“迅速”。凡是超过平均时间的，都可以理解为“迟迟未能形成生产能力”。越高高于平均时间，则越是“迟缓”。

按照这一标准来判断，投资的有效性和无效性的定义可以进一步明确地表述如下：

1. 根本不能形成生产能力，不能使社会总产品有所增加的投资，是无效投资。
2. 形成生产能力所需要的时间小于为形成该种生产能力所需要的平均时间的投资，是有效投资。

3. 形成生产能力所需要的时间大于为形成该种生产能力所需要的平均时间的投资，只有在它形成生产能力、提供社会总产品，并补偿了在超过形成该种生产能力所需要的平均时间的期间造成的损失之后，才成为有效投资。在这以前，它是无效投资。

三、合理投资和不合理投资

仅从促进经济增长这一个目标对投资进行分析，是不够的；投资作为经济增长的第一推动力量，它的积极作用既在于增加社会总产品，提高经济增长率，还在于对经济中的各种比例关系起协调作用，对经济发展的各个目标起协调作用。从这个意义上说，投资实际上是经济中的一种平衡力量，或者称之为平衡的推动力量。如果投资能够起到这种平衡的推动力量的作用，那么投资是合理的。

但投资也可能表现出与此恰恰相反的作用：使得经济中的各种比例关系不相适应，使得经济发展的各个目标失调，顾此失彼，此长彼消，以致投资不仅不成为经济中的一种平衡力量，反而成为破坏平衡或加剧不平衡的力量。这样的投资是不合理的。

如果投资是不合理的，那么就短期而言，只要它是有效的投资，社会总产品的增加仍是可能的。但就较长的时期而言，由于经济中各种比例关系的不相适应和经济发展的各个目标的失调，社会总产品很可能停止增长，甚至还会下降。这样，有效投资就变成无效投资了。

由此可见，从投资的合理性和不合理性的角度来对投资进行分析，比从投资的有效性和无效性的角度来分析更为重要。合理投资和不合理投资概念，是宏观投资理论中的范畴。在谈到投资的合理性和不合理性时，投资只具有宏观经济的含义。

投资的合理与否，要根据投资对于经济增长、物价基本稳定、提供较多就业机会、提高劳动者实际收入水平这四方面的作用来判断。只要其中有一个方面的情况比投资以前恶化了，就不能称为合理投资。假定其中有一个方面的情况比投资以前好转了，而其余三个方面的情况维持与投资以前相同的水平而没有恶化，那么就可以称为合理投资。假定有较多方面的情况比投资以前好转了，较少方面的情况维持与投资以前相同的水平而没有恶化，那么投资的合理程度是增大的。

因此，可以把合理投资的定义进一步明确地表述如下：

就投资对于经济增长、物价基本稳定、提供较多就业机会、提高劳动者实际收入水平这四方面的作用而言，投资以后，至少其中有一个方面的情况比过去好转，而没有一个方面的情况比过去恶化，那么这样的投资就是合理投资。

如果在上述四个方面中，投资以后，经济增长了，但其余三个方面仍维持原状，即既没有比过去好转，也没有比过去恶化，那么在这种情况下，有效投资恰好是合理投资，或者说，有效投资与合理投资是同一回事。如果希望投资既具有有效性，又具有合理性，那么投资以后，经济的增长和其余三个方面的维持原状，就是最低限度的要求。

按照最低限度的要求来使有效投资与合理投资统一起来，只是安排投资的一个出发点。应当使得上述四个方面的情况在投资以后都有所好转。投资的合理性越大，不仅投资的有效性越能得到保证，而且还能使有效投资持续不断地进行下去。道理是很清楚的：社会总产品没有增加，物价不能维持基本稳定，国民经济中不能产生较多的就业机会，劳动者实际收入水平下降，其结果将使整个国民经济状况恶化，持续的经济增长也将成为不可能。

正如在考察投资的有效性和无效性时要把时间因素考虑在内一样，在考察投资的合理性和不合理性时，也应当考虑时间因素。这是因为：只有在投资形成生产能力之后，它们才能起到平衡经济的作用，而从开始投资到形成生产能力，将会有一段时间间隔。这段时间间隔的大小，以各个部门和各项投资的特点而定。

这里需要注意的一个问题是：物价稳定、提供较多就业机会、提高劳动者实际收入这三方面的情况是有所不同的。在开始投资与投资形成生产能力之间，由于只有资金的投入而没有社会总产品的产出，所以货币流通量是增长的，这就会对物价的稳定发生消极的影响。如果在投资形成生产能力之后，由于投资的结果而引起的社会总产品增长率仍然小于货币流通量的增长率，那么它仍然会对物价的稳定发生消极的影响。这一点是不容忽视的。以提供就业机会来说，情况则与此不同。从开始投资之时起，投资就有可能提供一定的就业机会，因为这些投资项目本身是吸收劳动力的。投资形成生产能力后，它可能对就业发生十分不同的影响：或者它有可能扩大就业（包括这些投资项目本身增加的就业，也包括由此引起的其他部门和企业的就业的增加），或者它有可能引起就业的减少（包括由于投资引起的其他部门和企业的就业的减少，以及由于投资结束而引起的投资项目本身的就业的减少）。再以劳动者实际

收入水平而言，除了因投资而引起的物价变动和就业变动这两方面可能引起劳动者实际收入水平变动以外，更重要的是由于投资而引起的劳动生产率的变化，劳动者实际收入水平的变化必然要受到劳动生产率变化的制约。在投资形成生产能力之前，劳动生产率一般并不发生重要的变化，因此从投资开始到投资形成生产能力之间的这段时间内，劳动者实际收入的变动主要同投资引起的物价变动和就业变动有关；而在投资形成生产能力之后，劳动生产率的变化将对劳动者实际收入水平发生越来越有力的影响。

由此可见，投资的合理与否，固然要看投资形成生产能力之后对物价稳定、提供就业机会和提高劳动者实际收入水平等方面的影响如何，也要看开始投资之后到形成生产能力之间这段时间内，投资对物价稳定、提供就业机会和提高劳动者实际收入水平方面的影响。如果只注意到前一种影响而忽视后一种影响，那就有可能造成这种情形，即在投资形成生产能力之前，投资已经给国民经济的平衡带来消极的影响，甚至严重的消极影响，这样，即使投资以后形成了生产能力，但由于在这以前投资给国民经济平衡带来的消极影响过大，以至于妨碍了生产能力的发挥，或抵消了生产能力形成后可以在国民经济平衡方面发生的积极作用。

四、有效投资与合理投资之间的矛盾

前面已经指出，判断有效投资的标准和判断合理投资的标准是不一样的，有效投资在经济中的作用和合理投资在经济中的作用也有所不同。因此，有效投资不一定是合理投资，或者说，有效投资即使是一种合理投资，但也不一定是合理程度最大的即最合理的投资；另一方面，合理投资虽然必须是一种有效投资，但它不一定就是有效程度最大的（即最有效的）投资。有效投资与合理投资之间显然存在着矛盾。

例如，某一项投资或某一方面的投资，单纯从增加社会总产品供给的角度来看，它是有效投资，但它有可能在形成生产能力之前因投资额较大，占用资金的时间较长，从而影响货币流通量，对物价稳定发生不利的影响；或者，它有可能在形成生产能力之后，本身吸收的就业和由此引起的其他部门、企业的就业反而减少了；或者，即使它形成了生产能力，但由于物价变动和就业变动的影响，或由于劳动生产率的下降，从而导致劳动者实际收入水平降低，等等。所以，从兼顾多种目标和平

衡国民经济的角度来看，它却是不合理的投资，或合理程度较小的投资。

又如，某一项投资或某一方面的投资，从兼顾多种目标和平衡国民经济的角度来看，它是合理投资，因为它能使经济增长、物价基本稳定、提供较多就业机会、提高劳动者实际收入水平这四个方面的情况中至少有一方面的情况比过去好转，而没有任何一方面的情况比过去恶化。但是，正由于它要兼顾多种目标，因此它不一定是最能促进社会总产品增加的投资（比如说它不一定建成最新的自动化工厂），而可能是为了兼顾其他目标，并非购置最新设备，但仍能在某种程度上促进社会总产品增加的投资，从而它不是有效程度最大的（或最有效的）投资。

怎样对待有效投资与合理投资之间的这种矛盾呢？这个问题可以用规范方法来分析或用实证方法来分析。

用规范方法来分析，就是把投资所要兼顾的多种目标按照轻重缓急、先后次序进行排队，然后根据客观存在的实际条件，把通过投资所要解决的问题和可能解决的手段加以通盘考虑，再决定有效投资与合理投资究竟能在何种程度上协调一致。按照上面的定义，在投资所要解决的四个方面的问题中，只要其中至少有一个方面比过去好转，其余三个方面不比过去恶化，就是合理投资了。那么，应当首先让哪一个方面比过去好转呢？当然，这里涉及的是实现目标的客观可能性问题，所以要根据条件来分析。但这里也有一个价值判断问题，即认为什么任务更重要，什么任务较次要。用规范方法来分析，就是从价值判断的角度来评定各个目标的先后次序，然后再设法使合理投资得以实现。

用实证方法来分析，是按照既定的规范准则，或假定所有目标都同样重要，再拟定使有效投资和合理投资协调一致的途径。有效投资和合理投资之间矛盾的解决，不仅与投资的前提条件有关，而且与投资资金的筹集和运用方式有关。下面，准备从实证分析的角度，对投资的前提条件和投资资金的筹集、运用方式进行一些探讨。

五、有效投资与合理投资的资源与市场条件

无论是有效投资还是合理投资，它们的共同点在于：二者都必须在有充足的、可利用的经济资源条件下进行，二者都必须使投资形成生产能力之后所生产的产品有市场。这就是说，资源条件和市场条件是投资

有效性和投资合理性的共同前提。

经济资源包括物质资源和人力资源两大类。物质资源，也就是指生产资料，包括生产设备、原材料、燃料和动力、运输手段、仓储设备等。人力资源，包括非熟练劳动力和熟练劳动力，而熟练劳动力中，又包括技术、管理等方面的专业人员。这些资源条件是投资所不可缺少的。

以有效投资来说，既然投资的有效与否取决于它能否迅速形成生产能力，增加社会总产品的供给，所以不言而喻，如果缺乏生产资料 and 人力供给的保证，要迅速形成生产能力将是困难的，甚至是不可能的。否则，即使投资项目已经建成，但由于得不到充足的生产资料（包括原材料、燃料和动力、供修理和更换用的零部件等），或者得不到适当的劳动力，或者运输和仓储等条件跟不上生产的需要，那么仍然无法增加社会总产品的供给。从这一点来看，投资作为经济增长的第一推动力量，以充足的、可以利用的经济资源的存在为前提。假定客观上存在着闲置的生产资料，又有闲置的各种劳动力可以利用，投资之后迅速形成生产能力是没有困难的。假定客观上暂时没有现成的、足够的闲置生产资料和劳动力，但只要稍加调整就可以保证生产资料和劳动力，那么投资之后也能迅速形成生产能力。或者，即使生产资料和劳动力都供应不足，但如果有足够的外汇储备，可以及时地转向国外市场去取得所缺少的经济资源，那么投资之后仍然有可能迅速形成生产能力，只不过在这种场合，情况会变得复杂些，因为这涉及外贸平衡和国际收支平衡的问题了。假定以上所说的这些条件全都不具备，投资就不可能迅速形成生产能力，它就成为无效投资。

以合理投资来说，既然投资的合理与否取决于它能否兼顾经济增长、物价基本稳定、提供较多就业机会、提高劳动者实际收入水平等多种目标，那么，投资合理性的最低限度要求就是它必须具有有效性，即能够迅速形成生产能力。由于充足的经济资源的供给是迅速形成生产能力的必要条件，所以合理投资也必须具备充足的经济资源供给这一前提，否则就无法对多种目标起到兼顾的作用。

再分析投资的市场条件。市场条件是指投资以后所生产出来的产品要适应市场的需要，要有销路。无论这些产品是供生产消费还是供个人消费，都需要有买主愿意在一定价格条件下购买它们。假定找不到买主，生产只是为某种产量指标或产值指标而生产，生产出来的产品只不过在仓库中积压起来，那就无法实现投资对经济的积极作用。这一点对

合理投资来说，是完全可以理解的，因为投资之所以被称为合理的，正在于它能在增加社会总产品供给的同时，对维持物价基本稳定、增加就业机会和提高劳动者实际收入水平起作用，如果投资以后生产出来的产品没有销路，那么投资在所有这些方面本来可以起到的作用也就发挥不出来了。不仅如此，假定产品没有销路，投资对于物价和劳动者实际收入很可能发生消极的影响。这样的投资是不合理的投资。

那么，投资的市场条件这一前提对于有效投资来说，是不是也适用呢？也许会有这样一种看法：由于投资的有效与否取决于它能否迅速形成生产能力，能否增加社会总产品的供给，而迅速形成生产能力与否只是同资源条件有关，与市场条件没有直接的联系，所以，只要投资之后能生产出一定数量的产品，不管这些产品是否有销路，它们都可以被称为有效投资。按照这种看法，似乎只有那些根本不形成生产能力或未能迅速形成生产能力的投资才是无效投资，能迅速形成生产能力但产品与市场需要不相适应的投资则不算是无效投资。这种看法无疑是不正确的。

这种看法的错误在于：它仅仅从字面上理解生产能力的形成，而把生产能力同市场条件割裂开来。实际上，这是对生产能力的一种误解。我们知道，如果投资建成了一座工厂，但这座工厂建成后并不从事生产，不提供产品，那么仍然不等于具有实际生产能力，因为这只是一种名义生产能力；如果这座工厂建成后生产的产品不适合市场需要，只是积压在仓库内，那么这种情形至少同该工厂不从事生产一样，因为它同样没有为社会提供可供利用的产品；不仅如此，它甚至比该工厂不从事生产更坏，因为它消耗了其他工厂所生产出来的、本来可以安排其他用途的燃料、动力、原材料等。因此，投资以后形成的生产能力应当是实际生产能力，而不是名义生产能力，应当是为社会提供适应市场需要的产品，而不是生产出没有销路的产品。如果我们从这个意义上来理解有效投资和生产能力的形成，那么就必然把市场条件看作投资有效性的前提之一。

认为投资的有效与否与市场条件没有直接联系的想法，恰恰是混淆了实际生产能力与名义生产能力的区别，误把后者当作前者，而不了解投资的有效性在于它所形成的生产能力乃是实际生产能力，而并非名义生产能力。

六、有效投资与合理投资的赢利性问题

投资赢利性问题是一个重要的理论问题。即使投资以后生产出来的产品有销路，但如果它们只能以低于生产成本和利息费用的价格销售出去，那将会造成什么后果呢？

首先，对投资单位而言，这样的投资不仅不能回收上来，而且在投资以后，仍然需要追加一定的支出才能维持生产，否则它就连原来的生产规模也维持不下去了。这样的投资，即使形成了生产能力，并且形成的是产品有销路的实际生产能力，那么它只不过是一种对投资单位得不偿失的投资。一般说来，这样的投资是应当避免的。

然而，假定我们把视角由个别投资单位扩大到整个国民经济，那么我们对投资赢利性的问题可能会产生不同的看法。

国民经济是一个整体。国民经济各个部门有机地联系在一起。某些部门或某些企业，从它们本身的情况来分析，经济资源条件是具备的，产品也适应市场的需要，但由于某种原因，产品的价格只可能等于甚至低于生产成本和利息费用，从而是不赢利的。那么，是否应当在这些部门或企业进行投资呢？投资的赢利性是不是这些部门或企业的必不可少的投资前提呢？看来这个问题不可能简单地予以肯定或否定，因为这涉及投资的宏观经济效果的计量。

前面已经提到，有效投资有宏观经济的和微观经济的双重含义，合理投资则是宏观经济学范畴。从宏观经济的角度来对待投资，可能出现这样一种情况，即某些部门或某些企业的投资尽管其本身不具备赢利条件，但投资的结果却有助于其他部门或企业的生产有更大程度的增长，有助于国民经济的综合平衡，有助于协调各个目标之间的关系，那么这样的投资仍是十分必要的，这样的投资仍然可以称为有效投资和合理投资。

但投资的宏观经济效果也有可能成为替某些实际上无效的或不合理的投资进行辩护的借口，硬说这些投资项目不应当中止，否则就是缺乏宏观经济的考虑等等。甚至可以说，任何投资都能找到“合理的”根据，因为主张进行这种投资的人总可以提出“理由”，认为该项投资对国民经济如何如何重要，即使不赢利，也是不能取消的。的确，这是一个容易引起争论的问题。假定我们只承认投资的宏观经济效果的存在及其意义，而没有判断宏观经济意义上的投资有效性和投资合理性的标准，那么这个问题就无法解决。

在这种情况下，经济计量学方法是可以采用的。经济计量学方法本

身固然有局限性，但在一定的场合，在一定的前提与假定之下，对于宏观经济意义上的投资有效性和投资合理性的分析仍有用处。

首先应当重视投资的资源条件和市场条件。任何投资都需要有充足的生产资料和人力供给的保证，因为这是形成生产能力的前提。投资以后生产出来的产品，也需要与市场需求相适应，否则生产出来的产品只能堆积在仓库里，投资所形成的生产能力只不过是名义生产能力而已。在分析投资的资源条件和市场条件时，可以采取各种计量方法。一般说来，可以采取投入产出分析方法来说明资源供给状况和市场需求状况。

再看投资的赢利性条件。微观经济意义上的投资赢利性，可以采取成本—收益分析方法来计算。在这里，关系是比较简单的。在一定产量和价格条件下，考虑到生产成本和利息费用，可以了解到投资单位的赢利与亏损状况，然后根据生产的时间可以了解到投资的回收期限。投资回收期的长短通常是判断投资单位的微观经济效果的重要尺度。

至于从宏观经济角度来考察投资的赢利与否，问题要复杂得多。物质生产领域内投资的合理性以及宏观经济意义上的投资的有效性，不能离开国民经济中各种比例关系的考察，不能回避国民经济各个部门之间投入产出关系的分析。如果甲部门所生产出来的产品除了直接供应消费者以外，还为乙、丙、丁等部门的生产消费所必需，而乙、丙、丁等部门所生产出来的产品除了直接供应消费者而外，还为戊、己、庚、辛等部门的生产消费所必需，如此等等，那么，对甲部门追加一定的投资的效果就不仅仅从甲部门本身所增加的收入中反映出来，而且也从乙、丙、丁、戊、己、庚、辛等部门由此所增加的收入中反映出来。假定一定的收入量与一定的就业量之间存在某种比例关系，那么，对甲部门追加一定的投资的效果既反映于甲部门本身增加的就业量，也反映于其他各部门的就业量的变动。这样，如果采用反事实度量法，至少可以两种方案进行比较。一是不增加甲部门的投资时的各个部门的总收入、净收入、就业等变量的大小，二是增加对甲部门的一定量的投资后各个部门的总收入、净收入、就业等变量的变动率。两种方案进行对比的结果，可以了解到投资的宏观经济意义上的赢利性。假定某项投资本身不赢利，但确实能使各个部门的总收入、净收入、就业等有所增长，而增长的结果能使国民经济的收益大于该项投资本身不赢利给予国民经济造成的损失，那么该项投资仍是有利于国民经济的。该项投资实际上仍有一个投资回收期，只不过这种投资回收期反映于国民经济之中。反之，如果两个方案对比的结果，即使某项投资本身有所赢利，但却使各个部门

的总收入、净收入、就业等有所减少，或者，某项投资本身有亏损，但各个部门的总收入、净收入、就业等增加甚微，以致国民经济的收益仍小于该项投资本身亏损给予国民经济造成的损失，那么，该项投资是不利于国民经济的。如果在这种情况下仍坚持以注意宏观经济效果的名义来从事该项投资，那么这种投资就是不合理的投资和宏观经济意义上的无效投资。

七、投资资金的供给、财政与投资的关系

要使投资成为有效投资和合理投资，必须重视投资资金的供给。如果某项投资具备了资源条件和市场条件，产品又有销路，并且预计销售后还有赢利，但由于资金供给不足，以至于投资无法进行，或者使在建项目中途停顿，那样就不可能迅速形成生产能力，投资也不可能成为有效投资。不仅如此，由于已经投入但迟迟未能形成生产能力的资金是国民经济的一项损失，因此该项投资也只可能是一种不合理的投资。

另一方面，即使投资能迅速形成生产能力，但如果资金供给过度，投资也可能引起财政或货币流通方面的失调，从而对物价稳定发生不利的影响，这样，它同样不可能成为合理投资。

那么，怎样才能避免资金供给的不当，而使投资具有有效性和合理性呢？首先，让我们对投资与财政之间的关系进行一些探讨。

在社会主义条件下，增加投资所需要的资金的一个重要来源是财政拨款。一般情况下，国家的财政拨款直接影响着投资的数额和规模，影响着投资的有效程度。更重要的是，财政拨款影响着多种目标之间的关系，影响着投资的合理程度。

在协调经济增长与物价基本稳定这两个目标时，一个迫切的问题是如何防止对货币资金的需求量过大，也就是如何防止货币流通量的增长过快。通货膨胀之所以发生，其原因归根结底在于社会总产品的增长率小于货币流通量的增长率。而要防止和消除通货膨胀，或者依靠提高社会总产品的增长率，或者依靠降低货币流通量的增长率，或者双管齐下。

货币流通量之所以会有较大幅度的增长，主要是由财政赤字或银行信贷膨胀引起的。因此，在客观上已经出现较多的财政赤字时，特别是连年有财政赤字时，通过财政拨款方式来增加投资资金，是必须慎重

的，否则很可能使货币流通量进一步增大。

但是，由于投资是经济增长的第一推动力量，缺乏必要的投资无法使社会总产品增加，甚至也无法扭转社会总产品增长率小于货币流通量增长率的局面。单纯地紧缩投资，既不能保证消灭财政赤字，也不能保证不发生通货膨胀。这是因为：国民经济中各个部门是有机地联系在一起的，只有不断调整部门结构和产品结构，才能使国民经济的比例关系经常保持协调。但部门结构和产品结构的调整在大多数场合需要追加一定数量的投资。如果为了消灭财政赤字和防止通货膨胀而单纯采取紧缩投资的做法，只会使国民经济的比例不协调和进一步不协调，甚至会使某些本来可以增加产量和赢利的行业或企业因此转为亏损，而有助于财政状况的好转和通货膨胀的消失。

从增加社会总产品的角度来看，技术改造和设备更新是提高劳动生产率的物质条件，而技术改造和设备更新通常需要追加一定数量的投资。如果为了消灭财政赤字和防止通货膨胀而单纯采取紧缩投资的做法，那就很难从物质条件方面着手来提高劳动生产率和增加社会总产品。不仅如此，如果缺乏必要的投资，以致设备无法更新，在其他条件不变的情况下，劳动生产率将会下降，于是某些本来可以照常生产和赢利的行业或企业也会因此转为亏损，这样就会进一步不利于财政，不利于应付通货膨胀。

可见，不能简单地把投资增长看成是财政赤字或通货膨胀的起因。有效投资和合理投资不仅不会加剧财政赤字和通货膨胀，反而是用来消除财政赤字和通货膨胀的手段。只有那种无效的投资、不合理的投资，即迟迟未能形成生产能力的投资、产品无销路的投资，或者虽然产品有销路但却亏损累累的投资以及使国民经济各种比例关系不协调的投资，才应对财政赤字和通货膨胀负责。

因此，对财政部门来说，需要注意的是：必须紧缩或停止一切不具备资源条件和市场条件而又没有宏观经济效果的投资，而对于那些能够迅速形成生产能力、产品有销路、有赢利或有助于国民经济各部门总收入和净收入增长的投资，则不应当紧缩或停止。有效投资和合理投资是活跃、繁荣国民经济的推动力量，活跃、繁荣的国民经济则是财政的坚实的基础，是源源不断的财政收入的保证。其实，只要财政部门对待投资持有这种科学的态度，即不该投资的不予投资，有必要投资的给予投资，就有可能避免投资资金供给的不当。

八、投资资金筹集方式的选择

财政拨款是社会主义投资资金的重要来源，但绝不是惟一来源。在社会主义条件下，投资所需要的资金至少有四个国内来源，即财政拨款、社会集资、企业保留资金、银行信贷。银行信贷（包括短期、中期和长期信贷）可以作为不同用途的投资所需要的资金。它的优点在于能够督促投资单位加强经济核算，注意投资的微观经济效果。而银行通过对投资方案的审查和监督资金的使用，还能从增加宏观经济效果方面对投资起一定的作用。社会集资，除了指社会通过储蓄和购买债券方式聚集的资金以外，还包括群众为创办合作企业而筹集的资金、社会各界人士为发展国内建设事业而筹集的资金等。企业保留资金则指企业根据自主权原则而保留的一部分利润。企业可以按照生产的需要，利用这些资金来增添设备，进行技术改造，扩大生产规模，降低成本，增加产量。

这四个国内资金来源中，财政拨款也不是在任何情况下都成为主要的资金筹集方式。由于投资项目的不同和客观经济条件的不同，可以在这些筹集资金的方式中作出适当的选择。但无论采取哪一种筹集资金的方式，前面一再提到的投资的条件都是必须考虑的。任何情况下都应避免无效投资和不合理投资。任何时候都应力求增加投资的有效性和合理性。

很容易被人们遗忘的是，社会集资这种筹集资金的方式不仅与国家的投资之间有一种替代作用，而且还可能成为货币回笼的一种方式。社会集资与国家投资的替代作用表现于：本来社会上的某些投资项目是由财政拨款来承办的，现在改由社会集资来进行。但投资不只是货币资金的供给，物资的供给保证是不可缺少的。社会集资所聚集起来的货币资金，需要购买生产资料。为投资所需要的生产资料，基本上是国家的生产资料供应部门提供的。如果国家的生产资料供应部门所拥有的为该项投资所需要的生产资料不足，那么这表明该项投资的资源条件还不具备。根据前面在分析投资的条件时已经说明的，不具备充足生产资料供给的投资是无效投资和不合理投资，应当中止。于是此项以社会集资方式出现的投资未能实现，它并不会对国民经济造成不利的后果。如果国家的生产资料供应部门拥有为该项投资所需要的足够数量的生产资料，那么这表明该项投资的生产资料供给条件已经具备，投资可以进行。这时，国家的生产资料供应部门供应生产资料，收回社会上的货币资金，这对于国民经济显然是有利的。否则，如果由国家拨款代替社会集资，

虽然也能同样实现该项投资，但却起不到促进货币回笼的作用。

从另一个角度看，如果不进行社会集资，那么保留于社会各界手中的这些货币的出路何在呢？它们可能以储蓄方式存入银行，也可能购买消费品。假定它们存入银行，银行也会遇到如何运用它们的问题，在社会需要进行某项投资时，银行的信贷方式提供资金，其作用与社会集资进行该项投资是一样的。但假定这些货币不存入银行，而转向购买消费品，特别是购买供不应求的消费品，结果将会使市场供应更加紧张。因此，在投资条件已经具备而社会集资又有可能的时候，选择社会集资方式的投资往往是一种更为合理的投资。

（原载《财贸经济》，1982年第1期和第3期）

Effective and rational investment under socialism (1982)

What is effective investment? To put it simply, it is the kind of investment that works promptly in putting together production capacity, boosts the supply of aggregate social product, and stimulates economic growth. What is rational investment? In short, it is the kind of investment that maintains basic price stability, creates many job opportunities, and raises labor force income while spurring economic growth. Whether investment is effective or not is determined by whether it has increased aggregate social product; and the effectiveness of investment is measured by the growth rate of aggregate social product. In contrast, whether investment is rational or not is determined by whether it has met the following goals: (1) boosting the economy; (2) maintaining basic price stability; (3) creating more jobs; and (4) raising labor force income. And the rationality of investment is measured by its actual results in meeting these goals. Effective investment may or may not be rational investment. Under socialism, it is not enough for investment to be merely effective. No effort should be spared to turn effective investment into rational investment, and with the largest possible degree of rationality at that.

I. Investment — primary dynamo behind economic growth

Economic activity is a dynamic process in which one period of production, distribution, exchange and consumption circumscribes the next period. To allow production, distribution, exchange and consumption to take place on a larger scale in the next period, a certain amount of national income from the previous period must be

spent in investment. The amount of investment determines the degree of changes in economic scale. Therefore, for a given return on investment, economic growth rate is always predicated on a given rate of investment, i.e., the percentage of national income spent on investment.

Investment always manifests itself as the primary driving force behind economic growth. The term "primary driving force" refers to the initial impetus that can set a stagnant economy on the track of growth. Without this initial impetus, no economy can be delivered from stagnation.

The relationship between supply and demand or between production and consumption may be thrown off balance in economic activity. The same can happen between economic sectors and between economic regions. If this lack of coordination is allowed to deteriorate further, it can bring down the economic growth rate or, worse, lead to zero or negative growth. Investment is indispensable if this situation is to be remedied and sustained economic growth ensured. Here, investment is still the primary driving force in adjusting economic structures, coordinating supply and demand, and maintaining economic relations in equilibrium.

Stagnant development of productive technology, worn-out equipment and outdated technological processes, misuse of equipment and raw materials, or failure to eliminate weak production links in good time in the course of economic activity can erode workforce productivity or inflict financial losses. If these conditions are allowed to continue, they will not only hold back economic growth but also adversely affect government revenue for the obvious reason that financial losses in enterprises invariably diminish government revenue. To reverse shrinking workforce productivity and compensate for enterprise losses, it is necessary to increase investment while adopting necessary management countermeasures. This is precisely where investment can be used as the primary driving force to renovate production technology, raise workforce productivity, and boost corporate profits and government revenue.

The reason why investment becomes the primary driving force on these occasions is that the significance of investment does not lie in the demand for it, but in the chain reactions it causes in economic activity. The demand arising from investment is, after all, limited, but the chain reactions it causes in economic activity can play a much larger role in national economy.

More investment means higher income, and higher income can stimulate investment. If this virtuous cycle can be made to last, a cumulative process will result in which investment brings along more investment, and income brings about still more income. This is how economic growth happens, how technology is upgraded and labor productivity grows, and how growth in corporate profit and government revenue are realized. By the same token, without the initial investment, there will be no subsequent investment; and without the income yielded by the initial investment, a constant flow of income will be out of the question.

This being the case, it is clearly unwise to underestimate or overlook the tremendous role investment can play as the primary dynamo behind economic growth.

My above analysis is, of course, built upon a given condition of management. It is not uncommon that mismanagement results in low labor productivity, sluggish economic growth, and financial losses. For this reason, this situation can be changed to a certain extent simply by improving management, without increasing investment.

My analysis is also based upon the initiative and motivation of the workforce. It is not uncommon that the lack of initiative or motivation, or the failure to motivate the workers and give full scope to their initiative limits workforce productivity to such a low level as to reduce the economic growth rate and incur corporate losses. In that scenario, we can also change the situation not by investing more but by taking proper steps to motivate workers and put the initiative into their hands.

II. Effective and ineffective investment

The effectiveness of investment rests with its ability to fuel economic growth, but not all kinds of investment have such ability. Investment may also be ineffective. Ineffective investment refers to the kind of investment that yields zero or negative growth.

Investment effectiveness or ineffectiveness has dual implications: microeconomic and macroeconomic. In microeconomic terms, investment becomes effective if it can boost the investor's output (that is, increase the investor's net output value). Otherwise, it is ineffective. In macroeconomic terms, investment becomes effective if it causes the national economy to grow (that is, increases national income); failing this, it is ineffective. Because all investment must go through certain processes from the start of the action to the yield of increases in production and national income, the time factor must be considered, that is, the length of interval from the beginning of investment to the date when output begins to grow and national income begins to rise. That duration varies in length with the situation in different sectors. However, no matter how long it takes, the effectiveness or ineffectiveness of investment hinges on whether the economic growth it has brought about is positive, zero or negative.

If the time factor is not considered, investment is ruled ineffective only if it cannot enhance production capacity or contribute to aggregate social product. Any investment can be ruled effective if it enhances production capacity or increases aggregate social product. Thus the number of ineffective investment should be kept low, because most investment can yield production capacity and add to aggregate social product after a certain period of time, thereby contributing to economic growth one way or another.

However, it is far from enough to judge the effectiveness of investment or the lack of it this way. The time factor must be taken into account, that is, the length of time it takes from the onset of an investment action to the realization of output and national income increases. I have defined effective investment at the beginning of this article as something that is prompt in bringing about production capacity. In other words, no investment can be effective if it is overly

time-consuming.

You may wonder why my definition of effective investment should contain the word "prompt." In what light should we understand that word? How can we tell whether investment is effective or ineffective based on our understanding of that word? As we all know, investment refers to the occupation of a certain amount of available capital for a certain period of time, whereas the available capital occupied by investment is part of the newly created value in the national economy that may be put to other uses in material production. Used properly, it can raise aggregate social product and elevate economic growth. Therefore, investment entails a certain degree of "probable" or "potential" increase in aggregate social product and economic growth rate. If this amount of money used as investment is prompt in bringing about production capacity, this "probable" or "potential" increase can be converted into an actual increase in aggregate social product. If this amount of money is left idle, i.e., it is used in no investment, it will never yield actual increase in aggregate social product. If an amount of money that can be invested to yield production capacity promptly is left idle, it obviously means losses in aggregate social product and national economic growth rate.

Supposing this amount of money is used as investment but takes a longer time than usual to enhance production capacity, it does absolutely nothing to boost aggregate social product or economic growth during that extra inactive period of time. Because, in this regard, inactivity is synonymous with losses in both aggregate social product and economic growth. During that extra time this amount of money should be regarded as ineffective investment. Moreover, even after it has yielded production capacity and begun to contribute to aggregate social product, it must make up for the losses it has caused previously to the national economy. Only after that can it qualify as effective investment.

This is why, in assessing investment effectiveness, due consideration should be given to the time needed for investment to

put together production capacity.

How, then, should the word "prompt" in the wording "being prompt in yielding production capacity" be understood? Because of the differences in industries and investment projects, it is necessary to use the average time it takes for a specific industry or investment project to build production capacity as the benchmark. Investment that takes less than the average time to achieve the anticipated result can be regarded as being "prompt." The less time it takes to be effective, the "prompter" it becomes. Investment projects that take more than the average time to foster production capacity should be deemed "tardy in bringing about production capacity." The more time it takes in this process, the "tardier" it becomes.

With this benchmark, the effectiveness or ineffectiveness of investment can be defined as follows:

(1) Investment that cannot yield production capacity or contribute to aggregate social product is ineffective investment;

(2) Investment that takes less than the average time to yield production capacity is effective investment;

(3) Investment that takes more than the average time to yield production capacity can be deemed effective only after it has reaped production capacity, contributed to aggregate social product, and made up for the losses it incurred during the extra time it took to yield such a production capacity. Before it has met these goals it should be regarded as ineffective investment.

III. Rational and irrational investment

No study of investment is complete if it focuses only on whether it has furthered economic growth or not. As the primary driving force behind economic growth, the positive role of investment lies not just in boosting aggregate social product and economic growth rate, but also in coordinating economic relations and goals of development. In that sense, investment is actually a balancing force in an economy, or the driving force behind economic balance. Investment is deemed

rational when it acts as such a balancing force.

Investment, however, may play an opposite role, that is, to disrupt the balances of economic relations and goals of economic development. Instead of keeping the economy on an even keel, it can throw the economy off balance or aggravate economic disequilibrium. Such is one of the attributes of irrational investment.

If investment is irrational, it may still help increase aggregate social product in the short run when it is effective. But in the long run, what appears briefly as effective investment can disturb economic relations and goals of economic development, and result in a stagnation or downturn in aggregate social product. This is where effective investment becomes ineffective investment.

Thus it is more important to see whether investment is rational or not than to judge if it is effective or ineffective. The concept of rational and irrational investment belongs in macroeconomic investment theory. When we talk about rationality or irrationality of investment, we do it in the context of macroeconomics.

Whether investment is rational or not depends on what role it plays in (1) economic growth, (2) price stability, (3) job creation, and (4) increase in labor income. Investment is considered irrational if it performs badly in one of these four fields, but it can be regarded as rational if it contributes to one field while the other three fields remain roughly constant. Investment becomes more rational if more such fields have improved while fewer of them remain constant.

Thus the definition of rational investment can be put more specifically:

As far as the role of investment in the aforementioned four fields is concerned, investment is rational if it has improved one of these fields while the others show no sign of decline.

If economic growth has picked up after investment is made, and the other three fields remain intact, that is, they have neither improved nor deteriorated, this is a typical case of effective

investment also being rational, or to put it differently, effective investment and rational investment becoming the same thing. The minimum requirement for investment to be at once effective and rational is that it can at least promote economic growth while maintaining the status quo of the other three fields.

To combine effective investment with rational investment under that minimum requirement is just the starting point of arranging investment. We should try to improve all the four fields after investment is made. The more rational investment is, the more effective it becomes and the longer it can stay effective. The reason for this is clear: Without increasing aggregate social product, basic prices stability cannot be maintained, new job positions cannot be created in the national economy, and labor income will decline, and as a result, the national economy as a whole will deteriorate, and sustained economic growth becomes out of the question.

As much as the time factor should be taken into account when investment effectiveness or ineffectiveness is studied, the same should be done when investment rationality or irrationality is observed. This is because only by generating production capacity can investment play its role in coordinating economic relations, but it takes a period of time for that to happen. The length of this period is determined by the characteristics of the economic sector and the investment project in question.

What merits attention in this regard is that investment impacts price stability, the creation of jobs, and labor income in different ways. Before production capacity is generated, because there is only financial input and no output in aggregate social product, the amount of currency in circulation grows, which will have a negative impact on price stability. If, after production capacity is yielded, the growth rate of aggregate social product resulting from the investment is still lower than the growth rate of the amount of currency in circulation, it may still have a negative impact on price stability, a possibility that should not be overlooked. The situation, however, is different with the creation of new jobs. Investment may begin creating jobs immediately

after it is made, because the investment action itself can absorb some workers. However, after investment has brought about production capacity, it may either increase employment (including the jobs created by this investment itself and the jobs created by other industries or firms under its impact), or reduce employment (including fewer job opportunities in other industries or firms under the impact of this investment and fewer job opportunities directly caused by the termination of the investment project). With regard to real labor income, apart from the investment-induced changes in price level and employment that are likely to affect labor income, the investment-induced changes in labor productivity are a more important factor that inevitably affects changes in labor income. Before production capacity is realized, few significant changes will happen to labor productivity. Therefore, during the interval from the start of investment to the materialization of production capacity, changes in labor income are mainly related to changes in price level and employment, whereas after production capacity is created, changes in labor productivity will have an increasing impact on labor income.

Thus, to judge if investment is rational or not, not only its impact on price stability, job creation, and real labor income after it has brought about production capacity, but also its impact on these fields during the interval from the outset of the investment to the yield of production capacity should be observed. If the former impact is considered but the latter neglected, it is likely that the investment in question may have already had a negative impact, and a seriously negative impact at that, on the balance of national economy before it reaps production capacity. In that scenario, even if investment has generated new production capacity, its earlier negative impact on national economy may be so grave as to hold back the effectiveness of production capacity or offset its positive impact on balancing the national economy.

IV. Discrepancy between effective and rational investment

As I have pointed out in the foregoing, the criteria for judging effective investment are different from those for rational investment. The roles of effective investment and rational investment in the economy are different as well. Effective investment is not necessarily rational investment. Even if effective investment is also rational, it is not necessarily the most rational investment. On the other hand, although rational investment must also be effective, it may not be the most effective investment. The discrepancy between effective investment and rational investment is apparent.

For instance, a specific investment project or investment in one certain field may be effective because it can raise aggregate social product, but it may have a negative impact on price stability by taking up so much funding for so long as to affect the amount of currency in circulation before it creates production capacity. After creating production capacity, the investment in question may also diminish the job positions it has created and cause other industries and firms to reduce their job positions. Even if it has created production capacity, the investment can still cause real labor income to dip due to price changes, job market fluctuations and declining labor productivity. Given these possibilities, and by taking its multiple goals and the balance of national economy into consideration, effective investment is likely to be irrational or have just a small degree of rationality at best.

Observed from the perspective of multiple goals and the balance of national economy, a certain investment is rational because it has improved at least one of the four fields – economic growth, basic price stability, job creation, and labor income – while the other fields have shown no sign of deterioration. However, because rational investment has to attain multiple goals, its capacity to boost aggregate social product may be lower than maximal (for instance, if the investment is not put into a highly sophisticated automated factory), although it can still boost aggregate social product to a certain extent. In this case, it cannot be counted as the most effective investment.

How, then, should we deal with the discrepancy between effective

and rational investment? We may study the question from a normative or a positive approach.

A normative approach calls for realigning the goals of investment in the order of importance, urgency and priority of the multiple goals that the investment aims to attain. Then overall consideration should be given to the problems to be solved through this investment and the means of solving these problems, so as to find out to what extent effectiveness and rationality of this investment can be coordinated. According to the aforementioned definition, investment is rational if it has improved at least one of the four fields while the others show no sign of deterioration. The question now is which one of these four fields should be improved first. The answer must be based on a study of the actual situation to see which one of the four goals is most attainable. However, the answer also involves judgment of values, that is, which goal is more important and which goal is less important. To observe investment through normative analysis is to prioritize the four goals from judgment of values in order to make rational investment.

The positive approach follows established norms and rules, or is based on the assumption that all goals are equally important, to find ways to coordinate effective and rational investment. The solution to the discrepancy between effective and rational investment is related not only to the preconditions of a given investment but also to the methods of raising and operating the fund needed for this investment. The next chapter explores, from the viewpoint of positive study, the preconditions of investment and how to raise and operate the fund of investment.

V. Resource and marketability for effective and rational investment

The shared attributes of effective and rational investment are that, firstly, both can only take place where there are sufficient and usable economic resources, and secondly, there must be markets for the products of the production capacity they have created. In other

words, economic resources and marketability are prerequisites for investment to be at once effective and rational.

Economic resources fall into two categories: material and human. Material resources, that is, means of production, include production equipment, raw materials, fuels and power, means of transportation, and storage facilities. Human resources encompass unskilled and skilled labor force, the latter including technical and management professionals. These resource conditions are indispensable for every investment project.

Now that effectiveness of investment hinges on its speed in putting together production capacity and boosting aggregate social product, it is difficult, or even impossible, to turn investment promptly into production capacity in the absence of means of production and human resources. Even if an investment project has been completed, it still cannot increase aggregate social product if it has no sufficient supply of means of production – such as raw materials, fuels, power, and spare parts for maintenance and repair purposes – and adequate labor force, or if transportation, storage and other factors fail to meet production needs. In this regard, investment – the primary driving force behind economic growth – is based upon the adequacy of useful economic resources. Investment can put together production capacity rapidly where idle productive resources and a variety of idle workers are available. It can also quickly bring about production capacity where productive resources and labor force are unavailable but can be obtained through minor readjustments, or where economic resources are in short supply but there is an adequate foreign exchange reserve to be used to buy those deficient resources from foreign markets. However, in the latter scenario, things tend to be complicated because it involves the balance of foreign trade and of international payments. In the absence of all the abovementioned conditions, investment becomes ineffective because it cannot promptly create production capacity.

Given that the rationality of investment is determined by whether it can meet the four goals of economic growth, basic price stability,

job creation, and real labor income, effectiveness – that is, promptness in creating production capacity – becomes the minimum requirement for rational investment. Because adequate supply of economic resources is a prerequisite for the speedy creation of production capacity, such supply must also be guaranteed for rational investment. Otherwise it cannot meet all four goals at the same time.

The next consideration is the market conditions for investment, that is, the product salability of an investment project. Whether such a product is made for production or consumption purposes, there must be people willing to buy it at a certain price. If production is carried out only for the purpose of meeting certain quotas for output or output value and the product cannot be sold out and has to be piled up in warehouses, the investment will not be able to contribute to economic growth. This conclusion is understandable, because investment can be rational only if it contributes to aggregate social product, maintains basic price stability, creates new jobs, and increases real labor income. Those roles can never be realized if nobody wants to buy the product of an investment project. Furthermore, investment may have a negative impact on prices and labor income if its product cannot be sold out. Such investment is irrational.

Is product marketability also a prerequisite for effective investment? Because whether investment is effective or not is determined by whether it can bring about production capacity promptly and boost aggregate social product, people may argue that the effectiveness of investment is irrelevant to product marketability. They believe that investment is effective as long as it can produce a certain amount of products, regardless of product salability. In their eyes, investment becomes ineffective only if it cannot create production capacity or cannot do it fast enough – investment should not be deemed ineffective if it can bring about production capacity speedily even though its products are unwanted on the market. This idea, undoubtedly, is not correct.

This idea is wrong in that it only accepts the literal meaning of

production capacity, and severs production capacity from product marketability. It is, therefore, a misunderstanding of production capacity. We know that the production capacity of a factory built with an amount of investment is only nominal if it does not produce and supply products. If the factory's products cannot meet market demand and only belong in warehouses, this factory is a nonfactor at best because of its failure to supply society with usable products. We would rather this kind of factory did not do anything, for the fuel, power, raw materials and so on it consumes could have been used for meaningful purposes. Therefore, production capacity created by investment should be real, rather than nominal. It should supply society with marketable products instead of things that cannot be sold out. If the effectiveness of investment and the creation of production capacity are understood in that light, product marketability must be regarded as a precondition for effective investment.

The argument that the effectiveness of investment is unrelated to the marketability of its product exactly mistakes nominal production capacity for real production capacity. The effectiveness of investment rests in real, rather than nominal, production capacity it creates.

VI. Profitability of effective and rational investment

Investment profitability is an important theoretical issue. Even if the product of an investment project can be sold out, what will be the consequences if it can only be sold out at a lower price than its production and interest costs?

First of all, this kind of investment cannot be recouped in that case. Moreover, even after the investment project is completed, further expenses are needed to keep production going; otherwise even the original scale of production cannot be maintained. This kind of investment, even if it can bring about production capacity and its products are marketable, poses more losses than gains, and should never be allowed to happen.

Nevertheless, if we extend our vision from an individual investor

to the entire national economy, different opinions may occur on investment profitability.

The national economy is an integrated entity, in which all sectors are organically connected. Some sectors or firms may have the needed economic resources and their products can meet market demand. But, for one reason or another, their products are priced equal to or lower than their production costs and interest expenses, and therefore, they cannot generate a profit. Should investment be made in such a sector or firm? Is profitability an overriding condition for investment? It seems that neither question can be answered with a simple yes or no, because both involve how the macroeconomic effectiveness of investment should be measured.

As illustrated in the previous chapter, effective investment has both macroeconomic and microeconomic implications, while rational investment belongs in the macroeconomic realm. Observed from a macroeconomic point of view, some kinds of investment in certain sectors or firms are unlikely to make a profit, but can contribute to faster growth in other sectors or firms and to the balance of national economy and coordination among investment goals. This kind of investment is still necessary, and can be regarded as both effective and rational.

Defenders of investment that is at once ineffective and irrational in practice may also cite the macroeconomic effectiveness of investment to back up their argument that this kind of investment should not be cancelled. They may accuse those who want to do so of lacking macroeconomic farsightedness. They can always find a "reason" to justify any investment project they like, arguing that it is so important to the national economy that it cannot be ditched even if it is not making money. Indeed, this issue can easily become controversial, and can never be settled if we accept the existence and significance of the macroeconomic results of an investment project without setting benchmarks for its effectiveness and rationality in macroeconomic terms.

This is where econometrics comes in handy. Despite its

limitations, the methods of econometrics are still useful for analyzing investment effectiveness and rationality in macroeconomic terms on certain occasions and under certain premises and presumptions.

The resource and market conditions for investment should be considered in the first place. Investment, no matter what kind it is, must be guaranteed with an ample supply of means of production and human resources, both of which are prerequisites for production capacity. The products invested in should also meet market demand, otherwise they can only become part of warehouse stockpiles and their production capacity is nominal at best. Various econometric methods can be employed when we analyze the resource and market conditions for an investment scheme. Generally speaking, the input-output analysis can be employed to determine the situation regarding resource supply and market demand.

The conditions for investment profitability come next. Investment profitability in microeconomic terms can be computed with cost-benefit analysis. Relationships in this regard are relatively simple. By factoring in the given output and price conditions, as well as production costs and interest expenses, we can clarify whether an invested project is making or losing money. Then the deadline for recouping the investment – normally a major benchmark for judging the microeconomic effectiveness of an invested project – can be set with reference to the production cycle.

The situation is a lot more complex when it comes to judging if an investment project is making a profit or not from a macroeconomic perspective. Investment rationality in the field of material production and investment effectiveness in macroeconomic terms cannot be studied without comparing various relations in the national economy and dissecting the input-output relationship between sectors in the national economy. If the product of Sector A is not only supplied directly to consumers but also needed by Sectors B, C and D for their production, while the products of Sectors B, C and D are also both supplied directly to consumers and needed by Sectors E, F, G and H for production purposes, and if that cycle goes on and on, then the

results of follow-up investment in Sector A will be reflected not just in that sector's augmented income but also in the augmented incomes of Sectors B, C, D, E, F, G and H. Suppose there is a certain ratio between income and employment, then the results of follow-up investment in Sector A will be reflected not just in its increased number of jobs but also in the changes that have taken place in the number of jobs in the other sectors. Using counterfactual analysis, we can compare the results of the following two approaches: first, to study total income, net income, employment and other variables before Sector A was invested in; second, to study the changes in the variables such as total income, net income, and employment in the other sectors after Sector A was invested in. From this comparison we can get to know the degree of profitability of investment in macroeconomic terms. Suppose that a certain investment project does not make money for itself, but contributes to the growth in total income, net income and employment in other economic sectors, and the benefits to the national economy from the growth in these sectors outweigh the losses caused to the national economy by the investment project's failure in making a profit, then the investment can still be considered as a gain to the national economy. As a matter of fact, there is an investment-recouping period for the project, but such a period is reflected in the national economy. If, on the contrary, a comparison of the two approaches indicates that the investment does make a profit for itself but has inflicted losses in total income, net income and employment on other sectors, or that the investment is losing money while these sectors' increases in gross income, net income and employment are negligible so that the benefits the investment has yielded for the national economy are barely enough to offset the losses it has inflicted on the national economy, such an investment is deemed detrimental to the national economy. If allowed to continue under the excuse of cherishing its macroeconomic results, the said investment becomes irrational, and – in macroeconomic terms – ineffective as well.

VII. Relationship between investment fund supply,

public finance and investment

To make investment both effective and rational, due attention must be paid to the supply of funding. Suppose an investment project has favorable resource and market conditions and its product can be sold briskly enough to guarantee an after-sale profit, but it cannot continue or has to stop midway because of fund shortage, then it cannot put together production capacity in good time, and cannot become effective investment. Furthermore, this kind of investment is irrational because it is a loss to the national economy when the money spent fails to yield production capacity.

If, on the contrary, an investment scheme can yield production capacity promptly but spends too much to achieve the purpose, it may also disrupt public finance or money circulation, thereby exerting an adverse impact on price stability. Thus it can never become rational investment.

What can be done to avoid improper supply of funding and ensure effectiveness and rationality of investment? Let us begin answering this question by studying the relationship between investment and public finance.

Under socialism, fiscal appropriations are an important source of reinvestment. They generally have a direct impact on the volume and scale of investment and its effectiveness. More importantly, the impact of such appropriations also extends to the relationship between the multiple goals of investment and to investment rationality.

When we try to coordinate the relationship between economic growth and basic price stability, we face the urgent task of preventing the demand for monetary funds from running out of control, or, to put it another way, we must prevent the amount of currency in circulation from growing too fast. Inflation is eventually attributed to the failure of the growth in aggregate social product to outpace the growth in the amount of currency in circulation. Inflation can be prevented or erased only by boosting the growth rate of aggregate social product, reducing the growth rate of the amount of currency in circulation, or

both.

Fast growth in the amount of currency in circulation is mainly an outcome of fiscal deficit or bank credit expansion. Therefore, when there is a serious fiscal deficit, especially when such a deficit has lingered for several years, fiscal appropriation designed to increase investment funding must be used cautiously. Otherwise the amount of currency in circulation may be further increased.

However, insofar as investment is the primary driving force behind economic growth, the lack of sufficient investment can neither boost aggregate social product nor change the situation where aggregate social product grows slower than the amount of currency in circulation. Tightening up investment alone can neither eliminate fiscal deficit nor effectively keep inflation away from the door. This is because economic sectors are interlinked and only by constantly restructuring these sectors and their products can the proportional relationships in the national economy be coordinated. However, restructuring sectors and products calls for follow-up investment on most occasions. If investment is tightened up merely to eliminate deficits and forestall inflation, the national economy will fall further out of proportion and coordination. Worse, it can also land some industries or firms that may expand production and make a profit in financial loss, thereby doing a disservice to the effort to turn the fiscal situation around and eradicate inflation.

From the perspective of increasing aggregate social product, technical renovation and equipment upgrading are material conditions for labor productivity increases, but both call for follow-up investment. If investment is tightened up merely to wipe out deficits and forestall inflation, it is very difficult to boost labor productivity and aggregate social product by improving their material conditions. Furthermore, if other conditions remain unchanged but equipment cannot be upgraded for lack of necessary investment, workforce productivity will decline. As a result, the industries and firms that could have been producing and making a profit will lose money, and public finance and the effort to control inflation will be jeopardized as

well.

To ascribe the rise of financial deficits or inflation merely to investment growth is to oversimplify a complex matter. Effective and rational investment is actually an important means by which to eliminate deficits and inflation, rather than to aggravate them. It is ineffective or irrational investment – investment that drags on and fails to yield production capacity, investment in unmarketable products, investment that is made in marketable products but incurs heavy losses or distorts economic relations – that should be held responsible for deficits and inflation.

This being the case, what merits the attention of the fiscal department is that they should curtail or cancel all the investment projects that lack resource and market conditions or fail to yield macroeconomic returns. However, investment projects that yield production capacities promptly, produce marketable products, make profit, and are conducive to the growth of total and net income of various sectors in the national economy, should not be curtailed or axed. Effective and rational investment is a dynamo behind a robust and booming national economy, and a robust and booming national economy is the solid foundation of public finance and a guarantee for stable fiscal revenue. The financial department can avoid inappropriate supply of investment funding as long as it takes a scientific attitude toward investment, that is, to invest in what should be invested in and not to invest in what should not be invested in.

VIII. Choice of investment funding raising channels

Fiscal funding is a major financial source for investment, but certainly not the only source for it. Under socialism the money needed for investment purposes comes from at least four avenues: fiscal appropriations, nongovernmental fund-raisers, business reserve funds, and bank credits. Short-, medium- and long-term bank credits can be used as a source of money for all purposes of investment. Their strength lies in that they can urge investors to tighten up financial auditing and pay due attention to the microeconomic results of their

investment projects. The bank, by screening investment plans and monitoring the spending, plays a definite role in enhancing the macroeconomic results of investment. Apart from money raised by way of savings and bond purchases, the funds from nongovernmental sources also include the money procured from people of all walks of life to run cooperative firms and boost domestic development. Business reserve funds refer to the portion of profit that firms are allowed to retain on the principle of autonomy to buy equipment, upgrade technology, expand production, reduce costs, and increase output.

Of the four major sources of funding, fiscal funding is not always the principal one. People can make their choices according to investment needs and financial situation. No matter what source is chosen, however, the aforementioned investment conditions should always be kept in mind. On no account should ineffective and irrational investment be made. Whenever an investment project gets off the ground, no effort should be spared to maximize its effectiveness and rationality.

A point that can be easily forgotten is that nongovernmental fundraisers are not only a substitute for government investment but also a method to withdraw money from circulation. The role of such fundraisers in substituting for government investment comes through when investment projects originally to be funded with fiscal appropriation revert to social fund-raising. However, investment is not just a supply of money. Guaranteed material supply is indispensable, too. The money raised from nongovernmental channels needs to be spent on means of production. However, means of production needed for investment purposes are basically provided by the government department in charge of supplying them. If the government department does not possess sufficient means of production needed for an investment project, it means that the resource conditions for the project are not ripe. Just as I have said in my analysis of investment conditions, investment without adequate supply of means of production is ineffective and irrational and, therefore, should be

abrogated. By the same token, if a nongovernment-funded investment project fails to get off the ground, it will not adversely affect the national economy. If the government department has sufficient means of production for an investment project, it means that the material conditions are ripe and that the project in question can be undertaken. In this case, the government department contributes to the national economy by supplying the needed means of production and withdrawing money from circulation. Otherwise, if nongovernmental funding is replaced with fiscal funding, it cannot withdraw money from circulation even though it could also be used for investment purposes.

From another point of view, in the absence of fund-raisers, what is the best use for money held in nongovernmental hands? This kind of money may end up in banks as saving deposits, or be spent on consumer goods. If it ends up as saving deposits, banks will have to think about how to put the money to good use. When there is investment demand, supply of money by bank credit plays the same role as nongovernmental money-raisers. However, if the money does not become saving deposits but is spent on consumer goods, especially on those in short supply, market supply will be strained. For this reason, if investment conditions are suitable and money can be raised from nongovernmental sources, such investment projects are more rational than others.

— *Finance & Trade Economics*, issue Nos. 1 & 3, 1982

经济改革的基本思路 (1986)

我国经济体制改革已经进行好几年了，下一步经济体制改革应当怎样进行，我想谈一点个人的看法，一共七个问题，二十八点。其中有些看法可能引起争论。这是一件好事，没有争鸣，经济学就不可能繁荣。

一、所有制改革是改革的关键

(1) 经济改革的失败可能是由于价格改革的失败，但经济改革的成功并不取决于价格改革，而取决于所有制的改革，也就是企业体制的改革。这是因为：价格改革主要是为经济改革创造一个适宜于商品经济发展的环境，而所有制的改革或企业体制改革才真正涉及到利益、责任、刺激、动力问题。

(2) 所有制改革的目的是建立真正自负盈亏的全民所有制企业。“真正自负盈亏”主要是指：第一，企业必须负担亏损带来的一切后果；第二，盈亏必须是对称的。这里的“对称”，既对企业而言，也对企业负责人而言。所有制改革中最要紧的，就是真正使全民所有制企业自负盈亏，特别是要解决企业亏损后怎么办的问题。盈亏的对称性是指：盈利的好处归企业，亏损也应由企业承担，不能像现在这样，亏损归国家，这将成为改善企业经营的动力。有些集资兴办的企业之所以有活力，有动力，有压力，与盈亏的对称性有关。赚了归自己，亏也由自己负责，直到最后倾家荡产。目前在我国的的全民所有制经济中，企业亏了以后，负责人只是换个工作或受降级的行政处分，这是不管用的。盈亏必须对称。因此，经营不善的企业，该破产的就破产，破产后就清理。要有破产法，还要有社会保障的规定，对工人的就业等问题要认真处理。

(3) 集体所有制企业是可以实行股份制的。全民所有制企业体制改革的可行措施之一也是实行股份制、控股制，建立社会主义的公司财

团（企业财团）。

这里所说的股份制，主要不是指把股票卖给职工或个人所有（当然也可卖点给职工、个人），主要指公有者之间按股取利。公股持有者是多种多样的：国营企业财产评估以后，这一部分股权归国家，等于国家投资在这里。地方增加投资，是地方的股权。企业扩大再生产部分的投资，是企业的股权。其他全民所有制企业进来投资，是其他全民所有制企业的股权。这样，根据股权的多少，在董事会中有适当的安排。建立董事会后，由董事会来决定这个股份制企业的大政方针。这样，才能真正解决政企职责分开的问题。不然，政企分开的问题总是不好解决的。必须建立董事会，由股东大会成立董事会。股东都是公方。假定股票可以卖点给私人，那么比重也不会很大。实行控股权，也是全民所有制可以采取的措施。控股制是可行的：既然实行股份制，公司企业的股票可以让大家认购，就可以实行控股制；西方国家中某个大股东掌握公司不到51%的股票，有可能控制这个企业，使之成为子公司。我们也可以这样做。可以假定：实行控股制后，一个强有力的社会主义大企业，通过层层控股，成为社会主义的公司财团。这个公司财团将能改变企业行为，使企业从只注意短期经营，变为也注意长期经营，因为它具有战略眼光。这时，它能根据今后公司的长期发展，制定决策。作为一个公司财团，要有全盘考虑。比如说，西北的石油开发，可以由公司财团出面搞，它注意到若干年后西北地区石油工业将兴起，就会考虑用一部分利润到西北投资。它可以跨部门、跨地区经营，自己内部可以取得一个平均利润。这样可以大大加速西北的开发。我们将来对西部的开发，不能像现在这样零敲碎打，而可以由社会主义的公司财团来开发、经营。

（4）所有制改革要因行业、地区、企业规模而异。对于企业，我们可以把各个企业按其在国民经济中的重要性，按其所需资源的稀缺程度，分成若干行业。然后看看哪些行业应该发展？主要发展什么样的企业，是全民的、集体的，还是个体的？因地区而异，是指要按各个地区的特点来发展。因企业规模而异，是指企业要按照不同大小来分类。假定这样的话，全民所有制企业将保留在重要的行业内，保留在一些地区。它们是较大规模的企业。其他的企业，该租赁的租赁，该承包的承包，有些还可卖给集体或个体。这样，把大部分小企业摆脱，国家则把一些全民所有制的骨干企业保留下来，让它们发育为社会主义的公司财团，让它们具有竞争能力，让它们成为中国的跨国公司，打入国际市场。它们仍是全民所有制企业。实现这样一种设想将是我们改革成功的

关键。它将给企业带来动力、责任、刺激、利益。还有些中小企业要出卖股权，谁买？卖给谁？要看行业而定。集体、个人都可以买。这就可以形成一种新型的经济联合体：混合企业。这样，我们才能实行真正的多种所有制、多种经营形式。这绝不影响全民所有制的主导地位和公有制的统治地位。

二、我们需要一个比较完善的市场机制

（5）市场本身有一种自行调节的功能，它可以使需求和供给趋向平衡；它又有各种局限性，因此有必要进行政府调节。但绝不能反过来说：政府能够包办一切，只是由于目前力量不足，才需要由市场来拾遗补阙。我们认为，政府调节与市场调节之间的关系是这样的：首先肯定市场本身有一种机制，能够使经济自动调节，能使供求趋向平衡；但因为它有各种局限性，如资源的有限供给、经济信息系统不健全等等，所以需要政府调节。改革的基本思路是：社会主义经济首先是商品经济，然后才是有计划发展的商品经济。

（6）市场调节与政府调节是并存的、互补的，一方不能替代另一方。这就是二元机制。但二元机制绝不是板块结合。它的含义是：政府调节必须以市场调节作为出发点，它是为弥补市场调节的种种局限性而存在的。市场价格是多种多样的，只有在完全竞争的条件下才有自由价格；在其他条件下，将会形成不完全竞争的价格。而每一种市场都有自由价格与不完全竞争价格之分，计划价格必须以市场上的各种价格为依据。同时，计划价格与市场价格可以有上下出入。上下出入的原因和幅度，在于政府调节，但仍然必须以市场价格作为出发点。

（7）比较完善的市场机制不是靠引进的，而是自然发育的。过去，它之所以没有发育或发育不足，是由于缺乏发育的环境，缺乏社会主义商品经济的环境。只要发展社会主义商品经济，市场机制会自行趋于完善。我在这里使用了“比较完善”这四个字。市场不可能在现有条件下形成完全竞争的市场。应充分认识到我们的经济是资源供给有限的经济，而且还要考虑到政府调节的必要性。但我们可以使之“比较完善”。

（8）社会主义的市场体系应包括四大市场：一是商品市场。包括消费品市场、生产资料市场。房地产市场也应包括在内，因为住宅商品化是我们经济发展的必然趋势。二是资金市场。包括证券市场在内。企业实行股份制后，假定允许企业买卖股票，假定允许个人购买股票，就应

有一个证券市场来进行这样的交易。不然，这种证券将缺乏灵活性。但证券市场可以加以调节。或者存在专门的证券市场；在条件不成熟的情况下，也可以由银行代理发行股票、买卖股票，充当股票经纪人和实行股票的抵押、贴现。三是技术市场。是指科技成果有偿转让的市场。四是劳动力非商品化条件下的劳动力市场，简称为劳务市场。考虑到劳动力市场从来不是完全竞争的市场，因而它是分层次的、因地制宜的。由于人员的水平流动和垂直流动方面的局限性，它只可能逐渐趋向于完善。我们应该有一个统一的商品市场。这就是说，商品不管是消费品还是生产资料，可以在全国范围内流通。假定它不能流通，那仅仅是因为经济上的原因（如成本太高、收益太低），而绝不是由于经济以外的因素的干扰。资金市场也是指全国范围的资金市场。假定资金不能做到全国范围的融通，这仅仅是由于经济原因，而不是由于人为的、非经济因素的干扰。

三、提高政府部门的效率

（9）一个有高度效率的政府部门，表现为有效的经济决策、有效的政策执行、有效的经济监督。无法可依，有法不依，执法不严，以权代法，是政府无效率或低效率的标志。一个没有效率的政府部门，加上一个不完善的市场机制，那么我们的经济改革，即使方案再好，也不能实行。所以在改革的思路中，一个重要的方面是：必须提高政府部门的效率。

（10）经济调节比采取行政手段要求有更高的管理水平，间接控制比直接控制要求有更高的管理水平，指导性计划比指令性计划要求有更高的管理水平。应该认识到：改革以后，管理经济不是容易了，而是更难了。目前，我们经济管理干部的水平，大大落后于需要。所以要加速培养经济管理干部，提高干部素质。这是提高政府部门效率很重要的一个方面。

（11）与其是主观主义的、不科学的计划管理，不如不要计划管理；与其是无效率、瞎指挥的经济调节，不如不要经济调节。在这种情况下，不如索性让市场调节与商品经济来发挥作用。所以在二元机制中，与市场机制并存的那种政府调节，是指科学的、有高度效率的政府调节。二元机制不是简单地说市场机制与政府调节都要有。政府调节以具有科学性与高效率为前提。假定我们不要瞎指挥的政府调节，只要市

场调节，那么至少可以使经济在波动中增长。而瞎指挥的政府调节的加入，就有可能使经济停滞、倒退，1958年的事例就很典型。应充分认识到这一点：对政府调节要有区别，看它是不是科学的。科学的政府调节是好事，它可以弥补市场的不足；不科学的政府调节，会使市场调节原有的优越性消失掉。因为市场机制大体上可以使供求趋于平衡，虽然时间和过程要长一些，波动要大一点，但经济还可以增长。所以，把二元机制提到这样的一个高度来认识，我们的思想就打开了。

（12）为了提高政府部门的效率，行政改革势在必行。干部选拔、任命制度必须改革。对干部应实行“任期目标责任制”，以便加以考核。干部“只上不下”，当然不对。干部“能上能下”的提法，也不一定妥当。应该是干部“有上有下”，该上就上，该下就下。应该是：干部当得好的就上，当不好就下。在干部任免上，没有照顾的问题。只有这样，我们的政府部门才会有效率，才会加速体制改革的进程。

四、企业家精神与社会主义企业家

（13）中国需要一大批社会主义企业家，需要企业家精神。企业家应该有战略眼光，有创新与实干精神，有组织能力与经营管理能力。在经济改革中，要保护社会主义企业家，让他们充分施展才能。没有企业家，没有企业家精神，即使改革了所有制，建立了股份制的企业，建立了公司财团，建立了新型的公有制企业，经济仍然缺乏生机。如前所述，所有制改革是关键。现在的问题是：谁来主持这个新型的公有制企业？谁来施展才能，发挥企业的活力？那就是企业家。没有企业家，仅仅改革了所有制是不够的。所有制改革的内在的东西，就是企业家精神。我们在改革中要认识到企业家与企业家精神的重要性。

（14）社会主义企业家不是靠自上而下地指定产生的，也不是靠“温室”培养出来的。他们的命运与社会主义商品经济的发展联系在一起，与企业经济活动联系在一起。他们是在竞争的环境中拼搏出来的。我们要特别注意原来条件不好的企业，包括乡镇企业，那里是容易产生社会主义企业家的场所。要找社会主义的企业家，就应该到那些地方（中小企业、乡镇企业）去寻找。因为，那里条件差，能够从中拼杀出来的人，一定具有企业家精神。“社会主义企业家是环境逼出来的”，这句话对我们很有现实意义。这样产生的企业家，才能给企业带来竞争力。

(15) 要认识到企业家与企业家精神是商品经济的产物。社会主义商品经济越发展，企业家将越多，企业家精神也越能发挥影响。因此，社会主义商品经济的发展，能培养出越来越多的企业家。这将胜过创办多少期厂长训练班、经理培训班。没有商品经济的环境，是培养不出社会主义企业家的。同样，大学里的经济系，可以使学生增长一些基本经济知识，不一定能培养出企业家。

(16) 企业必须新陈代谢。办得不好的企业，该停产的停产，该关闭的关闭，该淘汰的淘汰，该清理的清理。社会主义经济中每年有百分之几的企业破产，不是坏事，而是好事。社会主义经济活动的大舞台，应该留给那些新兴的、有生命力的、有竞争能力的企业大显身手。市场竞争是一场旋风，它吹垮了那些落后的、没有效益的企业，保住了一批有竞争力的企业，但更重要的是：它清理了场地，让更多的企业能够生长。这就是创新，这样才能有社会主义的财团，才能有打入国际市场的社会主义跨国公司。这样才能使我们的经济既有压力，更有活力。

五、符合社会主义伦理原则的经济行为规范

(17) 社会不平等引起社会不安定，但社会不安定不一定来自社会不平等。收入分配的差距会增加效率，但效率不一定来自收入分配的差距。在一个客观上平等的社会中，假定人们的生活水平先上升，后下降，上升大，下降小，由于消费、收入、工资的不可逆性，也可造成社会的不安定。这是由于人们的心理造成的。另一种情况是：在一个客观上平等的社会中，有些人会自认为不平等。比如有人多劳多得，有人少劳少得，少劳少得的人不看自己少劳，只看少得，感觉自己吃亏了，这也会带来社会的不安定。如果收入分配的差距超过了一定限度，有可能影响效率，使一些人自暴自弃、消极怠工。所以在社会主义经济中必须处理好平等与效率的关系。我们所理解的平等，一是生产者成为生产资料的主人，二是机会的均等，三是现有生产力水平上的按劳分配。我们所理解的效率是在生产资料公有制基础上的效率，机会均等下的效率，符合按劳分配原则的效率。只有从这个角度来理解，我们才能妥善处理好平等与效率的关系。

(18) 从经济上看，市场调节虽然有局限性，但它毕竟能使经济在波动中增长。从社会协调方面看，市场调节的局限性却要大得多。市场本身不能实现社会发展的协调。我们不是为增长而增长，经济发展与社

会协调是统一的。我们之所以需要政府调节，是因为有效率的政府调节既表现在经济方面，也表现在社会方面。它表现在社会方面，是指在保证经济增长的前提下进行收入分配的调节。这种调节是另外一种意义的调节，与调节供求平衡不同，它是从社会意义上讲的。这种调节是符合社会主义的整个发展目标即社会经济发展目标的。因为，在经济改革中应注意到，累进制的所得税和调节税以及对低收入家庭生活的补助，一方面要有适当的限度，另一方面也是不可缺少的。它们既保证了经济增长，又保证了社会协调。我们整个改革要沿着这样一种方向前进。

（19）社会主义精神文明建设的重要内容之一是建立新的价值观念。比如说，什么是“公平”？什么是“就业”？怎样看待“一部分人先富起来”？这些问题值得我们重新思考。通过思考，我们可以明辨经济改革中的对与错、是与非，了解到什么是我们要争取的，什么是我们应该抛弃的。人们往往把不值得留恋的东西拼命地抱住不放，这就涉及到价值观念的转变。没有价值观念的转变，就不可能对经济改革作出正确的判断。

（20）传统东方文化的价值观念的核心是家族观念和小生产者的平均主义，近代西方文化的价值观念的核心是个人主义，二者是相冲突的。在传统东方文化基础上实行现代化的发展中国家，时时处处都会遇到两种价值观念的冲突。我们正在进行的是社会主义现代化，我们面临的问题不是在传统东方文化的价值观念和近代西方文化的价值观念之间作出选择，而是探索如何在两者之外，建立符合社会主义伦理原则的新价值观念。这是一个难题，但我们必须设法解决。从这种意义上说，价值观念的转变是比经济体制改革更深刻的一场革命。这不是一代人所能完成的，我们必须充分认识这个问题的艰巨性。

六、近期需要认真注意的问题

（21）扩大经济中的横向联系是近期改革的重要措施。只有扩大横向经济联系，才能使我们的商品市场趋于统一，使我们的资金市场逐步形成，才能打破条块分割。这一点非常重要。假定不搞企业的横向经济联系，不让企业之间在资金、人力、技术等方面互相协作交流，不让企业的产品打到对方的市场上去，那么，我们的市场机制是建立不了的，我们的条块分割是打不破的。这正是我们近期改革的重要内容。我们正在巩固已有的改革成果中前进，其中最重要的一条，就是扩大经济中的

横向联系，这是改革在继续进行的证明。

(22) 我国经济当前的首要问题仍然是基本建设投资过大，消费基金增长过快相形之下是次要的。这不是说消费基金不需要调节，而是说不能把这一点提到最突出的地位。要知道，我国消费者手中之所以有货币，是由于他们提供了物质产品和劳务。收入是与供给相联系的。如果对消费基金有过多的限制，往往在抑制需求的同时也抑制了供给，从而给将来的经济发展造成后遗症。经济调节中，既要调节需求，也要调节供给，绝不能在压低需求的同时把供给也压下去了。我们认为，消费早熟需要避免，但不能认为我国目前已进入早熟型消费阶段。我们应该汲取其他发展中国家的经验，防止早熟型消费的出现。早熟型消费有两个标志：一个是积累率过低，而我们的积累率保持在30%左右，是高水平的；另一个标志是稀缺生产资源中的大部分被新的消费方式所占用，比如石油，生活用油过多就会影响生产。我们没有出现这种情况，所以我们目前没有消费早熟。

(23) 平衡是一种分析方法，是分析的出发点，平衡本身不是目的。我们的目的是实现四个现代化。社会主义经济在运动过程中，总是围绕着平衡点摆动，在一定范围的摆动中前进。从这一点来讲，我们不是为平衡而平衡。假定经济上不去，财政平衡是无意义的，信贷平衡也是无意义的。我们要认识到，同样是平衡，有低水平与高水平之分。做到低水平平衡并不难，只需采取紧缩政策。如果我们不单纯抑制需求，而设法刺激供给，那是高水平的平衡。何况，经济总是在围绕着一个平衡点上下波动中不断前进的，“需求略大于供给”和“供给略大于需求”，都是基本平衡。按我国目前的情况看，“需求略大于供给”更具有现实性，而“供给略大于需求”是做不到的。所以我们当前必须学会如何适应这样的形势，学会在这样一种形势下进行经济建设。

(24) 政策要保持稳定性和连续性。要让人们感到放心，让从事经济改革的人感到放心。政策的多变只会促使政策效力递减。经济中的重大震荡，往往发生于企业和个人估计到政策将会有显著的变化而纷纷采取预防性措施的时候。因此，使企业和个人对经济环境产生一种稳定感和对政策保持足够的信任，不仅可以在相当大的程度上减轻经济改革中可能发生的震荡，而且有利于保持一个促进经济改革的良好社会环境。

七、我国经济前景的设想

(25) 全民所有制经济在国民经济中的主导地位，不仅不依据全民所有制企业数目在全国企业数目中的比重，甚至也不依据产值所占的比重，而是依据它是否掌握着作为国民经济命脉的部门，是否在若干种关键商品产量中占有较大的比重。从长远来看，全民所有制企业不一定很多，大量的企业可能是混合经济的或者是集体的。而且，即使是全民所有制企业，也不是我们现在所认识的、传统意义上的全民所有制企业，而是一种新型的、股份制的、实行控股制的、属于某一个企业财团的以全民所有制为主的企业。

(26) 从较长远角度来看，指令性计划不是不可以取消的，指导性计划可以成为我国惟一的计划形式。当然，这要看我们的条件是否已经成熟。条件成熟的主要标志是某些资源已不像现在这样稀缺了，供求紧张程度已有所缓和。此外，还要考虑到国家在某些方面是否具有足够的经济管理能力，这是因为：实行指导性计划比指令性计划更难。

(27) 在财政、金融、价格、工资四种调节手段中，今后，工资的调节下放到基层、企业；中央对经济的调节主要运用财政、金融两种手段，地方的调节也主要运用这两种手段。除非在十分必要的情况下，应尽量少采取价格调节手段。这就是我们长远的宏观经济调节政策。国家计委主要负责制定中长期计划。

(28) 将来中国经济面貌的最明显的变化，可能反映在农村经济面貌的变化上。土地向耕作能手集中，家庭承包的农场规模扩大，劳动生产率提高，多余的劳动力主要进入乡镇企业，小城镇将普遍兴起，大城市、小城镇和农村形成多层次的经济网络。小城镇将成为生活服务、文化教育、文娱和商业中心。中国人民生活水平提高的标志，不是看现期的货币收入，而是看家庭财产存量的不断增加。

(1986年4月25日在北京大学“五四”科学讨论会上的报告)

Basic thoughts on economic restructuring (1986)

Years have passed since economic restructuring came under way in this nation. What is to be done next? Here I would like to share my thoughts, which come in twenty-eight points, and involve seven issues altogether. Some of these ideas may be controversial, but I see controversy as a good thing. Without discussion and debate, there will be no economic prosperity.

I. Ownership reform holds the key to economic restructuring

(1) Economic restructuring may break down if price reform fails. The success of economic restructuring, however, hinges not on price reform, but on ownership reform, which entails revamping the corporate system. This is because price reform serves the main purpose of shaping an environment in favor of the growth of the market economy, but only ownership reform or corporate system reform can address such issues as interests, responsibility, motivation, and incentives.

(2) The purpose of ownership reform is to build state firms truly liable for their own gains and losses. Being "truly liable for their own gains and losses" means that, for one thing, firms should bear all the consequences of financial losses, and for another, gains and losses must be symmetrically treated not only for firms but also for their leaders. The most crucial task of ownership reform is to make state firms really accountable for their successes and failures, and, even more so, to answer the question of what is to be done with firms in the red. Symmetrical treatment of gains and losses means that firms should enjoy their profits while absorbing their losses rather than passing the ball to the state, which is exactly what firms are doing

today. Taking responsibility for their own losses will stimulate them to improve management. The reason why some nonstate firms can stay dynamic and motivated under pressure is because they can treat gains and losses symmetrically – meaning that they have all the economic gains to themselves while being totally liable to economic losses, bankruptcy included. As things stand in this nation, the best that can be done with a failing state firm is to demote its general manager or shift him to another post. This way of doing things cannot be sustained. Gains and losses must be treated on a balanced footing. Mismanaged firms should go bankrupt, and bankrupt firm should be liquidated. There should be both a bankruptcy law and a social security act, and issues such as reemployment for layoffs should be tackled in real earnest.

(3) Collective firms may adopt the shareholding system. State firms may also be transformed into shareholding companies, holding companies, or socialist enterprise consortia.

The shareholding system talked about here is not about selling stock shares to workers or other individuals (although of course, some of the shares can be sold to workers and other individuals), but about distributing interests among public owners according to the number of shares they hold. There can be a variety of public shareholders. After a state firm has its current assets evaluated, its net assets should be counted as state shares because they come from state investment. The investment added by a local government to a state firm becomes locally owned state shares, while the shares in the firm's possession come from its own investment. In addition, investment made by other state enterprises also becomes shares owned by these enterprises. The positions of the stockholders on the board of directors are arranged according to how many shares they hold, but it is the board of directors that decides the policies and principles for a shareholding firm. Only in this way can the difficult problem of detaching government administration from business management be effectively addressed. The board of directors is established through the shareholders' congress. In this case, all shareholders are public

owners. In such a structure, even if some shares are sold to individuals, they are unlikely to take up a large portion of the total stock. The holding company system is another option that works under public ownership. Once a state firm becomes a shareholding company, its shares can be put up for sale. In the West, a holder of less than 51% of the shares of a company can control it and turn it into his branch company. We can do the same. If, under the holding-company system, a powerful state company can turn itself into a socialist enterprise consortium by buying shares to control a number of companies, it can change the behavior of these companies, and shift their focus from short-run business to long-term operations with a broad strategic vision. In that position, the socialist company can adapt its policy decisions to long-term development goals. Whatever it does, an enterprise consortium must take the overall scheme of things into consideration. For instance, it can take the lead in oil development in northwest China. If it has foreseen a boom in the petroleum industry coming to that region in a few years, it may consider investing part of its profits there. To boost development, it may also engage in trans-sectoral or trans-regional business operations in return for an average internal profit. China's western region should not be developed piecemeal by an assortment of small concerns, but should be handled by such giants as socialist consortia.

(4) The tactics for ownership reform should differ depending on industry, locality, and business size. Firms may be categorized into industries according to their importance to the national economy and the scarcity degree of the resources they need, before deciding which industries should be shored up first and what kind of firms – public, collective or private – should be developed in the main. Such industries and enterprises should also be considered in the light of local conditions, and categorized according to their sizes. Large state firms in important industries or regions should be preserved, while other companies can be leased or subcontracted out; some of them can be sold to collectives or individuals. In this way, the state can let go of most small firms in order to keep those essential companies that form the backbone of the economy under socialist ownership. These

"backbone" firms may be developed into competitive socialist enterprise consortia, or transformed into multinational corporations that will be a force to be reckoned with on the world market. At the end of the day, however, they will remain state owned. How about medium-sized and small firms? This depends on what industry is in question. Their shares can be sold to collectives and individuals to create companies under mixed ownership. This design of ownership reform holds the key to the success of economic restructuring. Once it is translated into reality, it will impart motivation, a sense of responsibility, incentive, and interest in our enterprises, and diversify ownership and management without sacrificing the leadership role and dominance of public ownership.

II. The need for a relatively complete market

(5) Market can balance supply and demand with its self-regulatory function, but it also has limitations that can only be overcome with government regulation. However, this does not mean government can do it all, or that market is needed only when government is weak. In my opinion, the relationship between government and market should be interpreted in this way: Market enables the economy to regulate itself and coordinate supply and demand, but needs government regulation to make up for its shortcomings, such as its limited resource supply and incomplete economic information system. The bottom line for economic restructuring is that the socialist economy should be a market economy in the first place, and then a market economy supplemented by planning.

(6) Market regulation coexists with government regulation. They supplement each other, but are not mutually interchangeable. They combine to form a dual mechanism, which, nevertheless, is not the combination of two separate elements. Government regulation must take market regulation as its starting point, and works merely to pick up the slack of market regulation. Market prices are greatly variable. Besides free prices resulting from complete competition, there can also

be prices from incomplete competition; and state-regulated prices must be based on a wide variety of market prices although there can be discrepancies between planned prices and market prices. The causes and magnitudes of such discrepancies are subject to government regulation, which should still take market prices as its basis.

(7) A relatively well-functioning market mechanism cannot be transplanted; it can only grow to completion by itself in an economy. In the past, it could not grow in this country because it lacked a salubrious environment, i.e., a socialist market economy. Today, it can grow and improve over time, as long as we are resolved to put a socialist market economy in place. Please note that I am using the term "relatively well-functioning" to describe my idea of a market mechanism. The market mechanism cannot become completely competitive the way things are in China under the current circumstances. We should be fully aware that our economy is limited by scarcity in resources, and that government regulation is needed to supplement market regulation.

(8) A socialist market system should encompass four markets. First, a commodity market that entails a consumer goods market and a capital goods market. A real estate market should also be included, because commercial housing is an inevitable trend in our economic development. Second, a capital market which includes a securities market. Once the shareholding system is introduced, a securities market is needed; otherwise, share flow and trading will be out of the question. The securities market can be regulated, and specialized securities markets set up. Where conditions are immature, banks may act as intermediaries to issue and deal in stock shares, or work as brokers to mortgage stock shares or discount them for cash. Third, a technology market for payable transfers of research and development results. Fourth, a labor market, or service market. Having never been opened to free competition, our labor market is fragmented and differs across localities. Given labor's limited lateral and vertical mobility, the labor market can only grow gradually. We have got to develop a

unified commodity market in which nationwide circulation of consumer and capital goods is allowed. If such goods cannot be circulated nationwide, the reasons are more economic (such as high costs and low economic returns) than noneconomic. The capital market referred to here should be unified nationwide as well. If capital cannot circulate across the land, it should likewise be attributed to economic causes, rather than government interference and other noneconomic factors.

III. Raising government efficiency

(9) Effective economic decisions, policy enforcement, and economic supervision are hallmarks of a highly efficient government. A government with little or no work efficiency is invariably crippled by legislation that is absent, bypassed, laxly enforced, or simply superseded by state power. An inefficient government plus an incomplete market can scuttle economic reform no matter how good the reform plan is. Therefore, to make economic restructuring a success, we must raise government efficiency without fail.

(10) Government efficiency is more needed in economic regulation than in government intervention, more for indirect market control than for direct market control, and more for guidance planning than for central planning. We should be aware that managing the economy has become more challenging after economic restructuring came under way. The efficiency level of our economic administrators leaves a great deal to be desired. We must speed up training to raise their overall quality and proficiency, for only thus can government efficiency be boosted effectively.

(11) We should relinquish planned management if it is arbitrary and unscientific, and dismantle economic regulation if it is ineffective and arbitrary. In either case, we would let the market mechanism run its course. Thus, the kind of government regulation that is paired with market regulation should be scientifically viable and highly efficient. The dual mechanism does not mean market regulation and government regulation are both indispensable. Government regulation

should be predicated on scientific feasibility and high efficiency. If we reject willful government intervention and bring the role of the market mechanism into play, at least we can boost the economy during fluctuations. The involvement of a bull-headed government can only inflict stagnation or setback on our economy – what happened in 1958 across this land was a typical case in point. We should learn to differentiate between sound and unsound government regulation. Sound government regulation is good in that it can overcome market failures; unsound government regulation can do nothing but nullify the self-regulatory function of the market mechanism. The market mechanism can strike a general balance between supply and demand and facilitate economic growth, even though it may take more time and is likely to cause major fluctuations in the course of it. If we can see the dual mechanism in such light, we are able to open up new horizons.

(12) Administrative reform is a must if government efficiency is to be raised. The system whereby government officials are selected and appointed must be overhauled. We should evaluate the performance of civil servants within a framework that holds them accountable for the goals set for their tenures. It makes no sense that these people can only be promoted and not demoted. It makes little sense, either, that people can be both promoted and demoted. Of course, there should be both promotions and demotions, but only competent officials should be promoted and incompetent ones demoted – no exception should be made in this regard. Only thus can the government work efficiently, and institutional reform be speeded up.

IV. Entrepreneurship and socialist entrepreneurs

(13) China needs legions of socialist entrepreneurs as much as it needs entrepreneurship. Our entrepreneurs should have strategic vision, dare to innovate and create, be pragmatic and imbued with organizational and business acumen. In economic restructuring, socialist entrepreneurs should be protected, and their talent given full

scope. Without entrepreneurs and entrepreneurship, the economy will be sluggish even if the ownership system is transformed, and even if shareholding firms, enterprise consortia, and new-type state firms are established. As argued above, ownership reform holds the key to economic restructuring. But the next question is: Who are to run the restructured state firms, and to use their talent to inject life into these firms? None other than entrepreneurs. Without entrepreneurs, ownership reform can get nowhere. Entrepreneurship is essential to ownership reform. In the years of reform, we should never lose sight of the importance of entrepreneurs and entrepreneurship.

(14) Socialist entrepreneurs do not come forth by doing the government's bidding, nor can they be groomed in a "greenhouse." Their destiny is bound up with the development of the socialist market economy and with the economic activity of their enterprises, where they come to the fore through competition. We should keep an eye on businesses in adversity, rural firms included, for these are where socialist entrepreneurs are likely to emerge. We should go to medium-sized and small firms and those run by farmers if we are to find socialist entrepreneurs. Because those who can emerge unscathed from unfriendly territories at least have the makings of an entrepreneur. "Socialist entrepreneurs are born of pressure." That line sounds realistic to us all. Entrepreneurs born of adversity are the only people who can bring a competitive edge to our firms.

(15) Entrepreneurs and entrepreneurship are fruits of the market economy. The farther the socialist market economy advances, the more entrepreneurs will turn up, and the more impact entrepreneurship will bring. The burgeoning socialist market economy can provide a constant supply of entrepreneurs – this is more effective than putting a lot of factory directors or managers through advanced training courses. Without a market economy we will not be able to produce so many socialist entrepreneurs. By the same token, our university economics departments cannot necessarily cultivate entrepreneurs even though they are doing a fair job of instilling basic economics knowledge in students.

(16) Enterprises must be allowed to go through a "metabolic process" in which the new supersedes the old. Ill-managed enterprises should call it quits or be closed down, phased out, or liquidated. For a certain percentage of enterprises to go bankrupt on a yearly basis is not the end of the world for the socialist economy. The platform for the socialist market economy should be preserved for emerging, dynamic, and competitive enterprises. Market competition is a whirlwind that can dispose of outdated and inefficient firms and preserve competitive ones. But more importantly, it can level the ground for more enterprises to grow. Such is the process of innovation. Such is the way socialist consortia come to stay, and the way socialist multinational companies carve out a niche in the world market. Only in this way can our economy respond to the pressure of competition and brim over with vitality.

V. Economic norms based on socialist ethics

(17) Social inequity spawns social instability, but social instability does not necessarily stem from social inequality. Income disparity may spur efficiency, but efficiency does not necessarily come from such disparity. In an objectively equal society, if the standard of living first rises and then drops, with increase outstripping decrease, the irreversible nature of consumption, income, and wages can also work psychologically to cause social unrest. In an objectively equal society, there are people who work harder and make more money than others, but there are also those who work less and are paid less. If those who make less money refuse to accept the fact that they do less than others and claim that they have been taken advantage of, they are likely to stir social instability. If the income gap exceeds a certain limit, it can affect efficiency and drive some people to despair and indolence. That is why in the socialist economy, the relationship between equality and efficiency should be handled properly. Equality, as we understand it, entails turning workers into owners of capital goods, equal opportunities for all and distribution according to work done. Efficiency, as we understand it, is also based on public ownership of capital goods, on equal opportunities, and on the principle of

distribution according to work done. Only with this understanding in mind can the relationship between equality and efficiency be well handled.

(18) From an economic point of view, despite its limitations, the market mechanism enables the economy to grow amidst fluctuations. From the perspective of social coordination, however, the limitations of the market mechanism are more pronounced, for the market itself cannot coordinate social development. We do not seek economic growth for growth's own sake. Rather, economic growth should be consistent with coordinated social development. Efficient government regulation is needed because its impact is both economic and social. The social impact of government regulation manifests itself in regulating income distribution while ensuring economic growth, an impact that is mandated by the socialist goals for socioeconomic development. Thus, in the course of economic restructuring, progressive income tax, income-adjustment tax, and allowances for low-income families are needed, but should be kept within reasonable bounds to ensure economic growth and social harmony. At the same time, however, we have got to know that we cannot do without these taxes and allowances in securing economic growth and social harmony. This is exactly what economic reform is all about.

(19) An important task of socialist cultural development is to foster new values. For instance, what is "equity"? What is "employment"? What attitude should we take toward the policy of "allowing some people to get rich first"? These questions should be considered in a new light, so that we can clarify the dos and don'ts in economic restructuring, and know what to strive for and what to give up. People tend to cling to things not worth their devotion. To change that habit calls for a change in values. We cannot make a sound judgment on economic restructuring without changing our values.

(20) The concept of family and the small-time producers' belief in egalitarianism are at the core of the Eastern cultural tradition, whereas individualism is the nucleus of modern Western culture. The two are mutually conflicting. Those of us who live in a developing

nation striving for modernization on the basis of traditional Eastern culture invariably find ourselves torn between these conflicting values. What we pursue is socialist modernization, and the problem confronting us is not so much to choose between the values of our traditional culture and the values of the modern Western culture as to go beyond these two cultures and explore new values that suit socialist ethics. This is a hard nut to crack, but we have to do it. In that sense, to change our values calls for an even more profound revolution than economic restructuring, a mission that cannot be fulfilled in just one generation's time. We have to be fully aware of the arduous and protracted nature of this mission.

VI. Immediate issues to be handled in real earnest

(21) Extending lateral ties in the economy is a major immediate-term task for economic restructuring. Only by extending such ties can we unify our commodity market, gradually bring about a capital market, and lift the barriers resulting from the interference of central and local government boundaries. This task is of paramount importance. If we cannot promote lateral economic ties between firms and let them collaborate and exchange with each other in capital, labor, and technology, and if we do not allow one company to sell its products on another company's turf, we can never build a workable market mechanism and break down the barriers between central and local government boundaries. This task is high on the agenda of the immediate round of economic restructuring. As we build on what we have accomplished so far to go on with economic reforms, the main thrust of our endeavor should be to extend lateral economic ties.

(22) As things are today, excessive investment in infrastructure construction remains the number one headache in the Chinese economy. Overheated consumption funds can only take a second seat. This does not mean excessive increase in consumption funds should not be controlled, but that it is not our primary concern. Make no mistake about it, the consumers in our nation have money to spend in return for the material products and labor services they have

provided. Income is always relevant to supply. If the control of consumption funds is overly tightened up, it can stifle supply and demand at the same time, and its side effects on economic development will be felt sooner or later. In regulating the economy, aggregate demand and supply should be properly controlled. On no account should we cut supply while curtailing demand. I believe premature consumption should be avoided, but there is no reason to say that China today is already in a period of premature consumption. Of course we should draw a lesson from other developing nations' experience and forestall the emergence of premature consumption. There are two telltale signs for premature consumption. One is an excessively low saving rate. By contrast, the saving rate in our nation is maintained at 30%, which is deemed a high level. The other is that the lion's share of scarce resources is overused by a new mode of consumption. For example, production will be affected if too much petroleum is consumed in everyday life. That scenario is yet to be experienced in this country. Clearly, there is no trace of premature consumption in China today.

(23) Equilibrium is part of an analytical approach, and the starting point of economic analysis. Equilibrium itself is not the goal. Our goal is to achieve the Four Modernizations. The socialist economy always swings around an equilibrium point as it moves along. In that sense, we are not seeking balance for balance *per se*. Fiscal balance and credit market equilibrium can mean nothing if the economy stagnates. We have got to know that equilibrium can be maintained at a low or high level. Low-level equilibrium can be easily achieved by adopting a retrenchment policy. If, instead of going single-mindedly after curtailing demand, we do everything we can to stimulate supply, we can achieve high-level equilibrium, not to mention the fact that the economy always advances while hovering around an equilibrium point, which is a sign of basic equilibrium whether demand outgrows supply slightly or vice versa. In China today, for demand to outgrow supply slightly is a preferred and realistic option, whereas it is unrealistic to expect that supply can slightly outgrow demand. That is why we should adapt ourselves to the current situation and learn how

to run the economy under such circumstances.

(24) Government policy stability and continuity should be maintained to set people at ease, especially those in the thick of economic reform. Policy volatility can mar government policy. Major economic unrest often occurs when firms and individuals hasten to take countermeasures upon sensing an imminent major policy change. For this reason, if we can foster a settled sense of economic stability in firms and individuals and keep them confident in government policy, we can take the edge off the impact of the shock waves that might come from economic restructuring, and carry out reforms in a healthy social environment.

VII. Tentative projections of the Chinese economy

(25) The leading position of the state sector in the national economy is not determined by its proportion of the nation's total number of firms or aggregate output value, still less by its shares in the key branches of the national economy. Rather, it is determined by its control of industries that are the lifeblood of the national economy, and by its shares in the output of crucial commodities. In the long run, there will not be many state firms, as most enterprises in this country will come under mixed or collective ownership. Moreover, the state firms referred to here are not the familiar old-fashioned type. Rather, they will be transformed into shareholding or holding companies that are publicly owned in the main, and some of them will belong to a certain enterprise consortium.

(26) From a long-term point of view, there is no reason why mandatory plans cannot be abolished to make way for guidance plans as the one and only form of planning. Of course, there must be certain conditions to make it happen. One such condition is that key resources are no longer in short supply and that the disparity between demand and supply has been reduced. Another condition is that the government is efficient enough in running the economy, because it is more difficult to carry out guidance planning than mandatory planning.

(27) Of the four economic policy instruments in use today – fiscal policy, monetary policy, price control, and wages – the decision-making power to determine wages should be delegated to firms at the grass roots level. Central and local governments should use fiscal and monetary policies as chief economic regulatory means. Unless absolutely necessary, the use of price control as an economic lever should be minimized. Such is my idea of how to shape our long-term macroeconomic regulatory system. The State Planning Commission should take charge of drafting relevant long- and medium-term development plans.

(28) The rural economy is probably where the Chinese economic landscape will change most dramatically. Farmland will devolve to the hands of skilled farmers. Farms will grow in size under a household responsibility system. Labor productivity will go up, and surplus labor force will be reallocated to rural firms. The countryside will be clustered with small towns, which will combine with large cities to form multilayered economic networks. Small towns will become cultural, educational, commercial, and recreational centers that also provide a complete array of community services. The improving Chinese standard of living will be benchmarked not by current cash-income growth but by increases in household wealth.

April 25, 1986

社会主义所有制体系的探索 (1987)

—

所有制改革归根结底是由商品经济发展的要求引起的，是由企业作为商品生产者这一不可改变的地位所引起的。至于改革后的所有制究竟具体采取什么样的形式，则应从有利于推动生产发展出发。单一的所有制不利于发展商品经济，不利于发挥企业作为商品生产者的积极性，也不利于使社会主义制度的优越性充分体现出来。于是出现了改革后所有制体系的设计问题。

改革后的所有制中是不是还包括全民所有制？对于这个问题，可以明确地回答：包括全民所有制在内。但改革后的全民所有制，并不等于现阶段的全民所有制。它们是有区别的。

在传统经济模式的影响下，人们曾经认为国家机构直接经营管理全民所有制企业是惟一可行的方式，甚至是惟一正确的方式。但实际上，在社会主义经济建设过程中，这种经营方式的弊端暴露得越来越充分。企业成为行政机构的附属物，企业的人权、财权、物权完全集中在国家手中，国家对企业管得太多太死，企业经营好坏与自身的经济利益没有联系，也不承担经济责任。这正是国家机构直接经营管理企业的必然结果，是把全民所有同国家机构直接经营企业混为一谈的必然结果。在所有制改革中，必须以改革全民所有制为重点。

要知道，既然是全民所有制企业，那么从本质上说，生产资料归全民所有，产品归全民所有。企业的全民性代表全体人民的根本利益、整体利益和长远利益。承认全民性是全民所有制的属性，意味着全民所有制企业是为了全体人民的共同利益而进行生产和经营的。问题在于：怎样才能使全民所有制企业在生产和经营中体现自己的全民性？怎样才能使它们真正为了全体人民的共同利益而进行经济活动？在这里，必须指出，全民所有制企业不是一个空泛的概念，它们是从事经济活动的实

体。全民所有制企业的全民性体现在企业领导层和企业职工一起在经济活动中对全体人民的利益负责。但这种负责并不是指全民所有制企业必须由国家来经营管理。不仅如此，而且可以明确地指出，假定认为只有由国家来经营管理全民所有制企业才能体现这些企业的全民性的话，那么企业经营管理不善，弊端丛生，其结果恰恰不是对全体人民的利益负责，而是对全体人民的利益的损害。这样，在对全民所有制企业进行改革时，应该强调的是：必须对全民所有制企业的全民性有新的理解，即它们的全民性体现于经济活动的成果，而不是体现于国家对这些企业的经营管理。也就是说，改革全民所有制，不是要否定全民所有制，也不是要改变这些企业的全民性。改革全民所有制，正是为了使全民所有制企业的全民性通过它们的有效的经济活动而充分体现出来。

二

在社会主义所有制体系中，还包括一个主要的方面，这就是根据社会主义商品经济发展的要求，建立多种所有制，即实现所有制的多元化。所有制多元化是指：社会主义社会中可以存在多种所有制，包括公有制，也包括非公有制。此外，企业生产资料所有权也可以不是单一的，而是由全民、集体和个体按照多种方式交叉、渗透而形成的混合性质的。在这种混合性质的所有制中，全民所有、集体所有、个体所有相互渗透，你中有我，我中有你。这就是说，一个企业内部，可以有不同的生产资料所有权构成。所有制的多元化，包括混合性质的所有制的形成，首先与我国现阶段劳动的性质有关。企业中的劳动者的劳动存在着质与量的差异，他们仍然要用个人利益的眼光去看待自己的劳动及其劳动成果。而且，企业之间还存在着劳动条件的差异，这又会导致企业的经营成果和经济效益的差别。有些企业能够比一般的企业生产出更多的劳动成果，这部分收入应归企业所有，以利于调动企业经营管理的积极性，促使企业经营活动改善。所有制的多元化和混合性质的所有制的存在，可以使企业和在企业中工作的劳动者更能从利益关系上使自己同生产经营成果统一起来。

再从我国现阶段的生产力水平来看，所有制的多元化和混合性质的所有制的存在也是与此有关的。我们知道，一定的生产资料所有制形式，取决于社会生产力的发展水平。社会主义商品经济中究竟采取什么形式以及在一定范围内存在哪些所有制，要受生产关系一定要适应生产

力发展的规律的制约。现阶段我国生产力发展水平较低，发展也很不平衡，这种状况决定了在长时期内将是多种所有制的并存，决定了在一个企业内，完全可以使不同的所有制相互渗透或相互结合。这是不以任何人的主观意志为转移的。

总之，在设计我国所有制体系时，需要考虑我国究竟需要建立什么样的企业所有制关系。这一切不能离开发展商品经济的要求，不能离开现阶段劳动的性质和生产力水平的制约。为了发展商品经济，每个企业必须以商品生产者资格开展生产经营活动，企业有权自己决定其产供销活动，并且要在竞争中保存自己和发展自己。这不是什么“放权给企业”的问题，而是“还权给企业”的问题。企业作为商品生产者，应当拥有一个商品生产者所具有的自主经营权。即使是全民所有制企业，改革以后，国家必须把生产资料交由企业使用，并且让企业有权支配自己的经济活动的成果。至于每一个企业的所有制形式，则由具体的情况来决定。

三

在社会主义社会中，建立和发展股份企业不仅是必要的，而且也是可行的。社会主义建设需要大量资金。要改变资金分散的现象，必须集中资金，把社会资金潜力动员起来。因此，企业发行股票有助于使资金集中，以满足扩大生产的资金需要。由于社会主义经济制度的基础是生产资料的社会主义公有制，所以股份企业也将建立在这一基础之上。如果是集体经济的企业发行股票，由劳动者购买，那么从性质上说，这种由劳动者集资而组成的企业仍然是集体经济单位。看来，这类企业的股份化完全是可行的，也不会引起疑虑。问题是全民所有制企业能不能发行股票？全民所有制发行了股票后，性质会不会变？对这个问题，应有正确的理解，不能认为只有集体企业才能发行股票，而全民所有制企业不能发行股票。我们不能用关于全民所有制企业的传统的观点来看待全民所有制企业的股份化。

如果全民所有制企业成为股份企业，从现有的生产资料所有权来看，有三方面的入股者：一是中央政府部门；二是地方政府部门；三是全民所有制企业本身。这三类入股者都是全民所有制性质的。股份化不改变企业的全民性。如果全民所有制是向社会集资的，那么新的入股者又可以分为三类：大致有（这里不考虑外资入股）三种：一是其他的地

方政府部门和其他的全民所有制企业；二是集体企业；三是劳动者个人。从新入股的构成看，如果只有第一类新入股者，企业的全民性没有变化。如果还有第二类 and 第三类新入股者，那么企业的全民性依然保留，但又增加了集体的成分。不管怎样，股份企业的生产资料仍然归劳动者所有的，这样的企业仍然是公有制企业。

从生产资料使用权上看，由于股份企业的所有权与使用权是分离的，因此有必要考察谁真正在进行经营管理。经营管理归于企业的管理人员。既然社会主义股份企业的股东是劳动者或是代表劳动者利益的单位，那么通过股东代表选举的企业管理人员也就是劳动者利益的代表。以股份化的全民所有制企业来说，如果第二类 and 第三类新入股者的资金相对于原来的入股者和第一类新入股者的资金而言是较少的，那么企业仍由全民所有制一方经营管理。即使第二类 and 第三类新入股者的资金相对说来较多，但只要它们是分散的，那么全民所有制一方也照样掌握了企业的经营管理权。这些都表明企业的全民性基本上没有变化。

退一步而言，即使第二类 and 第三类新入股者的资金较多，而且第二类新入股者的资金并不分散，从而掌握了企业的经营管理权的话，企业不仍然是社会主义公有制企业吗？企业的经营管理权不仍然掌握在劳动者利益的代表者手中吗？这又有什么值得顾虑的呢？

下面，让我们再分析一下企业股份化的优越性。股份化是现阶段可以采取的最有利于增强企业活力的措施，它的优越性表现于：

第一，建立股份企业将从根本上改变政企不分的状况，从而可以把企业办成一个完全经济性的实体。由于企业的负责人向董事会负责，董事会向股东负责，企业就不再是行政机关的附属物。股份企业在服从国家政策和经济法规的前提下，有独立决策的权利。换言之，国家不能对股份企业直接进行干预，而只能通过股权，影响企业的经济活动。这样，企业与政府的关系，在经济上主要体现在纳税和收税的关系上，企业的经营决策权问题就会迎刃而解。

第二，股份经济可以比较有效地解决生产要素的合理流动问题。股份企业盈利高低是一个信号，可以引导资金转移到盈利高的部门，使资金和劳动力得到比较合理的配置，可以提高资金使用效率。在市场竞争的条件下，股份企业只有将资金投向最有发展前途的领域，合理使用资金，避免决策失误和资金浪费，才能立足，才能发展。至于政府部门，则可以通过各种调节和补偿措施，有计划地引导股份资金投向国民经济

中的薄弱环节和落后部门，从宏观的角度来促进生产力合理布局。

第三，入股集资有利于把社会上的闲散资金集中起来，实现融通资金的活动。在社会集资和劳动者个人入股的条件下，个人消费基金的结余部分表现为新增加的股金。个人是以投资者的身份出现的，入股后，不能任意抽回股金。因此，企业以集资入股方式吸收个人消费基金的多余部分之后，不存在股金退出企业而冲击消费品市场的可能性。除个人入股以外，股份经济还可以把企业拥有的留成资金作为集资的重要来源。由于各个地方和企业都拥有一定量的暂时闲置的资金，因此通过股份经济的途径，集中地方和企业的资金，承担与地方和企业利害关系密切的项目的建设，有利于加快建设的步伐，并且，这也是为社会提供更多就业机会（特别是对于开拓广大农村的就业门路而言）的有效途径。

四

各个不同的企业相互入股（即相互购买股票）的结果，产生了社会主义条件下的企业控股制。控股制又称参与制，它是股份经济发展的必然产物。控股制本是资本主义发展到垄断阶段时出现的一种经济组织形式，大资本通过控股，渗入其他企业之中，支配着这些企业。层层控股、层层渗透的结果，形成了总公司—子公司—孙公司……这样的公司系统。因此，控股制在资本主义制度下，是大资本控制小资本、支配小资本的手段。

作为一种社会化大生产条件下的经济管理形式，控股制可以适用于社会主义股份经济之中。这是因为，管理具有二重性：一是由社会化大生产决定的自然属性；一是由社会制度决定的社会属性。就社会化大生产而言，社会主义与资本主义是相同的。就社会制度而言，社会主义与资本主义截然不同。因此，社会主义社会中可以采取控股制形式，即保留这一管理方式的自然属性，所改变的则是它的社会属性。

在社会主义经济中，一些有竞争能力的、经济效益高的企业可以利用自己的税后利润购买其他企业的股票。当它们在其他企业的股份中占到一定的比重，从而作为有影响的大股东而控制了那些企业，于是可以按照自己的经营方针来经营管理或进行企业改组。由于股权以及与股权联系在一起的股份利益在这里起着作用，所以一旦企业之间相互控股，企业之间的竞争必然激化。激化的市场竞争对于股份化的企业来说，不是坏事，而是好事，它促使每一个股份化企业必须提高经济效益。特别

是在产品代替性强、消费品价格弹性大、产品更新期间利润不稳定的条件下，如果一个企业经营不善，它就面临被其他企业“接管”的威胁。这种“接管”意味着：其他企业作为新的股东利用这些企业利润率下降、原来的入股者急于想把股票脱手的形势，购买其大量股票，进而控制它们，先从组织上予以“接管”，使之变为自己的子公司，再从生产上、经营上、技术上加以改造。甚至在某些具有独占性的领域内，原来的企业如果经营不善，也是有可能被“接管”的。

至于一些较小的企业，在经营不善的条件下，也可能被本企业的职工“接管”。本企业的职工作为股东，虽然很分散，但他们对企业的要求是盈利、是发展，他们的个人利益同企业盈亏总额挂钩。因此，在必要的场合，他们可能集中股权，以集体代表的身份，对企业进行“接管”，重新经营。这对于企业的发展前景肯定是有利的。

五

实行控股制之后，一个强有力的社会主义大企业，实行跨部门、跨地区的生产经营，并通过层层控股，建立自己的子公司、孙公司。母公司同若干个子子公司、孙公司集合在一起，就形成社会主义的公司财团（或称为企业集团）。若干个社会主义大企业通过各种方式的经济联系，也可以形成一些带有地方色彩的社会主义公司财团，简称为地方财团（或地方企业集团）。社会主义公司财团的核心将是一个母公司，或称持股公司。它是本财团的经营管理方针的决策者。在母公司下面，有各个子公司、孙公司，这些公司并不是公司的分支机构或附属机构，它们都有自己的独立经营活动，自主经营，自负盈亏。母公司是通过股权的控制来施加影响的，也就是说，母公司的经营方针要通过股权的控制来贯彻。这就不会重犯行政干预的弊病。这样一种集中与分权相结合的公司管理体制，有利于促使企业经济活动合理化和高效率化。

由于市场竞争的开展，一些社会主义大企业兴起了，一些社会主义大企业衰落了，或者说，一些社会主义公司财团壮大了，一些社会主义公司财团的地位相对下降了，这完全是正常的现象。哪个大企业想保持上升的趋势，哪个公司财团想在排列名次上跃居前位，只能依靠自己的竞争能力，只能取决于自己的发展战略是否正确以及能否实现，只能寄希望于本企业、本财团的领导层和职工的素质。如果缺乏竞争能力，或者制定的发展战略错误，或者制定的正确的发展战略未能得到贯彻，或

者领导层和职工的素质不高，那么即使是大企业、大财团，也会衰落下来。但企业的股份化和控股制本身，将给它们以内在调整力量，即自我更新的力量。衰落的企业如果不调整，不更新，它的股票价格不断下降，就有可能被“接管”。“接管”以后，企业也就可能以新的面貌登上市场竞争的舞台。

与此同时，在控股制的条件下，银行与企业之间的关系有可能发生变化。这种变化表现为两个方面。一是某些专业银行不仅实行了企业化，而且实行了股份企业化，于是企业可能购买银行的股票，成为它们的股东。从我国的所有制改革的前景来说，企业持有专业银行的股份并参与银行的经营管理的可能性不是不存在的。二是企业股份化之后，银行对企业实行参与。在现阶段，银行与企业之间关系的这一变化的可能性要更大一些。我们可以设想，银行不仅是单纯的贷款提供者，而且也是投资者。银行可以直接从事企业投资活动，成为企业的股东之一，甚至银行还可以自己创办企业。在银行掌握企业的股权之后，银行与企业的关系就在股份利益的基础上联结在一起了。银行作为股权持有人，将派出自己的人进驻大企业，参与企业的管理，参加企业的会议。银行不仅仅参与管理企业资金的使用，也过问企业的生产和经营。

银行本身也可以通过对企业的参与而形成社会主义银行财团。社会主义银行财团同社会主义公司财团一起，实行跨部门、跨地区的经营。银行财团的核心仍然是持股公司性质为中心银行，它所控制的子公司、孙公司同样不是中心银行的分支机构或附属机构，而是自主经营和自负盈亏的经济实体。持股性质的中心银行同样需要通过对股权的控制来影响子公司、孙公司的生产经营。除此以外，银行对企业的参与还有利于银行自身的信贷工作的改进。这是因为，如果要求贷款的企业没有投资风险观念，那将由提供贷款的银行承担一切投资风险。贷款收不回，项目建设失败了，其损失归于作为贷款提供者的银行。建立股份企业，特别是采取银行参与企业的做法，经营失败由股权人，即由参与企业的各方共同负责，这对于银行的经营的改进是可以起到积极作用的。

六

混合经济型企业是指由全民、集体、个体等多种所有制共同投资而组成的企业。即使不实现企业的股份化，只要容许不同所有制的企业联合经营，也可以产生一些混合经济型企业。但企业的股份化的结果将

导致混合经济型企业的大量出现。当然，纯粹的、单一所有制性质的企业也会继续存在，但应当认识到，大量混合经济型企业的出现是社会主义经济中的不可避免的局面。

社会主义社会中的混合经济型企业的性质应当如何确定呢？如果原来的全民所有制或原来的集体所有制以入股集资形式新增资金，并在混合经济型企业股金中占有一定份额，并且能够掌握企业经营管理权的话，那么这样的混合经济型企业无疑仍是公有制企业。但如果不是这样，那又如何确定其性质呢？对此，让我们作进一步的分析。

比如说，如果一个企业是新创办的，其资金来自股票发行，而购买股票的，既有各种企业，又有个人，那么这样的混合经济型企业，是一种新的经济联合体，是传统的全民、集体所有制之外的一种新的公有制形式。

我们之所以把这种新型的经济联合体称为公有制企业，是因为它们在很大程度上类似于生产资料入股和资金入股的合作组织形式。它是新型的公有经济。这种经济组织形式既体现了劳动者群体作为生产资料主人这一特征，又最便于加强企业的活力，使企业成为独立的自主经营、自负盈亏的商品生产者。它在今后有可能成为我国新企业的所有制结构中的主体。

在社会主义经济建设中，混合经济型企业的出现正是适应了生产力发展的要求。它符合国情，促进了商品经济的发展。它既适合在乡村中成长，也适合在城市中发展。它方式灵活，可大可小，便于安置社会闲散人员，有利于密切城乡联系。新成立的混合经济型企业是原有的全民所有制企业的有力竞争者，可以迫使后者改善经营管理，或推动它们较快地走上所有制改革的道路。

七

与混合经济型企业一样，小型合作企业也是适合于我国国情、方便灵活的一种新的所有制形式。它和混合经济型企业的区别在于：

第一，混合经济型企业的入股者是各个企业和个人，并且可能有全民所有制单位投资入股，而小型合作企业则完全是由个人集资入股组成的。

第二，混合经济型的规模可大可小，而小型合作企业的规模一般说来是较小的。当然这并不否认小型合作企业以后可能发展、壮大，甚至也有可能逐渐演变为混合经济型企业，但至少就它们初创时期而论，它们是较小的。

小型合作企业由个人集资入股而组成，它们体现劳动者群体是生产资料主人这一特征，从而是社会主义公有化的一种形式。它的生产资料归参加合作者所有，合作者共同劳动，集体经营，税后利润分给参加合作的成员，这些成员可以把收入用于生活支出，也可以用于再入股。在小型合作企业中，参加合作的成员作为劳动队伍中的一员，取得劳动报酬，作为入股者，又取得一定的税后利润。

小型合作企业特别适合于零售商业、手工业、城镇服务业、农产品加工业。参加合作的成员以自己的劳动进行集体生产，自主经营、自负盈亏。集资时，每人最少要出多少资金，最多只能出多少资金，以及劳力同资金按什么比例分配，要民主商定。这一切完全体现了它作为合作经济组织的质的规定性。

从形式上看，小型合作企业也可能自称为“股份公司”。这是无关紧要的。实际上，小型合作企业是真正的、名副其实的合作经济。它不同于股份公司之处就在于它只由参加合作的成员集资入股，而不向外界集资。如果它以后采取发行股票的方式向外界集资，那么它就变为混合型企业了。

鼓励劳动者个人以集资入股（包括用生产资料折成股金）形式组成小型合作企业，并肯定它们的合作经济性质，即公有制性质，是对理论和实践的尊重。承认这样的企业是公有制企业，无非是承认本来早就应该承认的社会事实而已。

目前，小型合作企业往往被人们称为“小集体”或“民办集体”。当然，人们可以采用这种名称或那种名称。但应当注意的是，当人们称这类企业为“小集体”时，不能认为“小集体不如大集体”，“小集体要向大集体过渡”；当人们称这类企业为“民办集体”时，也不能认为“民办集体是非正式的集体”，“民办集体要过渡到公办集体”。要知道，合作经济就是集体经济，它是灵活的社会主义所有制形式，可以适应不同的生产力状况，可以有不同的企业规模。合作经济不一定要向其他集体所有制形式过渡，而且也不存在这种过渡的必然性。合作经济形式，其他集体经济形式，混合经济形式，等等，各有优势和适用范围，应该长期共存，共

同发展。

八

我们可以把农业中的联产承包责任制的实行看作农村所有制改革的第一步，现在，让我们从所有制体系的角度，对农村所有制的进一步改革加以探讨。

应当了解农村所有制进一步改革的背景，即这一改革是在什么条件下展开的。要知道，在实现联产承包责任制的基础上调整产业结构，农村经济将向大规模商品经济转化。农村将根据市场需要生产、加工、提供大量农副产品。商品经济的发展，使每个农民家庭作为商品生产者和经营者进入商品市场。因此，与蓬勃发展的商品经济相适应，农村的所有制将继续进行改革。

按照商品经济发展的要求，在农业、林业、渔业、畜牧业等生产活动中，家庭联产承包责任制的生产经营的形式会长期存在，但必将逐步走向专业化，甚至会把一些生产环节独立出来，形成某些生产环节的专业化。

于是，在分工协作的基础上，农民家庭将采取不同形式的自由联合。这种自愿结合而组成的农民家庭的联合经营组织的财产，属于参加联合经营的农民家庭共同所有，按各自劳动成果的大小比例分配劳动收入。此外，收入的一部分也可以根据投入的资金和生产资料的多少按比例分配。这样就会产生一大批与上一节提到的小型合作企业相似的小型合作农场（林场、渔场、牧场），它们是广大农民在实践中的创举，对未来农村经济的发展将起着十分重要的作用。这种小型合作农场（林场、渔场、牧场），是新型的集体经济，它们是对过去农业中集体经济统一生产资料和统一劳动的旧框框的突破。作为农民的自由联合的经营组织，它们是在家庭经营的基础上，采取集资形式集中各种生产要素的合作经营。它们是能够调动起广大群众的积极性的农村所有制的进一步改革。

在商品经济发展过程中，原来的乡镇企业的所有制改革问题必然被提上议事日程。乡镇企业的经济性质，照理说应当是农民（乡镇居民）的合作经济，它是农民靠自己的资金、劳力、技术建成的。不少企业尽管依靠贷款兴办，但贷款只能是农民用企业获得的利润偿还。然而在实

实际生活中，这些企业不是如上所述的合作经济性质的企业，而变成了（或在一定程度上变成了）官办企业。有些干部凭着对这些企业领导层的任免权，干涉企业的自主活动。一些企业即使获得较多的利润，但利润由干部支配，农民仍不能得到好处。因此，要改革乡镇企业的现状，就应当从所有制上解决问题，即打破目前实际存在的企业的官办模式，使农民成为名副其实的企业主人。

当然，这里并不否认现存的许多乡镇企业是办得很有成绩的，并且农民也确实能从乡镇企业得到利益，但我们所说的乡镇企业的所有制改革不是仅仅针对那些办得差的企业而言。办得差的企业无疑需要加以整顿，最有效的整顿方式就是进行所有制改革。即使是办得好的企业，也同样要改革所有制。这是因为，既然乡镇企业是集体所有制，那就不能使之成为基层政权的附属物，不能政企不分。“还这些企业以本来面目”，就是使之真正成为集体所有的企业。如果只对办得差的乡镇企业进行所有制改革，不对办得好的乡镇企业进行所有制改革，那么不禁要问一句：假定将来有一天，基层政权的领导换人了，新上任的基层政权领导不再像过去那样考虑问题了，办得好的企业不就有可能变为办得差的企业吗？究竟有什么方法能避免这种情况的出现呢？可见，不管今天办得好还是办得差的乡镇企业，都应当一律进行所有制改革。从所有制上解决企业经营问题，是根本性的。至于哪些企业先改革所有制，哪些企业后改革所有制，则可以根据各个企业的生产和经营管理现状来安排。

那么，怎样从所有制方面改革乡镇企业呢？乡镇企业所有制改革的设想是：清产核资、折股到户。农民成为企业的股东，他们作为股东，通过选举实现自己的意志，行使管理企业的权利。在收益分配权利上，收益分配重大问题民主确定；股东除参加劳动领取报酬外，依其股金多少，按比例分享红利。今后，乡镇政权只负责指导和帮助农民经营，不要自己办企业。乡镇新办的企业，或者是乡镇劳动者自己集资兴办的合作企业，或者是有不同所有制混合的混合经济型企业。这两类企业都是新型的公有制企业。此外，如果农民家庭要独资办企业，这也是可以容许的，尽管它们属于个体经济性质。

农村中的供销社也有必要进行所有制改革。这一改革可以从两个方面着手：第一，大量分散于农村的基层供销社，应当转化为独立的合作企业，即成为名副其实的供销合作社，自主经营，独立核算，自负盈亏，税后利润除留作公积金、公益金的部分外，按社员的股金分配。第二，县以上的供销社，包括各个专业公司和工商企业，应当转化为混合

经济型的企业，即有多种所有制混合的股份企业，也是自主经营、独立核算、自负盈亏的。它的组织管理与一般股份企业的组织管理相同。

通过上述农村所有制的进一步改革措施，继家庭联产承包责任制实行之后，乡镇的基层政权同经济活动之间的关系将发生更为显著的变化。农业合作化之后，特别是人民公社化之后的那种农村经济活动方式将彻底解体。乡镇的基层政权完全变为纯粹的政权组织，脱离具体的生产经营活动，从而以往那种把广大农民置于统一指挥、统一管理之下，使他们的经济活动被动地听命于少数乡镇干部的意志，限制广大农民积极性和创造性的发挥，阻碍农村商品经济的发展，并使农村产业结构长期单一不变的情况，将不再存在。

乡镇基层政权在经济上的作用主要体现于积极引导乡镇商品经济的发展。为此，它们要负责土地的管理。土地公有的原则不能改变，但土地应当是有偿使用的。要防止侵占耕地，严禁土地买卖。这是乡镇基层政权的职责所在。乡镇基层政权还要设法帮助农民寻找致富门路，组织农民兴办各种企业，并帮助这些企业解决发展中遇到的难题。乡镇基层政权还可以为企业的联营牵线搭桥，组织技术协作和经济协作。乡镇基层政权在引导农村商品经济发展的过程中，应当突出“服务”二字。它们的管理就是为农民的经济活动服务。

九

所有制的核心是生产资料所有权的归属。但把所有制理解为生产资料所有权的归属，仅仅是对所有制的狭义理解。对所有制的广义的理解是：除了生产资料所有权的归属以外，所有制还包括生产组织的形式和生产管理体制等。因此，以上所谈到的所有制改革，不仅涉及生产资料所有权的归属在改革前后的变化，而且也涉及生产组织的形式和生产管理体制在改革前后的变化。改革后所建立的新的社会主义所有制，就是指新的生产资料所有权的归属、新的生产组织形式和新的生产管理体制。

改革后的社会主义所有制不是单一的，而是多元的。多种所有制构成了新的社会主义所有制体系。对这个体系可以这样理解：

从生产资料所有权的归属来看，这是一个以社会主义公有制为主体的、包括为社会主义经济服务的各种非公有制在内的所有制体系。公有

制企业包括：全民所有制企业、混合经济型企业、合作企业。非公有制企业包括：个体企业、外资企业、中外合资企业。

从生产组织形式和生产管理体制来看，全民所有制企业、混合经济型企业可以自己经营，也可租赁、承包给合作经济或个人经营；合作企业同样可以自己经营或采取租赁、承包的方式，让个人来经营。

这样的社会主义所有制体系是根据社会主义商品经济发展的需要而产生的。在公有制企业中，虽然股份化的实行涉及按资金（或股金）分成，但投资入股对于投资者来说是对生产的贡献，其性质与在银行存款相似，应有一定的股息收入作为报酬。投资入股，发展社会主义经济，对社会主义经济的总体利益大于投资入股者的个别利益。而公有制企业的租赁、承包经营，则能够适应生产力发展的需要，使生产要素在现有条件下有效结合，减少人力、物力、财力的浪费，对生产的发展起到促进作用。

至于社会主义所有制体系中属于非公有制范畴的个体经济，它存在的必要性已经无需论述，因为个体经济是作为社会主义经济的必要补充而存在的，它为社会主义社会中的生产和生活服务，而且还可以增加就业，增加税收。个体劳动者主要依靠自己的劳动从事经营。有些人辛勤劳动，经营有方，获得较多的收入，这是正常的。只要有正确的政策，加强管理，同时又善于教育和引导，就能保证个体经济沿着为社会主义服务的轨道发展。

总之，通过所有制改革，今后我国将形成如下的二元经济模式：一方面，是几百家最大的企业，它们通过层层控股，形成母公司、子公司、孙公司系统，形成公司财团（企业集团）。它们将决定我国工业化的方向、技术进步的方向。另一方面，是几十万家甚至上百万家小企业，包括合作经济的、个体的、混合所有制的小企业，它们形成紧密的协作网，同时又处于相互竞争之中。它们将着重解决农村劳动力的转移、农副产品生产和加工、农村居民收入水平的提高、小城镇建设、城乡居民生活服务等问题。二元经济的这两个不同的部分将各自按照自己的运动规律向前发展。二者是长期并存和互补的。

（原载《河北学刊》，1987年第1期）

A tentative study of socialist ownership structure (1987)

I

Ownership reform stems, in the final analysis, from the requirement for developing a commodity economy in this nation. It also arises from the unchangeable position of companies as commodity producers. Whatever its form, ownership structure should contribute to the promotion of production. A monomorphic ownership structure is detrimental to the growth of the commodity economy, to the motivation of firms as commodity producers, and to the effort to make the most of the superiority of socialism. All this gives rise to the mission of hammering out a post-reform ownership structure.

Will the post-reform ownership structure include public ownership? The answer is in the affirmative: Public ownership will be included. However, the reformed public ownership will no longer be the same as it is today. There will be differences between the two.

Under the influence of the traditional economic mode, people believed that the only workable way to run public companies was to put them directly into the hands of government institutions. In the reality of socialist economic development, however, the drawbacks of this practice were becoming pronounced. Companies became appendages of the government, which held all the power over human resources, finance and materials, and kept a tight rein on them. A company's performance thus had no direct bearing on its economic gains, nor was it held accountable for its own economic losses. Such was the inevitable outcome of the direct government intervention of business management, in which public ownership was synonymous with the direct involvement of government institutions in corporate

activity. This is why the main thrust of ownership reform should be directed at public ownership.

We should know that in a public company, both capital goods and products belong to the public. The public attributes of such institutions represent the people's fundamental, overall and long-term interests. Recognition of the public ownership of such companies means that they are engaged in production and management in the common interest of the entire citizenry. The issue here is: How can public companies manifest their public nature in production and management, and go about their economic activity truly in the interests of all the people? It should be noted that public companies are not an empty concept but entities in the thick of economic activity. Their public nature is embodied in the fact that both their managers and workers are responsible for the interest of the whole population in such activity. However, this responsibility does not mean that public companies can only be run by the government. Moreover, it should be noted unequivocally that, supposing the public nature of these companies could be manifested only under government management, those companies that are malfunctioning and riddled with malpractice cannot honor their commitment – rather, they can only betray the basic interest of the entire state and citizenry. Thus, in transforming public firms, we must understand their public nature in a new light. That is to say, their public nature should be reflected in the results of their economic activity rather than in being state-managed. To reform public ownership is neither to negate this form of ownership nor to change the nature of public companies. To reform public ownership is precisely to emphasize these firms' public nature through effective and fruitful economic activity.

II

An essential task of the socialist ownership structure is to meet the requirement of the developing socialist commodity economy that forms of ownership should be diversified. Ownership diversity means that a socialist society may have more than one form of ownership,

both public and nonpublic. Moreover, capital goods need not come solely under public ownership but under a mixture of state, collective, and private ownership. In this mixed ownership system, public, collective, and private ownership are intertwined and infiltrate each other in a "you in me, me in you" situation. That is to say, the capital goods in a company may come under a mixture of ownership. The need for ownership diversity, including ownership mixtures, arises from the nature of labor in our nation at the present stage of development. Workers still care about their labor input – which differs in quality and quantity – and its economic returns out of the concern for their own interests. Furthermore, due to differences in working conditions, companies also vary in managerial performance and economic returns. Some may be more productive than others. The earnings from such extra output should be put at these firms' own disposal so as to spur their managers on to improve management. Diverse, mixed forms of ownership enable firms and workers to align themselves with production and management performance because this is where their own interests are at stake.

The existence of diverse and mixed forms of ownership is also relevant to our nation's present level of labor productivity. We know that a certain form of ownership of capital goods is determined by the development level of society's labor productivity. What forms of ownership should be adopted or allowed in a socialist commodity economy is circumscribed by the law governing labor productivity improvement. As things stand in our nation, productivity is relatively low and its development is uneven. This implies that, independent of man's will, diverse forms of ownership will be around for a long time to come while infiltrating or integrating each other inside a business.

In all, when designing a new national ownership structure, we should decide what kind of corporate ownership system is really needed. Such a decision cannot be detached from the requirements of the commodity economy and the restraints arising from the nature of labor and the level of productivity at the current stage of development. To advance the commodity economy, every company

must organize its production and business as a producer, have the final say on production, supply and marketing, and strive to survive and grow through competition. The issue here is not so much "decentralizing power to companies" as "returning power to companies." Companies should have the decision-making autonomy that they deserve as commodity producers. The same is true with public companies. After ownership restructuring is completed, the government should put capital goods at these companies' disposal and allow them to handle the fruits of their economic activity. As to what form of ownership a company should adopt, it should be decided according to the merits of individual cases.

III

It is both necessary and workable to establish and develop shareholding companies in a socialist society. Socialist construction cannot do without colossal sums of money. Dispersed capital should be pooled, and the financial potential of all sectors tapped. To allow companies to issue stock shares helps pool money and meet the funding needs of production expansion. Public ownership of capital goods is the foundation stone of the socialist economy. Shareholding companies should be built on the same foundation. If a collectively owned company sells shares to its workers, its collectiveness will remain intact because it is formed with money raised from and by its workers. The fact that the shareholding system can operate for collective companies should not be a cause of concern. The issue here, rather, is whether public firms should be allowed to issue stock shares, and whether doing so will change their public nature. We must see it in perspective. It is wrong to insist that only collective firms can issue shares and to forbid public companies from doing so. The adoption of the shareholding system by public companies should not be judged from a traditional viewpoint.

If a public firm becomes a shareholding company, its shareholders may fall into three categories judging from the current structure of capital goods ownership: central government agencies, local

government agencies and the company itself. If all its shareholders are in the public category, the company's public nature will not be affected. If the public firm raises funds from all walks of life, its new shareholders will roughly fall into three categories, excluding foreign investors: other local government agencies and other public firms, collective firms and workers. If all the new shares are sold to the first category of shareholders, the firm's public nature remains. If the new shares are also sold to the second and third categories of shareholders, the firm's public nature will acquire a collective element. No matter what happens, the enterprise remains publicly owned.

To determine who controls the use of capital goods, it is necessary to find out who are running the shareholding company, because the right to own capital goods and the right to use them are separated. The operation of such a company is controlled by its managers. Given that the shareholders of a socialist shareholding enterprise are workers or organizations that represent the workers' interests, then the managers elected by shareholders' representatives should also be regarded as the workers' representatives. In a shareholding company under public ownership, if the second and third categories of new shareholders have contributed more money than the old shareholders and the first category of new shareholders, the company is still in the hands of those representing public ownership. If the second and third categories of newcomers have bought more shares than the others but such shares are scattered rather than concentrated, the company is still under public ownership. In all cases, the company's public nature remains basically unchanged.

Even if a shareholding company is controlled by the second and third categories of new shareholders who have contributed more money while the shares held by the second category of new shareholders are not scattered, isn't the enterprise still a public socialist enterprise? Isn't the management of the company still in the hands of those representing workers' interests? Is there anything to be concerned about?

Now, a look at the superiority of the enterprise shareholding

system. As the best option available for invigorating our companies, the shareholding system has at least three advantages.

Firstly, the shareholding system can fundamentally change the situation in which government administration is confounded with business management, and thereby turn companies into purely economic entities. Under this system, the general manager is held accountable to the Board of Directors, and the Board of Directors is responsible to shareholders, and thus the company can no longer be an appendage to a government department. The shareholding company makes its own decisions in compliance with government policy and economic legislation. In other words, the government can no longer interfere in the company's business, but can influence its economic activity by holding its stock shares. The economic relationship between enterprises and the government becomes one between paying and levying taxes, and the enterprises will have no problem in making their own business decisions.

Secondly, a shareholding economy works relatively more effectively in meeting the need to allocate production factors efficiently. The profit level of such a company is a signal that guides the shift of capital to high-profit fields, thereby rationally allocating capital and workforce, and raising capital utilization efficiency. The shareholding company can find a foothold in market competition and develop itself only if it can put its capital to best use, utilize it sensibly, and avoid decision-making errors and waste of money. Government departments may, through legislative and compensatory measures, attract share capital to the national economy's weak links and backward sectors in a well-planned fashion, and promote the rational allocation of productive resources from a macroeconomic perspective.

Thirdly, raising funds by selling shares helps pool idle money from nongovernmental sources to meet financing purposes. Under the prerequisite that funds are raised from nongovernmental sources and workers are allowed to buy shares individually, the surplus of personal consumption fund comes in the form of newly added share

capital that cannot be withdrawn arbitrarily. For this reason, after the surplus fund for personal consumption is absorbed to buy company shares, it is unlikely for such money to be withdrawn from a shareholding company and spent in the consumer goods market. Apart from allowing individuals to buy shares, the shareholding economy can also use part of the profit at a company's dispensation as a major fund-raising source. By pooling idle money from localities and companies and spending it on construction projects that have a close bearing on the immediate interest of these localities and companies, the shareholding economy can also speed up development, and effectively create jobs for society, rural areas in particular.

IV

The practice of companies buying each other's stocks gives rise to a corporate stock-holding system under socialism. As an inevitable result of economic development, this system, also known as "participatory system," originated in an economic organizational form that emerged from the monopolist stage of capitalism, when a big corporation infiltrated other companies by buying their majority shares and getting them under control. The control through stock-holding and penetration into multiple companies eventually brought about a corporate system in which the general company branched into one level of subsidiaries after another. Under capitalism, therefore, the corporate stock-holding system is a tool with which large capital controls and manipulates small capital.

As a form of business management in society's large-scale production, the stock-holding system can be made to work for the socialist shareholding economy on account of the dual attributes of business management: its natural attribute determined by society's large-scale production, and its social attribute determined by the social system. In terms of society's large-scale production, socialism is identical to capitalism; in terms of social system, socialism is categorically different from capitalism. Thus a socialist society can adopt the stock-holding system by retaining its natural attribute and

altering its social attribute.

In a socialist economy, a competitive and highly efficient company may use its after-tax profit to buy another company's stock shares. When it has become the other company's majority shareholder and thus taken control of it, it will run or reshuffle that company according to its own will. Because of the role of equity and equity-related interests, the scramble between companies for majority holding rights is bound to intensify. When that happens, it is a boon, instead of a bane, for every shareholding company on the scene, because it gives them a good opportunity to improve their economic efficiency. When products become highly substitutable, when the prices of consumer goods show a large degree of elasticity, and when the profits from those products that are being upgraded become unstable, ill-managed businesses will be in danger of being "taken over" by others if they fail to cope with the situation. When such a business is taken over, the buying company may buy its stock in a large amount by taking advantage of its declining profit rate and its shareholders' hasty disposal of their shares. In this way the new CEO turns it into a subsidiary, and goes further to overhaul its production, management and technology. This happens even in a monopolistic industry, where failing companies are in danger of a "takeover."

A small business that does not perform well may be taken over by its employees. These employees are scattered stockholders with a shared desire for their business to make a profit and grow, and their personal interests are tied to its gains and losses. When and where possible, they may pool their equities and act collectively to take over the business and reshuffle its management. When this happens, it is definitely conducive to the future success of the business.

V

A powerful large socialist enterprise under the shareholding system may organize trans-sectoral and trans-regional business, and, through multilevel share-controlling actions, establish multiple layers of subsidiaries to form a socialist corporate consortium or enterprise

group. Several large socialist enterprises can foster different economic ties and combine themselves into a consortium or enterprise group. At the center of a socialist corporate consortium is the decision-making matrix – or holding – company. Under the parent company there are first- and second-layer subsidiaries which, rather than being mere branches or appendages, do business independently, make their own decisions, and bear the responsibility for their losses and gains. The matrix company exerts its influence through its control of stock shares. That is to say, the parent company carries out its business principle through its equity, thereby fending off the drawbacks of administrative intervention. This corporate management system, in which rights are both centralized and decentralized, helps set a company's business activity on a rational and efficient footing.

Some giant socialist enterprises may rise, and some others may fall in market competition. To put it another way, one giant socialist corporate consortium may grow in strength while another may fall into a decline. There is nothing odd in this phenomenon. A giant enterprise can stay competitive and at the top of the ranking chart only with sensible and effective development strategies, wise leadership and fine workforce quality. Companies or consortia are doomed, no matter how large they are, if they are no longer competitive, if their development stratagems are wrong, or their leaders and workforce are low in quality and proficiency. The shareholding system and the controlling shareholder system compel a company to readjust and save itself. Without such readjustment and self-rejuvenation, a waning company can only watch helplessly as its stock dwindles in value and its property rights become vulnerable to a takeover. Such a takeover, however, may give the company a new lease of life and return it to the ranks of competent competitors.

Under the stock-holding system, the relationship between banks and enterprises may change in one of two ways. First, specialized banks may convert themselves into commercial corporations under shareholding management, and allow businesses to purchase their stock shares to become their shareholders. Judging from the prospects

of ownership reform in this country, it is not unlikely that businesses will hold stock shares of specialized banks and join their management. Second, demutualized banks may also participate in managing other businesses; and, as things stand at the present stage of development, the relationship between banks and businesses is more likely to change this way. We can assume that banks are not just loan providers. They are also stockholders of businesses and can run their own companies. After a bank gains control of a business' stock, the common interest resulting from this will bring the two sides closer. A bank that holds the stock of a large business can send representatives to join the latter in managing its funding, production and business operation.

Banks can also convert themselves into socialist banking consortia through their involvement in business. Such a banking consortium may work alongside a socialist corporate consortium to do business that transcends departmental and regional boundaries. At the core of this banking consortium is a central bank that functions as the holding company. The first and second tiers of subsidiaries to such a central bank are not its branches or affiliates; rather, they are economic entities that make their own business decisions and are liable for their own gains and losses. The holding central bank needs to influence the production and management of these subsidiaries by way of its equity. Moreover, the bank's involvement in business also helps improve its credit management because if a business applying for a loan has no idea about the risks involved, the bank providing the loan is liable for such risks. If the bank cannot recoup the loan it has issued in due time, or if the project invested with the loan falls through, the bank will bear the financial loss thus incurred. In a shareholding company established with a bank's participation, the outcome of business failures is borne by all partners, a fact that can galvanize the bank into improving its management.

VI

Mixed-ownership companies, as the name suggests, are economic

entities invested jointly by public, collective, and private partners. Firms of this type allow for joint business activity under different types of ownership even in the absence of the shareholding system. However, demutualization of firms inevitably produces a large number of companies under mixed ownership. Enterprises under a single type of ownership will go on as usual, but the emergence of many mixed-ownership economic entities will be an inevitable trend in a socialist economy.

How to define the nature of such mixed-ownership companies in a socialist society? If a public or collective enterprise has increased its capital by raising funds through stock share sales, and thus obtained a certain portion of share capital from a mixed-ownership firm and controlled its management, this company should be regarded as a public enterprise. If such a mixed-ownership firm is not deemed public, what else should it be? Let us look into this matter more closely.

If, say, an enterprise has been set up with funds raised by selling stock shares to both companies and individuals, such a mixed economic structure should be regarded as an economic conglomerate under a new form of public ownership, which is different from traditional types of public or collective ownership.

We regard this type of economic conglomerates as public enterprises because they are similar to collectives whose partners buy stock shares with capital goods or cash. They represent a brand-new type of public ownership enterprise, which not only identifies workers as masters of capital goods but also energizes itself by becoming an independent commodity producer that makes its own business decisions and bears responsibility for its own gains and losses. Such economic conglomerates are most likely to become the mainstay in China's future corporate ownership structure.

The emergence of mixed-ownership companies meets the demand to boost productivity in socialist economic development, corresponds with the reality of the country, and promotes the commodity economy. Such firms can grow in both rural and urban areas. Flexible

in business operation, they can adjust their corporate sizes according to circumstances to accommodate the idle and the jobless and better connect rural and urban areas. The presence of such mixed-ownership firms challenges old public enterprises to improve their management and start ownership reform at an early date.

VII

Like mixed-ownership companies, small cooperatives represent another nascent form of ownership. Convenient and flexible, these small cooperatives differ from mixed-ownership firms in two ways:

First, the shareholders of a mixed-ownership company are enterprises and individuals, and state-owned companies may buy their way into it. By contrast, small cooperatives are formed entirely by individual shareholders.

Second, mixed-ownership companies vary in size, whereas cooperatives are generally small, even though it is possible for them to grow bigger and evolve into mixed-ownership companies. Nevertheless, cooperatives tend to remain small, at least in the formative stage.

Small cooperatives, being organized by individuals who buy their way into them, identify their workers as masters of capital goods. That is why they are seen as a new form of socialist public ownership. Their members own the capital goods, join in collective labor and management, and distribute their after-tax profit among themselves. Such earnings may be used to cover daily expenses or be converted into new stock shares. Members of such a small collective get paid for their labor as employees while earning a certain percentage of the tax-paid profit as shareholders.

Small cooperatives are especially suitable for businesses in retailing, handicrafts, community services and farm produce processing. Their members are engaged in collective labor, make economic decisions and share gains and losses. Whenever funds need to be raised, they put their heads together to decide the ceiling and

floor for the money to be paid by every member according to a ratio between labor and fund. This way of doing things is entirely agreeable to the nature of small cooperatives.

It does not matter whether or not a small collective calls itself a "shareholding company". They represent the collective sector in the true sense of the term. They differ from shareholding companies precisely in that, instead of turning to society for financial help, they raise money exclusively among their members. They can become mixed-ownership firms if, someday, they start to raise money by issuing stock shares to the public.

To encourage individual workers to form their own small cooperatives by buying shares or converting their contribution of capital goods into shares, and to confirm the collective – i.e., public – nature of such cooperatives, is to respect both theory and practice. To accept the small cooperatives as public enterprises is for no other purpose than to recognize an established social fact that has to be accepted as such.

Small cooperative enterprises are often called "small collectives" or "collectives run by individuals." People may name such firms any way they want. However, when you choose to call them "small collectives," you are wrong if you think that small collectives are not as good as large collectives or that small collectives should be turned into large ones. When you choose to call them "collectives run by individuals," you are wrong if you believe that they are "informal collectives" or that they should be converted into public collectives. We must see cooperatives exactly as a form of collective economy as well as a form of socialist ownership that is highly flexible and adaptable to different levels of productivity and corporate scales. The cooperative economy does not necessarily need to develop itself into other forms of collective ownership, and there is absolutely no such inevitability either. The cooperative economy, other forms of collective economy, and the mixed-ownership economy each have their own strengths and applicable scopes, and should be allowed to exist side by side and develop together in the long run.

VIII

We may regard the adoption of the household responsibility system that links remuneration with output as the first step toward rural ownership reform. In this chapter, let me make some tentative study of the next stage of ownership reform in rural areas from the perspective of the national ownership structure.

Let us start with some background information about the next stage of rural ownership reform. We have to understand that, on the basis of initiating the household responsibility system, the rural economy is being restructured in transition to a large-scale commodity economy. Rural areas will adapt their production and processing undertakings to market demand, and provide large quantities of farm and sideline products. The advance of the commodity economy enables every farming household to enter the commodity market as both producers and business operators. Rural ownership reform should keep up with the burgeoning commodity economy.

According to the requirements of the commodity economy, the rural household responsibility system will be maintained for a long time in agriculture, forestry, fishery, and animal husbandry. However, rural production and businesses are bound to develop along specialized lines. That means some fields of production will operate independently and be specialized.

On the basis of a division of labor and collaboration, farming households can freely collaborate with one another in different forms. The assets of such voluntary economic cooperation will be owned by the members, who will distribute the earnings among themselves according to work done. Part of such earnings, however, may also be distributed according to shares of capital or of capital goods. This will give rise to a large number of small cooperative farms (forest, fishing and animal farms included) similar to the small cooperatives described in the previous chapter. A creation of the broad masses of farmers in their production activity, these cooperative farms will play a major role in the future development of the rural economy. They

represent a new type of collective economy, and a breakthrough from the old agricultural collective economy in which capital goods and labor are centralized. On the basis of household management, these farms can bring farmers' funds and production factors under cooperative management. The emergence of such farms is nothing short of another round of rural ownership reform that can fire the enthusiasm of the rural population for production and development.

In the course of developing a commodity economy, the issue of revamping the ownership of old rural enterprises will be put on the agenda. These rural enterprises, according to common sense, represent a form of cooperative economy run by farmers (and townspeople) with their own money, labor and technology. Although many of them are dependent on loans, they are supposed to repay such loans with nothing but their profits. However, in actual fact, these enterprises have changed their collective economic nature and evolved, to a certain extent, into local government-run businesses. Some local officials, holding the power to appoint or dismiss the managers of these businesses, are given to interfering in their business activity. Farmers can hardly benefit from such businesses because their profits are often manipulated by these officials. Such problems with the old rural enterprises can only be redressed through ownership restructuring – that is, to put an end to government interference in them and let farmers be their true masters.

I do not here deny the fact that many rural enterprises are doing perfectly well and that, in many places, local farmers are benefiting from them. Rural enterprise ownership reform is not directed merely at mismanaged enterprises. Of course, enterprises that do not perform well should be straightened out, and the best way to do so is to restructure their ownership. However, well-run rural firms need ownership restructuring as well. Now that rural firms are collective economic entities, they should not become appendages to grass roots governments and muddle along under government administration that is entangled in business management. We have got to restore them to their true beings as collective firms. If we limit ownership reform to

poorly run enterprises, we must answer the question: If, someday, a local government comes into the hands of a new leader who has changed the old way of doing things, will well-run enterprises start going downhill? Is there any way to prevent this scenario from materializing? Clearly, all rural firms, large or small, good or bad, should have their ownership restructured. Only by starting from ownership reform can these companies' business problems be fundamentally addressed. As to which enterprises should be the first to engage in such a reform, this should be decided in light of actual production and management situations.

How, then, should rural enterprise ownership be reformed? The guideline is to liquidate the assets and check the accounts, and to distribute the stock to every member household. In this way, farmers can become shareholders who can impose their will on their companies through voting in elections and exercising their management rights. Major issues on income distribution will be settled by consensus. Apart from getting paid for work done, shareholders are also entitled to dividends allotted according to shares. Township governments are not allowed to run enterprises, and their power should be limited to guiding and helping farmers in business activity. New rural firms and cooperatives established by rural workers with their own money, and mixed-ownership firms are, without exception, new types of public enterprises. Farming households should also be allowed to run wholly owned enterprises that belong in the private sector.

Rural supply and marketing cooperatives should have their ownership revamped in two ways. First, large numbers of rural supply and marketing cooperatives at the grass roots level should be converted into independent cooperative firms. Only thus can they truly become supply and marketing cooperatives that make their own business decisions, function as independent accounting units, and take responsibility for their gains and losses. Their after-tax profit will be dispensed among members according to shares after a certain amount has been set aside as public accumulation fund and welfare fund.

Second, supply and marketing cooperatives at and above the county level, including specialized companies and industrial and commercial businesses, should be transformed into mixed-ownership, shareholding companies that make their own business decisions as independent accounting units and are accountable for their own gains and losses. They will have the same organizational setup as other shareholding companies.

By putting the rural ownership system through the abovementioned reform steps, the relationship between township governments and rural businesses will undergo another round of profound changes comparable to those taking place upon the adoption of the household responsibility system linking remuneration to output. The mode of rural economic activity born of the Movement of Agricultural Collectivization (1954-1955) and particularly of the Movement of the People's Communes that began in 1958, should be totally abolished. Grass roots governments will become pure administrative institutions detached from everyday production and business. Institutions that subject the broad masses of farmers to centralized administration, that allow a tiny number of township and town government officials to impose their will on people's economic activity, and that have hindered the growth of rural commodity economy and kept the monolithic rural economic structure unchanged for long years, will eventually be consigned to the dustpan of history.

The economic role of grass roots township governments will be limited to guiding the rural commodity economy. Land management is part of that role. The principle that land is public property shall never be changed, but it should not prevent land from being used with compensation. It is also the mission of grass roots governments to prevent arbitrary requisitioning of farmland and bar the selling and buying of land. These governments should also find ways and means to help local farmers beat poverty, organize them in running businesses, and help these businesses solve problems. They will also have a "matchmaking" role to play, that is, to bring enterprises together for technological and economic collaboration. "Serving the

people" should be the motto for local governments in steering the advancement of the rural commodity economy. The purpose of their administration is specifically to serve farmers' business activities.

IX

Proprietorship over capital goods is at the core of ownership. However, to interpret ownership merely as proprietorship over capital goods is a narrow-minded understanding of the substance of ownership. In a broad sense, ownership also encompasses the organizational form of production and the administration and management of production, apart from proprietorship over capital goods. This being the case, the ownership reform discussed in the foregoing involves not only changes in ownership of capital goods before and after the reform, but also changes in the organizational form of administration over production. The new socialist ownership born of the reform effort refers precisely to proprietorship over capital goods, to new organizational forms of production, and to new administrative and managerial systems over production.

The reformed socialist ownership system will not be singular but plural. It will constitute multiple forms of ownership and can be understood from the following perspectives:

In terms of capital goods proprietorship, it will encompass diverse forms of nonpublic ownership in the service of the socialist economy, with socialist public ownership taking the lead. Under public ownership, there will be enterprises owned by all the people, enterprises under mixed ownership, and cooperatives. Under nonpublic ownership, there will be private firms, foreign-invested companies, and equity joint ventures with Chinese and foreign investment.

Concerning the organizational form of production and the administrative and managerial system over production, enterprises owned by all the people and enterprises under mixed ownership can be run on their own or rented or contracted out to cooperative

enterprises or individuals. Likewise, cooperatives can also be run by themselves or rented or contracted out by individuals.

This socialist ownership system is born of the need of the burgeoning socialist commodity economy. In a shareholding company under public ownership, dividends are dispensed among shareholders according to their shares of capital (or money paid for stock shares), and shareholders are investors who contribute to production through the shares they have bought. The money they have spent on shares is similar in nature to bank savings, and therefore, they also deserve remuneration in the form of stock interest. The stock shares invested in the economy contribute a lot more to the growth and overall interest of the socialist economy than to the shareholder's individual interest. Leased and contracted management serves to adapt public enterprises to the demand for boosting productivity, allocating production factors effectively under the current circumstances, minimizing waste in human, material and financial resources, and promoting production.

I deem it unnecessary to say anything here about the presence of private economy that does not belong in the public sector of the socialist ownership system. This is because the private sector exists to supplement the socialist economy and help create jobs and tax revenues. Self-employed workers rely on themselves in business activity. It is only normal for them to make more money through diligence and shrewd management. Given correct government policy, effective administration, and sensible education and guidance, the private sector can grow in the course of serving socialism.

To sum up, ownership reform will bring about a dual economic system. On the one hand, the national economy will contain hundreds of large enterprises that will grow into corporate consortia (enterprise groups), which, through multilevel investment, will bring about a network of second- and third-tier subsidiaries. These consortia will point out the way for the national drive for industrialization and technological progress. On the other hand, the national economy will have numerous small enterprises under cooperative, private or mixed

ownership, which will form a close-knit network of collaboration while competing with one another. Their shared mission will be to address the problems arising from the reallocation of surplus rural workforce, farm and sideline product production and processing, from the efforts to raise rural residents' income and build small towns, and from everyday services for urban and rural residents. These two groups of economic entities will each follow a different course of development and coexist in a mutually complementary relationship.

— *Hebei Academic Journal*, issue No. 1, 1987

论两种类型的非均衡经济和我国当前经济体制改革的主线 (1988)

一、均衡条件下的资源配置与非均衡条件下的资源配置的区别

在经济学中，非均衡是相对于瓦尔拉均衡而言的。瓦尔拉均衡是假设存在着完善的市场和灵敏的价格体系条件下所达到的均衡。非均衡是指不存在完善的市场，不存在灵敏的价格体系条件下所达到的均衡。因此，非均衡又被称为非瓦尔拉均衡。

根据瓦尔拉的学说，既然市场是完善的，价格体系是灵敏的，交易者有充分信息，价格随供求的变化而随时进行调整，那么在任何一种价格条件下，需求总量必定等于供给总量，社会中的超额需求和超额供给都是不存在的，任何交易的实现，都以均衡价格为条件。没有达到均衡价格，不会成交；只有价格均衡了，才可能进行交易。根据这样的学说，生产的过剩、商品的滞销、经常性的失业，以及与超额需求有关的通货膨胀也就不会出现。

对于这种不符合经济实际的瓦尔拉均衡分析，虽然早就引起一些持有异议的西方经济学家的尖锐批评，而且凯恩斯在其1936年出版的《就业、利息和货币通论》一书中专就资本主义社会中经常性失业存在问题进行了阐述，但直到60年代初，西方经济学界关于非均衡的研究仍是局部性的、非系统的。甚至对凯恩斯本人的经济理论的解释，也存在截然不同的观点。占主流地位的凯恩斯理论解释者认为，凯恩斯经济学仍然是一种均衡经济学，凯恩斯只是对瓦尔拉均衡学说作了一定的修改，基本上没有否定它。另一些凯恩斯理论的解释者则认为，凯恩斯经济学已经突破了均衡理论的界限，进行了非均衡理论的最初的、体系性的阐述。这具体表现于：凯恩斯认为市场机制不一定能充分发挥作用，市场

难以把各种交易活动协调起来，无论是产量、就业量还是投资量都是波动的，而在资本主义条件下，经常出现的是生产过剩、失业、投资需求的不足。

非均衡理论从60年代后期起有较大的进展。非均衡的研究表明：在市场不完善和价格不能起到自行调整供求的作用的条件下，各种经济力量将会根据各自的具体情况而被调整到彼此相适应的位置上，并在这个位置上达到均衡。显然，非均衡所达到的均衡，并非市场完善前提下的均衡，而是市场不完善前提下的均衡，并非与零失业率或零通货膨胀率同时存在的均衡，而是伴随着失业或通货膨胀的均衡。换言之，非均衡实际上也是一种均衡，只不过它不是瓦尔拉学说中所论述的那种均衡，而是存在于现实生活中的均衡。这就是非均衡的含义。

如果经济确实处于瓦尔拉均衡状态，那么市场在资源配置中的自我制约作用将是明显的。市场的这种自我制约作用可以顺利地通过每个微观经济单位的利益和预期利益的变化来实现。当微观经济单位认为某种资源投入对自己不利而决定停止资源投入时，这一决定也符合社会资源配置的效率标准。反之，当它认为资源投入有利而增加投入时，它的效率的提高同样有助于社会资源配置效率的提高。可见，只要微观经济单位对利益敏感，资源配置将受到市场价格的制约，资源必将被投入有效的部门、地区和企业，而从无效的部门、地区和企业流出。资源配置过程中的市场自我制约表现为：市场不可能使任何一种无效的资源投入持久化，市场将使资源配置自行符合效率标准。

二、两类不同的微观经济单位和两类不同的非均衡

从以上关于资源配置过程中市场自我制约的分析可以了解到，市场之所以能够在经济运行中对于过度扩张和过度收缩有自行调整和纠正的作用，是同参加市场活动的微观经济单位的充分活力紧密地联系在一起的。经济的均衡状态固然以市场的完善和价格的灵活为前提，但一个更为重要的或更为基本的前提则是微观经济单位的充分活力的存在。

由此可以把微观经济单位分为两类。一类是具有充分活力的微观经济单位，一类是不具有充分活力（直到完全缺乏活力）的微观经济单位。微观经济单位之所以具有充分活力，是因为它自主经营、自负盈亏，能够按照自己的利益进行各种投资机会的选择和生产经营方式的选择，能够按照自己的利益进行税后利润的分配，并且需要自己承担投资

和经营的风险。这样的企业就是独立的商品生产者和经营者，这样的个人就是经济学意义上的、独立参加市场活动的交易者。如果微观经济单位不符合这些条件，它们必然不具有充分活力，直到完全缺乏活力。

在均衡条件下，微观经济单位无疑具有充分活力，并以此为基础形成完善的市场，这一点不必再重复了。这里需要分析的是，在非均衡条件下，微观经济单位是不是必然不具有充分活力呢？为了说明这个问题，有必要把经济的非均衡区分为两类。

第一类经济的非均衡是指：市场不完善、价格不灵活、超额需求或超额供给都是存在的，需求约束或供给约束也都存在着，但参加市场活动的微观经济单位却是自主经营、自负盈亏的独立商品生产者，它们有投资机会和经营方式的自由选择权，它们自行承担投资风险和经营风险。

第二类经济的非均衡是指：除了市场不完善、价格不灵活以外，更重要的是，参加市场活动的微观经济单位并非自主经营、自负盈亏的独立商品生产者，它们不具有投资机会和经营方式的自由选择权，它们也不自行承担投资风险和经营风险。这样的微观经济单位，或者没有摆脱行政机构附属物的地位，或者受到前资本主义关系的严重束缚。

如果经济的非均衡分为这样两类的话，那么可以认为：资本主义经济中所出现的非均衡属于上述第一类经济的非均衡，前资本主义经济中所出现的非均衡属于上述第二类经济的非均衡。至于社会主义经济中的情况，则需要区别对待：在传统的和双轨的经济体制之下，由于企业并没有摆脱行政机构附属物的地位，所以这种非均衡属于上述第二类经济的非均衡；通过经济体制改革，建立了新的经济体制，在这种新体制之下，企业成为自主经营、自负盈亏、有投资和经营的自主权并相应地承担投资风险和经营风险的独立商品生产者了，这时的经济的非均衡，就可以归入上述第一类经济的非均衡。

在第一类经济的非均衡条件下，从微观经济单位本身来看，它们是具有充分活力的，但由于这些具有充分活力的微观经济单位处于经济非均衡的环境之中，它们在不完善的市场上进行交易活动，而价格又不是灵活的，信息也不完备和通畅，这样，即使它们本身具有充分活力，这种活力的发挥却受到环境的限制。例如，价格有刚性，它们就不一定能完全根据价格信号来调整生产；工资有刚性，它们也就不一定能完全根据资源的最优组合方式来配置和组合资源，等等。当然，微观经济单位

有充分活力而这种活力受到环境的限制，同它们不具有充分活力仍是不一样的，这也就是第一类经济的非均衡与第二类经济的非均衡的区别。

三、第一类非均衡条件下市场的自我制约

在均衡条件下，资源配置过程中的市场自我制约之所以能够有效，即市场之所以有可能不让任何一种无效的资源投入持久化，归因于两个条件：第一，市场是完善的，价格是灵活的；第二，微观经济单位能够按照自身的利益进行交易活动。在第一类经济的非均衡状态中，第二个条件已经解决了，因为微观经济单位已经具有充分活力。问题只在于市场不完善，价格不灵活，经济中或者存在着资源供给的约束，或者存在着需求的约束，或者二者同时存在。但应当把微观经济单位具有充分活力这个条件看成比市场完善这个条件更加重要。这是因为，市场的完善和价格的灵活，主要是为商品经济的发展创造一个良好的环境，而让微观经济单位具有充分活力，则是解决市场活动参加者的利益、责任、刺激、动力问题。即使市场完善了，价格灵活了，但如果微观经济单位没有充分活力，不能利用完善的市场和灵活的价格来进行交易，它们缺乏合理组合资源和提高资源利用效率的主动性、积极性，又不承担资源配置不当所造成的经济损失，那么市场在资源配置过程中的自我制约作用也就非常有限。

这意味着第一类经济的非均衡具有使市场自我制约的两个条件中的一个较重要的条件，即微观经济单位具有充分活力。这对于市场在资源配置中的自我制约作用的发挥是有利的。

这时，尽管市场还不完善、价格还不灵活、资源供给约束或需求约束还存在，但由于微观经济单位能够根据自己的利益来从事交易，它们从本能上不会把资源投入无效的经济活动中去，也会拒绝无效的、促成效率下降的资源组合和利用方式。因此，市场在资源配置过程中实际上仍然按照效率标准来调整资源的投向和资源的组合，避免出现无效资源投入的持久化。

然而，即使是第一类非均衡，它仍是一种非均衡，这时的资源投入毕竟不同于均衡条件下的情况。第一类非均衡对于微观经济单位的交易活动和资源利用方式的影响，主要表现于以下三个方面：

第一，在市场不完善、信息不完备和不畅通的条件下，微观经济单位在市场上得不到足够的、及时的信息，甚至它们得到的信息中有不少是不正确的信息。这些微观经济单位不得不在有限的信息、甚至错误的信息的指引下资源投入和组合的决策，其结果，很可能给经济带来较低的效率，并且使社会的资源配置不符合效率标准。

第二，在价格不灵活，即存在着价格刚性的条件下，微观经济单位的资源配置的调整要受到限制。这是因为，价格刚性并不能反映资源的稀缺程度和资源投入的效果，微观经济单位在组合资源时，不可能按照最优的方式来选择所需的资源。如果各个微观经济单位在价格刚性条件下不能从优化资源组合的角度来利用资源，那么就全社会的范围而言，资源配置过程中的浪费或闲置是不可避免的。

第三，由于资源供给约束和需求约束的存在，在供求不能平衡的场合要按照短线来配置资源。对微观经济单位来说，实际上是意味着竞争的加剧，即在供给约束的场合，微观经济单位作为需求一方，面临着货源有限的问题，从而不得不为获得供给而投入更多的力量；而在需求约束的场合，微观经济单位作为供给一方，面临着市场有限的问题，从而不得不为实现自己的销售而投入更多的力量。

微观经济单位在供给约束和需求约束的场合，为争取货源和销路而投入的更多的力量，对社会而言，就是资源的超正常的使用，即资源的使用量要大于均衡条件下的情况，对资源的超正常使用，应当被看成是资源配置不当的一种表现。

第一类非均衡对于微观经济单位的交易活动和资源利用方式的上述影响，反映了市场的自我制约作用在第一类非均衡条件下虽然存在，但却受到了限制。

四、第二类非均衡条件下市场的自我制约

资源配置过程中市场自我制约取得效果的两个条件（市场完善和价格灵活，微观经济单位有充分活力），在第二类经济的非均衡状态中都不存在。这样，资源配置过程中的市场自我制约作用就受到了很大的限制。对市场自我制约作用所受到的限制，可以从以下两方面来进行分析：

一方面，微观经济单位之所以缺乏活力，主要是由于它并未成为真

正的利益主体，生产经营的成果同它的利益没有直接的、必然的联系，它也不为生产经营的失误或投资的失误而承担应有的经济损失。这样，微观经济单位既缺少动力和刺激，又缺少压力 and 责任感。明明是有利于自身经济利益的、从而也是有利于社会资源配置效率提高的，微观经济单位可能无动于衷，不屑去做；明明是不利于自身经济利益的、从而也是造成社会资源配置效率下降的，微观经济单位可能照常去做，甚至乐意去做。市场的自我制约作用在微观经济单位这种对资源配置的效率麻木不仁的态度面前显得无能为力，因此也就谈不到如何以效率标准来制约对资源的投入和利用。

另一方面，微观经济单位之所以缺乏活力，并不仅仅由于它对生产经营中的利益与损失关心不够或不予关心，而是由于它的一切生产经营都要受到行政部门的限制，微观经济单位必须按行政部门的命令行事。因此，即使某些微观经济单位关心生产经营的利益与损失，并且希望按照利益原则来调整自己的资源投向和资源使用方式，但它们作为行政机构附属物的地位决定了它们难以按照自己的意愿和利益原则去做。于是资源配置中市场的自我制约作用就无从发挥；哪怕资源配置再不合理，效率再低，市场也难以纠正。

以上两个方面充分说明，在第二类非均衡条件下，实际上很难使市场在资源配置过程中发挥其应有的自我制约作用。这正是第二类经济的非均衡与第一类经济的非均衡的显著区别。如果说在第一类非均衡条件下，资源配置过程中的市场自我制约作用虽然受到一定的限制，但毕竟存在并起作用的话，那么在第二类非均衡条件下，在资源配置过程中，市场机制几乎发挥不了它应有的制约无效投入的作用。比如说，如果资源投入不多，资源组合形式不合理，资源使用的效率下降等情况发生了，市场不可能纠正它们；或者，即使市场会发出警告的信号（某些资源供求缺口的扩大、社会的经济效益的降低、价格的较大幅度变动等等），但微观经济单位接收不到这些信号，或在收到信号之后不可能调整自己的资源投向和资源组合形式，甚至不愿意调整自己的资源投向和资源组合形式。资源配置失调的状况将延续下去，并且越来越严重。那么，最终的结果又将是什么呢？不外乎以下三种情况中的一种：

第一种情况——由于资源配置失调的日趋严重而导致的经济恶化，迫使政府采取非经济的手段来干预经济，扭转资源配置的失调现象。这是一种非市场的制约方式，在第二类非均衡经济中，这种方式的干预（通常被称为“纠偏”、“政策调整”，等等）屡见不鲜。需要指出的是，

这里所提到的政府，是指最高决策当局而言。只有在最高决策当局觉察到资源配置失调问题的严重性并且下决心“纠偏”、“调整政策”之后，这种非市场的扭转资源配置失调的方式才有可能被运用。

从时间上看，等到最高决策当局觉察到问题的严重性并且下决心“纠偏”、“调整政策”，肯定已有较大的“滞后”，这给经济造成的损失也肯定是相当大的。

问题还在于最高决策当局如何“纠偏”。只有在最高决策当局真正认识到资源配置失调现象的产生及其日益严重的原因在于第二类经济的非均衡（即市场不完善、价格不灵活和微观经济单位缺乏充分活力），并且决心从消除第二类非均衡的措施着手时，这种“纠偏”才能取得真正的效果。否则，如果最高决策当局只是想用某种非经济的干预方式来扭转资源配置失调状况，而又继续保持第二类非均衡经济，那么至多只能暂时缓和一下资源供求的紧张状态，而使得资源配置失调的问题持久化、复杂化，以至于不得不在间隔一段时间之后，再次“纠偏”，再次“调整政策”。不仅如此，最终的结果必定是：问题越积越多，阻力越来越大，“纠偏”越来越困难，“纠偏”所取得的效果也越来越差。

第二种情况——在资源配置失调日趋严重和由此引起的经济恶化的情况下，政府不采取非经济的手段来干预经济，即政府不准备着手扭转资源配置的失调现象。那么这种情况的继续发展，可能带来如下的结果：问题越积越多，当问题积累到一定程度以后，资源供求之间的矛盾充分暴露出来。这时，不仅经济中出现“滞”、“胀”或“滞胀”现象，而且严重的“滞”、“胀”或“滞胀”现象可能使经济处于濒临瘫痪的境地。到了这种场合，也只有到了这种场合，市场在资源配置过程中的自我制约作用才会比较明显地表现出来，这是指：经济的混乱和经济濒临于瘫痪的状况将迫使微观经济单位自谋出路，于是本来缺乏充分活力的微观经济单位在极度困难和几乎绝望的条件下，不得不为了自身的利益（甚至是为了本单位职工的利益），自行通过交易活动而谋求出路。

在第二类非均衡的经济中，这时所出现的微观经济单位之间为自身利益而进行的交易活动，有不少属于地下交易活动。也就是说，地下市场这时将迅速发展起来，地下市场可能使一些微观经济单位为了进行有利于自己的交易而付出昂贵得多的代价，还可能使资源配置的方向进一步扭转。但不管怎样，地下市场毕竟是一种“市场”。在这种“市场”上，供求双方的交易可能摆脱非经济因素的某些干扰，而由商品的稀缺程度以及由此决定的价格（类似于不完全竞争价格）来影响供求双方的交

易。市场在资源配置过程中的自我制约作用，在这种“市场”上反而能够表现出来，使供求双方在双方都能接受的条件下成交。地下市场的活动在这种情况下多多少少起着缓解经济困境的作用，使资源配置的失调不至于严重到使整个经济陷于解体的地步。尽管这一切是带有讽刺意味的，但在第二类非均衡的经济中，这种现象却是有可能发生的。

第三种情况——在资源配置失调日趋严重和由此引起的经济恶化的情况下，政府认识到问题的根源在于经济的非均衡，而且认识到经济的非均衡不仅表现于市场的不完善，更重要的是表现于微观经济单位缺少活力，于是政府着手进行经济体制改革，从增加微观经济单位的活力和逐步使市场完善方面采取相应的措施；同时，在经济体制改革过程中，在宏观经济调节方面也采取一些措施，使政府调节与市场调节较好地结合起来，争取缓和资源配置中的矛盾，使社会的资源投向和资源组合逐渐趋于合理。

毫无疑问，第三种情况的出现并不是很容易的。当经济处于第二类非均衡状态之中时，经济的运动有一种惯性，使最终结果更接近于上述第一种情况。至于第二种情况，通常不是第二类经济的非均衡条件下政府所希望出现的，而很可能是在政府干预无效，对经济的混乱找不到有效的对策时，经济自发地趋向的结果。同时，如果经济趋向第二种情况，那么这也很可能是由于政府既在资源配置严重失调面前无能为力，而又对地下交易活动无能为力的缘故。但第三种情况的出现却需要有一系列前提：

首先，资源配置的严重失调和经济的恶化使政府认识到经济体制改革的必要性，特别是认识到通过经济体制改革，使微观经济单位具有充分活力的必要性。

其次，政府在经济体制改革方面采取了一些有效的措施，使微观经济单位逐渐摆脱原来的作为行政机构附属物的地位，有了内在的动力和外部的压力，关心自己的利益与损失。

再次，与此同时，政府采取适当的宏观经济调节措施，使资源配置的失调状况趋于缓解，使市场的自我制约的作用逐渐发挥出来。

最后，在经济体制改革和政府经济调节都取得成效的基础上，经济中逐渐形成了由市场调节与政府调节共同组成的二元机制，在二元机制起作用的情况下，资源配置状况将会逐渐好转。

可见，这一系列前提中的任何一个前提，都不是轻易能实现的。但在第二类经济的非均衡条件下，如果说资源配置的严重失调最终有三种可能的结果的话，那么惟有第三种结果才值得争取实现。而一旦实现了第三种情况，第二类经济的非均衡就转变为第一类经济的非均衡。如果说经济的均衡缺乏现实性，那么从第二类经济的非均衡过渡到第一类经济的非均衡，即第一类经济的非均衡的实现，仍不失为一种次优的选择。

五、第一类非均衡条件下二元机制可能引起的摩擦

在经济运行过程中，市场机制和政府调节机制在某些场合可以保持协调，而在另一些场合，两种机制之间的不协调可能是难以避免的。

为什么在经济运行过程中二元机制的并存可能引起摩擦，这是一个与经济的非均衡状态有关的问题。考虑到经济的非均衡可以区分为第一类非均衡和第二类非均衡，因此在分析二元机制可能引起的摩擦问题时，也要从两类经济非均衡的特点着手。现在先考虑第一类非均衡条件下的情况。

第一类非均衡条件下市场机制与政府调节机制的不协调，主要表现为以下两个方面：

第一，在第一类非均衡条件下，如果经济中同时存在着市场调节和政府调节，并且市场调节作为基础性的调节起作用，政府调节作为高层次的调节起作用，那么两种机制之间可能出现如下的摩擦，即在经济中出现供给小于需求或供给大于需求时，由于市场不完善，所以价格上升或下降以后，货源缺口或市场缺口只是略有缓和，价格的变动不能完全符合市场调节的意图；假定这时进行政府调节，政府采取措施以弥补市场调节的不足，但政府的调节措施却可能同市场调节的意图相违背，这样，尽管货源缺口或市场缺口被消除了，但市场机制却遭到破坏。这就是两种机制的摩擦。换言之，在这种情况下，政府调节机制是以市场机制遭到破坏（至少是一定程度的破坏）作为代价而发挥作用的。

怎样看待两种机制之间的这种不协调或摩擦呢？这只有从调节的效果来评价。市场机制遭到破坏，哪怕只是一定程度的破坏，是不是必要？是不是值得？当然，最好是在不破坏市场机制的情况下，通过政府调节而消除经济中所出现的供给小于需求或供给大于需求的现象，如果

那样，两种机制就协调了，就没有什么摩擦了，但现实情况不一定如此。所以说，两种机制之间的不协调以及由此而造成的政府调节对市场机制的某种程度的破坏，只有从调节的效果来评价，才能判断这样做是不是必要，是不是值得。但不管怎样，两种机制的摩擦仍是可能出现的。

第二，与上述情况相反，市场机制的作用的发挥在第一类非均衡条件下也有可能限制政府调节机制发挥其应有的作用。这也是同市场的不完善、信息的不完整和不及时、价格不能起充分调节供求的作用以及资源供给约束或需求约束的存在直接有关的。比如说，在政府采取某些措施对资源的配置进行调节的场合，由于市场不完善、信息不完整和不及时等原因，政府的调节措施不一定能达到预期的效果，在这里，市场调节对政府调节的限制也起着一定的作用。这是因为，政府通过自己的调节措施，把调节后的利益和损失等信息传递给参加市场活动的各个交易者，指望后者根据自己的利益原则来调整自己的资源组合方式和资源投向，而市场本身也从自己的渠道把利益和损失等信息传递给参加市场活动的各个交易者。信息的传递渠道不一致，信息又不是完整的和及时的，这样，市场机制的作用既可能同政府调节的意图相吻合（这当然是理想的），也可能成为对政府调节的一种干扰，从而成为对政府调节作用的一种限制。这同样是资源配置过程中或经济运行过程中两种机制之间的不协调或摩擦的反映。

总之，在第一类非均衡条件下，只要市场机制与政府调节机制并存，那么两种机制就有可能处于不协调状态，它们的摩擦的产生是可能的，有时甚至是难以避免的。

六、第二类非均衡条件下二元机制可能引起的摩擦

第二类非均衡经济的非均衡程度与第一类非均衡条件下的情况相比，是加重了，于是市场机制和政府调节机制共存可能引起的摩擦将大于第一类非均衡条件下可能引起的摩擦。这可以从以下三方面来说明。

第一，由于企业不是独立的商品生产者，企业没有摆脱行政机构附属物的地位，所以要使企业按照市场的利益原则进行生产经营和资源投入，是有阻碍的。企业经营的好坏缺乏市场评价标准的结果，必然导致企业效率低下。这时，无论政府进行什么样的经济调节，都难以达到政府调节预定的效果，主要原因就在于在企业缺乏独立商品生产者地位的

前提下，市场机制本身是扭曲的，政府调节与这种扭曲的市场机制之间的矛盾也就不可避免。

第二，不仅如此，假定企业没有摆脱行政机构附属物的地位，政府对企业的利益状况是缺乏了解的，政府所进行的各种经济调节很难建立在合理的基础之上，这样，政府所进行的经济调节也可能是一种扭曲的调节。扭曲了的政府调节与扭曲了的市场机制之间很难协调，这又是造成两种机制的摩擦的原因之一。

第三，假定在第二类非均衡条件下发生了与资源供给约束和需求约束有关的货源缺口和市场缺口，那么这与第一类非均衡条件下所发生的货源缺口和市场缺口有什么区别呢？在第一类非均衡条件下，这些缺口依靠按市场的优先原则、垄断原则等进行的不完全竞争下的交易来实现配额均衡，或者依靠按政府的平均原则、目标原则、历史原则等进行的不完全竞争下的交易来实现配额均衡。不管市场机制与政府调节机制之间存在着什么样的摩擦，只要进行不完全竞争下的交易活动，配额均衡仍是可能实现的。但在第二类非均衡条件下，情况会有所变化。这是因为，企业不是独立的商品生产者，它们不能根据自身的经济利益来组合资源和投入资源。于是市场的优先原则也好，垄断原则也好，或者政府的平均原则、目标原则、历史原则也好，在企业缺乏独立经济利益和不能按自己经济利益进行交易活动的场合，这些原则全都会被扭曲，而与它们本来的含义有较大出入。不完全竞争下的交易未必能实现配额均衡，从而货源缺口或市场缺口可能维持原状，甚至还会有所加剧。于是市场机制与政府调节机制之间的摩擦就会大于第一类非均衡条件下两种机制可能引起的摩擦。

七、第二类非均衡经济运行分析的意义

通过以上的分析可以清楚地了解到，无论是在第一类非均衡条件下还是在第二类非均衡条件下，在某些场合，经济运行过程中市场机制与政府调节机制之间的摩擦是不可避免的。这可以看成是二元机制的局限性。

经济运行过程中两种机制之间存在着不同程度的摩擦这一事实，实际上也只能说明二元机制的局限性，说明在非均衡条件下经济运行过程不可能尽善尽美。但这并不能证明二元机制是不必要的。

要知道，如果经济处于均衡状态之中，过度需求和过度供给都不存在，那就不需要二元机制。但正如我们都已经了解的，经济的均衡状态只是纯理论的假设，现实经济中存在着的是经济的非均衡状态（第一类非均衡或第二类非均衡）。二元机制不是我们主观愿望能决定其存在与否的，而是客观上必然存在的经济运行机制。在非均衡条件下，只有通过二元机制的发挥，才能在资源供给约束或需求约束存在（即货源缺口或市场缺口存在的场合，通过不完全竞争下的交易来实现配额均衡。因此，即使市场机制与政府调节机制之间的摩擦不可避免，只要二元机制正常地发挥作用，一般说来，社会主义商品经济的发展是不会受到严重阻碍的。当然，第一类非均衡条件下的经济运行要比第二类非均衡条件下的经济运行顺利得多；在第二类非均衡条件下，如果不善于处理二元机制之间的摩擦，使这种摩擦加剧，那么社会主义商品经济的发展必将受到严重阻碍。这就进一步说明了社会主义经济体制改革对于经济发展的迫切意义，说明了社会主义企业具有充分活力对于经济顺利运行的迫切意义。换言之，经济的非均衡程度越轻，两种机制之间的摩擦就越小，但只要存在经济的非均衡，这种摩擦即使无碍于经济发展和经济运行，也是不可忽略的。认识到它的存在，采取措施去缓和它，就可以减少它的消极作用。

总之，通过对两种类型的非均衡经济以及经济运行中二元机制的摩擦问题的分析，可以得出以下三点有关我国当前经济体制改革的论断。

第一，要认识到当前我国经济并非处于以市场不完善为主要特征的第一类非均衡状态中，而是处于以市场不完善和企业不具有充分活力为主要特征的第二类非均衡状态中。因此，经济体制改革必须以企业体制改革为主线，即以赋予企业充分活力的改革作为首要任务，并通过这一改革，使我国经济由第二类非均衡状态过渡到第一类非均衡状态。在不可能达到均衡状态的前提下，过渡到第一类非均衡状态是可行的、值得的。

第二，假定不以企业体制改革为当前我国经济体制改革的主线，总想在企业尚未具有充分活力的第二类非均衡条件下就进行完善市场和放开价格的改革，不仅不能收到良好的效果，反而会使经济恶化，使资源配置的失调状况加剧。理由是十分清楚的。正如前面所述，在第二类非均衡条件下，政府调节与市场调节之间存在尖锐的摩擦；扭曲了的政府调节和扭曲了的 market 调节交织在一起，将使经济的效率进一步降低。

第三，根据经济的非均衡性质，特别是根据第二类经济非均衡的特

点，在当前我国经济体制改革中，宏观经济管理体制改革的重点应当放在促进市场对资源配置的自我制约作用方面，以及缓和经济运行过程中市场调节与政府调节的摩擦方面。如果不是循着这些方面进行宏观经济管理体制的改革，结果必然会阻碍我国经济由第二类非均衡向第一类非均衡的过渡，必然会扩大经济中的货源缺口或市场缺口。这是因为，在企业尚未实现自主经营、自负盈亏的场合，政府调节在消除货源缺口或市场缺口方面发挥作用的机制是受限制的：既然作为交易者的企业不可能按照自己的利益原则来调整自己的供给与需求，政府所希望达到的配额均衡也就难以实现。政府的经济管理措施如果不利于调动企业经营的主动性、积极性，不利于引导企业根据自己的利益来自行调整供给与需求，而只是单纯地用紧缩需求的方式来缩小货源缺口，或者只是单纯地用直接投入和直接分配的方式来实现供求的暂时平衡，那么我国的经济将会持续停留在极不合理的第二类非均衡状态之中。

（原载《经济研究参考资料》，1988年第128期）

Two types of disequilibrium, mainstream of current economic restructuring (1988)

I. Differences of resource allocation in equilibrium and disequilibrium

In economics, disequilibrium is pertinent to Walrasian equilibrium. The latter is achieved under the assumption of a complete market and a flexible price system. Disequilibrium, which is a kind of equilibrium arrived at in the absence of a complete market and a flexible price system, is also dubbed "non-Walrasian equilibrium."

According to the theory of French economist Léon Walras (1834-1910), given that the market is complete and the price system flexible, given also that traders possess full information and prices adjust instantaneously with changes in supply and demand, then under a given price condition aggregate demand must equal aggregate supply, excess demand and excess supply do not exist, and the settlement of every transaction is guaranteed by an equilibrium price. No deals will be reached before equilibrium price is attained; only with equilibrium price can transactions take place. According to this theory, overproduction, unsalable products, chronic unemployment, and inflation associated with excess demand will never happen.

The analysis of Walrasian equilibrium, alien to economic reality, had long drawn acute criticism from dissentient Western economists. In *The General Theory of Employment, Interest, and Money* published in 1936, John Maynard Keynes (1883-1946) went out of his way to dissect the unemployment and other perennial problems in capitalist society. Nevertheless, up till the early 1960s Western economists' study of disequilibrium was partial and unsystematic at best. Their

interpretations of Keynesian economic theory were categorically divided as well. Mainstream Keynes followers believe that Keynesian economics is still a theory based on equilibrium and that Keynes did not negate the Walrasian equilibrium theory despite the fact that he somewhat amended it. Some other interpreters maintain that Keynesian economics broke through the limits of the equilibrium theory and provided initial but systematic pronouncements on the disequilibrium theory. They back their argument by citing Keynes's belief that market mechanisms are not necessarily effective, and that market alone cannot totally coordinate trading activities, with the result that output, levels of employment and investment are subject to fluctuations, whereas overproduction, unemployment, and insufficient investment demand are commonplace under capitalism.

The disequilibrium theory has made substantial headway since the late 1960s. Studies of disequilibrium have indicated that under the condition of an incomplete market where prices fail to adjust demand and supply, economic forces will proceed from their respective circumstances to adjust themselves to the point where they are well adapted to each other and where equilibrium is achieved. Obviously, the equilibrium achieved by way of disequilibrium is not the equilibrium in a complete market but in an incomplete market; it is not the kind of equilibrium with zero unemployment and zero inflation rates, but with both unemployment and inflation in presence. In other words, disequilibrium is actually a form of equilibrium; but unlike the kind of equilibrium described in the Walrasian theory, it is the kind of equilibrium that exists in reality. Such is the connotation of disequilibrium.

If an economy is exactly in Walrasian equilibrium, the market will be highly self-restraining in resource allocation. The market's self-restraining role can be fulfilled smoothly through the changes in the actual and expected benefits of every microeconomic agent. When a microeconomic agent believes that a certain resource input will bring no benefit and decides to stop it, this microeconomic decision also measures up to the efficiency standard of society's resource allocation.

If, on the contrary, the agent believes that a certain resource input is beneficial to itself and decides to increase it, its improved efficiency will also help boost social efficiency in resource allocation. Therefore, so long as the agent is sensitive to its own interests, its resource allocation will be adapted to market prices, and resources are bound to be channeled into efficient sectors, localities and enterprises and withdrawn from inefficient sectors, localities and enterprises. The market's self-restraining function in the process of resource allocation manifests itself in that it does not allow any ineffective resource input to last and enables resource allocation to automatically measure up to efficiency standards.

II. Two types of microeconomic agents and two types of disequilibrium

As my analysis of the market's self-restraining role in resource allocation indicates, the ability of the market to adjust and rectify excessive expansions and recessions in economic practice is closely tied with the full vitality of microeconomic agents participating in market activity. Economic equilibrium is certainly on the premise of complete market and flexible prices, but the vitality on the part of microeconomic agents is a more important and fundamental prerequisite.

Thus microeconomic agents can be divided into two categories: those with full vitality, and those without full vitality or totally lacking it. A microeconomic agent can be brimming with vitality because it makes its own business decisions and takes full responsibility for its gains and losses. Such a firm can choose the best investment opportunities and patterns of production and management, distribute its after-tax profit according to its own interests, and take investment and management risks on its own. Such a firm is an independent commodity producer and manager. Such an individual, in economic terms, is a trader that takes part in market activity independently. Any microeconomic agent that does not have these attributes invariably lacks full vitality or lacks it totally.

In equilibrium, microeconomic agents are certainly brimming with vitality and, on this basis, form a complete market. This point need not be repeated here. What I want to find out is this: Is it true that microeconomic agents invariably lack full competitive vigor under economic disequilibrium? To find the answer, it is necessary to divide economic disequilibrium into two categories.

Economic disequilibrium in the first category is marked by an incomplete market, inflexible prices, presence of both excess demand and excess supply, and restraints on both demand and supply, while microeconomic agents in the market are independent commodity producers that make their own business decisions and take responsibility for their gains and losses, and that have the freedom to choose their investment opportunities and modes of management and bear investment and business risks.

Economic disequilibrium in the second category is characterized by an incomplete market and inflexible prices, and more importantly, by a market filled with microeconomic agents that, instead of being independent commodity producers making their own business decisions and bearing their own gains and losses, neither have the freedom to choose investment opportunities and management modes nor bear the responsibility for investment and management risks. Such microeconomic agents have not shaken off their status as government subsidiaries or are bound hand and foot by their pre-capitalist ties.

If my division of economic disequilibrium stands, there is reason to believe that the disequilibrium in a capitalist economy belongs in the first category and that the disequilibrium in a pre-capitalist economy belongs in the second category. What happens in a socialist economy should be treated differently. Disequilibrium under a traditional and dual-track economic system falls into the second category because its enterprises have yet to shake off their status as government subsidiaries. Under the new economic system born of economic reform, enterprises become independent commodity producers that make their own investment and business decisions, and are liable for their gains, losses as well as investment and business

risks. Thus the disequilibrium in the new economic system falls into the first category.

In the first category of disequilibrium, microeconomic agents are full of vitality. However, these microeconomic agents are in an economic disequilibrium. They make transactions in incomplete markets where prices are inflexible and information is incomplete and congested. Therefore, such vitality is limited by this environment. For instance, price rigidity makes it hard for these agents to adjust production in response to price signals, and wage rigidity also prevents them from optimizing their resource allocations. However, a microeconomic agent that has full vitality but is circumscribed by its environment is very different from a microeconomic agent that lacks full vitality. This is exactly the difference between the first and second categories of disequilibrium.

III. The market's self-restraint role in the first category of disequilibrium

The self-restraining role of the market in resource allocation can work effectively under economic equilibrium, that is, it may prevent any ineffective resource input from becoming protracted under two conditions. Firstly, the market is perfect and prices are flexible; and secondly, microeconomic agents can transact according to their own interests. The first category of disequilibrium furnishes the second condition because microeconomic units are already brimming with vitality. Its only problems are incomplete markets, inflexible prices, and an economy in which restraints exist on resource supply and demand. However, we ought to regard microeconomic agents having full vitality as a more important condition than having a complete market. This is because a complete market and flexible prices serve mainly to provide a friendly environment for the development of a commodity economy, whereas encouraging microeconomic units to regain their competitive edge helps solve problems in market participants' interests, responsibilities, incentives and motivations. Even when market is complete and prices are flexible, its self-

restraining role in resource allocations will be sharply limited if microeconomic agents do not have full vitality, cannot take advantage of complete market and flexible prices to make transactions, lack aggressiveness and enthusiasm to sensibly allocate resources and raise their resource utilization rate, and cannot bear the economic losses incurred from improper resource allocations.

All this indicates that the first category of economic disequilibrium possesses the more important one of the two conditions that enables the market to play its self-restraining role, that is, the existence of microeconomic agents with full vitality. This condition is beneficial for the market to fully play its self-restraining role. Because these

kinds of microeconomic agents can act in their own interests to make deals, their instinct can prevent them from putting their resources into ineffective economic activity and enable them to refuse ineffective, efficiency-reducing approaches of allocating and utilizing resources. Consequently, even though the market is still incomplete and prices are inflexible, and even though there are still restraints on resource supply or demand, in the process of resource allocations, the market can still follow the efficiency standard to adjust the allocations and combinations of resources, thereby avoiding protracted ineffective resource input.

Nevertheless, the first category of disequilibrium is still a kind of disequilibrium, under which resource input is still different from that under equilibrium. The impact of this category of disequilibrium on microeconomic agents' market transactions and patterns of utilizing resources manifests itself in three ways:

First, with an incomplete market and imperfect and frictional information access, microeconomic agents cannot obtain adequate and timely information, and a lot of information they have obtained is incorrect. However, they have no alternative but to make resource input and combination decisions under the guidance of such limited or even erroneous information. This is likely to bring low economic efficiency and cause resources to be allocated in violation of efficiency

standards.

Second, with inflexible or rigid prices, the adjustments of resource allocation by microeconomic agents will be restrained. This is because price rigidity cannot reflect the degree of resource scarcity and the results of resource input and, therefore, they find it hard to optimize their choices of needed resources. If, under rigid prices, the microeconomic agents are unable to follow optimized resource allocation approaches, the waste or idling of resources in allocation processes can hardly be avoided.

Third, because of the restraints on supply and demand, resources are allocated on a short-term basis where demand and supply are unbalanced. This entails tougher competition for microeconomic agents. In the case of supply restraints, the microeconomic agents on the demand side face the problem of limited supply sources and have to input more to secure supply. By the same token, in the case of demand restraints, the agents on the supply side face the problem of a limited market and have to input more to reach their sales goals.

The extra resources spent by these agents for either supply or sales purposes are a manifestation of an abuse of social resources, which means more resources have been consumed than economic equilibrium allows. This is a clear example of improper resource allocation.

The above-mentioned impacts of the first category of disequilibrium on microeconomic agents' transactions and utilization of resources indicate that, even though the market can still play its self-restraining role, its effectiveness is whittled down.

IV. The market's self-restraining role in the second category of disequilibrium

The two conditions – a complete market with flexible prices and full vitality of microeconomic agents – for the market to play its self-restraining role effectively in resource allocation are absent in the second category of disequilibrium. Thus the market's self-restraining

role is greatly restricted in the process of resource allocation. This may be analyzed in two ways.

On one hand, the reason why microeconomic agents lack vitality is that they have not truly become masters of their own interests, that the fruits of their production are not directly and inevitably related to their interests, and that they are not held accountable for the economic losses resulting from their production, management or investment mistakes. In this way, they lack not only motivation and stimulus but also pressure and a sense of responsibility. They may become indifferent to opportunities that are obviously in their economic interests and help elevate their resource allocation efficiency. But at the same time they may willingly do things that are apparently detrimental to their own economic interests and that may aggravate their inefficiency in resource allocation. The market's self-restraining role is rendered ineffective when microeconomic agents are callous about boosting resource allocation efficiency, to say nothing of following efficiency standards to control the input and utilization of resources.

On the other hand, the reason why microeconomic agents lack vitality is not only that they do not care enough – or do not care at all – about their gains and losses in production and management, but also that their performance in production and business is subject to restrictions imposed by government departments – they have to do the government's bidding. For this reason, even if microeconomic agents care for their gains and losses in production and management and wish to readjust their input and use of resources, their status as government subsidiaries determines that they can not follow their own will, interests and principles. The market is thus stripped of its self-restraining role in resource allocation; there is nothing it can do no matter how unreasonably resources are allocated and how gravely efficiency is impaired.

The above analysis testifies that in the second category of economic disequilibrium, it is hard for the market to play a proper self-restraining role in resource allocation. This is exactly where the

significant difference between the first and second categories of economic disequilibrium rests. In the first category of disequilibrium, the market's self-restraining role still works despite the constraints on it. By contrast, in the second category of disequilibrium, the market's restraints on ineffective resource input can hardly be made to work. Therefore, if efficiency in resource utilization declines due to insufficient resource input or inappropriate resource combinations, the market is unlikely to rectify it. Even if the market can send a warning signal about the widening gap between the demand for and supply of a certain resource, or about a drop in economic efficiency or a large price fluctuation, microeconomic agents are unable to receive it. Even if they can receive it, they cannot – or do not want – to adjust the destinations or combinations of their resource input. Maladjustment in resource allocation will thus prevail, and grow from bad to worse, with one of the following three possible outcomes.

Possibility One: The economic disarray caused by increasingly disproportionate resource allocation forces the government to intervene with noneconomic means in an attempt to rectify it. Such nonmarket intervention, usually known as "rectification" or "policy readjustment," is not uncommon in the second category of disequilibrium. It should be noted that the government in this context refers to the supreme decision-making echelon. Only when this echelon has sensed the serious nature of such disproportionate resource allocation and resolves to "rectify" it or "readjust" its policy, can such noneconomic means of intervention be applied.

However, by the time the supreme power has discovered the seriousness of the problem and resolves to do something about it, a lot of time has been wasted, and the delay inevitably causes considerable economic losses.

The issue, however, comes down to how the supreme policy-making echelon "rectifies" the situation. Only when the policy-makers have fully realized that the emergence and aggravation of disproportionate resource allocation are caused by the second category of economic disequilibrium (that is, incomplete market,

inflexible prices and microeconomic agents lacking vitality), and only when they are determined to eradicate this category of disequilibrium, can the "rectification" effort reap real results. If the decision-makers' desire is to reverse the disproportionate resource allocation by noneconomic intervention while leaving this kind of disequilibrium intact, the strains on resource demand and supply can only be relaxed temporarily at best, and the disproportionate resource allocation will become so protracted and complicated as to involve another round of "rectification" or "policy readjustment" after a certain interval. The ultimate result is that unsolved problems grow in number, obstruction become more and more stubborn, the "rectification" effort becomes more and more difficult, and the situation goes from bad to worse.

Possibility Two: When disproportionate resource allocation occurs incessantly and hurts the economy badly, while the government decides not to intervene with noneconomic means, which means it will not work to reverse the disproportionate resource allocation, the situation will keep worsening. When the problems have accumulated to a point where the conflict between resource demand and supply comes to a head, the economy will suffer from "stagnation," "inflation," or "stagflation," and, in the worst scenario, be pushed to the brink of collapse. Only then can the market's self-restraining role in resource allocation come into play. That is, when the economy is teetering on the verge of collapse, microeconomic agents will be forced to seek a way out. Confronted with a difficult and almost hopeless situation, they have no alternative but to seek a solution on their own through transactions that serve their own interests (or the interests of their workforce).

In this situation, many trading activities between microeconomic agents for their own interests are underground in the second category of disequilibrium. The rapid rise of such an underground market may force those microeconomic agents to pay more dearly for closing deals to their advantage, thus further changing the direction of resource allocation. Nevertheless, the underground market is still a kind of market, where sellers and buyers may bypass the intervention by

noneconomic factors and allow transactions to be impacted by the scarcity of commodities and the prices determined by this scarcity (similar to the prices under incomplete competition). Under these circumstances, the market's self-restraining role in resource allocation can work so that sellers and buyers can reach deals under mutually acceptable conditions. In this way, the underground market contributes more or less to alleviating the difficult economic conditions and preventing disproportionate resource allocation from causing a total economic collapse. This seems ironical, but is most likely to happen in the second category of disequilibrium.

Possibility Three: When resource allocation grows increasingly more disproportionate and leads to economic deterioration, the government realizes that the problem is caused by economic disequilibrium and that such disequilibrium manifests itself not just in market incompleteness but, more importantly, in a lack of vitality among microeconomic agents. Thus the government sets about overhauling the economy institutions while taking steps to revitalize these microeconomic agents and gradually improve market completeness. Meantime, in this reform process, the government also adopts macroeconomic regulatory steps, coordinates these steps with market regulations, and strives to ease the strains on resource allocation, thereby directing and combining social resources more appropriately.

Possibility Three is undoubtedly the least probable. When the economy is in the second category of disequilibrium, there is inertia in the economy that will push it closer to Possibility One. Possibility Two is usually not what the government hopes for in the second category of disequilibrium, but it is very probably the economy's spontaneous reaction when government intervention fails and there are no effective methods to control economic chaos. Meanwhile, if the economy moves towards Possibility Two, this may also be caused by the government's ineffectiveness in dealing with severe disproportion of resource allocation and underground trading activity. Possibility Three, however, may become reality only when:

- severely disproportionate resource allocation and economic aggravation awaken the government to the necessity of economic restructuring, especially the need to revive microeconomic agents through such restructuring;

- microeconomic agents, while gradually putting an end to their status as government appendages thanks to the government's effective economic restructuring steps, become motivated to care more about their own gains and losses in response to internal incentive and external pressure;

- at the same time, with the adoption of appropriate macroeconomic regulatory measures by the government, disproportionate resource allocation has been alleviated and the market's self-restraining role has been brought into play;

- and finally, on the basis of results achieved by the government in economic restructuring and regulation, the economy has come under the dual regulation of the market and government, causing a gradual improvement in resource allocation.

Obviously, none of these preconditions can materialize easily. However, under the second category of disequilibrium, of the aforementioned three possible outcomes of lopsided resource allocation, only Possibility Three is worth striving for. If Possibility Three becomes the reality, the second category of disequilibrium will be converted into the first category of disequilibrium. If economic equilibrium is an unrealistic proposition, to convert the second category of disequilibrium into the first category is nothing short of a second best choice.

V. Possible friction between dual mechanisms in the first category of disequilibrium

Market and government mechanisms may work in accord on one occasion and fall into disarray on another in the course of economic development. Inconsistency between the two may well be unavoidable.

The friction that may arise between the dual mechanisms is an issue pertinent to economic disequilibrium. Given the fact that disequilibrium falls into two categories, we should bear each category's attributes in mind when looking into such possible friction. Let us first consider what may happen in the first category of disequilibrium.

The inconsistency between market and government regulation in the first category of disequilibrium is apparent in two ways.

Firstly, if there are both market and government mechanisms in the economy in the first category of disequilibrium, with the former playing a basic regulating role and the latter assuming a regulating role at a higher level, friction may arise between them when supply is in disarray with demand. In this situation, because of market incompleteness, the rise or fall in prices can only slightly ease supply or demand shortfalls, and price changes cannot entirely reach the goals of market regulation. If, at this stage, the government steps in to make up for the deficiencies of market regulation but its regulating steps are at odds with the intention of market regulation, the shortfalls may be eradicated, but market mechanism will be damaged. This is a reflection of the friction between the two mechanisms. In other words, in this situation, government mechanism can work only at the expense of market mechanism – at least to a certain degree.

How should we evaluate the inconsistency or friction between the two mechanisms? We can only evaluate them from their regulatory results. Is it necessary, and worthwhile, for the market mechanism to be damaged, if only to a limited degree? Of course it is always better to rectify the situation in which supply falls short of demand or outstrips demand through government regulation without causing any damage to market mechanism. In that scenario, the two mechanisms are well coordinated and free from friction. But things do not necessarily go that way in reality. Therefore, the inconsistency between the two and the damage caused by government regulation to market mechanism can only be evaluated from the regulation results. Only by such evaluation can we see if such inconsistency is necessary

and worthwhile. However, no matter what happens, friction between the two is highly probable.

Secondly, contrary to the above proposition, market mechanism may also hold back government regulation in the first category of disequilibrium, due directly to an incomplete market, incomplete and untimely information, the failure of prices in regulating supply and demand, and constraints on resource supply and demand. For instance, on certain occasions when the government takes steps to regulate the allocation of resources, these steps may not reach the expected goals because of factors such as incomplete market and incomplete and untimely information. In this scenario, the government hopes to inform market traders of what gains or losses are to be expected from its regulatory steps, in the hope that they will follow their own interests to readjust the allocation and input of their resources. In the meantime, however, the market is also conveying, through its own channels, its information on gains and losses to these traders. As a result of different information accesses and incomplete and delayed information, market mechanism may either accord with the intention of government regulation, which is, of course, the best scenario, or disturb or restrict government regulation. Both possibilities are also reflections on the inconsistency or friction between the dual mechanisms in the course of resource allocation or economic operation.

To sum up, in the first category of disequilibrium, market and government mechanisms may, in their coexistence, be locked in a state of inconsistency, and frictions between them are possible, and, sometimes, even unavoidable.

VI. Possible friction between dual mechanisms in the second category of disequilibrium

The second category of disequilibrium is more serious in degree than the first category. Therefore, the possible friction caused by the coexistence of market and government mechanisms may be more

acute than in the first category of disequilibrium. This can be interpreted in three ways.

First, the fact that enterprises are not independent commodity producers or have not put an end to their status as government appendages will hold up their efforts to organize production and input resources in compliance with the principle on market interest. Lack of market standards in evaluating enterprise performance inevitably corrodes the efficiency of these enterprises. In this situation, government regulation is unlikely to achieve its expected goals no matter what specific measures are adopted. The main reason for this is that market mechanism is distorted when enterprises are not functioning as independent commodity producers, and the friction between government regulation and the distorted market regulation thus becomes unavoidable.

Second, when enterprises remain government appendages, government regulation on the economy is distorted because the government, for lack of sufficient information on the economic interests of these enterprises, cannot guarantee that every regulation measure it takes is appropriate. Difficulties in coordinating distorted government regulation and distorted market mechanism is another cause of friction between the two.

Third, if supply and demand shortfalls associated with constraints on resource supply and demand occur in the second category of disequilibrium, what are such shortfalls' differences from those in the first category of disequilibrium? In the first category of disequilibrium, these shortfalls can be resolved by balancing the quotas through transactions in incomplete competition according to the market's priority or monopoly principle. The balance of quotas can also be realized through transactions in incomplete competition according to government principles of egalitarianism, goals, and history. No matter what friction this may cause between market and government mechanisms, it is still possible to balance the quotas so long as transactions are conducted in incomplete competition. However, the situation may change in the second category of disequilibrium. This is

because enterprises are not independent commodity producers and cannot allocate and input their resources in light of their own economic interests. Thus both market principles regarding priority and monopoly and government principles concerning egalitarianism, goals and history will be distorted and lose their original meanings where enterprises are stripped of their independent interests and cannot transact to their own benefit. Transactions carried out in incomplete competition may not help balance the quotas, and supply or demand shortfalls may remain, or even aggravate. As a result, the friction between market and government mechanisms will be more acute in the second category of disequilibrium than in the first category of it.

VII. Implications of economic operation in the second category of disequilibrium

A clear message from the above analysis is that, on certain occasions, friction between market and government regulation mechanisms are unavoidable in the course of economic operation under either category of disequilibrium. Such is the limitation of the dual mechanisms.

In addition, the fact that friction exists to various degrees between the two mechanisms in the course of economic operation can only point to such a limitation, which means that under disequilibrium no economic operation can follow a perfect course. However, this is not to say the dual mechanisms are unnecessary.

It is worth noting that dual mechanisms will be unnecessary if the economy is in equilibrium and excess demand and supply are nonexistent. However, as we have seen, economic equilibrium is purely a theoretical assumption. In reality, the economy is always in disequilibrium of either the first or second category. The coexistence of dual mechanisms is no wishful thinking, but an objective reality in economic operation. Under economic disequilibrium, and when there are restraints on both resource supply and demand (that is, either supply or demand is in shortage), only by engaging both mechanisms

can quotas be balanced through transactions in imperfect competition. Therefore, even though friction is unavoidable between the two mechanisms, the development of the socialist commodity economy will not be seriously held back so long as the dual mechanisms play their normal roles. Needless to say, the economy can run more smoothly in the first category of disequilibrium than in the second. In the second category of disequilibrium, if the friction between the two mechanisms is not handled properly but allowed to aggravate, the socialist commodity economy is bound to be seriously hindered. This further drives home the imminent importance of socialist economic reform to economic development, and the imminent importance of the full vitality of socialist enterprises to smooth economic operation. In other words, the less the economic disequilibrium is, the less serious the friction is between the two mechanisms. However, so long as the economic disequilibrium persists, such friction should never be overlooked even if they do not affect economic development and operation. We can minimize the negative impact of such friction if we see its existence in perspective and take steps to hold it in check.

In all, my analysis of the two categories of disequilibrium and the friction between the two mechanisms in the course of economic operations boils down to three conclusions on the current economic reforms in our country:

Conclusion One: We need to understand that our current economy is not in the first category of disequilibrium, characterized mainly by market incompleteness, but in the second category of disequilibrium, marked in the main by the fact that the market is incomplete and enterprises are yet to become fully vital. Therefore, enterprise reform should be the mainstream of the current economic restructuring, with top priority given to imbuing our enterprises with full vitality. Through this reform, the national economy should accomplish its transition from the second category of disequilibrium to the first category. As much as economic equilibrium is unattainable, it is feasible and worthwhile to shift the economy to the first category of disequilibrium.

Conclusion Two: If, instead of setting enterprise reform as the mainstream of the ongoing economic restructuring, we are bent on bringing the market to completion and decentralizing prices when the economy is still in the second category of disequilibrium and when our enterprises are yet to be fully energized, we will fail to achieve good results, the economy will be crippled, and the already imbalanced resource allocation will be even more imbalanced. The reasons are clear. Just as mentioned in the foregoing, the second category of disequilibrium tends to lock government and market mechanisms in acute friction. With distorted government regulation tangled with distorted market regulation, economic efficiency will be further eroded.

Conclusion Three: Based on the nature of economic disequilibrium, the second category of disequilibrium in particular, the macroeconomic administrative reform should, as part of the current economic restructuring, emphasize promoting the market's self-restraining role in resource allocation, and stress minimizing the friction between market and government regulation in the course of economic operation. If we fail to do these things in the macroeconomic administrative reform, the transition of the national economy from the second category of disequilibrium to the first category will be held back, and supply or demand shortfalls are bound to be exacerbated. This is because the role of government regulation in eradicating supply or demand shortfalls is limited where enterprises cannot make their own business decisions and bear the responsibility for their gains and losses. When enterprises cannot readjust supply and demand according to their own interests the way they should as traders, the balance of quotas the government hopes for will never be achieved. If the government's administrative measures are detrimental to the effort to motivate enterprises in business activity and guide them in readjusting supply and demand in light of their own interests, and if such measures are designed to make up for supply shortfalls merely by reducing demand or to keep supply and demand in temporary balance merely by direct input or distribution, the Chinese economy will continue to languish in the extremely counterproductive

second category of disequilibrium.

经济改革、经济增长与产业结构调整之间的关系 (1988)

在当前我国的经济生活中，一个有待于解决的研究课题是如何在经济改革、经济增长与产业结构调整三者之间建立一种彼此推进的协调关系，以便既能在经济改革过程中实现有效的经济增长，又能通过经济增长和产业结构调整来建立资源配置的新机制，实现从传统经济体制向新经济体制的转变。

这一任务是艰巨的。当前我国经济处于非均衡状态，市场不完善，资源短缺，而企业还没有成为有真正的利益约束的商品生产者。在这种情况下，假定主要依赖市场机制的作用，让市场定价，那么在企业缺乏利益约束和生产要素的流动仍然受到产权关系不明确的限制的条件下，一方面会造成物价的迅速上涨，市场信号扭曲，从而产业结构不但难以朝着合理化的方向调整，甚至历史上形成的产业结构失调状况会加剧，并会阻碍今后的经济增长；另一方面，假定主要依赖政府调节的作用，即仍由政府实行价格限制和商品配额，那么，在一定程度上有可能促进某些产业部门的较快发展，抑制另一些产业部门产量的增加，并且也有可能维持一定的经济增长率，但由于企业的积极性受到束缚，企业的效率难以提高，因此势必推迟甚至阻碍资源配置新机制的建立，经济增长只可能以牺牲效率作为代价而实现，而产业结构最终不得不因缺少正确的市场信号引导而摆脱不了失调的困境。这就是摆在我国经济学界面前的一个难题。对这个难题，本文准备从投资主体的确定着手进行研究。

—

经济增长的主体是企业，产业结构调整的主体也是企业。这里所说的主体，是指投资主体而言。但要使企业成为有效益的投资主体，必须先使企业成为真正的利益主体。这就是说，企业必须具有自己独立的利

益，企业要关心这种利益，企业进行投资是为了实现这种利益，企业在投资中自我约束也是为了实现这种利益。如果我们在制定经济增长政策和产业结构调整政策时，把具有独立利益和接受利益约束的企业作为投资主体来看待，也许可以在这方面走出一条新路。假定以此为出发点，那么首要问题将是企业制度的改革，即赋予企业以利益主体和投资主体的地位，由企业的投资选择来制约经济增长和产业结构调整，促进经济增长和产业结构调整，从而达到经济改革、经济增长、产业结构调整三者协调并进的目标。

产业结构调整实际上就是压缩一些产业部门的投资和增加一些产业部门的投资，产业结构不仅体现于各个不同部门的产出比例，而且体现于各个不同部门的投入比例。投入制约着产出，投入与产出之比也制约着产出。“让企业成为产业结构调整的投资主体”这句话，具有两个含义：第一，企业根据自己的利益而选择投资方向，决定增加对哪些部门的投入，减少对哪些部门的投入，并由此影响产业部门之间的产出比例；第二，企业根据自己的利益而调整投入与产出之比，也就是通过效率的提高来制约投入，增加产出。这两个含义中，第二个含义可能更加重要。这是因为，只有让企业成为利益主体，企业通过提高效率来增加产出的积极性才能有较大幅度的提高。在资源短缺和投入受到客观限制的条件下，这将是克服某些商品短缺的更为合理的途径。

从另一个角度来看，企业作为投资主体，也就是意味着企业作为生产要素的需求主体或购买主体。当企业根据自己的利益调节投资方向和生产要素组合方式时，通过对生产要素的需求的调整而影响其他企业提供的产品的销售量，这样也就从客观上影响一些产业部门的产量和规模的变化，引导着产业结构的调整方向。因此，在企业成为利益主体时，企业既从自己的投入（包括投入的资源数量以及投入与产出之比）方面，又从自己对其他企业提供的产品的购买方面制约着产业结构调整。经济增长率归根到底是由每一个企业的产出增长率决定的，既然企业的产出增长率总是在产业结构调整过程中实现，所以经济增长与产业结构调整将是同一个过程。具有独立利益的企业在作为经济增长主体的同时，也就成为产业结构调整的主体。

产业结构调整中的作用时，应当考虑到企业是在非均衡条件下进行经济活动的，市场的不完善和资源供给的短缺不可避免地会对企业的投资选择与购买选择发生有力的影响。这样，我们就不可能忽视政府在产业结构调整中的重要作用。经济的非均衡程度越大，政府在产业结构调整中所起的作用也越重要。

政府要对非盈利性的投资项目承担责任，这是与政府的性质直接有关的。在任何情况下，政府也不应当回避这方面的投资责任。关于这一点，几乎不需要再作论证了。现在需要探讨的是，假定市场不完善和资源供给短缺，政府作为经济调节者，究竟应当如何影响企业的投资选择与购买选择，进而影响产业结构的调整，使之趋向合理化？这主要是通过政府的配额均衡而实现的。

政府的配额均衡可以通过目标原则，或平均原则，或历史比例原则来实现，每一个原则都有一定的适用范围，每一个原则也都可能出现弊端，因此，政府在何种情况下采取何种原则，应当根据具体条件进行研究，然后作出决定。

目标原则是指政府根据产业部门的重要程度而制定轻重缓急的顺序，把有限的资源配售给各个有关的部门。这种分配资源的方式有利于贯彻政府预定的经济增长目标和产业结构调整目标，并且能够较快地促进某些产业部门的增长，限制另一些部门的增长。但问题是：产业部门发展的轻重缓急顺序的排列是否科学？能不能使有限资源配售的比例有助于经济增长目标与产业结构调整目标同时实现？这样的资源配额是否符合资源利用的效率标准？能不能保证配售到某一产业部门的资源不被挪作他用，不被转卖牟利？从某种意义上说，目标原则的副作用在于：它使某些部门和企业处于特殊照顾之下，而这些部门和企业却不一定是高效率的；至于另一些部门和企业，实际上被排除在资源供给以外了，尽管它们是高效率的，但由于资源不足而不得不使效率降低。因此，如果只有配额的目标原则（即使目标原则的确定是科学的），而没有促进部门间资源存量转移的措施和促进企业转产的措施，目标原则下的配额均衡将以社会的资源利用效率下降作为代价。

平均原则是指政府根据需求者所提出的需求数量和可供供给的资源数量进行平均分配。从调整产业结构的角度来看，平均原则可能是阻碍政府预定的产业结构调整目标的实现的，因为这样做意味着基本上维持产业结构的现状；但从维持经济增长的角度来看，平均原则下的配额均衡不至于导致经济增长率的较大幅度的波动。加之，就居民生活必需品的

供求而言，按平均原则来分配有限的资源仍然有着维持社会安定的作用。在平均原则之下，社会的资源利用效率也是会降低的，但这种降低应当主要归咎于资源供给的普遍不足，而不一定是改变产业部门结构所引起的（因为产业结构基本维持现状）。

历史比例原则是指政府根据历史上已经形成的或过去一贯沿用的资源分配比例来确定部门间或企业间的资源配额。用这种办法来分配有限的资源，其效应与采用平均原则相似，即基本上维持产业结构的现状，同时又可以避免经济增长率发生较大幅度的波动。但问题是：历史比例原则的确定既然以既成的资源分配比例为依据，那就涉及既成的资源分配比例的合理程度究竟如何。同样地，在这种情况下，能不能保证分配到一定的部门和企业中的资源不再被挪作他用，不再被转卖给其他部门和企业而牟利？还有，历史比例不可能不根据实际情况而有所调整，如果要调整历史比例的话，那么怎样重新制定有限资源的配额？

由此看来，在资源供给不足从而有必要由政府采取配额的情况下，既要兼顾经济增长与产业结构调整目标，又要不挫伤企业经营的积极性，不使企业的资源利用效率下降，这的确是一个相当艰巨的任务。不管政府按照哪一种原则来实行配额，目标配额的制定（即产业部门重要程度顺序的排列）、平均配额的制定、历史比例配额的制定，首先，必须具有科学性，只有科学地制定这些配额，才能尽量减少政府配额过程中的差错和矛盾。其次，无论在哪一种原则之下，都应当防止短缺资源的渗漏现象的发生，也就是要防止被分配到一定部门和企业中的短缺资源转卖给其他的部门和企业。

一种折中的做法是兼取三种原则，实现政府调节下的配额均衡。三种原则之中，比较有利于达到政府预定产业结构调整目标的是目标原则；比较有利于维持经济增长，较少地导致经济增长率发生较大幅度波动的是历史比例原则；较少引起需求各方之间的摩擦，并且较少地挫伤所有企业的积极性的是平均原则。这样，要发挥非均衡条件下政府的配额均衡在产业结构调整中的作用，不妨以目标原则为主，兼顾历史比例原则和平均原则的特点，制定一种综合地确定短缺资源分配比例的办法。

定在短缺资源的分配中主要依据的是目标原则，那么这时的经济增长必定是在产业结构调整过程中实现的，而产业结构调整过程中所实现的经济增长也必定是倾斜式的增长，即经济的不平衡增长。

这里涉及对于经济不平衡增长的价值判断问题。任何经济增长都是在一定的经济现实环境中出发的，我们可以把这种现实环境称作经济增长的初始状态。任何经济增长，在经历一定的时间之后，总会达到某个预期的经济境界，我们可以把这种预期的境界称作经济增长的阶段终点。在评价经济的平衡增长与不平衡增长时，既不能脱离经济增长的初始状态，也不能脱离经济增长的阶段终点。假定初始状态是产业结构协调的，而预期的经济增长阶段终点也是产业结构协调的，那么经济的平衡增长显然是理想的增长途径。在这段时间内，经济的不平衡增长也许是不必要的，甚至还可能不利于预定的产业结构协调目标的实现。然而，在当前我国经济处于非均衡状态初始点上的产业结构已经出现严重失调的情况下，经济的平衡增长既缺乏可行性，又不符合短缺资源配额均衡经济增长的要求。因此，对于经济不平衡增长的是与非，不应当脱离实际而作出判断。

政府配额均衡条件下的经济不平衡增长的结果，究竟能否达到政府预定的经济增长目标与产业结构调整目标，与政府制定的主导产业政策的科学性有关，也与这一主导产业政策被贯彻的程度有关。假定政府不制定任何主导产业政策，一切听任市场调节来自发地形成经济中的主导产业，虽然其结果也有可能既实现经济增长，又调整了产业结构，但这通常以市场比较完善和企业具有利益约束为前提。

即使如此，产业结构调整过程也可能相当缓慢，因为一旦出现了货源有限或市场有限等情况，通过市场自身的配额调节（短缺资源的自发分配或有限市场的自发分割）总是在无数次交易活动和资源转移之后才达到预期效果。就当前我国的实际情况来说，由于市场不完善和企业仍然缺乏利益约束，资源部门间的自发转移有困难，市场配额调节的结果不一定与政府预定的经济增长目标、产业结构调整目标相吻合，从而由政府制定主导产业政策，并根据这一政策来实现政府配额均衡下的经济不平衡增长，就显得十分必要。

主导产业政策是一种倾斜式的产业政策。但应当注意到，任何主导产业都需要有其他若干产业与之配合，而与主导产业直接有关的其他若干产业又分别与更多的产业联系在一起。这样，即使政府实行的是倾斜式的产业政策，这种政策也只能按照与主导产业关系的密切程度来实行

短缺资源的配额，而不可能倾斜到只顾某一个或少数几个产业而忽略其他有关产业的地步。这意味着，在非均衡条件下，如果说政府惟有通过配额均衡来实现经济的不平衡增长，集中较多的资源发展主导产业，以调整产业结构的话，那么产业政策的这种倾斜只能适度，而不应当过分，否则不仅不能加速主导产业的成长，反而有可能导致产业结构失调现象的延续或加剧。

通过以上的分析，可以清楚地了解到，关于经济增长的平衡与不平衡之争实际上并非如通常所说的，究竟是不平衡增长优越还是平衡增长优越。既然增长的初始状态是产业结构失调，那么争论的焦点就不可避免地成为经济增长的不平衡程度之争，也就是产业政策的倾斜度之争。过度倾斜的害处大于完全没有倾斜。经济的过分不平衡增长可能加剧产业结构的失调；而在经济增长的初始状态表现为产业结构已经失调时，经济的平衡增长虽然无助于产业结构失调现象的消除，但较为可能的是基本上维持产业结构现状，而不一定使之加剧、恶化。这正是在政府制定主导产业政策时需要注意的。

于是，问题归结为政府究竟如何运用主导产业政策，如何使产业政策的倾斜适度。为了说明这一点，有必要考察一下企业运行机制和价格信号在主导产业政策实施过程中的作用。

四

主导产业政策是由政府制定并由政府推行的。政府行为的非理想化使得政府所制定和推行的主导产业政策同政府预定要达到的经济增长与产业结构调整目标之间存在一定的差距。政府很难使得产业政策的倾斜恰到好处，这样就需要有一种力量对产业政策倾斜过度进行制约。这种制约的力量不是来自政府本身，主要来自作为投资主体和利益主体的企业。

假定企业没有摆脱行政机构附属物的地位，依然缺乏利益的约束并且不能根据自己的现实利益和预期利益来选择投资机会，毫无疑问，当政府的产业政策严重倾斜（即过度倾斜）时，企业对于由此引起的市场供求比例的变化不可能作出反应。产业政策的过度倾斜所加剧了的产业结构失调，以及具体表现出来的某些商品供给缺口增大和另一些商品需求缺口增大，只有等到问题积累到一定程度，等到政府自己发现它们的严重性了，才有可能纠正过来。但这往往需要较长的滞后期，国民经济

因此而受到的损失将是巨大的。不仅如此，由于产业政策的倾斜与政府对短缺资源的配额联系在一起，在企业缺乏利益约束的情况下，企业甚至有可能利用产业政策的倾斜过度来为自己牟利，如利用短缺资源去发展并非市场所急需的生产，或利用短缺资源进行非生产性的盈利活动。其结果，不但不是对产业政策倾斜过度的制约，反而会加剧不合理的产业政策的倾斜，加剧短缺资源的短缺程度。

如果客观上发生上述这些与政府在制定倾斜的产业政策时所预计的情况相违的现象，而政府又不把企业缺乏利益约束视为问题的症结所在，那么政府很可能作出一种错误的判断，即认为这一切主要是由价格的不合理或双轨价格的存在所引起的。于是政府试图以取消双轨价格制和放开价格来纠正产业结构的严重失调，消除商品供给缺口和需求缺口。从理论上说，这样做似乎是有根据的，因为价格信号的正确将导致资源流向市场所需要的领域，企业对价格信号的灵活反应将导致企业转而生产短缺商品，转而投资于经济中的薄弱环节，促进产业结构的合理化。但这与非均衡条件下的实际情况完全不符。假定政府这样做，所带来的恰恰是产业结构的进一步失调和经济的进一步混乱。关键仍在于：尚未自主经营、自负盈亏的企业不可能成为真正起作用的产业结构调整的利益主体。

如上所述，资源短缺和初始状态中的产业结构失调是既成事实，市场不完善和企业缺乏利益约束也是既成事实。在资源短缺的前提下，配额均衡是不可避免的：不是由政府来实行配额，就是由市场来实行配额。价格双轨制意味着既有政府实行的配额，又有市场实行的配额，而政府实行的配额将根据目标原则（或平均原则，或历史比例原则）付诸实现。如果政府决定在这种形势下把价格双轨制转变为市场单一定价制，那就意味着取消政府的配额，而让短缺资源完全由市场来实行配额：市场或者按照“谁先来，谁先买”的优先原则分配，或者按照垄断原则分配。但无论市场按照什么原则来分配短缺资源，只要市场仍然是不完善的，企业产权关系仍然不明确和企业仍然缺乏利益约束，那么供给价格弹性较小和需求价格弹性较小的事实必然导致新的两种价格并存，即公开的市场价格与地下的市场价格（黑市价格）的并存。公开的市场价格与地下的市场价格你追我赶，始终保持某种差距，结果导致价格的轮番上涨。这正是我国经济处于非均衡状态下的实际情况。它不仅无助于缓和产业结构失调，而且只会使产业结构失调加剧。

政府如果考虑到经济的非均衡状态，考虑到企业尚未成为独立商品

生产者这一客观事实，那么从有效地调整产业结构的目标着眼，绝不能在条件不成熟时放开价格和取消价格双轨制；而只能在保持政府配额的同时，确定企业的产权，改造企业运行机制，并依靠企业的自我约束来制约产业政策倾斜的过度。

五

企业作为投资主体和利益主体，将具有投资与经营的自我约束力；而这种与企业运行机制联系在一起的企业自我约束力，将成为对于政府的产业政策倾斜过度的一种制约。这是因为，企业是按照自己的利益趋向而进行投资方向的变动和投资数量的调整的。如果政府产业政策的倾斜过度，在双轨价格条件下，企业将面临以下两种选择。

第一种选择是，企业宁肯接受市场配额，即利用高于固定价格的市场价格来生产既符合自己的利益，又适应市场需要的短缺产品。这样就可以弥补政府产业政策倾斜过度而导致的该种商品的短缺。当然，当企业作出这种选择时，企业要冒一定的投资风险和经营风险。但企业作为利益主体，它不仅有权这样做，并且也愿意承担这些风险。伴随着企业投资风险和经营风险而来的，将是企业的盈利。有了盈利的动力，企业是有可能作出这种选择的。

第二种选择是，由于政府的产业政策倾斜过度而导致政府配额过于集中，但企业又不愿接受市场配额（这主要是由于企业从自身利益出发，感觉到市场配额的价格过高，从而投资风险和经营风险过大）。这样，政府配额的不足必将导致企业改变生产规模和生产方向，包括企业转产、停产、减产、与其他企业合并或联营等等。由此涉及生产要素的流动和资源在部门间、企业间的重新组合。生产要素的流动和资源重新组合以企业自身的利益为指导，而企业的利益又以市场的实际需要为转移，于是也就有助于弥补政府的产业政策倾斜过度而导致的某些商品的短缺。有了盈利的动力，企业也会作出这种选择。

无论企业作出第一种选择还是第二种选择，其结果首先是有助于弥补政府产业政策倾斜过度而导致的某种短缺。这可以被看成是企业的自我约束对于产业政策倾斜过度的一种制约。除此以外，还存在着企业的自我约束对于产业政策倾斜过度的另一种制约。这就是在企业作出上述任何一种选择之后，市场形势都会发生一定的变化，从而促使政府改变原来的产业政策过度倾斜的做法，修正过于集中的配额方案。

比如说，假定企业作出第一种选择，从市场上用高于固定价格的价格来购买生产资料，生产市场所需要的短缺商品。这样，市场上该种生产资料的供给量将增加，而企业所生产出来的该种短缺商品的价格将下降。这将给予实行该种生产资料配额和该种短缺商品配额的政府以一定的信号，使政府感到自己原来制定的配额方案（即产业政策倾斜过度，配额过于集中的方案）已与新的市场形势不相适应了，于是政府就有可能调整配额来适应新的市场形势。

假定企业作出第二种选择，即企业通过生产要素的流动和资源的重新组合来应付政府原定的配额过于集中问题，那么生产要素流动和资源重新组合的结果将会导致市场上某些短缺商品供给量的增加，引起市场形势的变化。当政府接收到这种信号以后，也会重新考虑原来的配额方案，从而根据新的市场形势进行配额的调整。

由此可见，只有企业从作为行政附属物的地位转到自主经营、自负盈亏的独立商品生产者的地位，政府的配额均衡才有助于产业结构的合理化，才能避免因政府配额不当而造成产业结构失调迟迟不能解决的情况发生。反之，如果政府在企业体制未变的条件下，指望用取消双轨价格来协调产业结构，那就只能得到与政府的预定目标相反的结果。

这一切充分说明了非均衡状态中的经济改革、经济增长、产业结构调整三者之间的关系的实质。简言之，如果不首先进行有效的企业体制改革，经济增长与产业结构调整这两个目标不仅难以实现，而且会给以后的经济增长与产业结构调整造成困难。

Relationship between economic reform, growth and industrial restructuring (1988)

An unanswered question in our nation's economy is how to foster a congenial relationship in which economic reform, growth and industrial restructuring supplement each other, so that the economy can grow effectively in the course of economic reform, a new mechanism for resource allocation can be found through economic growth and industrial restructuring, and the traditional economic system can be converted into a brand new one.

This is no easy mission. The Chinese economy is in a state of disequilibrium. The market is incomplete. Resources are in shortage. Firms are yet to become commodity producers that are motivated by their own interests. Under these circumstances, if we rely mainly on market regulation to decide prices when our firms cannot pursue their own interests, and if the flow of production factors is still hampered by ambiguous property rights, we are courting two dire results. For one thing, prices will rise, market information will be distorted, and our industrial structure, instead of running on an even keel, will become even more lopsided to inhibit future economic growth. For another, if we count mainly on government regulation and allow the government to impose restrictions on prices and quotas on commodities, some industries may grow fast, but the development of other industries will be hindered. Economic growth may be maintained at a certain rate, but because firms are apathetic about improving their efficiency, the establishment of a new resource allocation mechanism will inevitably be delayed or encumbered. As a result, economic growth may only be achieved at the expense of efficiency, while the industrial structure will stay warped for lack of guidance from accurate market information. Such is the sixty-four

dollar question for my fellow economists in this nation. This paper is a study of this question starting from a definition of the term "investment principal."

I

Firms are principals in economic growth and industrial restructuring. As the term "principal" is interpreted in the context of "investor," firms must be true interest principals before they can become efficient investors. To put it another way, they must possess independent interests and be concerned with such interests. They invest, and constrain themselves in so doing to achieve such interests. If, in formulating policies for economic growth and industrial restructuring, we regard firms as investment principals that have independent interests and are willing to be restrained by such interests, we can blaze a new trail in this field. If we take this as the starting point, corporate institutional reform will become the overriding issue, which entails establishing firms as interest and investment principals, and letting economic growth and industrial restructuring be conditioned and promoted by their investment choices, so as to attain the goal of coordinating economic reform, growth and industrial restructuring in simultaneous development.

Industrial restructuring entails reducing investment in some industries and increasing it in others. The industrial structure embodies both the output ratios and the input ratios between industries. Input circumscribes output, and the input-output ratio also conditions output. The proposition, "let firms become investment principals in industrial restructuring," means two things. First, we should permit firms to act in their own interests when choosing their investment destinations, or when deciding which departments need more investment and which departments need less, and thus to impact the output ratio between industries. Second, we should allow firms to act in their own interests when adjusting the input-output ratio, that is, controlling input and increasing output by raising efficiency. The second meaning is probably more important because only by turning

firms into interest principals can they be highly motivated to boost output by improving efficiency. That is a more sensible way to overcome shortfalls in certain commodities when resources are in shortage and input is constrained by circumstances.

From another point of view, to convert firms into investment principals is to turn them into demanders for, or purchasers of, production factors. When a firm acts in its own interests to redirect its investment and modify the way it groups production factors, and influences the sales volumes of products supplied by other firms by adjusting its demand for production factors, it is actually impacting a certain industry's changes in output and scale and leading the way for industrial restructuring. For this reason, when a firm becomes an interest principal, it can in fact moderate industrial restructuring with both its input – resource input and input-output ratio included – and purchases from other firms. The rate of economic growth is ultimately decided by each firm's output growth rate. Economic growth and industrial restructuring are part of the same process once firms can maintain their output growth through industrial reform. When firms with independent interests become principals of economic growth, they also become principals of industrial restructuring.

II

When we regard firms as investment principals and put a premium on the role they can play in industrial restructuring through their investment and purchase choices, we must take into account the fact that they are engaged in economic activity under economic disequilibrium, and that the incomplete market and resource shortfalls invariably affect their investment and purchase decisions. In so doing, we will recognize the paramount role of the government in industrial restructuring. The greater the degree of economic disequilibrium, the more important the role of the government becomes in industrial restructuring.

The government is duty-bound to support nonprofit investment projects, a duty that is directly related to its nature. Under no

circumstances should the government shun its responsibility for this field of investment. This point is self-evident, and no more proof is needed. The question to be discussed here is what, supposing the market is incomplete and resources are in short supply, the government should do as the economic regulator to influence firms' investment and purchase choices, and further impact industrial restructuring and put it on a sound footing. A fundamental answer to this question lies in the government's capacity to balance its quotas.

Balanced government quotas are achievable through the goals principle, the principle of averages, or the principle of historical ratios. Because each of these principles is limited in its scope of application and has its drawbacks, the government should choose between them on the basis of study and investigation.

The goals principle guides the government to allot quotas for the limited resources to be sold to industries in order of priority and urgency. This way of distributing resources helps implement government goals for economic growth and economic restructuring, boosts growth in some industries and restrains it in some other industries. But it also poses some questions. Is the alignment of the industries in order of priority and urgency scientifically viable? Can the ratios between the quotas on scarce resources be set in a way to make possible the simultaneous attainment of economic growth goals and those for industrial restructuring? Do the quotas measure up to benchmarks for resource utilization efficiency? Is there any way to prevent industries from putting the resources allotted to them to other uses or reselling them for a profit? In a sense, the side effect of the goals principle (even if it is scientifically viable) is that it may give preference to industries and firms with low efficiency, to the neglect of truly efficient industries and firms whose efficiency may be curbed by resource shortages. In this regard, the balance of government quotas under the goals principle (even if it is scientifically viable) is maintained at the expense of resource utilization efficiency unless measures are taken so that resources can be reallocated among industries, and firms can change their line of production.

The principle of averages directs the government to distribute resources equally among industries according to the aggregate demand of firms and the availability of such resources. This principle may become an impediment to achieving the government's industrial restructuring goals, as it serves basically to maintain the status quo of the industrial structure. However, from the perspective of sustaining economic growth, quota allocation under the principle of averages will not go so far as to cause dramatic fluctuations in the economic growth rate. Moreover, judging from the supply and demand of daily necessities, the principle of averages helps maintain social stability when limited resources are distributed according to it. Under this principle, resource utilization efficiency tends to drop, but such a drop is ascribed mainly to universal shortages in the supply of resources rather than to changes in the industrial structure (because, as a matter of fact, such a structure basically remains unchanged).

The historical ratios principle guides the government to allot resource quotas to be distributed among industries or firms in line with distribution ratios that have been followed for a long time in the past. This principle works in a way similar to the principle of averages, that is, by maintaining the status quo of the industrial structure and avoiding major fluctuations in the economic growth rate. However, it also poses some questions: Are the historical ratios – the cornerstone of this principle – reasonable or not? Is there any guarantee that the resources distributed to industries and firms are not put to other uses or resold for a profit? Now that it is impossible not to adapt historical quotas to reality, how can distribution quotas be reset when and where such a need arises?

It is thus clear that when resource shortfalls necessitate distribution quotas, the government is faced with the arduous task of attaining both economic growth and industrial restructuring goals without discouraging firms in business activity and hurting resource utilization efficiency. Such quotas should be scientifically viable whether they are arranged in order of priority and importance, evened out, or according to established ratios. First of all, only with viable

quotas can errors and conflicts be minimized while limited resources are dispensed. Then, no matter which principle is followed, everything should be done to forestall scarce resources leakage, i.e., the resale of scarce resources allotted from one industry or firm to another.

A compromise between these three principles may be reached to help balance distribution quotas under government regulation. Of the trio, the goals principle is relatively more conducive to the government's industrial restructuring goals; the historical ratios principle works better to sustain economic growth and minimize fluctuations in the economic growth rate; while the principle of averages helps more in reducing conflicts of interests and keeping firms motivated. To give full scope to the role of coordinated government quotas in industrial restructuring, we may as well take the goals principle as the guideline and draw on the historical ratios principle and the principle of averages when setting ratios for the distribution of scarce resources.

III

Economic growth amidst resource shortage is relevant to government quotas for distributing such resources between industries. If such resources are allotted according to the goals principle, economic growth is bound to take place in the course of industrial restructuring, whereas the economic growth achieved in the course of industrial restructuring is inevitably of a "tilting type," a byword for uneven economic growth.

The issue here involves judgment of the value of this type of uneven economic growth. Economic growth, whatever type it is, is attained in a real-world economic environment. We may regard this environment as the initial condition for economic growth. The economy invariably reaches a certain anticipated economic level after a certain period of growth, and we may regard this anticipated economic level as the condition for end-of-period growth. Whether the economy is balanced or not, economic growth cannot be evaluated

without taking its initial and end-of-period conditions into consideration. If the industrial structure is well coordinated at both stages of economic growth, then balanced economic growth is obviously the ideal. In this case, uneven economic growth is probably unnecessary or even detrimental to the attainment of the anticipated goals for coordinating the industrial structure. However, when the current Chinese economy is at the initial stage of disequilibrium and the industrial structure is already gravely lopsided, to strive for balanced economic growth not only is unrealistic but also contravenes the task of restoring economic equilibrium through optimal distribution of scarce resources. Therefore, our judgment of the merits or demerits of disequilibrium in economic growth should not be estranged from reality.

Whether the government's anticipated goals for economic growth and industrial restructuring can be reached as a result of imbalanced economic growth through quota rationing is determined, first of all, by whether the government industrial policy is scientifically viable or not, and secondly, by the determination with which this policy is carried out. If the government relinquishes its industrial policy and allows the market to run the economy completely, economic growth may be achieved and the industrial system restructured only when the market is relatively complete and firms are operating in accordance with their own interests.

Even so, progress in industrial restructuring may be tardy because it always takes numerous transactions in which resources change hands numerous times before the market clears (that is, through spontaneous distribution of scarce resources or spontaneous division of the limited market). Given the current situation in our nation, an incomplete market and the failure of firms to assert their own interests make it hard for resources to be spontaneously redirected, and the results of market regulation of quotas are not necessarily in accord with prescribed government goals for economic growth and industrial restructuring. Thus the government needs to formulate its industry-prioritizing policy and proceed from this policy to achieve imbalanced

economic growth under balanced government quotas.

This industry-prioritizing policy is, indeed, a tilted one. However, it should be noted that no leading industry can do without the assistance of several other industries that are themselves tied with even more industries. This being the case, if the government chooses to carry out such a tilted industrial policy, this policy can allot quotas for scarce resources among industries only according to how closely they are associated with the leading industry. Such a policy cannot be tipped in favor of only one or several industries to the neglect of the other related industries. That is to say, in economic disequilibrium, the bias of this tilted industrial policy should be kept within reasonable bounds if the government has no alternative but to count on quota rationing to bring about imbalanced economic growth and to concentrate resources on leading industries for industrial restructuring purposes. It should never be overdone. Otherwise, instead of spurring the leading industries, it may only sustain or aggravate the lopsided industrial structure.

As the above analysis indicates, the argument on economic growth is not about which is supposedly better, balanced growth or imbalanced growth. Given that the initial state of economic growth is characterized by a disproportionate industrial structure, the argument is unavoidably focused on the degree of imbalance in economic growth, that is, on the degree of bias of the tilted industrial policy. An over-tilted industrial policy is more harmful than an unbiased one in that it may exaggerate the already warped industrial structure. When the initial state of economic growth is characterized by a lopsided industrial structure, balanced economic growth may help maintain the status quo of the industrial structure and prevent it from further deterioration, even though it cannot completely redress its lopsidedness. This is a point the government should keep in mind when making its industry-prioritizing policy.

Now the issue comes down to how the government applies its industry-prioritizing policy and whether it can keep the prejudice of this policy within bounds. To find the answers, I deem it necessary to

look into the roles of the corporate operational mechanism and price signals in the course of executing the policy.

IV

The industry-prioritizing policy is formulated and enacted by the government. Generally speaking, dystopian government behavior generates a disparity between this policy and the government's anticipated goals for economic growth and industrial restructuring. Because it is hard for the government to tilt this policy with absolute precision, something has to be done to restrain such a tilt. Such restraints do not come from the government itself but, in the main, from firms that are investment and interest principals.

If firms cannot put an end to their status as government appendages, and fail to base their investment choices on their immediate and anticipated interests, they can never react properly to changes in supply and demand if the government industrial policy becomes over-tilted. The lopsided industrial structure aggravated by an overly tilted industrial policy, as well as the growing deficiency in the supply of some commodities and the demand for other commodities, can be remedied only when the problems have come to a head and alerted the government. Enormous losses occur simply because the government cannot address the issues timely. And the consequence does not stop just there. Because the bias of the tilted industrial policy is related to the government's rationing of scarce resources, firms lacking constraints on their interests may profiteer by taking advantage of that policy. They may use the resources in short supply to produce commodities not badly needed on the market or engage in nonproductive profiteering activities. In that way, they can only exacerbate lopsided government rationing, instead of curbing it, thereby making scarce resources even scarcer.

If, contrary to the intention of the government industrial policy, the aforementioned phenomena occur, and if the government fails to pinpoint firms' lack of independent interests as the key to the problem,

the government is likely to believe that all this was caused by unreasonable pricing or the double-track price system. That misjudgment may compel the government to abolish the double-track prices and decentralize them in an attempt to rectify the badly warped industrial structure and eradicate shortages in commodity supply and demand. Theoretically speaking, this way of doing things is not groundless, because correct price signals can direct the flow of resources to areas needed by the market, and firms' flexible reaction to such signals can lead them to shift production to commodities in short supply and their investment to weak links of the economy, thereby hastening the effort to balance the industrial structure. However, this behavior is totally disagreeable to an economy under disequilibrium. If the government chooses to do so, it can accomplish nothing but to further damage the industrial structure and drive the economy deeper into chaos. The central problem here is that firms that cannot make their own business decisions and bear the responsibility for their gains and losses cannot become true interest principals to play a part in industrial restructuring.

As the above analysis illustrates, the lopsided industrial structure characterized by resource shortage in the initial stage of economic growth is an established fact, and so are the incomplete market and firms' lack of independent interests. With resources in shortage, rationing is imperative either by the government or the market. The double-track prices mean both government and market are rationing the scarce resources. Government quotas are realized according to the goals principle, the principle of averages, or the principle of historical ratios. If the government decides to replace double-track prices with sole market prices, government quotas must be lifted, and scarce resources put at the mercy of the market. Then the market can allocate resources on a "first come, first served" basis or in line with the monopoly principle. No matter which principle the market chooses, the fact that the market is incomplete, that firm property rights remain ambiguous and that firms lack independent interests will curtail price elasticity in both supply and demand. The economy will end up with two new prices, i.e., open market prices and black

market prices. The price gap between open and black markets inevitably sends prices on one round of hiking after another. This is exactly what happens in the Chinese economy under disequilibrium, a situation that does nothing but aggravate the lopsided industrial structure.

If the government takes into consideration the fact that the economy is in disequilibrium and that firms are yet to become independent commodity producers, and if the government is mindful of its goals for effective industrial restructuring, it should never decontrol prices and abolish the double-track prices. On the contrary, the government, while going on with quota rationing, should define firm property rights, transform their operational mechanism, and rely on their self-restraints to prevent the industrial policy from being overly tilted.

V

When firms become investment and interest principals, they will be able to restrain themselves in investment and operation. This self-restraining ability, once linked with firms' operational mechanisms, will help prevent the government industrial policy from becoming overly tilted. This is because firms will be capable of adjusting the direction and amount of their investment under the guidance of their own interests. If the industrial policy is overly tilted towards a certain industry under the double-track price system, firms may react in two ways.

Firstly, they may accept market quotas, that is, to adopt market prices that are higher than government-mandated prices to produce commodities that accord with their interests and are in short market supply, thereby making up for supply shortages resulting from the government's excessively tilted industrial policy. Naturally, firms may run certain investment and business risks if they choose to react this way. As interest principals, however, they are not only entitled to do so but also willing to run such risks because risks accompany profits.

Profits are enough of a motivation for them to take this course of action.

Secondly, firms may choose not to accept market quotas mainly because, proceeding from their own interests, they believe the market has so overpriced the resources as to expose them to excessive investment and business risks. Then the lack of government quotas invariably will prompt firms to change their business scale and scope by altering their line of production, stopping production, reducing output, seeking mergers, or setting up joint ventures. This will cause production factors to flow, and the resources to be regrouped, among industries or firms. As such flow and regrouping are driven by firms' own interests, it will help make up for product shortages resulting from the seriously tilted government industrial policy.

Both possible reactions to the government's tilted industrial policy help make up for product shortages resulting from that policy. Both reactions point to firms' intention to restrain themselves to curb resource misallocation caused by the overly tilted government industrial policy. Their self-restraining action can also restrain the tilted government policy in another fashion. That is, when they react in either way, the market situation will change to a certain extent, thereby forcing the government to stop tipping the industrial policy overly in favor of certain industries and revise its over-concentrated quota plans.

For example, if firms react in the first way, that is, if they purchase capital goods from the market at prices higher than government-mandated prices to produce certain commodities in short market supply, it will increase the supply of the related capital goods, and reduce the prices of the commodities being produced. The government will receive a certain signal from these firms when it allots quotas on the capital goods and commodities in question. Upon discovering that its original quota plans – that is, the over-concentrated plans made under the overly tilted industrial policy – can no longer work, the government is likely to adapt those plans to the new market situation.

If firms react in the second way, that is, if they cope with over-concentrated government quotas through the flow of production factors and the regrouping of resources, the supply of certain commodities in shortage will be increased, and the market situation will be changed. When the government has received such a signal, it is likely to readjust its quotas in response.

It is thus clear that balanced government quotas can help straighten out the industrial structure only when firms have ended their status as government appendages and become independent commodity producers that make their own business decisions and bear the responsibility for their gains and losses. Only thus can time-consuming delays be avoided in addressing an industrial structure warped by inappropriate distribution of government quotas. On the other hand, if the government counts on abolishing the double-track prices to improve the industrial structure without overhauling the nature and function of firms, the result will be contrary to its intentions.

All this illustrates the essential relationship between economic reform, growth and industrial restructuring under economic disequilibrium. In short, if effective corporate institutional reform cannot happen in the first place, it will be almost impossible for the nation to achieve present and future economic growth and industrial restructuring goals.

— *Quantitative & Technical Economics*, issue No. 12, 1988

为新文化创造经济基础 (1989)

我今天演讲的主题就是经济改革、新公有制、新文化三者之间的关系。我想，把这三者之间的关系说清楚了，大家对中国经济改革的意义和前景的认识就清楚了，对中国经济改革中所遇到的各种艰难曲折也就较易理解了。

一、人的研究

在研究经济问题时，我们经常遇到一个问题：发展经济究竟是为了什么？我们是向谁提供产品和劳务？我们为什么要生产出越来越多的产品和劳务？这就是说：生产的目的是什么？其实，这个道理应当是大家都懂的：生产本身不是目的，人不是单纯地作为劳动力而生活在世上的，人不是为了生产，生产是为了人。生产的目的是使人们得到更好的关心和培养。假定只顾提供越来越多的产品，而人们的生活水平没有提高，人们的文化教育水平没有提高，人们并没有得到尊重，人们的潜在能力发挥不出来，这些都不符合生产的目的。

根据这个朴素的道理，我们可以给经济学下这样一个定义：经济学不仅限于研究如何增加物质财富，更应当研究如何利用人们创造出来的财富来满足人们的物质和文化生活的需要。“物”并不是经济学研究的中心，经济学研究的最高层次是“人”，经济学研究的中心是“人”。

根据这个朴素的道理，我们可以了解中国目前正在进行的经济改革的意义：经济改革并不仅为了使我们将来能够拥有更多的产品，更重要的是如何使中国人能够过富裕的生活，使他们有更高的文化教育水平，使他们真正成为社会的主人，得到社会的关心、培养、尊重。从这个意义上说，就经济而论经济，就经济改革而谈经济改革，是远远不够的。

我们必须承认，在满足人们的物质文化需要方面，在人的全面发展

方面，现状距离我们的要求或理想有不少差距，为此我们需要进行改革，包括经济体制改革、政治体制改革和新文化的建设。我们相信，只要这几方面的改革与建设取得实质的进展，劳动者的积极性被真正调动起来，人的聪明才智充分施展出来，不但我们的平均国民收入会在劳动生产率提高的基础上不断增长，而我们的国民素质也必定因经济发展和新文化建设的成就而大大提高。改革，正是中国的希望所在。

二、新文化尊重人

1949年以前，忽视人的地位和作用的旧文化在中国占据主导地位，是可以理解的。为什么1949年以后，旧文化还是这样强大呢？这是因为，旧文化在新的形势和新的经济环境中找到了新的表现形式。

当然，1949年前后的旧文化是有一定联系的。旧文化的特色是非科学和非民主，新文化的特色是科学和民主。关于这一点，前人早已作过分析。现在需要在这一分析的基础上再作进一步的概括。旧文化以神为中心，新文化以人为中心；旧文化强调的是权力，新文化强调的是知识。正因为旧文化强调权力，所以旧文化是一种官本位的文化；而由于新文化强调知识，所以新文化必然以人民为出发点，以科学为出发点。这样，无论是1949年前的旧文化还是1949年后以新形式出现的旧文化，其共同点就是迷信，而不以人为中心；就是对权力的崇拜和追求，而不是尊重科学、尊重知识、尊重人民。正由于旧文化在旧日中国经济中的基础非常坚固，旧文化在封建土壤中的根扎得太深了，所以1949年以后，除原来的旧文化照样存在外，又加上新形式下的旧文化。这就是说：在1949年前的旧文化未被清除的同时，又增添了1949年后的旧文化。如果我们把1949年前的旧文化称做“标准的旧文化”，把1949年后出现的新形式下的旧文化称做“改装的旧文化”的话，那么从50年代到80年代这段时间内实际存在于中国的，是两种旧文化，即“标准的旧文化”与“改装的旧文化”的并存，60年代末到70年代中期，是两种旧文化最明显地结合在一起的典型时期。中共十一届三中全会以后（1979年以后），“改装的旧文化”已经有较大的减弱，而“标准的旧文化”的减弱程度则小得多，甚至在某些方面（如农村中的大修祠堂、大造坟墓、大讲婚丧排场等）还有所滋长。这一方面说明了旧文化存在的独立性，即并不随着经济结构的调整和经济改革的进展而立即消逝的独立性，另一方面还表明：只要旧文化已渗透到人们的生活方式之中和习惯之中，那么

旧文化的表现就可能与人们的经济能力有关。家庭收入太低，连饭都吃不饱，即使人们想修祠堂、造坟墓、讲排场也会力不从心。当然，这不是说没有人用举债的方式来操办这些事，而是一般地说，人穷，这些自然会从简；有了钱，“标准的旧文化”很快就渗透到人们的生活之中，并滋长起来。

从这里，我们可以了解到，单纯依靠提高人民的收入水平，并不能消除旧文化，甚至连标准的旧文化也难以消除。由于旧文化处处是否定人作为社会主体的地位的，是以愚昧、盲从为特征的，所以在中国，要真正消除旧文化和促进新文化的发展，必须在发展经济的同时发展教育，提高国民的科学文化素质，而且这种教育，不是仅仅以传授知识和技术为主要内容，更重要的是把“人的现代化”作为主要内容。

要知道，没有“人的现代化”就谈不上社会经济的现代化和科学技术的现代化，没有“人的解放”就谈不到生产力的解放。新文化是同“人的现代化”、“人的解放”联系在一起的。了解了这一点，我们就能懂得新文化建设的深远意义。

三、新文化的基础

就中国的情况而言，为什么旧文化的势力这样强大而新文化始终这样弱小呢？原因在于新文化没有自己的经济基础。1949年以前的旧文化以旧的经济制度为基础。而从50年代末到中共十一届三中全会前，另一种形式的旧文化，即“改了装的旧文化”，也是有经济基础的。这就是僵化的产品经济体制，是政企不分、官商不分、抑制了生产者积极性的传统形式的公有制，所以新文化还是缺乏相应的经济基础。党的十一届三中全会的伟大意义在于冲破长期“左”倾思想的束缚，解放思想，为在中国建设适应生产力发展的社会主义体制指明了道路。党的十一届三中全会以来，我们不仅改革旧经济体制，建设新经济体制，而且也反对旧文化，包括那种“改了装的旧文化”，建设社会主义的新文化。社会主义新文化的经济基础就是社会主义有计划的商品经济，就是政企分开、官商分开、充分调动了生产者积极性的新型公有制。

只有把经济改革的任务同社会主义新文化建设的任务结合起来进行考察，我们才能懂得这10年来我们所做的工作之重大意义，也才能了解我们的改革事业之艰辛、困难。以新经济体制代替旧经济体制固然不易，以社会主义新文化代替旧文化尤其困难。改革中存在着利益调整问

题。旧文化、旧习惯支配着人们对利益的看法、对发展生产力的看法、对教育和文化的看法，而旧经济体制又造成了平均主义和一系列利益刚性（如工资刚性、就业刚性、福利刚性等）。改革必然要触动每个人原有的利益。对一个人来说，如果他有五个方面的利益，哪怕有四个方面的利益增加了，只有一个方面的利益减少了，那么他很可能对改革有所不满，因为利益的增加在他看来是理所当然的，而利益（即使是不合理的利益）的减少，他则认为是不对的。于是社会上存在着种种因利益摩擦而发生的不满。可见，人们不从利益观念上有较大的转变，不破除平均主义和旧经济体制造成的利益刚性，不破除利益本位的各种利益攀比，不建立与社会主义商品经济相适应的新文化观念、新利益观念，改革再往前深入，阻力会越来越大，改革所遇到的困难也就会相应增加。只要我们了解了这一点，我们就可以得出以下三个论点：

第一，“改革”不仅是同有30年历史的旧经济体制发生冲突，而且是同有两三千年历史的旧文化、旧习惯势力发生冲突。改革当然是不容易的。

第二，改革无疑给人们带来了不少新的利益，但由于改革打破了（或准备打破）旧体制下的利益刚性，又使人们失去了某种原有的利益，所以，当人们只注意原有利益的失去而不注意新利益的增加时，改革遇到的阻力就加大了。

第三，利益刚性是不合理的，由利益刚性所带来的原有利益中有些不利于生产力的发展，这些都非改不可。我们的改革绝不能就此止步，不能因为怕触动这些不合理的利益刚性而止步，否则我们的生产力发展不起来，中国经济无法繁荣。

从历史的角度看，从我们同有两三千年历史的旧文化的冲突的角度看，10年只是历史长河中的一瞬间。10年改革所取得的成就是惊人的。历史将会对此作出公正的评价。

一旦新文化有了自己的强大的经济基础（社会主义商品经济体制和新型公有制），新文化必将取得胜利。社会主义经济改革的进展与社会主义新文化的建立将是同步的、不可遏制的。

四、中国的希望

刚才谈到了信心问题。我想，在座的各位一定和我有同样的感觉。

目前，中国的经济建设的确遇到了一些困难，什么通货膨胀啦，“官倒”、“私倒”啦，腐败现象啦，教育危机啦，等等等等。我们应当承认这些事实的存在。但是，埋怨，发牢骚，都无济于事。我们只有承认现实，理解改革过程中的困难和艰辛，找到问题之所在，才能知道为什么改革是不可逆转的，困难总可以在继续改革中得到解决。既然经济改革的对手不仅仅是30年的旧体制，而且也包括三千年的旧文化、旧传统、旧习惯势力，那么我们就可以了解到，如果大家只是埋怨、发牢骚、甚至泄气的话，旧体制不会自动瓦解，旧文化、旧传统、旧习惯势力也不会自行消失。这样一来，中国的前途不是更没有希望吗？

在国内，由于我一直在大学教书，上课下课，我接触到不少年轻人。譬如说，年龄大约三十多岁的这一代青年，他们不像50年代上大学的那一代人在参加工作前后有过一段理想主义的美好日子，也不像那一代人那样对旧文化统治的顽强性较晚才有所认识。这些年轻人在上中学或上大学时就以“破四旧”的名义参加了“文化大革命”。他们的悲剧在于：他们是被愚弄、被欺骗的一代，他们是在“名为破除旧文化，实为维护旧文化”的逆流中，不自觉地成为新文化的破坏者队伍中的一员的。迷信、盲从、无知、偏激，使他们在戴上红袖章、捧着小红书、唱着造反歌和手执棍棒、皮带到处冲杀时，还自认为是“五四”精神的忠实执行者。然而，他们很快就醒悟过来了。上山、下乡、失学、待业，这些使他们懂得了旧文化的危害，特别是对他们这一代人的危害。他们中的相当多的人成为1976年“天安门事件”的参加者和支持者。历史既是这样的无情，又是这样富有戏剧性，旧文化的蒙蔽对象转眼之间变成了最痛恨旧文化的一分子。但怎样建设新文化呢？怎样使新旧文化的长期战斗最终以新文化的胜利来结束呢？他们思考过这些问题，其中有些人现在也成为新文化建设的积极参加者。而从这一年龄的大多数人来看，由于他们在那些动荡的年代里失去了学习的机会，他们对于新文化建设，更多的是感情上的要求和期待，而不是就这个问题的深入的理论分析和探讨。但是有一点，他们同其他年龄档次的人是相同的，这就是：他们从自身的经历中懂得了旧文化的退出和新文化的建设都是很不容易的。

又譬如说，比他们更年轻的一代人，即大约二十多岁，不到三十岁左右的人，情况又有所不同。一个22岁的大学毕业生，可能出生于“文化大革命”爆发的那一年。

一个30岁的讲师、助理研究员、工程师、博士生，在开始“文化大革命”的那一年，可能连小学还没有上，因为1966年，连小学都停课

了，不招生了。“文化大革命”的印象，他们已经记不起了，或者他们根本没有这种印象。他们是在“文化大革命”结束以后开始自己正规的学习生活的，他们的成长同中共十一届三中全会以来的正确的方针和政策有关。他们学到了新的知识，他们赶上了改革与开放的时代。他们是新文化的天生的追求者和向往者。同外界交往的频繁，对中国经济和技术落后的不安，校园生活中的学术探讨气氛，这一切使这一大批年轻的大学生、研究生、教师、科学研究者、技术人员成为新时代的新文化建设的积极分子。然而，他们自身具有不可忽视的局限性，因为他们太年轻了，他们对中国的现实社会状况了解得很不够，他们不了解旧文化势力的顽固和有力，误以为新文化的建设是那么顺利，那么容易。他们也许会认为，只要新文化一出现，旧文化自然就会退出历史舞台。这种把问题看得过分简单的想法，使他们又成了另一种意义上的理想主义者，只是这种理想主义与50年代的那些年轻人的理想主义有所不同：50年代的理想主义者以为摧毁旧文化的任务已由上一代基本完成，因此留给他们的任务将是新文化的建设；80年代的理想主义者虽然并不认为摧毁旧文化的任务已经基本完成，但他们却认为，在他们的积极参与之下，新文化将很快地战胜旧文化。不切实际的理想主义可能带来的是急躁和激动，以及在遭到挫折以后的悲观、失望。照理说，他们是幸运的一代，埋怨情绪应当比年龄大一些的人少，但实际上并非如此。为什么呢？这一方面是由于他们对改革事业的艰辛了解得太少，另一方面则由于单单靠他们的知识（他们是有知识的一代人）和他们的热情（他们不乏热情）并不足以战胜旧文化。在新文化的经济基础尚未建立之时，新文化是不会胜利的。

于是他们埋怨起来了。但埋怨又有什么用呢？他们失望了，失望能改变现状吗？信心始终重要，信心不能丢掉。改革再困难，我们也要硬着头皮干下去。我们算是豁出去了，我们与改革共命运。因此，在今天的讲演会前，我同单志明、区树鸿两位先生谈过。我说：“中国的希望在于我们大家对改革有信心，对新文化建设有信心。大家都没有信心，那么改革就真的没有希望了。”

我相信，我这么讲是有根据的。在座各位，不少人十多年前到过国内，不久前又故地重游。变化大不大？肯定可以看出巨大的变化。再过10年，变化还会大，这毫无疑问。我们大家，包括信心不足的人在内，要正确地认识世界经济形势和发展趋向，我们要正确地估计国情。10年来的变化是不小的。10年前，我们不可能公开讨论我们的落后和我们同

世界其他国家的差距，我们不可能针对中国的经济问题畅所欲言地争辩，更重要的，那些不科学的最高指示成为惟一可以援引的解决中国经济问题的依据。因此，在阻碍中国经济发展的种种阻力之中，旧文化作为不可忽视的阻力之一，在10年前达到了无以复加的地步。看到了这10年的变化，我想我们对于前景应该是有信心的。

五、科学与民主可以救中国

当我们看到中国经济至今仍然大大落后于世界上许多国家时，我们很自然地会想到这样一个问题：如果听任非科学、非民主的旧文化继续统治着我们，支配着我们的思想，那么我们也许仍然不了解自己的落后。这种觉醒不能不归功于最近10年来思想界、文化界、学术界的呐喊，也不能不归功于最近10年来我们同国外交往的增多和接触的频繁。现在，我们大家，至少国内的多数人，终于醒悟过来了。改革之所以成为不可阻挡的潮流，科学与民主思想的逐渐深入人心是一个重要的因素。我们完全有理由设想，如果说在社会主义商品经济条件下的新型公有制建立以前，缺乏相应经济基础的社会主义新文化由于相当弱小而不得不在同旧文化交锋时处于劣势地位的话，那么一旦建立了新型公有制，社会主义新文化有了自己的经济基础，社会主义新文化就不再是弱小的了，新文化在同旧文化的交锋时也就不再处于劣势了。社会主义商品经济条件下的新型公有制支持着社会主义新文化，而社会主义新文化也必将以全部力量来为新型公有制的巩固与发展服务。这种相互支持和相互促进的关系对今后中国经济的变化将产生重大的影响。在社会主义新文化的支持下，中国经济必定会进入一个新的历史阶段。

为什么社会主义新文化能够起着这样的作用？为什么中国经济的重大进展不可能没有社会主义新文化的支持？为什么新文化本身的发展和充实又不可能没有社会主义商品经济条件下的新型公有制作为自己的经济基础？对这些问题，可以作进一步的分析，这就涉及科学和民主的问题了。我们现在仍然强调科学与民主可以救中国，不仅仅着眼于科学与民主对经济发展的作用，更重要的是着眼于科学与民主在“人的现代化”、“人的解放”中的作用。大家不妨想想，如果我们的工人、农民能真正了解平均主义、“铁饭碗”、“大锅饭”、利益刚性和利益攀比对于经济的危害，以及对于自己长远利益的危害，改革的阻力是不是会大大缩小呢？如果我们的干部能真正了解只有彻底打破这种用行政命令的方式来

领导经济的旧体制，中国经济才能起飞，干部及其家庭的收入水平才能在经济增长过程中同人民收入水平一样提高，而经济的管理才能更有效率，商品经济体制的建立和新公有制的建立是不是会大大加快呢？特别是，如果广大人民群众能在科学与民主的思想指导下，把自己真正当成社会的主体，社会上的腐败现象是不是会大大减少呢？我想，我们是会得出肯定的答案的。

这就是新文化建设与经济改革、政治改革之间的不可分割的关系。在经济体制改革和政治体制改革取得成就的过程中，与新型公有制相适应的新文化建设一定能成为事实。

整个国民素质的提高需要有一个较长的过程。也许，只有等到我们的经济真正发达了，等到我们广大人民的收入水平大大提高了，生活真的富裕了，我们的文化、教育、科学、卫生事业才能获得充足的发展资金，才能真正得到全社会的重视，而我们的国民素质（包括文化素质、道德素质等）才能大为改善。这并不是过分强调经济的作用，而是根据世界各国经济与文化发展的历史经验而得出的结论。也许，只有到那时，中国传统文化的优秀成果才能真正被重视和发扬光大。要知道，一个民族的优秀文化成果是不会被丢掉的。既然它们是优秀的文化成果，那就经得起历史的筛选，经得起时间的考验。当前我们之所以还没有足够的经济力量来维护它，发扬它，不正是因为穷，因为人均国民收入太少，因为生产力落后么？也许，只有到那时，旧文化，尤其是“改装的旧文化”，尽管还有一定的市场，有一定的影响，但经济发展成就这一事实本身就是对“改装的旧文化”及其立足的基础——传统经济体制和传统公有制——的最好的反驳。如果说今天已有不少人对“改装的旧文化”深恶痛绝，对“改装的旧文化”所鼓吹的那一套非科学、非民主的东西从内心感到厌恶，那么这主要是出于理论上、思想上的认识，或者主要是从“改装的旧文化”支配下中国经济的贫穷落后所体验到的。但商品经济发展以后和新型公有制建立以后的中国经济究竟如何，人民收入和生活状况究竟如何，与那种以科学与民主为内容的新文化相适应的经济究竟会使中国社会产生什么样的新格局、新气象，这些仍然是设想中的，它们还不曾成为事实。而一旦这些成了事实，数以亿计的人民真正感受到商品经济发展、生产力发展、新型公有制建立给自己带来利益了，对这一切的认识也就大不一样。认识不再是空泛的、抽象的，而成为具体和实在的。这就会给人们一种信念、一种精神力量。那时，“改装的旧文化”即使再以娓娓动听的辞藻来蒙蔽人们，崇尚科学与民主的人们也不会再相

信了。

六、企业家能做什么

在国内，当我谈到经济改革与新文化建设问题时，有些企业家问我：“新文化建设是教育界、文化界、学术界的事情，一个企业家能为新文化建设做些什么呢？”他们不知道企业界在新文化建设中的作用，是别人不能代替的。我对他们说：要使新文化对旧文化取得胜利，光靠知识界的努力是不够的。只有当企业家和新公有制之下的工人、农民参加到新文化建设中来，为商品经济的发展作出贡献，并在商品经济发展过程中共同摒弃传统文化、旧习惯势力的时候，新文化才能真正在中国的土地上生根。

综合起来说，企业家不仅在经济改革中为新文化建设而尽力，而且他们本身也在建设企业文化，即新文化的一种形态。这里特别需要说的是企业文化的建设问题。

企业文化是企业的一种文化观念和价值准则，是企业职工的信念和凝聚力的体现。如果企业仍然停留于行政机构附属物的地位，企业没有自己的独立利益，职工的利益与企业的经营状况缺乏联系，那就不可能形成企业文化。因此，企业的自主经营和自负盈亏、职工与企业利益的一致，就是企业文化建设的内部经济条件。企业文化的建设也有赖于企业的外部经济条件，即企业应当处于竞争性的商品市场环境中。假定社会主义商品经济没有发展，企业同外界的经济关系不是通过竞争来实现的，企业的交易活动全都由指令性的计划所规定，企业只不过是一个加工车间，那么企业也就无法使职工树立以效益、竞争、风险等观念为中心的价值准则，职工与企业之间也就缺乏一种患难与共、利益均沾的适应关系存在的基础，这样，企业文化的建设必定是一句空话。

因此，企业文化的建设过程中，从经济上说最为重要的，一是企业自身的改革，即企业从传统的政企不分的公有制企业，转变为具有独立商品生产者地位的新型公有制企业，从内部解决企业与职工的适应问题；二是企业环境的改革，即企业所处的经济环境应当是竞争性的、交易活动公开化和合约化的环境，市场既给企业以机会，又给企业以压力，从而企业得以在这样的环境中重新调整自己与全体职工之间的利益关系，建立彼此适应的关系。这两个条件都表明，社会主义的企业文化是社会主义经济改革的产物，是社会主义商品经济发展以及建立了社会

主义商品经济条件下的新型公有制的结果。

从文化上看，由于企业文化是新文化的重要组成部分，企业文化不可能脱离新文化而孤立地存在，因此要理解社会主义企业文化的产生条件，必须把新文化作为企业文化的整个文化背景来考察。社会主义新文化以科学与民主为特色。对人的重视、对人的关心和培养是新文化区别于旧文化的重要特征。就现代企业的经营与管理来说，如果忽视了人在企业中的地位，忽视了人的主动精神、积极进取精神、创造精神，那么企业文化也就无从谈起。然而，企业只是社会的一个微观经济单位，企业与职工的关系、企业中的人际关系是社会中的人与人之间的关系的一个缩影。企业中的人与人的交往是不可能脱离社会这个大环境而实现的。假定整个社会被旧文化所支配，假定作为旧文化的核心的非科学、非民主的思想仍然统治着社会，假定用利益原则来处理企业内部人际关系等做法仍然受到一些人的非议，那么也就谈不上企业文化的建设与发展。

具体说来，企业文化建设将从以下这些方面推动经济发展：

第一，企业文化的建设在某个具体的企业中取得了成绩，必然会对其他企业起着示范作用。其他企业会考虑这样一些问题：为什么在那个企业中出现了新的人际关系，职工与企业之间的关系会变得如此适应，经济效益会有如此显著的提高？在那个企业中能够实现的，为什么在自己这里还不可能实现？企业文化建设方面的差距是否反映了企业本身在体制改革方面的差距？于是这些企业将由此寻找差距存在的原因，并在社会经济等方面探索加速改革的途径。这种示范效应不仅会在企业领导人中间产生，而且也会在企业职工之间产生。而一旦其他企业的领导人和职工们都感到了加速体制改革的必要性和建设企业文化的必要性，企业体制改革的进程和企业文化建设的进程都会加快。

第二，企业文化的建设在某个具体的企业中取得成绩所给予政府部门的影响，同样是不可低估的。政府无非是从企业收入的增加和政府从企业所得到的收入的增加，从企业产品受到社会的欢迎和社会供求矛盾的趋于缓和，以及企业职工情绪的稳定、职工积极性的增加等方面来考察企业文化建设的效果。由此，政府部门将会对这些企业在企业文化建设方面所作出的成绩感兴趣，愿意总结经验，进行推广。只要政府部门认识到有这些需要，它就会进一步考虑这些企业取得成绩的原因，并把这些企业同另一些企业进行比较：为什么这些企业在企业文化建设中能够取得成绩而另一些企业做不到这些？是不是这些企业在体制改革中有

某些重大的进展，才使它们具备发展企业文化的条件？政府部门将不再局限于总结这些企业取得成绩的经验，而必然会以此作为例证来推动其他企业的体制改革。

个别企业取得成绩，对政府部门来说固然是重要的，但对政府来说更重要的是推广这种经验，让更多的企业通过体制改革而取得同样的成绩。这样，个别企业的企业文化建设成就必定会推进整个企业体制改革的进程。政府部门的这种作用是个别企业所无法替代的。

第三，企业文化的建设在某个具体的企业中取得了成绩，从文化的角度来看，其影响绝不会仅限于企业本身或仅限于本企业职工及其家属这一较小的范围。这就是说，以某个有成就、有影响力的企业的“企业精神”体现出来的企业文化，会对社会文化中的旧传统产生冲击。比如说，当社会上还流行着平均主义的分配思想的时候，如果某一个企业大胆地进行了分配制度的改革，破除了平均主义的分配方式，实行按有效劳动分配或按效益分配，那就很可能在社会上引起震动，使社会上那些有平均主义分配思想的人先是惊讶，然后通过企业效益增长和职工收入普遍上升的事实的教育而逐渐明白了道理。又如，假定与旧文化紧密联系的等级观念至今仍有相当大的影响，那么一旦某个企业进行了改革，并在企业文化建设过程中建立了新的人际关系，破坏了传统的等级制度和等级观念，那么这也将引起社会的震动，这种震动最终必将冲击社会上存在的等级观念，从而推动着新文化的传播。尽管企业文化建设的成就对社会文化和价值观念的影响是无形的，但这种无形的影响是绝不能低估的。

（1989年1月12日在香港中华出入口商会的演讲）

Laying a solid foundation for new culture (1989)

The topic of my speech today is the relationship between economic reform, new public ownership and a new culture. In my opinion, when we clarify the relationship between these three things, we will gain a better idea about the significance of and prospects for the economic reform that has been going on in our country for a whole decade, and find it a lot easier to understand the trials and tribulations our nation has gone through in the course of it.

I. The study of people

In studying economic issues we are obliged to face certain questions. What is the purpose of growing the economy? For whom do we provide products, labor, and service? Why should we turn out more and more products and provide more and more labor and service? These questions boil down to one: What is the purpose of production? Common sense tells us that production *per se* is not the purpose. Human beings do not live in the world merely as laborers. People do not come into this world to serve production – it is production that serves people. The purpose of production is for people to be better cared for and better educated. It defeats the purpose of production if we concentrate single-mindedly on offering more products while our standard of living and cultural and educational attainments remain the same, and if our people are not duly respected and cannot live up to their potentials.

Based on this plain and simple line of reasoning, we may define economics this way: Economics should not be limited to learning how to increase material wealth, but more importantly, it should study how to use the wealth created by people to meet their needs in their material and cultural lives. The highest level, or focus, of economic

research is not material products, but people.

Based on this plain and simple line of reasoning, we can understand the meaning of the ongoing economic reform. Economic reform serves not merely to put the Chinese in possession of more products. More importantly, it is designed for them to achieve affluence and better cultural and educational endowment, and to be looked after, educated and respected as society's masters. From this perspective, it is clearly inadequate to argue for economic reform simply for the sake of economic reform.

We must admit that in meeting people's material and cultural needs and in facilitating all-round human development, there is a yawning gap between reality and ideal. Therefore, we have to accelerate reform – economic, political, and institutional reforms included – and cultivate a new culture. I believe that not only will our per capita national income grow nonstop with rising labor productivity, but our civic character will also improve vastly with what has been accomplished in growing the economy and cultivating the new culture, so long as we can ensure essential progress in reform and development, motivate our workforce unswervingly, and give full scope to the wisdom and talent of our people. Reform is exactly where China's hope rests.

II. New culture holds people in due esteem

Prior to the liberation year of 1949, an old culture, in which people's position and role were disdained, dominated this nation for understandable reasons. But how is it that the old culture remains so powerful after 1949? It is because it has carved out a new form of existence under a new situation and in a new economic environment.

It goes without saying there is a certain correlation between the old cultures before and after 1949. The old culture is anti-scientific and antidemocratic, whereas science and democracy are salient features of the new culture. Our predecessors had studied this a long time ago. Today, it should be recapitulated further on the basis of

previous studies. The old culture is centered on divinity, whereas the new culture is focused on people. The old culture emphasizes power, whereas the new culture stresses knowledge. Because of its emphasis on power, old culture is based on the official standard; for its stress on knowledge, new culture inevitably takes people and science as its starting point. Superstition is the shared attribute of pre- and post-1949 old cultures, which never hold people in center stage. In the old culture, power is worshipped religiously and pursued relentlessly, and science, knowledge, and people are never respected. The reason why the old culture of yesterday lingers on and a new form of the old culture came to the scene after 1949 is precisely because of the old culture's intricate foundation in the Chinese economy of yore and its deep roots in feudalism. That is to say, because the pre-1949 old culture escaped elimination, the post-1949 old culture has been allowed to rear its ugly head. If we call the pre-1949 old culture "standard old culture" and the post-1949 old culture "remodeled old culture," what existed from the 1950s through the 1980s were two kinds of old culture, the "standard old culture" and the "remodeled old culture," and the period from the late 1960s through the mid-1970s was one in which the two old cultures apparently got mixed. The "remodeled old culture" has been weakened considerably since the Third Plenary Session of the Eleventh Party Central Committee in 1979, but this has not happened to the "standard old culture." In fact, it has reappeared in such forms as construction sprees of temples and lavish tombs and the spread of wasteful weddings and funerals. This indicates that, on the one hand, the independent old culture won't beat a retreat anytime soon even with progress in economic restructuring and reform, and, on the other, once the old culture infiltrates lifestyles and habits, it becomes pegged to people's economic abilities. When people are having trouble making ends meet, there is little they can do even if they truly desire to build temples and lavish tombs or indulge in pomp and pageantry. Of course I am not saying they won't get these things done by falling into debt. Generally speaking, people become thrifty when they are hard up, but when they are better off, the "standard old culture" will

penetrate their daily life and spread among them in no time.

Obviously, we can never eradicate the old culture, not even the "standard old culture," by raising people's income alone. The old culture totally denies people's status as masters of society and is steeped in benightedness and blind obedience. It can be rooted up and give way to new culture only by developing both the economy and education and raising people's scientific and cultural endowment. The kind of education I am talking about here is not simply the imparting of knowledge and expertise but, more importantly, the cardinal mission of "modernizing people."

Make no question about it, without the "modernization of people" there will be no modernization of society, the economy, or science and technology. Without the "emancipation of people" there will be no emancipation of productivity. New culture is connected with "modernization of people" and "emancipation of people." Only by grasping this point can we capture the profound meaning of the cultivation of a new culture.

III. The foundation of a new culture

Why is the old culture so powerful and the new culture so weak in China? Because the new culture has yet to build up its own economic base. The pre-1949 old culture was based on an old economic system, but, during the period from the late 1950s to the eve of the Third Plenary Session of the Eleventh Party Central Committee, another form of old culture, the "remodeled old culture," found its foundation in the ossified commodity economy and the traditional form of public ownership which confounded government administration with business management, made officials act like businesspeople, dampened producers' enthusiasm for production, and robbed the new culture of its corresponding economic foundation. The landmark significance of the Third Plenary Session lies in the fact that it unshackled people from long years of "Leftist" ideology, emancipated their minds, and pointed out the way for building a socialist system conducive to productivity development. After that

meeting, we have not only transformed the old economic system into a new one, but also repudiated old culture, the "remodeled old culture" included, and built a socialist new culture. The socialist new culture has found its foundation in a planned socialist commodity economy that embraces a new type of public ownership whereby government administration is detached from everyday business management, officials no longer act like businesspeople, and producers are highly motivated.

Only by observing the mission for economic reform alongside the building of the socialist new culture can we fully comprehend the greatness of what our nation has been doing over the last decade and understand the adversities and trials involved in the cause of reform. It is hard to replace an old economic system with a new one, but it is even harder to replace an old culture with a new culture. Reform entails readjusting interests. Old culture and old habits hold sway over people's outlook on personal interests, labor productivity, education, and way of life, while the old economic system spawns egalitarianism and rigidity in such assertions of interests as wages, employment, and welfare. Reform is bound to touch upon everybody's established interests. If four of someone's five established interests have improved, he may still have complaints about the one interest that has suffered and go on to blame it on reform, because he takes the improvement in his established interests for granted and believes that something must have gone wrong if one of his interests has been impaired even if such an interest is unwarranted. The result is that society abounds with complaints that stem from all sorts of conflicts of interests. It is thus apparent that without correcting people's outlooks on their interests, without loosening the rigidity of interests caused by egalitarianism and the old economic system, without breaking the bandwagon mentality concerning interests based on tradition, and without fostering new concepts of culture and interests, the road ahead for reform will bristle with impediments. If we have fully accepted this point, we can arrive at three conclusions:

First, "reform" contravenes not only a 30-year-old economic

system but also three millennia of outdated culture and habits. Therefore, reform can never be a simple undertaking.

Second, reform has brought a lot of new interests to people, no question about it, but because it has broken or is ready to break the rigidity of interests under the old system, it has also deprived people of certain established interests. Thus reform is confronted with more impediments as people, oblivious to the new interests they have gained, are having misgivings about their lost established interests.

Third, rigidity in interests is uncalled-for, and some of the established interests born of such rigidity are detrimental to productivity growth. Both should be rectified, and reform should never be reined in because of it. We cannot afford to give up reform midway for fear of an unjustified rigidity in interests. Otherwise, our effort to develop productivity will be thwarted, and our hope for a prosperous economy dashed.

From a historical point of view, and from the perspective of our confrontation with the two- or three-millennium-old outmoded culture, ten years are just a twinkling of the eye. But what has been achieved in reform over those years has been breathtaking. History will pass a fair and honest judgment on it.

The new culture is bound to prevail once it acquires a sturdy economic foundation, that is, a socialist commodity economy and a new type of public ownership. The inexorable pace of socialist economic reform alongside the socialist new culture is unstoppable.

IV. The hope of China

I have just dwelled on the issue of confidence. I believe every-one present in this auditorium feels the same. True, the national economy has hit some snags – inflation, "official" and "nonofficial" smuggling, corruption, education crisis, and whatnot. We should admit these facts. Whining and griping gets us nowhere. Only by accepting the reality, knowing the challenges and hardships of reform, and getting to the root of the problems, can we understand why reform is

irreversible and why problems can be redressed in the course of reform. Given that economic reform is challenged by the 30-year-old system plus three millennia of old culture, traditions and habits, we know that the old system will not crumble on its own and the old culture, traditions, and habits cannot vanish overnight. Nevertheless, we must recognize that our nation will be doomed if we lose heart and allow ourselves to descend into complaint and despair.

My career as a university teacher on the mainland has brought me in contact with members of the younger generations in and out of class. Take, for example, the young people in their thirties today. Unlike the college students of the 1950s, who had wallowed in idealism for a period of time before and after they started work, and who were somewhat belated in their awakening to the stubbornness of the prevailing old culture, these 30- somethings had taken part in the Cultural Revolution in the name of "casting away the Four Olds" – old ideas, old culture, old customs and old habits – during their middle-school or college days. Their tragedy is that in the adverse current of "annihilating old culture in name and maintaining old culture in practice," they had inadvertently become new culture's saboteurs. Superstition, blind faith, ignorance, and extremism had driven them to put on red armbands and hold aloft the Little Red Book – Quotations of Mao Zedong. When they sang the Song of Rebels and came to blows, wielding cudgels and belts, they saw themselves as faithful enforcers of the May Fourth Movement spirit^[1]. However, it did not take long for them to come to their senses. "Re-education" in the countryside, loss of schooling opportunities, and joblessness eventually drove home to them the harms done by the old culture, especially to themselves. A considerable number of them were participants in or supporters of the Tian'anmen Incident of 1976^[2]. History is at once merciless and dramatic. All of a sudden, those hoodwinked by the old culture became its intransigent foes. Their minds were racing. How should the new culture be fostered? How could the new culture prevail in its long-term combat against the old? Having mulled over these questions, some of them ardently joined the cause of fostering the new culture. However, as the majority of the

people in their thirties today lost their schooling opportunities in the decade-long chaos, their attitude toward the new culture being fostered nowadays is based more on personal demands and expectations than on in-depth theoretical analyses and explorations. Nevertheless, there is one thing they share with people of other age groups, that is, they know from personal experience that it is no mean task to phase out the old culture and phase in the new culture.

The situation with the 20-somethings of today is somewhat different in comparison with the 30-somethings. A 22-year-old college graduate may have been born in 1966, the year the Cultural Revolution broke out.

A 30-year-old lecturer, assistant researcher, engineer, or PhD candidate may have missed primary school because all manner of schools were closed and stopped enrolment in 1966. They have just a faint memory of the Cultural Revolution, or no memory of it at all. They started school in the wake of the Cultural Revolution, and their development has been associated with the sensible policies adopted since the Third Plenary Session of the Eleventh Party Central Committee. They have learned new knowledge, and have been fortunate to live in the reform and opening years. They are the new culture's born pursuers and aspirants. Frequent contacts with the outside world, and concerns about China's economic and technological underdevelopment, have combined with the on-campus academic atmosphere to convert this generation of undergraduates and graduate students, teachers, researchers, technicians and engineers into spirited builders of the new culture. Undeniably, however, they are not without their limits. Because they are too young to adequately understand the reality of Chinese society, they know little about the stubbornness and strength of the old culture, and tend to believe that the building of a new culture will be nothing but smooth sailing. They probably believe the old culture will step down the moment the new culture goes onstage. This oversimplified way of thinking turns them into a different type of idealists from the youngsters of the 1950s. The idealists of the 1950s believed their task was to build the new culture

now that the older generation had basically fulfilled the mission to destroy the old culture. The idealists of the 1980s may not believe this mission has been basically accomplished, but they are convinced that, with their active participation, it will not take long for the new culture to triumph over the old. Unrealistic idealism is likely to fuel impetuosity, agitation, and, in time of setbacks, pessimism, and despair. Logically speaking, as a blessed generation, the 20-somethings of today should be less prone to dark moods than people a little older. In reality, however, that is not true. Why? It is partly because of their scanty knowledge of the trauma involved in the cause of reform and partly because they cannot beat the old culture merely with knowledge (they are a generation of knowledge) and passion (which they certainly do not lack). The new culture cannot succeed before it builds up its own economic base.

Thus they start whining and griping. But what good can complaining do? They are disappointed, but can disappointment change things? Confidence, as always, is of vital importance, and therefore, we should never lose heart. No matter how difficult reform is, we have got to brace ourselves and stick it out. We are ready to take chances no matter what. Our fate is bound up with reform. That is why I told my Hong Kong hosts just before this meeting, "The hope of China lies in our confidence in reform and in building the new culture. If everybody has lost heart, reform will be doomed."

I believe I made that remark for a reason. Many of you sitting in this auditorium have been to the mainland more than a decade ago and have returned there for visits recently. Did you see big changes out there? Of course you saw colossal changes. The changes will become even bigger ten years from now, no question about it. Every one of us, those who are not confident enough included, must see the world economic situation and future trend in perspective, and put our home situation into perspective too. The changes that have taken place over the last decade are by no means small. Ten years ago, it was impossible for us to talk openly about our backwardness and the gap between China and other countries. We would not have been able

to speak our minds about our country's economic issues. More importantly, those unscientific "supreme directives" would have remained the only theoretical support for solutions to those issues. Therefore, of all the impediments to Chinese economic development, the old culture must never be disregarded. Never had its impact been so ferocious as it was a decade ago. Having seen the changes over the last decade, I believe we should remain firmly optimistic about our future.

V. Science and democracy can save China

When we see that the Chinese economy today is still trailing a long way behind many other economies in the world, an idea naturally comes to mind. Had we allowed the anti-scientific, anti-democratic old culture to prevail and manipulate our thoughts, we would have lost sight of how underdeveloped we were. We cannot but owe this awakening to the outcry of the ideological, cultural, and academic circles, and to our growing exchanges and connections with other nations. Today, everybody, or at least most of us, have come to our senses. A major reason why reform is an irresistible trend is because ideas of science and democracy have been gradually engrained in people's hearts. We have every reason to believe that if the socialist new culture, for lack of a corresponding economic foundation, is too weak to compete with the old culture prior to the birth of a new type of public ownership, it will no longer be weak and at a disadvantage in competing with the old culture once the new type of ownership comes to stay and the economic foundation becomes a reality. The new type of public ownership under conditions of a socialist commodity economy will support the socialist new culture, which, for its part, is inevitably conducive to the consolidation of such ownership. This relationship of mutual support and promotion will have a major impact on future changes in the Chinese economy. With the support of the socialist new culture, the Chinese economy will enter a new period of historical development.

How is it that the socialist new culture can play such a role? Why

is it that the Chinese economy cannot score major progress without the support of the socialist new culture? Why cannot the new culture grow on its own and be consolidated without its economic foundation in the socialist commodity economy under the new type of public ownership? In-depth analysis of these questions will touch upon the issue of science and democracy. We emphasize that science and democracy can save China not just because of their role in economic development, but more importantly, because of their role in modernizing and emancipating people. If our workers and farmers can truly understand the damage caused to the economy and our own long-term interests by egalitarianism, life-long tenures, the egalitarian practice of everyone eating from the same big pot regardless of work done, rigidity in interests and the bandwagon mentality concerning interests, will the impediments to reform not be minimized? If our government functionaries can truly see that only by shattering the old system that put the economy at the mercy of administrative directives can the Chinese economy take off and the income of government functionaries and their families grow in pace with the income of the rank-and-file in the course of economic growth, will the commodity economy and the new form of public ownership not be built a lot faster? If, more than anything, the broad masses of people truly regard themselves as the masters of society under the ideological guidance of science and democracy, will corruption not be considerably reduced? As I see it, all these questions can be answered

in the positive. Herein lies the inseparable bond between the building of a new culture and economic and political reform. In the course of fruitful economic and political reform, a new culture commensurate with the new type of public ownership can definitely be translated into reality.

It takes a considerably lengthy process to raise the quality of the entire citizenry. Perhaps only after our economy has become truly well developed, our people's income has risen vastly, and our lives have become really affluent, can our culture, education, science and public health be provided with enough development funds and

cherished by the entire public, and our national character – cultural, moral, etc. – be considerably improved. We are not here to overestimate the role of the economy. Rather, this conclusion is based on the historical experience of countries in economic and cultural development. Perhaps a well developed economy is the only way for the fine accomplishments of traditional culture to be truly cherished and carried forward. We have come to realize that on no account should a nation lose its fine cultural achievements. Outstanding cultural attainments should stand the sifting of history and the test of time. Is it not because of poverty, low per capita national income, and underdeveloped productivity that we do not have enough economic resources to maintain and carry forward our finest cultural accomplishments? Perhaps only when achievements in economic development have become an established fact can they become the best rebuff to the "remodeled old culture" and its foundation, the traditional economic system, and traditional public ownership. If we can say that many people today hate the "remodeled old culture" from the bottom of their hearts and are utterly disgusted by the anti-scientific and anti-democratic arguments advocated by it, such hatred and disgust are based mostly on theoretical and ideological understanding, or are felt mainly from their experience with the poor and backward Chinese economy manipulated by the "remodeled old culture." As to the questions of what will become of the Chinese economy after the commodity economy is developed and the new type of public ownership established, what will become of the people's income and livelihood, and what new social pattern and atmosphere can the economy bring once it becomes commensurate with the scientifically and democratically based new culture, our answers today are more imaginative than factual. However, once all this has become reality, a reality in which the benefits of economic growth, productivity development, and brand-new public ownership can be keenly felt by hundreds of millions of Chinese, our answers will no longer be empty or abstract. Rather, they will become concrete and solid, and bestow faith and spiritual strength on people. By that time, those who cherish science and democracy will no longer believe in the

"remodeled old culture" no matter what high-sounding rhetoric it may employ.

VI. What entrepreneurs can do

Once, during a conversation on economic reform and the building of a new culture in the mainland, an entrepreneur asked me: "The building of a new culture is the task of the educational, cultural, and academic circles. What can a businessman do for it?" What the man did not know is that entrepreneurs have an irreplaceable part to play in building the new culture. I told him that new culture can never prevail over old culture by relying on intellectuals alone. The new culture can strike root in the Chinese soil only when entrepreneurs join workers and farmers under the new public ownership in contributing to the growth of the commodity economy and repudiating outdated traditions, culture, and habits in the course of it.

Generally speaking, our entrepreneurs today are not only doing their best to foster the new culture during the years of economic reform, but are also fostering a corporate culture. Given that corporate culture is a branch of new culture, let me talk at some length about how to foster it.

Corporate culture is the cultural concept and values of a company, and an embodiment of the collective faith and cohesion of its workforce. There will be no corporate culture to speak of if a firm remains a government appendage and has no independent interests, and if its workers' interests are irrelevant to its business performance. For this reason, company autonomy in business activity and company responsibility for gains and losses, combined with the unanimity of interest between the company and its workers are necessary internal economic conditions for corporate culture. Whether such a culture can be fostered also depends on the company's external economic conditions – meaning that at least it should find itself in a competitive commodity market. If no headway has been made in developing the socialist commodity economy, if a company fails to foster economic ties with the outside world through competition, and if its business

deals are entirely controlled by a mandatory plan and the firm serves merely as a processing workshop, it will have no way of fostering, among its workers, the norms of conduct and values centered on efficiency, competition, risks and other concepts, and its relationship with its workers will be deprived of a foundation upon which risks and interests are shared. The building of corporate culture becomes empty talk under these circumstances.

Corporate culture cannot be built in the absence of two pivotal economic conditions. The first is corporate transformation, meaning that companies must be converted from the old type of public ownership in which government interferes in business management, and become a new type of public companies that are independent commodity producers, so that they and their workers can be internally adapted to the requirements of corporate culture. The second is transformation of the corporate environment, which means companies must be given a competitive economic environment in which transactions are conducted openly and contractually, and which provides both opportunities and pressure for them to readjust their relations of interest with their workers and foster a new and congenial relationship between themselves. Both conditions indicate that the socialist corporate culture is an outcome of socialist economic reform and a fruit of the endeavor to develop the socialist commodity economy and establish the new type public ownership under such an economy.

Corporate culture, being a major component of the new culture, cannot be detached from it to stand alone. Therefore, to understand the conditions that the socialist corporate culture cannot do without, we must study the new culture as the cultural background of corporate culture. Science and democracy are salient features of the socialist new culture. Holding people in great esteem, being solicitous for and cultivating them are attributes of the new culture that distinguish it from the old. Corporate culture is out of the question if, in its business activity and management, a modern company turns a blind eye to its people's corporate position, initiative, enterprising

spirit and creativity. Nevertheless, businesses are, after all, microeconomic agents of society, and the relationship between a business and its workers, and the interpersonal relations of the workforce are microcosms of society's interpersonal relations. Exchanges between people cannot happen in companies without a social atmosphere. Corporate culture can never be fostered or developed either, if society is still manipulated by the old culture, if anti-scientific, anti-democratic ideas that form the core of the old culture still hold sway, and if the practice of handling interpersonal relationships inside a firm in line with the interest principle is still being scorned.

In comparison with economic reform, it is a lot more difficult to transform the cultural sphere and allow the new culture to prevail. I am not saying economic reform can be free from obstacles and setbacks. Progress in establishing the new type of public ownership, for instance, is not smooth precisely because of a variety of impediments and difficulties in its way, not to mention the fact that the birth of this type of ownership calls for the repudiation of outdated values and the fostering of modern values, and involves revamping the relationships between company and government and between company and worker – in the latter relationship, workers are not nominal but actual owners. However, it is relatively easy to convince people of the fruitfulness of economic reform, as long as some progress has been made in developing the socialist commodity economy and fostering the new type of public ownership, and as long as economic efficiency has been improved and people's income raised. When such achievements become established facts, anyone wanting to gainsay the socialist commodity economy and the new public ownership will risk offending the masses of people who are beneficiaries of economic reform. By contrast, it is unrealistic to hope that a new culture – corporate culture included – will draw the same popular support. To build a new culture means to uproot outdated values, where the foothold of old culture is strong, and impediments come not only from society but also from people themselves. Although the positive results of corporate culture are apparent in a company's

improved economic returns, people may still attribute them to economic reform rather than to cultural development. Furthermore, new concepts of employment, new principles for rewarding labor, new welfare standards, new interpersonal relationships, new consumer attitude, and new investment psychology are – because of their striking difference from old conventions – most likely to disconcert those deeply influenced by the old culture. Disharmony of this kind exists within and without any company. A clear message here is that cultural progress tends to encounter more obstacles than economic reform, and thus calls for more strenuous efforts.

Specifically, fostering corporate culture will promote economic growth in at least three ways.

Firstly, any firm that has come a long way in fostering its corporate culture invariably becomes a pacesetter for counterparts and gives them food for thought: How is that company able to cultivate an interpersonal relationship based on camaraderie among workers and mutual trust between workers and managers? How is that company capable of raising its economic efficiency so dramatically? Why can't we do what that company is capable of doing? Does the discrepancy between companies in fostering corporate culture reflect their discrepancy in institutional reform? While searching for answers to these questions, companies will set about exploring ways and means to speed up their own transformation. The pacesetter's diffusing impact will be spread to managers and workers. Once these people have seen the need for it, their institutional reform and their effort to build their own corporate culture will naturally pick up speed.

Secondly, the impact on the government of what a company has achieved in fostering corporate culture cannot be underestimated either. The government judges a firm's accomplishments in fostering corporate culture by searching for signs of improvements, such as whether corporate income and government revenue have increased simultaneously, whether its products are popular or not with the public, whether the strain on supply and demand has been eased, and whether the workers are happy with their jobs and motivated. If the

government is impressed by what the firm has accomplished in fostering corporate culture, it will willingly summarize and disseminate the firm's experience. When and where necessary, the government will go on to study the causes behind that firm's accomplishments and, by comparing it with other firms, try to answer the question of why that firm can foster its corporate culture but the others cannot. Isn't it because that firm is successful in corporate institutional reform in the first place? If the government does not want to stop at merely summarizing that firm's success and experience, it will set the firm up as a model

to advance institutional reform in other firms. The importance of the progress made by that firm will not be lost on the government, but it is more important for the government to disseminate its experience and encourage more firms to follow suit in corporate institutional reform. Only thus can a few firms' success in cultural cultivation be used to drive the corporate institutional reform as a whole. This role of government cannot be replaced by individual firms.

Thirdly, from a cultural point of view, the impact of a company's success in fostering corporate culture is by no means limited to the company itself, its workers, and their families. In other words, the "corporate spirit" that embodies the corporate culture of a successful and influential company can shake old cultural traditions to the core. For instance, a company can send shockwaves through a system where egalitarianism still holds sway by boldly replacing absolute equality with a system whereby income is distributed according to effective work done or economic efficiency. Initially, those who believe in egalitarianism will be taken aback, but then they will gradually come to their senses. The established facts – such as the company's improved economic efficiency and workers' pay rises – will eventually change their attitude. By the same token, a company can also shock the public with a new interpersonal relationship that eschews traditional hierarchy and the established pecking order in the course of overhauling business management and fostering corporate culture. Such a shockwave will spill over the remnant influence of the

hierarchical concept in society and further disseminate the new culture. The impact of the achievements in fostering corporate culture on social culture and values may be intangible, but should never be underestimated.

— A speech to Hong Kong Chinese Importers' and Exporters'
Association on January 1, 1989

[1] Narrowly speaking, the May Fourth Movement refers to the Chinese student demonstrations in Beijing on May 4, 1919, in protest against the government's yielding to the pressure of Western countries in signing the Treaty of Versailles. These demonstrations sparked national debates on why China was economically and politically weak and the role of traditional Chinese culture. The movement triggered the New Culture Movement of 1915-1921, in which intellectuals criticized Confucianism and advocated Western-style liberty, democracy and science. The May Fourth Movement Spirit is anti-tradition, anti-feudalism, and pro-new culture. (*Translator*)

[2] The Tian'anmen Incident of 1976 took place in Beijing on April 5, 1976, when thousands of citizens gathered at Tian'anmen Square to honor the memory of the late Premier Zhou Enlai, and voice their burning indignation against the Gang of Four. (*Translator*)

文化经济学的探索 (1990)

一、关于文化艺术品的特殊性质

文化经济学所要考察的不是文化艺术品的生产过程本身，而是与文化艺术品的生产和再生产有关的各种经济问题。这样就不可能不涉及文化艺术品的性质。从经济学的角度来考察，文化艺术品大致上可以划分为两类：一类是可以物化形态表现出来的，如音像制品、美术作品、书刊等；另一类是精神服务产品，也就是文化艺术部门和单位为社会提供的劳务，如表演艺术等。文化艺术品的生产与物质资料的生产相比，其特殊性反映于它们更具有个体性和创造性。当然，这种分类方法和对于文化艺术品的特殊性质的表述并无不妥之处，但如果再深入地推敲一下，也许我们会感觉到文化经济学中关于这一问题的研究的真正困难所在。

比如说，一个小说家或戏剧作家，他为社会创作了一部小说或一部戏剧，但具体地以物化形态表现出来的，首先是一部书稿，而不是一部现成的书。这个书稿首先需要被出版社或杂志社的编辑所承认，被他们接受，然后才由出版社或杂志社付印成书刊，在市场上销售。因此，我们在市场上所看到的以物化形态表现出来的文化艺术品，是指“集体”的产品而言，而这里所说的“集体”不仅包括作家本人，而且包括编辑人员、印刷工人等等。由此可见，如果把文化艺术品视为商品，把文化艺术品的供给与需求关系当做市场关系来看待的话，那么这里实际上存在两个“交易”过程：一是作家同出版社、杂志社之间的“交易”；二是出版社、杂志社同购买书刊的人（包括读者和书刊中间商）之间的“交易”。在前一个“交易”过程中，文化艺术品并不是一般意义上的商品，而是特殊意义的商品。这种“交易”既不同于物质资料生产过程中的原材料交易，也不同于现代加工企业对家庭手工业者或农副产品生产者的产品收购。不能不认为这是文化艺术产品的特殊性之一。

再以劳务的提供来说，文化艺术工作者提供的劳务同样地要比一般的劳务部门或劳务供给者提供的劳务复杂得多。不妨举一个例子：假定文化艺术工作者都像街头艺人那样直接面对观众，以表演艺术取得报酬，那么问题显然比较简单，即一方是劳务供给者，另一方则是劳务需求者，“交易”就在供求双方之间进行。但这不是文化艺术工作者当前提供劳务的主要方式。在目前的条件下，文化艺术工作者提供的劳务有可能采取下述形式，即类似于作家提供书稿给出版社，再由出版社销售书籍；一个演员、歌唱家或舞蹈家先受聘于演出团体或同演出单位订立合同，由演出团体或单位组织歌唱会或舞蹈表演，取得票房收入，然后付出一定的报酬给表演者，但在这里，文化艺术产品的“交易”只有一次，而不是两次。这就是说，只有在表演者面对观众时，他才提供了劳务，而在他受聘于演出团体或同演出单位订立合同时，并未提供具有商品性质的劳务，演出团体或单位是根据表演者以前的表演经历或根据考核而聘任他或同他订立合同的。然而，即使这样的劳务“交易”，也不同于一般劳务的交易，这是因为，文化艺术产品（表演艺术劳务）的购买者是所有的观众，而不是某一个买主，而供给者实际上也是一个“集体”，尽管某个主要的表演者（歌手或舞蹈家）在这个“集体”中可能起着最重要的作用。这也可以被看成是文化艺术产品的又一个特殊性。

以上，无论是从两个“交易”过程的角度还是从一个“交易”过程的角度，都可以了解到文化艺术品作为一种商品是具有自己的特殊性质的。但问题还不仅限于此。让我们再从文化艺术品的使用价值的社会评价方面来进行探讨。

二、关于文化艺术品使用价值的社会评价

一谈到商品使用价值的社会评价，问题必然转入了规范经济学的领域。要知道，在物质生产领域内，一件商品的使用价值本身，并不具有伦理的性质。鸦片、吗啡作为商品，由于能够满足人的某种需要，所以它们就具有使用价值：既可以在医药工业中使用它们，也有可能被吸毒者所购买。对鸦片、吗啡之类商品的生产、销售和使用之所以要实行严格的管制措施，正因为它们有可能成为毒害社会、毒害人们的商品。同样的道理也适用于武器和某些化学制品（如氰化物）等等，问题在于使用者如何使用它们，而不在于它们的使用价值本身。对武器和某些化学制品的生产和销售进行严格管制，也是从防止其不正当使用的角度来考

虑的。

文化艺术品作为商品，既有与此相类似之处，又有不同之处，例如，宣传政治反动、淫秽色情、凶杀暴力的书籍、电影、录像带等，尽管它们被投入市场后会有购买者，但它们却在明显地毒害社会。

然而与上面举例时所提到的鸦片、吗啡、武器、某些化学制品有所不同，鸦片、吗啡在被医药工业用作麻醉药品的原料时，一般不会造成危害，而只有当它们被滥用时，特别是鸦片、吗啡被贩毒者和吸毒者购买，或武器和某些化学制品流入不法之徒手中时，它们才危害社会。可见，关键不在于这些商品的使用价值本身，而在于谁使用它们，怎样使用它们。文化艺术产品中的那些宣传政治反动、淫秽色情、凶杀暴力的书籍、电影、录像带等，一般说来，问题不仅仅在于谁使用它们和怎样使用它们，甚至可以认为，它们的使用价值本身就是值得怀疑的。它们本来就不该被生产出来，而它们一旦被生产出来，就会产生有害的社会影响。很难认为对它们有所谓“正当使用”的问题，除非公安、司法等部门对它们有特殊的用途，但即使如此，这些部门也完全不需要为此目的而组织生产它们。因此，对这类文化艺术产品也就不存在所谓“严格管制下的生产和销售”问题。

这就是根据文化艺术品使用价值的社会评价而得出的文化艺术品的特殊性质的另一种表现。换句话说，文化艺术品之所以不同于物质资料生产的产品，是由于文化艺术品作为人们的精神生产的产物，本身有规范的含义。文化艺术品是它们的创作者的劳动的成果。它们要成为商品，除了有创作者本人投入的劳动以外，还包括其他有关的人员（如书刊的编辑人员、印刷工人、音像制品的制作人员等等）所投入的劳动，并且需要通过“交易”这一中间环节，到达消费者手中。这类商品的规范性质反映于它们的使用价值的社会评价方面。宣扬政治反动、淫秽色情、凶杀暴力的书刊和音像制品之所以必须被取缔，之所以在任何条件下都不允许其生产和销售，正是从规范的意义上来考虑的。也正是从这个意义上，不仅应当追究其出版者、编辑者的责任，而且更应当追究其创作者的责任。

三、关于文化艺术商品生产的经济效益

下面，让我们转而探讨另一个问题，即文化艺术商品生产的经济效益。请注意，我在这里使用的是“文化艺术商品生产的经济效益”概念，

而不是泛指一切文化艺术品或文化艺术创作物的“经济效益”。这是有区别的。假定一个人创作了一首诗、一幅画、一件雕塑，而并未投入市场，那么这种创作物不成为商品。它有没有经济效益呢？可以说，经济效益的概念这里并不存在（至于社会效益，那是会有的。只要它被人们所观赏或传诵，社会效益也就会产生。当然，社会效益有大有小，有正有负，这都要由具体情况来决定。关于这些，后面再进行探讨），所以我在这里指的只是那些成为商品的文化艺术创作物的经济效益。既然是商品，那么必然有商品供给者（卖方）、商品需求者（买方）、价格、市场。对商品供给者来说，还有成本、净收益、再生产的动力与条件等问题。对商品需求者来说，则有购买意愿的满足程度、使用所购买的商品的实际效果之类的问题。而对于经济活动的组织者、管理者而言，需要考虑的是通过这类商品的生产和销售而引起的资源配置格局的调整、国民生产总值和国民收入的增长幅度、财政收支的变动问题等等。所有这些，在研究文化艺术商品生产经济效益时都是不可回避的。

这样，文化艺术商品生产经济效益的研究领域就相当广泛，而不仅限于对于商品生产者的成本与效益的考虑，或对于国民生产总值和国民收入增长率的分析。简单地说，对文化艺术商品生产经济效益，至少可以从六个不同的方面来考察。

1. 文化艺术商品创作者投入的劳动与其所得的收入比较。这是从文化艺术商品的特殊性出发所考虑的个人经济效益问题，但这又是一个艰巨性较大的研究课题。文化艺术商品创作者（例如作家、画家、演员）所投入的劳动无疑是复杂劳动，但这种劳动的复杂程度却是不易衡量的。由此也难以给这种复杂劳动制定一个客观标准，难以判断投入劳动的数量与质量同所获得的收入的相符程度。

2. 文化艺术商品的供给单位（如出版社、演出团体、音像制作企业）的成本与收益之比。假定这些供给单位把付给文化艺术商品创作者的报酬列入工资成本之内（工资成本中还包括付给其他有关工作人员的报酬），并且再计算折旧费、原材料消耗等，那就构成了供给者的全部成本。供给者的经济效益大小取决于成本与效益（销售收入）之间差距的多少。

3. 文化艺术商品的购买者（使用者）的经济效益。这里排除了中间购买者的情况，而把文化艺术商品的购买者定义为最终消费者。购买者认为所买到的文化艺术商品越能符合自己的购买意愿，他们越会感到满足，他们也应认为这样的购买（交易）是有较大经济效益的。尽管人们

通常不把这种满足程度视为经济效益的尺度，而且事实上对这种满足程度也缺乏衡量的标准，但只要我们把经济效益看成是“以一定的支出取得尽可能多的收获”或“以尽可能少的支出取得一定的收获”的同义语，那么不可否认，标志着经济效益高低的“最小成本原则”或“最大效益原则”无论在文化艺术商品的供给者那里，还是在文化艺术商品需求者那里，都是存在的。文化艺术商品的购买者之所以会在购买前进行支出方向的比较，在购买中会对购买对象进行选择，在购买行为完成后会对这项购买行为作出评价，是因为与他们对经济效益的考虑直接有关。

4. 从国家财政的角度来看，某一商品的生产和销售，以及某一行业的商品生产和销售，都会使财政收支状况发生变动。通过这些生产和销售而使财政收入净增加额越大的，可以被认为是经济效益越好，反之则被认为是经济效益越差。对文化艺术商品的生产和销售，同样可以采用这种方式来衡量其经济效益。

5. 对经济增长率的贡献大小也是衡量某一具体商品的生产和销售以及某一行业的商品生产和销售的经济效益高低的标准。经济增长率通常是以国民生产总值或国民收入的年变动率计算的。对于文化艺术商品生产经济效益的衡量，这一方法同样适用。比如说，新闻出版的产值是国民生产总值的组成部分，它们同国民经济其他部门之间存在着相互制约的关系。如果新闻出版业产值的增长能导致与之有关的其他行业的产值有较大幅度的增长，我们就可以认为新闻出版业对经济增长的贡献较大，从而认为新闻出版业的经济效益是较好的。

以上五个方面中，只有第二和第四这两方面较易于分析，而第一、第三、第五这几个方面都是难度较大的。然而，更难以分析的是下面所要讨论的第六个方面。

6. 从资源配置的角度来考察，某一具体商品的生产以及某一行业的商品生产总是需要资源投入的，而生产的成果则又会使社会的资源总量和结构发生变动。物质资料的生产是这样，文化艺术商品的生产也是这样。假定社会的资源总量是有限的，并且资源配置的格局已经形成，唯有通过资源增量的变动才能予以调整。于是在衡量经济效益时社会面临如下的问题：某一具体商品的生产以及某一行业的商品生产究竟是导致资源配置状况的改善，还是导致资源配置状况的恶化？资源配置状况的改善或恶化，是衡量该项生产经济效益正负的标准，而改善或恶化的程度则是衡量该项生产的正值经济效益或负值经济效益大小的尺度。理论分析所得出的结论就是如此。

难点显然在于对既定的资源配置格局的评价以及对资源配置状况变动程度的衡量。也许有人会提出，用社会总需求与社会总供给的差距大小，或者更深入一层，用关键性产品的短缺程度或积压程度，未尝不可以作为对资源配置格局评价和资源配置状况变动程度的判断标准。但要知道，这通常只适用于近期经济效益的分析，而对于长期经济效益的分析则是远远不够的。也就是说，从近期看，某种资源配置状况不一定反映出什么问题，但从长期看，这种资源配置状况所暴露出来的问题则比较多。有些问题至今仍是潜伏的、不明显的，它们对经济似乎不构成危害，而如果持续下去，那么到一定时刻，潜伏的问题会公开化，不明显的问题会变得突出，而对经济的危害也就暴露出来了。只有从这样的高度来认识某一商品生产的经济效益和某一行业的商品生产的经济效益，才能对经济效益概念有较完整的理解。不管是对物质资料的生产还是对文化艺术商品的生产，都不应该忽略从资源配置角度对经济效益的考察，虽然在衡量这种经济效益方面存在着以上所说的困难。

当我们把研究的重点逐渐转移到资源配置方面，特别是关于资源配置的长期经济效益方面时，我们必然会遇到一个最为困难的问题，这就是社会效益的衡量。这个问题对于文化艺术商品来说尤其重要。前面在讨论文化艺术品使用价值的社会评价时，我们实际上已经接触到这个问题了。

四、关于文化艺术商品生产的社会效益

在一定的意义上，某种商品生产以及某一行业的商品生产的长期经济效益与它们的社会效益是一致的。但社会效益通常要比经济效益具有更广的含义。可以把社会效益直接同社会经济发展目标联结在一起。假定某种商品以及某一行业的商品生产有助于社会经济发展目标的实现，那么可以认为该项商品生产的社会效益较大；反之，假定某种商品以及某一行业的商品生产不利于社会经济发展目标的实现，那么可以认为该项商品生产缺乏社会效益。可见，在对一定的商品生产的社会效益进行分析时，有必要先明确究竟什么是社会经济发展目标，以及用什么来判断一定的商品生产究竟是有利于社会经济发展目标的实现还是不利于社会经济发展目标的实现。

社会经济发展目标不是单一的，而是多元的，比如说，既要提高居民的收入，又要避免收入分配的差距过大；既要满足居民在物质生活方

面不断增长的需要，又要满足居民在精神生活方面不断增长的需要；既要改善居民生活的社会环境，又要改善居民生活的自然环境，等等。多元的社会经济发展目标表明，单一发展物质资料的生产是不够的，文化艺术商品生产的发展起着同样重要的作用。我们在讨论文化艺术商品生产的社会效益时，绝不能忽视文化艺术商品生产的发展在实现社会经济发展的多元目标中应该和可以起到的作用。

社会经济发展目标中的任何一个目标都可以分解为各个不同的阶段性目标。以满足居民在精神生活方面的需要来说，这一目标可以分解为若干个不同的阶段性目标，每个阶段性目标是比较具体的。因此，在衡量一定阶段内的艺术商品生产的社会效益时，可以把文化艺术商品生产的社会效益同相应阶段内要达到的居民精神生活方面的需要的满足情况进行比较，以确定社会效益究竟是正值还是负值，确定正值或负值的社会效益的变动幅度。

就提高居民的生活质量这一社会经济发展目标而言，在把它分解为若干不同的阶段性目标之后，也可以采取同样的方法把文化艺术商品的社会效益同相应阶段内要达到的提高居民生活质量的情况进行比较。这种方法对于衡量文化艺术商品生产的社会效益的适用性，我认为是可以肯定的，当然，许多细节还应作进一步的研究，这将有待于关心文化经济学的同志们的共同努力。

在考察文化艺术商品生产的社会效益时，最为复杂的问题也许是对文化艺术商品在提高人们的思想觉悟或腐蚀人们心灵方面的作用的估计。从理论上说，这与前面讨论过的文化艺术品使用价值的社会评价具有相同的含义，但从社会效益的角度来看，则存在对文化艺术商品的作用的估计问题。我们可以明确地说，这种作用无疑是存在的，也是人们所不能否认的，但作用大小的估计却非常困难。特别是，提高人们的思想觉悟或腐蚀人们的心灵的因素很多，文化艺术商品的生产、销售和使用只不过是众多因素中的一项。迄今为止，在估计文化艺术商品生产的社会效益时还找不到一条可以把文化艺术商品在这方面的作用同其他因素的作用分离出来而单独予以估计的途径。这个难题只有留待今后的研究者来解决。

（原载《经济文化》，1990年第4期）

Cultural economics: a tentative study (1990)

I. Peculiarities of cultural and art products

Cultural economics is not concerned with the process by which cultural and art products are produced but with the economic issues pertinent to the production and reproduction of such products. Thus something has to be said about the attributes of cultural and art products. In terms of economics, they fall into two categories: those in the form of physical commodity, like audiovisual products, fine arts, books and periodicals; and those in the form of service, that is, labor services provided by cultural and art organizations, such as performance art. In comparison with material production, the production of cultural and art products is unique in that it is more individualistic and creative. Looking back, we may find nothing inappropriate with the way we categorize cultural and art products and interpret their peculiar attributes. However, if we probe the issue of cultural economics more deeply, we will know where the problems are.

If, for instance, a novelist or playwright comes up with a novel or a drama script, the first material form of his brainchild is a manuscript instead of a published book. This manuscript must be recognized and accepted by editors of a press or a journal before it turns into the book form and is sold on the market. Thus the material forms of cultural and art products we see on the market are a kind of "collective" product, that is, products brought into being "collectively" not only by authors but also by editors, printers, and the like. If we regard cultural and art products as commodities, and their supply-and-demand relationship as a market relationship, two "trading" processes will take place in reality: (1) trading between authors and publishers; (2) trading between publishers and buyers (readers and distributors

included). The former trading process, in which cultural and art products are not ordinary commodities but special ones, is different not only from transactions over raw materials in the course of material production, but also from purchases of household handicrafts or farm and sideline produce by modern processing companies. This difference is one of the peculiarities of cultural and art products.

As to the labor services provided by cultural workers and artists, they are likewise a lot more complicated than those provided by ordinary workers or organizations in other fields. For example, if a cultural worker or artist renders his labor or service as directly as a street performer does to his audience, the issue becomes as simple as what happens between a labor supplier and a labor demander – a deal between the two parties concerned in any supply-and-demand relationship. Nevertheless, this is not the dominant way for cultural workers or artists to offer labor service today. As things are nowadays, an author sends his manuscript to a publisher first, and then the publisher publishes the book and sells it on the market. An actor, a singer, or a dancer has to be hired by a troupe or sign a performance contract with it, before the latter puts on singing or dancing performances and pays the performer a portion of the box revenue. In that sense, this form of "trading" takes place only once, not twice. This is to say, only when a performer is brought in front of his audience can his service be really delivered. When he is hired by, or signs a contract with, a troupe, he is yet to deliver his "commodity" (i.e., his service), while the troupe hires him or signs a contract with him based merely on his previous experiences or evaluation reports. However, even this manner of transaction in labor and service is different from usual, because the "buyer" of cultural and art products (or the labor and service in performing art) is not an individual but all the audience, and the supplier is in fact also a "collective," even though one main performer (i.e., singer or dancer) plays a pivotal role in it. This is another special attribute of cultural and art products.

Judging from the two "trading" processes or either one of them, cultural and art products are commodities of a special nature. But the

issue does not stop then and there. Let us take another look from the social evaluation perspective of the use value of cultural and art products.

II. Social assessment of the use value of cultural and art products

Normative economics comes to mind at the mere mention of the social evaluation of a commodity's use value. We must accept that in material production, the use value of a commodity *per se* does not have an ethical attribute. Opium and morphine have some use value because, when used as commodities, they serve certain human needs – they may be either used in the pharmaceutical industry or bought by drug addicts. The production, sale, and use of commodities such as opium and morphine are strictly controlled because they are a potential bane to society and humanity. The same can be said of weapons and certain chemicals, such as cyanides: the problem here is not so much related to their use value but rather to the way people use them. To tighten up the control of the production and sales of weapons and certain chemicals is precisely to prevent them from being used for improper purposes.

As commodities, cultural and art products are at once similar to and different from the aforementioned material products. For instance, books, movies and audiovisual products about reactionary politics, pornography, murder or violence may have some buyers in the marketplace, but they are definitely poisonous to society.

Nevertheless, these cultural and art products are different in some ways from opium, morphine, weapons and certain chemicals. Opium and morphine are generally harmless when employed as raw materials for anesthetics – they become a public hazard only when abused by drug dealers and addicts. The same can be said of weapons and certain chemicals falling into the hands of criminals. It is thus apparent that the problem does not arise from these commodities' use value *per se* but from who uses them and what they are used for. As to

books, movies and audiovisual products about reactionary politics, pornography, murder, or violence, however, the problem is not as simple as who uses them or what they are used for, because their use value is suspicious in itself – they should not have been produced in the first place. Once they are produced, their pernicious social impact becomes immediately evident. We can hardly believe they can be put to "normal use," unless they are used for special purposes by the public security bureau or the judiciary. But even in that case, there is no need for these departments to organize the production of these products. Therefore, there is no need, either, to subject this kind of cultural and art products to "restricted production and sales."

This is another peculiarity of cultural and art products based on a social assessment of their use value. Such products are different from material products in that, born of people's spiritual needs, they have normative connotations peculiarly of their own. These products are the brainchildren of those who created them. To become commodities, they also need the labor input of related people – editors and printers in the case of books, and producers in the case of audiovisual products – other than those who created them. They also need an intermediary "trading" process, so that they can be delivered to consumers. Their normative attribute is reflected in society's appraisal of their use value. The reason why the production and sale of books, movies, and audiovisual products about reactionary politics, pornography, murder, or violence should be banned under all circumstances is precisely based on their normative attribute, that is, public assessment of their use value. This is precisely why not only their publishers and editors but also their authors should be held accountable.

III. Economic returns of cultural and art commodity production

Let me devote this section to another issue, the economic returns of the production of cultural and art commodities. Please note the concept I dwell on here is the "economic returns of the production of cultural and art commodities," not the "economic returns" of all

cultural and art products and creative works. These are two different concepts. When someone composes a poem or creates a painting or sculpture but does not market it, does it have economic returns? I would say it has no economic returns at all. (It does have its social returns as far as it is appreciated or read widely. Such social returns can be big or small, positive or negative, depending on its merits or demerits, which I will deal with in another section.) That is why this section is focused on the economic returns of cultural and art products that have become commodities. Where there are commodities, there must be suppliers (sellers) and demanders (buyers), prices and markets. On the part of the supplier, it is about costs, net returns, and the motivation and conditions for reproduction. On the part of the buyer, it is about the degree to which such a commodity satisfies his purchase intention and its actual effects. On the part of an organizer or a manager of such economic activity, consideration should be given to a series of issues such as the adjustment of resource allocation caused by the production and sales of these commodities, the margin of growth in GNP and national income, and fluctuations in fiscal revenues and expenditures. None of these factors can be ignored when the economic returns of cultural and art commodity production is studied.

This field of study thus takes on a vast scope that is not limited to the costs and returns of commodity producers or the growth rate of GNP or national income. Simply put, the economic returns of cultural and art commodity production can be analyzed from at least six different angles:

(1) Comparing the labor and earnings of authors of cultural and art products. Designed to observe an individual's economic returns by taking into account the peculiarities of cultural and art commodities, this is a rather laborious research topic. What an author – writer, painter, or actor – puts into a cultural or art commodity is undoubtedly complex labor, but its degree of complexity cannot be easily measured. Because of this, it is hard to set an objective benchmark for such complex labor, and even harder to quantify and

gauge its quality and to pay for it properly.

(2) The cost-benefit ratio of suppliers – publishing houses, performing troupes, audiovisual workshops, etc. Supposing the supplier lists his pay to an author in his wage cost, which also includes his pay to the staff members involved, this wage cost plus depreciation expenses and consumption of raw materials makes up the total cost. The supplier's economic returns are determined by the margin between the total cost and the returns, i.e., the sales income.

(3) The economic returns of the buyers (users) of cultural and art commodities. This refers to such a commodity's end-consumers, not including intermediate buyers. The more a cultural or art commodity meets a buyer's need, the more satisfied he becomes, and the more he is convinced that the deal has brought considerable economic returns. It is true that people normally do not regard the degree of their satisfaction as a benchmark for economic returns. In fact, there is no criterion to measure such satisfaction. Nevertheless, so long as we regard economic returns as synonymous to "maximum gain at a certain expense" or "minimum expense in return for a certain amount of gain," we cannot deny that the "minimum cost principle" and the "maximum returns principle" are being followed by both suppliers and buyers in judging their economic returns. The reason why a buyer considers where to spend his money before he buys a commodity, chooses a seller when he is buying it, and appraises the results of the purchase after he has bought it, is because all these behaviors are directly related to his concern with economic returns.

(4) From the perspective of government finance, the production and sales of a commodity or of a particular industry can change fiscal revenues and expenditures. The larger the growth in net fiscal revenues such production and sales can bring, the better its economic returns is believed to be; the smaller such growth is, the poorer its economic returns is believed to be. The same is true with the economic returns of cultural and art commodities.

(5) Contribution to the economic growth rate is another benchmark for judging the economic returns of the production and sales of a

single commodity or a certain industry. Economic growth rate is usually computed on the basis of the annual rate of changes in GNP or national income, a method that also applies to the economic returns of cultural and art commodity production. For example, the press and publication industry, whose output value is part of GNP, is in a check-and-balance relationship with other sectors of the national economy. We have reason to believe the press and publication industry has contributed a great deal to economic growth if its growing output value has led to considerable growth in the output value of related industries.

Of the above five perspectives, only the second, and the fourth are relatively easy for analysts, and the first, third and fifth are relatively difficult. Nevertheless, none of them is more difficult than the sixth perspective that follows.

(6) From the perspective of resource allocation, the production of a commodity, or the commodity production of a certain industry, calls for an input of resources, while the results of production can change the aggregate quantum and structure of resources. This is true with both material production and the production of cultural and art commodities. Supposing the aggregate quantum of resources is limited and the resource allocation pattern fixed, adjustment can be made only through incremental changes in resources. Thus society must answer the following question when appraising economic return: Is the production of a commodity or the commodity production of an industry improving or deteriorating resource allocation? Improvement and deterioration are benchmarks by which to judge whether economic returns is positive or negative. The degree of improvement or deterioration is the benchmark for determining the degree of positive or negative returns. Such a conclusion is derived from theoretical analysis.

The snag lies apparently in evaluating the current pattern of resource allocation and in measuring the degree of changes in resource allocation. People may suggest that the disparity between aggregate demand and supply – or, to probe more deeply, the extent

of shortage or overstock of some key commodities – could be employed as the criterion for appraising the pattern of resource allocation and the degree of changes in it. However, this criterion can be applied only to short-term economic returns, but far from enough for long-term returns. That is to say, the allocation of a certain resource may not be problematic in the short run, but may cause a lot of problems in the long run. Some of the problems are latent or obscure and seemingly harmless to the economy for the time being. But if the problems remain unsolved, they will emerge and become so acute as to hurt the economy sometime in the future. Only by perceiving the economic returns of the production of a commodity or the commodity production of a certain industry in this light, can we gain a relatively comprehensive understanding of the concept "economic returns." Despite the aforementioned snag, resource allocation can never be factored out when studying the economic returns of the production of either physical materials or cultural and art commodities.

When we gradually shift our study to resource allocation, especially to its long-term economic returns, we are bound to come across the most difficult issue, that is, how to measure social returns. This issue is particularly critical to cultural and art commodities. We have already touched upon this topic in our previous discussion about the social appraisal of the use value of cultural and art products.

IV. Social returns of cultural and art commodity production

In a certain sense, the long-term economic returns of the production of a commodity or the commodity production of an industry are consistent with its social returns. But social returns usually entail a broader meaning than economic returns, and can be directly linked with socioeconomic development goals. If the production of a commodity or the commodity production of an industry is conducive to socioeconomic development goals, we can presume that its social returns are high; if it is detrimental to socioeconomic development

goals, we can presume that it has no social returns at all. Therefore, when analyzing the social returns of commodity production, we have to clarify what are the socioeconomic development goals and what benchmark should be employed to judge if such production is a boon or a bane to such goals.

Socioeconomic development goals are multiple, rather than single. For instance, we should raise people's income, but at the same time, we must avoid widening the income gap; we should meet people's growing demand for a better material life, but their demand for a better spiritual life should also be taken care of; and we should improve both the social environment and the natural environment at the same time. Multiple socioeconomic development goals indicate that it is not enough to develop material production alone – the production of cultural and art commodities also matters. When we talk about the social returns of cultural and art commodity production, we can never overlook the role such production should and can play in attaining multiple socioeconomic development goals.

Every socioeconomic development goal can be divided into subgoals to be attained in different stages. The goal of meeting people's spiritual need, for example, should comprise a variety of specific goals for different periods. When evaluating the social returns of the production of a certain art product in a certain stage, we may do it in comparison with the degree of people's satisfaction with that product in meeting their demand for spiritual life during that stage. Only thus can we see if its social returns are positive or negative and determine the margin of changes in such positive or negative social returns.

In the case of a socioeconomic development goal for bettering the quality of people's lives, after that goal has been divided into sub goals for different stages, we can also compare the social returns of a given cultural and art commodity with the projected sub goal for a better life quality in a specific stage. I think we can be sure about the applicability of this approach to assessing the social returns of the production of such commodities. Of course many details in this

approach need to be hammered out through the concerted efforts of those interested in cultural economics.

In observing the social returns of cultural and art commodity production, the most complex issue is perhaps how to evaluate its role in enhancing people's ideological awareness or in corrupting their minds. Theoretically speaking, it is the same as the aforementioned social appraisal of the use value of cultural and art products. However, insofar as social returns are concerned, such a role needs to be evaluated. Nobody can deny that cultural and art commodities are playing such a role, but it is difficult to measure it. The difficulty lies in particular in the fact that people's minds can be nourished or corrupted by a host of factors – the production, marketing and utilization of these products are just a few of them. In evaluating the social returns of cultural and art products, we have yet to find a way to strip these products from the other factors that are playing the same role for an exclusive study. It is, indeed, another hard nut to crack awaiting future researchers.

环境保护与受害者的补偿问题 (1990)

一、环境破坏和环境治理过程中两种不同性质的受害者

对受害者的补偿是环境保护经济学中的一个重要的理论和政策问题。在分析这个问题时，首先有必要对“受害者”概念加以说明。实际上，这里有两种不同性质的受害者：一是环境破坏过程中的受害者，一是环境治理过程中的受害者。并且，每一种受害者又可以分为直接受害者和间接受害者。

环境破坏过程中的直接受害者，主要是指因环境受到破坏而使生命财产受到损失的个人，如身体受损害、财产受损失、失去谋生的手段、减少收入、生活变得不安定或不协调等。因环境受到破坏而使产量下降、产品质量下降、收入减少、财产受损失的企业，也应包括在环境破坏过程中的直接受害者之列。

环境破坏过程中的间接受害者，主要是指同环境破坏过程中的直接受害者（个人或企业）在经济上有较密切的联系，从而因直接受害者收入减少等情况而在经济上受到损失的个人和企业。

环境治理过程中的直接受害者，主要是指因治理环境的需要而停业、减产、迁移的企业，以及在這些企业中工作的个人，这些企业的收入和个人的收入将因此而减少。环境治理过程中的直接受害者还包括因治理环境的需要而迁移的家庭，他们的财产可能受到损失，收入可能下降，生活也可能变得不安定、不协调等。

环境治理过程中的间接受害者，主要是指同环境治理过程中的直接受害者（个人或企业）在经济上有较密切的联系，从而因直接受害者收入减少等情况而在经济上受到损失的个人和企业。

这两类受害者（包括直接受害者和间接受害者）受害的原因是不同的：环境破坏过程中的受害者是因环境破坏者的行为而受害，而环境治

理过程中的受害者则是因治理环境的行为而受害。同时，这两类受害者受害的程度可能有差别：环境破坏过程中的受害者不仅在经济上遭受损失，而且可能在身体上受到损害，甚至生命受到威胁；环境治理过程中的受害者则主要是收入或财产遭受损失，可能也包括因生活环境改变而使生活变得不安定、不协调，但不会有身体上受损害和生命受威胁之类的情况发生。

从受害者（个人或企业）自身对受害的感受来说，情况也有所不同。只要进行环境的治理，那么在经济上受不利影响的受害者就会感觉到或预感到自己的收入的变动，他们将因此提出补偿的要求。至于环境破坏过程中的受害者，他们或者在事后才发现自己在某些方面受到了损害，或者在实际上受损害之后经过他人的告知才了解到自己已经受到损害，甚至有可能在较长时间内察觉不到所受的损害，从而没有补偿的要求。

区别两种不同性质的受害者，对于环境保护中的补偿问题的探讨有以下重要意义。

第一，有助于确定补偿的性质和受补偿的理由。个人或企业无论是在环境破坏过程中受到损害，还是在环境治理过程中受到损害，都有必要给予相应的补偿，但由于受害的性质不同，因此补偿的性质和受补偿的理由也不一样。环境破坏过程中的受害者所遭受的损害，是由环境破坏责任者造成的，从理论上说，应当由环境破坏责任者给予补偿。这既可以由环境破坏责任者直接支付给受害者，也可以由环境破坏责任者付款给政府有关部门，而由政府有关部门给受害者补偿。而环境治理过程中的受害者所遭受的损害，虽然追根溯源仍由环境破坏责任者造成，但从受害者的感受来说，或从事件发生的直接原因来说，则是由于治理环境的主体（政府有关部门、企业、社会团体或个人）治理环境的行为所导致的，从而要由治理环境的主体给受害者补偿。治理环境的主体有可能就是当初破坏该环境的责任者，如果是这样的话，那就不存在再补偿的问题（即治理环境一方向当初破坏环境的一方要求补偿），否则就会产生再补偿的问题。从理论上说，再补偿是有充足理由的，至于在实际经济生活中能否实现，则要取决于各种具体的情况。

第二，有助于确定补偿的方式。在区分了两种不同性质的受害者，以及进一步区分了直接受害者和间接受害者之后，所采取的补偿方式也就易于被确定下来。这主要是指：对环境破坏过程中的受害者应当由环境破坏责任者给予补偿，而且应以直接补偿和充分补偿为主；在不考虑

上述再补偿问题的条件下，对环境治理过程中的受害者应当由治理环境的主体给予补偿，其补偿方式可以是直接补偿，也可以是间接补偿，或二者兼用，并且可以根据具体情况采用充分补偿或部分补偿。

第三，有助于确定政府在补偿方面所发挥的作用。政府在补偿方面所发挥的作用，是与政府负有保护人民利益、保护环境的责任分不开的。因此，无论是因环境破坏而造成的受害，还是因环境治理而造成的受害，政府都有责任为受害者得到相应的补偿而尽力。但这里需要说明的是，在环境破坏方面，虽然政府有可能因决策的失误而导致环境的破坏，但造成某一具体地区的环境破坏的直接责任者，则多半是某些企业或居民个人，后者也就自然地成为向受害者支付补偿的一方。这样，在对环境破坏过程中的受害者进行补偿时，政府的主要作用是如何保证受害者能从环境破坏责任者那里得到相应的补偿。在环境治理方面，情形有所不同。政府既可能是环境治理的决策者，也可能是环境治理的执行者。因此，政府既有可能成为直接向受害者进行补偿的一方，也有可能成为要求当初造成环境破坏的责任者再补偿的一方。假定环境治理的主体不是政府，而是某些企业、社会团体或个人，那么政府在补偿方面可能发挥以下三种作用：（1）政府保证受害者能从环境治理一方得到相应的补偿；（2）在环境治理一方要求当初造成环境破坏的责任者再补偿时，政府可以根据具体情况使环境治理一方的要求得到全部或部分满足；（3）在环境治理一方只可能给予环境治理过程中的受害者部分的补偿，从而受害者的要求还不能满足时，政府将根据具体情况决定是否满足受害者的要求或在多大程度上满足受害者的要求。

第四，有助于对环境保护中补偿问题的进一步探讨。正如本文将会提到的，环境保护中的补偿问题在理论上和政策上还有许多难点问题有待于进一步探讨。然而，要使这些问题得到较好的解决，首先必须把两种不同性质的受害区分开来，这是深入探讨的出发点。

二、对环境破坏过程中的受害者的补偿原则和补偿方式

前面已经指出，环境破坏过程中受害者所受损害，是由环境破坏责任者造成的，应当由后者给予补偿。但要知道，这是单纯从补偿理论的角度说的，现实中的问题显然比这复杂得多。

首先，环境破坏责任者的确定可能存在着争议。这要根据具体情况而定。比如说，一条河流的上游有一家造纸厂，它排放的污水使下游居

民的利益受到损害。这种情况下的环境破坏责任易于被确定。由造纸厂给受损害的居民以补偿，也是没有疑问的。即使一条河流的上游有若干家排放污水的工厂，下游若干城镇的居民的利益受到了损害，那么，不仅环境破坏的总的责任可以被确定下来，而且每家工厂具体的责任也可以通过排污量的计算而大体上被确定下来，从而补偿问题也就有实现的可能。然而我们在现实生活中还会遇到这样的情形，比如说，一个地区受到了酸雨的危害而使企业和个人的利益遭受损失，能确定环境破坏责任者是谁吗？能由此确定环境破坏责任者应付的补偿数额吗？又如，由于多年造成的水土流失和植被破坏而使得某一地区气候异常，旱涝洪灾不断，使居民利益受损，这也无法确定具体的环境破坏责任者，从而无法确定环境破坏责任者应付的补偿数额。由此可见，只有在能够确定环境破坏责任者的具体责任，并且确定环境破坏受害者的损失的情况下，才能按上述的补偿原则进行补偿。如果不是这样，那就需要另外探讨补偿的途径。

其次，在分析对环境破坏过程中的受害者的补偿问题时，还会遇到一个复杂的情况，即如何确定受害者的受害程度和损失的大小。前面在谈到直接受害者与间接受害者的区别时已经涉及这个问题，但应当注意的是，直接受害者固然是直接因环境破坏而受损害的，但从经济方面来看，其损失的大小不一定高于某些间接受害者间接地遭受的损失。因此，即使在确定了环境破坏责任者之后，环境破坏责任者所能给予补偿的也只可能是直接受害者。至于间接受害者所遭受的损失，是不是也应当得到补偿呢？如果应当得到补偿，那么又应当由谁来支付呢？这些问题同样是有争议的。

再次，以上在讨论环境破坏过程中的受害者时，都把企业和个人作为环境破坏的受害对象来看待，补偿的对象也就是受害的对象。但如果对这个问题作深入一步的分析，不难发现，环境破坏的受害对象实际上还包括国家或社会。这是因为，环境破坏的同时也就是国民财富的损失，是社会所拥有的资源存量的损失。这样就产生了一个新的问题：在确定了环境破坏责任者之后，环境破坏责任者应当支付两类补偿费用，一类是给直接受到损害的企业和个人的，一类是给国家或社会的。

根据以上的分析，并把现实生活中的各种复杂的情况考虑在内，我们可以把环境破坏过程中的受害者的补偿原则表述如下：

（1）在确定环境破坏责任者对环境破坏应负的责任的条件下，环境破坏责任者应当对直接受害者给予相应的补偿，补偿应当是直接的和

充分的，以弥补后者所遭受的损失。

(2) 在确定环境破坏责任者对环境破坏应负的责任的条件下，环境破坏责任者除了应当对直接受害者给予相应的补偿外，还应当给国家或社会相应的补偿，以补偿国民财富的损失、社会所拥有的资源存量的损失。

(3) 尽管环境遭到了破坏，但由于各种原因，使得环境破坏的责任无法明确到具体责任者（企业和个人），从而对环境破坏的直接受害者的直接补偿也就难以实现。在这种情况下，对直接受害者的补偿可以通过社会补偿的方式进行。关于社会补偿，将在下面论述。

(4) 即使确定了环境破坏责任者并由该责任者向直接受害者支付了补偿，环境破坏过程中的间接受害者的补偿问题仍无法因此得到解决。但间接受害者既然也是环境破坏过程中的受害者，他们的损失就应当得到相应的补偿。这种补偿也可以通过社会补偿的方式进行。

在明确了环境破坏过程中对受害者的补偿原则之后，接着需要探讨的是对受害者的补偿方式。如果企业和个人是直接受害者，那么环境破坏责任者可以按以下两种方式之一支付补偿费用：一是由环境破坏责任者直接支付给直接受害者；二是由环境破坏责任者付款给政府有关部门，而由政府有关部门给直接受害者补偿。此外，环境破坏责任者对国家或社会的补偿方式，是向国家或社会直接支付一定的补偿费用。假定环境破坏责任者采取的是向政府有关部门付款，再由政府有关部门向直接受害者付款的补偿方式；同时，环境破坏责任者还必须向政府支付补偿费用的话，那么政府有关部门在得到环境破坏责任者缴纳的一笔总的补偿费用之后，将会按一定的比例进行分配：一部分留下，一部分支付给环境破坏过程中的直接受害者。

现在我们来分析社会补偿方式。社会补偿是一种间接的补偿，是由社会各方通过多种方式筹集资金而形成的基金组织对环境破坏过程中的受害者进行的补偿。这里所说的间接补偿，是指以下这样一些补偿方式：例如，向受害者或受害地区提供优惠的贷款，以帮助受害者增加产量，从而增加收入，或帮助受害地区恢复和发展经济，提高当地的人均收入水平；指导和协助受害者或受害地区的劳动者就业；向受害者或受害地区提供技术援助，等等。换言之，与直接补偿不同，社会补偿作为一种间接补偿，并不是把补偿费用直接交给受害者本人，而是通过信贷、就业指导和帮助、技术援助等方式使受害者得以增加收入，以弥补

在环境破坏过程中所遭受的损失。

社会补偿的基金组织是从事这种补偿的机构，它所需要的资金是多方面筹集而来的。其中，既有企业的缴纳、企业和个人的捐赠、社会团体的捐赠，也有政府拨款。对受害者补偿数额的多少是不易确定的，这只能根据社会补偿基金组织的财力大小和其制定的社会补偿规划来确定补偿的范围和数额。但不管怎样，既然从理论上已经确认有必要对一切环境破坏过程中的受害者进行补偿，那么选择社会补偿这种方式将是比较恰当的。当然，社会补偿方面的许多细节仍有待于关心这个问题的人们去进一步研究。

三、对环境治理过程中的受害者的补偿原则和补偿方式

环境治理是指对已经遭到不同程度破坏的环境进行治理，以减少破坏程度，或使其尽可能得到恢复。环境治理过程中需要采取一定的经济和技术措施，并且会对所治理的区域内的产业结构、技术结构、就业结构、消费结构等发生某些影响。因环境治理行为而在收入等方面遭受损失的企业和个人之所以会有这样的损失，与环境治理过程中产业结构、技术结构、就业结构、消费结构的调整有关。因此，在讨论环境治理过程中对受害者的补偿问题时，不能不联系到这些结构的调整。

前面已经指出，给予受害者的补偿要由治理环境的主体支付。但这只是关于环境治理过程中对受害者补偿问题的初步的考虑。事实上，这方面的补偿问题同样是相当复杂的。我们有必要在初步考虑的基础上再进行一些探讨。

首先，应当认为，国家或社会是环境治理的受益者。如果说环境破坏过程中因国民财富的损失、社会所拥有的资源存量的损失而使国家或社会有理由从环境破坏责任者那里得到一定的补偿的话，那么在环境治理过程中，国家或社会将因国民财富的增加或损失的减少、社会所拥有的资源存量的增加或损失的减少而受益。因此，不管政府是否作为治理环境的主体出现，政府对于环境治理过程中的受害者都应当承担一定的补偿费用。

其次，在环境治理过程中，一方面，通过产业结构、技术结构、就业结构、消费结构的调整，有些企业和个人的收入会减少，有些企业和个人的收入会增加，前者被称为环境治理过程中的受害者，后者则是环

境治理过程中的受益者；另一方面，即使不通过产业结构、技术结构、就业结构、消费结构的调整，由于环境条件的改善，有些企业和个人的收入也会增加，他们同样成为环境治理过程中的受益者。这样，无论从哪一个方面看，在环境治理过程中收入有所增加的企业和个人，作为受益者，对于环境治理过程中的受害者也应当承担一定的补偿费用。

再次，正如前面已经指出的，环境之所以需要治理，是由于环境遭到了破坏，因此，当初破坏环境的责任者有责任为环境治理过程中的受害者承担一定的补偿费用。这就是治理环境的一方向当初破坏环境的一方所要求的再补偿。显然，这只有在环境破坏的责任者被明确的条件下才能实现。

最后，还应当对治理环境的一方进行分析。政府有关部门、企业或社会团体都有可能从事治理环境的活动，但各自的活动是有特点的。政府有关部门从事治理环境的活动，主要是从国土整治、改善环境质量、保护资源、发展经济、提高当地居民生活水准等方面考虑，即更多地从国家利益或社会利益的角度着眼。因此，政府有关部门通常把给予环境治理过程中的受害者的补偿费用，作为环境治理的整个费用的一个组成部分。一个常见的例子是：政府有关部门为了治理某一流域的环境，需要从该地区迁出若干户居民。为了补偿迁出者的损失，按情况给予安置费，这些安置费包括在整个治理费用之内。社会团体从事治理环境的活动往往与该社会团体的公益目标相联系。这样，给予环境治理过程中的受害者的补偿费用同用于环境治理的其他费用一起，都符合于该社会团体的公益目标，并由该社会团体自己承担或部分承担。比较复杂和特殊的是企业作为治理环境一方所进行的活动。客观上存在着两种可能性：一是某些企业为了扩大生产规模和技术改造的目的，着手对一定地区的环境进行治理；二是某些企业过去曾经对一定地区的环境有所破坏，它们是该地区的环境破坏责任者，后来根据法律或政府的决定，它们有责任对这一地区的环境进行治理。某些企业也可能既有治理某一地区的环境的责任，又有扩大生产规模和技术改造的任务。但不管怎样，这两种情况仍是有区别的。在后一种情况下，不存在治理环境过程中要求再补偿的问题；而在前一种情况下，企业将会提出再补偿的要求，而只要具体的环境破坏的责任是明确的，这种再补偿的要求并非不可能实现，否则对环境治理过程中受害者的补偿只能由作为环境治理一方的企业来承担。

此外，在对受害者的补偿方面，环境治理过程也反映了不同于环境

破坏过程的特点。环境治理一方能够给予补偿的，是直接受害者，即因环境的治理而直接减少收入的企业和个人。至于间接受害者，由于范围广、涉及的人数多、环境治理一方的治理费用（其中包括补偿费用）有限，因此可以不列入补偿之列。这是因为，环境治理与环境破坏不同，环境治理本身就包含了改善环境质量、恢复受治理地区的经济并使之得到发展的内容。这样，在直接受害者得到一定的补偿的同时，间接受害者即使不能从环境治理一方得到补偿，也能从环境治理的效果，即地区经济的恢复和发展中得到好处，从而增加收入。这就是说，对环境治理过程中的间接受害者实际上也是有所补偿的，只是这种补偿并不以人们易于察觉到的补偿形式出现，而是隐含在环境治理费用的使用及其效果上。

根据以上的分析，可以把环境治理过程中对受害者的补偿原则表述如下：

（1）在环境治理过程中，环境治理的主体应对直接受害者所遭受的损失给予相应的补偿。由于环境的治理可以使国民财富增加或损失减少，使社会所拥有的资源存量增加或损失减少，因此，无论政府是否作为环境治理的主体出现，政府都应当承担一定的补偿费用。

（2）环境治理过程本身就是使所治理的地区经济恢复和发展的过程，环境治理过程中的间接受害者可以从这个过程中得到好处。因此在环境治理费用（其中包括补偿费用）有限而涉及面又较广泛的条件下，可以不对环境治理过程中的间接受害者另给补偿。

（3）环境治理过程中的补偿费用，是整个治理费用的一个组成部分。它是通过多种方式筹集的，其中既有环境治理一方所提供的，也有政府作为受益者以及环境治理的其他受益者所提供的，还有在当初环境破坏的责任者已经明确的前提下由该责任者所提供的。所筹集的补偿费用将用于对环境治理过程中的直接受害者的补偿。

在确定了这些原则之后，接着需要讨论的是补偿方式。给环境治理过程中受害者的补偿可以是直接补偿，也可以是间接补偿，或者二者兼有；并且这种补偿可以是充分的补偿，也可以是部分的补偿。当然，这都是指对直接受害者的补偿。

那么，具体地说，直接补偿和间接补偿如何进行呢？一般说来，直接补偿主要用于在环境治理过程中因居民迁移而发生的财产、收入的减少的补偿。这种补偿可以由政府有关部门或环境治理主体支付给居民个

人。对于在环境治理过程中直接受害者的其他方面的损失，则可以通过间接补偿方式进行。如果说在环境治理过程中有些企业停产或关闭，从而职工将失去收入的话，那么对这些职工的损失的补偿，以间接补偿的方式进行（如协助企业转产、协助职工转业）要比以直接补偿的方式进行（由环境治理主体发给生活津贴）更好一些。停产或关闭的企业职工，在一定的社会保障制度之下也有可能得到某些收入，这可以使他们的生活水平不致下降得过多；但这属于社会保障的范围，不属于环境治理的补偿，从而不由环境治理费用中的补偿费用来支付。对于这里所提到的可以“部分补偿”的问题，则应作如下的理解，即对环境治理过程中的受害者所遭受的损失，在财力许可的条件下，可以充分补偿，否则也可以实行部分补偿。理由同样在于：环境治理过程本身就是所治理地区的经济恢复和发展过程，环境治理本身包含了对受害者的补偿。

四、对若干问题的进一步探讨

（一）直接补偿费用的最终负担问题

环境破坏的责任者既可能是生产者，也可能是消费者。由消费者支付直接补偿费用，是无法转嫁给其他人的，消费者作为环境破坏的责任者，就是直接补偿费用的最终负担者。至于生产者所支付的直接补偿费用能否转嫁出去，则取决于生产者的产品的性质、市场条件以及生产者的经济体制状况。假定生产者所生产的产品是供大于求或供求平衡的，市场上的竞争是充分的，而生产者又自负盈亏，那么生产者所支付的直接补偿费用不管是否列入生产成本，它们最终仍然由生产者自己负担。生产者以盈利的减少作为支付直接补偿费用的代价，也就是作为破坏环境的苦果而由生产者自己承受。

然而在现实生活中，支付直接补偿费用的生产者主要是公有制大中型企业，它们还没有成为自负盈亏的利益主体。这样，即使它们的产品在市场上遇到充分的竞争，并且产品供大于求或供求平衡，直接补偿费用列入生产成本之后，生产者的盈利将会减少。这种损失也不是由生产者自己负担的，而是落在国家身上。于是出现了一种不合理的现象：环境破坏的责任者是企业，为此而支付的直接补偿费用的最终负担者却是国家。

假定生产者的产品是供不应求的，市场竞争不充分，价格是非刚性的，那么直接补偿费用在进入生产成本之后就会在提高了的产品价格中

体现出来，于是这些产品的购买者就负担了这些直接补偿费用。假定购买者是消费者，消费者不可能再把所负担的直接补偿费用转嫁给其他人；假定购买者是生产者，那么问题又回到了前面已经提到的产品是否供大于求、市场竞争是否充分、生产者是否自负盈亏等条件。这样，归根到底，消费者和国家最终承担着直接补偿费用的可能性始终是存在的。

以上分析表明：为了使作为环境破坏责任者的生产者最终承担这些费用，深化企业改革和建立自负盈亏的企业体制是不可回避的，使市场逐步完善并缩小需求大于供给的缺口也是不可回避的。否则，由消费者和国家最终负担直接补偿费用这种不合理的现象将难以消失。

下面，再考虑环境治理过程中对受害者的直接补偿费用的最终负担情况。这种直接补偿费用由政府和环境治理一方支付。假定不考虑再补偿问题，那么由政府有关部门和社会团体所支付的直接补偿费用，作为环境治理费用的一部分，列入政府有关部门和社会团体的一定项目的支出。它们不列入生产成本，从而不能转嫁给消费者。但企业从事环境治理活动时，情况就比较复杂。如果企业出于扩大生产规模和技术改造的需要而投资改造环境、治理环境，这时的直接补偿费用包括在整个治理费用之内，是作为扩大再生产的投资的一部分而出现的。这些投资将被回收，回收期的长短视企业从事的该项投资的经济效益而定。然而，不管回收期多长，这些投资迟早会摊入企业的生产成本。于是问题同前面讨论的情况相似，即在企业不能自负盈亏、产品供不应求、市场竞争不充分、价格非刚性等条件下，最终仍是国家和消费者承担这笔费用。如果企业本身就是环境破坏的责任者，企业对环境的治理是以恢复已被自己破坏的环境为目的的，直接补偿费用作为环境治理费用的一部分，照理说应当由企业自己承担，但实际上企业在条件许可时仍然把它们转嫁出去而由国家和消费者来承担。这也表明了深化企业改革、促进市场完善、缩小需求大于供给的缺口的必要性。

（二）充分补偿与不充分补偿的判断问题

这里所说的不充分补偿，是指在环境破坏和环境治理过程中给予受害者的补偿不能弥补受害者所受的损失。这种不充分补偿主要是针对直接受害者损失的补偿而言。这是因为，无论是在环境破坏还是在环境治理过程中，间接受害者的范围都是相当广泛的，他们所遭受的损失不易被计算出来；而能够用来补偿这些间接受害者的资金又比较有限，因此很难按“充分补偿”的要求来补偿间接受害者。即使采用前面提到过的社

会补偿的方式来进行补偿，“充分补偿”仍然不易实现。可以认为，如果要对间接受害者进行补偿的话，那么这种补偿通常是不充分的。

对直接受害者既可以采用直接补偿方式，也可以采用间接补偿方式。应当注意到，对直接受害者的间接补偿究竟是充分补偿还是不充分补偿的判断，同样是不易做出的。间接补偿的两个显著特点是：第一，它的效应逐渐发生，从实行补偿到受害者感受到自己得到补偿有一个过程，时间或长或短；第二，它究竟能够产生多大的效应，与运用间接补偿费的机构和工作人员的效率高低有密切联系，与运用的方式恰当与否也有密切联系。从而同样数额的一笔间接补偿费会产生不同的效应，给予受害者的实际好处也不一样。根据间接补偿的这两个显著特点可以了解到，对受害者的间接补偿的充分与否，不单纯取决于间接补偿费数额的多少。

正因为如此，所以我们把有关不充分补偿的考察集中于环境破坏和环境治理过程中对直接受害者的直接补偿上。判断这种补偿是否充分的标准就在于直接受害者在财产、收入方面遭受的损失数额与直接受害者从环境破坏责任者那里或从环境治理的主体那里得到的补偿费数额的比较。二者相符的是充分补偿；损失数额大于所得数额的则是不充分补偿，或称部分补偿。在这里，对财产损失的估算相对来说要比对收入损失的估算容易一些，只要财产的估价恰当就可以比较准确地算出；而收入损失的估算涉及面较广，除固定的工资等收入外，还有生产销售收入、财产租赁收入、其他收入，并且所有这些收入在计算时还有贴现问题。这里包括预期的产量变化、价格变化、贴现率的标准、应计入的收入年限等。收入损失估算得偏高、偏低是常见的。这样，在直接补偿方面，不仅有可能出现不充分补偿（补偿额小于损失额），而且有可能出现过度补偿（补偿额大于损失额）。为了避免这种情况，对于直接受害者财产、收入损失的估算，应有一套较合理的方法。

由于间接补偿是逐渐产生效应的，受害者在间接补偿逐渐产生效应的过程中陆续得到实际的好处，所以间接补偿可以被视为多次补偿、分期补偿。直接补偿与此不同，它是以补偿费的形式支付给受害者的。假定一次性支付的补偿费与受害者的财产、收入损失额相当，那么这种一次性支付的补偿就是充分补偿，支付一次就够了。假定一次补偿是不充分补偿，那么直接补偿也可以采取多次补偿、分期补偿的方式，使累计的补偿额与损失额相当，使不充分补偿成为充分补偿。由环境破坏引起的对直接受害者的补偿既然以充分补偿为原则，所以在一次补偿不足以

弥补损失时，多次补偿、分期补偿的做法是可行的。至于在环境治理过程中对直接受害者的补偿，根据前面已经论述过的补偿原则，可以按不同的情况给予直接补偿或间接补偿、充分补偿或部分补偿。如果采用充分补偿的做法，那么也可以实行多次补偿、分期补偿。

（三）对不可挽回的损失补偿问题

以上在讨论充分补偿与不充分补偿时，所提到的损失都是指财产和收入的损失。然而受害者的损失不限于财产和收入的损失。例如，在环境破坏过程中，受害者的损失还包括身体受损害、生活变得不安定或不协调等。在环境治理过程中，受害者的损失也包括生活变得不安定或不协调等。因此，即使用充分补偿的方式来弥补受害者的损失，那也只意味着补偿额同受害者的财产和收入损失额相当，其余的损失并未得到补偿。

从另一个角度来看待受害者的损失，这种损失还可以分为可以挽回（或可以弥补）的损失与不可挽回（或不可弥补）的损失。一般而论，受害者在财产、收入方面的损失，通过充分补偿是可以挽回的。受害者的生活不安定、不协调或受害者的身体遭到损害，既可能通过某种补偿而得到弥补，也可能难以弥补。这是因为在生活安定或不安定方面往往具有不可比性，而在身体受损害方面，则要看受损害的程度而定。假定受害者本人对生活方式有自己的评价标准，例如喜欢田园式的乡居生活而不喜欢城市公寓的生活，喜欢家人团聚而不喜欢与子女分居，那么在环境破坏或环境治理的过程中，即使因生活方式的变更而得到了某种补偿，这仍然会被受害者本人看成是一种不可挽回的损失。以身体的受损害而言，在环境破坏后，受害者身体受损，有些是可以复原的，有些则不能复原。如果因环境破坏而使受害者的身体遭到严重损害，甚至丧失生命，那么无论得到多少补偿费，也很难弥补损失。

由此可见，对受害者的补偿问题，一旦涉及财产、收入以外的损失，就会变得复杂起来。首先应当肯定，因环境破坏而导致身体受损害的受害者，有理由得到环境破坏责任者的充分补偿。这种充分补偿与对环境破坏过程中受害者财产、收入损失的补偿一样，应以直接补偿费形式支付给个人。但这里还存在两个问题。第一，对身体受损害的补偿怎样才能被称为充分补偿？这是一个学术界至今未能解决的难题。对此，只能参照工伤事故、交通事故等的处理情况而定。正因为身体所遭受的严重损害是不可挽回的损失，所以我们必须增强环境保护意识。第二，在环境破坏责任者不明确的条件下，如何补偿身体遭受损害的受害者的

损失？前面曾经提到，这种补偿可以采用社会补偿的方式。但社会补偿在这方面能否以直接补偿方式出现呢？比如说，假定通过多种渠道筹集了社会补偿基金，那么基金除了采取信贷、就业指导和帮助、技术援助等方式给受害者在财产、收入上的损失予以间接补偿外，还可以用支付直接补偿费的方式给那些身体遭受损害的受害者予以相应的补偿。可以设想，只要社会补偿基金达到一定的规模，并且资金有稳定的来源，这也许是一个可行的办法。

在环境破坏和环境治理过程中，居民个人因生活方式的改变而感到的不安定、不协调等等，是难以折算为经济上的损失的。这种损失既不能像财产、收入方面的损失那样得到充分补偿或部分补偿，也不能像身体受损害那样有充足的要求补偿的理由。因此这是一个不易处理的问题。只能这样认为，在目前关于环境保护中的补偿问题的研究水平的限制下，可以不考虑居民个人因生活方式改变而产生的上述损失，而假定居民个人在财产、收入方面的损失得到充分补偿之后将会逐渐适应新的生活环境。

此外，在讨论对不可挽回的损失补偿问题时，还需要研究国家或社会因资源破坏、生态环境破坏等等而遭到的同样是不可挽回的损失补偿方式。这里有三个问题值得注意。

第一，如果环境破坏责任者不明确，国家或社会因资源破坏、生态环境破坏等而遭到的损失将不可能从其他地方得到补偿，而只能由国家或社会承担。这种损失归根到底由全民承担。

第二，如果环境破坏的后果是严重的，即使在环境破坏责任者明确的条件下，由后者向政府有关部门支付了一定的补偿费用，但由于已经造成的资源破坏、生态环境破坏的损失很大，补偿数额与损失数额相比微乎其微。这种损失归根到底也仍然由全民承担。

第三，即使在环境破坏责任者明确的条件下，其向政府有关部门支付的补偿费用与所估算出来的损失数额相当，但由于被破坏的资源中有些是不可再生的资源，被破坏的生态环境中有些是不可能复原的，这样，环境破坏责任者所支付的补偿费用仍然难以弥补国家或社会在这方面的损失。这种损失归根到底也由全民承担。

对这些问题的考察，从另一个角度向人们说明了加强环境保护的必要性。

(四) 政府决策失误导致的环境破坏的补偿问题

前面在讨论环境破坏的责任者的确定时，一直把企业和个人作为分析的对象。在那里，把政府决策失误所导致的环境破坏以及对受害者的补偿问题排除在外了。但实际上，政府的决策失误在环境破坏方面是有责任的。

可以按以下两种不同的情况来讨论。第一种情况是：政府的决策单纯从经济增长目标出发，而没有把环境保护作为同样应受重视的目标。结果在经济增长过程中出现了环境的破坏，使受害者遭受了损失。第二种情况是：在环境已经破坏而政府感到有必要对环境进行治理的前提下，政府环境治理工作中做了错误的决策，如采用了不科学的治理方案，实行了顾此失彼的环境治理措施。结果在环境治理过程中又出现了新的环境破坏，使受害者遭受了损失。这两种情况都表明了政府决策失误所导致的环境破坏是客观存在的。在讨论补偿问题时，有必要对这两种情况加以区别。

先谈第二种情况。在这种情况下，政府作为环境治理的决策者，通常是以环境治理主体的身份从事环境治理的活动。如果政府环境治理的决策方面有失误，并且这种失误很快地反映出来，那么因此而造成的受害者的损失可以用环境治理费用（其中包括了补偿费用）来补偿。但如果政府决策失误在一段较长的时间以后才被人们察觉，并且受害者的损失在较长时间才被受害者感受到，那么这样的补偿问题就不可能依靠环境治理费用来解决。

再谈第一种情况。这种情况是在经济增长过程中出现的。政府决策的失误表现为片面地注意经济增长而忽视环境保护。在这种决策失误之下造成的受害者的损失，可能会在经济增长过程中得到某种补偿，但也可能得不到补偿。而且，即使受害者得到某种补偿，那也只是一种滞后的和间接的补偿、一种仅限于财产或收入方面的补偿。至于补偿是否充分，那就要视经济增长的成果、时间的长短等因素而定。加之，经济增长过程中所给予的这种滞后的、间接的财产或收入方面的补偿往往是集体意义上的补偿，而不是个别的、有针对性的补偿。这就是说，在经济增长过程中，许多人都得到好处（如收入增加），但这些人环境破坏过程中受到的损失程度不一，他们在经济增长过程中所增加的收入也多少不等。收入增加最多的不一定是当初受损失最大的，而受损失较大的可能增加的收入较少。因此，经济增长所导致的集体意义上的补偿固然也是一种补偿，但却是具有较大局限性的补偿。这种集体意义上的补

偿，只能被看成是政府决策失误造成的环境破坏的补偿问题的部分解决。不仅如此，由于环境破坏而使受害者的身体遭受损害，这样的损失也无法依靠上述集体意义上的补偿来弥补。

再从资源破坏、生态环境破坏给国家或社会造成的损失来看，补偿问题同样是存在的。无论政府在经济增长过程中有决策的失误还是在环境治理过程中有决策的失误，都会带来国民财富的损失，带来社会所拥有的资源存量的损失。而在这种情况下，损失（其中有些是不可挽回的损失）只可能由国家或社会承担，也就是由全民承担。

政府在环境保护工作中的决策失误及其引起的环境破坏和补偿问题之所以应当引起人们的重视，还同其后果的严重性有关。政府在环境保护工作中的错误决策导致环境破坏的范围广，后果严重，纠正这种错误决策所需要的时间较长，费力较大；而由于政府往往不是具体的环境破坏责任者，不具体承担环境破坏的补偿费用，因此政府在环境工作中的错误决策的严重性不易被人们所认识。这就告诉我们，加强政府在经济增长过程中和环境治理过程中决策的民主化和科学化，努力做到经济增长目标与环境保护目标兼顾，具有特别重要的意义。

（原载《中国社会科学》，1990年第4期）

Environmental protection and compensation to victims of environmental damage (1990)

I. Two kinds of victims

Compensating victims is a major theoretical and policy issue in the economics of environmental protection. It is, therefore, necessary to clarify the definition of "victims" before looking into the issue. As a matter of fact, victims fall into two categories: (1) those victimized in the course of environmental damage; and (2) those victimized in the course of environmental treatment. There are both direct and indirect victims in each category.

Direct victims of environmental damage are individuals who lose health, property and the means to earn a living, make less money, whose lives are disturbed, or whose family relationships are upset because of the damage done to their living environment. They also include businesses that suffer losses in output, product quality, revenue and property due to environmental damage.

Indirect victims of environmental damage comprise mainly those individuals and businesses whose economic interests have been impaired by the financial and other losses incurred by the aforementioned direct victims – individuals or businesses – with whom they maintain close economic ties.

Direct victims of environmental treatment include businesses that are forced to close down, reduce output or relocate, and individuals working in such businesses. These businesses and individuals make less money as a result. Such direct victims also include families that are relocated due to the needs of environmental treatment – their property may be impaired, their income may drop, and their daily lives may become disturbed or disorganized.

Indirect victims of environmental treatment comprise mainly those individuals and businesses who suffer economic losses due to their close economic ties with the direct victims (individuals or businesses) of environmental treatment who make less money because of it.

People and businesses become direct or indirect victims for different reasons. They are victimized directly or indirectly because of the behavior of those causing environmental damage or those involved in environmental protection. The damage done to them differs in degree as well. Victims of environmental damage bear both economic and physical losses, and in extreme cases, their lives may be at risk. Victims of environmental treatment suffer mainly from losses in income or assets, and their lives may be disarranged by a changed living environment, although few of them are physically impaired or have their lives threatened.

Victims (individuals or businesses) feel differently about their miseries, too. Victims of environmental treatment may demand compensation because they have either felt or foreseen its adverse impact on their income. Victims of environmental damage may have found out either after damage was done to them or after they were told about it. Some of them may have been oblivious to such damage for a considerable length of time and thus failed to raise compensation demands.

To distinguish the two categories of victims helps research into the issue of compensating victims of environmental protection in the following ways:

Firstly, it helps clarify the nature of such compensation and the rationale behind it. Individuals and businesses must be compensated properly for the damage done to them either in environmental damage or in environmental treatment. However, the nature of compensation and the rationale behind it may differ with the causes of the damage done. The harm done to victims of environmental damage is caused by its perpetrators, and, theoretical speaking, should be compensated by the same perpetrators – they may pay victims

themselves or through the government. Although the damage done to victims of environmental treatment should be blamed ultimately on the party that has caused it in the first place, the victims, out of personal feelings, or by tracing such damage to its immediate cause, tend to blame the party – government agencies, businesses, social organizations or individuals – that undertakes to repair such damage through environmental treatment, and demand compensation from that party. Double compensation, which occurs when the party treating the damage demands compensation from someone who caused the damage, is out of the question if the environmental damage was done by the same party that treats it; otherwise, double compensation becomes the issue. Theoretically speaking, there are ample reasons to demand twofold compensation. However, whether or not such compensation can occur in reality depends on the circumstances.

Secondly, the distinction helps determine the way compensation is made. Once direct and indirect victims of either environmental damage or treatment are distinguished, it is easy to choose a proper way to compensate them. Those victimized in the course of environmental damage should be compensated by the responsible party, with compensation money dispensed directly and in full. Where double compensation is not considered, victims of environmental treatment should be compensated directly, indirectly or in both ways by the party responsible for the treatment. Such compensation may be paid entirely, partially or in both ways in the light of the actual situation.

Thirdly, it helps bring the role of the government into play in compensation, a role that is associated with the government's commitment to protecting the people's interests and the environment. That is to say, whether the damage is attributed to environmental destruction or environmental treatment, the government is duty-bound to do its level best to compensate victims. However, it should be noted that even though governmental decision-making mistakes may cause environmental damage, the real perpetrators are mostly

businesses or residents, who are naturally accountable for compensation. In that case, the government's major task is to see to it that victims are properly compensated by the perpetrators. The situation with environmental treatment is somewhat different. The government may either be the decision-maker for environmental treatment or its executor. Thus it may become the party either to directly compensate victims or to demand recompensation from those who caused the damage in the first place. If the party engaged in environmental treatment is not the government but businesses, social organizations or individuals, the government may handle compensation in one of three ways: (1) The government may guarantee that victims are duly compensated by the party engaged in environmental treatment. (2) When the party engaged in environmental treatment demands recompensation from the perpetrator of the environmental damage being treated, the government will make sure such a demand is met fully or partially according to the circumstances. (3) When the party responsible for environmental treatment can compensate victims only partially, and thereby fails to meet the victims' demand, the government will decide, according to the circumstances, whether the victims' demand should be met, and to what degree.

Fourthly, the distinction helps probe further into the issue of compensation in environmental protection. As is to be illustrated in a later section in this study, many difficult issues concerning compensation for victims of environmental protection remain unsolved in theory and in government policy. To address these problems, the two categories of victims should be distinguished in the first place.

II. Principles and approaches for compensating victims of environmental damage

As mentioned above, environmental damage is done by those held responsible for it, and should therefore be compensated for by them. But this is true merely in theory. In reality, the situation is a lot more

complex.

First of all, who should be held responsible for environmental damage can be a controversial decision. Such a decision can only be made according to the actual situation. Take, for example, the waste water discharged by a paper mill situated in the upper reaches of a river which impairs the interests of dwellers in the lower reaches. In this case, it is easy to pinpoint the paper mill as the culprit and ask it to pay dwellers for the damages done. If in the upper reaches of the river there are several factories whose waste water discharges have hurt the townspeople living in the lower reaches, not only must the total responsibility for environmental damage be clarified, but the responsibility to be shared by all those factories should also be decided according to the amount of waste water each factory has discharged, thereby making it possible to address the compensation problem properly. Nevertheless, we may also find ourselves dealing with the following scenario, in which acid rain has impaired the interests of the businesses and individuals of a certain place. Can we ascertain who caused such environmental damage? If the answer is yes, can we settle the amount of compensation money to be paid by the perpetrator? The same dilemma may occur again in another scenario, in which long years of soil erosion and vegetation destruction have drastically changed a region's climate, and resulted in alternating drought and flood that eventually hurt the interests of local residents. In this case, it is also difficult to identify the perpetrator and quantify the money to be paid as compensation. Clearly, only when both the responsibility of the perpetrator and the losses inflicted on the victims are clarified can the aforementioned compensation principle be followed. Otherwise, another way must be found to compensate the victims.

Then, in our study of compensating victims of environmental damage, we may also be faced with the complicated task of how to clarify the degree of damage and quantify the losses inflicted. In the previous section I dwelt on how to differentiate between direct and indirect victims. It should be noted, however, the economic losses

inflicted on direct victims of environmental damage are not necessarily higher than the losses of those victimized indirectly by such damage. If, in that case, the perpetrator of environmental damage can only compensate direct victims, it raises the highly controversial question: Should the indirect victims be compensated for their losses too? If the answer is yes, who is to compensate them?

Next, when it comes to victims of environmental damage, only businesses and individuals are counted as victims that deserve compensation. Looking deeper into the issue, however, it is not hard to see that the state or local community is also a victim of such damage. This is because when an environment is destroyed, it means a loss in national assets and in the local community's stock of resources. This means those responsible for environmental damage, once verified, should compensate two groups of victims: (1) businesses and individuals whose interests are directly impaired; and (2) the government or the local community.

Based on the above analysis, and by taking into account the complex situation in reality, we propose four principles for compensating victims of environmental damage:

(1) Those responsible for environmental damage should, once their responsibility is settled, compensate the direct victims appropriately; such compensation should be delivered directly and in full to make up for the victims' losses.

(2) Apart from compensating the direct victims, those responsible for environmental damage should, once their responsibility is fixed, also compensate the state or the local community for the losses they have caused to national assets and to the local community's stock of resources.

(3) If, after damage is done to the environment, for one reason or another the responsibility for it cannot be allotted to the businesses or individuals that have perpetrated it, and, as a result, if direct victims of such damage cannot be compensated directly, the direct victims may be handled with social compensation, an approach that will be

dwelt upon a few paragraphs later.

(4) If indirect victims of environmental damage fail to receive the compensation that they deserve after direct victims have been compensated by the perpetrator, the social compensation approach should also be employed.

After laying down these principles for compensating victims of environmental damage, we need to define the approaches to such

compensation. If businesses and individuals are direct victims, they may be compensated in one of two ways: (1) they may be directly compensated by those responsible for the environmental damage; or (2) those responsible for the environmental damage may be asked to deliver compensation money to the government and the government then pays the direct victims. Furthermore, compensation for the government or the local community shall be paid in money by those held responsible for the damage done. If perpetrators of environmental damage who choose to compensate victims through the government are also obliged to compensate the government, the government, upon receiving all the compensation money, shall divide the money into two according to a certain ratio, retain one portion, and dispense the other portion among direct victims.

Now let us consider social compensation. As a kind of in-direct compensation, it is administered to victims of environmental damage with funds raised from all walks of life. Social compensation can be dispensed in the following ways: (1) preferential loans that help victims boost production and thereby raise their income, or that help stricken areas restore and develop local economy so as to increase their per capita income; (2) employment guidance and assistance to victims or residents of stricken areas; and (3) technical assistance to victims or stricken areas. In other words, social compensation as an indirect way of atonement is not given directly to victims, but is delivered in such forms as loans, employment guidance and assistance and technical assistance to enable victims to earn more and thus make up for their losses incurred in the course of environmental damage.

The organization in charge of social compensation raises the money needed from all quarters, including fees paid by firms, donations from businesses, individuals and nongovernmental organizations, as well as government funding. The scope and amount of such compensation are decided in light of the organization's financial ability and compensation plans. Given that it is theoretically viable to compensate all victims of environmental damage, this form of social compensation is a wise choice. It goes without saying that many details for such compensation need to be further discussed and clarified.

III. Principles and approaches for compensating victims of environmental treatment

The term "environmental treatment" in this study refers to the treatment of an environment that has been damaged to various degrees, for the purpose of mitigating the damage done or restoring the environment in the best possible way. This kind of environmental treatment calls for certain economic and technical measures, and will have a certain impact on the industrial, technological, employment and consumption structures in the areas concerned. The losses in income or other fields inflicted by environmental treatment on businesses or individuals are contingent upon adjustments made in the course of environmental treatment to local industrial, technological, employment and consumption structures. Therefore, our study of compensation to victims of environmental treatment cannot but be linked with these readjustments.

As pointed out in the previous section, compensation to victims should be paid by the party responsible for environmental treatment. This, however, is just the starting point of such compensation. There are more complicated issues to be addressed as well. It is, therefore, necessary to proceed from the starting point to look further into the whole picture.

Firstly, the state or local community should be regarded as the

beneficiary of environmental treatment. If the losses incurred in the course of environmental damage to national assets and to a local community's stock of resources are the reason why the state or local society should be compensated by those held accountable for such damage, in the course of treating such damage the state may benefit from increases or mitigated losses in national assets, and the local community may benefit from increases or mitigated losses in its resources. Therefore, the government should pay a proper portion of compensation money to victims whether or not it is the party engaged in the environmental treatment.

Secondly, in the course of environmental treatment, on the one hand, some firms and individuals may suffer an income loss while others may enjoy an income rise through industrial, technological, employment and consumption restructuring – the former are victims of environmental treatment, and the latter beneficiaries of it. On the other hand, the income of some businesses and individuals will grow in a repaired or treated environment; thus they become beneficiaries of environmental treatment even without restructuring local industry, technology, employment, and consumption. The businesses and individuals that are beneficiaries of environmental treatment are duty-bound to pay a proper part of the compensation money to victims of environmental treatment.

Thirdly, as illustrated above, the environment needs treatment because it has been damaged. Perpetrators of this damage have the obligation to pay a certain amount of compensation money for a second time, this time to those victimized in the course of repairing the environmental damage. Such is the recompensation demanded of the perpetrators of environmental damage by the party engaged in environment treatment. Obviously, such recompensation can be realized only after the perpetrators of environmental damage are verified.

Lastly, it is necessary to take a close look at institutions that may engage in this kind of remedial environmental treatment, such as government institutions, businesses, and nongovernmental

organizations. The environmental treatment conducted by government institutions is generally in the national or public interest through such forms as homeland management and treatment, natural resource preservation, economic development, and living standard betterment in a certain area. For this reason, these institutions usually regard compensating victims of environmental treatment as part of the cost. For instance, when the government evacuates families from an area for environmental treatment purposes, it routinely pays a relocation grant to compensate these families. Such a grant naturally becomes part of the environmental treatment cost. The environmental treatment conducted by a nongovernmental organization is often relevant to its public welfare goals. Thus the amount of money it pays fully or partially to compensate those victimized in the course of environmental treatment is in keeping with its welfare goals in the same way as its other environmental protection expenses. The environmental treatment carried out by businesses is somewhat complicated by two possibilities. Firstly, a business sets about improving the environment of a certain place in order to expand production or upgrade technology; secondly, some businesses have caused certain damage to the environment of a certain place, and, because they are held responsible for such damage, they must treat it in compliance with law or government ordinance. A business may also have both the responsibility for repairing the environment of a place and the need to expand production and upgrade technology. There is a difference between these two possibilities no matter what the causes. In the latter possibility, no recompensation is needed in the course of environmental treatment; in the former possibility, recompensation is a necessity. It is not impossible for that demand to be met as long as the responsibility for the environmental damage done previously can be clarified; otherwise, the business must take it upon itself to compensate victims of environmental treatment.

Moreover, compensation to be made to victims of environmental treatment is not handled the same way as that to victims of environmental damage. A party responsible for environmental treatment can only compensate direct victims – businesses and

individuals that have lost part of their income because of environmental treatment. The funding for environmental treatment – compensation money included – is so limited that indirect victims, who tend to be large in number and wide in scope, must be omitted from the compensation list. This is because, unlike environmental damage, environmental treatment itself entails goals for improving environmental quality, restoring the economy of the area concerned and enabling it to grow. That is to say, while direct victims are compensated to a certain extent, indirect victims may benefit from local economic rehabilitation and growth resulting from environmental treatment, and increase their income even though they are not compensated directly by the party engaged in environmental treatment. It can be said that the compensation for indirect victims of environmental treatment is subsumed in the use and result of the environmental treatment funding.

Based on these observations, the principles for compensating victims of environmental treatment may be spelled out as follows:

(1) The organization engaged in environmental treatment shall, in the course of it, compensate direct victims appropriately for their losses. Because environmental treatment can increase national assets or mitigate losses, and boost the local community's stock of resources or reduce its losses, the government should bear part of the compensation cost.

(2) As environmental treatment is in itself a process of restoring and developing the economy of a given area, its indirect victims will benefit from it in due course. Therefore, they may not be compensated where the funding for environmental treatment – compensation money included – is limited and the compensation scope is too wide.

(3) Compensation occurring in the course of environmental treatment is part of the cost, and the compensation money is raised in different ways, including the money paid by the government and other beneficiaries, and the money paid by the verified perpetrators of the environmental damage being treated. This kind of compensation money will be paid only to direct victims of environmental treatment.

Now that the principles are laid down, what should be discussed next is the way compensation money is to be paid. Compensation to victims of environmental treatment can be paid directly, indirectly or in both ways. It can also be paid in full or partially. Of course, such compensation is meant for direct victims.

Then, to be specific, how to go about direct and indirect compensation? Generally speaking, direct compensation is designed to make up for residents' property and income losses incurred in the course of resettlement, and may be paid by the government or the party engaged in environmental treatment. The other losses caused to direct victims of environmental treatment may be indirectly made up for. If workers will lose their income because their factories have to stop production or are shut down in the course of environmental treatment, it is better to compensate them indirectly (such as by shifting the factories to other fields of production or the workers to other jobs) than directly (such as by granting a living allowance to them). The workers of a factory that has stopped production or closed down may also get paid by insurance so that their living standards will not drop too much, but this form of help belongs under social insurance and therefore has nothing to do with compensation from environmental treatment. As to the term "partial compensation," it means that the losses incurred by victims of environmental treatment may be partially compensated for – they can be fully compensated for only when there is enough money to cover it. The reason for it is the same: environmental treatment itself is a course of restoring and developing the economy of the area involved, which is an intangible form of compensation for victims.

IV. A closer observation of certain issues

i. Ultimate bearers of direct compensation costs

Those held accountable for environmental damage may be producers or consumers. If consumers are liable for such damage, they have no way of shifting their direct compensation responsibility to any

other people – in other words, they are the ultimate bearers of direct compensation costs. Whether or not producers can shift such payment to others is determined by the nature of their products, market conditions, and their own financial situation. If the supply of their products outstrips the demand, or supply and demand are balanced while their products are in complete market competition and they must bear the responsibility for their own gains and losses, the producers must eventually pay direct compensation whether such payment is listed as production cost or not – they pay for it at the expense of their profit. That is to say, they cannot but be obliged to swallow the bitter pill of environmental damage.

In reality, however, the producers that are supposed to pay for direct compensation are mainly large and medium-sized state businesses that do not take responsibility for their gains and losses. Their profits inevitably shrink once direct compensation payments are listed as their production costs, even if their products are in complete market competition, their supply outstrips demand, or their supply and demand are in balance. However, such losses are not borne by these producers, but by the state. The absurdity here is that businesses are the culprits of environmental damage, but it is the government that foots the bill.

If a product is in short supply and the market competition for it is incomplete, and if there is no rigidity in its price, the direct compensation to be delivered by its producer, once listed as a production cost, is incorporated into the product's price. Buyers of such a product end up as the ultimate bearers of the direct compensation cost. If the buyers are consumers, they cannot shift such a burden to others; if the producer is the buyer of his own product, the issue returns to such premises as whether the supply of his product is in excess of demand or in balance with it, whether market competition for it is complete or not, and whether the producer is responsible for his gains and losses. At the end of the day, the likelihood is that consumers and the state will find themselves paying for such direct compensation.

As illustrated above, to deepen corporate reform and establish a corporate system that holds businesses accountable for their gains and losses is a must if producers held liable for environmental damage are to be made to compensate. It is also imperative to improve the market and bridge the gap between supply and demand. If we fail in this, it will be impossible to prevent consumers and the state from unwarrantedly becoming the ultimate payers of direct compensation.

Who, then, are the legitimate ultimate cost bearers of direct compensation to victims of environmental treatment? The answer is the government and those engaged in environmental treatment. Where recompensation is not an issue, the direct compensation paid by the government or nongovernmental organizations is listed as part of the treatment cost in expenditure – it cannot be shifted to consumers because it is not part of production costs. However, the situation is complicated when it comes to businesses engaged in environmental treatment. If a business improves the environment in order to expand production or upgrade technology, it tends to lump direct compensation payment with its environmental treatment cost as part of its production expansion investment. This investment is to be recouped over a length of time determined by its economic efficiency. But no matter how long the recouping period, the direct compensation payment will be eventually factored into the business's production cost. The situation thus returns to what has been discussed previously, where such cost is eventually borne by the state and the consumer if the business is not liable for its gains and losses, if its product is in short supply and market competition is incomplete, and if there is no price rigidity. If the business is liable for environmental damage and if its environmental treatment is designed to remedy such damage, in the natural course of events its compensation payment becomes part of its total environmental treatment cost. As a matter of fact, however, the business will seek to shift this payment, whenever possible, to the state and the consumer, a possibility that justifies the necessity to deepen corporate reform, straighten out the market and mitigate supply shortfalls.

ii. Judging full and partial compensation

The term "partial compensation" refers to the kind of compensation that falls short of making good the losses inflicted on victims of environmental damage or treatment. It is relevant by and large to the losses suffered by direct victims. Because the indirect victims of either environment damage or treatment are always scattered over a large area, their number and their losses cannot be quantified easily, whereas the amount of money available is too limited to meet their demand for "full compensation," even with the money raised by the local community counted in. Therefore, the compensation to indirect victims, if delivered, is considered partial.

Although direct victims, by contrast, may be compensated directly or indirectly, it should be noted that it is no easier to ascertain if an indirect compensation to direct victims is full or not. Indirect compensation is marked by two characteristics. For one thing, victims have to wait for a certain time to be convinced that they have been compensated; for another, its effect hinges on the work efficiency of those who make such payment and the approach they take – the same amount of indirect compensation payment may have different effects on different beneficiaries. These two distinctive characteristics indicate that whether indirect compensation is paid fully or partially is not determined merely by its amount.

This is exactly why I have focused my study of partial compensation on direct compensation to direct victims of environmental damage or treatment. Whether a direct compensation payment is full or partial can be calculated by comparing the amount of property and income losses inflicted on a direct victim with the amount of compensation money he receives from the perpetrator of environmental damage or the party engaged in environmental treatment. Compensation is deemed full if the two amounts match, and deemed inadequate or partial if the victim is underpaid for his losses. In this regard, it is easier to figure out the property loss than the income loss. Property loss can be pinpointed if its value is properly

estimated, whereas income loss is somewhat complicated. Apart from wages and other fixed income, earnings from sales, rents and other activities should also be included; when all these figures are computed, the anticipated changes in output and price, depreciation rate benchmark, and the number of years involved should also be factored into the depreciation category. Because it is not uncommon for income losses to be over- or under-estimated, compensation may be inadequate where payment cannot cover the total losses, or overgenerous where payment outstrips the total value of losses. Only with appropriate methods can such errors be avoided when evaluating a victim's property and income losses.

Because it takes time for indirect compensation to take effect, its benefit seems to be delivered to victims in a constant stream. Thus indirect compensation may also be regarded as something paid in installments. Direct compensation is different in that it is paid in a lump. If that lump sum payment is commensurate with the victim's property and income losses, it is full and the case is closed. If that lump sum is partial, the direct compensation in question can become full with follow-up installments of payment. Given that full compensation is the guideline for dealing with direct victims of environmental damage, payment in installments is feasible where the starting payment is not enough to cover a victim's losses. Following the same guideline above, compensation to direct victims of environmental treatment can be paid directly or indirectly, in full or partially. Full compensation may also be paid in installments.

iii. Compensation for irreparable losses

What is covered by the full and partial compensations that have just been discussed is victims' property and income losses. However, victims' losses are often not limited to property and income. For instance, environmental damage may also impair its victims' health and blight their lives, and environmental treatment may also destroy its victims' lives and jobs. Full compensation payment can only make up for their property and income losses, leaving their other losses

unaddressed.

The losses inflicted on victims can also be classified as reparable or irreparable ones. Generally speaking, property and income losses can be made good through full compensation. The damage done to victims' lives and health may or may not be compensable. This is because of the incomparability of people's grievances in daily life even if the degree of damage done to their health can be defined. Victims vary in lifestyle. Some prefer the idyllic country life of farming to dwelling in an urban apartment building; some like living with family members and dislike separation from their children. Even if they have been compensated in some ways for the changes of lifestyle caused by environmental damage or treatment, they may still see such changes as an irreparable loss. People's impaired health can be cured or incurable, but no amount of compensation is enough to make up for badly impaired health or lost life.

The situation becomes complicated once the compensation issue involves losses other than those in property and income. To start with, victims whose health has been impaired by environmental damage do have every reason to deserve the same – direct as well as full – compensation payment that they receive for their property and income losses. But this poses two questions. First, what kind of compensation for impaired health can qualify as being full? The answer remains elusive to this day. For the time being, we can only make do by referring to the way work-related injuries and deaths and traffic accidents are handled. Precisely because of the irreparable nature of serious damage to people's health, we have to enhance our awareness of environmental protection in the first place. Second, how should victims be compensated for their impaired health when and where the perpetrator of environmental damage is yet to be identified? Impaired health may be compensated for through the social compensation fund. But can such welfare fund be used as direct compensation in such cases? In other words, apart from indirectly compensating victims for their property and income losses in the form of credit and assistance in employment and technology, can the social

compensation fund also incorporate the money raised from various quarters as direct compensation to pay victims for their impaired health? This is probably a feasible solution, provided such social compensation fund can reach a considerable financial scale and have secured steady fund-raising sources.

The mental disorder and discomfort caused to residents by lifestyle changes resulting from environmental damage or treatment can hardly be converted into economic losses. Therefore, this kind of loss cannot be covered with the full or partial compensation payments for property and income losses, nor is there a legitimate reason for these residents to demand the same full compensation as for impaired health. Changed lifestyle, indeed, is a hard nut to crack in this regard. Pending an effective solution, we may just leave the issue aside for the time being under the supposition that after being fully compensated for their property and income losses, residents will be gradually acclimatized to their changed living environment.

Furthermore, while racking our brains over how to compensate for irreparable losses, we should lose no time in finding ways and means to compensate for the irreparable losses inflicted on the state or society by the damage done to natural resources or the ecological environment. Let me call attention to three issues:

Issue One, if liability for environmental damage remains unidentified, there is no way for the state or society to be compensated for this kind of loss. This is a bitter pill, indeed, for the state or society to swallow. The entire population will have to bear such losses ultimately.

Issue Two, even if liability for environmental damage has been defined and the perpetrator has compensated, the amount of money the government receives will most likely be a pittance in comparison with the actual damage done to resources and the environment. Thus the losses, too, will eventually be borne by the entire population.

Issue Three, even if the compensation paid by the perpetrator to the government can offset the estimated amount of losses inflicted by

environmental damage, it is still not enough to make up for all the losses incurred by the state or society, because some of the damaged resources are not renewable and part of the damaged eco-environment can never be restored. Such losses will ultimately be borne by the entire population as well.

My observation of these issues drives home, from another angle, the need to tighten up environmental protection.

iv. Compensation for environmental damage resulting from wrong government policy decisions

Businesses and individuals have been the subjects of my analysis so far in this study when it comes to defining the liability for environmental damage. No mention has been made of the environmental damage resulting from wrong government policy decisions and the resultant issue of compensation to victims. As a matter of fact, there is no lack of cases in which faulty government policy decisions are to blame for environmental damage.

That may happen in two scenarios: In the first scenario, economic growth goals are on the top of government agenda while environmental protection fails to get equal attention. The result is that environmental damage occurs and inflicts losses on its victims in the course of economic growth. In the second scenario, the government, having seen the need to restore the destroyed environment of a certain region, makes a wrong policy decision, such as adopting unworkable treatment approaches and attending to one thing to the neglect of another. Thus new damage is done in the course of treating the damage, and local people and businesses are victimized as a result.

Let me dwell on the second scenario first, in which the government makes a decision on environmental treatment and goes on to carry it out. If it takes a policy misstep whose dire consequence becomes swiftly apparent, it may use its fund for environmental treatment – compensation payments included – to pay for the losses inflicted on victims. But if it takes a long time for the consequence to

be discovered and for victims to become aware of the damage done, the fund will no longer be available by then to pay for the losses.

Now, about the first scenario, which may occur in the process of economic growth, where a faulty policy decision arises from the government's obsession with economic growth and neglect of environmental protection. The losses inflicted by this policy misstep may or may not be compensated for in the course of economic growth. Even if victims are compensated to a certain extent, such compensation tends to be belated and indirect, and limited to property or income losses. Whether such compensation is full or not is determined by the margin of economic growth and by how long it takes to pay it. In addition, this kind of belated, indirect compensation for property or income losses is often delivered to collectives rather than individuals. That is to say, the benefits – in the form of, say, income increase – of economic growth are there for all to share, but the fact that people's losses through environmental damage are different in degree can result in a discrepancy in income increase from economic growth. Those getting the highest increase in income are not necessarily the same people whose losses are the heaviest, while those suffered the most may end up getting the lowest pay rise. Therefore, collective compensation in the course of economic growth is limited to a point where it can only address part of the compensation problem arising from environmental damage caused by government errors. Furthermore, if environmental damage has hurt people's health, compensation cannot be delivered collectively.

Likewise, the state and society should be compensated for losses resulting from destruction of resources and the environment. Government decision-making mistakes committed in either economic growth or environmental treatment can inflict losses on national assets and local community's stock of resources. These kinds of losses – some of which are irreparable – can be borne only by the state or society, that is, by the entire population.

Wrong government policy decisions on environmental protection, and the consequent damage and compensation merit public concern

not only because such damage often covers a vast area and its consequences tend to be grave and multitudinous, but also because it takes more time and effort to correct such mistakes. However, because the government is often not the actual perpetrator of environmental damage and the actual bearer of the compensation payment for it, the serious nature of the government's decision-making mistakes tends to elude public attention. This is why it is essential to step up the effort to put government decision making on economic growth and environmental protection on a democratic and scientific footing, and to attach equal importance to both economic growth and environmental protection goals.

— *Social Sciences in China*, issue No. 4, 1990

贫困地区经济与环境的协调发展 (1991)

我们经常听到这样一种说法：一个地区越穷，就越不重视生态环境（比如滥开荒，滥砍树，滥挖矿），也越没有财力来治理被破坏的环境，结果越来越穷。我们还经常听到另一种说法：某个地区过去虽然穷，但当地水污染少，土壤污染少，空气污染也少，后来，经济发展了，人民生活水平提高了，反而河流被污染了，土壤被污染了，空气也被污染了。这两种说法之中哪一种说法有道理，还是两种说法都有道理呢？如果说两种说法都有道理的话，那么，对生态环境的保护来说，似乎穷也不好，不穷也不好，难道只有处在“穷与不穷”之间才好吗？

实际上，我们所接触到的是环境经济学与发展经济学二者共同遇到的一个难题：环境保护和贫困区开发的经济运行机制问题。只有从经济运行机制方面着手研究，才能对上述问题有比较正确的回答。

一、与环境保护、贫困区开发有关的经济运行机制

任何一种社会，总是在一定的目标的指引下，依靠某种动力，使用各种资源，使经济运转起来，并在运转中排除各式各样的干扰，达到预定目标或尽可能接近预定的目标。社会的经济运行机制就是社会借以实现上述过程的一系列关系的总称，这些关系产生自这个社会的内部，而不是来自外界。概括地说，在社会经济发展中，经济运行机制包括以下四方面的机制。

（1）目标机制。目标和目标体系是如何形成的？目标顺序是如何排列的？从经济发展来说，需要研究的问题包括：发展的目标是什么？确定这些目标的出发点和依据有哪些？环境与生态平衡是不是被列入发展目标体系以及它们在这一目标体系中的位置如何？

（2）动力机制。动力的源泉是什么？动力是怎样产生的？以什么

方式取得动力？假定生态环境与生态平衡被列入了发展目标体系之中，那么怎样才能在发展过程中形成认真对待环境与生态平衡的动力？怎样得到这种动力？换句话说，怎样激励人们关心环境，关心生态平衡？怎样才能使这种动力长久维持？

（3）资源配置机制。资源按何种原则配置？以何种方式配置？资源配置主体在这一过程中的自我约束和相互约束是如何形成的？这两种约束怎样发挥作用？从经济发展与环境保护二者的相互关系来分析，经济发展过程中的资源是怎样配置的，环境保护过程中的资源又是怎样配置的？经济发展过程中的资源配置方式与环境保护过程中的资源配置方式之间有哪些矛盾？这些矛盾如何得到解决？经济发展与环境保护中的资源配置主体在资源配置方面如何自我约束与相互约束？

（4）排除干扰机制。怎样识别经济运行中的干扰？怎样排除这些干扰？假定经济发展与环境保护过程分别受到了来自各种因素的干扰，那么这些干扰是怎样被认识到的？怎样估计这些干扰的严重程度？经济发展过程中能否自行排除这些干扰？如果不能自行排除这些干扰，那么干扰将如何被排除？

不同的运行机制，在目标、动力、资源配置、排除干扰这四个方面是各有特点的。现在，我们需要研究的是社会主义经济中与环境保护、贫困区开发有关的经济运行机制问题，考察的重点放在社会主义社会的两种不同的经济运行机制（传统的经济运行机制与建立中的新经济运行机制）之下环境保护与贫困区开发过程的比较上，以便说明经济运行机制的不同决定了环境保护状况与贫困区开发过程及其效果的不同。

根据前面提及的经济运行机制所包括的四个方面，即目标、动力、资源配置、干扰的排除，在对以社会主义所有制为基础的两种不同经济运行机制进行分析、比较时，我们可以清楚地看到，它们在第一和第二方面的差别虽然存在，但并不十分显著。这是因为，由于两种不同的经济运行机制都建立在社会主义所有制的基础上，目标机制与动力机制的差别不可能达到目标截然不同与动力截然不同的地步，尽管在目标顺序和目标制定方式上存在着某些差别，以及在对动力源泉的认识和取得动力的方式上也存在着某些差别。但是，资源配置机制与排除干扰机制在社会主义传统经济运行机制与新经济运行机制之下则有很大的差别。正是资源配置机制与排除干扰机制的不同，成为决定两种不同的社会主义经济运行机制之下环境保护状况与贫困区开发过程及其效果不同的主要因素。

二、传统经济运行机制下贫困地区的环境破坏

动态地看，一个贫困地区在发展过程中有可能遭到两类不同的环境破坏。一类破坏是在发展初期就可能存在的，即当地居民为了使自己早日摆脱贫困状态，掠夺性地对待自然资源，致使森林、草原、矿产资源、植被遭到破坏，水土流失。这时由于工业还没有发展，一般只有这一类破坏。另一类破坏是在工业逐渐发展的过程中才出现的，即随着工厂的建立，水源被污染，土壤被污染，空气也被污染。当然，第一类破坏即使在工业发展以后也仍可能继续存在，因此工业发展后两类不同的环境破坏是可能并存的。

这两类环境破坏同传统的社会主义经济运行机制有什么关系呢？让我们先从一个贫困地区的供给与需求两方面分析谈起。

一个贫困地区通常是一个封闭的或基本上封闭的经济体系，它或者同外界没有经济联系，或者联系很少。假定它同外界联系很少，那么这表明该地区与其他地区之间的投入产出联系很少，本地区的需求基本上与当地的供给在很低的水平上是相适应的。

一个贫困地区，即使在基本封闭的状态中，也不是不会发生上述第一类环境破坏的。比如说，由于缺乏燃料，人们可能滥砍树；由于土地贫瘠、亩产量低、粮食供给不足，人们可能滥开荒。但应当注意到，处于基本封闭状态的贫困地区，即使发生第一类环境破坏，其破坏的程度也有可能受到某种限制。这正是封闭型经济的一个特点。当然，封闭条件下，由于该地区处于贫困状态，所以第一类环境破坏不会中止。如果这时客观上存在的是传统的社会主义经济运行机制，并且假定发生了由于基本生活资料供给不足而造成破坏资源、破坏环境的行为，则只能采取行政性措施进行干预，而缺乏内在的协调经济发展与生态平衡的机制。

然而，在经济发展过程中，地区的封闭状态肯定要被逐步打破。这时，就算传统经济运行机制仍在起作用，地区同外界的投入产出联系也会逐渐增加。一个地区经济的发展不仅引起本地区的供给增长和需求增长，而且也会被其他地区的供给和需求增长所带动。各个地区的供给和需求增长幅度的不一致，会使各个地区的经济结构进行某种程度的调整，使原来的人力、物力、财力的空间分布进行某种程度的调整，而不同地区居民收入水平提高的程度也会因此而很不一样。这时，各地区经

济发展和居民收入提高的这种不平衡性，主要是由于地理位置、自然条件、人口密度、资源状况的影响，而并非是经济运行机制的不同起着决定性的作用。制约着地区经济结构变化的基本因素不是在经济运行机制方面，而是在非经济运行机制方面，假定传统经济运行机制继续支配着经济生活的话。

贫困地区的封闭状态被打破以及在同其他地区经济联系增多的情况下，在受到地区之间经济发展与居民收入提高不平衡的影响之下，上述第一类环境破坏的程度就有可能加剧。单靠传统经济运行机制之下的行政干预措施很难予以制止。不可否认，有些贫困地区的干部和群众是关心本地经济发展和收入水平提高的。他们动脑筋，想办法，不辞辛苦，力求改变本地区的落后和贫困状态。那么，怎样才能迅速致富呢？发展要靠工业，工业需要资金，资金来自何处？假定国家进行投资，工业可以发展起来，但绝不是每一个贫困地区都有条件吸引国家在本地区进行工业投资的。如果一开始无法依靠工业来发展本地经济和依靠工业来积累资金，那么依靠发展工业来实现致富的目的将如何实现呢？在传统经济运行机制之下，这是很困难的。于是出现了两种可能性：一是，尽管贫困地区同外界的经济联系增多了，但本地的工业由于缺乏资金难以发展，本地的农业虽然有可能发展，但农业却难以为本地区积累资金，从而难以达到致富的目的，于是本地区同其他地区的人均收入差距将因发展速度的不同而逐渐扩大；另一种可能性是，为了积累资金，居民自发地或有组织地过度开采当地的资源，靠出卖资源来增加收入，在这种情况下，即使人们辛辛苦苦，也不会取得应有的成果，甚至会变得愈加贫困。由此造成的恶果，不但影响本地区，而且也影响其他有关地区，不但影响现在，还会影响到将来。在经济发展过程中，这样的例子是屡见不鲜的。

三、转换贫困地区的经济运行机制 比制定优惠政策更为重要

应当承认，一个贫困地区经济发展的快慢，居民收入提高幅度的大小，以及资源或环境破坏的严重程度，同一定时期的经济政策有密切的关系。但是更为重要的不是经济政策问题，而是经济运行机制问题。

正如前面已指出的，经济运行机制是指经济借以运行的一系列关系的总称。这些关系有些是以法律、法规确定的，有些依赖于经济政策的

规定。在经济运行机制既定的条件下，公布一项重要的经济政策并有效地推行之，会对既定的经济运行条件和运行过程发生这样的或那样的影响，从而产生经济和社会效应。政策的作用就是这样发挥出来的。经济政策通过对既定的经济运行机制的影响，在一定程度上改变了运行条件和运行过程，然后影响需求与供给、投入与产出，使地区经济和收入水平发生某种变化。但是，在贫困地区经济发展中，在深层次起作用的是经济运行机制，而不是政策。经济运行机制决定着经济运行过程，而政策要发挥作用，则必须对经济运行机制产生影响，使经济运行机制发生某种变化。比如说，某一地区是相当贫困的，为了促使该地区摆脱贫困状态，政府制定了优惠政策，包括减免税收、给予财政补贴、发放无息或低息贷款等。可是如果经济运行机制仍然不利于地区经济的发展，这些优惠政策的作用将是有限的。这是因为，尽管通过政府的优惠政策，该地区得到了财政补贴，得到了无息或低息贷款，但这些资金不会成为该地区经济发展的启动资金，政府给予的财政补贴和无息或低息贷款往往被用于缓和眼前的困难，不足以使该地区的经济繁荣兴旺。所以人们常说，对于贫困地区来说，更重要的是使它们有“造血”的机能，光靠“输血”甚至长期“输血”都无法使它们脱贫致富。

既然贫困地区的经济发展主要取决于经济运行机制是否合适，那么与贫困地区经济发展有关的环境与生态平衡问题也同样取决于经济运行机制，而并非取决于经济政策。正如仅仅依靠经济政策不足以使贫困地区摆脱贫困状态一样，仅仅依靠经济政策也不足以使贫困地区在经济发展过程中解决环境与生态平衡问题。这样，我们就必须进一步探讨：究竟什么样的经济运行机制不利于贫困地区的经济发展和生态平衡？什么样的经济运行机制有利于解决这些问题？假定这个问题明确了，那么政策的导向也就可以确定下来，即需要制定的是哪些政策，以便从某些方面限制不利于贫困地区经济发展和生态平衡的经济运行机制的作用，促进有利于这些问题的解决的经济运行机制发挥作用。只要经济运行机制转换了，贫困地区内部积累与再投入将会增加，环境破坏将受到内在的制约。反之，如果传统经济运行机制继续起着支配经济生活的作用，外部投入（也就是所谓“输血”）再多也不能迅速改变贫困地区的面貌。贫困地区既可能是一个漏斗，也可能是一个蓄水塘。外部投入好比向这里注水。如果贫困地区是漏斗，那么注入的水再多，迟早也要流完，结果，贫困地区依然是贫困地区。如果贫困地区是一个蓄水塘，外部注入的水不会流失，而会蓄积在塘里，于是在塘里养鱼，鱼就会繁殖，那里的经济面貌就会发生变化。这时，哪怕外部的投入只是一次性的，但却

是启动性的，这个水塘也就活起来了。所以说，要发展贫困地区经济，首要的问题是不让贫困地区成为漏斗，不让外部投入流失。为此就需要把传统经济运行机制转换为新的经济运行机制，把“漏斗”型的地区经济改变为“蓄水塘”型的地区经济。

四、贫困地区的内部积累机制

贫困地区经济发展中的一个关键性问题是资金投入问题。这个问题包括三个方面：一是资金来源；二是资金投入的方向或资金投入的结构；三是资金使用效率。在社会主义经济中，传统的经济运行机制与新的经济运行机制的区别在资金投入问题的三个方面极为明显。

就资金来源而言，一个地区内部积累的来源是企业的积累和居民的积累。假定这个地区一直处于贫困状态，那么正如前面已经指出的，或者本地没有什么工业，或者，即使有少数工业企业，这些企业也不会有很多积累；同时，本地居民的收入也少，他们或者没有积累，或者只有很少量的积累。这是一个现实问题。然而在这里要探讨的是，不管企业和居民的积累多么少，关键是要吸引他们再投入，于是就需要形成一种能够吸引本地区内部再投入的机制，即内部积累机制。前面在概述经济运行机制时，曾指出需要从目标、动力、资源配置、排除干扰这样四个方面来考察；而且，前面还曾提到，在同一种社会主义所有制基础上的两种不同的经济运行机制之间，目标与动力方面的差别不是主要的，差别主要在资源配置和排除干扰方面。这里所说的在两种不同经济运行机制之下地区内部积累机制的区别，实际上就是资源配置原则、资源配置方式之间的区别。因此可以这样认为：地区内部积累机制是社会的资源配置机制的一个组成部分。

在传统经济运行机制之下，贫困地区内部积累机制之所以难以形成，新的经济运行机制之下这一内部积累机制之所以存在，可从以下三个角度作出解释。

第一，资源配置是通过资金投入和再投入实现的。由于资金投入和再投入的结构不同，从而不断出现资源配置格局的调整。但是，怎样才能保证资金的投入和再投入呢？很明显，必须使得投入的主体认为这种投入和再投入有好处。这就是资金投入和再投入的利益导向，当然这里所说的利益大小是就相对利益而言的。投入和再投入必定趋向于相对利益较高的领域，于是就涉及价格问题。传统经济运行机制之下，价格比

例不合理，贫困地区所能够提供的是初级产品，但由于资源价格偏低，初级产品价格也偏低，加之贫困地区产品的生产成本和交易成本（运输成本包括在交易成本之内）偏高，于是一方面，贫困地区自身不可能有多少剩余，投入与再投入的资金没有来源；另一方面，这种场合也很难对贫困地区内部的投入和再投入有吸引力。如果今后实现了新的社会主义经济运行机制，那么价格比例将趋于合理，资源价格将上升到应有的水平，生产成本和交易成本则会相对下降，这样内部投入和再投入的吸引力就必然会增大。从这里可以得到一个重要的启示：如果宏观经济决策部门决心帮助贫困地区脱贫致富的话，那么与其用“输血”的方式来帮助贫困地区，不如把转换经济运行机制作为重点，逐步解决资源价格偏低以及生产成本和交易成本偏高的问题，这才真正有助于贫困地区形成有效的内部积累机制。

第二，资金投入和再投入来自剩余，剩余又分解为消费与储蓄，或消费与投资（投资来自储蓄的转化）。因此，就资源配置而言，一开始就涉及剩余的分配问题。贫困地区的经济落后，劳动生产率低，它所提供的初级产品价格又不合理，因此剩余本来就很少。如果在这种情况下，剩余中有较多部分被用于消费，那么可供投资的部分就非常微薄了。为了开发贫困地区，一定要防止不合理的消费支出侵蚀本来可以用于投入和再投入的内部积累。这里所说的不合理消费，主要是指与民间的陈规陋习有关的各种非生活必需的消费支出，此外也包括某些与现有生产力水平和居民收入水平不相适应的消费支出。然而在传统经济运行机制之下，这只能依靠行政措施来加以控制。行政措施的控制从表面上看是有效的，但却会带来一个问题，即资金投入的主体（包括企业、城镇居民、农村生产单位、农民家庭）缺乏来自内部的资金投入和再投入的热情，因而不能很好地同行政措施相配合，结果政府不得不再强化行政干预。况且，在传统经济运行机制下，即使依靠某种行政措施，使资源价格上升了，生产成本和交易成本降低了，价格与成本之间有了一定正值的差额，但如果资金投入的主体依然缺乏资金投入和再投入的热情，这个差额仍会被不合理的消费支出侵蚀，内部再投入依旧落空。新的社会主义经济运行机制建立后，资金投入和再投入主体既有自主性，又有资金投入和再投入的热情，它们就有内在的限制不合理消费支出的倾向，内部积累就会增多。至于政府的调节，也可以更多地采取经济调节（如调整税率、利率）的形式，调节效果也会比单纯依靠行政措施好得多。

第三，资源配置不仅包括了资金投入和再投入，而且包括了投入和再投入的组合。要知道，资金投入和再投入既以价值形式表现，也以实物形式表现，而在以实物形式表现时，就有人力、物力、财力资源的组合比例和组合方式等问题。此外，由于地区之间存在着投入产出关系，存在着资源的流动，因此，资金投入和再投入也包括了一个地区的资源如何与其他地区的资源有效结合，以便在价值形式和实物形式上相一致的问题。这样，为了使贫困地区的经济有较快的发展，应当尽可能地创造本地资源同外地资源的有效结合方式，并通过这种结合来提供较多的内部积累。当然，一个贫困地区要完全依赖于外部资源（尤其是外部的财力资源）流入来发展经济，既无助于本地区自身内部投入与再投入机制的形成，而且在我国经济的现阶段也缺乏现实性。但从一个贫困地区的具体条件出发，如果完全没有外部资源的流入，地区经济的启动有时会遇到很大困难。因此，重要的是在于本地资源同外地资源究竟以何种方式结合。在传统经济运行机制之下，由于资金投入和再投入的主体缺乏自主性和机动性，本地资源的组合方式以及本地与外地资源的结合方式都受到很大限制。这时，如果说仍然有本地资源与外地资源结合的话，那么也主要是通过行政性措施来实现的，既难以有效结合，又难以长期结合。如果建立了新的社会主义经济运行机制，资金投入的主体有了自主性和机动性，它们就会从经济利益（包括近期利益和长期利益）出发，选择有效的结合方式。由于贫困地区本地资源同外地资源能否有效结合是关系到该地区经济能否产生较多的内部积累、能否加速居民收入水平提高的重要条件，所以单从资源结合方式来看，也有必要通过改革来转换经济运行机制。

五、贫困地区资金投入的结构与经济发展—环境的协调

根据以上分析，地区的资金投入问题的第二个方面是资金投入的方向或资金投入的结构。资金投入量是流量，现有的资金部门结构表现为资金的存量，它们是长期形成的。在传统经济运行机制之下，资金投入的方向是由政府部门决定的。如果资金的部门结构不合理，那么存量调整的难度很大。可行的办法只是调节流量，即调节资金投入量。然而，一方面流量有限，另一方面，流量一旦投入就会变为存量。不妨把流量比喻为“活水”，存量比喻为“死水”。流量变为存量，也就等于“活水”变成了“死水”。于是贫困地区的资金部门结构不仅失调，而且失调状况不易改变，内部积累机制难以形成，内部投入和再投入也难以顺利进行。

此外，考虑到贫困地区经济的发展和居民收入水平的提高是一个持续的过程，就资金投入和再投入而言，应当设法使这种来自内部的投入和再投入保持稳定性。传统经济运行机制之下，是实现不了稳定的投入和再投入的。这是因为，仅仅依靠行政措施，资金投入和再投入缺乏利益导向，地区的资源结合又不可能持久，这样，势必会形成“热一阵”、“冷一阵”的状况。那么，新的社会主义经济运行机制之下，又将如何呢？要知道，内部投入和再投入的主动权在形成内部积累的企业和有了储蓄的城乡居民手中，而不在政府手中。只有企业和城乡居民愿意把手中的货币投入本地区经济的发展事业，内部积累机制才能被认为已经形成。因此，不能认为只要经济运行机制一转轨，贫困地区的内部积累机制就会形成。比如说，在新的经济运行机制之下，企业有了自主性，城市居民有了投入、再投入的积极性，但他们究竟把资源投入何处呢？是投入本地区还是投入其他条件的地区呢？如果利益导向其他地区而并非本地区，那么，即使建立了新的经济运行机制，贫困地区经济发展的投入和再投入也仍然缺乏保证。在这种情况下，政府的调节是必要的。各级财政部门可以根据具体情况，规定一定比例的贫困地区建设资金，作为对贫困地区投入和再投入规模的某种保证；又如，政府还可以通过优惠的税率，动员社会资金，吸引它们投入贫困地区的开发，以补充这些地区内部投入和再投入之不足；在国家、地方、企业，社会各界广泛集资的基础上，还可以建立某一地区的开发基金，按照内部投入和再投入的实际状况而适当运用。

下面，我们需要着重研究的是，在贫困地区经济发展的过程中，如何才能通过资金的合理投向来促进经济发展与环境的协调？如果客观上已经存在着资金投入结构的不当从而存在着资金部门结构的失调的话，那么，从协调经济发展与环境的角度来看，转换经济运行机制在这些方面究竟能够起多大作用？

应当承认，传统经济运行机制不可能解决这些方面的问题，其理由已经在前面作了说明。关键在于：在传统经济运行机制之下，既然难以形成贫困地区的内部投入和再投入机制，又难以通过资金存量的调整来改变资金部门结构不合理的现状，因此，传统经济运行机制在解决贫困地区的经济发展与环境协调方面的局限性就是不言自明的。那么，在新的社会主义经济运行机制之下，能否解决这些问题呢？这是一个比较复杂的问题，需要较深入地探讨。

从理论上说，即使建立了新的经济运行机制，并不意味着市场信息

必定是充分的，也不意味着资金投入的主体必定得到足够的、及时的信息，它们得到的信息中也许有不少是不正确的信息，从而它们不得不在有限的信息、甚至错误信息的指引下进行资源投入的决策，其结果将使社会的资源配置不符合经济发展与环境协调的要求。加之，由于资源供给不足，资金投入的主体不可能以经济发展与环境的协调作为自己的经济行为的约束，而很可能以加紧开采自然资源来应付短缺资源的供给不足。这就进一步加剧了经济发展与环境协调的困难。

由此可以认识到，新的社会主义经济运行机制的建立并不能自然而然地解决贫困地区经济发展与环境之间的协调问题。同传统的经济运行机制之下情形相比，在新的经济运行机制之下，内部投入和再投入肯定要大大增多，但这些内部资金究竟投入什么地区，投入什么部门，特别是它们能否投入环境保护领域或究竟有多少数额投入环境保护领域，并非仅仅取决于经济运行机制的转换。但无论如何，有两点是值得指出的：

第一，在新经济运行机制之下要比传统经济运行机制之下有较多的内部投入和再投入，这样，即使新机制的建立不等于贫困地区经济发展与环境间可以自行趋于协调，也毕竟为推动这种协调准备了财力方面的前提。

第二，在传统经济运行机制之下，由于企业没有摆脱对行政机构的依附地位，不能自主经营和自负盈亏，因此，即使政府采取了旨在协调经济发展与环境调节的措施，企业也可能对此无动于衷，从而使这些调节措施不能取得很好的效果。而新的经济运行机制之下，企业作为独立的商品生产者，会从自身的利益出发考虑政府采取的措施对自己的影响，趋利避害，使自己的行为符合政府调节的意图。

因此，我们可以得出这样的结论：尽管经济运行机制转换本身并不等于资金的投入方向趋于合理，不等于环境保护领域的投资由此增多，不等于经济发展与环境之间日益协调，但由于前面提到的这两点（新经济运行机制之下有较多的内部投入和再投入，以及企业将会根据自己的利益而按政府的调节意图改变经济行为），经济发展与环境协调的可能性要比在传统经济运行机制之下大得多。这就从资金投入方面或资金投入结构方面说明了环境保护、贫困地区发展、经济运行机制转换三者是紧密地联系在一起的。

六、贫困地区的资源利用效率

地区资金投入的第三个问题是资金利用效率。在资金投入数量和资金投入方向或结构为既定的条件下，资金利用效率的高低便成为决定地区经济发展和居民收入水平提高程度的最重要因素。此外，资金利用效率的高低还直接关系到生态破坏程度，关系到环境保护部门的发展状况，关系到经济发展与环境的协调程度。

资金利用效率与资源利用效率是同一个概念。经济发展中所投入的经济资源，如果以货币形式来表现的话，那么都可以折算为资金。因此，资金利用效率的高低也就是资源利用效率的高低。资源利用效率也被称为资源的有效利用程度。资源有效利用是指：（1）各种资源都得到充分利用而没有闲置、浪费；（2）各种资源的组合是有效率的，即能在其他条件不变的情况下产生尽可能高的效率；（3）资源利用的结果，即资源组合所提供的产品和劳务，是社会所需要的，它们成为有效供给。简言之，资源有效利用包括资源充分利用、资源组合有效率、资源组合的成果为社会所需要三个内容。只有从这三个方面进行综合分析，才能判断资源是否得到了有效利用，以及在多大程度上得到了有效利用。

在传统经济运行机制之下，资源的有效利用受到严重的限制。市场不完善和企业缺乏活力，不可避免地造成资源的低效率利用，无效供给难以依靠经济内在的力量来加以制止。这时，只有依赖政府采取非经济的手段来干预经济。但经济运行机制不转换，即使政府以非经济的手段来暂时缓和因资源利用效率低下而造成的矛盾，问题也只会越积越多。当问题积累到一定程度以后，资源供求之间的矛盾便充分暴露出来。经济的混乱迫使企业不得不为了自身的利益（甚至是为了本单位职工的利益），通过地下交易活动而谋求出路。对个别企业来说，资源利用效率也许有所提高，但对全社会而言，资源利用效率仍然是低下的，甚至还会因地下交易活动而变得更差。这是因为地下市场可能使一些企业为了进行有利于自己的交易而付出昂贵得多的代价，还可能使资源配置的方向进一步扭偏。

建立新的经济运行机制之后，由于企业有了自主性和机动性，由于企业的资源利用效率高直接同自身的利益有关，提高资源利用效率便成为企业最关心的目标。而市场的逐渐完善与政府采取的宏观经济调节措施，不仅为社会的资源投向和资源组合趋于合理创造了条件，而且为

资源利用效率的普遍提高提供了良好的环境。因此，从提高资源利用效率这一角度来说，及早使社会主义经济运行机制转轨，也是非常必要和迫切的。

七、重要的是及早摆脱“低收入—生态破坏—低收入”循环

以上从资金投入的来源、资金投入的方向、资金利用效率三方面探讨了两种不同的经济运行机制下的贫困地区开发问题以及经济发展与环境的协调问题。实际上，资金投入的这三个方面是紧密地联系在一起的；而且，这三个方面中，具有关键性意义的是如何及早建立贫困地区的内部积累机制，这是加速贫困地区经济协调发展的首要条件。只要贫困地区形成了内部积累机制，不断地有资金投入和再投入本地的经济之中，其他一切问题就比较容易处理了。换言之，如果一个贫困地区的经济始终像一个“漏斗”，蓄不住水，那也就谈不上如何利用这些水、如何分配水源等等了。

在贫困地区经济协调发展过程中，资源的有效利用正是以本地区内部积累机制的形成为前提的。贫困地区的居民为什么不珍惜自己的资源而过度采伐，原因之一就在于他们要发展本地区经济和提高居民收入水平，除了尽量消耗本地资源之外，没有其他的途径。只有在本地区内部形成投入与再投入机制之后，资源才会被珍惜，才会被有节制地利用；也只有在这时，贫困地区才会认真考虑如何提高本地资源的利用效率问题。在贫困地区本地资源同外地资源相结合的问题上，情况同样如此。虽然无论是对本地资源还是对外地资源而言，都要使投入的资源能得到充分利用，都要尽可能实现资源的有效组合，并且都力求使这些资源组合的成果（产品和劳务）得以在市场上实现，但对贫困地区来说形成内部积累机制是最为重要的。只有这样，与贫困地区进行经济合作的地区才会对此有持久的热情，两地资源的结合才能持续地进行下去，也才能给贫困地区经济带来实际的好处。否则，即使两地进行了经济合作，这种合作也不可能持久，甚至只是一次性的。

当然，在贫困地区开发过程中，尤其是在协调贫困地区的经济发展与环境之间的关系的进程中，资源有效利用问题仍有其本身的特点。在贫困地区内部积累机制形成之后，仍要时刻注意资源的有效利用，使资源利用效率不断提高。这就是说，不能认为内部积累机制的形成等同于

资源的有效利用。如果不注意资源的有效利用，那么即使形成了内部积累机制，积累率却有高有低；如果内部积累率偏低，这对贫困地区的经济发展依然起不了什么作用。因此，贫困地区必须在形成内部积累机制的同时，尽可能提高资源利用效率，以便使来自内部的投入和再投入有更多的产出，从而有更多的剩余。此外，资源有效利用既是一个经济运行机制问题（即经济体制问题），也是一个生产技术问题。在不同的技术条件下，资源有效利用程度必定有所差异。如果经济体制为既定，提高技术水平不仅可以提高资源有效利用程度，增加单位投入的产出，还可以使现有的资源具有更多的用途，甚至发现更多的资源，利用更多的资源。这说明了在贫困地区不断提高生产技术水平的重要性。

在贫困地区形成内部积累机制和提高资源利用效率，都同调动企业的积极性、居民（包括职工）的积极性有关。对于内部积累机制的形成来说，重要的是调动企业和居民（包括职工）作为资金供给一方的积极性。例如，调动作为投资者的企业的积极性，有助于企业增加再投入；调动作为储蓄者的居民（包括职工和农民）的积极性，有利于提高储蓄率，并为储蓄转化为投资创造条件。在资源有效利用方面，重要的是调动所有生产要素供给者的积极性，既包括资金供给者的积极性，也包括劳动供给者的积极性。在劳动供给者之中，包括了管理人员、技术人员、工人、农民等等。不仅如此，需求一方的积极性的调动对于资源有效利用也是不可忽视的。这是因为，要使得资源组合的成果在市场上实现，需求一方的积极性同样重要，否则生产出来的某些商品就会积压、滞销。当然，这并不是说要人为地刺激需求，而是说需求是有某种伸缩性的，如果加以引导合理的需求仍有扩大的余地。调动需求一方的积极性，实际上是指对需求者进行引导，以适当扩大他们的购买行为，并使贫困地区的供给成为有效供给。在这里，有一个重要的问题需要说明，这就是贫困地区由于人均收入少，市场狭小，对各种工业品的需求也有限。因此，对需求的引导，是既有利于从供给方面提高资源利用效率，又有利于从需求方面提高资源利用效率的。

由于资源有效利用还意味着对资源的保护和对环境的保护，所以在贫困地区开发过程中，不能只注意到资源是否被充分利用（没有闲置的资源），资源组合是否有效率，资源组合的成果是否为社会所需要，而且还应注意资源保护和环境保护问题。从较长时期来考察，不保护资源和环境，必定会导致资源的过度开发和资源的破坏。对于贫困地区经济发展来说，这是非常重要的问题。贫困地区的经济究竟能不能最终摆

脱“低收入—生态破坏—低收入”的困境，与此有着十分密切的关系。要突破“低收入—生态破坏—低收入”这一恶性循环，关键在于把“生态破坏”变为“生态保护”。只要这一环节发生了根本性的变化，低收入就可以逐步变为中等收入，然后再变为高收入。

不久前，我在河北承德地区丰宁、围场两县考察时曾针对当地的情况谈到，在发展山区经济的过程中，经常听到这样四个字：“靠山吃山”。这句话的本意并不错，因为山区的经济发展离不开山区资源的优势，如果抛开了山区资源的优势，山区经济的起步确实是困难重重的。但这句话也可能被某些人所误解，即认为既然“有山可吃”，那还怕什么呢？如果那样的话，结果就会“坐吃山空”，直到把山区资源耗竭了，山区资源破坏了，山既“不可靠”，“吃也无处可吃”了。所以，正确的说法应当是“养山吃山”。要使得山有“可吃之处”，必须“养山”。“养山”就是珍惜山区资源，合理开发，并且不断维护山区资源，使山区资源存量日益增多。在发展山区经济时，不“养山”而“吃山”，没有不失败的。河北省承德地区是山区，我的这些话，不仅对山区，实际上对所有的贫困地区都是适用的。只有“养山”才能把“山”视为财源，只有“养水”才能把“水”视为聚宝盆。“养”字大有文章可做。这不单纯是技术性问题，首要的是经济运行机制问题。贫困地区要真正脱贫致富，唯有走经济与环境相互协调发展的道路，变“低收入—破坏生态—低收入”循环为“提高收入—保护生态—提高收入”循环。在转换了经济运行机制之后，从前一循环向后一循环的转变就有了前提，贫困地区经济与环境的协调发展才有了可能性。这就是我们所得出的结论。

（原载《中国社会科学》，1991年第4期）

Coordinating economy and environment in less developed regions (1991)

An old argument claims that the poorer a place is, the less mindful the locals are of the ecosystem, the more indiscriminate they are in land reclamation, logging, and mining, while having less money to treat the damaged environment and thus sinking deeper into poverty. Another oft-heard opinion puts it this way: When a place is poor, water, soil and air pollution are rare; but when the local economy is booming and the local standard of living is improving, the local rivers, soil and air are polluted too. Which argument holds water? Or are both of them reasonable? If both hold water, does it mean that the cause of environmental protection is helpless whether a place is rich or poor, or that it can be helped only when the place is neither poor nor rich?

In fact, both environmental economics and development economics are confronted with the same baffling paradox concerning the economic operational mechanisms for environmental preservation and for the development of less developed regions. Only by beginning our study from these mechanisms can these questions be answered.

I. Economic operational mechanisms associated with environmental preservation and developing less developed regions

Society, whatever its type, invariably relies on an inherent impetus and employs the resources at hand to keep the economy going in the direction of certain goals. Defying all sorts of interference, it strives to reach these goals or approach them as closely as it can. The "economic operational mechanisms" is a general term for

all the relationships society employs to go through this process. These relationships are inherent in society, rather than emanating from outside. Generally speaking, there are four operational mechanisms at work in the course of socioeconomic development:

(1) Goals mechanism. How do goals and the system of goals come about? How are these goals aligned in such a system? The issues that should be studied pertinent to economic development are: What are the goals of development? What are the starting point and basis for these goals? Do the environment and ecological equilibrium belong in the goals system; and if yes, what are their positions in it?

(2) Impetus mechanism. What are the sources of impetus? How is impetus produced? In what ways can impetus be obtained? If the ecosystem and ecological equilibrium are listed in the goals system, how can people be motivated to take the environment and ecological equilibrium seriously in the course of pursuing development and acquiring the impetus to do so? In other words, what is to be done to motivate people to be concerned with the environment and ecological equilibrium? How can the impetus for this motivation be made to last?

(3) Resource allocation mechanism. What principle is to be followed in allocating resources? In what way should resources be allocated? How do self-restraints and restraints for and between resource allocation principals come about? How do these two kinds of restraints work? How are resources allocated in the course of economic growth or environmental protection in the context of the relationship between the two? What conflicts will occur between economic growth and environmental protection in the course of resource allocation? What is to be done to reconcile such conflicts? How should resource-allocating principles restrain themselves and each other in economic growth and environmental protection?

(4) Interference elimination mechanism. How should we identify interference in the course of economic operation? How might we eliminate such interference? If economic growth and environmental protection are mutually interfering, how can such interference be

identified? How can we estimate the seriousness of such interference? Can it be disposed of spontaneously in the course of economic growth? What is to be done if economic growth itself cannot overcome such interference?

Each mechanism has its distinct attributes. The topic of this study is the socialist economy's operational mechanisms in relation to environmental protection and the development of less developed regions, but the focus is on how these come about under the old operational mechanisms compared with their progress under the new ones being established. The purpose is to prove that the question of whether the economic operational mechanisms are old or new can make a difference in environmental protection and the process and results of developing underdeveloped regions.

When we study and analyze these four mechanisms, we find differences between the old and new goals mechanisms and between the old and new impetus mechanisms, but such differences are not pronounced. Because both mechanisms are based on the same system of socialist ownership, it is impossible for categorical differences to arise from their old and new forms, despite the fact that the goals are aligned and prescribed somewhat differently and that there are differences in how the source for impetus should be understood and in the way such impetus is obtained. However, our analyses and comparisons do reveal striking differences between the new and old resource allocation mechanism and the new and old interference elimination mechanism. It is the differences in these two mechanisms that are the principal factors behind the differences between old and new socialist economic operational mechanisms in the state of environmental protection and the course and results of developing impoverished regions.

II. Environmental damage under old economic operational mechanisms

Dynamically speaking, a less developed region may encounter

two kinds of environmental damage in the course of development. One such damage may have already existed in the early stage of development, in the form of damaged forests, grassland, and vegetation, depleted mineral ores and soil erosion resulting from predatory exploitation of natural resources by local residents in a hasty bid to beat poverty. Generally, this is the only kind of environmental damage that less developed regions suffered before they began to develop industry. The other kind of environmental damage occurs in industrial development and in the form of water, soil and air pollution caused by the emergence of factories. Of course, the first kind of environmental damage may exist alongside the second kind in the stage of industrial development.

What is the relationship between these two kinds of environmental damage and the old socialist economic operational mechanisms? Let us begin our discussion with a study of the supply and demand in less developed regions.

Such a region is usually an entirely or basically closed economy. Its scanty or zero external connection indicates that it has little or no input and output exchanges with other regions, and that local demand basically matches local supply at a fairly low level.

Such a region is not immune to the first kind of environmental damage even if it is basically in seclusion. For instance, cooking fuel shortage may compel local people to fell trees indiscriminately. Shortfalls in grain supply resulting from low-yielding farmland may precipitate wanton land reclamation. Nevertheless, it should be noted that even if the first kind of environmental damage happens in a secluded region, its consequences may be limited. This is one of the characteristics of a closed economy. Of course, the first kind of environmental damage will not cease in such a secluded region because of poverty. If the local economy is under old socialist economic operational mechanisms, and if a shortage in basic means of living has prompted behaviors that are damaging to resources and environment, such behaviors can only be intervened with administrative steps because the region has no internal mechanisms to

coordinate its economic growth and ecological equilibrium.

Nevertheless, regional seclusion is bound to give way in the course of economic growth. The input-output ties between a secluded place and the outside world will grow gradually even if old operational mechanisms are still at work. The development of one place not only boosts its own supply and demand but also is impelled by the supply and demand of other places. Disparity between places in the margin of supply and demand growth will compel them to restructure their economies and readjust their spatial distribution of human, material, and financial resources, thereby causing local resident income to rise to varying degrees. This unevenness between places in economic growth and resident income increase stems mainly from geographical locations, natural endowment, population density and resources, and is not decided by differences in economic operational mechanisms. In other words, in places where old economic operational mechanisms still hold sway in local economic life, local economic structural changes are not circumscribed by economic operational mechanisms, but by noneconomic operational mechanisms.

Under the impact of disequilibrium between regions in economic and resident income increases, the first kind of environmental damage may go from bad to worse in less developed regions where the state of seclusion is collapsing and economic ties with other regions are growing. Such environmental deterioration can not be checked by merely relying on administrative intervention under old economic operational mechanisms. Undeniably, the officials and citizens of such regions care about developing local economies and increasing local income, and are doing their best to deliver themselves from the quagmire of underdevelopment and destitution. But what should they do to quit poverty and achieve prosperity fast? Development hinges on industry, but industry calls for capital. Where shall the needed capital come from? Industry can be developed with state investment, but not every less developed region can procure state investment in local industry. If a region cannot count on industry to grow its economy

and accumulate its capital, where else can it turn to for help? Under old economic operational mechanisms, it is rather difficult for a poor region to go from rags to riches. This gives rise to two possibilities. One is that even though the region's external economic ties are growing, it may find it hard to develop its industry for lack of capital; and even though its agriculture may grow to a certain extent, it cannot grow enough to obtain the capital it badly needs. Thus the region finds it impossible to overcome poverty, while its per capita income gap with other regions widens gradually as a result of its slow economic growth. In the other possibility, the local residents may, of their own accord or in an organized way, resort to excessive tapping of local resources and selling them to boost income, but despite their hard work, they cannot gain what they want, and become even poorer. Their efforts may have an adverse impact on their region and those of others and on both their present and future. There is no lack of such examples in the course of China's economic development.

III. Changing economic operational mechanisms more important than formulating incentive policies for poverty-stricken regions

We should admit that in a less developed region, the speed of economic growth, the margin of increase in local resident income, and the degree of seriousness of damage done to the local environment and resources are closely associated with economic policy for a given period of time. However, these problems have more to do with economic operational mechanisms than with economic policy.

As illustrated above, "economic operational mechanisms" is a general term for the series of relationships an economy relies upon for development. Some of these relationships are defined in legislation and statutes; the others are instituted in economic rules and regulations. Under a given economic operational mechanism, the promulgation and effective enforcement of a major economic policy will impact the condition and progress of economic operation one way or another, and thus yield economic and social returns. Such is the

way government policy works. The impact of economic policy on a given economic operational mechanism alters the condition and orbit of economic operation to a certain extent, and goes on to affect demand and supply, and input and output, causing changes in local economic and income levels. However, it is economic operational mechanisms, rather than policy, that play a more profound part in the development of a less developed region. They determine the course of economic operation. By contrast, if government policy is to play a role, it must influence these mechanisms and change them in certain ways. For instance, the government may grant tax exemption or reduction, financial subsidy, and low-interest or interest-free loans to a rather poor region, hoping to help it beat poverty at an early date. However, the beneficial effects of these incentives can be restricted if the prevailing economic operational mechanisms are detrimental to local economic development. This is because the financial subsidy, interest-free or local-interest loans granted to the poor region through preferential government policy are often not used as start-up fund for local development. Instead, they are frequently spent to cope with immediate financial woes, and are not enough to generate a local economic boom. That is why people often say it is essential to endow less developed regions with the "blood-making" function. "Blood transfusion," whether sporadic or long-term, can never put any population or region on the road to prosperity.

Given that the economic growth of less developed regions is predicated on the soundness of economic operational mechanisms, environmental protection and ecological equilibrium, by reason of their close relevance to economic growth, are also determined by such mechanisms rather than by economic policy. Economic policy alone is not enough to help poor regions overcome poverty. By the same token, it is not enough to rely on economic policy alone to help these regions maintain ecological equilibrium in the course of development. This being the case, we need to learn what kind of economic operational mechanisms are detrimental to the economic growth and ecological equilibrium of poverty-stricken regions, and what kind of economic operational mechanisms can help these regions address

these issues. Once we have found the answers to both questions, we will know what policy to take to curtail the economic operational mechanisms that do not work and promote the role of the workable mechanisms. Once sound economic operational mechanisms are chosen, less developed regions will be able to increase their internal accumulation and reinvestment, and limit environmental damage. On the contrary, if they allow old economic operational mechanisms to go on dominating local economic life, they can never beat poverty no matter how much external input or "blood transfusion" they can receive. In that sense, a less developed region can be likened to either a funnel or a reservoir, and investment from the outside can be compared to water. If such a region works like a funnel, it will remain in poverty because all the "water" it receives will drain away sooner or later. If, however, the region works like a reservoir in which all the "water" it receives is retained, and the "fish" raised in it thrive, then the local economy will keep changing for the better. In that case, even if investment arrives in one installment from the outside, it will have such a start-up effect that the entire "reservoir" will be energized. Thus, to develop the economy of a less developed region, the first thing to do is not to turn the region into a "funnel" but to prevent incoming investment from going down the drain. For this purpose, we have to replace old economic operational mechanisms with new ones, and turn local economies from "funnels" to "reservoirs."

IV. Less developed regions' internal accumulation mechanism

Capital investment is pivotal to the development of less developed regions. The issue entails (1) the source of capital, (2) the direction or structure of the capital, and (3) the efficiency with which such capital is used. In a socialist economy, the differences between old and new economic operational mechanisms in capital investment are striking in all three aspects.

Insofar as the source of capital is concerned, a region's internal accumulation comes from the accumulations of local businesses and

residents. If the region is perennially poor, it may have no industry to speak of. Even if it has a few industrial firms, their accumulations won't amount to a lot, and the low-income local residents will not have large savings. This is a realistic problem, but what I want to prove here is that, no matter how much local firms and residents may have in their bank savings, it is imperative to procure their reinvestment. This is where a kind of internal mechanism is needed to attract local reinvestment in such a region. In my previous brief introduction to economic operational mechanisms, I have pointed out that we need to approach the issue from the perspectives of goals, impetus, resource allocation, and elimination of interference. I have also mentioned that between the two kinds of economic operational mechanisms based on socialist ownership, the differences between old and new goals and impetus mechanisms are not as important as those between old and new resource allocation and interference elimination mechanisms. The differences between the old and new internal accumulation mechanisms are actually those between the principle for resource allocation and the approach to it. Thus it is safe to say that the internal accumulation mechanism for a region is an integral part of the resource allocation mechanism for the entire society.

There are three reasons why the internal accumulation mechanism can work in less developed regions under the new economic operational framework but cannot do so under the traditional framework.

Firstly, resource allocation is realized through capital investment and reinvestment. The pattern of resource allocation is readjusted repeatedly due to structural differences between such investment and reinvestment. But how can capital investment and reinvestment be guaranteed? The answer is apparent: We must convince such investors that they can benefit from such investment and reinvestment. Herein lies the role of capital investment and reinvestment in guiding interests. It goes without saying that the benefits in question refer to relative benefits. As both investment and reinvestment inevitably flow to where gains are high, this gives rise to the price issue. Under old

economic operational mechanisms, the price ratio is irrational. All a less developed region can provide are primary products. As the prices for resources are on the low side, the prices for these primary products are kept low as well, whereas the production and trading costs (transportation included) for the less developed region's products are on the high side. Not only will the region end up with a negligible surplus in hand, it will also be deprived of its fountainhead of capital for investment and reinvestment. Such a situation can hardly attract capital investment and reinvestment from within the region. If, however, new socialist economic operational mechanisms are set up, the price ratio will be rectified and the prices for resources will rise to an appropriate level while production and trading costs drop relatively, so that internal investment and reinvestment become an attractive prospect. A major lesson to be drawn from this is that if macroeconomic decision-makers are really resolved to help less developed regions to prosper, they should, rather than choose the "blood transfusion" method, focus on changing their economic operational mechanisms and gradually address their low resource prices and high production and trading costs. Only in this way can these regions be helped to formulate an effective internal accumulation mechanism.

Secondly, capital investment and reinvestment come from a surplus fund that can be broken down into consumption fund and savings, or consumption fund and investment fund converted from savings. Therefore, from the perspective of resource allocation, the issue involves the distribution of the surplus fund in the very beginning. An underdeveloped economy with low labor productivity, combined with inappropriate pricing of the primary products such an economy provides, results in a scanty surplus fund at the disposal of such regions. If, under these circumstances, a considerable part of the surplus fund is spent on consumption, what is left for investment can be negligible. If less developed regions are to be developed in real earnest, everything should be done to prevent irrational consumption expenses from eroding the internal accumulation fund that can otherwise be used for investment and reinvestment purposes. The

term "irrational consumption" points mainly to consumer expenses not on daily necessities but on outmoded conventions and customs, as well as consumer expenses that go way above local productivity and resident income levels. Under old economic operational mechanisms, such "irrational consumption" can only be controlled by administrative means. This kind of control may be effective on the surface, but it can bring a problem: For lack of motivation for internal investment and reinvestment, potential investors – namely, businesses, urban residents, rural firms, and farming households – may choose to bypass administrative orders, thus forcing local government to tighten its control time and again. What is more, even if administrative control succeeds under old economic operational mechanisms in coordinating prices and costs by raising resource prices and reducing production and trading costs, such a balance may still be eroded by irrational consumer expenses, and the hopes of internal capital investment will still be dashed if businesses and people are not motivated to invest and reinvest. After new socialist economic operational mechanisms are established, businesses and people will have both initiative and motivation to invest and reinvest, and, with internal constraints in place to hold back irrational consumer expenses, internal accumulation will grow. Local governments, on their part, can make more use of economic regulatory means – tax rate and interest rate readjustments – that work a lot better than hard and fast administrative rules.

Thirdly, resource allocation includes investment and reinvestment, as well as grouping such investment and reinvestment. Given that investment and reinvestment are embodied in both value and material, when they come in material forms, they give rise to such issues as ratios and approaches for regrouping human, material and financial resources. Furthermore, taking the input-output relationship and the flow of resources between regions into account, investment and reinvestment also entail how to effectively integrate the resources of one region with those of another region so that their value and material forms can be well coordinated. We have to put less developed regions on the track of fast economic growth in a way that enables the

resources of one region to be integrated with those of another region in the most effective way possible, and through such integration, to yield more internal accumulations. Of course, if a less developed region must rely entirely on the inflow of resources – financial resources in particular – to grow its economy, such reliance cannot help the region formulate its internal investment and reinvestment mechanisms, nor is it realistic in the current stage of Chinese development. However, as things are in this nation, less developed regions can find it very difficult to jump-start their economies without the inflow of outside resources. The issue here is how internal resources can be integrated with external resources. Under old economic operational mechanisms, local and inter-regional groupings of resources are seriously constrained by the lack of autonomy and flexibility on the part of investors and reinvestors. If, under these circumstances, the resources of one place can still be integrated with the resources of another place, this is most likely to happen through administrative intervention, but such integration can be both ineffective and short-lived. If new socialist economic operational mechanisms are permanently instituted, investors, endowed with autonomy and flexibility, can act in their own immediate and long-term economic interests to choose ways that work for such integration. Whether a less developed region can integrate its resources effectively with those of other places determines whether it can acquire a sizeable internal accumulation and speed up increases in local residents' income. Therefore, in order to bring about such an efficient integration in resources, it is imperative to change the economic operational mechanisms through reform.

V. Capital investment structure and coordination between development and environment

According to the analysis made above, the second aspect of the regional capital investment issue involves the direction and structure of this kind of investment. The capital invested is known as "capital inflow," while the sectoral structure of such capital manifests itself in

the form of capital stock that is accumulated over a long period of time. Under old economic operational mechanisms, it is the government that decides the direction of capital investment. An irrational capital sectoral structure makes stock readjustment very difficult. A feasible way to cope with the problem is to regulate the capital flow, the amount of money to be spent on capital investment. However, for one thing, the capital flow is limited, and for another, once the capital flow is invested, such amount of money will become part of the stock. We may as well liken capital flow to "flowing water" and the stock to "still water." To turn capital flow into capital stock is like turning "flowing water" into "still water." If that happens, the capital's sectoral structure in a less developed regions will become lopsided, a lopsidedness that cannot be rectified, thereby making it hard to bring about a workable mechanism to facilitate internal accumulation and internal investment and reinvestment.

Moreover, given the continuous process it takes to boost development and improve local resident income in less developed regions, it is imperative to maintain stability in investment and reinvestment from within these regions. Such stability is unreachable under old economic operational mechanisms, because the reliance on administrative steps alone can deprive capital investment and reinvestment of the guidance of interests and make lasting integration of resources between regions impossible. As a result, investment proceeds in fits and starts and fails to ensure steady and efficient growth. What, then, will happen under new socialist economic operational mechanisms? We need to ensure that the initiative for internal investment and reinvestment is in the hands of companies with internal accumulations and of urban and rural residents with bank savings. It should not be in government hands. Only when companies and individuals are willing to invest in local economic undertakings can we be convinced that an internal accumulation mechanism has taken shape. However, it is naïve to believe that an internal accumulation mechanism will become permanent simply because an old economic operational mechanism has given way to a new one. If, under new economic operational mechanisms, firms begin

to make their own business decisions and urban residents are keen on investing and reinvesting, their investment direction becomes an issue. Where do they want to invest, in their own region, or in other regions with better conditions? If, under the guidance of their interests, they choose to invest somewhere else instead of their own region, less developed regions will have no guaranteed money for investment and reinvestment in development despite the fact that they have adopted new economic operational mechanisms. This is where government regulation can help. Financial authorities at various levels may set aside a certain amount of construction fund to maintain investment and reinvestment in less developed regions on a certain scale. Local governments may also set preferential tax rates so that funds can be drawn from nongovernmental channels to less developed regions to make up for their investment and reinvestment shortfalls. On the basis of raising funds from the state, regions, businesses and various walks of social life, a development fund may be established, and its money can be deployed according to a region's internal investment and reinvestment needs.

At this point, we need to consider how to enhance equilibrium between economic growth and the environment in less developed regions by putting capital investment where it is most needed in the course of development. If invested capital is structurally flawed and results in disequilibrium in the capital sectoral structure, how effectively can changing economic operational mechanisms work in coordinating development and environment?

It should be conceded that old economic operational mechanisms cannot solve these problems for reasons already explained in a previous chapter. Given that old economic operational mechanisms can neither foster internal investment and reinvestment mechanisms in less developed regions, nor remedy the lopsided capital sectoral structure through readjusting capital stock, their limits are apparent in tackling problems in coordinating development and the environment. Can the problems be addressed under new socialist economic operational mechanisms? This is a complex issue that merits in-depth

study.

Theoretically speaking, the establishment of new economic operational mechanisms does not guarantee adequate market information, nor does it indicate that capital investment principals are assured of access to adequate and timely information. A good part of the information they obtain may still be incorrect and misleading when they make resource input decisions. As a result, resource allocation can hardly meet the demand for equilibrium between development and the environment. Furthermore, capital investors, whose economic behavior cannot be restrained by such a demand because of resource supply shortfalls, may most probably step up their exploitation of natural resources to make up for such shortfalls, thus making it even more difficult to coordinate development and environmental issues.

Obviously, the establishment of new socialist economic operational mechanisms does not mean that problems in between economic growth and environmental protection can be automatically addressed. In comparison with the situation under old economic operational mechanisms, internal investment and reinvestment are bound to increase considerably under new mechanisms. However, the questions of which region or industry should be invested with such internal capital, and particularly, whether it can be invested in environmental protection, and if so, how much can be invested in it – these cannot be determined merely by changing economic operational mechanisms. Two points are worth noting no matter what happens:

Firstly, more capital will flow into internal investment and reinvestment under new economic operational mechanisms than under old ones. For that matter, even though the establishment of new mechanisms cannot spontaneously bring about a balance between development and environment in less developed regions, it at least sets the financial stage for such a balance.

Secondly, under old mechanisms, because businesses were government appendages that could not make their own decisions and be responsible for their own gains and losses, their indifference to

government steps to coordinate development with environmental protection often derailed such attempts. By contrast, new economic operational mechanisms can turn businesses into independent commodity producers that are mindful of their own interests and willing to adapt their behavior to government intentions when they assess the impact of government steps on themselves and seek advantages and avoid risks from these steps.

Thus we can arrive at the conclusion that even though a shift in economic operational mechanisms does not mean that capital investment will be automatically directed rationally and that environmental protection will receive more investment because of it, the new economic operational mechanisms can bring more internal investment and reinvestment, and enable businesses to act on their own interests to adapt their behavior to government regulation intentions. Thus it is more likely for development and environment to be balanced under new economic operational mechanisms than under old ones. From the perspective of capital investment or capital investment structure, this drives home the close connection between environmental protection, development of less developed regions, and changing the economic operational mechanisms.

VI. Resource utilization efficiency in less developed regions

Efficiency in capital utilization is the third issue pertinent to local capital investment. With a given amount of capital investment and a given direction or structure for it, capital utilization efficiency is the foremost factor in determining the level of regional development and of increases in resident income. Furthermore, capital utilization efficiency also has a direct bearing on the level of ecosystem damage, the development of the environmental protection sector, and the level of balance between development and environment.

Capital utilization efficiency is an identical concept to re-source utilization efficiency. The economic resources put into development

can be converted into capital if they come in money form. Therefore, the level of capital utilization efficiency is the same as the level of resource utilization efficiency. Resource utilization efficiency also represents the level of effectiveness at which resources are used. Effective use of resources means that: (1) all sorts of resources have been put to full use, without being left idle or to waste; (2) various groupings of resources are working efficiently, that is, they can yield the highest possible efficiency under the assumption that the other conditions remain unchanged; and (3) the results of using resources are exactly what is needed by society, or, in other words, the products, labor and services provided by grouped resources have become effective supply. In short, effective utilization of resources entails three aspects: full use of resources, efficient resource grouping, and results of such grouping that are welcomed by society. Only by taking these three aspects into overall consideration is it possible to judge if resources have been put to effective use and – if the answer is yes – how effectively they have been used.

Under old economic operational mechanisms, the effectiveness of resource utilization is seriously handicapped. An incomplete market, coupled with lethargic company performance, inevitably keeps resource utilization efficiency low, and ineffective supply of resources cannot be remedied with the economy's internal strength alone. In both scenarios, intervention in the economy can be effected only through noneconomic government means. However, if economic operational mechanisms remain intact, problems will keep snowballing even if the government can reconcile the conflicts resulting from low resource utilization efficiency through noneconomic means. When the problems come to a head, the conflict between resource supply and demand will be fully exposed. An economy in disarray invariably forces firms to seek the way out through underground transactions in an attempt to protect their interests (as well as the interests of their workers). This may enable a few firms to somewhat improve their resource utilization efficiency, but for society as a whole, such efficiency will remain low and tend to be aggravated by such underground transactions. This is because the

underground market may force firms to pay a high price if they want to turn such transactions to their favor, thereby steering resource allocation further from the right course.

Under new economic operational mechanisms, and with newly gained decision-making autonomy and flexibility, firms will become keener than before in pursuing the highest possible resource utilization efficiency because it is directly relevant to their immediate interests. The gradually improved market works alongside government macroeconomic regulatory steps not only to furnish favorable conditions for placing resources where they are needed and grouping them as reasonably as possible, but also to set the stage for universal improvements in resource utilization efficiency. Insofar as resource utilization efficiency is raised, it is both necessary and urgent to shift the socialist economy to new operational mechanisms.

VII. Putting an end to the "low income – ecosystem damage – low income" vicious cycle

From the angles of capital investment sources, the direction of such investment, and capital utilization efficiency, I have just probed into the development of less developed regions and the balance between such development and environmental protection under old and new economic operational mechanisms. As a matter of fact, these three facets of capital investment are closely interrelated. Pivotal to these facets, moreover, is the question of how to establish an internal accumulation mechanism in less developed regions. Such a mechanism is the foremost precondition for speeding up balanced development in these regions. As long as these regions can establish their own internal accumulation mechanisms and secure a constant flow of capital to invest and reinvest in local economies, they will find it easier to tackle their other problems. To put it another way, if the economy of a less developed region is like a funnel that cannot retain any water, using and distributing such water is out of the question.

In the course of balanced economic development in less dev-

eloped regions, effective use of resources is predicated on the formation of local internal accumulation mechanisms. One of the reasons why residents of these regions do not value their resources and are given to tapping them wantonly is because in their effort to develop local economies and raise their income, they have no alternative but to consume local resources as much as they can. Only when they have developed their internal investment and reinvestment mechanisms can they cherish their resources and economize on them. Only then can these regions put improving their efficiency in utilizing local resources on the agenda. The same is true of integrating local resources with those of other regions. It is true that all the input of resources, local or otherwise, should be put to best use and grouped as effectively as possible, and that every effort must be made to put the fruits of such grouping on the market (in the form of products and services). However, nothing is more important to these regions than putting an internal accumulation mechanism in place. Only with such a mechanism can developed regions be motivated for economic collaboration with less developed regions, can sustained integration of local and outside resources happen steadily, and can actual benefits be reaped from the economies of less developed regions. In the absence of such a mechanism, interregional economic collaboration cannot be made to last – in extreme cases, once happened, it can never happen again.

In developing less developed regions, particularly in coordinating their development and environment, we must not lose sight of the salient features of the issue of effective resource utilization. After an internal accumulation mechanism has been set up in such a region, the effort to put resources to effective use and to keep raising the resource utilization efficiency should never be slackened. That is to say, the arrival of the internal accumulation mechanism does not mean utilization of resources can become immediately effective. If effectiveness is overlooked in this regard, the accumulation rate will fluctuate even in the presence of the internal accumulation mechanism. If the accumulation rate is on the low side, it can do little to boost economic development in less developed regions. Therefore,

these regions must do their level best to increase resource utilization efficiency when fostering internal accumulation mechanisms, so that their internal investment and reinvestment can yield more output and surplus. It must be pointed out that effective utilization of resources is not only connected with the economic operational mechanism but also affected by production technology. Efficiency in resource utilization varies with technical conditions. Under a given economic system, improved technology can boost such efficiency, increase the output of per-unit input, and put available resources to more uses. It can even help discover and utilize more resources. Such is the importance of steady improvement of production technology in less developed regions.

The cultivation of internal accumulation mechanism and the increase of resource utilization efficiency in less developed regions are subject to the enthusiasm of local businesses and residents (workers included). The cultivation of the internal accumulation mechanism, in particular, hinges on motivating capital-supplying businesses and individuals. For instance, the motivation of businesses as investors helps them reinvest more; the enthusiasm of residents (workers and farmers included) as bank creditors helps boost the savings rate and furnishes favorable conditions to convert bank savings into investment. In boosting resource utilization efficiency, it is essential to motivate every supplier of production factors, including capital and labor suppliers – managers, technicians, workers and farmers. Furthermore, the enthusiasm of those on the demand side is also indispensable to efficient utilization of resources, because the marketing of the fruits of resource grouping cannot do without them. Otherwise, the products may be stockpiled or become unsalable. Of course I am not saying that demand should be stimulated artificially, but that demand is elastic, and that if properly guided, rational demand often has room to expand. To motivate those who need capital is in fact to guide them to expand purchases properly while turning the supply from poor regions into effective supply. In this regard we have to see the fact that the demand of less developed regions for manufactured goods is circumscribed by their per capita

income and small markets. Therefore, to put demand under proper guidance can help improve the resource utilization efficiency on both sides of the supply-demand relationship.

As efficient utilization of resources also calls for protecting resources and the environment, we should, in the course of opening up less developed regions, focus our attention not only on whether resources are fully utilized (so that none of them is left idle) and grouped efficiently, and whether the products of such grouping are needed by society, but also on the protection of resources and the environment. From a long-term point of view, negligence in resource and environmental protection inevitably leads to overheated development and damaged resources. This is a pivotal issue to the development of less developed regions, for it has a close bearing on whether these regions can be released from the "low income – ecological damage – low income" vicious cycle that can be overcome only by replacing "ecosystem destruction" with "ecosystem preservation." If this fundamental change can be effected, low income can be gradually turned into middle-level income and further to high income.

During a recent fact-finding tour of Fengning and Weichang counties in Chengde Prefecture, Hebei Province, I told my hosts that I often heard the old refrain about developing mountain economies: "You'd better live off the mountains if you live there." There is nothing wrong with that saying, because mountainous regions cannot be developed without tapping local resources. It can be very difficult to jump-start the economy in such regions if local resources are left unused. However, the old refrain can also be misunderstood by those who think: "We have nothing to fear, now that we can live off the mountains." If that philosophy is taken for granted, then everything in the mountains will be used up before you have realized it. That is, when mountain resources are used up or ruined, the mountains will become so uninhabitable that folk living on them will have nowhere else to turn to for sustenance. For this reason, that old refrain may be reworded like this: "Nourish the mountains to eat off them." To make

the mountains "eatable," you have to "nourish" them. This means to cherish mountain resources and tap them in a restrained way while conserving them and building up their stock. Nobody can succeed in developing a mountain economy if they are given to "eating off" the mountains and do not care to "nourish" them. Chengde Prefecture happens to be a mountainous region, but my remarks apply not just to mountainous regions but to every less developed region as well. Only by "nourishing" the "mountains" can they become a source of wealth. Only by "nourishing" the "water" can the "water" become a depository of wealth. A great deal can be accomplished when you are devoted to nourishing something. This is not merely about technicalities, but more than anything else, about economic operational mechanisms. For a less developed region to escape poverty and embark on the road toward prosperity, the only way out lies in coordinating economic development with environment protection, and in reversing the vicious cycle of "low income – environmental damage – low income" into the virtuous circle of "income increase – ecosystem protection – income increase." Both conversion and coordination can happen after old economic operation mechanisms have given way to new ones. Such is my conclusion.

比较经济史研究与中国的现代化 (1993)

一、从经济史学谈起

经济史学是以人类经济活动的历史过程，即以经济制度的演变、生产力的发展以及二者之间相互作用的历史过程作为研究对象的学科。它是经济学和历史学的交叉学科。从经济学说史上看，虽然从重商主义者到古典经济学家，曾经有不少人论述过历史上的经济现象和经济问题，提出过有关经济 and 历史的相互关系的观点，但这些非系统的论述还不构成经济史学。作为一门独立学科的经济史学，于19世纪晚期产生于西欧。德国新历史学派的代表人物，如施莫勒（G. von Schmoller）、谢夫莱（A. E. P. Schaffle）、毕歇尔（K. Bücher），以及同一时期英国的罗杰斯（J. E. T. Rogers）、吉宾斯（H. de B. Gibbins）、阿诺德·汤因比（Arnold Toynbee）、艾希利（W. J. Ashley），法国的勒瓦瑟尔（P. E. Levasseur），美国的登巴（C. F. Dunbar）、法尔南（H. W. Farnam）、 Gros 斯（G. Gross）、伊利（R. T. Ely）等人，都为西方经济史学的建立做出了成绩。在20世纪前半期，在欧洲和美国，经济史学有较大的发展。德国的桑巴特（W. Sombart）、瓦格曼（E. Wagemann），英国的克拉潘（J. H. Clapham）、波士坦（M. Postan）、托尼（R. H. Tawney），法国的亨利·瑟（Henri Sée），瑞典的赫克歇尔（E. F. Heckscher），奥地利的道布希（A. Dopsch），比利时的皮朗（H. Pirenne），美国的汤普逊（J. W. Thompson）、罗斯托夫采夫（M. I. Rostovtzeff）、阿歇尔（A. P. Usher）等人，都是在经济史学的一定领域内有重要著作问世的知名学者。

在经济史学的发展过程中，不同的研究者由于受到不同的哲学思想、史学思想和经济学思想的影响，在理论与历史之间的关系、地理环境或人口因素在经济发展过程中的作用、政府在经济的发展过程中的作用、人类社会经济的发展是单线的还是复线的、人类社会经济的发展是

渐进的还是突变的这样一些重大问题上，存在着意见分歧。他们对人类经济活动的历史、经济制度演变的历史甚至生产力发展的历史都有自己的看法，尽管其中不少看法可能是较片面的，或者是以西方世界作为中心来概述全世界的经济史的，但应当承认，无论在经济史料的收集与整理方面，或在某一具体经济史事实的考证与辨析方面，他们的研究成果值得以后的研究者们重视与参考。

比较经济史学是经济史学的一个分支，它考察世界上各个不同国家和地区经济史过程的差异和共同点，分析这些差异和共同点的原因与后果，以加深对人类社会经济活动的历史过程的认识。比较经济史学产生与发展的时间要比经济史学晚得多。要知道，在经济史学产生以后的较长时期内，虽然像施莫勒、毕歇尔、艾希利、亨利·瑟、皮朗、赫歇尔、克拉潘等人都曾对不同国家的经济史进行过比较研究，但这些比较研究并不是系统的。并且，由于他们研究的重点主要放在某种经济史理论模式的建立上，因此对不同国家的经济史资料的编排、整理往往服从于他们固有的经济史理论模式。换言之，在当时的条件下，比较经济史学还没有成为一门独立的学科，经济史的比较研究附属于一般经济史研究。

二、比较经济史学的形成

比较经济史学的形成和经济史比较研究的重要性被学术界所认识，主要是在第二次世界大战结束以后，尤其是在20世纪年代中期以后。这是与当时的世界政治经济形势分不开的。第二次世界大战结束后，随着旧的世界政治体制的解体和不少后进国家先后走上现代化的道路，关于经济制度、经济发展、经济政策的历史比较成为学术界广泛感兴趣的课题，这方面的研究为比较经济史学的形成创造了重要的条件。像讷克斯（R. Nurkse）、库兹涅茨（S. Kuznets）、罗斯托（W. W. Rostow）、赫尔希曼（A. O. Hirschman）这样一些以研究经济成长著称的经济学家，都在比较经济史学领域内进行了专门的论述。尽管除了罗斯托以外，其他几位学者都不被归入经济史学家范畴，但他们的著作在比较经济史研究中的地位却是不容忽视的。此外，诸如人力资本理论、制度创新理论、技术创新理论、政治周期理论、长波理论、政治市场与公共选择理论等等的产生和发展，也使得比较经济史研究有了新的理论依据或更为生动的研究内容。

在比较经济史学形成过程中，另一个起着重要作用的因素就是计量经济史学（econometric history）或历史计量学（cliometrics）的兴起。计量经济史学有时也被称做新经济史学（new economic history），它出现于20世纪50年代末期，自60年代中期以后有较大的发展。福格尔（R. W. Fogel）、诺思（D. C. North）、恩格尔曼（S. L. Engerman）等美国经济史学家是主要代表人物。他们把以往的经济史学称做传统经济史学，认为后者停留于历史编纂学的水平，而未能把经济理论同经济史结合在一起，以及未能运用现代数量分析方法来研究历史上的重要事件、经济的发展过程。他们认为新经济史学弥补了传统经济史学的上述缺陷。60年代至80年代，新经济史学在技术创新史、制度创新史、铁路史、美国南部经济史、西欧中世纪庄园制、历史上国民收入与劳动生产率的计算、经济周期史等领域内所发表的若干论著，引起了学术界的注意，并给比较经济史研究有力的推动。这种推动主要是在研究方法上。正如福格尔和恩格尔曼在1971年出版的《美国经济史的重新解释》一书中所指出的：“如果资料十分完备，简单的统计方法通常就够用了。资料越是贫乏，就越需要使用高深的统计方法。但无论如何，可以利用的资料的确总是低于标准统计方法所要求的最低限度。在这种情况下，如果要获得成就，关键就在于研究者要能够设计出在利用资料方面特别有效的方法，也就是说，研究者要能够发现一种可以靠有限的有用资料来解决问题的方法。”^[1] 比较经济史学研究除了有赖于一定的理论作为依据以外，研究方法特别是数量研究方法的进展也是使不同的国家、不同地区经济发展过程的比较研究取得成就的一个不可忽视的原因。
